TURKIC ART. The earliest historical phase of the artistic culture of the nomadic Turkic peoples, which belongs among the steppe cultures (q.v.), can be dated with comparative certainty on the basis of written sources and archaeological finds (see also ASIA, CENTRAL; MONGOLIAN ART; SIBERIAN CULTURES). In the 9th century, with the conversion of the Turki to Islam (q.v.), this ancient artistic heritage was partly incorporated in the Islamic culture, whose ornamental repertory it enriched (see MAMELUKE ART; OTTOMAN SCHOOLS; SELJUK ART).

SUMMARY. Historical introduction (col. 438). Jewelry and minor arts (col. 441). Sculpture (col. 443). Petroglyphs (col. 446). Historicultural contacts (col. 448).

HISTORICAL INTRODUCTION. The ancient period (6th–10th cent.) in the history of the Turkic peoples was marked by the existence of powerful nomad states in Central Asia and farther west, following the consolidation of large ethnic groups, among which were the ancestors of the modern Tuvintsy, Altaitsy, Khakasy, Yakuty, Kirghiz, Kazakhs, Turkmen, Uzbeks, Bashkirs, Uigurs, and other large and small national groups now living in Central and West Asia and in southern Siberia. This period witnessed the crystallization not only of the ethnologic aspects but also of the basic cultural heritage of the Turkic peoples.

From the archaeological and historicultural standpoint, the early period of the various widely scattered Turkic-language groups is characterized by the emergence of common features in their material culture (weapons, trappings, ornaments, vessels, etc.) and a sameness in the fundamental peculiarities of their burial ritual (a basic variant being the burial with a horse), which is regarded as a touchstone in ethnology.

The old Turkic tribes first appeared on the historical scene in the middle of the 6th century, when they were mentioned under the Chinese form, Tu-Kiu. The nucleus of these tribes was formed by a cattle-raising nomadic people known as the Altai Turki, who excelled in the smelting of iron ore and manufactured weapons on what might be considered a large scale for that time. By 546 the Turki had become so strong that they included in their ranks the Gaogü (Tele), a tribe consisting of some fifty thousand families. In 552 the chieftain of the new confederation, Kagan Bumin, launched an attack against the Zhuan-Zuan, who had until then dominated Central Asia, and dealt them a crushing blow that annihilated their power forever. The main headquarters of the Turki were established along the Orkhon River, and Bumin's successors continued to engage in intensive military and political operations, which in the long run resulted in the creation of a huge empire that encompassed immense territories in Central Asia and southern Siberia.

At the end of the 6th century, as a result of a fierce political struggle, the ancient Turkic dominion split into an eastern and

a western khanate (kaganate). In 630 the eastern Turkic khanate was subjugated by the Chinese emperor T'ai-tsung (T'ang dynasty); but a half century later, in the 680s, following a rebellion led by Kagan Elteres and his chief advisor Tonyukuk, the Turki regained their independence. At the beginning of the 8th century the eastern Turkic khanate once more spread its dominion over a vast territory.

In 745 the power of the eastern Turkic kagans (khans) was again broken, and supremacy passed into the hands of Uigur khans. This, however, was a tribal and dynastic shift and did not bring about any clear changes in the ethnic map of Central Asia or in the culture of its nomadic population. Nevertheless, a fact of great significance in the cultural history of Central Asia ought to be mentioned — namely, the appearance of many fortified settlements, castles, and towns in the territory of Mongolia (q.v.) and Tuva.

In 840 the Uigur khanate fell as a result of the invasion of the Yenisei Kirghiz from the Sayan Mountains. From their homeland on the steppe of the Minusinsk Basin, hordes of the Yenisei Kirghiz crossed the Sayan Mountains on horseback, setting fire to the towns and nomadic camps of the Uigurs. Some of the Uigurs retreated into eastern Turkistan and Dzungaria, while others fled south toward Tibet. The hegemony of the Yenisei Kirghiz in Central Asia lasted for almost 70 years, until the beginning of the 10th century, when they were once more driven back to their own homeland beyond the Sayan Mountains. Many artistic monuments of the Central Asian Turki — their stone sculpture in particular — were destroyed or at least seriously damaged as a result of the invasion of the Kirghiz.

Despite the great political and military upheavals, the art of the Turkic nomads — jewelry-making, sculpture, and cliff carving — attained a significant level of development between the 6th and 10th centuries.

JEWELRY AND MINOR ARTS. Turkic craftsmen excelled in the production of gold and silver objects to satisfy the demand of the affluent nomadic aristocracy. A special qualitative analysis has revealed that the gold objects found in ancient Turkic kurgans (barrows) were made of high-standard, or "pure," gold.

The gold and silver plaques were made with a kind of mold: a thin sheet of gold foil was hammered with a miniature hammer onto a specially prepared wooden matrix of a given design, the foil was then cut along the contours, and the edges were bent under with small pliers. The plaques were secured to a bronze or leather backing with clamps, generally made of bronze; then they were ready to be attached to leather belts or harness straps (PLS. 219, 220). Bronze objects, in contrast to those made of gold and silver, were poured and were used without a leather backing.

The preferred shapes for ornamental plaques were flower- or leaflike forms. Articles made of bronze were mostly heart- or crescent-shaped, although some are rectangular with heart-shaped cutouts. A richly adorned belt was an indispensable item of attire for any member of the wealthy Turkic aristocracy. One such belt was found in the Altai (kurgan 1, Urochishche Tadila, Kurai steppe) in the tomb of a rich Turki named Ak-Kyun; one of the plaques on this belt carries an inscription that reads "Master Ak-Kyun's . . . sash." Other equally rich belts and parts of belt sets were found during the excavation of old Turkic kurgans in Tuva (Mongun-Taiga, Ulug-Khem), in Mongolia (Nainte-Sume, Dzhargalanty, Khushot-Khudzhirte), in the Minusinsk Basin (Kapchaly, Tyukhtyatski Klad), in Kirghizia (Chu Valley), and elsewhere.

Miniature vessels, most often made of silver (PL. 219), were extensively known throughout the Turkic world. These objects made by Turkic jewelers have been found in kurgans in the Altai, Tuva, and the Minusinsk Basin, and they were also widely represented on the Turkic stone figures of both chronological groups (see below).

Turkic metalware can be grouped in several categories according to shape and type. The first group consists of vessels with a spherical body, a high neck, and a vertical base from tombs in the Altai (Katanda, Kurai, Tuyakhta, Gurevski Zavod), in the Minusinsk Basin (Bidzha, Kopēny, etc.), and in Tuva (Mongun-Taiga). The second group is made up of ewers with an ellipsoidal body and either a vertical or a bent-away rim, which have been found in the Minusinsk Basin and among Sassanian goldware (VI, PL. 256; XII, PL. 402). The third group consists of small bottlelike vessels with a thin, long body and a high neck; the fourth group, of hemispherical bowls on a base that appears vertical in profile; the fifth, of large vessels with an ellipsoidal body and a sharply defined flared base; and the sixth, of hemispherical bowls.

Characteristic items of Turkic jewelry are the so-called "lyre" plaques, which were worn suspended from the belt by strips of leather; these bronze plaques with a heart-shaped opening (only one example made of iron has been found) came into wide circulation in the 8th and 9th centuries, toward the end of the ancient Turkic period, and thus serve as a reliable dating criterion. Standard examples of "lyre" plaques have been found in the Transbaikal region (Khoitsegorski necropolis), in the Minusinsk Basin, in central and southern Tuva (Ulug-Khem, Sagly, Mongun-Taiga), in the Altai (Kurai), and in Semirech'e during investigations of the Ak-Beshim ruins in Kirghizia, where in the territory of the Karluks they were mixed with Turgesh (Türgish) coins dating from the 8th century.

There was an important center of jewelry-making beyond the boundaries of the Turkic khanate, in the territory of the Khakas-Kirghiz state, which stretched along the middle Yenisei River. The early Kirghiz artisans, as well as their fellow craftsmen among the Turki, attained a high level of perfection.

Of great historic importance are the examples of jewelry found in the secret chambers of the old Kirghiz kurgans. (Those who prepared kurgan tombs for important persons, in an attempt to hoodwink grave robbers and gold hunters, placed the major treasures in concealed hollows dug beside the burial rather than in the tomb proper.) One of the kurgans of the Kopēny *chaatas* contained four gold vessels set upon a silver tray (the more massive pieces weighed 593 gr. and 780 gr.). The vessels were overlaid with an intricate ornamentation of various plant motifs and depicted fantastic griffins clutching fish in their beaks. Other secret chambers yielded gold plaques from belt sets, with figures of fantastic birds, fish, and geese, and a gold dish with stamped ornamentation. Of very special interest is a series of artistic bronze objects that constitute a hunting scene: galloping horsemen with bow and arrow shooting at snow leopards, roes, deer, and wild boar.

The art of jewelry-making of the Kirghiz shows an obvious kinship with the art of Sassanid Iran (see SASSANIAN ART). This influence is visible not only in their ornament but also in the subject matter of their compositions.

The Tyukhtyat treasure (consisting of 178 bronze and iron objects) was found accidentally during work along the Kazyr River in the Minusinsk Basin; it was attributed to the 9th–10th century on the basis of coins that date to the end of the 9th century. The most numerous items in the treasure were trappings (136 items). There is some reason to believe that the treasure mainly represents the handiwork of an unknown Kirghiz craftsman who was a master smith, caster, and jeweler (various tools of the trade were found among the objects). The ornamentation on the harness plaques shows the influence of T'ang motifs (see CHINESE ART). Artistic objects similar to the Tyukhtyat items have been found in excavations in Tuva (Sut-Khol region, Tora-Tal-Arty necropolis); these finds belong to the period between 840 (the beginning of the Kirghiz expansion over the Sayan Mountains) and the beginning of the 10th century (the period of their retreat into the Minusinsk Basin).

Decorated horn and bone articles were widely distributed throughout the Turkic world. The ornamental motifs include not only geometric and plant designs but also a circular pattern — the so-called "dot-and-circle" — which originated far back in pre-Turkic antiquity as a symbol for the sun, heat, and light. [A prototype of this ancient circle pattern appears on the oldest known Central Asian wooden instrument for lighting a fire by friction, found at Sagly-Bazhy II in Tuva, in a burial of the Pazyryk period (5th–4th cent. B.C.).] The Turkic bone and

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

horn carvers left examples of intricate ornamentation on quiver facings (Mongun-Taiga, Uibat II). Plant designs appeared even on birch-bark quivers, as attested by an extraordinary specimen excavated in the Kargy River valley in southwest Tuva.

There are also excellent examples of narrative carvings. Deservedly famous is the scene of a battue depicted with great artistry and expressiveness on the plaque of a pommel facing found in the Kudyrge necropolis in the Altai, which is analogous to the plaque found in the Kara-Kudzhur burial in T'ien-shan. In a child's grave in the same necropolis was found a stone with a ritual carving depicting a richly attired female figure wearing a three-horned tiara, a child, kneeling men, holding the reins of their horses, and a male mask that seems to be a prototype of the *balbal* statues (see below: *Sculpture*). The Kudyrge stone composition evokes the prevailing relationship of overlord to subject in the Turkic world. There are valid grounds for thinking that this composition describes a moment in the tribute-offering ceremony. Ancient Turkic texts several times refer to their warriors forcing by the might of arms "those who had heads to bow them, and those who had knees to bend them." Kneeling was the expression of the unconditional submission of those who had become the vassals of the Orkhon-Yenisei Turki.

The female figure on the Kudyrge stone is usually taken to be a representation of the goddess Umai, one of the major deities in the pantheon of the Central Asian Yurki, by whom she was venerated as the goddess of fertility, as the guardian of chi dren, and — most significantly — as the patron goddess of war. Little wonder, then, that in an inscription dedicated to the wise Tonyukuk (councilor and prominent personage of the eastern Turkic khanate) the account of a victorious campaign ends with the following words: "Heaven, [the goddess] Umai, the sacred Fatherland [land–water], it was they, then, who granted us victory."

SCULPTURE. The ancient stone sculptures and images (PLS. 217, 218) found in the immense territory once occupied by the Turkic tribes are among the most remarkable art monuments left behind and impart a characteristic touch to the archaeological panorama of Central Asia and more western regions, of the Altai and Kazakhstan. By far the largest number of sculptures — 113 examples — discovered to date have been found in Tuva, while only 29 have been noted in the Altai, 23 in Mongolia, and 6 in the Khakass Autonomous Region. Slightly more than 200 statues in all have been found scattered throughout the Semirech'e territory and in neighboring areas of Kazakhstan.

The sculptures may be divided into two chronological groups: the majority of the statues belong to the 7th and 8th centuries and are set up near rectangular slab enclosures; rows of simple, vertical *balbal* stones diverge from the main sculpture and the nearby enclosure; the later works, of the 8th and 9th centuries, are not situated near enclosures. The sculptures within each chronological classification can be subdivided into two types: those showing the full human figure and those showing only the head or face.

Judging by the figures that remain standing in the steppe and mountain valleys, the orientation of the stone images was dictated by certain strict laws, since the majority of them face east or southeast. The orientation of the *balbal* stones always corresponds to that of the main sculpture and the enclosure.

The ritual significance of the sculptures is intimately related to that of the Turkic enclosures with steles; this relationship is so obvious that it may be asserted beyond doubt that these two types of monuments are variant expressions of one and the same system of beliefs. All present evidence indicates that the statues and the steles situated near enclosures have the same symbolic content.

The dating of the sculptures was arrived at on the basis of the "inventory" (articles) shown in the carving. In most cases the statues represent a warrior holding a vessel in his right hand, less frequently one in each hand. By comparing the objects that appear on the stone figures with articles found in Turkic burials in the Altai, Tuva, Mongolia, the Khakass region, Transbaikal, Kazakhstan and Kirghizia, it is possible to place the statues with certainty between the 7th and 9th centuries. Many of the figures discovered in Central Asia and in western Asia and southern Siberia constitute a high point of Turkic stone carving.

The question of whom the stone figures represent has been the subject of sharp controversy in the archaeological literature devoted to Oriental studies. The supporters of one theory hold that (except in the case of the Orkhon group in Mongolia) they represent important personages of the Turkic Tu-Kiu (Chinese Tu-chüeh); others express the opinion that the statues represent the more powerful enemies defeated by the Turkic warriors.

The solution to the puzzle lies largely in the dynastic chronicles of the Northern Chou and Sui dynasties and in ancient Turkic texts. A fragment of one of the chronicles reads: "Inside the building erected at the grave site are placed a drawn or painted image of the deceased together with an account of the battles in which he took part during his lifetime. Usually, if he killed one man, then one stone was put up. Some have stones numbering up to a hundred, or even to a thousand." The texts of the Orkhon-Yenisei are in full agreement with the dynastic chronicles; numerous references bear witness to the fact that the Turki followed the ritual practices described by the chroniclers. The Turkic texts show that the Turki used the word *balbal* for the stone image of a defeated and destroyed enemy whether the latter had been a great and mighty foe or just a simple warrior killed in battle. There are many such indications, all of them pointing to the same significance of the *balbal* statues as representations of vanquished enemies. Thus, for example, the text honoring Kül Teghin (in a passage attributed to Kagan Bilga) states: "In honor of the Kagan, my father [Kagan Elteres, Bilga's father], at the head [of the row of funerary stones] was placed the *balbal* of Baz Kagan. . . ." The same text goes on to explain that Baz Kagan had been one of the most powerful enemies of the Orkhon-Yenisei Turki and that he was finally defeated by their armies. A careful study of the dynastic chronicles reveals that the concept of "a drawn or painted likeness of the deceased" does not appear in the older, Chou dynasty text, which refers instead to a "stone token"; thus there is no contradiction between the chronicle and the evidence presented by Turkic sources.

Of extreme importance in determining the true meaning of the Turkic stone figures are some archaeological and historico-ethnographic finds which indicate that the stonecutters sought to underline the foreign ethnic origin of the people they represented; in every instance where the features of a face are indicated, the features characteristic of the Mongolian anthropological type are emphasized, whereas the anthropological type of the nomads who at that time lived in the areas where the statues were found (e.g., Tuva, Mongolia, the Altai) were, without question, predominantly Caucasian. The weapons shown on many statues are of a type used by alien and hostile tribes (e.g., the Uibat type of daggers); where clothing is shown in detail, it is apparent that the garments overlap from right to left rather than from left to right as was the custom among the Turki of Central Asia. In addition, it must be pointed out that the interpretation of the stone figures as representations of defeated foes has survived to modern times in the oldest heroic poetry of the Tuvintsy, one of the most ancient peoples of Turkic origin, and in the folklore of a number of Siberian peoples, such as the Kety, Selkupy, and Evenki.

All the details shown on the ancient Turkic stone figures are of great archaeological and historicoethnological interest: the clothing, the headdresses, the style of the hair, beard, and mustache, the earrings, the weapons, the belts and belt ornaments, the small pouches for carrying various trifles (*kaptargaki*), and the vessels.

Although the clothing is frequently indicated, details are scant. The usual neck opening suggests that the outer garment (*caftan*) is represented. The sleeves usually have narrow cuffs, which are shown in relief. Occasionally, there appear broad facing bands with a deep opening at the front. The manner of overlapping the clothing is indicated; this was a distinguishing ethnic characteristic in Turkic times, which, together with the

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

hair style (worn loose and shoulder length or plaited into braids) served to identify members of different tribes and ethnic groups that often inhabited adjacent territories. The hair style and manner of overlapping the clothing even played an important role in the diplomatic etiquette observed by Central Asian rulers of unequal rank and importance. As far as can be determined, the garments shown on the stone figures overlap from right to left, a custom alien to the Orkhon-Yenisei Turki.

The headgear shown on the Turkic statues of warriors is most often a small cap shaped like a truncated cone — a type that has survived to modern times and has much in common with the caps of the Kazakhs. Much less frequent are tall, conical hats of a type that is known to have been widespread in Scythian times (an example in fur was found in Barrow II at Pazyryk in the Altai, 5th–3d cent. B.C.). Some of the stone figures have tall hats with the tip bent forward; this type of headgear was common in Central Asia before the Turkic period, in Hunnish times, and they are usually compared to the hats of Noin-ula.

The stone figures often show the hair parted in the middle. All the Turkic ritual statues represent men, and therefore a mustache and beard are often indicated. As a rule, the mustache was worn with the ends curled up; a straight mustache is rarely found. Two types of beard have been recorded: a small goatee (shown in relief) and a sparse, longish beard. A big, bushy beard is extremely rare. A number of statues of the later period have plaited hair.

The earrings on the statues are of two kinds: oval ones with a shaft and pendants, and those with tiny spheres soldered on the lower edge.

Weapons are shown on many of the figures, underscoring the fact that these are warriors. Two types of light arms appear: swords and daggers. Swords of the type represented on the statues were in common use in the great steppe belt during this period, as attested by the swords with cross hilts found in the Altai (necropolis near the village of Srostki), on the upper Ob River (the village of Bolshaya Rechka, site BE VIII), in the Caucasus and Hungary, and elsewhere.

The majority of the daggers shown in the sculptures are of the so-called "Uibat type." Very similar daggers with the same peculiar shape (the hilt bent at an angle to the blade) were widely used. Examples have been found in the Uibat *chaatas* (Khakass region), in a necropolis at Arkhiereiskaya Zaimka near Tomsk, in the Borisov necropolis (northern Caucasus), and at Kupyansk (Kharkov region).

The belts on the stone figures are shown with decorative plaques and with a variety of objects suspended from them, as was customary in Turkic times. The plaques come in two basic designs: rectangles with figured cutouts, and crescent shapes (similar types have been found in nomad settlements in the Altai, Tuva, the Minusinsk Basin, western Asia, and Hungary). "Lyre" plaques are frequently represented on the stone figures of the later period. Along with the belts are shown small pouches for carrying various trifles, such as pieces of steel or flint with tinder and amulets; identical pouches made of leather, fur, felt, and silk have been found in Turkic burials in the Altai (Kurai steppe) and in Tuva (Mongun-Taiga). Similar pouches for small change are still used by the Altaitsy.

Vessels are shown on many statues, but why they are represented remains a mystery. Most of these illustrate types of vessels that have been recovered from kurgan burials, such as silver vessels with a spherical body and high neck, ewers with an ellipsoidal body, phials, and hemispherical bowls.

The final stage of the Turkic nomads' statuary art is represented by the numerous stone statues of the Polovtsy (also known as the Comans, Kumans, or Kipchaks), which abound in the south of Russia. These statues were accurately described by Guillaume Rubruquis (William of Rubruck), a 13th-century traveler and envoy of the French king Louis IX. Both male and female figures have been recorded among the Polovtsian statues, which are known to have had an altogether different meaning from the earlier stone monuments of Central Asia. And yet exploratory excavations have shown that, like the stone figures of Central Asia, the Polovtsian statues of southern Russia are not funerary monuments: the kurgans on which they are erected do not contain nomad burials; they belong to earlier historical periods and thus serve merely as a kind of "pedestal" for the Polovtsian memorial figures.

In the eastern territories occupied by the Turki — Mongolia, Tuva, the Altai, eastern Kazakhstan — the custom of erecting stone statues came to an end in the 9th century. The western Turkic nomads, however, continued until later times practices that harked back to the ancient rituals of the nomads of Central Asia. The Arab traveler Aḥmad ibn-Faḍlān ibn-Ḥammād, who visited the Volga region and Central Asia in 921–22, reported that when a Turki was buried, "if he had ever killed a man and had been brave, [they] then carved an image in wood, one for every man he had killed, and placed them on his grave, saying, 'These are his pages who will wait on him in paradise.'" The wooden images mentioned by ibn-Faḍlān correspond to the older *balbal* of the Central Asian Turki. It is difficult to determine how long the Oguz continued the ritual of setting up images of enemies. It is significant, however, that the word *balbal* is not to be found in the dictionary of the Polovtsian (Coman) language, compiled by a Venetian living in the Crimean city of Solkhat (now Stary Krim); the dictionary, containing more than 1,500 words translated into Latin and Persian, was compiled at the beginning of the 14th century, but based on the vocabulary of the 13th century. [This is the well-known *Codex Cumanicus o Alphabetum Persicum, Comanicum et Latinum* (Venice, Bib. Marciana, Cod. lat. DXLIX), which had belonged to Petrarch, who left it to the Venetian Republic (see K. Grønbeck, ed., Codex Cumanicus, in *Faksimile herausgegeben mit einer Einleitung*, Copenhagen, 1936).]

The stone figures and their accompanying complexes were erected not only in observance of a ritual but also in pursuance of a very definite social objective: to spread far and wide among the masses of the nomads the conviction that the khanate was durable and invincible. For that reason the stone statues were erected in well-frequented places, where they would be seen by many people, serving both to remind them of the khanate's glorious victories in the past and to spur them to take part in new dangerous and distant campaigns. To this end, the sculptures — on which the Turkic craftsmen spent so much effort — were set up along the busiest tracks and caravan routes.

Indubitably, the Turki also used statuary of a commemorative nature (i.e., monuments that portrayed their most notable personages), which had no direct relationship to the *balbal* figures. Thus archaeological excavations in Mongolia have brought to light, in the region of the kagan monuments, a sculptured portrait of Prince Kül Teghin, who is mentioned in the chronicles. From the stylistic point of view this portrait has nothing at all in common with the *balbal* carvings.

Another noteworthy type of sculpture consists of marble turtles; in the holes in the turtle's back were placed clamps to support steles with memorial inscriptions in honor of the outstanding political and military figures of the khanate.

PETROGLYPHS. Old Turkic petroglyphs have been discovered in many places in Central Asia and to the west: in Mongolia (Ulan Khada, Barshin-gol, Mukur, etc.), in Tuva, in Kazakhstan (upper Irtysh, Chulak Mountains, Chu-Ili Mountains, Tamgaly, etc.), in Kirghizia (Saimaly-Tash, the right bank of Lake Issyk Kul, etc.), in the Pamir (Lyangar), and in eastern Turkistan (Khargos, Dzhaosu, Tekes, Boshan range).

The predominant motif in Turkic cliff carvings is a stylized representation of the mountain goat, of which examples numbering in the thousands are known; figures of other animals are found much less frequently. In a majority of cases the mountain goat is shown in motion, most frequently in the act of jumping; a static position is relatively rare. In contemporary literature these petroglyphs are referred to as Churuktug-Kyrlan types after the place in the Bai-Tal region of Tuva where the first mass discovery of these carvings was made.

From the point of view of style the distinguishing feature of the cliff carvings is a considerable degree of conventionalization: the few essential strokes that indicate the outline of the

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

animal's body and the meager details by no means reflect the animal's true size and proportions. Except for the sharply curved horns, the images were produced by chiseling away small strips of the rock surface; almost all the figures are in full profile, and the carving of the details is of equal depth.

While in most instances the figures of mountain goats are not part of a composition, they do occasionally appear in a hunting scene (mountain goats were among the animals most frequently hunted by Turkic tribesmen). Shown in cliff carvings are hunting scenes with dogs, hunts by means of pits and traps, and battues; hunters armed with bows are also depicted. In an unusual composition discovered on a cliff at Bazhiktig-Khaya (central Tuva) the mountain goat figures are intermixed with images of horned chaman masks.

As a rule, Turkic cliff carvings are found interspersed among older Scythian and Hunno-Sarmatian carvings; the cliffs on which they appear seem to have been considered a kind of sanctuary, and for more than a thousand years artists covered them with carvings, choosing the southern slopes of the mountain ridges and, particularly, the cliff surfaces covered with so-called "desert varnish."

The dating of the cliff carvings constitutes one of the most difficult archaeological problems in the study of Turkic art. In order to solve the problem it has been necessary to define the style and determine the meaning of the images, and to compare the articles portrayed in the carvings with reliably dated material counterparts or with other representations. A comparative study has revealed that these cliff carvings are like the *tamga* (lit., "sign of property") discovered on a number of monuments in the Orkhon valley in Mongolia. There, among the monuments with steles dedicated to the prominent Turkic khan Kül Teghin and his brother Bilga, *tamga* signs in the shape of mountain goats designating the name of the kagan (khan) or of someone of equal rank have been found. V. L. P. Thomsen (1842–1927), the famous philologist and Turkologist who deciphered the old Turkic writing, even conjectured that these *tamga* symbols were the word "kagan" written in the Orkhon script.

Clues to the semantics of the *tamga* are provided by biographical data on Kül Teghin and Kagan Bilga. These two men were both nephews of Kagan Merchö, who became known for his savage and devastating incursions into the territories adjacent to the Turki. On his way back from his last military expedition, warriors of the Bayirku tribe, which he had in the past soundly defeated, ambushed and murdered him. His death signaled the start of an internecine struggle in which Kül Teghin played a leading role; he attacked the dead kagan's oldest son, defeated and killed him, and then finished off all the kagan's other sons as well. Instead of assuming the title of kagan, Kül Teghin bestowed it upon his elder brother, Bilga, who in turn named Kül Teghin commander-in-chief of the Turkic armies and eastern Chzhuki-prince (a high political title).

Kül Teghin died in 731, three years before Kagan Bilga; the latter took his brother's death very hard, and the funeral was held with all the pomp which characterized the burial ritual of the Central Asian Turki. Kagan Bilga died in 734; in the place reserved for the kagan's name on the memorial erected in his honor appears exactly the same *tamga* in the form of a mountain goat as on the stele commemorating Kül Teghin; thus the symbol for "kagan" appears not only on the stele commemorating the kagan himself but also on the one for his brother. Bilga thereby meant to express his recognition of Kül Teghin's military and political services and his indebtedness for having been placed on the throne; by having the kagan's *tamga* carved on Kül Teghin's memorial, Bilga no doubt also wanted to proclaim that Kül Teghin deserved the highest honors, those normally reserved for the kagan alone.

Emblems such as these have been found on several other monuments in the Orkhon Basin: on a slab north of the Kül Teghin complex, on a stone figure and two steles in the valley of the river Ongin, on a stone slab in Askhet, and on a marble turtle from a group of Turkic tombs on the Mukur River. In Tuva these *tamga* symbols have been found not only in cliff carvings but also on Turkic monuments: on a stone figure in the Sagly valley, on a stone figure and *balbal* rocks in the Ulaatai River valley, and on memorial steles with inscriptions in the Khachy valley. All these *tamga* emblems on the Turkic monuments were undoubtedly the prototypes of many thousands of cliff carvings in Tuva, Mongolia, the Altai, Kazakhstan, Central Asia, and Sinkiang. Owing to this analogy it has been possible to determine objectively and beyond doubt the period of time when the widely distributed Turkic cliff carvings were made.

With the exception of a relatively small number of memorial representations at Teve-Khaya in Tuva and at Bogdo Uula in Mongolia, which were executed in the ancient Mongolian era, cliff carving as a widespread practice ended with the ancient Turkic period, and the Turkic petroglyphic tradition subsequently died out. However, ethnographic evidence indicates a persistence of the ideological concepts linked to the ancient cliff carvings until relatively late times, reflecting totemistic beliefs that are closely associated with historical periods in which hunting is the major and determining economic activity of a people.

While it is true that in a number of places, such as Tuva and Mongolia, the custom of carving animals on cliffs ceased, popular tradition has brought down to our day figures that resemble those of the ancient petroglyphs. The link between ancient and modern representations is seen in the totemistic concepts current among the Sayan-Altai peoples (see SIBERIAN CULTURES). The amazing parallelism between the ancient cliff carvings and the figures on contemporary or almost contemporary objects must be attributed both to the conservative nature of shamanism (q.v.) and, above all, to the vitality of totemistic concepts. In a number of cases it is possible that the figures and compositions used on objects were copied directly from petroglyphs.

HISTORICULTURAL CONTACTS. Historicultural contacts spanned enormous distances, from the Chinese frontiers on the east to the confines of Byzantium on the west. Analysis of the archaeological finds offers irrefutable evidence of the existence of broad cultural contacts between peoples living in widely separated territories of Central Asia and to the west. The culture as a whole reflects a significant number of common aspects in the life of the nomads in various areas of the Turkic khanates. These similarities are exhibited not only in the decorative arts and in monumental sculpture but also in many of the archaeological artifacts, such as weapons (whistling arrows, bows, knives, daggers, swords), trappings (bits with typical S-shaped cheek bars, stirrups with lamellate or looped irons), various clasps (buckles), kettles, and other objects found in Turkic kurgans.

Cultural likenesses are sometimes so pronounced that ethnic boundaries are difficult to determine. However, other cultural remains — primarily the monuments, such as the enclosures with steles and *balbal* figures — make it possible to circumscribe exactly the boundaries of the khanate of the Central Asian Tu-Kiu. When these monuments are plotted on a map, a certain break becomes apparent in the expanse between the Central Asian area south of the Sayan Mountains and the territory of the Minusinsk Basin, where the Khakass khanate existed in the Turkic period. This is not surprising, for both of these unified nomad empires were for long periods engaged in incessant hostilities.

The nomadic Turkic world was in continual cultural contact with the China of the T'ang period, as corroborated by numerous finds of imported goods: silk and woolen fabrics, mirrors made of a special "white" metal, coins, and some items of jewelry. The flow of Chinese goods into the Turkic world was least of all the result of trade; most of these goods were war booty and gifts or tribute sent by the Chinese emperors in the hope of placating the warlike people of the steppe.

The nomads also came into possession of articles from distant cultures to the west; even objects made by Byzantine craftsmen reached Central Asia. Striking examples of the syncretism of various art forms are found in Western Asia, especially in the regions of Semirech'e and Tien-shan. The art objects found in the investigation of the Sukuluk ruins (Chu

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

valley) — the terra-cotta figurines in particular — attest to influences from Sogdiana (q.v.) and from Sassanian and Indian art (qq.v.), as well as to unquestionable effects of the cult of Zoroastrianism (q.v.). Many specimens of bractea (stamped ornaments made by obtaining a coin impression on gold foil) were stamped from Byzantine coins. The fact that in the Karluk period (8th–10th cent.) Islam had not yet been adopted throughout the Semirech'e region certainly had a repercussion on the development of the arts. It was just at this time, however, that the city of Taraz on the Talas River played a significant role as the easternmost outpost of Islam. In Taraz a polychrome pottery with bands of Arabic inscriptions in Kufic characters on a white background, typical of the Samanid area, was in common use (see SAMANID ART). In the Karluk period Arabic inscriptions on vessels were widely used in western Asia. These inscriptions were as a rule expressions of a good wish, or more rarely the signature of the craftsman (e.g., "made by Yusuf").

In the reconstruction of the historicultural and ethnic contacts — which in the Turkic period extended between the mountains and steppes of Tuva and Mongolia and the territories of western Asia, Kazakhstan, and eastern Turkistan — a significant contribution is made by the petroglyphs. Comparative study of the cliff carvings is based on a number of research principles, the most important of which are the following: (1) the comparing of the most numerous series of images possible, which will yield good results if a series of carvings very common in one area is compared with equally well-represented series in other, distant territories; (2) the according of due importance to stylistic traits, which are also important as a dating criterion; (3) the evaluating of the respective semantic meanings of the compositions and, in conjunction with this, the comparing of the relative spacing of the component figures; (4) the working out of an absolute chronology of cliff carvings, without which they would be useless as indicators of intercultural and intertribal contacts.

Petroglyphic investigation has become one of the most fruitful fields of study for reconstructing the contacts and movements of various ethnic groups, since the cliff carvings are a tangible record of the exchanges that took place between distant territories. Cliff carvings, unlike many other artistic or utilitarian objects, could neither change hands nor be moved from place to place; therefore, the existence of identical or similar cliff compositions in places geographically far removed from one another gives an idea of the movements of vast masses of Turkic nomads.

The distribution of the mountain goat emblems, or Churuktug-Kyrlan type of representations, in Mongolia, Tuva, the Altai, eastern Kazakhstan, Kirgizia, and Sinkiang provides sure evidence of the actual area of the movements of the Turkic tribes. The results of the comparative study of petroglyphs lead in turn to the conclusion that the main current of ethnic and cultural contacts flowed from east to west, the cliff carvings themselves being the landmarks of the ethnogenetic processes that unfolded over the wide expanses from the Sayan and Khangai mountains in the east to the peaks of the T'ien-shan and the Pamir and Altai ranges in the west.

The study of Turkic art (the jewelry in particular) reveals, despite its originality, significant influences from a number of Eastern and Western cultures.

The diverse history of the various Turkic-language peoples in later periods was determined by the stormy period of the formation of the Mongolian empire and by the subsequent development of feudalism. Many Turkic-language tribes found themselves included in different political units and frequently isolated from one another. As a result of new cultural conditions, many old artistic traditions were lost forever, and others underwent such modifications as to become unrecognizable. The culture of the Turkic peoples in later periods of their history owed a major debt to the peoples of western Asia and still more western territories who had been assimilated by the Turkic newcomers from the east. But, in spite of the divergent historical evolution of the Turkic tribes, there persist in the artistic traditions of these peoples tangible artistic traits of the old Turkic culture, whose birthplace was Central Asia.

TURNER, JOSEPH MALLORD WILLIAM. An English landscape and marine painter, Turner anticipated the impressionists in his treatment of light and atmosphere. The son of a barber, he was born on Apr. 23, 1775, in London, received little education, and showed his taste for art at an early age (some drawings in the British Museum were done when he was only twelve). Like so many of his generation, Turner started his career as a topographical draftsman. He probably had some training under Thomas Malton the Younger (1748–1804); then he studied (1789–93) at the schools of the Royal Academy, where he began exhibiting water colors in 1790 and oil paintings in 1796. In these years he was an assiduous copyist of works by P. Sandby and John Robert Cozens and formed a friendship with Thomas Girtin, whom he met at the house of Dr. Thomas Monro, an amateur and collector. Turner quickly rose to fame, was elected Associate Royal Academician in 1799 and Royal Academician in 1802, and from 1808 to 1838 was professor of perspective at the Royal Academy.

After traveling around Wales, Yorkshire, the Lake District, and Scotland (where he was to return in 1831 as the guest of Sir Walter Scott), he made his first journey abroad in 1802 (during the brief peace of Amiens), visiting Paris and Switzerland. In 1804 he opened his own gallery on Harley Street; later it was moved to Queen Anne Street, where his works remained until his death. In his early years Turner worked much for engravers, attempted historical painting (*Death of Nelson*, 1808; London, Tate Gall.), occasionally painted country houses, and perfected himself as a painter of landscapes. Among his patrons was the Earl of Egremont, who became a close friend and later invited the artist to Petworth; the 20 pictures the Earl purchased are still preserved there. Another patron was Walter Fawkes of Farnley Hall, Yorkshire, where Turner

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

used to stay nearly every summer between 1810 and 1824. In 1819 he visited Italy for the first time, spending three months in Rome, then going to Naples and returning via Florence and Venice. He filled many sketchbooks with drawings and water colors and on his return painted a number of important pictures of Italian subjects, most of them now at the Tate Gallery in London. He revisited Rome in 1828, when he exhibited some of his paintings there, and in 1835 and 1840 returned to Venice. His annual tours, which took him to France, Germany, the Netherlands, Switzerland (with H. A. J. Munro of Novar in 1836), and Austria, ceased in 1845. In the last years of his life he began to suffer from ill health, but he continued to exhibit until 1850. He died in Chelsea on Dec. 19, 1851, and was buried with honors in St. Paul's Cathedral.

Turner was a man of robust constitution, short and ungainly in appearance, frugal in his personal tastes, and with unbounded energy in all that concerned the pursuit of his art, working long hours and undertaking extensive journeys in search of subjects. He never married, had no pupils, and was secretive about his methods, not allowing anyone to watch him at work. Toward the end of his life scurrilous legends grew up about him, for he was living with his landlady under an assumed name, though this may have been no more than an artist's natural defense against social interruptions. His will left all the paintings in his possession to the nation and directed that his money be used to found a charitable institution for poor artists; this was contested, however, and after five years of litigation the money went to his distant relatives. A selection of 34 paintings was shown at the National Gallery, London, in 1857; and John Ruskin, who had written *Modern Painters* in defense of Turner's work, was entrusted with the selection of the water colors that were shown at Marlborough House in the same year. The condition that the bequest be displayed as a whole and that a gallery be built to house it was not carried out until 1908, when Sir Joseph Duveen the Elder built the Turner wing at the Tate Gallery, where a number of the oil paintings now hang and the process of cleaning and examining the less-finished works continues. The more than 19,000 drawings and water colors were deposited in the Print Room of the British Museum after the storerooms of the Tate were flooded in 1928.

The concentration of so much of Turner's work in London has been detrimental to his reputation. It is impossible to study his work on the Continent, but there are some fifty important oil paintings in United States and Canadian museums such as the Metropolitan Museum and other collections discussed below.

In early life Turner mastered the art of drawing and water-color painting (PL. 222) with a perfection that has never been surpassed. He used every known device, sometimes relying on the most delicate washes or building up rich tones that almost rival oil painting. Gradually his style changed from topographical recording to a romantic interpretation of the moods of nature. Gothic architecture was a favorite subject. Though in treatment and color his water colors soon became revolutionary, in composition they always retained the grace of the 18th century. The water colors, on the whole, found purchasers more readily than the oils and are more frequently signed and dated; they are therefore widely scattered in public and private collections.

Accurate observations of every kind of natural and architectural form, made in his early life, coupled with his extraordinarily retentive memory, enabled Turner in his later period to dispense with detail and yet retain the sense of mass and structure. He seems never to have painted his finished work, whether in oils or water colors, direct from nature — and for this reason was not hampered by considerations of exact topographical accuracy — but his sketchbooks are filled with color notations of the utmost delicacy and beauty, done probably, if not on the spot, at least soon after he had seen the particular effect he wished to record. The water colors of his middle and late period include, apart from records of his journeys, illustrations to the poetic works of Byron, Scott, and Samuel Rogers; the illustrations for Rogers's work are delicate vignettes that set a new fashion in book illustration.

Turner began working for engravers in 1794, and in 1805 *The Shipwreck*, the first of many plates of his paintings (XII, PL. 317), was published, thus reaching a wide public. The following year he started the publication of his *Liber studiorum*, which was issued in parts of five etched and mezzotinted plates, designed to emulate the *Liber veritatis* of Claude Lorrain (q.v.). In 1819, when 71 plates had been published, the project was abandoned, perhaps because Turner had turned to steel engraving and had trained a group of engravers to produce work of fine quality, which was to have a lasting effect throughout the 19th century.

Among the earliest oil paintings in the Turner Bequest are views of Buttermere Lake and Coniston Fells, both exhibited in 1798. Though low in tone, they already show a remarkably subtle gradation, producing the hazy atmospheric effect characteristic of England. Soon after, Turner began a series of experiments in the style of other painters, which are not so much imitations as attempts to master and, where possible, surpass the achievement of the painters he most admired, among them Richard Wilson (1713–82) and Claude Lorrain, who enjoyed a great reputation among English collectors. When Turner was in Paris in 1802 he made elaborate notes of the pictures he saw in the Louvre. Titian and Poussin (qq.v.) were among the painters who aroused his admiration, and in the following years he made several experiments in their respective styles: *Venus and Adonis* (New York, Gall. of Modern Art, Huntington Hartford Coll.) and *The Holy Family* (London, Tate Gall.) recall Titian, and *Chateâux de St. Michael, Bonneville, Savoy* (London, Tate Gall., Stephen L. Courtauld Coll.) and *The Destruction of Sodom* (1805; PL. 223) are attempts to rival Poussin. In 1807 Turner exhibited the first of his genre subjects, probably inspired by Sir David Wilkie's success in reviving the style of Teniers (q.v.), and also painted a number of oil sketches from nature, mostly of the Thames (PL. 221). As direct transcripts of tone and color they invite comparison with Constable (q.v.) and no doubt served to clear his palette and free his style from the compositional trammels of the past. In the succeeding decade he painted a number of English scenes in which the study of light and atmosphere are accompanied by a great freedom of design, as in *Linlithgow Palace* (1810; Liverpool, Walker Art Gall.), *Somer Hill, Tunbridge* (1811; Edinburgh, Nat. Gall. of Scotland), and *St. Mawes* (1812), *Frosty Morning* (1813), *Crossing the Brook* (1815), and *England: Richmond Hill* (1819), all in the Tate.

At the same time he was developing his skill as a marine painter, first in a manner similar to Van de Velde (*Dutch Boats in a Gale*, 1801; *Mertoun, St. Boswells, Scotland*, Earl of Ellesmere Coll.), later with more immediate observation of nature (XI, PL. 156), as in *Calais Pier* (London, Nat. Gall.), painted in 1803 after his first crossing of the Channel; and in 1818 his famous *Dort or Dordrecht* (Farnley Hall, Yorkshire, Major Le G. G. W. Horton-Fawkes Coll.) was obviously a tribute to Cuyp (q.v.). In those days of dangerous seafaring the theme of shipwreck was surprisingly popular, and Turner approached the problem with originality. One of his most ambitious works in this category is the *Wreck of a Transport Ship* (1810; Paris, Gulbenkian Coll.). Here, as in the *Snowstorm: Hannibal and His Army Crossing the Alps* (1812; PL. 224), he achieved a sweeping breadth of design that completely dominates the subject. It was probably Claude Lorrain's inspiration that led Turner to paint a number of Carthaginian subjects, variations on the theme of a seaport with classical buildings. While he lacked Lorrain's lucidity of design and clear light, Turner undoubtedly came nearer to nature in the rendering of atmosphere and sunlight effects (PL. 221).

After his first visit to Italy his coloring became much purer. The grays and browns he had used tended to vanish from his palette, and the first Italian compositions he exhibited — *Rome, from the Vatican* (1820), *The Bay of Baiae* (1824), and *Rome, the Arch of Titus and the Forum Romanum* (1826; PL. 224), all in London (Tate Gall.) — are glowing with tones of orange and mauve, yellow and blue, so that, in the last-named picture, the reflected lights under the arches of the Basilica of Maxentius produce a sparkling effect. In these years he painted the

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

two great pictures of Dieppe and Cologne (New York, Frick Coll.) and the two views of Mortlake Terrace (New York, Frick Coll.; Washington, Nat. Gall.). In 1827, while staying with the architect John Nash on the Isle of Wight, he sketched a number of delicate studies of the regatta at Cowes (London, Tate Gall.), and in 1828 he exhibited the painting of the same scene (Vict. and Alb.). The fantastic element prevails in the sonorous colors of *Ulysses Deriding Polyphemus* (1829; PL. 225). A number of figure subjects exhibited or attempted during this period appear to be inspired by Rembrandt but are more diffused with light and generalized. Turner usually treated figures as part of a crowd rather than as individuals, and these masses of figures are an integral part of the scenes, as in *Pilate* (1830; London, Tate Gall.). In the 1830s he painted *Palestrina* (London, Nat. Gall.), *Childe Harold's Pilgrimage* (PL. 225), three pictures of Admiral Van Tromp, and a number of Venetian subjects (PL. 221) with ever-increasing mastery and opalescent color. An obsession at one time was the combination of different sources of light such as sunset, moonlight, and firelight. The sight of the burning of the Houses of Parliament in 1834 may have set him off on this course. In 1835 he exhibited his two paintings of the fire (Cleve. Mus.; Philadelphia, Mus. of Art), as well as the *Keelmen Heaving in Coals by Night* (Washington, Nat. Gall.), and in 1837 *The Parting of Hero and Leander* (London, Tate Gall.). The unfinished *Fire at Sea* (London, Nat. Gall.) probably also belongs to this group, as well as *Rockets and Blue Lights* (1840; Williamstown, Mass., Sterling and Francine Clark Art Inst.) and *The Slave Ship*, of the same year (Boston, Mus. of Fine Arts).

Compositional devices in this late period became more complex. He endeavored to embrace an ever-wider scene and, instead of leading the eye toward a central vanishing point, sometimes tended to introduce a diversion sideways. Instead of being constructed in the theatrical manner on a rectangular stage with a backcloth, Turner's later compositions often produce the effect of being disposed within a hollow sphere or ovoid. Sometimes sharp perspective, as in the foreshortened bridge in the Philadelphia *Burning of the Houses of Parliament*, enhances the effect of recession, and the sense of immensity is rendered by taking a high station point, as in *Rome, from Mount Aventine* (London, Rosebery Coll.), *Heidelberg* (London, Tate Gall.), and *Juliet and Her Nurse* (New York, Mrs. G. Macculloch Miller Coll.). *The Snow Storm — Steam Boat off a Harbour's Mouth Making Signals in Shallow Water, and Going by the Lead* (1842; London, Nat. Gall.) is a whirl of movement suggested by the elemental forces Turner had seen when the sea was so rough that he had himself tied to the mast in order to be able to stay on deck and observe the effects of the storm. The spiral movement within a composition is perhaps best seen in the square or octagonal pictures that he painted in pairs of contrasting cold and warm colors, to express not only different times of day but also degrees of emotion, as in *Peace* and *War* (both 1842) and in *Shade and Darkness — the Evening of the Deluge* and *Light and Colour (Goethe's Theory) — the Morning after the Deluge* (both 1843), all in London (Tate Gall.). The fact that he used such titles shows that he was far more concerned with the purely visual effect than with the historical scene, which is, as it were, superimposed for the sake of his public.

Turner was in the habit of appending lines of poetry to his paintings. These are sometimes taken from James Thomson's *The Seasons* or from other poets but are more often lines of his own composition. He continued to discover new subjects. *The "Fighting Téméraire" Tugged to Her Last Berth To Be Broken Up* (1838; London, Nat. Gall.) is emblematic of the passing of the sailing ship and the coming of steam. In 1844 he painted *Rain, Steam, and Speed — the Great Western Railway* (London, Nat. Gall.), probably the earliest picture of a train, but the real subject is light seen through rain. Many of the studies of coast and sea not exhibited in his lifetime are almost tachist in their effect of paint boldly flung on with a palette knife, and young artists find them an inspiration as action painting. Turner's technique in oils is closely related to his work as a water-colorist. He was one of the first to paint on a white ground instead of using the traditional brown or buff as Constable did. There are records showing that toward the end of his life he used to send almost blank canvases to the Royal Academy and add the color and detail on varnishing day. This practice may account for the large number of unfinished canvases in his studio at the time of his death.

Turner's reputation stood high for many years, partly owing to Ruskin's writings. The artist had no direct followers, although his style undoubtedly influenced a number of Victorian landscape painters. The closest is James Baker Pyne, and there are similarities in the work of John Martin, Francis Danby, William Linton, Frederick Lee Bridell, and Frederick Henry Henshaw. When Monet and Pissarro (qq.v.) visited London in 1870, they were struck with the impressionist qualities of Turner's work. As the study of purely formal value gained ground and the influence of Cézanne (q.v.) led artists to stress the monumental rather than atmospheric qualities in landscape, Turner's work was looked upon with disfavor and even ridiculed by Roger Eliot Fry and Clive Bell. In more recent times, after a collection of Turner's works had been sent to the Biennale in Venice and toured many European capitals in 1948, his reputation reasserted itself.

A good deal of contemporaneous criticism of Turner is reprinted by A. J. Finberg in his standard *Life*. It was largely in response to this adverse criticism and incensed by the personal revelations in G. W. Thornbury's *Life* that Ruskin wrote his *Modern Painters*. Although C. F. Bell (1901) and W. Armstrong (1902) compiled inventories of Turner's work, the lists and inventories given by Finberg are still the most complete and accurate.

UGOLINO DI VIERI. Ugolino, a Sienese goldsmith and enameler, was born at the beginning of the 14th century and died between 1380 and 1385. The earliest documentary mention of him is in 1329 when, already of age, he sold a house that he owned together with his father, Vieri di Ugolino (also a goldsmith), and his brother Giovanni. In 1332 he was paid for a bowl, to be presented by the Commune of Siena to the

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

condottiere Guidoriccio da Fogliano. In 1337–38 he was in Orvieto, where, with the collaboration of Viva di Lando and Bartolommeo di Tommè (known as Pizzino), he executed for the Cathedral the Reliquary of the Holy Corporal commemorating the Miracle of Bolsena. In 1343 he was again in Siena, where he restored a silver bowl for the Consoli della Mercanzia (he carried out a similar task again in 1356). The following year, in Pistoia, where he went as ambassador of Siena, he was commissioned to assess the silver altar of St. James, on which one Master Pero (Pietro da Firenze) was working. Back in Siena in 1358, he executed for the Chapter House of the Cathedral a chalice of silver gilt and enamel, which was then given in pledge to the nuns of S. Prospero for 56 gold florins. It is probable that he also executed the large reliquary in the Church of S. Maria del Carmine in Siena; a document of 1365 mentions it as a worthy rival to the reliquary of Orvieto.

The Reliquary of the Holy Corporal (PLS. 226, 227; VI, PL. 382) is Ugolino's major work and one of the great masterpieces of Gothic goldwork. It was designed — certainly by Ugolino himself and not, as Fumi (1896) suggested, by Lorenzo Maitani, who in any case died in 1330 — in the form of a triptych, with the gabled panels separated by slender pinnacled pilasters. On the pinnacles are small silver figures of angels; the lateral gables are topped by statuettes of saints and the gable of the central panel by a crucifix flanked by two mourners; and small figures of Apostles and prophets are set around the pedestal. It is probable that most of the sculptural parts, which show the influence of Giovanni Pisano (q.v.), were done by Bartolommeo di Tommè, who, as documents of 1377 and 1381 reveal (Machetti, 1929, p. 35), was primarily a sculptor.

The two faces of the reliquary are divided into 12 rectangular compartments with enameled silver plaques. Those on the front show scenes from the story of the Holy Corporal (the Miracle of Bolsena; PL. 226; VI, PL. 382); those on the back, scenes from the Passion (PL. 227). Other enameled plaques representing scenes from the life of Christ are on the cavetto of the pedestal. The plaques are especially interesting for their technique, which differs from the traditional cloisonné and champlevé enamels: Ugolino developed a special procedure that had been initiated at the end of the preceding century by his fellow citizen Guccio di Mannaia for the chalice of Nicholas IV (Assisi, S. Francesco, Treas.). The outlines were engraved on the silver plates, worked in a very low repoussé, and then covered with a layer of translucent polychrome enamel. This procedure aimed at obtaining effects typical of painting, in part through the subtle modulation of color tones produced by the varying thickness of the layer of enamel. The enamels of the Orvieto reliquary can indeed well be compared to the masterworks of contemporaneous Sienese painting whose figural tradition directly inspired them.

It is possible to distinguish a certain (though not very marked) stylistic diversity between the various groups of scenes. Those with the story of the Passion go back to various sources. The Entry of Christ into Jerusalem echoes the composition of the same scene in the *Maestà* of Duccio di Buoninsegna (IV, PL. 290), while the Presentation in the Temple, except for the rare iconographic variant of the kneeling Virgin, has the same composition as the famous painting of this theme by Ambrogio Lorenzetti (1342; Uffizi), strengthening the hypothesis that there was an older common source for both. In all these scenes, however, the prevailing influence is that of Pietro Lorenzetti (q.v.), revealed in the incisive drawing and the dramatic agitation of the figures — for example, those crowded about in the Lament for the Dead Christ (PL. 227). In the scenes of the Miracle of the Holy Corporal, however, the solid modeling of the figures and their rhythmic arrangement within surroundings defined in exact perspective show a more striking similarity to the art of Ambrogio Lorenzetti (q.v.), becoming, in the scene of the receiving of the reliquary in the papal hall (VI, PL. 382), an almost exact copy of Ambrogio's fresco of Boniface VIII receiving St. Louis as a novice (ca. 1331; IX, PL. 197). Inferior in execution, yet marked by the same imaginative spirit as the others, are the scenes on the cavetto of the base, where a few iconographic peculiarities also appear, such as the representation of the angel of the Annunciation still poised in flight. Such iconographic details, together with the elegant delineation in the French style that Toesca (Tr, p. 592) noted also in the enamels of Guccio di Mannaia, demonstrate how elements of diverse artistic tradition, as well as stylistic novelty, had been grafted onto Ugolino's predominantly Lorenzettian art.

Of the same period as the Reliquary of the Holy Corporal is the Reliquary of St. Savinus in the Cathedral in Orvieto (PL. 226), which was executed by Ugolino in collaboration with Viva di Lando. It consists of a Gothic tabernacle rising above a reliquary urn that bears a small statue of the Virgin. Another small figure, that of the saint, is enshrined within the upper level of the tabernacle, and the figure of an angel surmounts the whole. Here the enamels serve a purely decorative function in the singularly elegant architectural ensemble. Toesca holds this work to have been designed, if not perhaps entirely executed, by Ugolino.

Restorations in the Church of S. Domenico in Perugia in 1954 resulted in the discovery of a paten (Perugia, Gall. Naz.) with an enameled medallion of the Annunciation in the center. Its many technical and stylistic affinities with the scenes from the story of the Holy Corporal support the possibility that this paten may have belonged with a chalice described in the 1468 inventory of S. Domenico as bearing the inscription ISTE CALIX FECIT UGHOLINUS ET VIVA DE SENIS and equipped with a paten with the Annunciation in enamel. Also to be attributed to Ugolino, or at least to his workshop, is the Reliquary of St. Galganus in the parish church of Frosini (near Siena), on the front of which are three enamel panels with stories of the saint, showing clear reflections of the Lorenzettis.

Particularly from the point of view of technique, Ugolino's work served as a model for most of the Sienese goldsmiths of the 14th century, as shown by various objects sometimes attributed to him (e.g., a pluvial clasp with the Annunciation; London, Vict. and Alb.); but the great figural skill of the master is absent. His translucent-enamel technique soon spread beyond Siena: to Florence (e.g., a pluvial clasp with the Nativity in the British Museum, attributed to Ugolino by Venturi, IV, p. 938); to Spain (crosses in the cathedrals of Vich and Gerona); and especially to France, where the earliest examples of this technique are found on the pedestal of the statue of the Virgin, given by Jeanne d'Evreux to the Abbey of St. Denis (1339; Louvre) and on a cup with the legend of Tristan (Milan, Museo Poldi Pezzoli), which has also been attributed to Ugolino.

UKIYO-E. The movement or school of art called Ukiyo-e had its beginnings in the first half of the 17th century and dominated the greater part of the Edo, or Tokugawa, period (1615–1867), becoming established chiefly in the city of Edo (Tokyo, after 1868). Its full flowering barely extended to the middle of the 19th century, but in subsequent times there have been note-

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

worthy survivals, which, at least from the point of view of technique, engage even contemporary interest. Indeed, the art of Ukiyo-e, which consists mainly of prints in black and white and color, has for some time had new practitioners of outstanding talent among the modern artists of Japan, attesting to a persistence of interest that is not merely traditionalistic and that cannot be overlooked.

The designation Ukiyo-e is generally rendered as "pictures of the floating world," though the word *ukiyo* has many shades of meaning that defy translation in current terms. It is certain that Ukiyo-e connotes an innovating movement related to the consolidation of a middle class and to the increasing development of the cities, which stood opposed to traditional academicism, and that it is of great importance not only for Japanese art but for all modern art. The prints of Ukiyo-e had, in fact, not a little influence on the work of the French impressionists and on various other European artists of the 19th century. As a consequence of their success in Europe, the Asiatic artists became more aware of the values inhering in their own figural traditions, and this contributed to the formation of modern trends and schools, which came into being out of this very awareness and constituted the indispensable premise for a more mature contemporary art. It was precisely because of Ukiyo-e that the Western world became interested in Japanese art as a whole, beginning that exchange which has brought about the present artistic integration, so to speak, of the two worlds. (See JAPANESE ART; ORIENTAL MODERN MOVEMENTS.)

SUMMARY. Origins and application of the name (col. 459). Evolution of the technique of the print (col. 460). Ukiyo-e artists (col. 461). Conclusion (col. 464).

ORIGINS AND APPLICATION OF THE NAME. The expression *ukiyo-e* appeared in an earlier context as the designation, or rather the popular description, of a painter of remarkable ability who had a very varied style, ranging from traditional purism, probably not very deeply felt, to a tendency toward novelty, evidenced especially in his water colors. The artist in question was Iwasa Matabei (1578–1650), to whom many works by students and, more especially, imitators, have been lightly attributed, though only a few are securely authenticated. Critics and public were agreed in calling him "Ukiyo-e Matabei," that is, "Matabei, the painter of the elegant world" (Buhot, 1962), in reference to his aristocratic and elevated taste.

The application of the word *ukiyo* to the artists of the new movement, who specialized in portraits of actors and courtesans and in genre scenes (see GENRE AND SECULAR SUBJECTS), was taken by Western scholars — supported by the use of the work in medieval Buddhist texts — to refer to the sadness and transience of life and to represent a rigidly Buddhist and hence negative evaluation of these subjects and thus of the new life and culture of the townspeople. Actually, about the beginning of the Genroku era (1688–1703) *ukiyo* acquired a new meaning, "floating world," which was equivalent to "fashionable world" or "high life"; it had no religio-moralistic overtones, which would certainly have been alien to the mentality of the new Japanese *bourgeoisie* that flourished during the Tokugawa regime. Subsequently the form *ukiyo-e* took on a derived meaning, more or less equivalent to "modern," almost entirely overlooked by Western scholars. Thus, provided it is devoid of the generally accepted Buddhist implications and is related rather to the fluctuations of fashion and of beau monde attitudes, "floating world" is the most accurate rendering of *ukiyo*.

It is very strange, as has been pointed out more than once (Paine and Soper, 1955; Buhot, 1962), that the innovative movement of Ukiyo-e should be linked with the name of Matabei, an artist of undeniably aristocratic spirit who stood quite apart from the artistic aspirations that it gave form to and from the world to which it referred. The real precursors of Ukiyo-e were, in fact, the anonymous popular painters, and it was the technique of wood engraving and of color prints that determined its success. Its evolution shows a progressive enlargement of the public to which the artists addressed themselves. In the initial phase the artists, who were never aristocrats, worked for the rich *bourgeoisie*, who lacked interest in the symbolic and edifying compositions of Zen Buddhism and in Chinese subjects, preferring instead more topical and immediate subjects, especially if they had an erotic flavor. Subsequently the perfecting of the technique of prints led to an increase in production and a keen interest in Ukiyo-e on the part of ranks still less cultured and of lower economic status. Consequently the taste represented in these prints became truly national, even though the old nobility remained aloof and hostile to it, displaying an academic disdain for the new works, which were considered too popular and lacking in refinement.

The attitude of the nobility brought about a break between the traditional and the prevailing taste of the Japanese world, though, in reality, the old tradition was by now exhausted as a result of profound social transformations, which had reduced the samurai, most of whom had become *ronin* (samurai without masters), to a struggling subsistence and which had confined the Buddhist spirit within the walls of the monasteries. On the other hand, Ukiyo-e appears to have been closely connected both with the Kabuki theater (see SCENOGRAPHY) and with *haikai*, a new form of poetry derived, but substantially different, from the classic *tanka*. Men of letters, playwrights, and painters sought to address themselves to the people and to emerge from the rarefied atmosphere of a tradition that — despite some remarkable survivals, especially in the area of the theater — must in general be regarded as crystallized, partly as a result of the rigid isolation in which Japan was kept by its foreign policy of the time.

All the various forms of this popular and innovative movement showed a greater, at times even exaggerated, expressive intensity and a far-reaching fidelity to the world of reality that asserted itself independently of those symbols and conventions which remained particularly perceptible in *haikai*, even though *haikai* sought to express visual impressions and intense transitory moods. The break with the Sinicizing tradition in the field of painting, the wide diffusion of new works created with the help of such semimechanical means as blocks for prints (not to speak of the profound revolution that the prevalence of their use produced in the esthetic tradition and attitude of Japan), the ever wider contacts of the artists with the popular masses — all these developments brought about a bold renewal, from which in turn derived the subsequent artistic evolution of Japan, especially from the time when the interest and enthusiastic appreciation of the Western world confirmed the existence of universal and unsuspected values in such an unconventional and lively art as that of Ukiyo-e.

EVOLUTION OF THE TECHNIQUE OF THE PRINT. The use of prints was related to the popular orientation of Ukiyo-e, but it also represented the quest for an expressive means that might better lend itself to the subjects and the spirit of the new trend than did the traditional techniques. In the period of classical Japanese painting, wood engraving was sometimes used (from the 12th century) for the preliminary outlines of pictorial compositions, as seen in the painted paper fans inscribed with the Lotus Sūtra (Jap., Hokekyō) in the Shitennōji in Osaka (VIII, PL. 286). Used especially among the Buddhists for illustrating books, wood engraving burgeoned later (beginning early in the 17th century) in an unexpected manner, accompanying the rise of the *bourgeoisie*. Thus the illustrations for novels took their place beside other genres, such as those of the *kanazōshi*, or popular books; the *jōruri* recitations accompanying the puppet theater; the *hyōban-ki*, anecdotes about celebrated actors and famous courtesans; and the collections of routes and itineraries.

The activity of the early Ukiyo-e artists caused the technique of prints to advance rapidly. In the first prints, the *sumizuri-e*, which were produced from a single block and printed in black, the lines of the drawing gradually became clearer and finer; the summary hand coloring of Moronobu (see below) was succeeded by the use of more varied and brilliant colors, but still applied by hand. Then there appeared the *tan-e*, the first prints to be colored with a brush and so named because of the predominance of *tan* (orange-red lead), and the *beni-e*, first

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

made and distributed by Masanobu (see below), with their delicate tones and wider range of colors, predominantly *beni* (crimson, obtained from the safflower), yellow, green, and violet. Those *beni-e* in which the black of the outlines was given the lustrous appearance of lacquer (*urushi*) by the addition of glue became known as *urushi-e* ("lacquer pictures"); the latter term is largely replacing *beni-e* because of possible confusion with *benizuri-e* (see below). Additional luster was lent to the *urushi-e* by sprinkling particles of brass or mica on the wet pigments. But the chromatic simplicity of prints remained a drawback that was deeply felt by artists and public — a fact that led some Ukiyo-e artists to abandon the technique of the print and to continue with that of the brush. By the same token, there appeared the technique of multiple impressions with three successive blocks, though its use was limited to certain de luxe calendars; because of the consistent use of soft rose color accompanied by green, yellow, and greenish blue, prints so produced came to be called *benizuri-e*.

The triumph of the art of printmaking was, however, to come with full-color prints, the *nishiki-e*, or "brocade pictures" (PL. 228), which made their appearance at New Year's in 1765. Into these first *nishiki-e* went not only the genius of Harunobu (see below) but also the talents of many of the men of letters and the printers of Edo, to say nothing of the enterprise of the ardent amateurs of the art (military men of middle rank and wealthy merchants) who commissioned the work. The results were stunning. The *nishiki-e*, making use of five, six, seven, and sometimes even eight different colors, clear and lively, constituted the definitive statement of the technique of the print. It might even be said that here the technique of the woodblock print reached its absolute peak. The decline that began after the death of Hiroshige in 1858, brought about in part by excessive commercialization, seems to have been arrested in the modern period. In fact, while the technique of *nishiki-e* persists, there is currently a revival of the oldest technique, that of *sumizuri-e*, which appears, for example, in the works of Shikō Munakata (see below), and there has also been a more or less tentative use of other techniques, of Western derivation, involving either the material of the printing surface or the coloring and drawing. In a sense the phenomenon of Ukiyo-e endures into the present, forming part of the profound renewal of Japanese art, in which, however, there is complete awareness of the more vigorous aspects of its own tradition, especially in its more brilliant achievements.

UKIYO-E ARTISTS. As an art movement, Ukiyo-e became consolidated and acquired a definite character, so to speak, through one of its great personalities, Hishikawa Moronobu (active 1660s–94), undoubtedly the most representative artist of the new trend. Through him Edo became the principal center for the production of prints, while the illustration of books, in which Moronobu specialized (the *e-hon*, or picture books, published by him number more than 130), became independent of the text and took on an unforeseen and unforeseeable artistic autonomy. Moronobu's subjects (PL. 229) are popular festivals, genre scenes, particularly the activities of artisans and tradesmen, erotic scenes of the Yoshiwara (Edo's pleasure quarter), and divers feminine themes. They included paintings (PL. 229, *above*) as well as prints, and the theater of the time was also among his subjects, as is shown by a screen in Boston (Mus. of Fine Arts; Paine and Soper, 1955, pl. 109B).

If Moronobu (who had had years of training in the classical styles of painting) succeeded in achieving woodblock engravings that could render effects of drawing and design equal to those obtained by traditional means, the members of the Torii school, profiting from the teachings of Moronobu, further improved the technique of the print and thus laid the foundation for the ultimate success of the new movement. The early work of Torii Kiyonobu I (1664–1729), the founder of the Torii school, was in the field of book illustration, carried out in a style much influenced by Moronobu's, but he came to specialize in work for and about the Kabuki theater, including representations of celebrated actors (PL. 230). Torii Kiyomasu I (1696–1716), probably his son, and Torii Kiyonobu II (1706?–63), presumably the son of Kiyomasu I, maintained the Torii style, portraying figures of actors and courtesans (PL. 230). Thus the activities of these two generations of Torii contributed to a wider diffusion of the favorite subjects of Ukiyo-e, despite the hostile reaction of the traditionalists.

This was the time of Ogata Kōrin (q.v.; 1658–1716), of the poet Bashō, of magnificent actors, and of such talented painters and printmakers as Okumura Masanobu (ca. 1686–1764), an expert in the technique of the print (PLS. 230, 231). Working somewhat later was Ishikawa Toyonobu (1711–85), who was influenced by Masanobu and who was one of the major figures of Ukiyo-e (PL. 232). Representative of a rather elegant trend in illustrating that became established chiefly in Kyoto was Nishikawa Sukenobu (1671–1751), who carried on, in his own manner, the tendencies favored by Masanobu.

Ukiyo-e was now on the way to its most brilliant phase. Mention has already been made of the importance of Suzuki Harunobu (1725–70; PL. 233; IV, PL. 446), to whom the development of *nishiki-e* is in great part due, in the technical evolution of the print. This technical triumph seems to have intensified his genius, which, enriched by the experience of his predecessors and contemporaries (particularly Toyonobu and Sukenobu), created feminine figures of exquisite, almost supernatural grace — images annotated with environmental features, architectural or landscape, or accompanied by animal figures, which confirm and heighten the elegance of the composition. In the development of Ukiyo-e, Harunobu represents a turning point that is not merely technical. The elegance of his works (which rarely portray cortesans and never actors, for his world was that of the lower middle class, from which he drew his ideal of feminine beauty) is brought about by stylization, by clear, fine drawing, and by the juxtaposition of colors. His vision is never very deep, even in the open-air scenes, where the surroundings in which the figures move are barely indicated; it becomes descriptive only in rare cases (some of doubtful authenticity). The faces of his women, realized in delicate and elegant lines, acquire expression through the whole attitude of the figure. His *Girl on Her Way to the Shinto Shrine on a Stormy Night* (Akiyama, 1961, pl. 169), *Lovers in the Snow* (Michener, 1959, pl. 113), and *Shōki Carrying a Girl* (ibid., pl. 101; in which the demon-queller is shown carrying a girl on his shoulders in a raging wind and rain) are excellent examples of this indirect and yet very clear expressiveness, producing effects which, though differing widely, are profoundly moving. The slightly humorous interpretation of ancient legends and Chinese tales is another of the characteristics of Harunobu, certainly one of the more lettered of the Ukiyo-e artists, who for this reason — and also because of his samurai origin — had a rich and cultured clientele, enthusiastic for his creations.

Indeed the personality of Harunobu was so dominant that the early works of Isoda Koryūsai (active 1760s–80s) are hardly distinguishable from those of the master; its effects are evident, though perhaps in somewhat lesser measure, in the work of Katsukawa Shunshō (1726–92) and Ippitsusai Bunchō (active mid-1760s through 1770s), both of whom specialized in portraying actors. Koryūsai, after Harunobu retired, abandoned the latter's rich polychromy and returned to the representation of the courtesans and apprentices of the "green houses" (brothels), developing at the same time the effects obtainable from black of greater or lesser intensity, and he brought the depiction of women back to a descriptive realism of considerable power (PL. 228), seeing them without the poetical aura with which Harunobu had invested them. Koryūsai also set the standard print size called *ōban* (15 × 10 in.), and the compositions became more profound and detailed, though they remained no less coherent and refined.

Shunshō (PL. 233; IV, PL. 447) strove for realism in the faces and expressions of his actors while attacking new compositional problems, and he explored the interesting subject of wrestlers (*sumō*), with their gigantic fat-laden bodies. Shunshō founded a school that, carrying on after him, was one of the finest within Ukiyo-e, numbering in its ranks such famous artists as Katsukawa Shunkō (1743–1812), Katsukawa Shunjō (d. 1787), and Katsukawa Shunei (1762–1819).

With Torii Kiyonaga (1752–1815), the old studio of the Torii, which had sheltered artists of great talent, once more assumed a leading role. A pupil of Torii Kiyomitsu (1735–85), Kiyonaga was soon able to shake off the influence of Harunobu and of Koryūsai, while showing a predilection for the subjects to which Kiyomitsu had also been partial — namely, aspects of feminine beauty. In Kiyonaga there appeared an exceptional balance of realism and idealization, so that his women, with their calm, sweet faces — often represented against the background of a famous view of Edo or in a sumptuous interior — constituted a novelty. As for technique, he tended to join together two, three, or sometimes even five sheets to create a procession of these images that dominate the surroundings in which they are set. It is perhaps fortuitous that the contrast between the figures and the minutely described landscape in some of his prints gives them a feeling of deep sadness, as if there weighed upon them the fading light of a gray wintry afternoon. At other times, however, he represented the effects of sun-baked haze, and always he idealized his female figures in their magnificent robes, harmonizing the proportions according to a canon of beauty all his own (IV, PL. 448). Kiyonaga's interpretation of feminine beauty can be said to have been decisive in the development of one of the greatest personalities of Ukiyo-e, Utamaro (q.v.), who — though he represents an opposite, but nevertheless related, direction — seems to have shared Kiyonaga's dissatisfaction with the actual format of prints. Whereas Kiyonaga resorted to the juxtaposition of sheets, Utamaro favored a new type of image, the bust portrait, or *ōkubi-e* (lit., large-head picture), in which the figure is in the foreground and the face is large. As to subjects, he too was primarily a painter of courtesans, though he also made studies of natural life and of the pictorial effects of snow.

Not far removed from Utamaro in time or in eminence was Hosoda (or Chōbunsai) Eishi (1756–1829; PL. 234), a painter and printmaker of samurai origin. His prints are unusual for their subdued colors and for the delicacy of the feminine types.

The subjects treated by Tōshūsai Sharaku (1749–1803), 28 of whose prints represent the same type of composition as Utamaro had used, were, at least so far as is known, exclusively actors (PL. 234). Among the artists of Ukiyo-e, Sharaku, with his espressive power and his chromatic sensitivity, is truly an enigma. His highly personal style stands out from that of Shunshō, so that even at first glance it is easy to recognize as his a series of at least 136 prints, all published by Tsutaya Jūzaburō and all signed with the artist's name. What is really extraordinary is that this long series of works can be dated with precision to a period of no more than ten months, beginning in the spring of 1794. The personality and career of Sharaku continue to be the subject of research and examination. The data currently accepted by most students of Ukiyo-e indicate that he may have been a No actor named Saitō Jūrōbei. But this identification would account neither for the sudden rise of his artistic personality nor for the extreme brevity of the meteoric span of his unquestionable genius, which was little appreciated until Western critics discerned its greatness — without, however, dispelling the mystery enveloping it.

The principal phase of Ukiyo-e may be said to have ended with Sharaku, apart from certain figures of outstanding caliber such as the artists of the Utagawa school. Utagawa Toyoharu (1735–1814) was the founder of the school; Utagawa Toyokuni (Toyokuni I; 1769–1825; PL. 235) produced prints that were considered to rival Utamaro's. The Japanese environment was evolving; the political situation became taut. The name Ukiyo-e lost much of its fascination, and it was quickly replaced by other expressions signifying up-to-dateness and novelty. Another factor that came into play was that the spell of the theater and of the pleasure quarters was diminishing as the habit of traveling grew more widespread.

Thus there was a shift in subject matter, which was to be developed above all by Hokusai (1760–1849) and Hiroshige (1797–1858; qq.v.). It might be said that for the West — and to a certain extent even for Japanese critics — these two names sum up the greatness of Ukiyo-e. Undoubtedly the curious personality of Hokusai, with his highly personal and almost unreal visions of nature, was as much calculated to strike the imagination of Western critics and scholars as his curious way of bringing himself to the attention of the public had struck his Japanese contemporaries. But the greatness of Hokusai is not embodied solely in his impressionistic interpretations of Fuji (II, PL. 30; IV, PL. 447; VII, PL. 297) and in his illustrations for the famous *Hundred Poems* collection, for his personality is largely expressed in the 15 albums of the *Mangwa* (VII, PL. 299), sketches of varied subjects, which show both his bizarrerie and, unquestionably, his genius. Hiroshige, on the other hand, who in his maturity was a contemporary of Hokusai, being 37 years his junior, appears to have been immensely more balanced, though in a sense less powerful (PLS. 235, 236). Wholly averse to exaggeration, he was an acute observer and a most effective interpreter of the Japanese landscape. Hiroshige's creations never transport the viewer into the world of fairy tale, but they make him feel, as if in actuality, the disagreeableness of the driving rain, the heaviness of the mud, and the warm caress of the sun. With Hiroshige ended the apogee of the art of the print, which continued, however, through the work of the last pupils of Toyokuni, though it was by then reduced to representing ships and European types and was increasingly commercialized and influenced by photography. Its resumption after a long lapse — and excluding all of its former mechanical processes, of course — is a recent occurrence and so far one of relatively limited importance.

CONCLUSION. The technique of the print in its continuance into modern times in Japan does not, naturally, have the wide popular diffusion that Ukiyo-e enjoyed, even though many contemporary artists who devote themselves to this art form are remarkably accomplished. Their descent from Ukiyo-e is often merely a matter of technique — except for the indisputable will of these artists to create distinctly Japanese works. The old subjects have disappeared, and only a limited group of printmakers, among them Un'ichi Hiratsuka (b. 1895), whose works have affinities with *sumi-e* and with Moronobu's black-and-white prints (*sumizuri-e*), and Shikō Munakata (b. 1903; X, PL. 426) venture willingly into traditional subjects, such as views of famous temples and depictions of divine and human Buddhist figures — without on this account, however, rejecting other sources of inspiration. Many others, such as Gen Yamaguchi (b. 1903), Yoshikane Kinoshita (b. 1893), and Hatsuyama Shigeru (b. 1897) are nonobjective or surrealist artists. And yet, on careful consideration, it appears that the spirit of Ukiyo-e has not altogether disappeared. It lives on, in fact, in the works of these modern epigoni as the echo of that glorious tradition which was actually a great turning point in world art and which modern Japanese critics are able to evaluate in a spirit completely different from that of the first enthusiastic European admirers, who sought — and to a certain extent found — in the prints of Ukiyo-e the key to a renewal that had been a long time in the making but had not yet taken definite shape.

The influence of Japanese prints on Western art, and especially on the impressionists, remains a delicate problem. The works that aroused the interest of such artists as Manet, Monet, Degas, Whistler, Van Gogh, and Gaugin were certainly not the finest; it is now known that the 100 prints sent to the Exposition Universelle in Paris in 1867 by the Shogun government had been chosen primarily with a view to illustrating, on the one hand, Japanese costumes and crafts and, on the other, the countryside and cities (especially Edo). It seems impossible at first glance that works by artists high in popular esteem but far inferior to the major representatives of Ukiyo-e could raise such a stir in the advanced and cultivated art world of the Paris of that day. Furthermore, there is abundant evidence that only with the 1889 Paris Exposition did the great masterpieces of Utamaro and Harunobu become known in the West; thus the conclusion seems inescapable that even a mere reflection of what had been the true greatness of Ukiyo-e, presenting a solution to common and still unsolved problems among Western artists, was able to bring about unexpected consequences chiefly because the Japanese suggestion, charged with an exotic fascination, came unexpectedly into an environment made receptive by inner travail

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

and rendered fruitful even the excessive enthusiasm of its discoveries.

UNION OF SOVIET SOCIALIST REPUBLICS. The U.S.S.R. is made up of 15 constituent republics of which by far the largest is the Russian Soviet Federated Socialist Republic. This article begins with the Russian Republic and takes up the other republics in geographical order from west to east. The artistic production of the autonomous republics of Siberia (Yakutia, Tuva, and Buryat) is treated last (see also SIBERIAN CULTURES). These territories occupy a vast geographical area that extends from eastern Europe to the Pacific Ocean and from the Arctic Ocean in the north to the steppe and deserts of Central Asia in the south, and they are inhabited by peoples of different races, languages and traditions, thus accounting for the diversity of the artistic development. An important factor in the cultural development has been the relationship between the peoples of the U.S.S.R. and those of the Near and Middle East, of the Mediterranean zone, and of China.

The territory of the U.S.S.R. is an area of ancient artistic cultures beginning in the Upper Paleolithic period, continuing in the Neolithic and Bronze ages (see ASIATIC PROTOHISTORY), and culminating in the steppe cultures (q.v.). From the 2d to 1st millennium B.C. the civilizations of western Asia, Iran, and Greece were influential in determining various lively centers of culture such as those in the Caucasus and Azerbaijan, the kingdom of Urartu (q.v.) in Armenia, the Greco-Scythian civilization on the Black Sea (see GRECO-BOSPORAN AND SCYTHIAN ART), the Greco-Bactrian kingdoms (see BACTRIAN ART), and the kingdoms of Sogdiana and Khwarizm (qq.v.). The contributions of Islamic culture (see ISLAM) appeared later in these same zones. The expansion of the Christian civilization was noticeable in Armenia (see ARMENIAN ART) and in Georgia (see GEORGIA, ART OF), but above all Byzantium exerted a profound influence on early Russian art. Kiev was the center of this early art (see SLAVIC ART). Chinese influences were spread through the migrations and invasions of Tatar-Mongol peoples throughout Central Asia (see ASIA, CENTRAL). Owing to the crisis caused by the invasions, the politicocultural center of Russia gradually shifted during the course of the Middle Ages toward the north; Moscow continued the ancient Russian artistic heredity but also was open to Western influences, from the Romanesque to the Gothic and the Renaissance.

At the beginning of the 18th century the secular trends, which had been present in various forms of art since the 16th century, were consolidated, and the new politicocultural center of St. Petersburg fostered the baroque (see BAROQUE ART) and neoclassic styles (q.v.). In the 19th and the early 20th century the cultural evolution of the peoples who had become a part of the Russian empire paralleled that of other European countries. The contact with Russian culture facilitated artistic progress in all parts of the Russian empire, particularly in the most backward peripheral zones. The process of unification was effected when the Soviet regime was established. The impetus of socialist realism created the conditions for this unification without altering traditions and, in fact, stimulating the continuance of local styles (see UNION OF SOVIET SOCIALIST REPUBLICS: MODERN MOVEMENTS).

RUSSIAN REPUBLIC (Russian S.F.S.R.). *Historical and artistic periods.* The Russian Soviet Federated Socialist Republic, the largest of the constituent republics of the U.S.S.R., occupies a leading place in the artistic life of the nation. The Great Russian people, who account for the bulk of the republic's population, and the numerous other peoples that inhabit its territory have contributed to the development of its multinational art.

a. Antiquity. The most ancient artistic remains (ca. 30,000 years old) date from the Upper Paleolithic period: ornamental incisions on bone (the Talitskaya site near Perm); female statuettes and animal figurines of stone and mammoth tusk; engraved representations of mammoths, elks, snakes, birds, and fish on bone and horn (Kostenki and Gagarino on the upper Don River, Malta near Irkutsk, Buret on the Angara River); and cliff drawings (a bull and two horses near Shishkino on the Lena River and painted representations of mammoths, horses, and rhinoceroses in the Kapov Cave in the southern Ural region). At Gagarino, Kostenki, Malta, and Buret, settlements have been uncovered, with dwellings that were dug partly into the ground level and had frameworks of wooden posts, mammoth bone, reindeer antlers, and other materials.

Relics of the Neolithic period are more numerous and much more widespread. Exploration has revealed that for dwelling purposes there were earth houses dug partly below the ground, huts of plaited twigs, and structures on piles; the settlement on the Modlona River in the Vologda district had quadrangular houses with plaited twig walls and double-sloped roofs (beginning of the 2d millennium B.C.). Various types of pottery have been uncovered (with decoration consisting of small pits and comb marks in the forest belt from Karelia

Union of Soviet Socialist Republics. *Key*: (1) Modern political boundary; (2) boundaries of the soviet socialist republics; (3) internal boundaries of the Russian Republic.

to the Transural; with a wavy ribbon design and plaiting in the easternmost area), as well as figurines of persons and animals made of stone, bone, horn, and wood (realistic elk heads of bone from the Oleni Island burial in Lake Onega, end of the 3d–2d millennium B.C.; stone fish from eastern Siberia, 4th–2d millennium B.C.; human and bear figurines of bone from Uelen on the Chukchi Peninsula, end of the 2d–beginning of the 1st millennium B.C.). From the Shigir and Gorbunovo peat bogs (Sverdlovsk district) there are realistic, carved wooden figures of animals and birds, ladles with birds' heads, and anthropomorphic idols (3d–2d millennium B.C.). Schematized portrayals of elk, deer, birds, boats with rowers, and symbols of the sun and moon (ca. 2500–1000 B.C.) are incised on the granite cliffs of Lake Onega (at Besov-Nos and Peri-Nos) and the White Sea (at Besovy-Sledhi and Zalavruga); sometimes they form an integrated composition (the scene of the driving of elk at Zalavruga).

Many artistic relics from the Aëneolithic period and the early Bronze Age (which occurred in the southern regions much earlier than it did in the north) have been preserved in burial tumuli (kurgans). Barrows in Maikop and the northern Caucasus (middle and late 3d millennium B.C.) have yielded gold and silver figures of animals, as well as silver objects with engraved figures of animals and hilly landscapes — ornaments that testify to ties with the civilizations of the ancient Orient and Transcaucasia. To the period from the end of the 3d to the 2d millennium B.C. belong dolmens and barrows containing local bronze goods in the northern Caucasus. In the transition period from the Bronze to the Iron Age the Kuban (2d millennium–7th cent. B.C.) culture flowered in the central Caucasus (bronze artifacts with elaborate chased and engraved ornamentation, with representations in the "animal style," and with figures of anthropomorphic divinities). In the open steppe and wooded steppe zones of the European part of the R.S.F.S.R. there was a consecutive development of cultures designated by their types of burials: in the last quarter of the 3d millennium B.C., the Pit culture (clan settlements with semisubterranean dwellings; pottery with round and pointed bases and with whipped-cord and incised ornamentation); in the first half of the 2d millennium B.C., the Catacomb culture (censers, flat-bottomed pottery with a more elaborate corded and dentated design); and from the second half of the 2d millennium to the beginning of the 1st millennium B.C., the Timber-frame culture (semisubterranean dwellings with beam frames above ground and two- or four-sloped roofs; sharp-ribbed and jar-shaped pottery decorated with comb-impressed and incised geometric designs). Characteristic of the Fatyanovo culture of the forest belt (end of 3d–2d millennium B.C.) is round-bottomed and often polished pottery with incised, detate, and whipped-cord ornamentation (stripes, festoons, and lozenges). Bronze adornments, idols, and weapons with ornamentation and animal figures have come to light in the Volga, Kama, and Ural areas and in Siberia as far as Lake Baikal. In the southern part of western Siberia, the following cultures developed: from the end of the 2d to the first half of the 2d millennium B.C., the Afanasievo culture (pottery with pointed and spherical bases and with a simple geometric design; gravestones with representations of birds and human figures); from about the 18th to the 13th century B.C., the Andronovo culture (flat-bottomed pottery with complex comb-impressed and incised geometric ornamentation; on the Yenisei River, stone sculptures portraying forebears); and at the end of the 2d and beginning of the 1st millenniums B.C., the Karasuk (Kara Suk) culture (pottery with more graceful and restrained ornamentation; columns with stylized representations of human faces, animals, and cosmic signs). In eastern Siberia, which had ties with China, local traditions manifested themselves in cliff drawings and rocks with relief representations of deer.

At the beginning of the 1st millennium B.C. (first in the northern Caucasus) the Iron Age culture spread throughout the territory of the Russian Republic. In the open steppe belt it is related to the Cimmerians (9th cent. B.C. to our era) and to the Scythians who settled north of the Black Sea and the Sea of Azov (8th–7th cent. B.C.); later, it is related to the Sarmatians (Savromats) who roamed between the Don and Ural Rivers (7th–3d cent. B.C.) and to the Sindian and Maeotian tribes of the Azov and Kuban areas (see GRECO-BOSPORAN AND SCYTHIAN ART). Economic and proprietorial differentiations resulted in the appearance of rich barrows of tribal chiefs and notables. The Scythian tumuli had wooden funerary chambers with four-sloped roofs; earthworks and roughly executed stone statues have also survived. In the barrows of the Kuban region there have been found extremely vivid examples of the local "animal style": expressive, stylized representations of wild beasts, birds, and

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

griffins [a gold panther from the Kelermes tumulus (VI, PL. 463), a gold deer from Kostroma, and bronze chariot parts from the village of Ulski — all of the 6th cent. B.C.]. In the Scythian burials there are Greek artifacts testifying to connections with the Greek cities on the northern coast of the Black Sea. In the 6th and 5th centuries B.C. many Greek towns that formed part of the Bosporan kingdom were founded — Phanagoreia (on the Taman Peninsula), Gorgippia (mod. Anapa), Tanais (at the estuary of the Don), and Pantikapaion (mod. Kerch). Among the remarkable examples of Greek architecture and art are fine tomb structures with corbeled roofs and vaulted domes, stone public and domestic buildings, frescoes in houses and crypts (VI, PLS. 462, 472), remarkable polychrome terra-cotta vessels with figural decoration (VI, PL. 469), sarcophagi (VI, PLS. 469, 474), and steles with reliefs. There are evidences of the local art that predominated in the first centuries of our era. Also noticeable is the Greek influence on the art of the local tribes, which formed the Sindian state on the Caucasian coast (5th cent. B.C.). In the chased gold plaque with cult scenes from Karagodeuashkh on the Taman Peninsula (VI, PL. 465), as well as in the silver rhytons from Karagodeuashkh and the Kuban area, both Greek and local traits are blended. By the 2d century B.C. the Sarmatians had settled in the areas of the Kuban, the north Caucasus, and the lower Don. Their art (gold diadems, flagons, bracelets, vessels, fibulae, earrings, etc.) combines elaborate decorative representations in the "animal style" with polychrome incrustations of stones and colored glass. This combination is characteristic also of the art of the Sarmatian tribe of Alans who were settled until the 9th century of our era along the Don, and until the 13th in the northern Caucasus. The steppe Alans are represented by fortifications of stone slabs with carved geometric ornamentation and with schematized representations of animals and persons; by subterranean burials with spherical vaults; and by semisubterranean houses with walls of plaited twigs smeared with clay. Rich adornments, arms, harnesses, and textiles exemplify the culture of the northern Caucasian Alans (10–12th cent.).

The Dyakovo culture existed in the forest belt along the upper Volga and Oka rivers (7th cent. B.C.–5th cent. of our era; fortified settlements with houses of earth, pottery with "textile" motifs, metal adornments, and carvings in bone and horn); along the middle Volga, the similar Gorodets culture (pottery with "antler" designs); and along the Kama River the Ananino culture (8th–3d cent. B.C.; surface dwellings, stylized ornamental representations of beasts and birds of prey on bronze battle-axes and other objects, and stone slabs with engraved representations of warriors), which was replaced by the Pyanobor culture (3d cent. B.C.–5th cent. of our era; timber huts, bronze adornments, and cult figures). Over large territories extending as far as western Siberia and the Altai, from the second half of the 1st millennium B.C. to the early centuries of our era, local traditions were combined to a greater or lesser extent with the Scythian and, later, the Sarmatian culture. In Siberia there developed an original Scytho-Siberian animal style, on which influences from the cultures of China, Central Asia, and the Near East were superimposed. Along the lower Ob River the Ust-polui culture evolved (4th cent. B.C.–1st cent. of our era; geometric ornamentation on bronze, bone, and horn goods; animal and human figures and heads), and along the upper and middle Yenisei River, the Tagar culture (7th–2d cent. B.C.; animal-style adornments, similar to those of the Scythians, and rock drawings), and, later (1st cent. B.C.–4th cent.), the Tashtyk culture (portrait death masks of clay; bronze, stone, and wooden realistic figures of persons and animals). The finds in the Altai mountains have been especially rich (Scytho-Siberian gold artifacts; tumuli of tribal notables, 5th–3d cent. B.C., in the areas of Pazyryk and Bashadar, containing objects of metal, leather, wood, fur, and felt decorated with highly expressive stylized representations of cult scenes, beasts and zoomorphic monsters, plant and geometric ornamentation, etc.). In the 5th–6th century were formed the Turkic states in the Altai (rich adornments, hunting scenes engraved on bone, and figural engravings on stone) and the state of the Kirghiz along the middle Yenisei (gold, silver, and bronze utensils with a rich plant design in relief; expressive relief representations of riders and beasts; and rock drawings with hunting and war scenes). In the 8th–10th century the coastal area formed part of the Bokhai state (stone sculptures of persons and animals; geometric ornamentation). Stone figures of warriors were widespread from the 6th to the 9th century in the Khakass region, Tuva, and the Altai (see TURKIC ART).

In the 1st millennium of our era the eastern Slavs settled in a large territory reaching from the lower Danube and Dnieper rivers to the Baltic Sea and Lake Ladoga. In appearance their settlements were essentially fortified citadels surrounded by a rampart topped with paling or a timber wall. The domestic architecture consisted of a northern type of house made of wooden beams, and a southern type of clay hut dug partly into the ground. Remains of the earliest beamed rectangular houses with double-sloped roofs have been found in the citadel of Bereznyaki (3d–5th cent.), near Rybinsk; an idea of the southern type of house is given by the excavations of the

Borshevo citadel (Voronezh district; 8th–10th cent.). At Bereznyaki, each house was meant to accommodate a large patriarchal family; the houses in Borshevo were smaller and joined by passages into a complex that was intricate in plan. The art of the Slavs of the 1st to the 5th century is represented by pottery with polished geometric ornamentation and by bronze pendants, buckles, and fibulae with openwork geometric designs (Kaluga and Smolensk districts). From the 6th century, when tribal alliances began to be formed, there have survived many treasures and tombs, as well as clay vessels and silver and bronze objects, often enameled, with stylized figures of persons, animals, and birds. The Slavic barrow of the 8th–10th century, sometimes 33–40 ft. high (Smolensk), contained a wooden funerary chamber. The sanctuary of the god Perun near Novgorod (10th cent.) consisted of a circular platform with an idol in the center, surrounded by smaller platforms with pyres. In the region of Smolensk have been found several dozen pagan temples — raised round platforms (to 65 ft. in diameter) surrounded by earthen banks with palings. In the center there was a rectangular stone sacrificial altar with a covering supported by four pillars; other pillars were carved to represent human figures. The temple on Annunciation Hill (Blagoveshchenskaya Gora) near Bryansk included a large timber house, in addition to the platform with the altar and idols. An idea of the pagan divinities placed in the sanctuaries is given by written descriptions and by idols that have survived in burials in rural localities. Small bronze idols of the 9th and 10th centuries have been found along the upper Volga, in the Vyatsk area, and in the Ural region; clay statuettes have been found near Suzdal, and larger stone idols with more complex forms in the Moscow, Yaroslavl, and Kirov districts.

The neighbors of the Slavs in the north and northeast were the Finno-Ugrians (earth houses, timber structures, and metal adornments). In the 7th century, on the Caspian and Black Sea steppes, arose the state of the Turkic-speaking Khazars, which was destroyed by Russia in 965; studies have been made of the town of Sarkel with its geometric layout of brick fortifications. Under pressure of the Khazars, the Turkic-speaking Bolgars (Bulgars) moved from the steppes along the Azov Sea and the lower Volga to the middle Volga and the Kama River, where, in the 10th century, a state was founded, with its capital, Bolgar Veliki, situated near the mouth of the Kama. In the 13th century the Mongols destroyed the states of the Far East, Siberia, the Altai, and Kaman Bolgaria. Brick buildings of the 14th century have survived from the town of Bolgar: the "Black Chamber" Mausoleum and a minaret similar to those of Central Asia; the town existed until the 15th century, the period of the Golden Horde, whose dominions spread from the Danube to the Irtysh rivers. From the 9th to the 13th century the southern Russian steppe was inhabited by Turkic nomadic tribes (Pechenegs, Torki, and Berendei) and by the Polovtsi; in addition to various adornments, they left bone-encrusted quiver trimmings and funerary sculptures. The traditions of ancient art were long preserved in the folk art of the peoples of the R.S.F.S.R.

Pëtr MAKSIMOV, Anatoli KANTOR

b. Medieval and modern periods. In the 9th–10th century the rise and development of feudal relationships among the eastern Slavs resulted in the creation of a powerful Russian state (see below: *Ukraine* and *Byelorussia*) with its capital in Kiev, the emergence of a ruling class of powerful boyar landowners headed by a prince, and the conversion of Russia to Christianity (ca. 988–89). Ties with foreign states, especially Byzantium and the southern Slavic countries, were strengthened. There began the construction of large Christian churches and of princes' and boyars' residences. On the high banks of rivers (Novgorod) or on promontories at the confluence of two rivers (Pskov) were built fortified town centers — kremlins — with adjoining sections traversed by streets that converged on the kremlin, either paralleling the river or descending to it. The houses in northern towns (Novgorod, Staraya Ladoga) were wooden. In the 10th century houses in three sections were built [with a passage between the heated room for domestic use (*istobka*) and the state room (*klet*)], as well as large mansions (*khoromy*) consisting of a row of tall wooden structures (with separate roofs) set side by side and sometimes joined by passages. The first wooden cathedral, St. Sophia in Novgorod (989; destroyed 1045) had 13 "tops" and as many supporting frames. In the south the dwellings were semisubterranean, of a type also encountered in the east (Suzdal). Town fortifications consisted of wooden walls set on banks of earth.

The kinship of Russian stone churches with Byzantine and south Slavic ones is evidenced by the oldest surviving stone church in the R.S.F.S.R., the Cathedral of St. Sophia in Novgorod (XIII, PL. 56), a five-aisled, triapsidal structure with five domes resting on drums pierced by windows, galleries and porches on three sides, and a stair tower. Later, during the feudal period (12th–13th cent.), when stone churches were built in many towns, the predominant type had three aisles and six piers; from the second half of the 12th century, four piers were also used. Along with this Russian type of church, local peculiarities appeared in construction technique and the embellishment of façades. In the region of the upper Dnieper River, walls of alternating courses of stone and brick were superseded by all-brick walls, but the decorative niches on the façades and the colonnettes on the drums were retained. On the façades there were colonnettes (or clustered columns), and on walls and drums a sequence of consecutive arches — motifs related to Romanesque architecture. Along with simple buildings, such as the Church of SS. Peter and Paul in Smolensk (mid-12th cent.), churches with a more complex and dynamic distribution of spaces were built, such as the Church of the Archangel Michael in Smolensk (1191–94), with a pedestal under the drum, a tripartite façade corresponding to the form of the vaults, three relatively low porches, and low lateral apses. At first, the Novgorod churches of the 12th century were six-piered, with a tower on the west façade, three or five domes, and niches on the façades, as exemplified by the Church of St. Nicholas Dvorishchenski (founded 1113) and the churches of the monasteries of St. Anthony (1117) and St. George (Yuriev; 1119). Of smaller dimension are the four-piered churches of the end of the 12th century (SS. Peter and Paul in Novgorod, 1185–92; the Church of the Saviour at Nereditsa, outside Novgorod, 1198; St. George and the Church of the Dormition in Staraya Ladoga), which are distinguished for the simple embellishment of their façades and the picturesque distribution of their windows. Edifices of similar type in Pskov are the six-piered, three-domed Cathedral of the Ivanovski Monastery (before 1243) and the Cathedral of the Mirozhski Monastery (before 1156), which is pierless and has a cruciform plan with low adjuncts at the corners. In the northeast, in the Vladimir-Suzdal principality, building was carried out in dressed stone, often decorated with architectural and sculptural details. Recessed portals, arches of Romanesque type, slender colonnettes with sculptured capitals joined together by arches, apses, and a drum to support the dome were harmoniously combined in the typical Russian cubical church, which was domed and had semicircular blind arches (*zakomari*) on the exterior walls. The early buildings (the Cathedral in Pereslavl-Zalesski and the church in Kideksha, both 1152) are plain, but the Cathedral of the Dormition (1158–61, enlarged 1185–89) in Vladimir displays a more highly developed embellishment. The stately, graceful Church of the Intercession of the Virgin (1165) on the Nerl River near Vladimir has reliefs in the lunettes of its blind arches, while St. Dmitri (Demitrius; XIII, PL. 57) in Vladimir has reliefs covering the upper half of the façade and the drum. Finally, in the Church of St. George (1230–34) in Yuriev-Polski — which, like Suzdal Cathedral (1222–25), has porches on three sides — sculptured plant ornamentation entirely covers the walls; in the spaces formed by the blind arches there are relief representations of saints and, higher up, elaborate sculptural compositions with many figures. Neither church has retained its original domes, vaults, or upper walls. In the former prince's castle (12th cent.) at Bogolyubovo, near Vladimir, the stair tower, also decorated with blind arches, has survived.

Painting was well developed and constituted an important element in church interiors. A synthesis between architecture and painting was achieved by adapting the painted scenes and figures to the building's inner space and to the contours of the piers, vaults, and domes; the flat manner of painting left the surfaces of the walls and vaults relatively undisturbed.

The 11th-century frescoes in the drum of the central dome of the Cathedral of St. Sophia in Novgorod (XIII, PL. 64) follow Byzantine models and are distinguished for their solemn character, for their restrained and austere color scheme, and for the elongated proportions and spiritual, ascetic faces of the figures. In the 12th-century frescoes in Novgorod, Staraya Ladoga (XIII, PL. 66), and Pskov a departure from Byzantine models is evident: the figures are more squat and the faces are simpler and have more character and there is a noticeable tendency toward clear, light colors and a more vigorous — sometimes more linear — style of painting. The new Russian manner can also be seen in the frescoes of the 12th century and the beginning of the 13th in the cathedrals of the Dormition and St. Dmitri in Vladimir (XIII, PL. 67) and in the one in Suzdal.

The icon painting of Novgorod (*Ustyug Annunciation*) and of Vladimir-Suzdal (*St. Demetrius of Salonika*, the *Virgin Orans of Yaroslavl*; both in Moscow, Tretyakov Gall.) is characterized by faces based on the national type; the composition is more restrained and flatter, and the colors are varied, consisting of a range of bright colors with golden highlights on garments. In book illumination the influence of frescoes and icons is evident (Mstislav Gospel, 1103–17; Moscow, Historical Mus., Patr. 1203); the initials reflect the animal style (Yuriev Gospel, 1120–28; Moscow, Historical Mus., Fol. Perg. no. 1003). The same influences can be detected in the bas-relief animals in the Church of St. Dmitri in Vladimir and the Cathedral of Yuriev-Polski, while their flatness betrays ties with

ancient wood carving. Sculpture in the round was evidently unknown in the 11th–13th century. A high degree of excellence was achieved in artistic handicrafts — the adornment of metal goods with enamel (crosses, small icons, trimmings on church books), filigree, tiny fused-on silver bosses, and niellowork (on silver). The technique of tracing a gold design on lacquered copper sheets was used on the doors of Suzdal Cathedral (1220–30). Stone architecture, mosaics, and frescoes were new to Russia in the 10th century and the beginning of the 11th century and were therefore executed by Greek (and perhaps southern Slavic) artisans; but Russian disciples soon appeared, and 12th-century chronicles mention outstanding Russian builders.

The Tatar invasion of Russia (ca. 1230–40) and the Mongol-Tatar dominion checked the development of Russian art, especially that of building in stone, for a long time. Wall painting yielded its leading place to panel painting. It was probably during this time that there first appeared in wooden churches the many-tiered iconostases — so typical of the succeeding period — which compensated for the absence of frescoes. Only in Novgorod and Pskov, which had not been affected directly by the invasions, were stone architecture and wall painting promptly resumed. From the end of the 13th to the 15th century the small monastic or parish church with four piers, single apse and dome, and tripartite façade predominated in Novgorod. At the end of the 13th century there appeared a new style of façade embellishment that reached its full development in the second half of the 14th century, the time of the flowering of the Novgorod republic.

Among the stone fortifications of the 14th and 15th centuries, the best preserved are the fortress at Porkhovo (1387, partly rebuilt in 1430), with its simple forms and elaborate system of defending the gates, and the walls of the citadel (kremlin) in Novgorod (1484–90), with its relatively rich decoration on the Saviour and Vladimir towers. Novgorod houses were constructed almost entirely of wood, including the large boyar mansions (*khoromy*), which consisted of several high buildings joined together. Especially noteworthy among the stone constructions is the Euphymius Hall in the residence of the archbishop, which has Gothic vaulting that attests to the presence of western European builders.

The evolution of Novgorod painting is interesting. While the frescoes of the Church of the Saviour at Nereditsa (1199) show a severe chastising divinity, those of the 14th century represent a merciful and redeeming one. As early as St. Nicholas on the Lipna an Ascension was substituted for the usual scene of the Last Judgment and some frescoes of the second half of the 14th century include impressions drawn from real life. Many-figured compositions became more frequent and complex, architectural and landscape backgrounds more varied, and human figures and faces more realistic; the former static quality was replaced by lively poses and more vigorous movement (XIII, PL. 68). The manner of painting was more dynamic, with sharp highlights on the folds of garments and the illuminated parts of faces. Light, transparent colors predominated, with the exception of the dramatic frescoes in the Church of Our Saviour of the Transfiguration, painted in 1378 by Theophanes the Greek, who used an almost monochrome range of reddish-brown and grayish-blue colors with harsh highlights (II, PL. 464; XIII, PL. 68). The Novgorod icons of the 13th to the beginning of the 15th century are distinguished by their folkloristic, lifelike features, the purity of their bright unmixed colors, their simplicity and flatness of composition, and their precise drawing (XIII, PL. 71). In the second half of the 15th century the manner of painting became more meticulous, and the dimensions of icons were reduced (XIII, PL. 69); similar changes were introduced in frescoes. Inventiveness and humor distinguish the initial letters and marginal decorations in Novgorod manuscripts.

In Pskov, which became a republic in 1348, the development of architecture followed a separate path. At first churches had roofs laid directly on the blind arches, which were sometimes on different levels (Trinity Cathedral, 1365–67); then roofs with eight slopes were built (Church of SS. Cosmos and Damian, 1462). Characteristic of Pskov churches are three low apses and various additions (low porches and chapels) that were made to enlarge the area of the building. These additions, as well as porches with thick round posts and bell towers built onto or near the church, gave the plain Pskov churches a picturesque quality. The interiors were rarely decorated with frescoes. The multicolored iconostasis as well as the black pottery resonance chambers (*golosniki*) placed along the upper parts of the walls and the drums to improve the acoustics stood out against a white background. The remains of the defensive walls of Pskov show an advanced system of defending the gates, and the defensive walls of Izborsk have retained their decoration — bands of patterned brickwork and large crosses. The frescoes in the Cathedral of the Snetogorski Monastery (XIII, PL. 68) near Pskov include complex groups of figures and are more monochrome in their reddish-brown color scheme than those in Novgorod. The Pskov icons are distinguished for their marked folkloristic character and for their frequently somber and intense range of colors.

At the beginning of the 14th century Moscow began to gain ascendance in the northeast, uniting the Russian lands and waging war against the Tatars. The first stone churches of Moscow were similar to those of Vladimir-Suzdal (12th–13th cent.) in plan and in the walls of dressed stone. The churches of the late 14th century and first third of the 15th (Cathedral of the Dormition, Zvenigorod, XIII, FIG. 93; Trinity Cathedral, Trinity-Sergius Monastery, 1422–23) had recessed portals, blind keel arches (*zakomari*), high apses, and strips of carved ornamentation dividing the façades into sections. There was no sculpture on the façades, but the elaborate transition from the lower part of the building to the drum by means of additional tiers of *zakomari* and the decorative *kokoshniki* (blind arches resembling women's headdresses) gave these churches a graceful and picturesque air. With the expansion of building activity (mid-15th cent.) the costly dressed stone was replaced by brick; on gables (the palace at Uglich, second half of 15th cent.), on the *zakomari*, and on the upper parts of apses and drums (Cathedral of the Therapont Monastery at Beloe Ozero, ca. 1490) there appeared broad bands of patterned brickwork with terra-cotta plaques.

The dramatic impact and somber color scheme of the icons painted by Theophanes the Greek in 1405 for the Cathedral of the Annunciation in Moscow were not assimilated by Muscovite artists — especially not by Andrei Rublëv (q.v.), who worked with Theophanes in the Cathedral of the Annunciation (XII, PL. 338). Typical of Rublëv's frescoes (Cathedral of the Dormition in Vladimir, 1408; XII, PL. 339) and of his icons (the Trinity icon from the Trinity-Sergius Monastery; XII, PL. 336) are masterly composition, gracefulness of drawing, and harmony of color scheme, which, along with the beauty and spirituality of the faces, create a serene and joyous mood. Rublëv's art marks the apogee of Muscovite painting in this period. The rare examples of Russian sculpture include a stone panel with a carved relief of St. George (1464; workshop of V. D. Ermolin) from the Saviour's Tower (Spasskaya Bashnya) of the Moscow Kremlin and fine miniaturelike carvings by the sculptor Master Ambrose (Amvrosi).

During the last quarter of the 15th century, when Moscow became the capital of the Russian state, Russian and Italian architects and builders constructed stone churches, palaces, and defensive walls. The buildings in the Moscow Kremlin simulate the beauty of the 12th-century architecture of Vladimir (Cathedral of the Dormition, 1475–79, by Aristotele Fioravanti of Bologna; XIII, PL. 58); they consist of elements from earlier Russian churches (Cathedral of the Annunciation, 1484–89, built by Pskov builders), of certain features from the late Gothic and early Renaissance styles (Granovitaya Palace, 1487–91, by M. Ruffo and P. A. Solari; XII, PL. 112; defensive walls and towers, XIII, PL. 60), and of typically Russian church decoration [Cathedral of the Archangel Michael, 1505–09, by Aloisio (Alevisio Novi) from Milan; XIII, PL. 58]. Above the Kremlin complex rises the tall bell tower of Ivan the Great (Ivan Veliki).

In the first half of the 16th century kremlins were built in Nizhni Novgorod, Kolomna, and Tula, and fortified monasteries were erected or enlarged. In the cities and villages churches were built with tripartite façades (churches of St. Triphon and the Conception of St. Anne in Moscow) and tiers of *kokoshnik* arches (old Cathedral of the Virgin of the Don Monastery, Moscow, 1593), but without internal piers. Wood predominated in architecture; it was used to build the huts of peasants and townspeople, boyars' houses, and tsars' palaces. Wooden churches were square in plan, with additions for the altar and porch, and had either a steep roof with two slopes or an octagonal tent roof (*shater*); some wooden churches were built on a cruciform plan. Their influence may be detected in the stone churches in the shape of tall towers or groups of towers, often with tent roofs, such as those at Kolomenskoe (XIII, PL. 255, FIG. 97) and Dyakovo (ca. 1550), near Moscow, and the Cathedral of the Intercession, known as St. Basil the Blessed, in Moscow (XIII, PL. 59, FIG. 97). The rich adornment of their façades was carried out mostly in glazed bricks. Secular buildings had plain walls adorned only with a band of patterned brickwork or an elaborate cornice.

A reverential, yet festive character prevailed in the painting of this period. The frescoes by Dionysius (ca. 1500) in the Church of the Virgin in the Therapont Monastery display a cheerful range of light, pure colors; characteristic features are the slim, elongated figures, the graceful drawing, and the richness of the garments and architectural background. The same traits are found in later frescoes, icons, and miniatures. Icons of the second half of the 16th century have more elaborate compositions filled with symbolism. The icons of the Stroganov school (end of 16th and beginning of the 17th cent.) are relatively small — more suitable for houses than for churches — and because of their meticulous painting and their combination of colors with gold seem to be precious products of the jeweler's craft. The sculpture of this period can be characterized as applied art [bas-reliefs decorating the tsar's throne in the Moscow Cathedral of the Dormition (1551), and the human figures supporting the choir in the Cathedral of St. Sophia (1533) in Novgorod].

In the 17th century the strengthening of secularism and closer ties with foreign nations broadened the horizon of Russian artists. More secular buildings were built, frequently of stone. The houses of wealthy townspeople in Moscow, Nizhni Novgorod, Yaroslavl, Pskov, Gorokhovets, and Kaluga were usually constructed according to a trisectional plan, with a hall in the middle. An external flight of steps led to the second, main floor, and the top floor was either stone or wood. Pskov houses for a long time preserved the simplicity of their façades, while the brick houses of central Russia had rich adornment. Palaces were still composed of a row of buildings joined together. Later, they were unified into one building and became simpler and symmetrical (the stone Lefort Palace in Moscow, 1697–98, built by the architect D. Aksamitov). Classical forms and orders, which were combined with carving in stone and glazed tiles, appeared in the 17th century (Terem Palace in the Moscow Kremlin, 1635–36, by B. Ogurtsov) and became widespread at the end of the century: the Troekurov and Volkov mansions, the Krutitski Palace (ca. 1694, by O. Startsev), and the refectories of the Simonov Monastery (ca. 1683) and the Novodevichi Convent (1685–87) in Moscow. The five-domed, pierless church with chapels, a low and spacious structure on the west, and a bell tower over the entrance predominated. In the lavish adornment of the façades the traditional vertical division into sections and the *kokoshnik* arches were combined with horizontal divisions and window bands deriving from domestic architecture. Bell towers terminated in tent roofs, and some of the churches were crowned by two or three decorative tent roofs. Among the examples of this "ornate style" of building in Moscow are the Church of the Trinity in Nikitniki (ca. 1635–53) and the Church of the Nativity of the Virgin in Putinki (1649–52). (N. B.: To distinguish churches of the same name in a single city, the Russian usage is to add the name of the district in which the church is situated.) Later, the churches were more sober and the adornment more consonant with the structure (the Moscow Church of St. Nicholas in Khamovniki, 1679). At the turn of the century, the five-domed, pierless churches had open galleries and became lighter (Cathedral of the Vvedenski Monastery in Solvychegodsk, 1683–93, and the so-called "Stroganov" Church in Nizhni Novgorod, completed 1718). The large churches of traditional type — with piers and five domes — acquired galleries, chapels, and porches as well as ornate decoration on their façades (St. Elias the Prophet, 1647–50, St. John Chrysostom in Korovniki, 1649–54, and St. John the Baptist in Tolchkov, 1671–87, all in Yaroslavl; the Church of the Resurrection in Kostroma, 1652). Though the more severe northern churches lacked additions, they had richly decorated door and window frames. Classical orders appeared at the end of the 17th century in pierless parish churches and in cathedrals. Under the influence of architecture in wood, stone churches in the baroque "Naryshkin style" were built with a large octagonal tower or with several octagonal stories rising above the central rectangular structure, as illustrated by the churches at Fili (II, FIG. 277) and Ubory (XIII, PL. 60, FIG. 97), both outside Moscow; even bell towers assumed the form of tiered octagonal turrets (Novodevichi Convent, Moscow, ca. 1690). In keeping with the prevailing taste for adornment, wooden churches were crowned with tiered towers, with a tent roof over several tiers of so-called "barrels" (*bochki*) — semicylindrical roofs ending in a peak, with a "cube" composed of two interescting "barrels," or with many domes.

Russian painting of the first half of the 17th century followed traditional formulas; but in the second half of the century, under the influence of Western art, it became increasingly secular, ornate, and elegant. Biblical and hagiographic scenes resemble genre paintings owing to their numerous secondary figures and their scenes, clothing, architecture, and landscapes from everyday life. The old traditions are reflected only in the flat composition, the conventional beauty of the faces, the elongated proportions of the figures, and the rhythmic quality of the drawing. Frescoes cover walls and vaults like multicolored patterned carpets (frescoes in the Cathedral of the Archangel in Moscow, 1652–66; wall paintings by Guri Nikitin and Sila Savin at Pereslavl, Rostov, Yaroslavl, etc.). Simon Ushakov (1626–86) used chiaroscuro effects in the faces and figures in his icons (XIII, PL. 69); his engravings reveal a study of nature and a familiarity with Western models (engravings for J. Piscator's *Theatrum Biblicum*). Ushakov and artists close to him [I. Maksimov, T. I. Filatyev, I. Vladimirov, and K. I. Ulanov (d. 1731)], others more connected with the old traditions [Nikita Pavlovets (d. ca. 1677) and F. E. Zubov (d. 1689)], and still others who had come from abroad (the Armenian I. I. Saltanov and the Pole V. Poznanski, who were closer to Western art) all worked in the Armory Palace (Hall of Arms) in Moscow, as did the Dutch artist Johann Detterson and the Flemish artist Daniel Vuchters (Wuchters), both painters of portraits in the Western manner.

In the 17th century sculpture remained tied to architecture (the bas-reliefs of the Terem Palace, Moscow, 1635–36) and the decorative arts, although a small number of carved wooden bas-reliefs and statues are known. The bas-reliefs on the interior of the church in the village of Dubrovitsa (near Moscow; end of 17th cent.) and the statues on its exterior walls were probably executed by foreign sculptors. The desire for festivity and elegance in everyday life gave a great impetus to the applied arts.

As a result of the reforms introduced in the early 18th century by Peter the Great, secularism gained the ascendant in Russian art, while the divergences between it and Western art, which were still conspicuous at the end of the 17th century, diminished. This was especially noticeable in the new capital, St. Petersburg — now Leningrad — where, along with Russian architects, there worked the Swiss architect D. Trezzini (Tressini; 1670–1734), the Italians N. Michetti (d. 1759) and G. Chiaveri (1689–1770), the Frenchman A. J. B. Le Blond (1679–1719), the Germans A. Schlüter (1660–1714, G. Schädel (ca. 1680–1752), and J. Mattarnovi (d. 1719), and others. The town plan of Leningrad (especially the network of streets crossing at right angles on Vasilevski Island) differed in its regularity from the layouts of old Russian towns. The appearance of the streets was also different owing to the solid rows of houses of standardized design facing onto them. Public buildings also underwent a change; while the Twelve Colleges (Ministries), consisting of 12 similar parts connected together, recalled the old chancelleries, the designs of the Admiralty and the Kunstkammer were entirely new for Russia. There were three-aisled churches with a tall bell tower and spire on the west side (e.g., Cathedral of SS. Peter and Paul), while the palaces were symmetrical buildings with large halls of state (the Menshikov palaces in the city and at Oranienbaum). The buildings of this period had a restrained character; only figural pediments and, occasionally, decoration around windows enlivened the smooth or somewhat subdivided façades (Summer Palace of Peter the Great). In Moscow, where the buildings were more richly decorated, there persisted the old type of church surmounted by a bell tower (Church of the Archangel Gabriel, called the "Menshikov Tower," 1704–07) and the central-plan, domed church with two chapels and bell tower (Church of St. John the Warrior, 1709–13). Even the Arsenal in the Kremlin had sculptural and painted decoration on its exterior. In Leningrad, richly embellished architecture, similar to the Italian and south German baroque, flourished in the 1740s and 1750s. During this period the non-Russian type of basilican church was superseded by the central-plan church with five domes, as exemplified by the Cathedral of the Smolny Convent (1748–64) and the Cathedral of St. Nicholas (1753–62) in Leningrad and by the Church of St. Clement (1762–70) in Moscow. There was a revival of the Russian type of tall, detached bell tower (Trinity-Sergius Monastery). The palaces of this period, despite their lavish interior and exterior decoration, had precise plans and simple contours (the Winter Palace in Leningrad, by B. F. Rastrelli, and the palaces he rebuilt at Peterhof and Tsarskoe Selo). Gardens had geometric layouts (the Summer Garden in St. Petersburg, the gardens in Peterhof, and those of the country estate of Kuskovo, near Moscow) and were graced with pavilions, fountains, and statues.

Russian sculpture became an independent branch of art. At first foreigners worked in this field, the most outstanding being the Italian Carlo Bartolomeo Rastrelli (ca. 1675–1744), author of the portrait bust and equestrian statue of Peter the Great in Leningrad. In portraiture, realistic tendencies developed; the works of I. Nikitin (ca. 1688–1741), A. M. Matveev (1701–39), I. Ya. Vishnyakov (1699–1761), I. P. Argunov (1727–1802), and A. P. Antropov (1716–95) reveal not only an assimilation of Western experiences but also an original characterization of the sitter's inner world. The official state portrait is represented by the paintings of the German G. Danhauer (Tannauer; ca. 1680–1737), the Frenchman L. Caravacque (died 1754), the German G. C. Grooth (1716–49), the Italian P. A. Rotari (1707–62), and the Frenchman L. Tocqué (1696–1772), all of whom brought the rococo style to Russia. Ecclesiastical painting came under the strong influence of secular painting. Perspectivist painting gave rise to new ways of achieving a synthesis between architecture and painting, and the illusory effect of space was used to make interiors seem larger. This type of painting was practiced by the Italians G. Valeriani (1708–61) and S. Barozzi (d. 1810), the Russians B. Sukhodolski and A. I. Belski (1730–96), and others. M. V. Lomonosov (1711–65) revived the art of mosaics, which had been all but forgotten in Russia. Handicrafts also reflected the influence of the baroque and rococo styles.

In the provinces the new architectural forms from Leningrad and Moscow were combined with the old architectural and decorative formulas, such as the tent steeples of the bell towers in Suzdal and the adornment of church façades in the Volga and Ural regions and Siberia. Still more traditional was architecture in wood: the Cathedral with three tent roofs in Kem (1714), the Church of the Trinity with five tent roofs in Nenoksa on the White Sea (1727), and the tiered, multidomed churches of the Transfiguration (1714;

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

XIII, PL. 63) and the Intercession (1764) in Kizhi, on Lake Onega. In village churches there was a widespread use of painted wooden sculpture that combined old forms with the new realism. The frescoes of churches in Vologda, Tula, and other towns followed the old traditions but made use of current motifs in the architectural backgrounds and clothing. Even in the 17th century the *lubok* — a popular hand-painted engraving with a moralistic or sharply satirical text — was in use. Folk art firmly retained ancient traditions, including motifs from pagan antiquity, and many branches of folk art were developed by non-Russian peoples.

The crisis that the feudal system was experiencing in the second half of the 18th century and the first half of the 19th gave rise to conditions that favored the transition from the sumptuousness of mid-18th century art to the civic ideals and severity of neoclassicism and to more realistic and didactic traits in the representational arts. These tendencies came to predominate in the Academy of Fine Arts, founded in 1757 in Leningrad. In architecture, neoclassicism first became perceptible in the early 1760s (Academy of Fine Arts building, Leningrad) and then emerged vividly in the works of V. I. Bazhenov (1737–99), I. E. Starov (1745–1808), and M. F. Kazakov (1738–1812). In the architectural works of Bazhenov, such as the Pashkov Palace in Moscow (PL. 238), there is still evidence of ties with the preceding period, whereas the buildings by Starov (the Tauride Palace, Leningrad) and by Kazakov (the Golitsyn Hospital, Moscow), with their plain walls and severe porticoes and colonnades, effect the transition to the more severe architecture of the beginning of the 19th century. Churches were often built in the form of rotundas with large domes (e.g., the Church of Philip the Metropolitan, Moscow, by Kazakov), a type of plan also adopted in secular buildings (e.g., the former Senate in the Kremlin, Moscow, also by Kazakov). Bazhenov and Kazakov made attempts to revive ancient Russian forms, with which they sometimes combined Gothic elements. Russian neoclassicism is closely associated with the Italian Giacomo Quarenghi (1744–1817), the architect of many buildings and palaces in Leningrad and its environs (X, FIG. 535), and the Scotsman Charles Cameron (ca. 1740–1812), who constructed buildings at Pavlovsk and Tsarskoe Selo. Gardens with more natural landscaping began to predominate.

The beginning of the 19th century is distinguished for the somber monumentality of its architecture and for a great upsurge in urban construction, especially in Leningrad, where the Admiralty (PL. 242), the Stock Exchange, the Academy of Mines (Gorni Institut), and especially the Cathedral of the Virgin of Kazan (PL. 240) were planned in close relation to the adjoining streets and squares. This concept, developed in the construction of Leningrad and new cities in southern Russia (see *Ukraine*) and in the rebuilding of old towns (about 400 rebuilt in the period 1750–1830), was especially evident in the formal and richly embellished edifices by K. I. (Carlo) Rossi (1775–1849) in Leningrad (PL. 241; X, PL. 274, FIGS. 535, 539). The buildings by V. P. Stasov (1769–1848) are more severe. Significant reconstruction work was carried out in Moscow after the fire of 1812 by O. I. Bove (Beauvais; 1784–1834), D. I. Gilardi (1788–1845), A. G. Grigorev (1782–1868), and others, whose work differed from that of St. Petersburg architects in its less severe manner and greater lyricism. In provincial towns, streets were straightened and broadened, and alongside the existing centers (kremlins and monasteries) arose new squares with administrative and commercial buildings. The differences between the architecture of the capital and the provinces diminished owing to the standard designs drawn up by the city architects. Over 150 administrative buildings were constructed according to designs by A. D. Zakharov (1761–1811), and façades of houses were based on designs by Stasov and others. The forms of neoclassicism penetrated to provincial country estates and villages, where local carpenters adapted them in an original way to the requirements of architecture in wood. From 1830 to the early 1850s the severity of Russian neoclassicism gave way to showy splendor that was already evident in the Cathedral of St. Isaac in Leningrad (1818–58) and especially in the palaces built by A. I. Stakenschneider (1802–65), which combined elements of the neoclassic, baroque, and Renaissance styles. M. D. Bykovski (1801–85) and N. L. Benois (1813–98) made use of Gothic forms, while K. A. Thon (Ton; 1794–1881) created the "Russo-Byzantine" style, combining a neoclassic distribution of space with Byzantine, Romanesque, and early Russian details.

In painting, historical subjects prevailed. But the paintings of A. P. Losenko (1737–73) or G. I. Ugryumov (1764–1823) on themes of ancient or Russian history cannot be compared with the portraits. Those by D. G. Levitski (1735–1822), F. S. Rokotov (1732/36–1808), and V. L. Borovikovski (1757–1825) — the best portraits of the second half of the 18th century — are distinguished for brilliant workmanship and the subordination of composition and coloring to the psychological individuality of the model. Genre painting included depictions of the patriarchal, domestic aspects of peasant life (M. Shibanov, d. ca. 1789) as well as its want and poverty (I. A. Ermenëv, 1736–after 1792). Simon F. Shchedrin (1745–1804), with his views of gardens in the environs of St. Petersburg, and F. Ya. Alekseev (1753/55–1824), a master of city scenes, laid the foundations of Russian landscape painting. At the beginning of the 19th century, as previously, the greatest importance was attached to historical and religious painting (A. I. Ivanov, 1775–1848; V. K. Shebuev, 1777–1855; and A. E. Egorov, 1776–1851). Peasant life was represented in an idealized and poetic spirit by A. G. Venetsianov (1780–1847), who founded a school of genre, landscape, portrait, and still-life painting. Unprecedented elements were introduced into Russian painting by the romantic portraits of O. A. Kiprenski (1782–1836) and by the more realistic portraits of V. A. Tropinin (1776–1857). Landscape painting was renewed with the Italian views of Silvester F. Shchedrin (1791–1830) and the romantic paintings of M. N. Vorobëv (1787–1855). Among the foreign artists working in Russia in the second half of the 18th century and the beginning of the 19th, mention should be made of the following: the Swede A. Roslin (1718–93), the Austrian J. B. Lampi (1751–1830), and the Englishman G. Dowe (1781–1829), all portraitists; and the Italian P. Gonzaga (1751–1831), a major scenographer.

In the mid-18th century foreign sculptors, such as the Frenchman E. M. Falconet (q.v.), who executed the monument of Peter the Great in Leningrad (1766–82), were still being called to Russia; but the lead was soon taken by Russian sculptors: F. I. Shubin (1740–1805), and the neoclassicists F. G. Gordeev (1744–1810), I. P. Prokofiev (1758–1828), and M. I. Kozlovski (1753–1802; especially the monument to Suvorov in Leningrad, 1800–01). Heroic idealization marks the work of I. P. Martos (1752/54–1835) in his monument to Minin and Pozharski in Moscow (1808–18), as well as the bas-relief medallions (1814–36) dedicated to the war against Napoleon by F. P. Tolstoy (1783–1873). Later, in the work of B. I. Orlovski (1793–1837) and P. K. Klodt (1805–67), heroic pathos was combined with true-to-life features. The leading sculptors of the end of the 18th century and the beginning of the 19th — Kozlovski, Martos, F. F. Shchedrin (1751–1825), S. S. Pimenov (1784–1833), V. I. Demut-Malinovski (1779–1846), and I. P. Vitali (1794–1855) — devoted themselves to the decoration of buildings, funerary monuments, and garden sculpture. An important role in Russian art was played by engravings (E. P. Chemesov, 1737–65; G. I. Skorodumov, 1755–92; and N. I. Utkin, 1780–1863) and lithographs (A. O. Orlovski, 1777–1832). There were remarkable achievements in the applied arts during the neoclassic period (the Imperial Factory in St. Petersburg, 1744, the factory of F. Ya. Gardner, 1766, etc.).

In the reactionary atmosphere of the reign of Nicholas I there prevailed a frigid, official academicism, sometimes tinged with pessimism, as in the works of F. A. Bruni (1799–1875). The tragic destruction of noble persons served as the theme of *The Last Day of Pompeii* (1830–33; Leningrad, Russian Mus.) by K. P. Bryullov (1799–1852), who brought vivid romantic emotions and a study of nature to the severe academic school. A. A. Ivanov (1806–58), in his *Christ's Appearance to the People* (1837–57; Leningrad, Russian Mus.), turned to the neoclassic tradition; in his sketches (especially his landscapes) and in his water colors of Biblical subjects he approached the problems of painting in a new way. In genre painting P. A. Fedotov (1815–52) headed the school of critical realism, which was acquiring increasing social significance; in his art a caustic, satirical commentary on the mores of the gentry and the merchants is combined with a sympathy for simple people. Critical realism achieved a still broader scope in graphic work (e.g., the illustrations of A. A. Agin, 1817–75). Sculpture, on the contrary, preserved the outer forms of neoclassicism, at the same time losing its monumentality and becoming turgid, complicated, and trivial; the development of realism was reflected mainly in portrait sculpture and small-scale statues.

The breakdown of the feudal serf-holding system, which precipitated the peasant reform of 1861, marked the beginnings of capitalism. The economic dominance of the middle class and its accord with the gentry, whose tastes and way of life were imitated by the former, helped to make architecture more eclectic than ever. The appearance of new types of buildings and the advance of construction techniques caused the beginnings of a breach between function and traditional architectural designs and between new materials and old forms borrowed from the Renaissance (A. I. Rezanov, 1817–87; K. M. Bykovski, 1841–1906), from the early Russian style [V. O. Sherwood (Shervud; PL. 243), 1833–97; A. N. Pomerantsev, 1849–1918], or from folk architecture in wood (I. P. Ropet, 1845–1908). Only at the turn of the century did the exponents of Art Nouveau begin to seek artistic forms in keeping with the new types of buildings and current construction techniques. The architectural works of F. O. Schechtel (1859–1926) in Moscow and F. I. Lidval (1870–1945) in Leningrad anticipated some of the features of the constructivist school of the 1920s; but most of the modernist architects merely introduced a wealth of decorative embellishment, which soon

CC-0. Panjab University Digital Preservation Foundation, Chandigarh

provoked a reaction that expressed itself in a return to the purer forms of the Italian Renaissance (I. V. Zholtovski, 1867–1959; V. A. Shchuko, 1878–1939), of Russian neoclassicism (I. A. Fomin, 1872–1936), and of early Russian architecture (A. V. Shchusev, 1873–1949). Though the pre-Revolution architects often reached a high artistic level and achieved a more organic coalescence of old forms and new types of construction, they were nonetheless unable to cross beyond the confines of stylization.

In painting, under the influence of revolutionary, democratic ideas, critical realism emerged as the dominant trend. In the 1860s V. G. Perov (1834–82) painted pictures that were intended as sharp social indictments. Satirical graphic art flourished and realism penetrated also into historical painting (V. G. Schwartz, 1838–69). In 1863 a group of artists left the Academy of Fine Arts in protest against its conformist policy and formed the Artists' Workshop, which was headed by I. N. Kramskoi (1837–87). In 1870 Kramskoi and other artists founded the Society for Traveling Art Exhibitions in opposition to academic salon art. In the exhibitions of the Peredvizhniki (Itinerants, Travelers, or Wanderers, as the members were known) — the first took place in 1871 — there was a predominance of genre paintings (K. A. Savitski, 1844–1905; G. G. Myasoedov, 1835–1911; V. M. Maksimov, 1844–1911; V. E. Makovski, 1846–1920; N. A. Yaroshenko, 1846–98; etc.). Acute psychological insight distinguishes the portraits of Kramskoi and the historical pictures of N. N. Gay (Ge; 1831–94). The landscapes of the Peredvizhniki (I. I. Shishkin, 1832–98; A. K. Savrasov, 1830–97; and F. A. Vasilev, 1850–73) reveal the beauty of the Russian countryside and stand in contrast to the romantic grandeur of the seascapes by I. K. Aivazovski (1817–1900). The most important Russian realists were associated with the Peredvizhniki: I. E. Repin (1844–1930), who painted fine portraits and portrayals of folk life, Russian history, and the fight for freedom; and V. I. Surikov (1848–1916), who, in his huge dramatic canvases, presented the people as history's chief protagonist. Close to the Peredvizhniki was V. V. Vereshchagin (1842–1904), whose treatment of battle themes was meant to provoke feelings of protest against war. The last quarter of the 19th century and the beginning of the 20th constituted a period of new and varied quests. The romantic landscapes of A. I. Kuindzhi (1842–1910) vied with the subtle plein-air quality in the landscapes of V. D. Polenov (1844–1927), I. I. Levitan (1860/61–1900), and V. A. Serov (1865–1911), who later painted portraits. Landscapes occupied a prominent place in the canvases of V. M. Vasnetsov (1848–1926) on themes from Russian epics and fairy tales, in the religious compositions and portraits of M. V. Nesterov (1862–1942), and in the genre-historical paintings of A. P. Ryabushkin (1861–1904). M. A. Vrubel (1856–1910) united elements of fantasy and symbolism. At the end of the 19th century the society Mir Iskusstva (World of Art) was founded for the purpose of advancing the principles of art for art's sake. The work of the leading exponents of this group — A. N. Benois (1870–1960), K. A. Somov (1869–1939), X. N. K. Roerich (1874–1947), and V. E. Borisov-Musatov (1870–1905) — is characterized by stylization, by idealization of the past, and sometimes by mystical overtones. Mir Iskusstva also encouraged the graphic arts and book illustration, as exemplified by the work of M. V. Dobuzhinski (1875–1957), E. E. Lanceray (Lansere; 1875–1946), and A. P. Ostroumova-Lebedeva (1871–1955), as well as the art of scenography, as attested by the endeavors of L. N. Bakst (1866–1924; XII, PL. 442) and A. Ya. Golovin (1863–1930). The younger generation of the Peredvizhniki (N. A. Kasatkin, 1859–1930; S. V. Ivanov, 1864–1910; and A. E. Arkhipov, 1862–1930) combined their interest in the life and struggle of the working class and peasantry with a freer plein-air painting, which was especially characteristic of the Union of Russian Artists (Soyuz Russkikh Khudozhnikov), founded in 1903; its chief exponents — K. A. Korovin (1861–1939), F. A. Malyavin (1869–1940), A. S. Stepanov (1858–1923), K. F. Yuon (1875–1958), A. A. Rylov (1870–1939), and the Mir Iskusstva artists B. M. Kustodiev (1878–1927) and I. E. Grabar (1871–1960), who was closest to impressionism — delighted in the picturesqueness of the Russian countryside and rural life. In the decade before the 1917 Revolution the detachment from realism and the development of modernist tendencies manifested themselves in the symbolism and stylization of K. S. Petrov-Vodkin (1878–1939) and the artists of the Blue Rose society (Golubaya Roza; founded 1907), who were attracted by primitivism and decorative exoticism; in the Cézanne-inspired pursuits of the Jack of Diamonds group (Bubnovi Valet, founded 1910; P. P. Konchalovsky, 1876–1956; I. I. Mashkov, 1881–1944); in the futurism of the rayonists (N. S. Gontcharova, 1881–1962; M. F. Larionov, 1881–1964); and especially in the mystical fantasy of Marc Chagall (q.v.) and the abstract painting of the expressionist Wassily Kandinsky (q.v.) and the suprematist K. S. Malevich (q.v.; see also NONOBJECTIVE ART).

During the period 1861–1917 sculpture was less significant than painting. Realistic tendencies manifested themselves in smaller sculpture — most notably in the work of M. M. Antokolski (1843–1902) — and in the monuments created by M. O. Mikeshin (1836–96), A. M. Opekushin (1841–1923), and S. M. Volnukhin (1859–1921). P. P. Trubetskoi (1866/67–1938) worked in an impressionist vein, as did A. S. Golubkina (1864–1927) and N. A. Andreev (1873–1932). S. T. Konenkov (b. 1874) turned to archaic forms.

Pëtr MAKSIMOV

c. The Soviet period. From the first years of the Soviet regime, new types of buildings and new principles of town planning developed in conjunction with the socialist transformation. During the periods of the Civil War (1918–20) and the reconstruction of the national economy (1921–25) the first Soviet industrial projects were built, including the Chërnoreche chemical factory (1918–19) in the Gorki district, by V. A. Vesnin and others, and the Volkhov hydroelectric station (1919–26), by O. R. Munts (1871–1942) and others. Other important works were the Central Aerodynamics Institute (1919–29) in Moscow, by A. V. Kuznetsov (1874–1954), the Gorki House of Culture (1925–27) in Leningrad, by A. I. Gegello (b. 1891) and others, and complexes of houses for workers in Moscow, Leningrad, Sverdlovsk, Novosibirsk, and elsewhere. An important experience in architectural teamwork (I. V. Zholtovski, A. V. Shchusev, and others) was the setting up of the All-Russian Agricultural Fair in Moscow (1923). Outstanding examples of memorials were the Monument to the Fighters for the Revolution in Leningrad and the Lenin mausoleum in Moscow (PL. 251).

Building activity was greatly expanded during the transition to the socialization of industry. During the years of the First Five-Year Plan (1929–32) gigantic industrial plants were constructed, and urban districts were rebuilt in Moscow, Gorki, Sverdlovsk, Cheliabynsk, Rostov-on-Don, Volgograd, Ufa, Perm, and other towns; also, many new towns arose (Magnitogorsk, Novokuznetsk, Berezniki, etc.). Among the artistic groups of this period, some were based on a purely formal and sometimes deliberately eccentric use of the forms and materials of modern architecture, as in the case of the Society of New Architects (1923–30). An influential group was the Society of Modern Architects (OSA; 1925–31), in which the leading role was played by the Vesnin brothers — Victor (1882–1950), Leonid (1880–1933), and Alexander (1883–1959) — and M. Ya. Ginzburg (1892–1946). The members of the OSA, who called themselves "constructivists," advocated industrial methods of building, an esthetic expression of modern construction techniques, and a strict concern for functional planning and the use of buildings in a socialist society. Their significant buildings of the 1930s were the House of Culture of the Moscow Automobile Factory, the Pravda newspaper building in Moscow, and the Ordzhonikidze Sanitarium at Kislovodsk. The influence of this trend made itself felt in the works of architects who were not affiliated with the OSA: the Marx-Lenin Institute, the building of the Izvestiya newspaper, and the Ministry of Agriculture — all in Moscow — as well as the Barvikha Sanitarium on the outskirts of Moscow and the theater in Rostov-on-Don. The exponents of a different tendency, who were associated with the Moscow Architectural Society (1867–1930) and the Leningrad Society of Architects and Artists (1903–32), upheld the validity of the classical heritage and based their work on that of leading pre-Revolutionary architects who continued to be active in the Soviet period (I. V. Zholtovski, A. V. Shchusev, V. A. Shchuko, and I. A. Fomin). This tendency grew stronger after the competition for the Palace of Soviets (1931–33), for which architects had as their directive an assimilation of classical and new architecture. A single organization — the Union of Soviet Architects — was founded in 1932. In the 1930s town-planning operations were expanded in the Volga and Ural regions and Siberia, and Moscow was greatly transformed through the construction of houses, factories, subways (PL. 251), and the Moscow Canal. In Leningrad, also, large housing complexes were built.

After the War of 1941–45, the reconstruction of thousands of destroyed towns and villages was undertaken: Volgograd (by K. S. Alabyan, 1897–1959); Voronezh (by L. V. Rudnev, b. 1885); Rostov-on-Don (by V. N. Semenov, 1874–1960); Pskov (by N. V. Baranov, b. 1909); Novgorod (by A. V. Shchusev); Smolensk (by G. P. Goltz, 1893–1946); Kalinin (by N. Ya. Kolli, b. 1894); and Novorossisk (by B. M. Iofan, b. 1891). There was an expansion of town building in eastern areas of the R.S.F.S.R. (at Krasnoyarsk, Komsomolsk-on-Amur, and Omsk and in the Kuzbas, Ural, and Volga regions). In Moscow, in the years 1947–53, seven skyscrapers (PL. 253) and additional residential districts were built. Between 1949 and 1955 many new towns were founded (Angarsk, Volzhski, Novokuibyshevsk, Oktyabrski, Salavat, etc.).

Since 1954 Soviet architecture has been oriented toward mass construction, with a widespread use of prefabrication. Decorativeness and the eclectic use of archaic architectural forms have come under fire. The trend toward modern, simple, functional, and technically consistent forms of architecture is illustrated in Moscow by the

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Central Lenin Stadium, Convention Hall in the Kremlin (PL. 253), the Youth (Yunost) Hotel, the Pioneers' House on Lenin Hills, and the development of the southwest district (PL. 167), and in Leningrad by the Young Peoples' Theater and the Hotel Russia.

Pëtr VOLODIN

Representational art during the Revolution and the Civil War consisted primarily of political posters and cartoons (D. S. Moor, 1883–1946; V. N. Deni, 1893–1946, and V. V. Mayakovsky, 1893–1930). Monuments dedicated to the most outstanding figures of the Revolution and to the sciences and arts, in accordance with Lenin's call for "monumental propaganda," were created by N. A. Andreev, S. D. Merkurov (1881–1952), and others. Side by side with realism, an active part was played by cubism, futurism, and abstract art. However, the demands of actual life and the growing awareness of the representational arts among the people resulted in the victory of realism, the collapse of other tendencies, and the artistic reconversion of the majority of their exponents. The newly founded Association of Artists of Revolutionary Russia (1922) stimulated artists' interest in the traditions of Russian realism and in the authentic reproduction of revolutionary events, of the toil and way of life of the Soviet people, and of the new type of citizen who was emerging from the Revolution (e.g., the works of I. I. Brodski, 1883–1939; M. B. Grekov, 1882–1934; S. V. Malyutin, 1859–1937; and G. G. Ryazhski, 1895–1952). The leading artists of the Society of Easel Painters (Obshchestvo Khudozhnikov Stankovistov; 1925–32) sought artistic means for expressing the new features of Soviet life (P. P. Konchalovski, I. I. Mashkov, I. E. Grabar, K. F. Yuon, and A. A. Rylov). Humanitarian, positive attitudes toward life also gained the ascendant in sculpture (I. D. Shadr, 1887–1941; A. T. Matveev, 1878–1960; S. D. Lebedeva, b. 1892).

In 1932 the Union of Soviet Artists was founded on the principles of socialist realism (B. V. Ioganson, b. 1893; A. M. Gerasimov, b. 1881; S. V. Gerasimov, b. 1885; A. A. Deineka, b. 1899; A. A. Plastov, b. 1893; Yu. I. Pimenov, b. 1903; M. V. Nesterov; P. D. Korin, b. 1892; V. N. Baksheev, 1862–1958; N. P. Krymov, 1884–1958; and A. V. Kuprin, 1880–1960). With the intensive building of town complexes and public edifices, heroic monumental art became important, as demonstrated by the works of the sculptors V. I. Mukhina (1889–1953), M. G. Manizer (b. 1891), and N. V. Tomski (b. 1900) and the mural painter E. E. Lanceray (Lansere; 1875–1946). Biting political cartoons were produced by the Kukryniksy triumvirate (M. V. Kupryanov, b. 1903; P. N. Krylov, b. 1902; and N. A. Sokolov, b. 1903) and by B. E. Efimov (b. 1900), V. S. Ivanov (b. 1909), A. A. Kokorekin (1906–59), and V. B. Koretski (b. 1909).

In the postwar years, especially since the second half of the 1950s, art has begun to develop in various ways as the pompousness and conformity of the preceding years have been surmounted. There has also been an active struggle against individualistic, modernistic tendencies. Among the major contemporary artists are the painters V. A. Serov (b. 1910), S. A. Chuikov (b. 1902; cf. also the *Kirghiz S.S.R.*), G. G. Nissky (b. 1903), A. I. Laktionov (b. 1910), V. M. Oreshnikov (b. 1904), G. M. Korzhev (b. 1925); the sculptors S. T. Konenkov, E. V. Vuchetich (b. 1908), M. K. Anikushin (b. 1917), A. P. Kibalnikov (b. 1912), L. E. Kerbel (b. 1917); the graphic artists N. N. Zhukov (b. 1908), V. N. Goryaev (b. 1910), B. I. Prorokov (b. 1911), and D. A. Dubinski (1920–60); and theatrical set designers A. Ya. Golovin (1863–1930), P. V. Vilyams (1902–47), F. F. Fedorovski (1883–1955), and V. F. Ryndin (b. 1902). An important place in the artistic culture is held by the minor arts (china, artistic glass and crystal, textiles, furniture, lacquer painting, carpets, metalwork, carving and engraving on bone, carving and painting on wood, lace, ceramics, toys, etc.). During recent years a great deal of attention has been focused on industrial design.

Moscow, (A) plan of the city and its expansion. *Key*: (1) The Kremlin, 12th–14th century; (2) Kitai Gorod, first half of 16th century; (3) Bely Gorod, 16th century; (4) Zemlyany Gorod, second half of 16th century; (5) city limits, late 18th century; (6) city limits, 1957. Inset B: Schematic plan of the central zone showing the walls and monasteries of the 16th and 17th centuries. *Key*: (1) Monasteries in Kitai Gorod and Zemlyany Gorod; (2) fortified monasteries on the south; (3) walls of the Kremlin, 1485–95; (4) walls of Kitai Gorod, 1535–38; (5) walls of Bely Gorod, 1586–93; (6) fortifications of Zemlyany Gorod, 1591–92. Principal monasteries: (*a*) Zachatevski: (*b*) Alekseyevski; (*c*) Krestovozdvizhenski; (*d*) Nikitski; (*e*) Strastnoi; (*f*) Vysoko-Petrovski; (*g*) Rozhdestvenski; (*h*) Stretinski; (*i*) Ivanovski; (*j*) Novinski; (*k*) Novodevichi; (*l*) Danilovski; (*m*) Simonovski; (*n*) Novospasski; (*o*) Donskoi.

and of the U.S.S.R. (since 1922). The town was first mentioned in chronicles of 1147. The Kremlin, the most ancient part of Moscow, was built in 1156 on the Borovitski hill at the confluence of the Neglinnaya and Moskva rivers. In 1339 it was enlarged and surrounded by oak defensive walls and towers; in 1367 walls and towers of white stone were erected; these were replaced in 1485–95 by brick ones (over $1^1/_4$ mi. long and enclosing an area of ca. 70 acres), which have survived to the present (XIII, FIG. 95). The basic layout of the city was determined by streets diverging radially from the Kremlin and by three belts of town fortifications marking the city's gradual growth: the fortress walls of Kitai Gorod (1535–38), designed by Petrok Maly; those of Bely Gorod (1586–93), about 6 mi. long, designed by Fëdor Kon; and the wooden walls of Zemlyany Gorod (1591–92), about 10 mi. long, which were replaced by earthen ramparts (1611). The radial ring system was consolidated in the projected town plan of 1775–90, which received further elaboration during the rebuilding of Moscow after the fire of 1812, at which time the city's central squares — Red and Theater (now Sverdlov) squares — were formed; in place of the Bely Gorod and Zemlyany Gorod, boulevards with squares at the points of intersection with the radial streets were put through. In the second half of the 19th century, Moscow became an industrial and trading center with factories, apartment houses, banks, and offices. On the outskirts of the city densely populated districts have arisen.

The chief architectural monument of the 14th–17th century is the Kremlin, which includes the following major edifices: the Cathedral of the Dormition, also known as the Assumption (Uspenski Sobor, 1475–79; XIII, PL. 58), built by Aristotele Fioravanti of Bologna, which contains frescoes (1513–14, 1642–43) and the tsar's throne with reliefs (1551); the Cathedral of the Annunciation (Blagoveshchenski Sobor, 1484–89), built by architects from Pskov, with frescoes (1508) and icons (1405) executed by Theophanes the Greek, Andrei Rublëv (q.v.; XII, PL. 338), and others; the Cathedral of the Archangel Michael, also known as Archangel Cathedral (Arkhangelski Sobor, 1505–09; XII, PL. 112; XIII, PL. 58), built by Aloisio (Alevisio Novi) from Milan, with frescoes (1652–66); the Church of the Ordination (Rizpolozhenie, 1484–86), built by architects from Pskov; the Granovitaya Palace, also known as the Palace of Facets (1487–91; XII, PL. 112), built by M. Ruffo and P. A. Solari; the Bell Tower of Ivan the Great (1505–08), designed by Marco Bono and completed in 1600 by Russian architects; the Church of the Twelve Apostles and the Palace of the Patriarchs (1653–56, completed 1691); and the Terem Palace (1635–36), by B. Ogurtsov, L. Ushakov, T. Sharutin, and others. In the 16th century the towers of the Kremlin were given multistoried tent roofs — the Saviour Tower (Spasskaya Bashnya) in 1624–25, and the others between 1670–80.

Other buildings of the same period, not in the Kremlin, are the Andronikov Monastery, with the Cathedral of Our Saviour (Spasski

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

Sobor, ca. 1420–27) and a refectory building (1504–06) with a church (1694); the small pierless churches with cross vaults located in the former tradesmen's district: the churches of St. Trifon (early 16th cent.) and the Conception of St. Anne (16th cent.); the five-domed Smolensk Cathedral in the Novodevichi Convent (1524–25; frescoes, 1598); the tent-roofed Church of the Ascension in Kolomenskoe (XIII, PL. 255, FIG. 97); the Church of St. John the Baptist in Dyakovo (mid-16th cent.); on Red Square, the Cathedral of the Intercession (Pokrovski Sobor), later known as the Church of St. Basil the Blessed (XIII, PL. 59, FIG. 97), consisting of nine tower-shaped churches; the tent-roofed Church of the Transfiguration in the village of Ostrov near Moscow (2d half of 16th cent.); and the Cathedral of the Donskoi Monastery (1593). In the 16th century fortified monasteries were built around Moscow.

To the 17th century belong the relatively small, asymmetrical, multicontoured churches with richly adorned façades of plain and molded bricks. Examples of this ornate architectural style are the Church of the Trinity in Nikitniki (ca. 1635–53), the Church of the Nativity of the Virgin in Putinki (1649–52), the Church of St. Nicholas in Pyzhi (1647), the Church of St. Nicholas in Khamovniki (1679), and the Church of the Trinity in Ostankino (1678–92; XIII, PL. 60). (To distinguish Moscow churches of the same name, the district of the city is often given.) Among the edifices in the baroque Naryshkin style (end of 17th cent.) are the Church of the Resurrection in Kadashi (1687; bell tower, 1695), Church of the Intercession (Pokrov) in Fili (ca. 1693, II, FIG. 277), Church of the Trinity in Troitskoe-Lykovo (1698–1703), and the Church of the Virgin of the Sign (Znamenie, ca. 1702) in Sheremetev Court (ca. 1702) — all of which have a harmonious, tiered, central-plan distribution of spaces, and details in white stone on red brick walls. Other late-17th-century buildings include the Novodevichi Convent (1680–ca. 1690); the Vysokopetrovski Monastery (ca. 1690); the refectory of the Simonov Monastery (ca. 1683) and the Krutitski Palace (ca. 1694), both by O. D. Startsev; the Printing House (Pechatny Dvor, 1679); the Vol-

Moscow, plan of the central zone. Principal monuments: (1) Kremlin; (2) Red Square; (3) Church of St. Basil the Blessed; (4) Lenin mausoleum; (5) Church of the Glorification of the Virgin; (6) Lenin Library (formerly Pashkov Palace); (7) A. S. Pushkin Museum of Fine Arts; (8) Bolshoi Theater; (9) Lomonosov University; (10) Church of St. Clement; (11) Tretyakov Gallery; (12) Museum of Oriental Culture; (13) Lenin Academy of Agricultural Sciences (formerly Volkov mansion); (14) Lefort Palace; (15) Military Hospital in Lefortovo; (16) Kazan Station; (17) Yaroslavl Station; (18) Church of Philip the Metropolitan; (19) Peter Palace (Petrovski Dvorets); (20) Novodevichi Convent; (21) U.S.S.R. Academy of Sciences (Aleksandrinski Palace); (22) Museum of Architecture (formerly Donskoi Monastery); (23) Simonovski Monastery; (24) Municipal (formerly Golitsyn) Hospital; (25) Andronikovski Monastery; (26) to the villa of Ostankino. Inset: Scheme of the present city. *Key*: (1) Approximate city limits according to the town plan of 1935; (2) city limits, 1957; (3) actual city boundary; (4) district boundaries. Districts: I Sverdlovski; II Baumanski; III Kirovski; IV Frunzenski; V Leninski; VI Kievski; VII Krasnopresnenski; VIII Leningradski; IX Timiryazevski; X Dzerzhinski; XI Kuibyshevski; XII Pervomaiski; XIII Kalininski; XIV Zhdanovski; XV Propetarski; XVI Moskvorechski; XVII Oktyabrski.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

kov and Troekurov mansions; and the Lefort Palace (1697–98), by D. Aksamitov.

Constructions of the first half of the 18th century in the Muscovite baroque style are the Arsenal in the Kremlin (1702–36), by D. O. Ivanov, M. Choglokov, and C. Conrad; the Church of the Archangel Gabriel, generally known as the Menshikov Tower (1704–07), by I. P. Zarudny; the Church of St. John the Warrior (Ioann Voin, 1709–13); the Church of St. Clement (1762–70); and the Apraksin house (ca. 1760).

The most important neoclassic buildings of the second half of the 18th century are the Pashkov Palace, now the Lenin Library (PL. 238), by V. I. Bazhenov; the former senate building (1776–87), now the Supreme Soviet, in the Kremlin; the University (1787–93, rebuilt 1817–19), by D. Gilardi; and the Hall of the Noblemen's Assembly, now the Hall of Columns in the House of Trade Unions (PL. 238), the Golitsyn Hospital (1796–1801), the Church of Philip the Metropolitan (1777–88), and a group of houses, villas, and churches — all by M. F. Kazakov. Other landmarks are the Military Hospital in Lefortovo (1798–1802), by I. V. Egotov, and the Hostel (Strannopriimny Dom, 1794–1807), now the Sklifosovski Institute, by E. S. Nazarov and G. Quarenghi. The Peter Palace (Petrovski Dvorets, 1775–82), designed by M. F. Kazakov, was built in medieval style.

After the fire of 1812, architecture in Moscow acquired a marked unity of style. Among the neoclassic monuments of the first half of the 19th century are the Bolshoi Theater (1821–24), designed by O. I. Bove and A. A. Mikhailov and rebuilt (1856) by A. K. Kavos; the Food Storehouses (Proviantskie Sklady, 1832–35), by V. P. Stasov and F. M. Shestakov; the building of the Council for the Needy (Opekunski Sovet, 1823–26), by D. Gilardi and A. G. Grigorev; the Stanitskaya house (1817–22), by A. G. Grigorev; and the Usachëv-Naidënov villa (1829–31), by D. Gilardi. The suburban villa of Tsaritsino (1775–85), by V. I. Bazhenov and M. F. Kazakov, combined neoclassic principles with old Russian and Gothic forms. In neoclassic style are the suburban villas of Ostankino, Kuskovo, Arkhangelskoe, and Kuzminki.

Eclectic constructions of the middle and second half of the 19th century include the Great Kremlin Palace (1838–49), by K. A. Thon; the commercial arcades of Red Square (1889–93), at present the GUM department store, by A. N. Pomerantsev; the Historical Museum (PL. 243), by V. O. Sherwood; and the seat of the city duma (1890–92), now the Lenin Museum, by D. N. Chichagov.

Notable structures dating from the beginning of the 20th century are the Yaroslavl Railroad Station (1903–04) and the Ryabushinski house (ca. 1900), both designed by F. O. Schechtel in the Art Nouveau style; the Kazan Railroad Station (1913–26), by A. V. Shchusev; the Tarasov house (1909–10), by I. V. Zholtovski; and the A. S. Pushkin Museum of Fine Arts (PL. 243), by R. I. Klejn.

In the years 1918–24 the "Plan of the New Moscow" was drawn up under the direction of A. V. Shchusev and I. V. Zholtovski.

In the last half of the 1920s and the beginning of the 1930s many large factories and housing complexes were built. Major constructions from this period are the Lenin mausoleum (1924–30; PL. 251), by A. V. Shchusev; the Izvestiya newspaper building (1925–26), by G. B. Barkhin; the Marx-Lenin Institute (1926–27), by C. E. Chernyshev; the complex of the Lenin State Library, which was enlarged after 1920 according to plans by V. A. Shchuko and V. G. Gelfreikh; the Likhachëv automobile factory (1934–37), by E. M. Popov and others; the House of Culture of the automobile factory (1930–37), by the Vesnin brothers; the Central Statistics Bureau in Kirov Street (1929–36), by Le Corbusier (q.v.) and N. Ya. Kolli; the Pravda newspaper building (1929–36), by P. A. Golosov; and the building of the Council of Ministers of the U.S.S.R. (1933–35), by A. Ya. Langman. In 1931 a broad program of housing construction and community development was adopted, and in 1935 a general plan for the rebuilding of Moscow was approved. Participants in the drawing up and execution of the projects included architects of the older generation (e.g., V. N. Semenov, A. P. Ivanitski, B. M. Iofan, L. V. Rudnev), along with others who had received their training during the Soviet period (e.g., K. S. Alabyan, A. K. Burov, A. V. Vlasov, G. P. Goltz, A. G. Mordvinov, M. N. Parusnikov, Z. M. Rosenfeld, M. I. Sinyavski, L. Z. Cherikover, D. N. Chechulin). The central squares of Moscow were rebuilt, as well as Gorki Street, Kutuzov Prospect, Greater Kaluga Street (now part of the Lenin Prospect), the Peace Prospect, and other thoroughfares. Between 1932 and 1935, under the direction of the architects I. A. Fomin, A. N. Dushkin, and D. N. Chechulin, the first stations of the Moscow subway were built. Other projects of the 1930s were the All-Russian Agricultural Fair (1939), the Moscow Canal (1932–37), and bridges and embankments (1936–38). Since 1948 large housing developments of prefabricated reinforced-concrete constructions have been built. Many buildings based on individual designs are marred by excessive decorativeness, as exemplified by some of the skyscrapers erected in the years 1947–53, the largest of which is the Moscow State University on Lenin Hills (PL. 253), by L. V. Rudnev, S. E. Chernyshëv, P. V. Abrosimov, and A. F. Khryakov. Since 1955 housing construction has been concentrated in previously vacant areas, and a whole series of large city districts based on microcommunities has arisen (PL. 167).

Some of the major public buildings of this period are the Central Lenin Stadium (1955–56), by A. V. Vlasov, I. E. Rozhin, N. N. Ullas, A. F. Khryakov, and others; the Russia Cinema (1961), by Yu. N. Sheverdyaev, D. S. Solopov, E. A. Gadzhinskaya, and others; the Convention Hall in the Kremlin (PL. 253), by M. V. Posokhin, A. A. Mndoyants, E. N. Stamo, and P. P. Shteller; the Youth (Yunost) Hotel (1961); and the Pioneers' House (1960–62), by I. A. Pokrovski and others.

Museums and galleries in Moscow and environs: Tretyakov Gallery (1856), Russian and Soviet art; A. S. Pushkin Museum of Fine Arts (1912), a collection of world art; Museum of Oriental Culture (1918); Historical Museum (1873), collections of archaeological finds, textiles, garments, and objects used in daily life; Museum of the History and Reconstruction of Moscow (1896), material on the history and building of the city and collections of gifts presented to the city; Museum of Architecture (1935), a collection of original designs by Russian and Soviet architects; Shchusev Museum of Russian Architecture; Armory Palace (Oruzheinaya Palata), or Hall of Arms, in the Kremlin (converted into a museum in 1806), an extremely rich collection of court treasures and the minor arts; the Arkhangelskoe estate (opened as a museum after 1917), containing furniture, decorative goods, painting, and sculpture; the Ceramics Museum (1932) on the 18th-century estate of Kuskovo; Serf Art Museum (after 1917) in the Ostankino mansion.

Art schools and institutes: U.S.S.R. Academy of Fine Arts; U.S.S.R. Academy of Construction and Architecture; Surikov Institute of Art; Institute of Architecture.

Arkhangelsk (Archangel). This large port situated on the Northern Dvina River, near the White Sea, was founded in 1584. It was known as Novo-Kholmogory until 1613. Among the stone constructions of the 17th and early 18th centuries are the fortresslike market building (1668–84), designed by D. M. Startsev, with six towers and picturesque embellishment in the Muscovite ornate style, and the Novodvina Fortress (1701–05). In 1794 a town plan based on regularly aligned streets crossing at right angles was adopted. Notable structures in the neoclassic style are the provincial administrative buildings (1806) and the governor's residence (1817), both rebuilt in 1932, as well as the rope factory (beginning of the 19th cent.), by A. D. Zakharov. A new town plan was adopted in 1950. The art museum was founded in 1960.

Astrakhan. This port on the Volga River is situated about 62 mi. from the Caspian Sea. In 1558 it became a center of trade with Asia. Among the surviving monuments of art-historical interest are the stone kremlin, with defensive walls and towers (1580–1620), by Mikhail Velyaminov, Dei Gubasty, and others; the Cathedral of the Dormition (Uspenski Sobor, 1700–10), by Dorofei Myakishev; and the Cathedral of the Trinity (1698–1700). During the Soviet period

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

the city has been rebuilt in accordance with a town plan (1957) based on a network of streets crossing at right angles; in the center stands the kremlin. The art collection is housed in the Kustodiev Picture Gallery.

Bolgar Veliki (Bulgar Veliki, Bolgary Velikie). The ancient town that was the capital of the Volga-Kama Bulgars from the 10th to the 15th century. Destroyed in the 14th–15th century, the ruined town is located about 4 mi. from the Volga, near the village of Bolgar in the Kuibyshev district of the Tatar A.S.S.R., a subdivision of the R.S.F.S.R. Among the architectural monuments of the 13th and 14th centuries are rectangular houses with two-sloped or flat roofs and interiors richly decorated with stuccoes; baths with elaborate heating systems; the Little Minaret; and a mausoleum. The Khan's tomb, the Church of St. Nicholas, the monasterial crypt, and the ruins of the Square Mosque are all buildings of the same type, consisting of a basic cubic structure, from which, by means of pendentives, the transition is effected to an octagonal drum surmounted by a rounded cupola or a pyramid. The walls are richly decorated — outside with niches, stone carving, and colored tiles, inside with colonnettes, rosettes, and stalactites in the corners.

Derbent. Situated on the shores of the Caspian Sea, in the Dagestan A.S.S.R., the town has been in existence for more than one and a half millenniums. Architectural monuments of note are the town walls, with 3 gates and 30 towers (5th–6th cent.); the three-aisled mosque (Dzhuma), which was built in 733 from an existing Christian basilica and completely rebuilt in the years 1368–69, after an earthquake; Arab burials (8th cent.) in the Kyrkhlyar cemetery; and caravansaries and mosques (17th–18th cent.). A new town plan (1955), drawn up by the Leningrad Town Planning Institute, provides for expansion to the north and for the conversion of the old part of the town into a museum.

Gorki (until 1932, Nizhni Novgorod). The city, founded in 1221, is situated at the confluence of the Oka and Volga rivers and consists of two parts — the Nagornaya (on the hills) and the Zarechnaya (on the rivers). The layout of the Nagornaya gravitates toward the kremlin (1500–11; including the Archangel Cathedral, 1631, by L. Vozoulin) and is based on a regular street plan (second half of the 18th cent.) combined with a radial and semiannular system. Important edifices of the 17th and 18th centuries are the Pecherski and Annunciation (Blagoveshchenski) monasteries and the Church of the Nativity — the so-called "Stroganov Church" — completed in 1718. During the Soviet period both sections of the city have expanded.

Gorki (formerly Nizhni Novgorod), plan of the kremlin in the early 16th century. Principal monuments: (*a*) Cathedral of the Saviour; (b) Archangel Cathedral; (*c*) Tower of Ivan; (*d*) Tower of Dmitri; (*e*) Clock Tower; (*f*) North Tower; (*g*) Koromyslova Tower.

The art museum (1896) contains a collection of Russian and Soviet painting, sculpture, and graphic art.

Ioshkar-Ola (until 1919, Tsarevokokshaisk; from 1919 to 1927, Krasnokokshaisk). Founded in 1578 and capital of the Mari A.S.S.R. since 1920, the town is situated on the Little Kokshaga River in the Volga River basin. The original city was built without any definite plan and contained log houses with carved ornamentation on cornices, window surrounds, porches, and gates. The church in Ezhovo (1647) and the Church of the Ascension (1756) are built of stone. During the Soviet period the town has been enlarged in conformity with a town plan.

Irkutsk. A large industrial center of Siberia situated at the confluence of the Irkut and Angara rivers, Irkutsk was founded in 1686 and became an important political deportation center. Noteworthy buildings are the Church of Our Saviour (1706); the Church of the Raising of the Cross (1758–60); the "Humped" and "White" houses (both 18th cent.); the Technical Industrial School (ca. 1830), by the architect Rozen; the building of the city duma (ca. 1890), by the architect Rassushin; the theater (1893–97), by V. A. Shreter; and public and industrial buildings of the Soviet period. The district art museum is located here.

Kalinin (until 1931, Tver). Situated on the Volga River, the city was first mentioned in 1134–35. From the 13th to 15th century

Kalinin (formerly Tver), plan of the city in the 18th century. Districts: (*a*) Zatveritski; (*b*) Zavolzhski; (*c*) Zagorodski; (*d*) Zatmatski; (*e*) fortress of Tver.

it was the center of the principality of Tver. The Church of the White Trinity (1564) has survived. After a fire in 1763, a three-pronged town plan with four squares along the main axis was worked out. On an octagonal plaza stand the former town hall (1770–80), at present the headquarters of the town soviet; the former House of the Noblemen (1766–70), now headquarters of the town committee of the Communist party; and the former school (1780), now the Young People's Theater. Other noteworthy monuments are the palace of Catherine the Great (1763–75), built by M. F. Kazakov and rebuilt in 1809 by K. I. (Carlo) Rossi; the 18th-century houses on the embankment; and the Hall of Columns of the Noblemen's Assembly. During the Soviet period the city has grown appreciably. The district picture gallery is located here.

Kaluga. Situated on the Oka River, Kaluga was first mentioned in 1371; in the 15th century it was a large fortified town. In the 18th century the town's street plan, combining radial features with streets crossing at right angles, took shape. Buildings dating from the end of the 17th century and the beginning of the 18th are the house of the merchant Korobov (end of the 17th cent.) and the

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

churches of the Intercession (1687) and St. George (1700–01), both in the Naryshkin style of Moscow. Among the neoclassic constructions are a complex of public buildings (1780–87), presumably designed by P. R. Nikitin; the Trinity Cathedral (1786–1819), by I. D. Yasnygin; the Institute for the Nobility (1782–85), at present the Pedagogical Institute; 18th- and 19th-century houses [e.g., the Kologrivova house (1805–08), which now houses the ethnographic and art museum]; the Market Building (1784–88), completed in the years 1811–21 by I. D. Yasnygin. The city has been enlarged in accordance with a town plan that was adopted in 1949 and worked out in detail by the Moscow Town Planning Institute in 1959. The district art museum is located here.

Kazan. The capital of the Tatar A.S.S.R. since 1920, this city on the Volga River was founded at the end of the 14th century and became the capital of the Kazan Khanate (15th–16th cent.). In the center of the city is the stone-walled kremlin (1556, 1594), by Pskov builders (Postnik, Ivan Shiryai, and others), including the Tower of Syumbek (end of the 17th cent.), the Tower of Our Saviour (16th–17th cent.), and the five-domed Cathedral of the Annunciation (1561–62). In the 18th century the town acquired a regular street plan. Buildings of artistic significance are the Cathedral of SS. Peter and Paul (1726) and the Dryablov house (beginning of 18th cent.), both in baroque style; the 18th-century Ananaev and Merdzhani mosques; and the neoclassic buildings of the University, including the main building (1822–25), by P. G. Pyatnitski, and the anatomical theater, observatory, and clinics (all ca. 1830–40), by M. P. Korinfski. During the Soviet period Kazan has been considerably enlarged and rebuilt. The Tatar Republic Museum of Figural Art was founded in 1958.

Kostroma. Situated on the Volga River, the town has been known since 1214. Monuments from the 16th and 17th centuries are the Cathedral of the Bogoyavlenski Monastery (1559–65; frescoes, 1672); the Ipatevski Monastery, which includes stone walls, towers, the Trinity Cathedral (1652; frescoes, 1685, by the painter Guri Nikitin and others), the bell tower (1603–05, rebuilt 1649 and 1652), and the Romanov mansion (1586–90, rebuilt 1863); the Church of the Resurrection (1652); and the Church of St. John the Theologian in the Ipatevski district (1681–87; frescoes, 1735). In 1781 a town plan, incorporating a regularly aligned, fan-shaped system of streets converging toward the Volga, was adopted. The neoclassic Market Building (1789–1800), by K. Kler and S. A. Vorotilov, was enlarged in the first third of the 19th century according to designs by N.

Kostroma, plan of the city in the late 18th century. *Key*: (1) Original nucleus, until the 14th century; (2) approximate zone of the city nucleus before the 1781 plan.

Metlin, P. I. Fursov, and V. P. Stasov. The building of the main guard (1824–25), the fire tower (1825–26), the former Assembly of the Noblemen (1837–38), now the Pioneers' House, and a group of houses were all built by the architect P. I. Fursov. Houses and public buildings have been constructed during the Soviet period. The district picture gallery is located in Kostroma.

Kursk. Situated on the right bank of the Tuskar (Tuskor) River (the Dnieper River basin), Kursk was first mentioned in chronicles of 1095. From 1597 it was a borderland fortress with a wooden prison. Important structures of the 17th and 18th centuries are the house of the Romodanov boyars (1649–80); Trinity Church (1695); and the Cathedral of St. Sergius (1752–78), in the baroque style of the school of B. F. Rastrelli. The town plan of 1782 introduced regularity into the old layout of the town. In neoclassic style are the Desinev house (1790), by G. Quarenghi, which is now part of the district hospital, and the Cathedral of the Virgin of the Sign (Znamenski, 1816–26), by A. I. Melnikov. During the Soviet period the town has been built up in accordance with a new plan drawn up in the postwar years. The district picture gallery is located here.

Leningrad (until 1914, St. Petersburg; from 1914 to 1924, Petrograd). Second only to Moscow among the cities of the U.S.S.R., Leningrad is one of the most important industrial, cultural, and scientific centers of the nation. From 1712 to 1918 it was the capital of Russia. The city is situated on more than 100 low islands of the Neva River delta, which are joined together by 362 bridges; it was founded in May, 1703, when the cornerstone of the Fortress of SS. Peter and Paul on Zayache Island was laid. From the shipyards (1704) — later the site of the Admiralty (PL. 242) — fanned out three streets that were to become part of the basic layout of the old part of Leningrad as well as the city's main thoroughfares. The Nevski Prospect assumed great importance with the founding of the Alexander Nevski Lavra (1710–13) at its farther end.

The major early-18th-century buildings are the Cathedral in the Fortress of SS. Peter and Paul (1712–33), by D. Trezzini, which has a bell tower (ca. 400 ft. high) surmounted by a spire and houses an iconostasis (1722–26) by I. P. Zarudny; the Twelve Colleges (1722–42), by Trezzini and others; the Kunstkammer (1718–34), by G. J. Mattarnovi, N. F. Härbel, G. Chiaveri, M. G. Zemtsov, and others; the Summer Palace of Peter the Great (1710–14); and the Menshikov Palace on Vasilevski Island (begun 1710), by G. M. Fontana and G. Schädel. In the first third of the 18th century the following palaces with parks were built around Leningrad: Strelna (1716–26), by C. B. Rastrelli, A. J. B. Le Blond, M. G. Zemtsov, and others; Peterhof (see *Petrodvorets*); Tsarskoe Selo (see *Pushkin*); and Oranienbaum (1711–20), now Lomonosov, by Fontana and Schädel. In the 1730s the plan for the city's layout was reworked by P. M. Eropkin, with the collaboration of Zemtsov and Korobov.

Mid-18th-century baroque edifices are the Stroganov (1752–54) and Vorontsov (1749–57) palaces; the Smolny Convent (1748–64), with a five-domed Cathedral in the center of a square courtyard formed by rows of cells that has four small churches at the corners; and the Winter Palace (1754–62) — all designed by B. F. Rastrelli. The Naval Cathedral of St. Nicholas (1753–62), by S. I. Chevakinski, is also baroque. By competition (1763) a new city plan was devised (A. V. Kvasov and others), further developing the regular layout of the capital. Structures in a transitional style approaching neoclassicism are the Academy of Fine Arts (1764–88), by A. F. Kokorinov and J. B. Vallin de la Mothe, and the Marble Palace (1768–85), now the Lenin Museum, by A. Rinaldi.

Neoclassic buildings of the end of the 18th century are the Tauride Palace (1783–89) and the Trinity Cathedral in the Alexander Nevski Lavra (1776–90), both by I. E. Starov; the Engineers', or Michael, Castle (1797–1800), by V. I. Bazhenov and V. Brenna; and the Academy of Sciences (1783–89), the Hermitage Theater (1783–87), and the Smolny Institute (1806–08) — all of which were designed by Quarenghi. The wrought-iron grilles for the Summer Garden (1784) were designed by Ya. M. Velten in collaboration with P. Egorov. Outstanding buildings were constructed at Oranienbaum (the Chinese Palace, 1762–68, by Rinaldi), Tsarskoe Selo, and Peterhof, and new suburban residences were begun at Gatchina (1766–81, Rinaldi) and Pavlovsk (see below).

Among the neoclassic buildings constructed in the first half of the 19th century are the Admiralty, which was rebuilt (1806–23) by A. D. Zakharov; and the Cathedral of the Virgin of Kazan (1801–11; PL. 240) and the Academy of Mines (1806–11), both by A. N. Voronikhin. Major urban complexes dating from the same period are Strelka Square on Vasilevski Island, with the Stock Exchange (1805–10), by Thomas de Thomon, and other buildings; the Parade Ground, with the Imperial Barracks (1817–20), by V. P. Stasov; and works by K. I. (Carlo) Rossi, such as the Elagin (Yelagin) Palace (1818–26; X, FIG. 535), Palace Square, with the General Headquarters (1819–29); Decembrists' Square, with the Old Senate and Holy Synod (1829–34); the New Mikhail (Michael) Palace (X, PL. 274, FIG. 539), now the Russian Museum; and the Alexandrinsky Theater (1828–32), now the Pushkin Theater, with two squares and a connecting street that form a unified composition. A. R. de Montferrand designed the

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

Leningrad, plan of the center. Inset: Plan of St. Petersburg in 1750. (1) Nevski Prospect; (2) Sredny Prospect; (3) Voznesenskaya Street; (4) Bolshaya Perspektivnaya Street. Principal monuments: (*a*) Fortress and Cathedral of SS. Peter and Paul; (*b*) Petrovski Park; (*c*) Kirov Park and Elagin Palace; (*d*) Strelka Square on Vasilevski Island, with the Stock Exchange (now Naval Mus.), Kunstkammer (now the Mus. of Anthr. and Ethn.), U.S.S.R. Academy of Sciences, building of the Twelve Colleges (now Leningrad University), Menshikov Palace, U.S.S.R. Academy of Fine Arts; (*e*) Admiralty; (*f*) Stroganov Palace; (*g*) Cathedral of the Virgin of Kazan (now a museum); (*h*) Cathedral of St. Isaac; (*i*) Cathedral of St. Nicholas; (*j*) Plekhanov School of Mines; (*k*) The Hermitage and Winter Palace; (*l*) Marble Palace (now Lenin Mus.) and Parade Ground; (*m*) Palace Square; (*n*) Decembrists' Square; (*o*) New Mikhail (Michael) Palace (now Russian Mus.); (*p*) Pushkin (formerly Alexandrinsky) Theater; (*q*) Anichkov Place; (*r*) Summer Palace of Peter the Great (now a museum); (*s*) Alexander Nevski Lavra and Trinity Cathedral; (*t*) Tauride Palace; (*u*) Smolny Convent and Institute; (*v*) Leningrad Historical Museum.

grandiose Cathedral of St. Isaac (1818–58), which rises to a height of over 325 ft., as well as the Alexander Column (1830–34) on Palace Square. The constructions of this period were embellished with an abundance of monumental and decorative sculpture.

Eclectic architecture of the mid-19th century is represented by the Mariinski and Nikolaevski palaces (1839–44 and 1853–61, respectively), by A. I. Stakenshneider, and The Hermitage (1839–52), by Leo von Klenze and others. In the late 19th century and the beginning of the 20th, the Art Nouveau style appeared in the works of F. I. Lidval and N. V. Vasilev, while other architects, such as I. A. Fomin and V. A. Shchuko, returned to neoclassic forms.

During the Soviet period extensive town-planning projects have been realized. In 1919, under the direction of Fomin, improvement of the city's layout was begun. In the years 1935–40 a new town plan was devised by L. A. Ilin, A. I. Naumov, E. I. Katonin, N. V. Baranov, V. A. Vitman, and others. Large housing developments and public buildings were constructed. During the postwar years hundreds of damaged buildings were restored and many new housing districts, public parks, and public buildings (hotels, theaters, a stadium, a television center, etc.) were built. In 1955 the first branch of the subway was opened.

Museums: The Hermitage, founded in 1764 to house the private collection of Catherine the Great, opened to the public in 1852, and enlarged and reorganized during the Soviet period, with the largest collection of world art in the U.S.S.R.; Russian Museum (1898), with an extensive collection of Russian art; Museum of City Sculpture (1939) in the Alexander Nevski Lavra, containing a collection of local monumental, decorative, and memorial sculpture; Leningrad Historical Museum (1918); Ethnographic Museum of the Peoples of the U.S.S.R. (1901); Peter the Great Museum of Anthropology and Ethnography (1878); Research Museum of the U.S.S.R. Academy of Fine Arts (18th cent.).

Art schools and institutes: Repin Institute of Painting, Sculpture, and Architecture; Mukhina School of Art and Industry.

Murom. Situated on the Oka River, Murom is first mentioned in chronicles of 862. The tent-roofed Church of SS. Cosmos and Damian (1541 or 1565) is similar in design to the central section of the Church of St. Basil the Blessed in Moscow. The picturesque, lavishly decorated complex of the Trinity Monastery includes the five-domed Trinity Cathedral (1642) and the Church of the Virgin of Kazan (1648), to which its bell tower is joined by a covered passage. The Monastery of the Annunciation contains a five-domed church of the same name (rebuilt 1664), with a tent-roofed bell tower, and the Church of St. Stephen (1716, rebuilt 1836). The Church of the Resurrection (1658) has five domes, a covered gallery, and a tent-roofed porch. The Church of St. Nicholas (Nikola Naberezhni) was built in the years 1700–17. There are stone houses of the 19th century in the neoclassic style. During the Soviet period Murom has become an industrial center. The museum is dedicated to the artist I. S. Kulikov.

Bibliog. A. L. Mongait, Murom, Moscow, 1947.

Novgorod. This very ancient Russian city, situated on the Volkhov River, has been known since 859; in the 10th and 11th centuries it became the second largest Russian city after Kiev. From 1136 to 1478 it was the capital of the Novgorod republic. From the mid-12th century Novgorod was a large city divided by the Volkhov into two parts, with the kremlin (fortified by stone walls in 1044 and 1116; rebuilt 1331–33 and 1484–90) on the left bank, or Sophia side, and with the market and Yaroslav Palace on the right bank, or commercial side (Torgovaya Storona). The Cathedral of St. Sophia (1045–50) — built on a cruciform plan, with nave and four side aisles, three apses, five domes, and enclosed galleries on three sides — is severe and restrained in appearance. The interior contains fragments of frescoes (11th cent., 1108, and 1144), and the bronze doors (1152–54) on the west façade are from Magdeburg. Churches dating from early in the 12th century are the Cathedral of St. Nicholas Dvorishchenski (1113; frescoes, 1120–30); the Cathedral of the Nativity of the Virgin (1117; frescoes, 1125) in the Anthony Monastery; and the Cathedral of St. George (1119; frescoes, first half of the 12th cent.), built by Master Peter, in the Yuriev (George) Monastery. The Church of the Annunciation at Arkazha (1179; frescoes, 1189), SS. Peter and Paul on Sinichy Hill (1185–92), the Church of the Saviour at Nereditsa, near Novgorod (1198; frescoes, 1199; destroyed 1941–43 and since reconstructed) are all relatively small cubical structures with four piers, three apses, a roof laid directly on the vaults, and one dome. Surviving churches of the 13th–15th century are St. Nicholas on the Lipna (frescoes, ca. 1292–94; partly destroyed in 1941), St. Theodore Stratelates (1360–61; XIII, PL. 58; frescoes, ca. 1370–80), Our Saviour, on Ilin Street (1374; frescoes, 1378, by Theophanes the Greek), the Nativity of Christ in the Cemetery (na Kladbishche; 1381–82; frescoes, end of the 14th cent.), SS. Peter and Paul in Kozhevniki (1406), and St. Simon in the Zverin Monastery (1468). All these churches have one apse, outer walls divided into three sections, and four- and eight-sloped roofs, and their exterior walls are either plain or adorned with niches, patterned masonry, and carved crosses. The Euphymius Hall (1433) is a large, single-piered hall with ribbed vaults, above which there rises a lookout tower (1443). Of later date are the Church of the Holy Women Bringing Myrrh (Zhen-Mironosits, 1445, rebuilt 1510), the Church of St. Procopius (1529), and the Cathedral of the Virgin of the Sign (Znamenski Sobor, 1682) — all in the Muscovite style. From the 18th and 19th centuries there are stone houses with characteristic façades, the building of the main guard, and the Millennium Memorial of Russia (1862, by M. O. Mikeshin).

Badly destroyed during World War II, Novgorod was restored in the postwar years. The Museum of History and Art, founded in 1957, has a fine collection of 12th–16th-century icons of the Novgorod school.

Pavlovsk. Founded in 1777–78 as the country estate of Paul I, son of Catherine II, the town is situated some 16 miles from Leningrad; from 1796 it was the summer residence of the tsars. Contructions in the neoclassic style include the Great Palace, begun (1782–86) by C. Cameron and completed (1797–99) by V. Brenna, with interiors decorated by various architects (G. Quarenghi, K. I. Rossi, A. N. Voronikhin), sculptors (I. P. Martos, M. I. Kozlovski, and others), and painters (P. Gonzaga, J. B. Scotti, and others); the park pavilions known as the Temple of Friendship (1780–82), the Apollo Colonnade (1780–83), and the Pavilion of the Three Graces (1800–01) — all by C. Cameron; the Mausoleum (1808), by Thomas de Thomon; and the Pil Tower (1795), by V. Brenna. The naturally landscaped gardens (1777–1828) cover about 1,500 acres. During the Soviet period the Great Palace was converted into a museum. The complex, which was badly damaged in the war years 1941–44, has been restored.

Pazyryk. At this site in a valley on the right bank of the Great Ulagan River in the Altai Mountains were found five burial mounds, or kurgans (5th-3d cent. B.C.), containing tombs of notables of a nomadic, pastoral tribe that was culturally close to the Scythians of the Black Sea coastal area. These kurgans were excavated in 1929 and in the years 1947–49. The permanently frozen ground under the cairns conserved lavishly adorned saddles, an ancient carpet with a velvety pile, felt and leather rugs (X, PL. 136), clothing and textiles,

vessels and other utensils, bronze censers, and musical instruments (see also GOLD- AND SILVERWORK; METALWORK; SIBERIAN CULTURES; TAPESTRY AND CARPETS; TEXTILES). Many of these items bear remarkable representations in the Scytho-Siberian animal style (II, FIG. 31; see GRECO-BOSPORAN AND SCYTHIAN ART). The finds include numerous objects of Central Asian, Iranian, and Chinese provenance.

Pereslavl-Zalesski (Pereyaslavl). This town on the shores of Lake Pleshcheyev was founded in 1152; from 1174 to 1302 it was the center of the Pereyaslavl principality. The white stone Cathedral of the Transfiguration of Our Lord (1152) is a four-piered, single-domed, three-apsed church with sparse adornment. The Church of the Metropolitan Peter (1585) has a tent roof and is cruciform in plan. The walled and towered Nikitski Monastery (12th cent.) has a Cathedral and a refectory containing the Church of the Annunciation (all, 1561–64), as well as a bell tower (1668). The Danilov-Trinity Monastery includes the Trinity Cathedral (ca. 1530), built by Grigori Borisov, with frescoes (ca. 1660) by Guri Nikitin, Sila Savin, and others); there is also a tent-roofed bell tower and a refectory (end of the 17th cent.). The Goritski Monastery has lavishly decorated entrance gates (17th cent.) and buildings of the 17th and 18th centuries, which now house the ethnographical museum. During the Soviet period, both domestic and industrial construction has been carried out.

Petrodvorets (until 1944, Peterhof). Situated about 18 miles from Leningrad on the shores of the Gulf of Finland, this town is famous for its palaces and gardens of the 18th and 19th centuries. In the center of the complex is the Great Palace (1714–28), which was rebuilt in the baroque style (1747–52) by B. F. Rastrelli. The Lower Garden (ca. 256 acres) is laid out in the form of two intersecting tridents and contains many fountains — among them, the Great Cascade with numerous gilded statues, including one that depicts Samson tearing open the jaws of a lion (1800–02), by M. I. Kozlovski (restored in 1947 by V. L. Simonov). The pavilion of Peter the Great, Monplaisir, was built in the years 1714–25 by J. Braunstein, A. J. B. Le Blond, and N. Michetti. The park pavilions known as the Hermitage (1721–25) and Marly (1720–24) were also built by the architect Braunstein. The colonnaded pavilions (1803) are by A. N. Voronikhin. The Upper Garden has a regular system of lanes. There are also naturally landscaped gardens (end of the 18th–19th cent.), such as the English Garden and the Alexander Garden. The English Palace (X, FIG. 535) was designed by Giacomo Quarenghi in 1781–91). During the Soviet period, museums were established in the palaces and pavilions. The complex, which was badly damaged in the war years 1941–43, has been restored.

Phanagoreia (Rus., Fanagoriya; Gr., Φαναγόρεια). This ancient Greek town is located on the shores of the Taman Bay of the Black Sea (see GRECO-BOSPORAN ART). Founded in the 6th century B.C., it became part of the Bosporan kingdom in the 5th century B.C. and was destroyed by the Huns in the 4th century B.C. Excavations have brought to light remains of houses (6th cent. B.C.), monumental public buildings (5th–3d cent.) such as an Ionic temple, gymnasiums, defensive walls (3d–2d cent.), and large tombs (4th–3d cent.) with corbeled roofs. On the walls of the buildings and tombs there are fragments of wall paintings. The finds include pottery and bronze and silver adornments.

Pskov. One of the oldest Russian cities, Pskov has been known since 903; from 1348 to 1510 it was the center of the Pskov republic. The kremlin (known as the Krom) — the oldest part of the city, situated at the confluence of the Pskov and Velikaya rivers — had stone fortifications as early as the 13th century. As the city grew, new belts of defensive walls, built of the local stone, formed the Dormontov Town, the Middle Town (1309–75), and the Opolny Town (1465). In the 16th century the building of the defensive walls (ca. 6 mi. long) with monumental towers (e.g., the Gremyachaya Tower, 1525) was completed. Among the many noteworthy buildings are the Cathedral of the Transfiguration of Our Lord (Spaso-Preobrazhenski) in the Mirozhski Monastery (before 1156; frescoes, mid-12th cent.), a cruciform structure, with low corner additions and a dome; the Cathedral of the Ivanovski Monastery (before 1243), a three-aisled church with its roof laid directly on the vaults and with six piers, three domes, and three apses; the Cathedral of the Snetogorski Monastery (1311; frescoes, 1313); the Trinity Cathedral in the kremlin (1365–67), by Master Kiril, which was later rebuilt (1682–99). Churches of the 14th–16th century are St. Basil "s Gorki" (1413), SS. Cosmos and Damian "s Primostya" (1462), St. George "s Vzvoza" (1494), the Dormition "s Paromenya" (1521), the Resurrection "so Stadishcha" (ca. 1530), St. Nicholas (15th cent.), and the Epiphany (early 16th cent.) — all of which are small single-domed churches with three apses, low additions on three sides, bell towers (with two, three, and five apertures), and simple adornment on the upper parts of the walls, apses, and drums. Stone houses of the 17th century are the three-story Pogankin mansion, and the Lapin, Trubinski, and Sutotski houses; their façades have small windows without surrounds, and only the stone porches are adorned with carving. During the Soviet period the city has been enlarged through the construction of new houses and public buildings. There is an ethnographical museum.

Pushkin (until 1917, Tsarskoe Selo; until 1937, Detskoe Selo). The town, about 16 mi. from Leningrad, has a remarkable 18th- and 19th-century architectural and garden complex. The Great Palace of Catherine II, in the baroque style, was built in the first half of the 18th century by J. Braunstein, A. V. Kvasov, and S. I. Chevakinski and was subsequently rebuilt (1752–57) by B. F. Rastrelli; the façade is about a thousand feet long. The splendidly decorated rooms of state, arranged enfilade, were partly rebuilt by C. Cameron, V. P. Stasov, and other architects. The Agate Pavilion, the Hanging Garden, the Cameron Gallery, and the Pantheon (all, 1780–93) were designed by Cameron. The Alexander Palace (1792–96), by G. Quarenghi, is neoclassic in style. The Catherine Gardens include the Old Garden (1720–21) and the English Garden (second half of the 18th cent.). In 1818 the Alexander Gardens, including the Menagerie (1718), were transformed by A. A. Menelas into a naturally landscaped park; the New Gardens (1745) were laid out by A. V. Kvasov and S. I. Chevakinski. The various gardens contain numerous ornamental constructions, sculpture, and pavilions: the Hermitage (1743–54), by A. V. Kvasov, S. I. Chevakinski, and B. F. Rastrelli; the Grotto (1755–63), also by Rastrelli; the Concert Hall (1782–86), by Quarenghi; the Chinese Village (ca. 1774–96), begun by V. I. Neyelov and Cameron and completed (1817–22) by Stasov; the Admiralty (1773–77), by Neyelov; the Chesmensk Column (1771–78) and the Orlov Gates (1773–76), both by A. Rinaldi; and the statue of the Milkmaid (1810), by P. P. Sokolov. The Lyceum, which Pushkin attended, was build by Neyelov (1788–92) and rebuilt in 1811 by Stasov; in the garden there is a monument to Pushkin (1899–1900), by R. R. Bakh. In the town proper are the Great Orangery (1820–23), the Stables (1823), and the Riding School (Manezh, 1819–21) — all by Stasov. During the Soviet period the palaces have been converted into museums. The complex, partially destroyed in the years 1941–44, has been restored.

Rostov Veliki (Rostov-Yaroslavski). Situated on the shores of Lake Nero, this old Russian town was founded in very ancient times and first mentioned in chronicles of 863. From the 12th century it was the major town of the Rostov-Suzdal principality, and from 1207 to 1474 it was the center of the Rostov principality. In the 16th and 17th centuries Rostov flourished because of its favorable geographical position. The major artistic monuments are the Cathedral of the Dormition (ca. 1589), which is five-domed and similar in plan to the Dormition cathedrals in Vladimir and Moscow; the Cathedral of the Abraham Monastery (1553), a four-piered, five-domed edifice surrounded with galleries and chapels that marks the beginning of the Yaroslavl school of ecclesiastical architecture; and the Church of the Ascension (1566), by Andrei Maly, a small, pierless edifice with a single dome, which resembles earlier churches in the suburbs of Pskov and Novgorod. The seat of the metropolitan, known as the Kremlin (1670–83), has walls and towers and comprises the

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

house of the metropolitan (the lower floor, 16th cent.; twice rebuilt, end of the 18th and mid-19th cent.), now housing the ethnographic museum; the churches above the gateways of the Resurrection (1670), St. John the Theologian (1683), and Our Saviour "na Senyakh" (1675); a single-piered refectory, known as the White Mansion (1672), with an area of about 984 sq. ft.; the Church of St. Gregory the Theologian (1680); and the Red Mansion (ca. 1672–80). All of these buildings are situated around a central square and are interconnected by passages along the walls; the remarkable frescoes in the churches were painted in the years 1770–80 by Yaroslavl and Kostroma artists. The walled and towered complex of the SS. Boris and Gleb Monastery (16th–17th cent.), about 11 mi. from Rostov, includes the Cathedral (1522–24), the Church of the Annunciation and a refectory (1524) by Grigori Borisov, and the Church of St. Sergius (1545), with decoration added in 1680. The Cathedral of St. Dmitri in the Spaso-Yakovlevski Monastery (1802–04), by G. E. Dikushin and A. F. Mironov, is neoclassic in style. During the Soviet period major restoration work has been carried out.

Ryazan (until 1776, Pereyaslavl-Ryazanski). Known since 1095, Ryazan was the capital of the Ryazan principality from the beginning of the 14th century until 1521; in the 16th century it formed part of a chain of military outposts (*zasek*) that defended Moscow on the south. The kremlin, situated at the confluence of the Trubezh and Lybed rivers, includes the Cathedral of the Nativity (15th cent.?; rebuilt at the beginning of the 19th cent.); the Archangel Cathedral (end of the 16th–beginning of the 17th cent.), a triapsidal, single-domed structure of squat proportions; the Cathedral of the Dormition (1693–99), by Ya. G. Bukhvostov, a five-domed edifice (ca. 230 ft. high) with a gallery at the base, three tiers of huge windows, portals with lavish surrounds carved in white stone, and a tiered, steepled bell tower (1789–1840) in the neoclassic style; the bishop's residence, known as the Oleg Palace (1653–92), connected by a stone passage with the Cathedral of the Dormition; the Church of the Holy Spirit (1642), with two tent roofs; and the Monastery of Our Saviour, with the churches of the Epiphany (Bogoyavlenie, 1647) and the Transfiguration (1702). Located in the town are the Church of Our Saviour (1695) and various buildings in neoclassic style, such as the administrative buildings (1786), the commercial arcades (end of the 18th–beginning of the 19th cent.), the former Noblemen's Assembly (end of the 18th cent.), the upper school (1808), the hospital (1816), the seminary (1812–16), and houses. During the Soviet period Ryazan has become a large industrial and cultural center. The district art museum is located here.

About 31 miles from Ryazan are the ruins of Staraya Ryazan (Old Ryazan; 10th–16th cent.), capital of the Ryazan principality in the 12th and 13th centuries. Excavations have revealed three stone churches, earthen ramparts, houses, pieces of jewelry, and other relics.

Bibliog. M. A. Il'in, Ryazan', Moscow, 1954; A. L. Mongair, Staraya Ryazan' (Old Ryazan), Moscow, 1955.

Smolensk. Situated on the upper Dnieper River, Smolensk is first mentioned in chronicles of 865. Slavic barrows (9th–11th cent.) have been found in the nearby village of Ghëzdovo. From the 12th century the town was the center of the Smolensk principality. The early churches were four-piered: SS. Peter and Paul (1146; addition of 1752–57), St. John the Theologian (1173–76), and the Archangel Michael (Svirskaya, 1191–94). The town walls with towers (1596–1600) were built by F. S. Kon. Buildings in the 17th-century Muscovite style are the Cathedral of the Dormition, begun by A. Korolkov (1677–79) and completed by A. I. Shedel (1732–40); and the two-story, pierless church of the Ascension Monastery (1694–98), by G. Vakhromeev. The Cathedral of the Transfiguration in the Abraham Monastery (1775) is baroque. After the war of 1812, the city began to expand according to a plan adopted in 1818. The Noblemen's Assembly (1825), now the Medical Institute, was built by A. I. Melnikov in the neoclassic style. The expansion and reconstruction that has taken place during the Soviet period has provided for careful preservation of the historical center.

Bibliog. I. D. Belogortsev and I. D. Sofinski, Smolensk, Moscow, 1952; D. A. Ardusin, Smolensk, Smolensk, 1957.

Suzdal. Founded in the 10th–11th century on the banks of the Kamenka River in the Oka River basin, Suzdal was first mentioned in chronicles of 1024; from the 13th century to 1350, it was the center of the Suzdal principality. It contains many fine examples of Russian architecture. In the kremlin stands the Cathedral of the Nativity (1222–25, rebuilt in 1528; frescoes, 1233 and 17th cent.), a six-piered church with three porches, a carved portal, and two copper doors decorated with gold tracery (1220–30). The kremlin also contains the bishop's apartments (16th–17th cent.) and a bell tower (1635). In the town and its environs there are various picturesque monastic complexes: the Spaso-Efimevski Monastery, which has a wall with 12 towers (ca. 1660), a Cathedral (mid-16th cent.; frescoes, 1689), the chambers of the archimandrite with an attached refectory (1525), the Church of the Dormition (mid-16th cent.), and a bell tower (16th–17th cent.); the Rizpolozhenski (Ordination) Monastery, with a three-domed Cathedral (1530–1560s) and a gate with two tent roofs (1699) by the architects Mamin, Gryaznov, and Shmakov); and the Pokrovski (Intercession) Monastery, with numerous buildings of the 16th century, including a three-domed Cathedral (1518), a church, and a refectory as well as an 18th-century wall. Among the stone parish churches of the 17th and 18th centuries are the Dormition (1650), St. Athanasius (1720), and St. Nicholas (1720), which have bell towers with bulbous tent roofs. The Church of SS. Boris and Gleb (1152, rebuilt in the 18th cent.; 12th-cent. frescoes) in the nearby village of Kideksha is the earliest white stone building in northeastern Russia. During the Soviet period much restoration work has been done. The Museum of History and Art was founded in 1957.

Sverdlovsk (until 1924, Ekaterinburg). This large industrial and cultural center in the Urals, situated on the Iset River in the Ob River basin, was founded in 1721. The Rastorguev-Kharitonov villa, the former mining chancellery, the hospital of the Upper Iset Factory, the mansion of the gold-mining industrialist Ryazanov, and the Alexander Nevski Cathedral — all in neoclassic style — were built between 1817 and 1842 by the architect M. P. Malakhov. During the Soviet period many new buildings have been constructed.

Tomsk. Founded in 1604, this town in Siberia is situated on the Tom River. Edifices dating from the 18th and 19th centuries are the stone churches of the Annunciation (1776) and the Resurrection (1789–1807); the town hall (1802–12); the administrative buildings (1830–42); and the University (end of the 19th cent.; main building, 1885, by A. K. Bruni). In the Soviet period building has proceeded in accordance with the existing town plan; streets and squares have been renovated and new thoroughfares created.

Tula. Located on the Upa River (a tributary of the Oka), Tula is first mentioned in chronicles of 1146; since the 17th century it has been a center of the iron industry. It has a combined radial and ring layout, with the kremlin (1514–21) at the center. The most important architectural monuments are the churches of the Annunciation (1692), St. Nicholas Zaretski with a bell tower (1730–34), and the Ascension (1755–87); the houses of the Demidovs (ca. 1730) and the Liventsovs (ca. 1760), as well as others; and the Cathedral of the Dormition (1762–64; 18th-cent. frescoes). At the end of the 18th century and the beginning of the 19th, similar stone buildings lined the main streets. The Noblemen's Assembly, by V. F. Fedoseyev, dates from the years 1830–40. During the Soviet period construction has been carried out on the basis of a new town plan. The district art museum is located here.

Ufa. Since 1922 the capital of the Bashkir A.S.S.R. (Bashkiria), Ufa is situated on the Belaya River (a tributary of the Kama) and is one of the largest industrial and cultural centers of the Ural region. It was founded in 1586. There still exist wooden houses with rich carved decoration and neoclassic buildings dating from the first third of the 19th century. During the Soviet period the town has been greatly enlarged. The Nesterov Art Museum of the Bashkir Republic is located in Ufa.

Uglich. Situated on the banks of the Volga, on the site of a Slavic settlement (8th–9th cent.), Uglich is first mentioned in chronicles of 1148. The brick throne building of the prince's palace, known as the Palace of the Crown Prince Dmitri, has rich patterned brickwork on its pediments (second half of 15th cent.). The Church of the Dormition (the Divine Church, 1628) has three tent roofs. The Monastery of the Resurrection (1674–77) includes the five-domed Cathedral with chapels, a bell tower, and a single-pierced refectory with the Church of Hodegetria (Odigitria); the buildings, which are joined together by a covered passage, form a picturesque and somewhat austere ensemble. Dating from late in the 17th century are the Church of St. Dmitri (1683–92), the Church of the Nativity (1689–1700), and the Smolensk Church (1700) in the ornate style. There are also stone and wooden houses from the 18th century. In the town's environs stands the St. Nicholas Uleiminski Monastery (17th cent.).

Ulyanovsk (until 1924, Simbirsk). Situated on the banks of the Volga and Sviyaga rivers, the town, founded in 1648, was the birthplace of Lenin, who was born V. I. Ulyanov. Among the neoclassic buildings are the Trinity Cathedral (1822–44) and the former Noblemen's Assembly (1848), both by M. P. Korinfski. The administrative center dates from 1804, and the Market Building, by A. I. Melnikov, was built in the years 1832–36. During the Soviet period, especially after World War II, large-scale reconstruction projects have been carried out.

Veliki Ustyug. This northern town in the European part of the U.S.S.R., at the confluence of the Sukhona and Yug rivers, was founded in very ancient times and first mentioned in chronicles of 1212. The location of the town on the water route leading from Moscow to the seaport of Arkhangelsk and to Siberia accounted for its prosperity in the 17th and 18th centuries. At the end of the 18th century the town acquired a regular street plan. Architectural monuments of note are the monasteries of the Archangel Michael (1653) and Troitsko-Gledenski (1659), including cathedrals, bell towers, and refectory buildings; the Cathedral of the Dormition (1619–22), which was repeatedly rebuilt (last in 1780); and the churches of the Ascension (1648), similar to the ornate Moscow churches; the Transfiguration (1689–96) and St. Dmitri of Salonika (1700–08), both in the local building style; the Anointing (1714–23); the Transfiguration (1725–39); St. Nicholas (begun 1682); and St. Simeon Stylites (1765), in the baroque style. Stone constructions of the 18th and early 19th centuries include the baroque Shilov and Zakharov houses, the seminary (1725–28), and the commercial arcades (1819–23). In the Soviet period, housing, technical institutes, schools, and other buildings have been constructed.

Vladimir. One of the most ancient Russian towns, Vladimir is situated about 112 mi. east of Moscow. From the 12th to the beginning of the 14th century it was the capital of a great principality and surpassed Kiev as Russia's most important center. The major monuments of the Vladimir-Suzdal school of architecture are the white stone Cathedral of the Dormition (1158–61, enlarged 1185–89), which contains fragments of wall paintings of the 12th and 13th centuries and frescoes by Andrei Rublëv (XII, PL. 339) and Daniel (Daniil) Chorny (1408); remains of parts of the suburban residence (1158–65) of Prince Andrei Bogolyubski in the nearby village of Bogolyubovo; the fortified Golden Gate (1158–64); the Church of the Intercession of the Virgin (1165) on the Nerl River near Vladimir, which is a relatively small, single-domed, triapsidal church with relief decoration on the exterior; and the Church of St. Dmitri (1193–97; with wall paintings), the main church of the prince's court, which is similar in design to the Church of the Intercession and has exceptionally rich decorative carving in white stone on its façades. From the 17th–18th centuries remain the five-domed Church of Our Lady (1644–49), with a tent-roofed bell tower; St. Nicholas Mokry (1732–35), crowned with tiers of octagonal turrets; and St. Nikita the Martyr (1762–65), in the baroque style. Structures in the neoclassic style are the administrative building (1785), the commercial arcades (1787–90), the former Noblemen's Assembly (1826), and the upper school (1840). During the Soviet period there has been a great deal of industrial and domestic construction.

Vologda. Founded in 1147, the town is situated on the Vologda River (a tributary of the Sukhona). The five-domed, triapsidal Cathedral of St. Sophia (1568–70) contains frescoes (1686–88) by the Pereslavl painter Dmitri Plekhanov; its bell tower (1654–59) was altered by a superimposition made in 1869. The part of the kremlin within defensive walls (1671–75) includes the episcopal palace (1659), with two-story cells, the treasury chancellery, and the three-story baroque house of the bishop, the so-called "House of Joseph the Golden" (1764–69). The Cathedral of the Resurrection was erected in the years 1772–76. The most important churches are the five-domed Church of SS. Constantine and Helen (ca. 1690), with two tiers of decorative *kokoshnik* arches; the baroque Sretenski Church (1731–35); the Church of St. John Chrysostom (end of the 17th–beginning of the 18th cent.); the Church of the Intercession in Kozelena (1704–10); and the Church of St. Valaam Khutynski (before 1777). The Prilutski Monastery (16th–17th cent.) is located near Vologda. Examples of 18th- and 19th-century domestic architecture are the Petrov house (1704) and the house on the Red Army Embankment (1777), in the baroque style; the house of Admiral Barsh (1781), with lavish exterior adornment, in a transitional style between baroque and neoclassicism; and, in the neoclassic style, the Maslennikov house and the Skulyabinski Poorhouse (both ca. 1780), the governor's house (1792), and the Vitushechnikov house (1822–23). The district picture gallery is located here.

Voronezh. This city on the Voronezh River (a tributary of the Don) was founded in 1586 as a fortress for defense against the Crimean and Nogai Tatars. Among the 17th- and 18th-century architectural monuments destroyed during the German occupation of 1942 and 1943 were the Arsenal (1696); the churches of the Dormition (1694), St. Euphrasia (Eupraxia, 1738–61), and the Resurrection (1752–68); and the Mitrofanev Monastery (1784–87). The Church of St. Nicholas (1720–49) and the Potëmkin Palace (1760) have been restored. The postwar town plan (1950–52), drawn up by L. V. Rudnev, retains the "trident" principle of the 18th-century plan. After World War II large-scale construction projects were undertaken. The district museum of the figural arts is located here.

ments are two stone towers of the fortress (16th cent.); the Monastery of the Transfiguration of the Saviour, with a three-domed Cathedral (1516; frescoes, 1564), the entrance known as the Holy Gates (1516; frescoes, 1564), and a single-piered refectory (first half of the 16th cent.); and churches of the 17th-century Yaroslavl school, primarily five-domed, four-piered edifices with enclosing galleries and porches, detached tent-roofed bell towers, and rich interior and exterior adornment (wall paintings, tiles, patterned brickwork, carving in wood): St. Nicholas Nadein (1621; frescoes, 1640); the picturesque Church of the Prophet Elias (1647–50; frescoes, 1681); St. John Chrysostom in Korovniki (1649–54; frescoes, 1732), a symmetrical church with two tent-roofed chapels; St. Nicholas Mokry (1672; frescoes, 1673); and St. John the Baptist in Tolchkovo (1671–87; frescoes, 1695), with 15 domes. Some 17th-century stone houses remain. Yaroslavl was the center of a local school of icon painting (12th–14th cent.) and of fresco painting (17th–18th cent.). The regular street plan adopted in 1778 has persisted to the present day. The neoclassic style is represented by the ensembles of the three central squares; the administrative building (1780–84); the commercial arcades (1813–18), by P. Ya. Pankov; and the Demidovski Lyceum (first quarter of 19th cent.), by A. I. Melnikov. During the Soviet period, a plan

Yaroslavl, partial plan of the city in the second half of the 18th century. Principal monuments: (*a*) Central Square with the Church of the Prophet Elias (Elijah); (*b*) Monastery of the Transfiguration of the Saviour; (*c*) Rubleny Gorod; (*d*) Church of the Epiphany.

for rebuilding and enlarging Yaroslavl was drawn up. An ethnographic museum and the district art museum are located here.

Yuriev-Polski. Situated on the Koloksha River (a tributary of the Klyazma), the town was founded in 1152. There have survived the remains of ancient earthen ramparts. The Cathedral of St. George (1230–34) is a small, white stone church, with four piers and three porches; the exterior walls are completely covered with extremely fine carving. The Archangel Monastery, founded in the 13th century, consists mostly of 17th- and 18th-century buildings and has a tent-roofed bell tower. Yuriev-Polski has an ethnographic museum.

BIBLIOG. N. N. Ushakov, Sputnik po drevnemu Vladimiru i gorodam Vladimirskoi gubernii (Guide to Old Vladimir and the Cities of the Vladimir Province), Vladimir, 1913; N. N. Voronin, Vladimir, Bogolyubovo, Suzdal', Yur'ev-Pol'ski, Moscow, 1958.

Zagorsk (until 1930, Sergiev). The town, about 44 mi. north of Moscow, grew out of the settlement around the Trinity-Sergius Monastery, which was founded in the first half of the 14th century. The monastery is one of Russia's, largest architectural complexes of the 15th–18th century. Structures in the Muscovite style are the four-piered, triapsidal, single-domed Trinity Cathedral (1422–23), which contains icons by Andrei Rublëv (q.v.) and Daniel (Daniil) Chorny; the Church of the Holy Spirit (1476–77), built by Pskov architects; the five-domed Cathedral of the Dormition (1559–85), with frescoes (1684); and the brick walls and towers (1540–50; rebuilt in the 17th cent.). Monastery buildings in the 17th-century Naryshkin style are the tent-roofed Church of SS. Zosimus and Sabas, with hospital buildings (1635–37); the refectory and its church (1686–92), with rich exterior decoration; and the tsar's palace, comprising the Chertogi mansion, the church above the gates, and a chapel. The many-storied bell tower (1741–69), by D. V. Ukhtomski and others,

Zagorsk, plan of the Trinity-Sergius Monastery. Principal buildings: (*a*) Trinity Cathedral; (*b*) bell tower; (*c*) refectory; (*d*) chapel; (*e*) Cathedral of the Dormition; (*f*) Church of the Holy Spirit; (*g*) palace of the tsars.

is baroque. In the 19th and 20th centuries many of the monastery structures were rebuilt. From the 15th to the 16th century Zagorsk was a center of folk handicrafts: wood and bone carving, painting on wood, and toymaking. The museum in the monastery, established in 1920, houses a rich collection of Russian painting and minor arts of the 15th–18th century. There is also a museum of toys.

Zvenigorod. Located about 37 mi. from Moscow, the town is first mentioned in chronicles of 1328. In the 14th and 15th centuries it was a fortified town. There are remains of the earthen fortifications of the kremlin, and the white stone, single-domed Cathedral of the Dormition (1399) survives. The complex of the Savvino-Storozhevski Monastery includes the white stone Cathedral of the Nativity (ca. 1405; 15th-cent. frescoes of the school of Rublëv), which is similar in design to the Cathedral of the Dormition; the refectory 1652–54) with the Church of the Transfiguration (1693); the bell tower (mid-17th cent.); the palaces of the tsar (1652–54) and the tsaritsa (1650–52); the seat of the archimandrite (18th–19th cent.); and walls and towers (1650–54). During the Soviet period Zvenigorod, which occupies a picturesque site, has been transformed into a health resort with many rest homes and sanitariums.

BYELORUSSIA (White Russia; Byelorussian S.S.R.). *Historical and artistic periods.* Flint figurines, decorated pottery, and remains of pile dwellings have survived from the Neolithic period. In the second half of the 1st millennium B.C. Byelorussia was settled by Slavic tribes; from the 10th to the 13th century it formed part of Kievan Russia and some early Russian artistic centers (e.g., Polotsk, Vitebsk, Grodno) were founded there.

The Byelorussian nationality and culture were formed in the 14th–16th century, but from the beginning of the 14th century the territory of present Byelorussia was under the dominion of Lithuania; after the Union of Lublin (1569) it became part of Poland, remaining under its control until the end of the 18th century. In Byelorussian medieval art the artistic heritage of both Kievan Russia and western Europe was reflected. In the modern era Byelorussian artistic culture has had more affinity to that of Russia.

The medieval towns developed as trading centers or frontier fortresses. At the foot of the castle lay the trading and artisan districts, generally enclosed by wooden fortifications. Until the 16th century the layout of the towns was irregular. Monumental constructions of this period were primarily defensive. The large castles of the 13th–14th century (Kamenets, Novogrudok) had wooden walls and brick tower-dungeons. In the 14th century castles of stone and brick (Lida, Krevo) were built. Brick churches of the 15th and 16th centuries, while similar in plan to Russian churches, had a hall-like interior and often had fortified towers at the corners (Malo-Mozheikovo, Synkovichi). In miniatures and painting of the 14th–16th century the canons regulating icon painting were interpreted with

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

some freedom, and liberal use was made of ornamental motifs (miniatures of the Mstizhski and Orshanski Gospels, 14th cent.; the icon of *Paraskeva Pyatnitsa*, 16th cent., in the Byelorussian Art Mus., Minsk). Byelorussian sculpture of the 14th–17th century was influenced at first by the Romanesque and Gothic styles (crucifix, 14th cent., in the Byelorussian Art Mus.) and then by the Renaissance (carved gate from Grodno, late 16th cent., in the same museum). With the introduction of printing in the 16th century, engravings began to make their appearance.

Beginning in the late 16th century the local artistic traditions intermingled with baroque tendencies introduced by the Jesuits. Many Catholic monasteries were erected in the baroque style. On large estates private fortress-towns arose that had a regular layout (Bykhov, Nesvizh). In the 17th-century castles the means of defense were shifted to the surrounding ramparts and bastions. The manor house assumed the character of a palace (castle at Nesvizh). The Byelorussian baroque style reached its apex in the 18th century, at which time an indigenous type of church emerged with a richly decorated façade crowned by two tall towers (Carmelite church in Glubokoe, Cathedral of St. Sophia in Polotsk). Owing to the large-scale Jewish immigration at the beginning of the 17th century, a special type of synagogue came into use: a four-piered hall with a square plan, covered by nine vaults.

After the union of Byelorussia with Russia (1772–95) many towns were replanned on neoclassic lines. The principles of Russian neoclassicism spread also to buildings (Rumyantsev-Paskevich Palace in Gomel, 1785–93; Cathedral of St. Joseph in Mogilev, 1781–98, destroyed). In the 19th century Byelorussian realistic art came into being and developed in close contact with that of Russia. The leading Byelorussian artists (I. T. Khrutski, 1806–after 1855; A. G. Goravski, 1833–1900; N. Yu. Silivanovich, 1834–1919) received their artistic training at the St. Petersburg Academy of Fine Arts.

Local artistic life grew especially spirited at the beginning of the 20th century when the first studio-schools came into being (the one of Yu. M. Pen, 1854–1937, in Vitebsk, and of Ya.M. Kruger, 1869–1940, in Minsk), and the Minsk Society of Art Lovers was founded. In painting and graphic art of this period a note of social protest could often be found. Folk arts flourished, especially the weaving of textiles and wood carvings.

After the 1917 Revolution (and especially after World War II) the planned reconstruction of cities, towns, and villages was carried out. In the architecture of the 1920s and 1930s constructivist tendencies were successfully combined with those of a modernized classicism (I. G. Langbard, 1882–1951; G. L. Lavrov, b. 1896; A. P. Voinov, b. 1902; and V. N. Varaksin, b. 1901). Since the mid-1940s modern buildings have crowded out the old wooden ones.

Painting and sculpture have flourished in the Soviet period (painters V. V. Volkov, b. 1881, I. O. Akhremchik, b. 1903, E. A. Zaitsev, b. 1908, and V. K. Tsvirko, b. 1913; sculptor and graphic artist A. M. Brazer, 1892–1942; and sculptors A. V. Grube, b. 1894, Z. I. Azgur, b. 1908, and A. O. Bembel, b. 1905). In 1941–45 and the early postwar years war themes predominated. In recent years painters such as M. A. Savitski, b. 1922, and M. V. Dantsig, b. 1930, have produced works of a realistic nature.

Elena KVITNITSKAYA (architecture), Elena ALADOVA, Elizaveta ORLOVA (sculpture, painting, minor arts)

Art centers. Minsk (originally Mensk, Menesk, Men'sk). The capital of the Byelorussian S.S.R. (since 1919), it was first mentioned in chronicles of 1067. There are remains of a church of the first half of the 12th century. Baroque monasteries of the 17th and 18th centuries include a Bernardine monastery, a Bernardine convent, and the Monastery of SS. Peter and Paul. The present architectural aspect of Minsk was formed during the Soviet period, when the city underwent basic reconstruction. The chief buildings are the Hospital Center (1928–30, G. L. Lavrov), University Center (1928–31, I. K. Zaporozhets and G. L. Lavrov), and Lenin Library (1930–32, G. L. Lavrov). Constructions built by I. G. Langbard: Government House (1930–33), Officers' House (1934–35), Byelorussian Opera and Ballet Theater (1934–37), and Byelorussian Academy of Sciences (1935–39). Buildings by A. P. Voinov: Pioneers' Center (1935–36, with V. N. Varaksin), Party School of the Republic (1937–38), Hotel Belarus (1938), and the headquarters of the Central Committee of the Byelorussian Communist Party (1940–41, completed in 1947 by V. N. Varaksin). V. A. Korol and M. I. Baklanov also contributed public buildings. The Byelorussian Art Museum — until 1957 the Byelorussian Picture Gallery — was founded in 1939; it contains a collection of Byelorussian art of the 16th–20th century and Russian art of the 18th–early 20th century.

BIBLIOG. M. S. Osmolovski, Minsk, Moscow, 1950; V. R. Tarasenko, Drevni Minsk (Ancient Minsk), Materialy po arkheologii BSSR, I, Minsk, 1957, pp. 182–257; E. V. Aladova, ed., Gosudarstvenny khudozhestvenny muzei BSSR (State Art Museum of the BSSR), Moscow, 1958; F. S. Martinkevich, Minsk, Moscow, 1958; E. M. Zagoral'ski, Drevni Minsk, Minsk, 1963.

Gomel (originally Gomi). A town plan with a regular alignment of streets was adopted in the first half of the 19th century. The neoclassic Rumyantsev-Paskevich Palace, now the Regional Museum, Library, and Pioneers' Center, has a central section from 1785–93; additions are from the first half of the 19th century; the palace is set in a park. The wooden Church of St. Elias (Elijah) is from the late 18th century. Other buildings of note are the Cathedral of SS. Peter and Paul (1809–24, architect Klark), the Paskevich funerary chapel (2d half of 19th cent.), and the Russian Provincial Theater (1947–56, A. V. Tarasenko).

Grodno (originally Gorodno). The town was first mentioned in chronicles of 1128. The historical center of the city includes the Old Castle with the so-called "Lower Church" (1st half of 12th cent.), the so-called "Upper Church" (late 14th–early 15th cent.), and the Batori Palace, now the Historical and Archaeological Museum (after 1579, badly marred by reconstructions); the Church of SS. Boris and Gleb (12th cent.); and a palace known as the New Castle (mid-18th cent.; rebuilt in 1952 by V. N. Varaksin). In the modern center: a Jesuit church (1647–67, towers and dome rebuilt in 18th cent.), a Bernardine church (1595–1618, rebuilt in 18th cent.), and a Brigittine church (1642–51). In the Zanemanski suburb: a Franciscan church (1635, later rebuilt).

Grushenko, ed., Mogilev: istoricheski ocherk (Mogilev: Historical Essay), Minsk, 1959.

Nesvizh. The Radziwill Castle was begun in 1583. Other buildings of artistic interest are the baroque Town Hall (1596); the Benedictine monastery (1590–96); the Bernardine monastery (founded in 1598); and the Jesuit monastery with a college (1584–93) and a church (a baroque domed basilica, 1584, G. M. Bernardoni da Como).

Novogrudok (originally Novgorodok, Novogorodok). The town was mentioned in chronicles of 1116. There are ruins of the castle (destroyed in 1710), the lower part of the main tower (14th cent.), and other towers from the 16th century; the palace dates from the late 16th–early 17th century and has a chapel (late 17th cent.); the castle Church of the Dormition is from the 14th century. Other buildings include the Church of SS. Boris and Gleb (1517, later rebuilt), the synagogue (1648), and a Catholic parish church (1719–23).

Polotsk (originally Poltesk, Polotesk). The town was mentioned in chronicles of 862. Until the beginning of the 14th century it was the capital of the Polotsk principality. The Cathedral of St. Sophia (2d half of 11th cent.) was transformed into a baroque basilica with two towers (ca. 1750). The Church of SS. Boris and Gleb is in ruins (1st half of 12th cent., architect Ioann). The Cathedral of the Monastery of Our Saviour and St. Euphrosyne (before 1159, architect Ioann) has frescoes of the 12th century. There is a Jesuit college (the main part begun in 1750) with the Church of St. Stephen (consecrated in 1745).

Vitebsk (originally Vit'besk). The town was mentioned in chronicles of 1021. In 1101–1320 it was the capital of a principality. Noteworthy buildings are the remains of the Church of the Annunciation (12th cent.); a Jesuit college (18th cent.); the former governor's palace (until 1772); the Town Hall, now the Ethnographic Museum (1775; the third floor is from the early 19th cent.); and the Church of Our Saviour (1813).

Elena KVITNITSKAYA

UKRAINE (Rus., Ukraina; Ukrainian S.S.R.). *Historical and artistic periods. a. Antiquity.* From sites of the Upper Paleolithic period (the Kirillov site at Kiev, the Moltsov site on the middle Dniester, Mezin near Novgorod-Seversk, etc.) have come schematized representations of animals, birds, and humans (carvings and drawings on bone). The Neolithic period (5th–3d millennium B.C.) is represented by port-ayals of humans and animals on the walls of grottoes in the Stone Burial (Kamennaya mogila, north shore of the Sea of Azov). From the Copper and the Bronze Age (3d–2d millennium B.C.) are numerous remains of the Tripole culture (the Dnieper and Dniester areas) including painted pottery, statuettes of humans and animals made of baked clay, and the ruins of large houses of beaten clay (the settlements of Kolomiishchina on the middle Dnieper, of Luka Vrublevetskaya on the Dniester, etc.). The ornamental motifs are geometric in the north and east and spiral and meander in the Dnieper area and the southwest. Characteristic of the Ukrainian steppe are the numerous barrows of the Copper and the Bronze Age. In the 1st millennium B.C. the megalithic constructions in the Crimea (semi-dolmens of the southern coastal area and menhirs) appeared.

From the 1st millennium B.C. to the beginning of the 1st millennium A.D. the art of the kingdoms of classical antiquity and of the Scythian tribes developed in the southern Ukraine (see GRECO-BOSPORAN AND SCYTHIAN ART). In the northern Black Sea area are ruins of the classical cities that began to be established in the 6th century B.C.: Tyras (at the estuary of the Dniester); Olbia (at the mouth of the Dnieper and Bug rivers); Theodosia (in the Crimea); Chersonesos (near mod. Sevastopol); and Pantikapaion (mod. Kerch), which was the capital of the Bosporan kingdom from the 5th century B.C. to the 4th century of our era. Remains of houses, temples, public buildings, fortifications, and tombs with corbeled roofs (the Golden, Royal, and Melek Chesmen tumuli, 4th cent. B.C., VI, PL. 470, FIG. 854) have been excavated. Figural and decorative art is represented in wall paintings in houses and tombs (VI, PL. 462; Demeter tomb at Pantikapaion, 1st–2d cent., VI, PL. 472), mosaics (the floor of the baths at Chersonesos, 2d–1st cent. B.C.), sculpture in marble (VI, PL. 473) and terra cotta, sarcophagi (VI, PL. 474) and funerary steles, and gold coins (VI, PL. 471). Scythian barrows and ramparts of hill forts have been preserved in the southern Ukraine. Excavations on the outskirts of Simferopol have brought to light the remains of the Scythian city of Neapolis (Neapol Skifski), the capital of the Scythian kingdom from the 4th century B.C. to the 3d century of our era, with mausoleums, tombs with wall paintings, Greek inscriptions, and sculpture. The Scythian jewelry found in this area is known the world over: the gold comb from Solokha (VI, PL. 465), the electrum vase and objects of gold from Kul Oba (VI, PLS. 465, 466; XIII, PLS. 187, 191), and the silver vases and gold objects from Chertomlyk (VI, PLS. 466–468) — all from the 4th century B.C. Typical of this art are dynamic representations of animals (the "animal style," which reappears in Sarmatian and, later, in Slavic art).

b. Medieval and modern periods. On the northern shore of the Black Sea are the remains of numerous Christian churches of the 5th–10th century, with plain exteriors and richly decorated interiors (the mosaic floors of the Uvarov Basilica and of the so-called "Suburban Church" at Chersonesos, 6th–10th cent.). A surviving example of the Byzantine type of church is the one of St. John the Precursor in Kerch (10th–14th cent.) with fragments of frescoes. Of great interest are the "cave towns" in the southwestern Crimea — castle-forts and monasteries with remains of defensive walls and towers, palaces, basilicas, and houses hewn out of the cliffs.

The art of the eastern Slavs of the 1st millennium A.D. is represented by fibulae, buckles, and pendants, often with representations of animals and people. The technique of champlevé was widely practiced. Many of the ornamental and representational motifs were connected with Slavic beliefs. Sculpture is represented by the square pillar with reliefs, surmounted by a head with four faces, that was found in the Zbruch River. Numerous Slavic citadels enclosed by massive earthen ramparts have survived to the present day.

With the formation of a powerful feudal state — Kievan Russia, which, in the 9th–10th century, united the eastern Slavic tribes — began the great period of ancient Russian art, which became the artistic source of the Great Russian, Ukrainian, and Byelorussian peoples. Large cities were built in the Ukraine: Kiev, Chernigov, Pereyaslavl, Belgorod, and Vladimir Volynsk. Ordinary buildings were generally made of wood. Monumental constructions (palaces and churches) were of stone or brick. Typical was the Byzantine technique of construction, as well as certain compositional features taken from folk architecture in wood. In the late 10th and in the 11th century large churches were built with a cruciform plan, a dome, and many cupolas: the Desyatinnaya Church (989–96) and the five-aisled Cathedral of St. Sophia (ca. 1037) in Kiev (XII, PL. 128; XIII, FIG. 84) and the Cathedral of the Transfiguration in Chernigov (ca. 1036). During the intensive building of monasteries, from the second half of the 11th to the early 12th century, a type of single-domed cruciform church with plainer and more restrained forms evolved: the Cathedral of the Dormition (1073–78, destroyed in 1941) in the Monastery of the Caves (Pecherskaya Lavra) in Kiev.

The interiors of the churches were richly decorated with mosaics, frescoes, and carving. In the Cathedral of St. Sophia in Kiev are remarkable mosaics (the huge figure of the Virgin Orans, the scene of the Eucharist, the figures of the Church Fathers in the central apse, XIII, PL. 64) and frescoes (portraits of members of the family of Yaroslav the Wise, secular scenes, etc.). Also outstanding are the mosaics and frescoes of the church of the Monastery of St. Michael (XIII, PL. 65) in Kiev. In the 11th century icon painting was taught

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

in a school at the Monastery of the Caves, and the artist Alimpi (Alipi) enjoyed especial renown. Representational reliefs executed on slate slabs (2d half of 11th cent.) have been preserved. Miniatures dating from the 11th and 12th centuries include the Gospels of Ostromir (1056–57, XIII, PL. 73) and the Svyatoslav Miscellany (1073, Moscow, Historical Mus.). Objects of jewelry made by Kievan masters (XIII, PL. 70) were embellished with cloisonné enamel, chasing, niello, and filigree. Typical were plant ornamentation and plaited motifs, representations of animals and birds connected with pagan beliefs, and portrayals of Christian subjects.

From the second quarter of the 12th century, as Kievan Russia broke up into feudal principalities, local architectural and artistic schools were formed. Local materials were used for building. In Galician Russia an architecture in white stone developed (Church of St. Panteleimon at Galich, late 12th cent.) with carving resembling that found on Romanesque buildings. Ceramic slabs, with ornamental and representational embellishment, were used as the facing. In the Dnieper area (principalities of Kiev, Chernigov, and Pereyaslavl) the technique of ornamental brickwork was developed: the Cathedral of SS. Boris and Gleb (12th cent.) and the Cathedral of the Eletski Monastery (mid-12th cent.), both in Chernigov, and the Cathedral of Kanev (1144). At the end of the 12th century churches with complex structures deriving from folk architecture in wood were built with rich brick decoration on the exterior walls: the Church of Good Friday (Paraskeva-Pyanitsa, XIII, PL. 57) in Chernigov and the Church of St. Basil in Obruch. An outstanding example of mural painting is found in the Church of St. Cyril in Kiev, executed by local masters (mid-12th cent.).

In the 13th century the Tatar-Mongol invasion dealt a heavy blow to the development of the culture of ancient Russia. In the 14th century part of the Ukrainian territory was seized by Lithuanian and Polish overlords. The architecture of this period was marked by a greater defensive aspect. Numerous fortresses, castles, and fortified monasteries were built. Ecclesiastical buildings also assumed a defensive character (church-fort at Sutkovtsi, 15th–16th cent.). Large churches in Volynia (Church of the Apparition at Ostrog, Church of the Trinity at Mezhirich, 15th–16th cent.) preserved the ancient Russian type of cruciform, domed building, but presented elongated proportions, many-sided drums, and new materials (fluted bricks). In the Crimea, Genoese types of fortresses (14th–15th cent.) were erected at Theodosia, Sudak, and Balaklava. Among the Crimean ecclesiastical and burial buildings of interest are the Armenian churches, Moslem mosques, and mausoleums. In the 16th–18th century the Bakhchisarai Palace of the Khans was built.

In painting of the 14th–16th century, which retained ancient Russian traditions, there was a perceptible effort to achieve greater animation in movement and more original compositions (murals in the church of Luzhany, 15th cent., and church of Lavrov, 16th cent.; the work of Ukrainian masters in Poland; see POLAND). Beginning in the 15th century the preference in painting was for icons rather than frescoes. In the 15th century the icons were distinguished by the simplicity of their composition and the richness of their color schemes and in the 16th century by their expressivity of lines and figures. Sculpture employed low relief. In miniatures the narrative element was stressed and worldly subjects were introduced (Kievan Psalter, 1397); in book ornamentation there was widespread use of the "animal style" and of plaiting motifs.

In the western districts, in the second half of the 16th century, Renaissance motifs were widely used; this was connected with the more active economic life of the cities (Lvov, Lutsk) and the broadening of cultural ties with other nations. Especially expressive was the architecture of the school that was formed in Lvov (architects P. Krasovski, P. Barbon, P. Rimlyanin, V. Kupinos, and A. Prikhilny), where, along with Renaissance forms, occasional use was made of compositional elements drawn from folk architecture in wood. In the Dnieper area — church in Sulimovka, 1627, and Church of St. Elias (Elijah) in Subbotovo, 1653 — and in Volynia — Church of the Dormition in Niskenichi, 1653 — wooden churches with three or five chambers were constructed, a type characteristic of Ukrainian architecture. In the western districts, in connection with the strengthening of the Polish-Catholic expansion (17th cent.), numerous Catholic monasteries and churches in baroque style were erected.

In the icons of the second half of the 16th century a typical feature was the lighter color range and the predominance of pale blue tones. In the 17th century chiaroscuro, numerous details from the local way of life, and figures of donors were introduced in icon painting, and a typically Ukrainian iconography was formed. Decorative and realistic tendencies were mingled in the carved tombstones of the church elders and the laity beginning in the late 16th century.

In ornamentation, plant motifs of a Renaissance type predominated. A high degree of excellence was achieved in metal casting (Lvov) and in pottery (painted and, in the late 16th cent., glazed; also, glazed tiles). The sculpture of the 16th–17th century is represented by funerary monuments. Miniature painting was similar to Great Russian icon painting.

The union of the Ukraine with Russia (1654) played a great role in the development of the Ukrainian national culture. In the second half of the 17th century new towns were created (e.g., Poltava, Kharkov, Sumy) and much building was undertaken. Architecture in stone adopted the forms of the Ukrainian wooden architecture. Types of three- and five-chambered, many-domed churches were created (Cathedral of the Intercession in Kharkov, 1689, three-chambered; Church of the Trinity at Gustyn, 1671, Church of the Dormition at Lyutenko, 1686, and the Church of All Saints over the entrance to the Monastery of the Caves in Kiev, 1696–98, all five-chambered. In the cathedrals of many monasteries ancient Russian traditions were retained. Numerous civic buildings from the second half of the 17th and the early 18th century have been preserved. By the 18th century the ensembles of the present St. Sophia and the Monastery of the Caves, both in Kiev, had been built, as well as that of the Gustynski Monastery at Priluki. Typical of this period were the decorated external walls, rich brick ornamentation, and the use of elements of 17th-century Russian architecture (window frames, portals, etc.). At this time many Russian architects were at work in the Ukraine (O. D. Startsev, D. V. Aksamitov) and many Ukrainian ones in Russia (I. P. Zarudny, d. 1727). From the 1730s on, the architecture of St. Petersburg exerted a growing influence. Architects from Russia erected buildings in the Ukraine: J. G. Schädel (1680s–1750) built the bell tower of the Monastery of the Caves in Kiev (1731–45); A. V. Kvasov (d. 1772), the Cathedral at Kozelts (1752–63); and I. F. Michurin (1700–63), the Church of St. Andrew in Kiev (1747–53, PL. 237) according to designs by B. F. Rastrelli. The major Ukrainian architects of this period were I. G. Grigorovich-Barski (1713–85) and S. D. Kovnir (1695–1786), both of whom worked in Kiev. Characteristic of the architecture was the use of baroque details and the abundance of molded ornamentation on the façades. In the architecture of the western districts the baroque style predominated: the Jesuit college in Kremenets (1731–43), Town Hall in Buchach (1751), and Cathedral of St. George in Lvov (1746–62), the last two by B. Meretin (d. 1759). The majority of the remarkable Ukrainian buildings in wood are from the 17th to the 18th century. The main types of wooden churches were those with three frames and one or three domes (Cathedral of St. George in Drogobych, 1st half of 17th cent.; Church of St. Nicholas, originally in the village of Krivki, now at Lvov, 1763), those with five frames and one or five domes (Church of the Intercession in Romen, now in Poltava, 1764), and, less frequently, those with nine frames and many domes (Cathedral at Novomoskovsk, 1773–81, Ya. Pogrebnik). Often the domes were shaped like helmets. The main type of Ukrainian peasant house was the *khata* divided into three sections (vestibule, storeroom, and living quarters), made of logs in the north and of beaten clay in the wooded and steppe regions. Characteristic of these houses is an exterior coat of clay and whitewash that was often tinged with light colors, such as pale blue and pink. In the Carpathian mountain regions very ancient types of houses have survived.

Beginning in the second half of the 17th century, portraits were more elaborate and individualized. In icons and wall paintings (A. Galik, 1703–63, and others) elements taken from Dutch and other engravings were combined in an original way with folk art. The representations of saints were often distinguished from portraits only by the ornamental gold background (I. Rutkovich and I. Kondzelevich). Typical of the iconostases of the 17th and the early 18th century were the clear proportions, the unity of style in painting, carving, and architecture, and the abundance of secular subjects. In the course of time the iconostases became more sumptuous, more brightly colored, more profuse with gold and carving, and had more icons. Sculpture in metal and wood became widespread, as did engravings with religious and secular subjects. Minor arts flourished: polished ceramics (including tiles with elaborate designs), glass, carpets with geometric and plant ornamentation, embroidery in silk and gold thread, and silver church vessels in the baroque manner. In folk art the popular image of the Cossack Mamai playing a pandora was represented on shutters, doors, trunks, and wooden beehives and in easel paintings.

In the second half of the 18th century highly simplified, individualized portraits were the fashion. After the opening of the St. Petersburg Academy of Fine Arts (1757), most of the gifted artists who had begun their careers in the Ukraine (e.g., D. G. Levitski, 1735–1822, and V. L. Borovikovski, 1757–1825) went to the capital.

In the 18th century neoclassicism predominated in architecture largely because of the contributions of leading Russian architects of the neoclassic school: I. E. Starov (who laid out the city Ekaterinoslav), C. Cameron (palace at Baturin, 1799–1803), G. Quarenghi (palaces at Khotino, Lyalichi, etc.), A. D. Zakharov (Cathedral at Ekaterinoslav, 1830–35), A. I. Melnikov (semicircular square in Odessa, 1826–31), and T. de Thomon (Column of Glory in Poltava, 1805–11). Ukrainian architects were also active (A. I. Melenski, 1766–1833, and P.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

A. Dubrovski, b. 1782/83). In the second third of the 19th century neoclassic traditions (buildings of V. I. Beretti, 1781–1842, in Kiev) vied with eclectic tendencies as displayed in mansions in the Crimea (Vorontsov mansion at Alupka, 1830–37, built by E. Blore, 1789–1879). At the end of the 18th century and in the first half of the 19th, remarkable gardens with natural landscaping were created.

The development of easel painting was connected with the spread of revolutionary, democratic ideas which aroused interest in the common people's way of life and history, in socially significant subjects, and in the development of realism. The founder of the new school of Ukrainian painting was T. G. Shevchenko (1814–61); his precursors were the portraitists V. A. Tropinin (1776–1857, worked in the Ukraine in 1804–23) and K. S. Pavlov (1792–1852, worked in the Ukraine in 1820–46), as well as the landscape artist V. I. Shternberg (1818–45, worked in the Ukraine in 1837–38). The importance of Shevchenko as a master of critical realism and as the inspired poet of the masses was also significant for Russian art.

In the late 18th and the early 19th century artistic goods of an industrial nature were created: carpets, blown glass (bottles shaped like stylized bears, sheep, lions, cockerels), ceramics (vessels, tiles), and china and faïence. Ancient geometric designs continued to be used in wood carving and in peasant embroidery, which was generally executed in red, black, and white. In the western areas an original national character was kept in folk art, whereas in the work of professional artists who received their training in Italy or Austria the national traits disappeared.

The development of capitalism in the second half of the 19th century gave rise to new types of building. Architecture became eclectic: the Cathedral of St. Vladimir in Kiev (1852–96), the Galician Diet (now the University) in Lvov (1877–81), and the metropolitan's residence (now the University) in Chernovitsi (1864–73). In the early 20th century architecture reflected both the Art Nouveau style (the Gorodetski house in Kiev, 1902–03) and neoclassicism (the Arcades in Kiev, 1913–14). During this period architects also attempted to work out a national style (the building of the District Assembly in Poltava, 1905–09).

The life and sufferings of the Ukrainian peasants were represented in paintings by followers of Shevchenko — L. M. Zhemchuzhnikov (1828–1912), I. I. Sokolov (1823–1910), K. A. Trutovski (1826–93), and D. I. Bezperchi (1825–1913). The subsequent development of realistic painting was bound up with the Peredvizhniki movement. Nature and peasant life were portrayed by P. D. Marynovich (1856–1933), N. K. Pimonenko (1862–1912), S. I. Svetoslavski (1857–1931), P. A. Levchenko (1856–1917), V. D. Orlovski (1842–1914), and N. D. Kuznetsov (1850–1929). Subjects drawn from history formed the basis for the paintings of S. I. Vasilkovski (1854–1917), F. S. Krasitski (1873–1944), A. A. Murashko (1875–1919), A. G. Slastion (1868–1933), and I. S. Izhakevich (1864–1962). In the second half of the 19th century art schools were created in which instruction was given by artists of the realist school: in Kiev by N. I. Murashko (1844–1909), in Odessa by K. K. Kostandi (1852–1921), and in Kharkov by S. M. Prokhorov (1873–1948). Sculpture was represented by the works of L. V. Pozen (1849–1921).

In the late 19th and early 20th century the traditions of national art were retained mainly in the peasant way of life. In the interiors of the *khatas* liberal use was made of decorative mural painting (plant and, less frequently, zoomorphic ornamentation). The designs of carpets began to be executed predominantly in bright colors with black, dark blue, and white backgrounds. In central Ukraine carpets with a smooth surface (*kilimy*) and with a shaggy surface (*kotsy*) were made; in Podolia embroidered carpets were customary. Typical items were decorative textiles: bedspreads (*ryadno*, generally of a checked design in red, green, black, and purple woolen yarn), hand towels (*rushniki*), and lengths of textiles draped as skirts (*plakhta*) of a checked design in bright colors. Printing on calico was prevalent (plant motifs, stylized birds, etc.). The centers of the textile production were the villages of Sorochintsy, Shishaki, and Reshetilovka. Various kinds of pottery were produced: round pitchers (*kumantsy*); small barrel-shaped vessels (*bariltsy*), sometimes in form of sheep; and decorative platters, generally with representations of flowers, birds, and human figures in the center. Embossed leather, inlay, and wood carving flourished in the western Ukraine.

c. The Soviet period. During the Soviet period new towns were built and old ones reconstructed. Many large apartment houses, clubs, theaters, schools, cultural centers, sanatoriums, and other public buildings were constructed. In 1930 a vast project for the reconstruction of Crimean resorts was planned. During the war of 1941–45 hundreds of Ukrainian towns and villages were damaged. These were reconstructed and new building was begun on a large scale in the postwar period.

During the Civil War (1918–20) political poster art and caricatures were especially developed by A. I. Strakhov (b. 1896), B. E. Efimov (b. 1900), and Z. Sh. Tolkachev (b. 1903). In the 1920s and early 1930s the themes of revolutionary transformations and of building a new way of life were widely reflected in painting, the graphic arts, and sculpture. Artistic unions were founded: the Association of Artists of Red Ukraine and the Association of Revolutionary Art of the Ukraine, whose members worked in cubist, futurist, and expressionist styles and also attempted to revive medieval forms (M. L. Boichuk, b. 1883, and his followers). Subsequently the realistic tendency emerged as the dominant one: painters F. G. Krichevski (1879–1947), N. S. Samokish (1860–1944), K. D. Trokhimenko (b. 1885), S. M. Prokhorov (1873–1948), G. P. Svetlitski (1872–1948), N. G. Burachek (1871–1942), and A. A. Shovkunenko (b. 1884); sculptors M. I. Gelman (b. 1892) and E. A. Blokh (1881–1943); graphic artists I. S. Izhakevich, V. I. Kasiyan (b. 1896), and I. A. Daits (1897–1954); and the theatrical designers A. G. Petritski (b. 1895), A. V. Khvostov (b. 1895), and V. G. Meller (1884–1962). In the 1930s artists who had been trained during the Soviet period emerged: painters M. G. Deregus (b. 1904), V. N. Kostetski (b. 1905), A. M. Dovgal (b. 1904), V. F. Mironenko (b. 1910), and A. S. Pashchenko (b. 1906); and sculptors G. L. Pivovarov (1908–42) and M. G. Lysenko (b. 1906).

The artists of the postwar period are: painters G. S. Melikhov (b. 1908), T. N. Yablonskaya (b. 1917), M. M. Bozhi (b. 1911), S. A. Grigorev (b. 1910), V. G. Puzyrkov (b. 1918), M. I. Khmelko (b. 1919), and I. I. Bokshai (b. 1891); sculptors A. A. Kovalev (b. 1916), I. M. Gonchar (b. 1911), and A. P. Oleinik (b. 1914); and graphic artists V. G. Litvinenko (b. 1908) and E. L. Kulchitskaya (1877–1961). Artistic industries have been developing (ceramics, glass, textiles and embroidery, and carving in wood) and folk art is thriving.

Art Centers. Kiev. The capital (from 1934) of the Ukrainian S.S.R., Kiev is situated on the hilly right bank and on the low left bank of the Dnieper River. Settlements were made on the area of Kiev in the Paleolithic period (Kirillov site). In the 9th–12th century Kiev was the capital of the ancient Russian state; in the 14th century it became the center of the Ukraine. The Upper Town (Old Kiev), established in the 10th–11th century, was the residence of the reigning prince; the Lower Town (the Podol) lies in a valley along the Dnieper; Pechersk developed in the mid-11th century when the Monastery of the Caves was founded.

The St. Sophia complex (now a museum) includes: the Cathedral of St. Sophia (XII, pl. 128; XIII, fig. 84) — an outstanding church dating from about 1037, restored in the 17th–18th century when cupolas and façades in the Ukrainian baroque style were added, with famous mosaics (XIII, pl. 64) and frescoes from the 11th century; the bell tower (lower story early 18th cent., second and third stories 1744–48, fourth story 1851–52), in Ukrainian baroque style; and the seminary (1763–67), the former metropolitan's residence (1722–57), and the Zaborovsky Gate (1746, built by J. G. Schädel), all in Ukrainian baroque style. The Monastery of the Caves (Pecherskaya Lavra) includes: the Church of the Trinity (built over the entrance gate of the monastery, 1108, rebuilt during the 17th–18th cent.), with frescoes (18th cent.) in the interior; the Church of All Saints (1696–98), one of the finest buildings in Ukrainian baroque style; the bell tower of the monastery (1731–45, by J. G. Schädel); and the Kovnirovski building (1721–72) with bell towers (1754–61 and 1759–62) by S. D. Kovnir. The Vydubetski Monastery includes: the Cathedral of St. Michael (1070–88, rebuilt in the 18th cent.), the five-domed Church of St. George (1696–1701), the bell tower (1727–33), and the refectory (1696–1701). The Florovski Monastery in the Podol includes: the Cathedral of the Ascension (1722–32), the refectory (late 17th cent.), and the rotunda-shaped Church of the Resurrection (1824, A. I. Melenski). The Golden Gate (1037), now in ruins, formed part of the fortification system of ancient Kiev. The Church of Our Saviour in Berestovo (1113–25, rebuilt in the 17th–18th cent.) has a bell tower of the early 19th century (A. I. Meleski). The Church of St. Cyril (mid-12th cent., restored in the 17th cent.) has a pediment added in the middle of the 18th century by I. B. Grigorovich-Barski; there are remarkable frescoes of the 12th century and murals of 1883–84 by M. A. Vrubel in the gallery.

Constructions in baroque style: the Old Kiev Academy in the Podol (1703, rebuilt in 1732–40 by Schädel); the house of Peter the Great in the Podol (early 18th cent.); the Church of St. Nicholas (1772–75) and the Church of the Intercession (1766) in the Podol, both by Grigorovich-Barski; the Church of St. Andrew (1747–53, Rastrelli and I. F. Michurin), with an iconostasis designed by Rastrelli and paintings by A. P. Antropov and T. K. Levitski-Nos. The former Imperial Palace (1752–55) was built by Rastrelli and Michurin and rebuilt in 1868–70 by K. Ya. Maevski. Buildings in the neoclassic style are the Rotunda over Askold's grave (1810, A. I. Melenski), the Contract Building in the Podol (1817, V. I. Geste), the Shevchenko University building (1837–43, V. I. Beretti), and the Institute for Young Girls of the Nobility (1838–42, V. I. Beretti, rebuilt in 1957). The Cathedral of St. Vladimir was erected in 1852–96 by the architects I. V. Shtrom, P. I. Sparro, A. V. Beretti, and others.

In the Soviet period monumental public buildings, housing developments, and sports arenas have been built. During the war of 1941–45 the city was badly damaged, but it has been reconstructed.

Museums: The Museum of Ukrainian Art (1899), the largest existing collection of Ukrainian art (14th–20th cent.); Museum of Russian Art (1922), ancient Russian painting and paintings by Russian artists of the 18th–20th century; Museum of Western and Oriental Art (1919); St. Sophia Museum (1934), mosaics and frescoes from St. Sophia and the Monastery of St. Michael (XIII, pl. 65); Museum of the Monastery of the Caves (1926); Historical Museum (1899), Scythian, classical, and Slavic antiquities and Ukrainian handicrafts of the 14th–19th century; and the Shevchenko Literary and Artistic Museum (1949).

Bakhchisarai. Situated in the valley of the Churuk-Su River, the town was founded at the end of the 15th century; in the 16th–18th century it was the capital of the Crimean khanate. The town is divided into a new part and an old part retaining its medieval layout and narrow streets. The Palace of the Khans (16th–18th cent., now the Palace Mus. includes the Ambassadors' Court and the Aleviz Portal (1503, architect Alevisio Novy), the Large Mosque (16th–18th cent.), the mausoleum in the cemetery of the Girei dynasty (17th–18th cent.), the Sary-Gyuzel baths (1533), the Golden Fountain (1733), and the Fountain of Tears (1764). The Bakhchisarai Palace Museum (1920) has a collection of medieval art.

On the western outskirts of the town is Eski-Yurta (the village of Podgorodneye) with mausoleums of the 14th–18th century; on the eastern outskirts is Salachike (the village of Starosele) with the mausoleum of Khaji-Girei and Mengli-Girei (1501) and the Zynjirli madrasah (1500). Nearby is the Monastery of the Assumption (15th–19th cent.), a cave complex. In the environs are the mausoleum of Djanik-Khanum (1337) and ruins of numerous medieval cave towns, fortresses, and monasteries of the 6th–15th century.

Chernigov. The town is situated on the right bank of the Desna River. One of the most ancient towns of the Ukraine, it was first mentioned in documents of 907; from 1024 it was the capital of the Chernigov principality. The main architectural monuments are: the Cathedral of the Transfiguration (ca. 1036), a three-aisled, five-domed building with two towers, with fragments of frescoes in the interior; the Cathedral of the Annunciation (built in 1186); the Cathedral of SS. Boris and Gleb (12th cent., rebuilt in the 17th cent., destroyed in 1941, restored in 1954–55, XIII, PL. 56); the Church of Good Friday (Paraskeva-Pyatnitsa, late 12th–early 13th cent., rebuilt in the 17th–18th cent., destroyed in 1941–43, restored in 1962, XIII, PL. 57); the Regimental Chancery (late 17th cent.), one of the finest monuments of the Ukrainian baroque style; the St. Catherine Church (1698–1705, restored in 1954–55); the College (1700–02); the episcopal palace (now housing the Archives; 1780, rebuilt in 1903); and the residence of the governor (1804–06, A. D. Zakharov). The Eletski Monastery includes the Cathedral of the Dormition (12th cent.), cells (16th cent.), and a refectory and bell tower (17th cent.); nearby is the Black Grave (a barrow over the burial of the reigning prince, 10th cent.). The Trinity Monastery in the Boldina Hills includes the Trinity Cathedral (1679–95, A. Zernikau), the refectory (17th cent.), the bell tower (1775–78), and the Church of St. Elias (12th cent.). During the Soviet period, and especially after World War II, the town has been enlarged and rebuilt. The Historical Museum (1896) has a collection of ancient Russian jewelry and Ukrainian art.

BIBLIOG. B. A. Rybakov, Drevnosti Chernigova (Antiquities of Chernigov), MIA, 11, 1949, pp. 7–93; I. A. Ignatkin, Chernigov, Moscow, 1955; M. T. Yatsura, Chernigov, 2d ed., Kiev, 1961.

Chernovtsy (Chernovitsy). The town is situated in the foothills of the Carpathian Mountains, on the right bank of the Prut River. In the 12th–13th century it was the ancient Russian town of Chern; it was first mentioned under its present name in 1408. It is the historical center of Bucovina (Bukovina). Of architectural interest are the wooden churches of the Bucovin type — St. Nicholas (1607), the Trinity (1774), the Dormition (1783), and Goryachi Urban in the suburbs (17th cent.); the Monastery at Gorechi (1767); the residence of the Bucovin metropolitans (now the University, 1864–73, I. Glavka); and the Theater (1904–05), F. Fellner and H. Helmer). Chernovtsy is a center of wood carving. The Historical-Ethnographical Museum (1940) has a collection of Slavic antiquities and objects of Bucovin applied art.

Dnepropetrovsk (until 1926, Ekaterinoslav). The city is situated on both banks of the Dnieper River. It was founded in 1778. The city was laid out in 1790–92 by I. E. Starov. The Potëmkin Palace (1787–89, I. E. Starov, rebuilt in the 1830s, destroyed in 1942–43, restored in 1951–53), the Cathedral (1830–35, designs of 1806 by A. D. Zakharov), and the cloth factory (late 18th cent., F. I. Volkov) are in the Russian neoclassic style. In the Soviet period modern residential districts and public buildings have been constructed. The Art Museum (1914) has a collection of paintings by Russian and Ukrainian artists. The Historical Museum (1902) contains Scythian, Slavic, and Zaporozhe Cossack objects.

Feodosiya (anc. Theodosia; Gr., Θεοδοσία). This Crimean seaport on the coast of the Black Sea was founded by the Greeks in the 6th century B.C.; as a classical town it lasted until the 4th century A.D. In the 13th–14th century it was the Genoese fortress town of Kaffa; from 1475 it was Turkish and from 1783 it was Russian. The old part of town preserves its medieval layout. Remaining from the Genoese period are the defensive walls and the following towers: Clement (1348), Dokov (14th cent.), Constantine (1382–1448), and Giovanni di Scapo (1342). The main churches are: St. John the Precursor (1348, interesting carving in stone), St. Stephen (14th cent.), St. John the Theologian (14th cent.), St. Sergius (14th cent.), and the Church of the Archangels (1408). The Mosque of Mufti-dzhami dates from 1623. Of the buildings from the 19th and the early 20th century, the villas on the coast (now sanatoriums) deserve special mention. The Aivazovski Picture Gallery (1880), housed in a building designed by the artist, includes about 400 works by Aivazovski. The Ethnographical Museum (1811) contains ancient and medieval art.

BIBLIOG. M. Malowist, Kaffa, Warsaw, 1947; N. Barsamov, Feodosiya, Simferopol, 1953; V. I. Balakhonov, Feodosiya, Simferopol, 1963; V. D. Blavatsli, EAA, s.v. Crimea.

Kamenets Podolski. The town was built on a picturesque plateau above the Smotrich River (a tributary of the Dniester); it was first mentioned in chronicles of 1062; in the 16th–18th century it was the largest stronghold in the Ukraine. Part of the tangled network of old streets with a market square in the center remain. The castle (15th–early 16th cent., rebuilt in the 17th–18th cent.) includes walls, towers (15th–17th cent.), and the drawbridge (14th–17th cent.). Other interesting buildings are the market square with the Magistracy (16th–18th cent.), a Russian town gate with fortifications (16th cent.), the Catholic Cathedral (16th cent.), and the tower of the Armenian Church (16th cent.). Churches: St. Nicholas (14th cent.), SS. Peter and Paul (15th and 16th cent.), and the wooden Church of the Exaltation of the Cross (Krestovozdvizhenski) at Karvarsary (1799). Monasteries: Franciscan (16th–18th cent.), Dominican (14th–18th cent.), and the Trinity (1747). There are stone houses of the 16th and 18th centuries. During the Soviet period the town has been enlarged and beautified. The Historical Museum (1890) has a collection of Slavic antiquities and objects of minor art.

Kanev. The town is situated on the right bank of the Dnieper River. From the 12th century it was known as a frontier town of Kievan Russia. The Cathedral of the Dormition (1144), an outstanding monument of ancient Russian architecture, has survived. Near the town is the Shevchenko Memorial Center.

Kerch (anc. Pantikapaion; Gr., Παντικάπαιον). This town on the straits of Kerch was founded by the Greeks in the 6th century B.C. under the name of Pantikapaion; from 480 B.C. to ca. A.D. 370 it was the capital of the Bosporan kingdom; in the 5th–10th century it was the Byzantine town of Bospor; in the 10th–11th century it was the Russian town of Korchev; in the 14th–15th century it was the Genoese fortress town of Cerchio; from 1475 it was the Turkish fortress town of Kerch; from 1774 it formed part of Russia. Important monuments of antiquity in and near the town include the Royal, Golden, Melek Chesmen, and Kul Oba tumuli (4th cent. B.C., VI, PL. 470, FIG. 854); many tombs, some with frescoes (VI, PL. 462; Demeter tomb, 1st–2d cent., VI, PL. 472); and remains of buildings on Mithridates Hill, where the acropolis of Pantikapaion was located (see also GRECO-BOSPORAN AND SCYTHIAN ART). A monument of medieval architecture is the Church of St. John the Precursor (10th–14th cent.) with fragments of frescoes. The Pushkin Historical and Archaeological Museum was founded in 1826.

Kharkov. The city was founded in 1655 as a military outpost for defense against the Crimean Tatars and is at present a large industrial center. The major architectural monuments are: the Cathedral of the Intercession (1689), an outstanding example of Ukrainian architecture; the Cathedral of the Dormition (1771) and a bell tower in neoclassic style (1824–33, E. A. Vasilev); the old buildings of the University, including the Catherine Palace (1767–76), the University church (1823), and the chemistry and physics buildings (1820–23). During the Soviet period the city has been largely rebuilt, and many new structures have been erected (e.g., the House of Industry, PL. 252). The Historical Museum (1920) has a collection of primitive and Slavic art and of Ukrainian minor arts of the 17th–19th century. The Museum of Figural Art was founded in 1886.

Lvov (Leopoli; Ger., Lemberg; Pol., Lwów). The city, situated in the valley of the Peltev River, was founded in the 13th century. It is the historical center of Galicia and is now one of the important towns of the Ukraine. Ruins of the ancient citadel (the Tall Castle, 14th cent.) have been preserved. The center of the old town is the rectangular market place. There are many fine architectural monuments: the churches of St. Nicholas, of St. Onofrius, and of Good Friday (Paraskeva-Pyatnitsa) and the Catholic churches of St. Mary of the Snow and St. John the Precursor (both late 13th cent., greatly changed when rebuilt in the 16th–19th cent.). The Cathedral (1360–1493, by P. Shteker, I. Grom, and A. Rabish) is in Gothic style;

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

the Campani Chapel (late 16th–early 17th cent., P. Rimlyanin) is Renaissance, and the Boimi Chapel (1609–17, G. Sholts) has rich carved decorations by A. Pfister. The Armenian church (1363–70, by Doring) was rebuilt in the 15th–17th century. The market square includes the Renaissance house of the Black Stone (2d half of 16th cent., P. Krasovski), the Renaissance Kornyakt House (now the Historical Mus., 1580, P. Barbon), and the Town Hall (1835). The complex of the Lvov Brotherhood includes the three-domed Church of the Dormition (1598–1631, P. Rimlyanin, A. Prikhilny, and V. Kupinos), the stately four-storied bell tower (the Kornyakt Tower, 1573–78, P. Barbon and P. Rimlyanin; fourth story added in 1672 by P. Beber), and the Chapel of the Three Prelates (1578, P. Krasovski); these constitute the finest example of Renaissance architecture in the Ukraine. The Bernardine monastery has a basilica decorated with baroque details and sculpture (1606–30, Rimlyanin and Prikhilny). The Royal Arsenal is now the Historical Archives (1635, P. Grodzinski). The Monastery of St. George has a cathedral in baroque style (1746–62, B. Meretin). The Dominican Cathedral is also baroque (1749, M. Urbanik and Ya. de Vitt). The Church of St. Nicholas (1763, formerly in the village of Krivki) is an example of wooden architecture. The Osolinski Palace (now the Public Lib., early 19th cent.) and the Old Theater (now the Zankovetski Theater, 1842, L. Pikhl) are in neoclassic style. The Theater of Opera and Ballet dates from 1897–1900 (Z. Gorgolevski). During the Soviet period industrial and residential building has been carried out and cultural centers, cinemas, and schools have been constructed.

Museums: Museum of Ukrainian Art (1905), icons (14th–17th cent.), portraits, and paintings (19th–20th cent., mainly by western Ukrainian artists); Picture Gallery (1907), Russian and European art; Museum of Ethnography and Handicrafts (1951); and Historical Museum (1898).

Neapol Skifski (Neapolis; Gr., Νεάπολις). Ruins on the southeastern outskirts of Simferopol. In the 3d–2d century B.C. this was an important artistic and commercial center and the capital of the Scythian kingdom in the Crimea. Neapol flourished particularly in the 2d century B.C. Its culture reflected its mixed Scythian and Greek character. Systematic excavations (since 1945) have brought to light a massive defensive wall with towers, parts of the urban districts, a necropolis, a mausoleum with rich burials of a king and nobles, and burial vaults with wall paintings of the 1st century of our era (see VI, col. 857). In the 3d–4th century the town declined as a result of invasions by the Huns.

Bibliog. P. N. Shul'ts and V. A. Golovkina, Neapol' Skifski, in Po sledam drevnikh kul'tur (On the Track of Ancient Cultures), I, Moscow, 1951, pp. 143–68; P. N. Shul'ts, Mavzolei Neapolya Skifskogo (Mausoleums of Neapol Skifski), Moscow, 1953; V. D. Blavatski, EAA, s.v. Crimea.

Odessa. Odessa, a seaport on the coast of the Black Sea, was founded in 1794 on the site of an ancient Russian settlement; later it was the site of the Tatar settlement of Khajibei, of a Turkish fortress (1764), and of a Russian fortress (1792). Monuments in the neoclassic style are the semicircular square (1826–31, A. I. Melnikov) with the Potëmkin Stairs (1837–41, F. K. Boffo), the old Stock Exchange (1829–34, Boffo and G. I. Torichelli), the Vorontsov Palace (1826–31, Boffo), the city hospital (1804–20, Thomas de Thomon), and the Pushkin house (early 19th cent.). Constructions in an eclectic style include the Theater of Opera and Ballet (1884–87, F. Fellner and H. Helmer), the new Stock Exchange (now the Philharmonic, 1895–98, A. I. Bernardatsi), and the public library (1905–07, F. P. Nesturkh). In Shevchenko Park are the remains of the fortress (1799) and the Lanzheron Arch (1830).

Museums: Archaeological Museum (1825), classical art from excavations at Olbia, Chersonesos, and other sites; Museum of Western and Oriental Art (1919); Picture Gallery (1899); and the Historical and Ethnographical Museum (1854).

Bibliog. M. M. Sinyaver, Arkhitektura staroi Odessy (Architecture of Old Odessa), Leningrad, 1935; Odessa: Kratki spravochnik-putevoditel' (Odessa: Short Manual-Guide), Odessa, 1956.

Pereyaslavl-Khmelnitski (until 1943, Pereyaslavl). This town on the Trubezh River (a tributary of the Dnieper) was first mentioned in 907 in a pact concluded between ancient Russia and Byzantium; in 1239 it was destroyed by the Tatars, then rebuilt in the 17th century. It has in general preserved its ancient radial layout. The ramparts (10th–17th cent.) of the citadel and the surrounding town survive, as well as remains of buildings from the 11th and 12th centuries. There are some buildings in the Ukrainian baroque style: the Church of St. Michael (1649) and its bell tower (17th cent.) and the Ascension Monastery with its Cathedral (1700), bell tower (1776), and college (18th cent.). The Historical Museum was founded in 1954.

Bibliog. I. N. Dnestrov and I. A. Grabovski, Pereyaslav-Khmel'nitski, Kiev, 1954; Pereyaslav-Khmel'nitski i ego istoricheskie pamyatniki (Pereyaslavl-Khmelnitski and Its Historic Monuments), Kiev, 1954.

Poltava. The town is situated on the right bank of the Vorskla River (a tributary of the Dnieper). It was first mentioned in written sources of 1174. The town was destroyed in the early 18th century and replanned in 1804–05 by M. Ambrosimov. The Monastery of the Exaltation of the Cross (Krestovozdvizhenski) with its church (1689–1709) and bell tower (1786) is in the Ukrainian late baroque style. The Circular Square (1805–11) with eight radial streets, the Column of Glory (1805–11, architect Thomas de Thomon and sculptor F. F. Shchedrin), and other buildings in neoclassic style were built following standardized designs by A. D. Zakharov. Also of interest are the institution of charity (1820–23, M. Amvrosimov), the Institute for Girls of the Nobility (1832–40, L. I. Sharleman), and the Provincial Council (now the Ethnographical Mus., built in 1905–09, by V. G. Krichevski and others; interior wall paintings by S. I. Vasilkovski). The Art Museum, founded in 1918, has a collection of Ukrainian, Russian, European, and Oriental art. The Ethnographical Museum is dedicated to Ukrainian folk art.

Sevastopol (Sebastopol). This seaport on the southwestern coast of the Crimea was founded in 1784 near the citadel of Chersonesos, the town of classical antiquity. The city was destroyed twice (in 1854–55 during the Crimean War and in 1941–42). After World War II it was rebuilt according to a general plan of restoration and development (1946). The Count's Dock (1846) and the Church of SS. Peter and Paul (1848) are in neoclassic style. The Museum of the Black Sea Fleet was erected in 1895 and the Black Sea Aquarium in 1896. The building housing the panorama "Defense of Sevastopol in 1854–55" was opened in 1905 (painted by F. A. Rubo, destroyed in 1941; the painting was redone in 1948–54 under the direction of V. N. Yakovlev and P. P. Sokolov-Skal). The Picture Gallery (1927) has a collection of European, Russian, and Soviet paintings.

In the environs of Sevastopol is the ruined citadel of Chersonesos (5th cent. B.C.–14th cent. of our era) with defensive walls,

Chersonesos (near mod. Sevastopol), plan. (*a*) Greek, Hellenistic, and Roman city walls; (*b–d*) gates; (*e*) "barracks" (4th–3d cent. B.C.); (*f*) "barracks" (1st–3d cent. of our era); (*g*) mint; (*h*) Hellenistic houses; (*i*) necropolis (5th cent. B.C.); (*i*) main street; (*k*) Christian churches of the Byzantine period.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

towers (3d cent. B.C.–7th cent. of our era), remains of ancient buildings (a theater, 3d–2d cent. B.C., a mint, 4th–3d cent. B.C., and houses with mosaic floors) and medieval constructions (the Uvarov Basilica, 7th cent., the so-called "Basilica of 1935," 6th–10th cent., and six-piered churches of the 10th–13th cent.). The Inkermanski Monastery (10th–14th cent.) and the St. George Monastery (14th cent.) are located here. There are fortresses at Calamita (14th–15th cent.) and at Cembalo (14th cent., now the town of Balaklava). The Chersonesos Archaeological Museum (1860) houses a large collection of ancient and medieval art.

Uzhgorod. Situated on the Uzh River, the town dates back to the 8th–9th century; it is the historical center of Carpathian Ukraine. The old part of town has preserved its complex layout. The castle (14th–17th cent.) includes walls, bastions, and the palace (1598), now used to house the Ethnographical Museum and Picture Gallery. The Cathedral and episcopal palace date from 1646, a baroque church from 1757. On the outskirts of the town, in the village of Goryan, is the round Church of St. Anne (12th–15th cent.) with well-preserved Romanesque frescoes. In the environs of Uzhgorod are the Nevitski (13th–14th cent.) and Serednyanski (12th–16th cent.) castles. The Carpathian Ethnographical Museum (1948) and the Carpathian Provincial Picture Gallery (1948) are located here.

Yuri ASEEV

MOLDAVIA (Moldavian S.S.R.). *Historical and artistic periods.* In the territory of Moldavia art has traditions dating back to ancient times (monuments of the Tripolje culture from the 3d millennium B.C. and finds of ornate weapons from the Borodinski treasure of the 2d millennium B.C.). In the formation of Moldavian medieval art the heritage of ancient Kievan Russia and the building activity of Genoese traders (fortresses of the 14th–15th cent.) were influential. When the independent state of Moravia was founded in 1359, miniatures and fresco painting developed, artistic embroidery and carving in wood reached a high level of achievement, and the local style of ecclesiastical building evolved (elongated plans, lancet window frames and doorframes, and the bell-shaped dome). During the Turkish domination (16th–18th cent.) Moldavian culture did not develop. However, there are isolated outstanding examples of architecture from this period (Cathedral in Orgeyev, 17th cent.), as well as decorative carving (church of the Dragomir Monastery, 17th cent.) and painting (frescoes in the Church of the Dormition at the village of Novye Kaushany, 18th cent.).

After the incorporation of part of Moldavia (1791) and Bessarabia (the area between the Dniester and Prut rivers, 1812) into Russia, Moldavian towns were given new layouts based on neoclassic principles, and Russian architects (e.g., A. I. Melnikov, 1784–1854) worked in Moldavia. In peasant architecture a type of beaten clay or stone house came to be used with a gallery along the main façade, whose small columns rested on a sharply jutting socle and supported the pitched roof.

In 1897, in Kishinev, a drawing school was founded in which the local artists worked (sculptor A. M. Plamadyala, 1888–1940, and others). During the Romanian occupation (1918–40) the art of Bessarabia followed modern trends, while the art of Soviet Moldavia during those years developed along lines of socialist realism.

After the union of Bessarabia with the U.S.S.R. and the formation of the Moldavian S.S.R. (1940) a national artistic school was formed. The major artists were the painters M. E. Gamburd (1903–54), A. A. Vasilev (b. 1907), and L. P. Grigorashenko (b. 1924) and the sculptors L. I. Bubinovski (b. 1910) and K. S. Kobizeva (b. 1906).

Art centers. Kishinev. The town was first mentioned in written sources in 1420. It has been the capital of the Moldavian S.S.R. since 1940. Kishinev is divided into the lower town, which has preserved its medieval layout, and the upper town, which has been built up since 1834 according to regular plans. During the Soviet period the town has been enlarged. The Mazarakiev Church dates from the 18th century. The Cathedral (1830–35) is by A. I. Melnikov, The Art Museum of the Moldavian S.S.R. and the Ethnographical Museum of the Moldavian S.S.R. are situated here.

(Monuments of Moldavian Architecture, 14th–19th Cent.), Kishinev, 1960.

Elena KOSTINA

ESTONIA (Estonian, Eesti; Estonian S.S.R.). *Historical and artistic periods.* The earliest monuments of architecture are forts surrounded by a moat and wooden wall; in the 12th century the first towns formed around them. It is likely that in the 10th–12th century the dwellings consisted of two parts: a living section and a barn. The leading crafts during this time were ceramics and metalwork. In the 13th century Estonia was conquered by the Germans and Danes. Until the 18th century Estonian art developed within the current of western European culture.

During the Middle Ages many powerful castles were constructed. At Tallin part of the town fortifications built in the 15th–early 16th century have survived, as well as a number of public buildings and houses. There are noteworthy medieval basilicas (14th–16th cent.) in Tallin and Tartu. The most widespread type of village ecclesiastical construction was the hall church with one or three aisles. Isolated examples of decorative sculpture, baptismal fonts, and funerary monuments still exist.

Of the relatively few architectural monuments from the Renaissance, the most interesting one is the façade of the House of the Black Heads in Tallin (1597; built by A. Passer, d. 1637). Passer was also a fine sculptor (funerary monument of P. de la Gardie in the Tallin Cathedral, 1595).

Buildings in the baroque style exist in the town of Narva. The most interesting monument of the baroque period is the Kadriorg Palace in Tallin. Excellent examples of wood carving remain: the best artists were E. Thiele, who executed part of the carved frieze (1674) of the Town Hall in Tallin, and C. Ackermann, who made the altar (1696) in the Tallin Cathedral after designs of the Swedish architect Nicodemus Tessin the Younger (1654–1728). The magnificent iconostasis for the Cathedral of the Transfiguration in Tallin (1720) was executed in the studio of the Moscow architect I. P. Zarudny (d. 1727).

Artistic life flourished during the 19th century. Edifices constructed in the neoclassic style include the main building of the University at Tartu and villas at Riisipere, Hõreda, and Saku. Russian sculptors worked in Estonia (funerary monument of Admiral S. Greigh, d. 1788, in the Tallin Cathedral, attrib. to I. P. Martos, 1752/54–1835; funerary monument of Barclay de Tolly at Jõgeveste, 1823, and monument to him at Tartu, 1849 — both by V. I. Demut-Malinovski, 1779–1846). Tartu became an important artistic center; in 1803 an art school was opened at the University under the direction of C. A. Senff (1770–1838). In the 1830s the xylographic workshop of L. Maydell (1795–1846) and the lithographic workshop of G. F. Schlater (1804–70) were founded.

In the second half of the 19th century architecture was eclectic. In the figural arts realistic tendencies spread and manifested themselves in the work of the German Baltic artists E. Dücker (1841–1916), G. Bochmann (1850–1930), and O. Hoffmann (1851–1912) and of the first artists of Estonian nationality — painters J. Köler (1826–99) and P. Raud (1865–1930) and sculptors A. Weizenberg (1837–1921) and A. Adamson (1855–1929).

At the beginning of the 20th century Art Nouveau influenced Estonian architecture (Vanemuine Theater at Tartu, 1906, and Estonia Theater at Tallin, 1913, both by the Finnish architect A. Lindgren (1874–1929). The first Estonian architects, G. Hellat (1870–

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

1943) and K. Burman (b. 1882), utilized motifs of folk art in architecture. Local artistic life was promoted: A. Laikmaa (1866–1942) founded a studio-school at Tallin in 1903 and the graphic artist K. Raud (1865–1943) established one at Tartu in 1907; exhibitions of representational art were organized; and the Estonian Art Society was founded in 1907. Realistic art was permeated with social criticism (especially during the 1905–07 Revolution, when graphic art was used as political satire). During this period impressionism and Art Nouveau were influential. The major figures were A. Laikmaa, K. Mägi (1878–1925), and N. Triik (1884–1940).

From 1920 to 1940 Art Nouveau was gradually replaced by constructivist tendencies in architecture. A significant role was played by modern trends in the figural arts, especially during the 1920s, but realism continued to develop. Among the leading figures of this period were painters A. Jansen (1881–1957), A. Vabbe (1892–1961), A. Vardi (b. 1901), and Adamson-Eric (b. 1902); graphic artists G. Reindorff (b. 1889) and E. Viiralt (1898–1954); and sculptors J. Koort (1883–1935), A. Starkopf (b. 1889), and M. Saks (1902–62).

After World War II the destroyed towns were rebuilt and new towns were founded. Modern architecture is characterized by a simple and clear distribution of masses and sober, light forms. In figural art socialist realism dominates. The leading artists include painters Adamson-Eric, R. Treuman (b. 1910), V. Karrus (b. 1913), E. Kits (b. 1913), R. Sagrits (b. 1910), R. Uutmaa (b. 1905), J. Võerahansu (b. 1902), E. Okas (b. 1915), and I. Kimm (b. 1920); graphic artists G. Reindorff, A. Bach (b. 1901), E. Einman (b. 1913), R. Kaljo (b. 1914), O. Kangilaski (b. 1911), and L. Ennosaar (b. 1920); and sculptors A. Starkopf, E. Roos (b. 1908), A. Kaasik (b. 1908), O. Männi (b. 1925), E. Kirs (b. 1920), and E. Taniloo (b. 1923). An important place in the artistic culture is occupied by the minor arts: glass (M. Roosma, b. 1909), textiles (M. Adamson, b. 1908), ceramics (M. Rääk, b. 1907), leather (Adamson-Eric and E. Reemets, b. 1910), metal (L. Elken, b. 1924), and furniture (E. Velbri, b. 1902, and B. Tomberg, b. 1925).

The dwelling of the Estonian peasant remained until the beginning of the 19th century the combined house and barn, almost always unadorned. The artistic imagination of the people manifested itself mainly in folk art, particularly textiles and wooden objects. Until the mid–18th century geometric ornament was mostly used; later, plant ornamentation became widespread. Noteworthy are the carved wooden animal heads adorning harnesses and beer jugs.

Art centers. Tallin (Tallinn; Rus., Revel; Ger., Reval) is the capital of the Estonian S.S.R. There is evidence that it was an Estonian settlement in the 11th century. It was first mentioned in written sources in 1154. From 1918 to 1940 it was the capital of the country of Estonia. It consists of an upper part, Toompea (Vyshgorod), situated on a hill, and a lower part. The medieval part of the city has preserved its irregular network of streets. Interesting architectural monuments are: the medieval castle of the Teutonic Knights (radically rebuilt) with the "Long Hermann" Tower (ca. 1500); the city walls (14th–16th cent.) with the "Kiek in de Kök" and "Fat Margaret" towers; the Town Hall, Major Guild, and Guild of St. Olaf (all early 15th cent.); the Cathedral, later the Lutheran church (13th–15th cent., with a tower of 1799); the churches of St. Olaf (Oleviste kirik; 13th–16th cent.) and of St. Nicholas (13th–16th cent.); and the House of the Black Heads (façade 1597, architect A. Passer). The Kadriorg Palace was begun in 1718 by N. Michetti and M. G. Zemtosov; it now houses the Tallin Art Museum.

Tartu (Rus., Derpt, Yur'ev; Ger., Dorpat). The town was founded in 1030 on the site of an ancient Estonian settlement as the Russian fortress of Yur'ev. The most important buildings are: the Cathedral of the upper town (13th–15th cent.); Church of St. John (14th cent.); City Hall (1789, J. H. B. Walter); and the University (1809, J. W. Krause). The Tartu Art Museum and the Museum of Classical Antiquities of the Tartu University are located here.

Vol'demar VAGA

LATVIA (Lettish, Latvija; Latvian S.S.R.). *Historical and artistic periods.* An artistic culture of the forebears of the Lithuanian and Latvian tribes existed in the territory of Latvia in the 2d millennium B.C. (pottery, items of wood and amber), and wooden structures came to be widespread (neolithic site near Sārnate). The earliest hill fortifications (*pilskalns*) belong to the 1st millennium B.C. In the first centuries of our era the crafts of pottery, metalwork, and cloth weaving were widely developed. Geometric ornamentation predominated in decoration. In the 10th–12th century the first towns (Jersika, etc.) were founded, which were dependent on Russian principalities.

At the end of the 12th century and during the 13th, Latvia was seized by German Crusaders and united with Estonia under the name of Livonia. During this time buildings of limestone in Romanesque style were erected (castle and church at Ikšķile, late 12th cent.; castle at Koknese, early 13th cent.). In the 13th century new towns arose (Riga, etc.), and the local version of Gothic architecture was

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

developed, distinguished by simple forms and massive constructions of brick and rough stone (Cathedral in Riga, begun 1215; church in Valmera, 1283). In 1330–1550 the Gothic style reached its peak with lighter constructions and rich decoration (altar of the Church of St. Peter, 1408–09, in Riga; pediment and vaults of the Church of St. John, late 15th–early 16th cent., in Riga). A few works of figural art have survived (mainly memorial and religious sculpture).

In the 16th–17th century the ideas of Humanism penetrated into Latvia and later those of the Counter Reformation, particularly in architecture, in which elements of the northern European mannerist style appeared (addition to the Church of St. John in Riga, 1587–89). Decoration was very important, and was often polychrome (façade of the House of the Black Heads in Riga, 1620, destroyed during World War II; churches at Zlēku and Ēdole, both mid-17th cent.).

In the second half of the 17th century baroque came to be the leading trend in architecture (façade and tower of the Church of St. Peter in Riga, 1689–92, R. Bindenšū; Danenštern house in Riga, 1696). During the period of the apogee of the baroque (1700–70) façades were restrained, with little decoration, but the interiors were richly adorned (church in Apriki, 1710; Trinity Church in Lepaya, 1742–58; church at Pasiena, 1761). Funerary monuments in church interiors testify to the high degree of workmanship attained by the baroque sculptors and carvers. The most important civil edifices in baroque style (e.g., palace at Rundale, begun 1736; palace at Yelgava, begun 1738) were built by B. F. Rastrelli (1700–71).

With the end of feudalism the neoclassic style was established (1770–1840). The architecture of the late 18th century was marked by compactness of composition and refinement in details (three-storied houses in Riga and the church at Katlakalns near Riga, 1791–92, all by K. Haberland, 1750–1803). Between 1721 and 1795 the territory of Latvia was gradually reunited to Russia. Cities were rebuilt and towns planned under the influence of Russian neoclassicism (reconstruction of the citadel and its environs according to a plan of 1769 and the erection of the Warehouse, 1828–32, both in Riga; construction of the fortress at Daugavpils, 1810), and many country estates were erected (palace at Eleja, ca. 1800, G. Quarenghi; palace at Kazdanga, early 19th cent., J. G. Berlitz). In peasant architecture, generally constructed in wood, three types of dwellings predominated: two- or three-storied houses and houses with barns and baths. The wood carvings, painted chests, and pottery produced by the people were notable.

In the second half of the 19th century a national Latvian art began to form. Graduates of the St. Petersburg Academy of Fine Arts included the Latvian painters K. Hūns, 1830–77, and J. Fedders, 1838–1909, the graphic artist A. Daugulis, 1830–99, and the architect J. Baumanis, 1834–91.

At the end of the 19th century and the beginning of the 20th, Latvian art took on clearly defined aspects. Realism was promoted by the Rūķis (Toiler) Group, which included the painters J. Rosentāls (1866–1916), V. Purvīts (1872–1945), and Ā. Alksnis (1864–97) and the sculptors G. Šķilters (1874–1954) and T. Zaļkalns (b. 1876). In architecture an original national style was sought within the context of Art Nouveau (houses in Riga by architect E. Laube, b. 1880). The revolutionary events of 1905–07 and 1917 found expression in the work of a whole series of Latvian artists (caricatures by J. R. Tillbergs, b. 1880; posters by A. Apsītis, 1880–1914; and monuments by T. Zaļkalns and K. Zāle, 1888–1942).

From 1920 to 1940 neoclassic (F. Skujiņš, 1890–1957) and functionalist (E. Stalbergs, 1883–1958) tendencies spread. Modernist influences grew stronger in figural art; however, the leading artists remained faithful to the realistic tradition. Especially noteworthy was monumental sculpture (the architectural and sculptural ensemble of the Brethren Cemetery in Riga, 1925–29, sculptor K. Zale, and architect A. Birzenieks, b. 1894).

In the Soviet period (since 1940), and especially after World War II, extensive reconstruction and rebuilding of destroyed towns was undertaken. In recent years the development of architecture has been based on the mass construction of houses and community buildings according to standardized designs. A local construction industry has been created. Towns are built with open-plan micro-communities. In the villages modern kolkhoz and sovkhoz settlements are being built.

Figural art in the Soviet period follows the path of socialist realism. Major artists of the older generation are: painters J. R. Tillbergs; O. Skulme, b. 1889; V. Kalnroze, b. 1894; and E. Kalniņš, b. 1904 (PL. 249); graphic artist A. Junkers, b. 1899. Contemporary themes are present in the work of younger artists: E. Iltners, b. 1925; J. Osis, b. 1926; I. Zariņš, b. 1929; and B. Bērziņš, b. 1930. The minor arts are flourishing: ceramics, weaving, wood carivng, amber-work, metalwork, and stained glass.

Art centers. Riga. Capital of the Latvian S.S.R. The town was first mentioned in chronicles of 1201. It is divided into the old town, which has preserved its medieval layout and borders the Daugava (Dvina) River, and the new town, laid out on a regular plan in the 17th–19th century. Most of the multistoried buildings are from the second half of the 19th to the first half of the 20th century. Noteworthy medieval constructions are: Riga Castle (begun 1330, later rebuilt); Cathedral (begun 1215); Church of St. Peter, first mentioned in 1209 (enlarged 1408–09); and Church of St. John, first mentioned in written sources in 1297 (rebuilt late 15th or early 16th cent., with a mannerist addition of 1587–89). Baroque houses include the Reitern (1685, R. Bindenšū) and Danenštern (1696) houses. The Church of SS. Peter and Paul in the Citadel (1780–86, S. Seege), the church at Katlakalns (1791–92, K. Haberland), and the Warehouse (Pakhaus, 1828–32) are in neoclassic style. Additional public buildings have been constructed in the Soviet period. The Brethren Cemetery (1925–29) contains works by the sculptor K. Zāle and the architect A. Birzenieks.

Museums: Riga State Museum (18th cent.) in the Dom Monastery; Museum of Latvian and Russian Art (1919); Museum of Decorative Art, European paintings and minor arts; State Museum of Folk Crafts, an open-air museum situated on Lake Yugla, with a remarkable display of folk architecture and furnishings.

Daugavpils (Rus., Dvinsk; Ger., Dünaburg). The town has existed since 1277 and was built around a castle of the Teutonic Knights, 11 mi. from the new town founded in 1582. The fortress was begun in 1810 and completed in 1833. An ethnographical museum is located here.

BIBLIOG. I. N. L'vov, Krepost'-sklad Dvinsk: Istoricheskaya spravka (The Fortress-Repository of Dvinsk: Historical Information), Dvinsk, 1914; J. Šteimanis, Daugavpils v proshlom i nastoyashchem (Daugavpils in Past and Present), Riga, 1959.

Tsesis (Latvian, Cēsis; anc. Rus., Kes; Rus., Venden; Ger., Wenden). The town dates from the beginning of the 13th century. The Castle (13th–16th cent.) now houses the ethnographical museum. The Church of St. John was erected in the 1280s and rebuilt in the mid-19th century.

Ventspils (Rus., Vindava; Ger., Windau). The town, known since 1378, has a castle of the Teutonic Knights (ca. 1290) and a Lutheran church (1834–35, Johann de Witte).

BIBLIOG. J. Sviestiņs, Ventspils, Ventspils, 1934.

Yelgava (Latvian, Jelgava; Rus., Mitava; Ger., Mitau). The settlement began as a fortress of the Livonian Knights. In 1562–1795 it was the residence of the Kurland dukes. The Church of St. Anne is from 1573–1641. The Biron Palace (begun 1738) was built by B. F. Rastrelli. S. Jensens constructed the Peter Academy (1775). An ethnographical museum is located here.

Yuri VASILEV

LITHUANIA (Lithuanian, Lietuva; Rus., Litva; Lithuanian S.R.R.). *Historical and artistic periods.* The oldest settlements in the territory of Lithuania belong to the Mesolithic period (9th–5th millennium B.C.). Dating from the Neolithic period (4th–2d millennium B.C.) are objects of amber and pottery with geometric ornamentation. During the 1st millennium B.C. clan communities built hill forts (*piliakalniai*). Silver and bronze necklaces, bracelets, and fibulae became widespread at the beginning of the Christian Era. During the early feudal period (9th–12th cent.) and at the time of the formation of the Lithuanian state (13th cent.) wooden castles of feudal overlords were built on the sites of the ancient hill forts.

In the 13th century, and especially in the 14th and 15th centuries, stone castles were built for defense against the Crusaders and the Tatars (at Kaunas, Medininkai, Vilnius). The castles were rectangular or polygonal in plan. In the 13th century they were built without towers; in the 14th century, with one or two towers; and with the introduction of firearms, with towers at every corner of the castle. Around the castles, towns with defensive walls and town halls on market squares arose. The main streets had brick houses and public buildings whose façades, at the end of the 15th and in the 16th century, were crowned by Gothic decorative pediments (Perkūnas house in Kaunas). After Catholicism was established in Lithuania (1387) churches in the Gothic style were constructed as a rule without towers (St. Nicholas in Vilnius, ca. 1440; St. George in Kaunas, 2d half of 15th cent.; and the church in Zapyškis, 16th cent.). The two-towered Church of St. Anne in Vilnius (1500–81) is very ornate. Many churches were fortified (Bernardine church in Vilnius, 16th cent.).

In peasant architecture simple and functional types of timber-frame buildings were built (from the 19th cent. also in brick, clay, and wood): isbas, barns, sheds for animals, and baths.

In the 16th century, owing to the cultural ties with Italy, the Netherlands, and Germany, Renaissance tendencies penetrated into Lithuania, manifesting, themselves in architecture (buildings decorated in Renaissance style, such as the house at 4 Gorky Street, 16th cent., and the Church of St. Michael, 1594–1625, both in Vilnius), in the icon of the *Madonna of the Dawn Gate* (Aušros vartų madona, 2d half of 16th cent.), and in miniatures and engravings.

In the 17th and 18th centuries many baroque churches, monasteries, and palaces were built, profusely decorated with sculpture and painting. In the 18th century a type of church evolved with two tall towers pierced by apertures and a façade with rich, sculptural decorative effects (Church of St. Catherine in Vilnius). In the 17th century the mural paintings of the monastery at Pažaislis near Kaunas were executed (artists Delbenē, Michelarcangelo Palloni, and others), as well as the sculptural decoration of the Church of SS. Peter and Paul (Italian sculptors Pietro Peretti and Giovanni Maria Galli and local sculptors) in Vilnius. Berween 1760 and 1780 buildings in the neoclassic style were erected. (J. B. Knackfuss, d. 1794, and L. Stuoka-Gucevičius, 1753–98); this style dominated until the 1830s.

After the incorporation of Lithuania into Russia (1795) its art drew close to that of Russia. An important role in the founding of the new Lithuanian representational art was played by the Vilnius Art School (1793–1831), directed by exponents of neoclassicism — architect L. Stuoka-Gucevičius (PL. 240), painter F. Smuglevičius (1745–1807), and sculptor K. Jelskis (1782–1867). Artists who received their training at the Art School were V. Vankavičius (1799–1842), V. Smakauskas (1797–1836), and K. Ruseckas (1800–60).

Beginning in the 1830s, eclecticism predominated in architecture. Between 1850 and 1860 the figural artists turned to critical realism. The Vilnius School of Drawing (1866–1912), under the direction of the Russian artist I. P. Trutnev (1827–1912), was influential in spreading this style. In 1907 the Lithuanian Artistic Society was founded; it promoted exhibitions of national art. Important during this period were such figures as the romantic painter M. K. Čiurlionis (1875–1911), A. Žmuidzinavičius (b. 1876), and the realistic sculptors J. Zikaras (1881–1944) and P. Rimša (1881–1961). Traditional tendencies continued in architecture from 1919 to 1940, and constructivism developed (V. Dubeneckis, 1888–1932; V. Zemkalnis-Landsbergis, b. 1893). The Kaunas Art School, founded in 1922 by the painter J. Vienožinskis (1886–1960), acted as a center for the leading realist artists: painters A. Žmuidzinavičius, P. Kalpokas (1880–1945), K. Šklėris (1876–1932), and J. Šileika (b. 1883); sculptors V. Grybas (1890–1941) and Juozas Mikėnas (b. 1901); and graphic artists S. Žukas (1904–46) and M. Bulaka, b. 1907).

Major modern artists are: painters V. Mackevičius (b. 1911), A. Savickas (b. 1919), and A. Gudaitis (b. 1904); the master of stained glass S. Ušinskas (b. 1905); sculptors Juozas Mikėnas, P. Aleksandravičius (b. 1906), P. Vaivada (b. 1906), J. Kėdainis (b. 1915), and G. Jokūbonis (b. 1927); and graphic artists J. Kuzminskis (b. 1906), A. Kučas (b. 1909), V. Jurkūnas (b. 1910), D. Tarabildienė (b. 1912), and A. Makūnaitė (b. 1926). The minor arts (stained glass, ceramics, amberwork, furniture) are closely integrated with the architecture of modern interiors.

After World War II towns were rebuilt and enlarged, and many new industrial and collective farm communities were built.

Art centers. Vilnius (Vilnyus; Rus., Vilna, Vilno; Ger., Wilna). The capital of the Lithuanian S.S.R. (since 1940). It arose on the site of a fortified settlement known since the 5th century. It is mentioned in chronicles from 1323. In the 14th–16th century it was the capital of the Grand Duchy of Lithuania. The medieval town developed along the commercial roads extending to the southwest from the Upper and Lower castles on Gediminas Hill. The extant medieval constructions are the remains of the stone and brick Upper Castle (1st half of 15th cent.) and the following Gothic churches: the Franciscan church (ca. 1420, rebuilt in the 18th cent.), the Church of St. Nicholas (ca. 1440), the Bernardine church (ca. 1525, later rebuilt several times), and the Church of St. Anne (1500–81). From the Renaissance period are the remains of the city walls in stone (1503–22) with the Gate of the Dawn, the Church of St. Michael (1594–1625), and the Skarga Courtyard (2d half of 16th cent.) in the University.

There are many fine baroque churches: the Church of St. John (originally Gothic, rebuilt late 16th–early 17th cent.; the façade of 1740 is by J. C. Glaubitz); the Church of St. Casimir (1604–15, P. Bokša); the Chapel of St. Casimir (1636, C. Tencalla) in the Cathedral; the Church of St. Theresa (1634–50); the Sapiega Palace (2d half of 17th cent.); the Church of SS. Peter and Paul (1668–75, J. Zaor; sculptural decoration by P. Peretti and G. M. Galli); the Church of St. Catherine (late 17th–early 18th cent.; the façades, 1741–43, are by J. C. Glaubitz); the Missionary Church (1st half of 18th cent.). The observatory of the University (1782–86, J. B. Knackfuss) is in neoclassic style, as are the buildings by L. Stuoka-Gucevičius: the episcopal palace (1792, rebuilt in 1st quarter of

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

19th cent.), the Town Hall (1797–99), and the Cathedral of St. Stanislaus (1777–1801, PL. 240). The Evangelical Reform Church is also neoclassic (1830–35, K. Podčašinskis). In the Soviet period a new bridge (1952, V. I. Anikin) over the Neris River has been constructed, as well as other public buildings. The Vilnius Art Museum (1941) has a collection of Lithuanian, Russian, and European art.

Birzhai (Birzai; Ger., Birsen). The town was known as an important military outpost in the 15th century. Remains can be seen of the Castle of the Radziwills (1660–69, T. Spinovskis), in Renaissance style. The Church of St. John the Baptist was built by L. C. Anichini in 1853. An ethnographical museum is located here.

BIBLIOG. J. Ycas, Biržai (Lietuvos Universitetas, Humanitariuiu mokslu fakulteto rastai, VIII), Kaunas, 1931.

Kaunas (Kovno). The town was built about 1030 on the site of an earlier settlement. In the 13th century it was an important stronghold in the struggle against the Crusaders. It developed quickly in the 15th–17th century after being granted the "Magdeburg rights" (1408). In 1919–40 it was the capital of Lithuania. The remains of the stone and brick castle date from the 13th to the 17th century. The Church of St. Vytautas, the Cathedral, and the Church of St. George (all 15th cent.) are in Gothic style, and the Perkūnas House (16th cent.) is late Gothic. The Town Hall, begun in 1542 by B. Chojnowski, is Renaissance; the tower and the reconstruction of the façades (1771) are by J. Matekeris. The Jesuit church (1660–1725) is in baroque style. Near Kaunas is the baroque monastery at Pažaislis (1667–1712, L. Fredo). The art museum, named after M. K. Čiurlionis, has a collection of Lithuanian art.

BIBLIOG. V. Zeljukas, Kaunas, Vilnius, 1958; A. Gulbinskienė et al., Kaunas: jo praeitis, dabartis ir ateitis (Kaunas: Past, Present, and Future), Kaunas, 1960; H. Kairiūkštytė-Jacinienė and J. Baršauskas, Pažaislis, Vilnius, 1960.

Kedainiai (Kedainyai). The town has been known since the 15th century. The Church of St. George, in Gothic style, is from about 1403. The Calvinist church (1826) is in neo-Renaissance style. An ethnographical museum is situated here.

BIBLIOG. P. Biržys, Lietuvos miestai ir miesteliai, Kaunas, n.d.

Šiauliai (Shaulyai, Shavli; Ger., Schaulen). The town was first mentioned in chronicles of the 13th century. The Church of SS. Peter and Paul, dating from 1595–1625, is in Renaissance style. There is an ethnographical museum.

BIBLIOG. J. Naudužas, Šiauliu miesto archeologiniai paminklai, Ti lietuviu kultūros istorijos, II, Vilnius, 1959, pp. 177–87.

Trakai. In the first quarter of the 14th century Trakai was the capital of the Grand Duchy of Lithuania; later (until 1492) it was one of the residences of the reigning grand dukes. There are remains of the castle on the peninsula (2d half of 14th cent.) and of the castle on the island (late 14th–early 15th cent.). An ethnographical museum is located here.

Iozas BARŠAUSKAS

GEORGIA (Georgian, Sakartvelo; Rus., Gruziya; Georgian S.S.R.). *Historical and artistic periods.* The oldest constructions on the territory of Georgia are barrow burials of the 3d and 2d millenniums B.C. located in the Trialeti area and at Samgora (Samgori) and cyclopean fortresses and settlements with round- and oval-shaped dwellings. In the second half of the 1st millennium B.C. the states of Iberia in eastern Georgia and Colchis in western Georgia were founded. Archaeological monuments dating from this period include the ruins of an acropolis near Armazi (4th and 3d cent. B.C.–beginning of our era), a vaulted stone tomb (1st cent. of our era), baths of the late-antique type, and the remains of a palace at Armazis-khevi (first centuries of our era) — all near the ancient capital of Mtskheta — and a chamber with a caisson vault forming part of the cave town of Uplistsikhe (1st cent. B.C.–13th cent. of our era).

Gold, silver, and bronze objects (jewelry and vessels) of high quality and painted pottery have been found in the barrows at Trialeti (mid-2d millennium B.C.), Akhalgori (2d half of 1st millennium B.C.), and Armazis-khevi (Mtskheta), as well as at Kldeeti, Bori, and Vani (first centuries of our era). The architecture, ceramics, and metalwork of the first centuries of our era present vivid original traits (e.g., the characteristic use of metal with semiprecious stones and filigree) but also reveal the influence of the Hellenistic and Near Eastern cultural worlds. The dwelling of this period, the so-called *darbazi* (hall), had a wooden, pyramidal, corbeled roof (VI, FIG. 139) that resembled the roofs of Near Eastern countries; this type has survived into modern times.

In the early medieval period (4th–7th cent.) buildings were made of dressed, square blocks of stone; and vaults, arches, and a dome resting on a square mass — a feature that derived from both the local folk architecture (the *darbazi*) and the architecture of Near Eastern countries — began to be used. With the advent of feudalism and the acceptance of Christianity as the official religion early in the 4th century, Georgia was closely linked to the Mediterranean cultural world. The most important monument of civil architecture of the early feudal period is the fortress town of Udzharma. Ecclesiastical architecture is represented by basilicas (the largest is the Basilica of Zion in Bolnisi, 478–93, VI, FIG. 141), among which are the "triple-church" basilicas peculiar to Georgia (the naves are divided by walls), and, above all, by domed churches. Among the domed structures that are quatrefoil are: the major church at Dzhvari (586/87–604, VI, PLS. 112, 113, FIG. 141), one of the most perfect creations of Georgian architecture; the Basilica of Zion at Ateni and the church at Matvili (1st quarter of 7th cent.); and the Cathedral at Bana, whose quatrefoil is enclosed by a circular wall (mid-7th cent., VI, PL. 113, FIG. 143). The church at Tsromi has a dome supported by four freestanding piers (626–34/35, VI, PL. 113, FIG. 141). The architectural monuments of this period are distinguished by their severe style (balanced composition, restrained use of embellishment) and by their treatment of the façades. The architectural masses of the churches mount progressively like steps and are crowned by a broad pyramidal dome on a polygonal drum.

Medieval sculpture had a decorative character and was linked to architecture (sculpture in the round, because of opposition by the Orthodox Church, was not developed in medieval Georgia). The most typical examples are the reliefs on the churches at Bolnisi and Dzhvari (VI, PLS. 111, 112). The oldest examples of Georgian painting belong to this period: fragments of the mosaic floor in the church at Bichvinta (anc. Pitius, 4th–5th cent.), mosaics from the church at Tsromi (7th cent.), and mosaics with Georgian inscriptions (1st half of 5th cent.) in the Georgian monastery near Bethlehem in Palestine.

In the 12th century, after a period of transition (Arab dominion followed by the formation of kingdoms and principalities), Georgia became one of the most economically and culturally developed states of the Near East. Architecture, from the end of the 10th to the mid-13th century, flourished again. The new style was distinguished by a more varied and dynamic composition, elongated proportions along the vertical axis, and richly carved and decorated façades, but at the same time the strict architectural quality and crystalline clarity of the building as a whole was preserved. The interiors of the churches were covered with wall paintings; the alabaster and stone altar screens and wooden doors were adorned with carved reliefs. Certain details of Georgian architecture of this period are related to those of European Romanesque architecture. (For the most important buildings see GEORGIA, ART OF.)

Georgian medieval (8th–18th cent.) silver- and goldwork was of exceptional quality, particularly the icons, crosses, church vessels, and manuscript covers (VI, PL. 115). Eighth- and 9th-century metalwork is characterized by flatness, a linear manner of expression, and decorativeness (the *Icon of the Transfiguration* from Zarzma, 886). In the 11th century a more sculptural rendering of figures and drapery was combined with the former decorativeness and with rich ornamental trimmings (the *Laklakidze Icon* with scenes from the Gospels, the plaque with the image of St. Mamai, numerous crosses). Noted goldsmiths of the 10th–11th century were Asat (2d half of 10th–early 11th cent.), Ivan Monisdze, and Ivan Dyakon. One of the most impressive pieces of the first half of the 12th century is the folding *Icon of the Mother of God* from Khakhuli, entirely covered with chased plant ornament and numerous Georgian and Byzantine cloisonée enamels. The covers of the *Anchiskhati Icon* and the Tskarostav Gospels (by Beka Opizari) were executed in the late 12th–early 13th century. Sculpture developed along the same lines as metalwork.

Mural painting flourished from the 11th to the 14th century. Churches were decorated with murals portraying Biblical scenes and personages; many of the murals contained portraits of real persons. Characteristic local traits manifested themselves in the color scheme, the iconographic details, and the creation of new hagiographic cycles (for details see GEORGIA, ART OF).

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The earliest surviving illuminated manuscript is the Adishi Gospels (897). The decorative elements in the early manuscripts were severe and restrained; in the 11th and especially in the 12th century the ornamentation was more sumptuous, sometimes with many miniatures (the Second Dzhruchi Gospels and the Gelati Gospels). The manuscript of an astronomical treatise with remarkable representations of the signs of the zodiac is from 1181 or 1188.

The late medieval period (14th–18th cent.) was a time of great difficulties (the invasions of the Mongols and Tamerlane and the aggression of Turkey and Iran). The artistic level of architecture dropped, despite great technical skill. Brick was used for building as well as stone. The most representative monuments from this period are: the fortified town of Gremi, which was the capital of the Kakhetian kingdom in the 16th century; the Akhali Shuamta Monastery (16th cent.); the Ananuri fort (17th cent.); the Barakoni church (1753); the Anchiskhati bell tower in Tbilisi (Tiflis) and the bell tower in Ninotsminda; and bridges, baths, forts, and towers.

Metalworking flourished again in the mid-15th century (Master Mamne) and the 16th century (the *Icon of the Atskurska Mother of God*). In the 17th and 18th centuries artistic quality deteriorated.

Notable murals of the 14th century are found in Ubisi, Safara, and Zarzma. Murals appeared again in the 16th and 17th centuries in the churches of the Gelati Monastery and the Cathedral of Sveti-Tskhoveli at Mtskheta. A decline set in later. Among the 15th-century miniatures are the illustrations of the so-called "Decorated Psalter." Many illustrated secular manuscripts were produced in the 16th–18th century, the most interesting being editions of Rustaveli's poem, *The Hero in a Tiger's Skin.*

Peasant dwellings were distinguished by great variety. In the eastern and southern districts the *darbazi* type of house was widespread; in mountainous localities, two- and three-storied stone houses were built, sometimes with tall square defense towers. In western Georgia the *oda-sakhli* — a wooden house with a rectangular plan, resting on a stone socle or posts, with a balcony along the whole length of the façade — predominated.

Forms of Georgian folk art included wood carvings decorating peasant houses and furniture, carpets, embroidery, ceramics, metalwork (dishes, adornments, arms), and tombstones with reliefs.

After Georgia was annexed to the Russian empire in the 19th century closer ties were established with Russian culture and, through it, with European culture with which Georgia had not had any contact in the 15th–18th century because of the fall of the Byzantine Empire and the Turko-Persian encirclement. Peasant dwellings and town houses (from the 1860s) preserved the national traditions; later, the architecture in the cities followed the eclectic tendency prevalent all over Europe. Easel painting and graphic art began to be practiced. The founding father of the new Georgian painting was G. Gabashvili (1862–1936); other leading artists were R. Gvelesiani (1859–84), A. Beridze (1858–1917), A. Mrevlishvili (1866–1933), M. Toidze (1871–1953), and the talented self-taught artist N. Pirosmanishvili (1869–1918). At the turn of the century Ya. Nikoladze (1876–1951) was the founder of the national school of sculpture.

In the Soviet period the Academy of Fine Arts, which trained architects and artists, was founded in Tbilisi (1922). Large-scale rebuilding, planning, and modernizing of towns were carried out, and new industrial centers (e.g., Rustavi) and resorts were founded. After World War II much new housing was constructed in towns, on collective farms, and in resorts. National motifs were utilized in the new architectural forms.

In the figural arts an important role was played by the realist artists of the older generation — G. Gabashvili, M. Toidze, and the sculptor Ya. Nikoladze. Major landscape painters are A. Tsimakuridze (1882–1954), D. Kakabadze (1889–1952), and E. Akhveldiani (b. 1901). Genre paintings on themes of peasant life have been created by V. Sidamon-Eristavi (1889–1943), A. Kutateladze (b. 1899), and U. Dzhaparidze (b. 1906). K. Magalashvili (b. 1894) is a major portrait painter. L. Gudiashvili (b. 1896) has turned mainly to Georgia's past, to mythological and folk tales, to fantasy and grotesques. R. Sturua (b. 1916) and others work in the field of monumental painting. Scenography has achieved a high degree of development with the work of I. Gamrekeli (1894–1943), S. Virsaladze (b. 1909), and S. Kobuladze.

In sculpture N. Kandelaki (b. 1889), V. Topuridze (b. 1908), and T. Abakelia (1905–53) occupy a leading place. Book designs are produced by V. Grigolia (b. 1909), book illustrations by S. Kobuladze (b. 1909), I. Gabashvili (b. 1908), and D. Gabashvili (b. 1914); prints by V. Kutateladze (b. 1902), D. Kutateladze (1901–58), and L. Gudiashvili; and aquarelles by V. Dzhaparidze (b. 1901). In the postwar years the younger generation is represented by painters G. Gelovani (b. 1928) and G. Totibadze (b. 1928); graphic artists R. Tarkhan-Mouravi (b. 1923), T. Kubaneishvili (b. 1924), A. Bandzeladze (b. 1927), and D. Nodia (b. 1931); and sculptors B. Avalishvili (b. 1922), G. Kordzakhia (b. 1923), E. Amashukeli (b. 1928), M. Berdzenishvili (b. 1929), I. Ochiauri (b. 1924), and G. Ochiauri (b. 1927).

Art centers. Tbilisi (until 1936, Tiflis). The capital of the Georgian S.S.R. is situated on the banks of the Kura River (extending more than 12 mi.) and on the slopes of the Trialeti ridge. It was known as a fortified town in the 4th century; in the 6th century it became the capital of Kartlia (Iberia) and at the end of the 7th century, after the Arab conquest, it was the residence of the emirs. In 1122 it became the capital of united Georgia and later was the economic, political, and cultural center of Georgia. The city is spread out over the hills at different levels. The ancient nucleus, the old town, retains its original appearance. The ruins of the Narikala citadel (the oldest parts of the 4th cent., the later ones of the 16th–17th cent.) on the right bank, of the Kura and the Church of the Metekhi (1278–93) on the left bank, form the picturesque silhouette characterizing this part of Tbilisi. The narrow streets, often climbing uphill, preserve traces of the town's original layout.

Interesting medieval architectural monuments include: the Zion Church (6th–7th cent., repeatedly rebuilt, the last time in 1710), the three-aisled Anchiskhati Basilica (6th cent.), the Lurdzhi or Blue Monastery (late 12th cent., later radically altered), the Anchiskhati bell tower (1675), and the baths of the palace of King Rostom (17th cent.).

In the beginning of the 19th century the new town, with a network of right-angled streets, grew up on the right bank and in the 1840s on the left bank. Noteworthy buildings in the Russian neoclassic style include: the Zion bell tower (1812), the building of the Army General Staff (1824), and the Theological Seminary (now housing the Georgian National Museum of Art, late 1830s). Buildings in the eclectic style of the 19th and the early 20th century include: the Paliashvili Opera House (1880–96, V. Shretter), the Rustaveli Theater (1901, V. Tatishchev and I. Shimkevich), the Tbilisi Hotel (1915, G. Ter-Mikelov), and the Georgian High School for the Nobility (now part of Tbilisi University, 1900–16, S. Kldiashvili). A revival of forms characteristic of Georgian medieval architecture can be found in the Georgian Nobles' Bank (now the Public Library, 1912–16, A. N. Kalgin and G. F. Grinevski).

During the Soviet period Tbilisi has been modernized. New districts, public gardens and parks, and public buildings have been created.

Museums: Dzhanashia Museum (or Museum of Georgia), founded in 1919, arts of the prefeudal period and folk art; Georgian National

Alaverdi. The Cathedral of Alaverdi, situated in a valley of the Alazan River, about 12 mi. southwest of Telavi, is one of the most significant Georgian monuments of the first quarter of the 11th century (VI, FIG. 146). The three apsidal semicircles are enclosed in a rectangle of the stone exterior wall (ca. 137 by 87 ft.). The interior space of the church is the most grandiose in all Georgian architecture (over 164 ft. in height).Within the outer walls are ruins of dwellings, baths, a refectory, and other buildings from the early 17th century.

BIBLIOG. G. Tschubinaschwili, The Medieval Architecture of Georgia and Its Three Principal Cathedrals, Tbilisi, 1925 (in Georgian); G. Tschubinaschwili, Arkhitektura Kakhetii (Architecture of Kakhetia), 2 vols., Tbilisi, 1956–59.

Ateni. The domed, stone Church of Zion (1st half of 7th cent., master builder Todosa) is situated in a gorge of the Tana River, about 7 mi. south of Gori. In plan and architectural form it is a replica of the major church of Dzhvari, but with somewhat altered proportions. There are reliefs of individual figures and groups on the façade; the interior has a remarkable mural (1080), which includes portraits of real persons.

BIBLIOG. R. O. Shmerling, K voprosu o datirovke Atenskoi rospisi (The Question of Dating the Ateni Painting), Soobshcheniya Akademii nauk Gruzinskoi SSR, VIII, 1947, pp. 267–73; G. N. Barnaveli, O datirovke rospisi Atenskogo Siona (The Dating of the Ateni Zion Painting), Vestnik Akad. nauk Gruzinskoi SSR, XVII, 1956, pp. 281–86; Sh. Ya. Amiranashvili, Istoriya gruzinskoi monumental'noi zhivopisi (History of Georgian Monumental Painting), I, Tbilisi, 1957, pp. 77–98.

Batumi (anc. Bathys, medieval Vati, Batum). A seaport on the shores of the Black Sea. The town was first mentioned in written sources in the 1st century of our era. In the 16th and 17th centuries it was under Turkish domination, as were the southern districts of Georgia. In 1878 it was incorporated into Russia and began to grow rapidly at the end of the 19th century.

During the Soviet period Batumi has become one of the handsomest towns of the Black Sea coast. Its basic layout is a network of wide streets crossing at right angles. There is much greenery and many parks. The Museum of the Revolution was built in 1955 by K. Dzhavakhishvili; there are reliefs in the interior and on the façades, and the main façade has a frieze by T. Abakelia.

BIBLIOG. D. Komakhidze, Batumi, Batumi, 1956.

Bichvinta (Pitsunda; anc. Pitius). This ancient settlement on the coast of the Black Sea is situated on Cape Pitsunda. From the second half of the 1st millennium B.C. to the 1st millennium A.D. it was a large, rich town. Remains from this period came to light during excavations of the 1950s: massive fortifications, temples, baths, and other structures. Of artistic interest is the mosaic floor in one of the churches (4th–5th cent. of our era). Northeast of the ancient fortified town is a cruciform, domed church of the 10th century with walls of alternating courses of brick and stone and 16th-century frescoes in the narthex.

BIBLIOG. L. A. Matsulevich, Otkrytie mozaichnogo pola v drevnem Pitiunte (Discovery of a Mosaic Pavement in Ancient Pitius), Vestnik drevnei istorii, 4, 1956, pp. 146–53.

Bolnisi. The Basilica of Zion is situated about 43 mi. southwest of Tbilisi near the village of Bolnisi; it is one of the largest churches in Georgia (covering an area of ca. 91 by 79 ft.). According to the building inscription, it dates from 478–93. Three aisles, a projecting apse, horseshoe-shaped arches, and pierced lunettes above the entrances are characteristic features of early medieval Georgian architecture, as represented by this church (VI, FIG. 141). The interior columns have capitals and bases decorated with carved geometric designs and representations of plants and animals (VI, PL. 111).

BIBLIOG. G. N. Tschubinaschwili, Bolnisski Sion (Izvestiya Inst. yazyka i istorii material'noi kul'tury Gruzinskogo filiala Akad. Nauk SSSR, IX), Tbilisi, 1940.

David Garedzha (Garedja). A large complex of cave monasteries situated about 37 mi. southeast of Tbilisi. For a distance of about 15 mi. there are several hundred caves hollowed out of the cliffs. The oldest of these monasteries — the David Lavra and the monasteries of Dodo and of Natlis-Mtsemeli (St. John the Baptist) — were founded in the first half of the 6th century. From the 10th to the 13th century other monasteries were established, for example, Udabno, Chichkhituri, and Bertubani. In many churches and refectories mural paintings, some including portraits of contemporaries, have survived.

BIBLIOG. G. N. Tschubinaschwili, Peschchërnye monastyri David Garedzhi (Cave Monasteries of David Garedzha), Tbilisi, 1948.

Dmanisi. Located some 58 mi. southwest of Tbilisi are the ruins of a rich medieval trading center. The town was founded in the 9th century and flourished in the 12th–13th century. Excavations (1936–37) have revealed a citadel with stone walls and towers, streets, fortifications with bastions, underground passages, baths, and storehouses. In the citadel is a "triple-church" basilica (6th–7th cent., restored in the early 18th cent.) with a porch of dressed stone (1st quarter of 13th cent.) richly decorated with reliefs. To the east of the basilica are the ruins of a bell tower.

BIBLIOG. L. Mushelishvili, Raskopki v Dmanisi (Excavations at Dmanisi), SA, V, 1940, pp. 258–86.

Dzhvari. The major church of Dzhvari is a cruciform, domed, stone church, situated on a high hill opposite the city of Mtskheta (VI, PLS. 112, 113, FIG. 141). It was erected in 586/87–604 (according to an inscription) next to an small church — the minor church of Dzhvari (mid-6th cent., now half-destroyed). The church of Dzhvari is the earliest and best existing example of the type of church that became widespread in Georgia in the 7th century. The building is a quatrefoil (ca. 72 by 60 ft.) with four separate chambers that are connected with the interior space by deep niches; the central dome rises on an octagonal drum resting on squinches (ca. 77 ft. high). On the façades are reliefs, including some donor portraits.

BIBLIOG. G. N. Tschubinaschwili, Pamyatniki tipa Dzhvari (Monuments of the Dzhvari Type), Tbilisi, 1948.

Gelati. The monastic complex, located about 4 mi. northeast of Kutaisi, was one of the major cultural centers of medieval Georgia. It was founded in 1106 by King David the Builder. Surviving from the beginning of the 12th century are a cruciform, domed main church, ruins of an academy, and parts of the defensive stone walls with an entrance that rises over the grave of King David. Dating from the 13th century are the domed Church of St. George, the two-storied Church of St. Nicholas, a three-storied bell tower, and an entrance portico of the academy (all of stone). There is a marvelous mosaic (1120s) in the half dome of the altar apse of the main church. Mural paintings of the 12th to 18th century decorate the main church and the Church of St. George (including many portraits of historical persons). The famous Khakhuli folding icon, originally kept in the monastery, is now in a museum in Tbilisi.

BIBLIOG. B. Lominadze, Gelati: Putevoditel' (Gelati: Guide), Kutaisi, 1958; R. I. Keniya, K voprosu o kharaktere chekanki Khakhul'skoi ikony (The Question about the Chasing on the Khakhuli Icon), Soobshcheniya Akad. nauk Gruzinskoi SSR, XX, 1959, pp. 121–27; T. Virsaladze, Fragmenti drevnei freskovoi rospisi glavnogo gelatskogo khrama (Fragments of Old Fresco Painting in the Main Church of Gelati), Ars Georgica, V, 1959, pp. 163–204.

Gremi. This fortified town is near a village of the same name, on the banks of the Intsoba River, 11 mi. northeast of Telavi. In the 16th century it was the capital of the Kakhetian kingdom. To this period belong the ruins of a few churches, shops, baths, and houses (built of rough stones and brick); on the top of one of the hills are the fortress, the palace, and the main church (ca. 1565) — a cruciform, domed, brick building with murals of the 16th century.

BIBLIOG. G. Tschubinaschwili, Arkhitektura Kakhetii (Architecture of Kakhetia), II, Tbilisi, 1959, pp. 447–50.

Kutaisi. Situated on the Rion River, Kutaisi is the second most important industrial and cultural center of the Georgian S.S.R. and one of the most ancient towns of Georgia. It was known to authors of antiquity as Kotatisium and in the first centuries of our era as the fortress town of Kutatisi; in the 8th century it was the capital of the western Georgian kingdom, and in the 10th century it was one of the major cultural and political centers of Georgia. From the 13th to the early 14th century and from the late 15th to the early 19th century, it was the capital of the kingdom of Imeritia. In Kutaisi are the ruins of the grandiose Cathedral erected by Bagrat III (1003, destroyed in 1691). The church is a trefoil inscribed in a cross (160 by 128 ft.), with a dome resting on four large piers. The

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

porticoes on the western and southern façades, richly decorated with carving, are from the first half of the 11th century. In Soviet times much modern housing has been constructed. The Historico-Ethnographical Museum (1922) contains medieval Georgian minor arts. There is a branch of the Museum in the Gelati Monastery.

BIBLIOG. G. Tschubinaschwili, The Medieval Architecture of Georgia and Its Three Principal Cathedrals, Tbilisi, 1925 (in Georgian); N. P. Severov, Opyt rekonstruktsii Kutaisskogo khrama Bagrata (Experiment of Reconstructing the Church of Bagrat at Kutaisi), Ars Georgica, V, 1959, pp. 9–110.

Mtskheta (Mtskhet). The town is situated on a promontory at the confluence of the Aragva and Kura rivers, near Tbilisi. A large settlement existed here in the 2d millennium B.C. As the political center of Iberia, it was mentioned in written sources a few centuries before the Christian Era; until the mid-6th century of our era it was the capital of Georgia; subsequently it became the ecclesiastical center of the country. Excavations have been under way since 1937. At Samtavro, on the northern edge of the town, a huge necropolis (2d millennium B.C. – 9th cent. of our era) has been discovered containing pottery, artifacts of bronze, gold, and silver, glass items, and beads made by local craftsmen. On the right bank of the Kura the ruins of the Armazi acropolis (4th and 3d cent. B.C.–beginning of our era) have been uncovered: citadel walls, a palace and a storehouse made of dressed stone and sun-dried brick, and a rich grave. Unique in Georgian architecture is a stone tomb (1st cent. of our era), rectangular in plan, covered by a semicircular vault. At a higher level of the Kura, in Armazis-khevi, are the ruins of a palace complex, baths (2d–3d cent. of our era), and a necropolis with tombs of Georgian nobles (first centuries of our era) containing numerous artifacts (vessels, objects of adornment, arms) of gold, silver, and bronze, the excellent local glass, and gems with portraits.

The Samtavro Monastery has a cruciform, domed cathedral (11th cent.) with richly decorated façades (VI, PL. 114). The Cathedral of Sveti-Tskhoveli (VI, PL. 114) was erected in 1010–29 (builder Arsukisdze; restored in the early 15th and the 17th cent.). It is rectangular in plan (ca. 165 by 82 ft., 157 ft. high); the western part is divided into three naves, surmounted by a gallery; four freestanding piers support the drum of the dome. The façades are adorned with bands of arches, carvings, and reliefs. Inside are fragments of murals, most of which date from the 16th and 17th centuries.

BIBLIOG. G. Tschubinaschwili, The Medieval Architecture of Georgia and Its Three Principal Cathedrals, Tbilisi, 1925 (in Georgian); R. O. Shmerling, Samtavro: pamyatnik XI veka (Samtavro: 11th-Century Monument), Ars Georgica, I, 1942, pp. 49–76; N. P. Severov and G. N. Tschubinaschwili, Mtskheta, Moscow, 1946; V. Beridze, "Sveti-Takhoveli" in the Mtskheta Cathedral and Its Paintings on Subjects of the Christianization of Georgia, Vestnik Gosudarstvennogo muzeya Gruzii, XIV, 1947, pp. 135–64 (in Georgian); A. Apakidze et al., Mtskheta: Itogi arkheologicheskikh issledovani (Mtskheta: Results of Archaeological Researches), I, Tbilisi, 1958; Sh. J. Amiranashvili, EAA, s.v. Georgia.

Nikortsminda. A domed church (1010–14) is located about 9 mi. west of the village of Ambrolauri. Basically a hexagon, the church has five sides that terminate in apses, while the western side terminates in a rectangular block. The outer perimeter of the plan is cruciform. The porches to the south and west were added later in the 11th century. The façades have lavish carvings in stone. The interior of the church has mural paintings of the 16th–17th century.

BIBLIOG. G. N. Tschubinaschwili and N. P. Severov, Kumurdo i Nikortsminda, Moscow, 1947.

Pitareti. The church of Pitareti is located about 9 mi. southwest of the village of Tetri-Tskaro. The church (1st quarter of 13th cent.) is rectangular in plan (VI, FIG. 146), with a dome resting on two freestanding piers. There is a chapel on the western side. The façades and the drum are decorated with rich, skillfully executed stone carvings.

BIBLIOG. G. N. Tschubinaschwili, K voprosu o natsional'noi forme v arkhitekture proshlogo (The Question of National Form in the Architecture of the Past), Ars Georgica, III, 1950, pp. 191–200.

Samtavisi. The cruciform, domed church of Samtavisi is located about 19 mi. east of Gori. It was built in 1030 by Illarion Samtavneli (VI, PLS. 113, 114); the drum of the dome and the western wall were restored at the end of the 15th century. In the center of the eastern façade, in addition to the traditional niches and series of arches, there is a composition consisting of a large ornamented cross, the carved cornice of the main window, and ornamental squares below the window. The interior of the church has remains of mural paintings of the 17th century.

BIBLIOG. N. P. Severov, Pamyatniki gruzinskogo zodchestva (Monuments of Georgian Architecture), Moscow, 1947, p. 178; S. V. Sukhumi (anc. Dioskourias; Gr., Διοσχουριάς). This seaport on the Black Sea was founded by the Greeks in the 6th century B.C. under the name of Dioskourias; in the first centuries of our era it was the Roman fortress town of Sebastopolis. In medieval times Sukhumi (referred to as Tskhumi in Georgian chronicles) was part of the Georgian kingdom. From the mid-15th to the early 19th century it was under Turkish rule. In 1810 it was incorporated into Russia. During the Soviet period Sukhumi has become one of the most beautiful southern seashore towns.

BIBLIOG. A. N. Kalandadze, Arkheologicheskie pamyatniki Sukhumskoi gori (Archaeological Monuments of Sukhumi's Hill), Sukhumi, 1953.

Trialeti. A group of archaeological monuments (from the late Paleolithic and Aëneolithic periods to the early medieval period) were found south of the Trialeti ridge. The numerous grave objects found in the barrows date from the early and the middle Bronze Age (mid-2d cent. B.C.); they include painted pottery and some remarkable works in precious metals (a gold goblet inset with precious stones and filigree, silver goblets, and a little silver bucket with incised decoration).

Tsromi (Zromi). The church of Tsromi is located about 6 mi. west of the village of Kareli. It is the earliest (626–34/35) example of a Georgian church in which the dome rests on four freestanding piers (VI, PL. 113, FIG. 141). On the eastern façade are two deep, triangular niches, a motif that later became widely used in Georgian architecture. There are remains of mural paintings (10th cent.) in the apse. Fragments of a 7th-century mosaic from the half dome of the apse of the church are now in the Georgian National Museum of Art, Tbilisi.

BIBLIOG. G. Tschubinaschwili, Georgische Baukunst, II, Tbilisi, 1934; Ya. I. Smirnov, Tsromskaya mozaika (The Mosaic of Tsromi), Tbilisi, 1935.

Udzharma. Located 23 mi. northwest of Tbilisi, this ancient town was founded in the 3d–4th century; in the 5th and 6th centuries it was one of the most important centers of eastern Georgia, but declined in the 9th century. It was surrounded by massive defensive walls of dressed stone. The town's citadel consists of the upper fortress (with a two-storied palace and the Basilica of Dzhvar Patiosani, 5th cent.) and the lower fortress surrounded by massive walls with nine towers.

BIBLIOG. D. Muskhelishvili, Gorod Udzharma: Avtoreferat (Udzharma: Account), Tbilisi, 1956.

Uplistsikhe. This cave town on the left bank of the Kura River is about 6 mi. east of Gori. Georgian chronicles mention the fortress in the 1st century B.C.; in the 10th and 11th centuries it was one of the most important towns of Georgia; in the 13th century it was devastated by the Mongols. Uplistsikhe consists of groups of buildings of various periods hollowed out of the rock. Streets, a square, and an underground tunnel leading to the river have survived. Among the earliest constructions are the chamber with a caisson vault; the church on the square and other edifices were built in the 10th–11th century.

BIBLIOG. N. Tschubinaschwili, Uplis Tsikhe, Tbilisi, 1961.

Vardzia. The 12th-century cave monastery is situated in a gorge of the Kura River, about 19 mi. south of the village of Aspindze. Hundreds of caves, hollowed out of a steep tufa cliff (for a distance of ca. 2,950 ft.), are distributed in tiers and connected by passages. There are many cave dwellings and cells, caves of large proportions with high vaults and open terraces, and crypts and cisterns. In the center of the monastery, in a small square, is a freestanding bell tower; the main church of the single-hall type, with a barrel vault, pilasters, and supporting arches, is hewn out of the cliff; the interior has frescoes with portraits of King George III and Queen Tamara. Vardzia has been preserved as a museum zone since 1938.

ARMENIA (Armenian S.S.R.). *Historical and artistic periods. a. Antiquity.* The earliest architectural monuments in the Armenian Soviet Socialist Republic are the megalithic constructions of the Neolithic period on the slopes of Mt. Ararat. The end of the 3d millennium (the Aëneolithic period) is the date assigned to the settlement in Shengavit and also to the oldest artistic finds — stone and clay statuettes of women and animals and pottery covered with geometric designs. From the Bronze and the early Iron Age there are elaborate geometric, plant, and animal motifs executed on stone and objects of bone, clay, and metal (a gold cup with chased figures of lions from Kirovakan; massive figures of oxen, deer, and birds of cast metal; models of war chariots; bronze belts with engraved cult and genre scenes; various objects of adornment; and stone idols). Pottery with painted and incised ornamentation appears to have been widely diffused. From the 9th through the 6th century B.C. date the city-states of Urartu (q.v.), which had fortified citadels with palaces, temples, and domestic buildings (PLS. 257, 258). Artistic finds of the Urartian period include wall paintings uncovered in Arinberd, statuettes, and metalwork (PL. 259). Urartian art exerted substantial influence on the formation of Achaemenid art (see IRANIAN PRE-SASSANIAN ART CULTURES).

From the 6th to the 4th century B.C. the Armenian nation was formed, and from the 4th to the 2d century B.C. the Armenian kingdom. Towns (e.g., Armavir, Artashat, Tigranocerta), fortresses (e.g., Garni), and cult and secular buildings (temples, palaces, theaters, etc.) were constructed. Town building, architecture, and the representational arts from the end of the 1st millennium B.C. through the first centuries of our era, which basically reflect local traditions, give evidence of the influence of the Hellenistic world. A unique example of early Armenian art is the mosaic floor of the baths in Garni (3d cent.), with a subject drawn from Greek mythology. Sculpture, stone carving, toreutics, glyptics, and various applied arts were developed. The production of artistic glass began, and coins with the portraits of Armenian kings were struck.

b. Medieval and modern periods. The emergence of feudalism (3d–4th cent.) and the conversion of the Armenians to Christianity (301) fostered a new stage in the development of Armenian artistic culture. Dvin, the Armenian capital from the 4th to the 9th century, soon became a center of crafts and the caravan trade. In the 4th and 5th centuries the predominant type of religious edifice was the basilica without side aisles or with two side aisles, such as those remaining in ruins in Kasak, Ereruk (I, PL. 426, FIG. 719), and Dvin. From these descended the characteristic types of later churches: the central-plan, cruciform church with a dome supported by freestanding piers; the vaulted basilica; the domed hall church and triapsidal churches (see I, cols. 717–724). Beginning in the mid-6th century domed churches predominated.

The 7th century was the classical period in Armenian architecture. The basic model was the cruciform plan with a dome resting on four squinches, and this type was elaborated by enlarging the space under the dome, by adopting corner chambers and rectangular external walls, and by surrounding the inner rectangular space with an ambulatory. Secular building is represented by palace complexes (the patriarch's palace in Zvart'nots). Works of memorial architecture consist of arched and pierced monuments, steles, and freestanding columns with stone crosses (I, PL. 435). In the reliefs adorning the buildings, new motifs appeared (representations of the builders at Zvart'nots, crosses, and medallions with representations of saints at Ptghni). Churches were decorated with wall paintings (fragments at Lmbat, Aruch, and T'alin have survived). One of the earliest illuminated manuscripts was the Echmiadzin Gospel (6th cent.; see I, col. 726, for the more probable date of 989).

During the period of Arab dominion (end of 7th cent.) building activity slowed down and revived only with the rise of the independent Armenian kingdoms (9th cent.), when it developed greatly (10th–11th cent.). Numerous fortified centers of the feudal princes grew up (Aght'amar, Lori-Berd, Amberd) and monasteries were built (Marmashen; Sanahin, I, PL. 434; Tat'ew, I, PL. 425). The major center was the capital of the Bagratid kingdom, Ani, where, from the second half of the 10th century, numerous palaces, churches (the Cathedral, 989–1001, I, PLS. 433, 434, FIG. 719, designed by the architect Trdat, and the Church of Gagik, 1001–10, also by Trdat), inns, bridges, and houses were built. Carving in stone became more lavish and varied. Subject and ornamental reliefs covered the walls of the church at Aght'amar (915–21, I, PL. 435), the churches at Ani (I, PL. 435), and the vertical *khatchk'ars* (tombstones); carved portraits of church elders and founders are to be found in churches at Ptghni, Haghbat (I, PL. 428), and Sanahin. An example of sculpture in the round is the statue of King Gagik from Ani. The interiors of churches were embellished with wall paintings (at Tat'ew, Aght'amar, Sanahin, etc.). From the 10th to the 11th century date the highly decorative miniatures of the Gospel of Queen Mlk'e (902, I, PL. 431), the Echmiadzin Gospel (989), and the Gospel of 1038 (I, PLS. 429, 430). The making of carpets, textiles, arms, and pottery was well developed.

Blocked for a while by the conquest of the Seljuk Turks, the development of Armenian artistic culture began again from the end of the 12th century. In architecture the new stage was characterized by a reduced scale of buildings and by rich and graceful embellishment. Building was carried on in towns and monasteries (at Agarcin and Sanahin, I, PL. 434, and at Gegard); castles, bridges, and caravansaries were also constructed. An important center of Armenian culture from the end of the 11th century was the Armenian state of Cilicia. Architecture (the capital Sis, the fort of Lambron, the seaport Aias, etc.) and miniature painting developed, based on Armenian traditions. The Cilician school of miniature painting flourished in the 13th century, especially in the work of T'oros Roslin and his followers.

In the 14th century the Mongol dominion and the invasions of Tamerlane and nomadic Middle Asian tribes hindered the economic development of Armenia. Architecture suffered a grave decline, but representational art continued to develop. Wall paintings of the 14th century have survived at Akhpat, Dadi, and other places. Great virtuosity and delicacy in workmanship were achieved in carving in stone. From manuscripts of the 13th, 14th, and later centuries it is possible to identify various schools of painting. One of the most important ones, in the region of Lake Van, is distinguished by its graphic style (artist Tserun and others). Printed books (from 1512) gradually ousted handwritten books, but as late as the 17th century miniature artists were found who had a very personal touch (Akop Dzugaetsi). In the 17th century architecture showed new signs of life, but did not achieve its former high level (the Church of St. George at Mugni, the bell tower of the Cathedral at Echmiadzin). Monumental painting was replaced in the 17th and 18th centuries by decorative wall painting in churches and houses. In the 18th century the Ovnatanian family of artists did the wall paintings in the Cathedral at Echmiadzin. The Biblical scenes in these frescoes testify to the artists' familiarity with Western art.

After the union of Armenia with Russia (1828) many cities, such as Erevan, Alexandropolis, and Kars, were rebuilt, incorporating new ideas about town planning and new architectural principles. From the first quarter of the 19th century Armenian art began to develop along realistic lines and to assimilate the achievements of Russian and European art. The first artists of this new period were the painters A. Ovnatanian (1809–1881/84) and S. Nersisian (1815–84). They were followed by G. Bashinjagian (1857–1925; landscape painting), V. Sureniants (1860–1921; historical and genre paintings drawn from Armenian and Iranian life), and E. Tatevosian (1870–1936; influenced by impressionism). The work of the portrait painter S. Agajanian (1863–1940), the painter M. Sarian (b. 1880), and the sculptors A. Ter-Marukian (1871–1919) and A. Gurjian (1881–1948) commenced at the beginning of the 20th century.

c. The Soviet period. Towns were rebuilt, and many domestic and public buildings — including Houses of Soviets, cultural centers, clubs, schools, and medical buildings — were erected. A town-planning undertaking of major importance was the rebuilding of the capital, Erevan. The reconstruction (1924) was based on a town plan by the architect A. I. Tamanian (1878–1936). The architecture from 1920 to about 1935 reflected the traditions both of neoclassicism and of Armenian architecture, as well as elements of constructivism. In the postwar period town planning was carried out on a large scale. Genre and landscape painting and portraiture were the most highly developed of the pictorial arts. The painter M. Sarian occupies an outstanding place in Armenian art. Other painters include G. Gurjian (b. 1892), S. Arakelian (1884–1943), M. Abegian (b. 1909), M. Aslamazian (b. 1907), and O. Zardarian (b. 1918). A highly personal approach marks the work of A. Kojoian (1883–1959) in the graphic arts. In sculpture, the emphasis was on portrait busts, as exemplified in the work of A. Sarksian (b. 1902), A. Urartu (b. 1899), S. Stepanian (b. 1895), and N. Nikogosian (b. 1917). More recent artists (2d half of the 1940s) are the painters A. Galents (b. 1910) and G. Khanjian (b. 1926) and the sculptor G. Chubarian (b. 1923).

Art centers. Erevan (until 1936, Erivan). The capital of the Armenian S.S.R. (since 1920), the city was founded in 782 B.C. under the name of Erebuni by the Urartian king Argishtis I. The ruins of the earliest buildings include the citadel with a palace, a peristyle courtyard, temples, and numerous other buildings. In the Middle Ages it was a small town; from the second half of the 15th to the first third of the 19th century it belonged either to Iran or to Turkey. In the 19th and early 20th centuries it was a poorly maintained provincial town, built mostly of beaten clay. The medieval architectural monuments include the cruciform domed churches of Katogike (13th cent.) and Zoravar (17th cent.) and the arched bridge over the Razdan River (1679). The Mosque (now the Erevan Historical Mus.) dates from 1776.

During the Soviet period Erevan has changed completely in appearance. The first town plan (1924) served as the basis for succeeding plans (the latest of 1951 by N. Zargarian). Many new government buildings, hotels, banks, and theaters have been built.

Museums: Picture Gallery of Armenia (1921); the Matenadaran, an archive of ancient manuscripts and a research institute, with a collection of 10,000 Armenian manuscripts and about 700 in other languages that was begun in the 15th century (until 1939 it was kept at Echmiadzin); Erevan Historical Museum (1931); Literary and Artistic Museum of the Academy of Sciences of the Armenian S.S.R. (1921).

BIBLIOG. Yu. S. Yaralov, Erevan, Moscow, 1960 (Eng. trans., 1960).

Dvin. The medieval city, now in ruins, was located near the modern village of the same name. It was the capital of Armenia from about 330 to 893, when it was severely damaged in an earthquake; it was destroyed by the Mongols in 1236. Dvin consisted of a citadel, a settlement defended by walls of sun-dried bricks, and suburbs. Excavations have brought to light remains of the ruler's palace (4th–5th cent.); the palace of the catholicos (2d half of 5th cent.) with a columned hall; a single-aisled church (6th cent.); the cruciform, domed Cathedral of St. Gregory (7th cent., built over the ruins of a three-aisled basilica of the 3d cent.); remains of a mosaic floor) with an external surrounding gallery (5th cent.); a caravansary (6th cent.); and houses and workshops.

Echmiadzin (until 1945, Vagarshapat). The town, about 12 mi. from Erevan, was founded in the first half of the 2d century A.D. on the site of the settlement of Vardkesavan, already known in the 2d century B.C. From the second half of the 2d century to 387 it was the capital of Armenia. From the beginning of the 4th to the 12th century, and from 1441 to the present, it was the center of the Armenian-Gregorian Church and the residence of the catholicos. In the Middle Ages it had a chaotic layout of narrow streets. During the Soviet period the town has been improved and rebuilt. Medieval architectural monuments include the domed Cathedral with a central plan — the oldest Christian church in Armenia (303, rebuilt in the 5th and 7th cent. and later; bell tower, 1653–58; vestry, 1869) — and the Church of St. Hrip'simé (618), the finest examples of central-plan domed churches in medieval Armenia. The exterior of St. Hrip'simé is rectangular; the interior is cruciform in plan, with four axial apses and four diagonal three-quarter niches that give access to four corner chambers; the dome rests on a drum with 16 sides and is surmounted by a low faceted tent roof; the façades are divided by deep triangular recesses; above the porch (1653) rises a small bell tower (1790). The domed Basilica of St. Gajané (630) was restored in 1652 (I, PL. 427, FIG. 719). The Shogakat Church (1694) is of the domed hall type. The museum in the Cathedral vestry was founded in 1955.

B. Eremyan, Khram Ripsime (The Church of Hrip'simé), Erevan, 1955; V. M. Arutyunian, Echmiadzin, Moscow, 1958.

Ereruk Basilica. Near the village of Anipemz is the three-aisled church (I, PL. 426, FIG. 719) of the 5th century (perhaps later; see I, col. 717), which rested on a stylobate with six steps; the base of the stylobate measured ca. 98 by 130 ft. The roof was wooden. Four chapels at the corners were joined together on three sides by a gallery. Fragments of wall paintings have survived.

Garni (Gr., Γάρνι; Gornea). The ruins of a fortress near Erevan that probably existed in the 3d century B.C. (walls with rectangular towers built of basalt blocks). Within the fortress are the ruins of a classical temple (2d half of 1st cent. of our era, destroyed by earthquake in 1679), including a peristyle with Ionic columns and ornamental carving in stone; baths with a mosaic floor (2d–3d cent.); and a round, four-apsed, domed Christian church (6th cent.). Surrounding the fortress lie ruins of architectural monuments of the 4th–17th century.

Geghard (Airivank). The medieval monastery is situated in a gorge of the river Garni. Inside the walls are the cruciform, domed Astvatsatsin Church (1215), decorated with graceful carving and reliefs; a four-piered *djamatun* (1225–30), that is, a building for civic and religious functions (see I, col. 725); two domed churches hollowed out of the cliffs (the first with a stalactite dome resting on cross arches, the second with a cruciform plan and a burial chapel — both 1283, architect Galdzag); a four-piered burial vault (1288); and a series of small cells serving as chapels. Outside the monastery walls is the Church of St. Gregory (13th cent.), partly carved from the rocks.

BIBLIOG. N. M. Tokarski, Gegard, Moscow, 1948; A. Sainian, Garni i Gegard, Moscow, 1958.

Haghbat. A monastic complex (10th–13th cent.) is situated here, as well as the following churches: the Church of Nshan (967–91), a domed hall church with sculptured representations of church founders (I, PL. 428) and wall paintings (13th–14th cent.); the Church of St. Gregory (1005), a cruciform domed hall, rebuilt in 1211 when it was given a two-sloped roof; and the Astvatsatsin Church (12th–13th cent.), a small, domed edifice. There are two *djamatuns*: one, rebuilt in 1209, was supported by intersecting arches; the other, the Amazasp *djamatun*, was a very large four-piered building. Other structures are a library (3d quarter of 13th cent.), a large refectory (13th cent.), and a bell tower (1245). Numerous *khachk'ars* are located in the village.

Kasak Basilica. In the village of Aparan is the three-aisled, vaulted church (I, PL. 427) of the 4th century (perhaps later; see I, col. 717), which has a jutting horseshoe-shaped apse to the east and an addition to the northeast. Fragments of wall paintings survive. The chapel and vaulted hall attached to the basilica are probably from the 5th to 6th century.

BIBLIOG. A Sainian, Architecture of the Kasak Basilica, Erevan, 1955 (in Arm.).

Sanahin. A monastic complex near the village of Alaverdi. The churches, of the cruciform domed hall type, include the Astvatsatsin Church (ca. 934) and the Amenaprkich Church (957–62;

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

on the eastern façade, sculptured representations of church elders; inside, remains of wall paintings). Between the two churches is a vaulted gallery serving as a school (late 10th–early 11th cent.), with two vaulted *djamatuns* on the western side: a four-pillared one (1185) and a three-aisled one (1211). The bell tower is from the mid-13th century (ca. 75 ft. in height); the library (1063, I, PL. 434) has an octagonal dome; the round chapel of St. Gregory dates from about 1061. In the vicinity are various other buildings. A single-arched bridge (late 12th cent.) spans the Debet River.

BIBLIOG. K. Kefadarian, The Monastery of Sanahin and Its Inscriptions, Erevan, 1957 (in Arm.).

Shengavit. A settlement of the Aëneolithic period (end of 3d–1st half of 2d millennium B.C.) on the outskirts of Erevan. Excavations (1936–38 and 1958–59) have brought to light four cultural layers with the oldest architectural monuments of Armenia. An area of about 15 acres was enclosed by a defensive wall (ca. 13 ft. thick) of stone and clay. There was a secret passage to the river. The houses were either circular (beaten clay or sun-dried bricks set on a stone foundation), with conical roofs supported by central posts, or rectangular (of stone).

Teishebaini ("Fortress of the god Teisheba"; mod. Karmir Blur). This is one of the most important Urartian forts, situated near Erevan. It was founded in the 7th century B.C. and destroyed by the Scythians in the beginning of the 6th century B.C. Excavations (since 1939) have brought to light the citadel (FIG. 665) with a two-storied building consisting of about 150 rooms (some with wall paintings) and, adjoining the citadel to the west and south, a town with a very regular layout, defended on the east by a wall with towers.

Martirosian, Gorod Teishebaini (The City of Teishebaini), Erevan, 1961.

Zvart'nots ("Church of the Guardian Angels"). This round church near Echmiadzin was erected in 641–61 by Catholicos Nerses the Builder; it was destroyed in the 10th century and uncovered by excavations in 1901–07 (I, PL. 427). The interior plan was quatrefoil with a surrounding ambulatory. According to a reconstruction proposed by T. Toramanian in 1905, the church was a round, three-storied, domed building with a central plan; according to a reconstruction by Mnatsakanian (1959), its lower level had 32 facets. The church was decorated with ornamental and figural reliefs (including representations of the builders); inside were mosaics and wall paintings. It served as the prototype for a whole series of churches. Southwest of the church lie the ruins of the patriarch's palace.

AZERBAIJAN (Azerbaijan S.S.R.). *Historical and artistic periods.* Mesolithic menhirs, dolmens, and cromlechs exist in Azerbaijan. Cyclopean monuments were erected from the end of the 2d millennium B.C. At Sary-Tepe column bases (5th cent. B.C.) have come to light that are similar to those in the apadana at Suzakh. Dating from the 2d and 1st millenniums B.C. are the cliff representations of humans, animals, and hunt scenes (near Baku), stone and clay figurines of animals and birds, and pottery. Objects of bronze, iron, and glass have survived dating from the 1st millennium B.C. to the beginning to the Christian Era.

With the development of feudalism and the diffusion of Christianity ecclesiastical and defensive constructions were erected. The circular church in Lekit (5th–6th cent.), the basilica of Kum (6th cent.), the massive walls of the town of Kabala, and the fortification system of Derbent attest to the development of the art of building in stone and brick and to the adoption of domed and vaulted types of edifices. Judging from the two bronze griffins (which formed the legs of a throne) found in the village of Zagaly and the female stone statue from the village of Khinisli near Shemakha, the minor arts flourished and sculpture was practiced. The Arab conquest (7th cent.) affected the artistic culture and building. On the basis of earlier local traditions, new types of ecclesiastical and civic buildings were created: mosques, minarets, mausoleums, madrasahs, and caravansaries. From surviving monuments it is possible to identify various local architectural schools (10th cent. and notably 12th cent.) in the towns of Ganja (Gandzha) and Bailakan (sometimes combined into what is called the Arran school), in Shemakha and Baku (the Shirvan-Apsheron school), in Nakhichevan (the Nakhichevan school), later in Tabriz and Ardebil (the Tabriz school), and others. During the height of feudalism the characteristic features of Azerbaijan architecture were formed: domed and vaulted constructions, simplified ground plans and contours of buildings, fine workmanship lavished on details, and the use of geometric and plant ornamentation. The constructions in the south were made of baked brick and decorated with polychrome tiles; limestone was used in the north.

Buildings of the Nakhichevan school are the tower-mausoleums of Yūsuf ibn-Kusayyir (1162) and of Mu'mina Khātūn (1186) in Nakhichevan, by the architect 'Ajam ibn-Ab'ā Bakr, and the mausoleums erected by Nakhichevan architects in Barda (1322), Karabaglar (14th cent.), Salmas, and Khiov. The Shirvan-Apsheron school is represented by the Maiden's Tower in Baku (12th cent.?); the tower-castles in Mardakyan (circular one, 1232; rectangular one, 12th or 14th cent.), and in Nardaran (1301); the fortified construction known as Bailov Rocks in the Bay of Baku (13th cent.) with representations, chipped out of stone, of persons, animals, and fantastic creatures unique for Azerbaijan; the tomb of Dīri-Bābā at Maraz (1402); and the remarkable complex of the palace of the Shirvān Shahs in Baku (mainly from the 15th cent.). The famous Blue Mosque in Tabriz (PL. 67, FIG. 101) was built by the Tabriz school. In the early 16th century Azerbaijan became part of the Safavid empire. In architecture there was a growing taste for vast designs, such as the complex of Sheik Ṣafī at Ardebil of the 15th–17th century (VIII, PL. 160; XII, FIG. 621) and the Jāmi' Mosque at Ganja (1606). The Shirvan-Apsheron school is represented by the mosque in Nardaran (1663, Murad 'Alī) and the group of octagonal mausoleums (17th cent.) at the village of Kalakhan near Shemakha.

The Tabriz school of miniature painting (see MINIATURES AND ILLUMINATION; SAFAVID ART) flourished in the 14th–16th century. The illustrations to Rashīd al-Dīn's *Jāmi' at-Tavārikh* (X, PL. 90; XI, PL. 216) show strong Far Eastern influences, which had been introduced by Uigur craftsmen. The leading artist was Sulṭān Muḥammad (1470–1555), whose miniatures are distinguished by their dynamic composition, decorativeness, and realistic elements (VII, PL. 410). Artists who worked in Tabriz include Kamāl al-Dīn Bihzād and Mīr Sayyid 'Alī (qq.v.), Āqā Mīrak, Qāsim 'Alī, Muẓaffar 'Alī, Mīrzā 'Alī, and later Ṣādiqī-beg Afshār and the Muḥammads. Among the most famous works of this school are the illustrations to the *Khamsa* by Niẓāmī (II, PLS. 297–300). Metalwork and ceramics were highly developed. Carpets were exported to western Europe as early as the 15th century; the most highly prized carpets were from Tabriz and Shirvan (XIII, PLS. 421–425).

In the 18th century monumental architecture declined; only folk architecture maintained its former high level of achievement. Murals began to appear (palace of the Shekī Khans at Nukha), composed of compositions of floral motifs and sometimes with representations of birds, deer, and persons.

The incorporation of Azerbaijan into Russia in the 19th century was reflected in the country's artistic culture. Towns were built according to regular plans (Shemakha, 1824–69; Baku beginning in 1860) and new types of city dwellings were elaborated. In the figural arts growing stress was laid on realism: murals by Ustād Gambar Qarābāgh (1830s–1905), the work of Mīr Muhsin Navvād (1833–1918), and portraits by Mīrzā Qadym Irvānī (1825–75). The rise of realistic Azerbaijan art was closely allied to the revolutionary movements of the early 20th century and to the influence exerted by Russian art. The satirical graphic artist A. Azimzade (1880–1943) and the painter B. Kengerlī (1890–1922) played leading roles at this time.

In Soviet times art and architecture developed greatly. Cities, towns, and villages were reconstructed and improved. A blend of the principles of classical architecture and national elements was typical of the buildings erected in the 1930s by S. Dadashev (1905–46) and M. Useinov (b. 1905; Niẓāmī Museum in Baku, Azerbaijan pavilion at the All-Russian Agricultural Fair in Moscow, 1939). New industrial centers (Dashkesan, Sumgait, Mingechaur) were erected in the late 1940s, and in Baku many new buildings have arisen between 1940 and 1960.

Painting, sculpture, and the graphic arts have flourished. In 1920 the first art school (now the Azimzade Art School) was founded. The graphic arts are represented by the satirical cartoons, illustrations, and posters of A. Azimzade, G. Khalykov (b. 1898), R. Mustafaev (1910–40), G. Mustafaev (b. 1896), and I. Azhundov (b. 1907). The most important painters are M. Abdullaev (b. 1921), B. Mirzazade (b. 1921), S. Bakhlulzade (b. 1909), T. Tagiev (b. 1917), S.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Salamzade (b. 1908), N. Abdurakhmanov (b. 1925), T. Salakhov (b. 1928), T. Narimanbekov (b. 1930), and L. Feizullaev (b. 1918). Among the sculptors are F. Abdurakhmanov (b. 1915), D. Karyagda (b. 1914), T. Mamedov (b. 1927), and O. Eldarov (b. 1927).

Art centers. Baku. Baku, the capital of Azerbaijan, is on the Caspian Sea in the southern part of the Apsheron Peninsula. A settlement in this area was mentioned in the 7th century; in the 10th century Baku was referred to as a town; and in the 15th century it was a port and the residence of the Shirvān Shahs. In the old town, within the so-called "Īcherī-Shehīr fortress," which by the 17th century was surrounded by a double line of defensive walls (part of the inner one was restored in 1952–57), is the complex of the Shirvān Shahs (mainly of the 15th cent.). It consists of the two-storied palace; the remarkable Dīvān-khāna, an octagonal hall 23 ft. in diameter enclosed on five sides by a gallery with arcades, roofed by a high dome, and with a portal adorned with fine carving in stone and stalactites; the burial place of the Shirvān Shahs, with a door bearing rich carved ornamentation; a mosque with two cupolas and a minaret; and the Sayyid Yahyā Bakuwī mausoleum with a tent steeple. The minaret of Synyk-qalʿa dates from 1078/79. The Maiden's Tower (Kyz-kalasy, 12th cent.?) is a cylindrical construction (ca. 92 ft. high) with a massive protruding part extending almost to the top (a kind of buttress). In the Bay of Baku is the submerged fortified construction known as Bailov Rocks (Bailovskie kamni; 13th cent., architect Zayn al-dīn ibn-Abī Rashīd Shīrvānī). Systematic building outside the citadel walls was begun in 1810; the town developed rapidly in the late 19th century when the oil industry expanded.

During the Soviet period Baku has become one of the largest cities of the U.S.S.R. (the town plan was begun in 1923 by V. A. Vesnin and continued by A. P. Ivanitski, then by L. A. Ilyin). Constructions include worker's communities, residential districts, a series of large squares with monuments, public buildings, and parks.

Museums: Azerbaijan R. Mustafaev Museum of Art (founded 1936 as the successor of the Arts Sections of the Azerbaijan State Museum), arts of western Europe and Russia (15th–20th cent.), China, India, and Azerbaijan; Azerbaijan Niẓāmī Literary Museum (1945, originally founded in 1939 as the Niẓāmī Museum), paintings, graphic arts, sculpture, medieval miniatures, and minor arts (including carpets); Azerbaijan Historical Museum (1920).

Bailakan. This medieval town situated between the Kura and Araks rivers flourished in the 11th and 12th centuries and was destroyed in the 13th century. It was surrounded by a defensive brick wall (ca. 20 ft. thick). Excavations of the ruins (now known as Orenkala) have partly revealed residential districts, an artisans' district, a public bath, and other buildings.

BIBLIOG. L. Bretanitski, K izucheniyu gradostroitel'noi kul'tury srednevekovogo Azerbaidzhana XII–XV vv. Barda (Berdaa, Partav). This is one of the most ancient towns of the Caucasus. A mausoleum of 1322 (architect Aḥmad ibn-Ayyūb of Nakhichevan) has a cylindical brick tower (ca. 32 ft. in diameter) with two richly decorated doors and a facing of brick. There are remains of a second mausoleum (14th cent., probably by the same architect).

BIBLIOG. E. A. Pakhomov, Bashni-mazolei v Barde i ikh nadpisi (The Mausoleum-Towers of Barda and Their Inscriptions) (Trudy azerbaidzhanskogo filiala Akad. Bardy (Architecture of the Mausoleums of Barda), Arkhitektura Azerbaidzhana: Epokha Nizami, Moscow, Baku, 1947, pp. 245–55.

Djuga (Dzhuga). An important medieval commercial center, situated on the Araks River, destroyed in 1605. The two-tiered Mausoleum of Gulistān (early 13th cent.) has a tall square base above which is a twelve-sided tower decorated with geometric designs. There are ruins of Armenian medieval constructions (churches, caravansaries, and a cemetery).

Kabala (Kabalaka). In the early centuries of our era this ancient town was the capital of Caucasian Albania, and in the medieval period (until the 14th cent.) it was a town of considerable importance. Massive medieval fortress walls of brick on a stone foundation survive.

BIBLIOG. I. P. Shcheblykin, Ostatki krepostnykh sten Kabaly (The Remains of the Defensive Wall of Kabala), Doklady Akad. Nauk Azerbaidzhanskoi SSR, I, 2, 1945, pp. 90–94; I. P. Shcheblykin, Srednevekovye azerbaidzhanskie goroda Orenkala i Kabala (The Medieval Azerbaijan Cities Oren-kala and Kabala), Nizami, IV, Baku, 1947, pp. 222–31.

Karabaglar. This village, located about 25 mi. northwest of Nakhichevan, has a 14th-century mausoleum and a pair of minarets with remains of a connecting portal of the 12th century. The tower-mausoleum (ca. 33 ft. in diameter), of brick, is composed of 12 joined semicylinders whose surface is entirely covered with inscriptions on turquoise-colored bricks. Excavations (1939–40) have brought to light remains of a complex of buildings between the mausoleum and the minarets.

BIBLIOG. L. S. Bretanitski et al., Arkhitekturny kompleks v selenii Karabaglar (The Architectural Complex in the Village of Karabaglar), Arkhitektura Azerbaidzhana: Epokha Nizami, Moscow, Baku, 1947, pp. 256–76.

Kirovabad (until 1804 and in 1818–35 known as Ganja; in 1804–18 and 1835–1935 as Elizavetpol). Situated at the foot of the Little Caucasus Range, on the Ganjachai River, Kirovabad is the second most important industrial and cultural center of Azerbaijan. The city was founded in the 5th–6th century; in medieval times it was a center of crafts (carpets, ceramics, etc.) and of the Near Eastern caravan trade. It is the birthplace of the poet Niẓāmī (12th cent.). Architectural monuments of the 17th–18th century include the remains of the walls and towers of the fortress; bridges; the Jāmiʿ Mosque (1606), with a large domed hall (ca. 670 sq. ft., 42 ft. high); and domed houses. On the territory of the so-called "old Ganja" is the ecclesiastical complex of the Göj Imān (14th-17th cent.) faced with polychrome tiles. During the Soviet period Kirovabad has been reconstructed. There is a monument to Niẓāmī (1946, sculptor F. Abdurakhmanov, architects S. Dadashev and M. Useinov) and a mausoleum over Niẓāmī's tomb (1947, A. Sarkisov and I. Vakhutin).

BIBLIOG. L. Bretanitski and A. Salamzade, Kirovabad, Moscow, 1960 (bibliog.).

Mardakyan. The town is located on the north shore of the Apsheron Peninsula. A fortified settlement was built on the site of an older settlement. There are two tower-castles, one round (1232, ca. 65 ft. high) and one rectangular (14th cent. or, according to other data, 12th cent., 72 ft. high). The domed Mosque of Tūba-Shāhī

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

(1482, erected on the foundations of an earlier mosque) has an asymmetric façade.

BIBLIOG. L. G. Mamikonov, Restavratsiya pamyatnikov srednevekovoi arkhitektury Azerbaidzhana feodal'nykh zamkov v selenii Mardakyan (Restoration of the Monuments of Medieval Azerbaijan Architecture: The Feudal Castles in the Village of Mardakan), Trudy Azerbaidzhanskogo Politekhnicheskogo inst., II, 1956, pp. 97–110.

Nakhichevan. The city is the capital of the Nackhichevan Autonomous Soviet Socialist Republic (A.S.S.R.) and is one of the oldest towns in Azerbaijan. In the medieval period it was a major trading and crafts center. The Nakhichevan school of architecture, which occupies an important place in the history of Azerbaijan architecture of the 12th–14th century, originated here. Among the architectural monuments built by 'Ajam ibn-Ab'ā Bakr are the tower-mausoleums of Yūsuf ibn-Kusayyir (1162, octagonal; the façades have brick ornamentation laid in geometric patterns) and of Mu'mina Khātūn (1186, decagonal, with geometric ornamentation, stylized inscriptions, and plant designs; XII, FIG. 870). During the Soviet period housing developments and public buildings have been erected.

S. Bretanitski and A. V. Salamzade, Architectural Monuments of Azerbaijan, I: Monuments of the Nakhichevan ASSR, Baku, 1951 (in Azeri).

Nukha (anc. Sheki). The town, situated in the foothills of the Caucasus, was the capital of the Shekī khanate in the 18th century. The present town was built in the late 18th and the early 19th century; until 1772 it was situated at a lower point. The walls of the citadel (1790) remain. The two-storied palace of the Shekī Khans (built by Haydar 'Ali Zayn al-'Ābidīn) has carved decorations, ornamental window grilles, and interior murals of the 18th–19th century (including some by Ustād Gambar Qarābāgh). The house of the Shekī Khans has murals on the second floor. Caravansaries, baths, mosques, and numerous houses with aiwans and tiled roofs date from the 18th–19th century.

Abdul SALAMZADE, Mikael' USEINOV

KAZAKHSTAN (Kazakh S.S.R.). *Historical and artistic periods.* The oldest architectural monuments date from the 2d to 1st millennium B.C.: stone labyrinths, menhirs, and dolmens (the Begaza tumulus in central Kazakhstan) and numerous cliff representations of animals, people, and ritual scenes (Chulak Mountains, Tesiktas, etc.). Dating from the 15th to the 8th century B.C. are vessels with elaborate geometric ornamentation and anthropomorphic statuettes of stone and clay. In the middle of the 1st millennium B.C. the nomadic Saka tribes built communal edifices of beaten clay and wood (they also had portable dwellings) and adorned their garments, arms, and utensils with dynamic representations of fantastic and real wild animals. The 1st century B.C. is the date assigned to the Karagalinski treasure; one of the objects is a unique gold diadem decorated with openwork representations of dragons, birds, wild animals, and humans against a background of intertwining plants.

In the 6th-8th century of our era, in the steppe regions, stone sculptures of human figures, crudely executed but conveying individual traits, were widespread (see TURKIC ART). In the 6th–7th century large towns existed in the southern regions that were closely allied with the Central Asian cultural centers — Taraz (mod. Jambul), Otrar, Isfijab (mod. Sayram) — and Sogdian artisans produced terra-cotta statuettes and, from the 9th century, polychrome glazed vessels. In the 10th–12th century, under the Qarakhanids, the towns reached their greatest development. The layouts were typical of Central Asian towns: a citadel, the town proper (*shahristān*), and the buildings outside the walls (*rabad*). Baked brick was used as the building material (from the 9th cent.), and also for decorative effects; the buildings were faced with sculptured terra-cotta slabs. Examples of this style include the central-plan, domed mausoleums at Babaja-Khatyn (11th cent.) and Aisha-Bibi (12th cent.) near Jambul (Dzhambul). During the Mongol invasion, at the beginning of the 13th century, the towns were destroyed. Central-plan, domed mausoleums continued to be built, but now with more elaborate portals (*peshtak*) and faced with glazed ceramic slabs (mausoleums of Alasha-khan, Jechi, and Ayak-Khamyr and the mosque-mausoleum of Aḥmad Yasavī in Turkestan, all of the 13th–14th cent.). During the period of the Kazakh khanate (15th–17th cent.) the mausoleums of Kesene (in the Chelyabinsk region) and Shik-Niyaz (in the Kzyl-Orda region) were erected. In the 17th–18th century architecture suffered a decline; mausoleums were built in a simplified conical form and the walls were unadorned.

Toward the end of the 19th and the early 20th century, after Kazakhstan was incorporated into Russia, many new towns were built (Alma-Ata, Semipalatinsk, Petropavlovsk, etc.). In the traditional domed mausoleums new decorative elements appeared: sculptured and painted stone and wall paintings showing scenes of everyday life, cult vessels, and arms.

In the Soviet period the old towns underwent a transformation, and new towns and villages were created (Karaganda, Temir Tau, Balkhash, Dzhezkazgan, Leninogorsk). The public buildings combined the national architectural style and Kazakh decorative motifs.

The work of the Russian artist N. G. Khludov (1850–1935) had a great influence on the development of the figural arts. Among the artists of the older generation are the painters A. Kasteyev (b. 1904), A. Ismailov (b. 1913), A. M. Martova (1902–57), M. S. Lizogub (b. 1909), N. I. Kruzhilnikov (1896–1961), and A. M. Cherkasski (b. 1886). The artists of the younger generation include M. Kenbaev (b. 1925), S. Mambeyev (b. 1928), N. Nurmukhammedov (b. 1924), N. Tansykbaev (b. 1926), K. Telzhanov (b. 1927), K. Shayakhmetov (b. 1928), and S. Romanov (b. 1926), and in sculpture I. Itkind (b. 1873), Ya. K. Kuchis (b. 1895), and Kh. Naurzbaev (b. 1925).

Art centers. Alma-Ata (until 1921, Vernyi). The capital of Kazakhstan was founded in 1854 as a military outpost on the site of the medieval settlement of Almata and was built according to a strictly regular plan. In 1937 the first plan for rebuilding the town was drawn up and in 1948–50 the second one (D. Baragin, I. I. Belotserkovski, and L. K. Vertousov). In the first half of the 1930s buildings in the constructivist style were erected. Constructions from 1925–50 made use of classical and national traditions in their decoration. In recent buildings modern forms and constructions prevail. The Shevchenko Picture Gallery was founded in 1935. The ethnographical museum is housed in a wooden cathedral of the early 20th century.

BIBLIOG. D. B. Baragin and I. I. Belotserkovski, Alma-Ata, Moscow, 1950; M. M. Mendikulov, Arkhitektura goroda Alma-Aty (Architecture of the City of Alma-Ata), Alma-Ata, 1953.

Aisha-Bibi. The 12th-century mausoleum, located 11 mi. from Jambul, is a domed, square-plan building with brick walls, an entranceway with arched apertures, and niches faced with carved terra-cotta slabs with geometric and plant ornamentation.

BIBLIOG. A. Kh. Margulan et al., Arkhitektura Kazakhstana (Architecture of Kazakhstan), Alma-Ata, 1959.

Babaja-Khatyn. The 11th-century mausoleum, located 11 mi. from Jambul, is a monumental, square-plan, brick building with an octagonal dome. The façades are decorated with niches with large medallions and the main façade is distinguished from the others by the addition of a parapet.

BIBLIOG. A. Kh. Margulan et al., Arkhitektura Kazakhstana (Architecture of Kazakhstan), Alma-Ata, 1959.

Sayram (in the 7th–11th cent., Isfijab). This ancient town, situated about 7 mi. from Chimkent, has remains of the walls of the *shahristān* (covering an area of ca. 70 acres), and the far-flung *rabad* with a double ring of defensive walls. The basic layout is of two intersecting thoroughfares with four gates at the ends of the town. Constructions of the 10th–12th century are: the Jāmi' Mosque (rebuilt in the 19th cent.), the mausoleums of Ibrāhīm-atā and of Karachach-atā, and the Mosque of Idrīs Taigambar.

BIBLIOG. M. E. Masson, Stary Sairam (Old Sayram), Izvestiya sredneaziatskogo komiteta po delam muzeev i okhrany pamyatnikov stariny, iskusstva i prirody, 3, Tashkent, 1928.

Turkestan (until the 14th cent., Yasy). The town has been known since the 10th century. The large mosque-mausoleum of Aḥmad Yasavī dates from the late 14th century. All the rooms are inscribed within a rectangular plan; in the center is a portal flanked by massive pillars; the dome, drums, and walls are decorated with blue and white tiles. (See also TIMURID ART.)

Aina KUSURGASHEVA, Malbagar MENDIKULOV

TURKMENISTAN (Turkmen S.S.R.). *Historical and artistic periods.* Tribal art (4th–beginning of 1st millennium B.C.) is represented by finds of the "painted ceramic cultures" that were discovered in the foothills of the Kopet Dagh Mountains, in the Tedzhen (Tejend) oasis, and, later, in the Murghab (Murgab) oasis. In architecture an evolution is evident from the one-room houses of neolithic settlements to the large family, communal houses of sun-dried brick of the Aëneolithic period (the Geoksyur settlements, Anau I and II, Kara Tepe), which, in the Bronze Age, formed part of vast communities (Mamazga Tepe, Yasy Tepe, Altyn Tepe). Pottery developed from the neolithic handmade pots decorated with undulating or bracket ornamentation to the aëneolithic pottery richly painted in red-brown with cross, net, dash, and zoomorphic motifs to the refined clay vessels made on the wheel of the late Bronze Age. Elaborate terra-cotta statuettes of animals and mother goddesses were widespread.

After the territory of Turkmenistan was incorporated into the Achaemenid empire (6th–4th cent. B.C.), the large settlements were concentrated around the combined civic and religious complexes, which were monumental edifices of sun-dried brick. Under Alexander the Great and the Seleucid empire, Turkmenistan was included in the orbit of Hellenistic civilizations. The brilliant flowering of the ancient local culture occurred during the Parthian (Arsacid) era (ca. 250 B.C.-A.D. 226; see PARTHIAN ART). Town planning developed; the cities were fortified and divided into zones of palace-temple complexes, trading districts, main arteries, and civic and trading squares, as at Merv, Nysa (Nisa), and the Chilburj fortress. Parthian architecture is characterized by its massive grandeur, subtle proportions, buildings in which the elements of classical orders were adapted to local forms, and synthesis of sculptural and coloristic elements (the typical red, white, and black range of colors). Often the walls had two stories of different colors, divided into sections by engaged columns between which there were sometimes niches with statues. The blending of local and Hellenistic traditions was reflected in works of Parthian figural art: clay and marble statues, objects of silver and ivory (in particular, the remarkable rhytons decorated with representations in high relief), and terra-cotta statuettes.

During the 4th and 5th centuries public life and creative activity declined but in the 6th and 7th centuries there was a renewed upsurge of artistic culture. Life was transferred from towns to rural districts where majestic feudal castles with keeps were built, made of sun-dried brick and *pakhsa* (beaten clay), and with massive bases and "grooved" walls. Christian monasteries and churches were erected, as well as Zoroastrian fire temples and necropolises with ossuaries. The temple of Kei-Marzuban at Merv (perhaps a Buddhist temple), which was adorned with sculptural and painted representations, is known from written descriptions.

Interrupted in the mid-7th century by the Arab conquest, feudal culture developed again in the 9th century and continued until the early 13th century, especially under the Seljuks (see SELJUK ART) and the Khwarizm (q.v.) shahs. The growth of towns caused crafts and trade to flourish and fostered an upsurge in building activity. The use of baked bricks was widespread, and ornamental effects were obtained with patterned brickwork, carved bricks, and incised (carved) stucco. The walls were decorated with murals. In the 12th century colored tiles appeared. Powerful town walls flanked by semicircular towers and surrounded by moats were constructed. In the towns and suburbs well-arranged two-storied houses with a cruciform, central-plan, domed hall or internal courtyard (the Merv oasis) were erected. With the spread of Islam rich mosques of the closed-courtyard type were erected (at Dandankan, 10th–11th cent.; at Misrian, early 13th cent.), as well as the semiopen type (at Talkhatan, ca. 1096; at Nysa, 12th cent.). Next to the mosques rose slender minarets (at Misrian, 1102 and early 13th cent.). Along the caravan routes large caravansaries were built with four-aiwan courtyards and impressive entrance portals. The mausoleums were built on a central plan, with a pointed and pryamidal dome; the most outstanding examples are preserved at Merv, Urgench, and Serakhs. Two major architectural schools stand out: that of Khwarizm and that of Khorasan.

The crafts were highly developed and famous — textiles, glassware, metalwork, and superb ceramics richly ornamented, incised, and glazed, with geometric, plant, epigraphic, and figural motifs (human figures, animals, and birds).

The Mongol invasion (1219–21) paralyzed the development of the artistic culture for almost a century. In the 14th century, during the period when Urgench flourished, mausoleums, mosques, and other edifices were built there, characterized by elaborate compositions and sumptuous multicolored tile and mosaic facings (Tyurabek-khānym Mausoleum). Ceramic vessels began to be produced with rich polychrome or impressed ornamentation of plant and, infrequently, zoomorphic motifs and inscriptions; splendid carpets were made to whose beauty Marco Polo testified.

In the 15th century only isolated monumental constructions were built in southern Turkmenistan. The decline of urban culture lasted from the 16th century to the 1880s. A high level was preserved in the applied arts connected with the nomadic way of life — the weaving of patterned cloth and, especially, of artistic carpets that varied from tribe to tribe (the Salur, Tekke, Beshir, and Yomud ranked as the finest). The strict patterns based on octagonal shapes (tribal symbols of the sun), lavish borders, intense red tones, and the elegant compositions characterize the consummate perfection of the Turkmenian carpets. After the incorporation of Turkmenistan into Russia (2d half of 19th cent.), the towns of Ashkhabad, Mary, and Chardzhvu were constructed according to principles of Russian town planning.

During the Soviet period colossal projects of rehabilitation of old towns and construction of new ones were carried out. Ashkhabad was almost completely rebuilt after the earthquake of 1948. Architecture, after using motifs of medieval Turkmenian architecture (ogee arches and ornately patterned walls and ceilings) and turning to the classical heritage, arrived at a sober use of modern forms and construction techniques.

Painting and graphic arts developed. In 1920 an art studio was founded in Ashkhabad (later the Udarnaya School of Eastern Art, which existed until 1925) in which local artists, including the leading Turkmenian artist B. Nūr 'Alī (b. 1900), received their training. In the second half of the 1930s the Ashkhabad Art School (now the Rustaveli Art School) and the Museum of Figural Art were opened. During the 1930s an important role was played by the painters S. N. Beglyarov (1898–1950), I. I. Cherinko (1904–48), Yu. P. Daneshvar (1912–48), and E. M. Adamova (b. 1913). After World War II the following artists were active: Ya. Annanurov (b. 1916), N. Dovodov (b. 1921), A. Khadzhiev (b. 1924), Kh. Allaberdyev (b. 1920), G. F. Babikov (b. 1911), and N. Khodzhamukhamedov (b. 1927). In the 1950s and early 1960s an important place was occupied by artists who had completed their training in Moscow and Leningrad: A. Kuliev (b. 1918), G. Ya. Brusentsov (b. 1927), A. Amangeldyev (b. 1932), and especially I. Klychev (b. 1923).

Art centers. Ashkhabad. The capital (since 1924) of the Turkmenian S.S.R., Ashkhabad was founded in 1881 as a military outpost

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

on the site of a medieval village. It became a town of some importance when the Transcaspian railroad was constructed, and has developed greatly in the Soviet period, especially after the 1948 earthquake.

Museums: Historical Museum (1926), archaeological collections; an ethnographical museum (1899), carpets and other minor arts, archaeological material; Museum of Figural Art (1938), rare carpets, Turkmenian, Russian, and European art.

Near Ashkhabad are a number of important archaeological monuments. At the tells of Anau excavations have uncovered ancient agricultural settlements (4th–1st millennium B.C.) with remains of houses of sun-dried brick, pottery, and terra-cotta statuettes; in the vicinity is a medieval fortified town with ruins of a majestic mosque (1456). In the desert of Kara Kum are the ruins of Nysa (see VIII, col. 281), the main Parthian city from about 250 B.C. to the 3rd century of our era and one of the major towns of Khwarizm in medieval times. The remains include the Parthian town surrounded by walls with numerous towers (New Nysa), the adjacent suburb, and the royal Mikhrdatkirt fort (Old Nysa). Excavations conducted over many years have uncovered remains of Parthian buildings (temples, palaces, and storehouses), an archive of Parthian documents, marble and clay sculptures, highly artistic objects of metal and ivory (rhytons and turned furniture), and medieval ceramics and glass.

Merv. This huge complex of ruins on the right bank of the Murghab River is now a state museum. It includes: the ancient nucleus of Erk Kale (1st millennium B.C.); the classical town of Antioch of Margiana (Gyaur Kale), which flourished in the Parthian period (XII, FIG. 676); the medieval town of Sultan Kale with suburbs (9th–early 13th cent.), and the Timurid town of Abdullakhan Kale and Bairamalikhan Kale (from the 15th cent.). Soon after the founding of New Merv (1824, now Mary), the original Merv decayed. Remaining architectural monuments include the powerful defensive walls; houses with "grooving" (7th–10th cent.); the Mausoleum of Sultan Sanjar (mid-12th cent., built by Muḥammad ibn-'Azīz al-Sarakhsi) — a majestic, central-plan, domed edifice with a tall cubical base surmounted by an an arched gallery and crowned by a dome on a drum; the Mausoleum of Muḥammad ibn-Zaid (1112–13), which has preserved its elaborate courses of designed bricks; an odd building with two portals (15th cent.) near the graves of Buraidā and Ga'far; and the Mosque of Hājjī Yūsuf (16th cent.) with a vaulted aiwan. Excavations have uncovered houses, castles, a Christian monastery, a Buddhist stupa (3d cent.), Moslem religious buildings, and tradesmen's districts, in particular the district of the artisans who produced the glazed pottery.

Urgench. The ancient town of Urgench, on the left bank of the Amu Darya River, is near the modern village of Kunya Urgench. It was the largest town and capital (late 10th cent.–1221) of Khwarizm, and was situated on one of the main routes from eastern Europe to Central Asia. It flourished in the 10th–14th century; in the 17th century the inhabitants were transferred to New (Novo) Urgench (the present town of Urgench in the Uzbek S.S.R.) and the old town died out. Interesting architectural monuments are: the mausoleums of Fakhr ad-Dīn Rāzī (12th cent.) and of Tekesh (late 12th–early 13th cent.), with an original pyramidal dome; the minaret of Qutlugh-Tīmūr (1333; ca. 203 ft. high); the gates of a caravansary decorated with tiles (14th cent.); the Mausoleum of Najm ad-Dīn Kubrā (1320s) with splendid tile facings; the Mausoleum of the Urgench dynasty of the Sufs (1360s), known as the Tyurabek-khānym Mausoleum, with a complex distribution of space and a noteworthy mosaic ceiling in the dome of the main hall.

UZBEKISTAN (Uzbek S.S.R.). *Historical and artistic periods. a. Antiquity.* Rock paintings fom the Paleolithic and Neolithic periods exist in the Zaraut-Sai gorge (in the Surkhan-Darya district; expressive representations of hunt scenes and animals) and in the Khojikent and Bastandyk mountains (deer, wild oxen, and goats in contour). Traces of settlements and clan dwellings have survived in the Bukhara oasis and in Khwarizm dating from the Neolithic period. The pottery of this time had roughly impressed, incised, and sketched ornamentation. In the Bronze Age the stock-raising population made pottery with incised designs of triangles, zigzags, fir trees, and stripes; in the agricultural settlements of Fergana vessels were produced that were painted red and black and had triangular, rhomboid, and net-and-dash ornamentation.

In the 4th century B.C. Alexander the Great found large fortified towns in Bactria and Sogdiana (e.g., Marakanda, mod. Samarkand). The houses were decorated with representations from themes of local tales. From the 3d century B.C. to the 3d century of our era an artistic culture with most original features was formed; in the southern regions Hellenistic and, later, Indian connections are clearly evident. Town planning was well developed. A regular, right-angled plan, massive walls, and fortified gates are peculiar to a whole group of ancient towns in Khwarizm (Dzhanbas Kale, see VIII, col. 1004; Ayaz Kale, see VIII, col. 1005; Toprakkala with a huge palace of the rulers of Khwarizm, see VIII, cols. 1006–07, PL. 389) and in Tokharistan (Dalverzin Tepe and Karabag Tepe). During this period numerous town fortifications, houses, palaces, and temples were built. Walls were made of large sun-dried bricks and beaten clay; beamed roofs and colonnades were in use and, later, arches and vaults of sun-dried brick. After Buddhism penetrated to the southern districts of Uzbekistan in the first centuries of our era Buddhist stupas and monasteries were erected; remains survive at Termez and Airtam.

A synthesis of the arts was one of the outstanding stylistic features of the ancient artistic culture of Uzbekistan. Painted clay statues of royal personages, divinities, warriors, and grotesque creatures that adorned an eight-room house (beginning of our era) excavated at Khalchayan (southern Uzbekistan) are individualized and probably most of them were portraits. In the south the sculpture of the first centuries of our era shows perceptible connections with the school of Gandhara (q.v., the frieze from Airtam, 1st–2d cent.). The statues from the palace of Toprakkala (3d cent.) in Khwarizm are diverse in subject and monumental in style, but they evince a certain aridity in execution (VIII, PLS. 386–388). The wall paintings from this palace are distinguished by vigorous lines, a broad range of colors, and diversity of themes (court ladies and youths, a female harpist, a tiger among rushes, VIII, PL. 390). The decorative minor arts are represented by Bactrian toreutics (cups with portrayals of a winged goddess, amazons), statuettes from Bactria, Khwarizm, and especially Sogdiana (mostly representations of local goddesses), and ceramics (sometimes with compositions executed in relief).

b. Medieval and modern periods. In the 6th–7th century the main form of architecture was the severe, fortified, feudal keep-castle — a massive, two-storied edifice of sun-dried brick or beaten clay with a steep socle and smooth or "grooved" walls (Teshik Kale in Khwarizm, see VIII, col. 1008; Ak Tepe near Tashkent). Palace and cult buildings were erected, decorated with paintings, sculptures, and carvings. The wall paintings in the castle of Balalyk Tepe depict a banquet (see XIII, col. 132); those in the palace of Varakhsha show a fight between a warrior and two wild beasts and a procession of animals. The style of the wall paintings is refined, the compositions are either majestic or full of dynamic force, the figures are types, and the manner of painting is flat. Decorative elements stand out especially clearly in the stucco decoration at Varakhsha, in which many different ornamental motifs are combined with the main compositions. In sculpture expressive figures, mainly of males (Sogdian and Turkic horsemen, local gods), were created.

In the 9th–13th century town life developed and flourished. The scale of building increased; baked brick and mortar of plaster were used, the vaulting technique was perfected, and embellishment grew richer. Ruins of the most outstanding monuments of civil

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

architecture have survived: the feudal estate at Kyrk-kyz (9th cent.), rulers' palace (11th–12th cent.) at Termez, and caravansary of Ribaṭ-i-Malik (11th cent.) near Bukhara, which combined "grooved" walls with a portal entrance (*peshtak*). With the establishment of Islam many mosques were erected, which were the principal ideological and social centers of towns and villages. A typical town mosque of the 12th century is that of Maghāk-i 'Aṭṭārī (closed in appearance, pierced, with an elegant façade) and a typical suburban mosque is that of Namāzgāh (1119, with an ornate mihrab wall and an open arched gallery), both in Bukhara. A definite type of minaret evolved, with a circular plan and a tall, tapering tower subdivided by horizontal ornamental bands (minaret in Termez, 1032; Kalyān minaret in Bukhara, 1127; and minaret at Vabkent, 1196–98); sometimes the stem of the minaret was grooved (in Jar Kurgan, 1108). The theme of the glory that was to redound to the feudal overlords after their death was reflected in impressive mausoleums organized around a central plan, a dome, and, later, a portal. Geometric designs predominated in architectural ornamentation; widespread use was made of Arab epigraphy; plant motifs were not used much. In the minor arts (metalwork, ceramics), along with geometric plaited designs and inscriptions, an important role was played by zoomorphic and plant motifs; magnificent polychrome glazed ceramics were created by various local schools (e.g., the Samarkand type, XII, PLS. 383–386).

In the 14th–15th century, after the destructive consequences of the Mongol invasions were overcome, artistic culture flourished again. In monumental architecture, whose proportions were especially grandiose under Tīmūr Lenk (Tamerlane) and Ulugh-Beg, various types of buildings were perfected: mausoleums and mosques with a rectangular court and four liwans (Bībī Khānum Madrasah in Samarkand) and madrasahs built on a central plan with a monumental entrance and a liwan (madrasahs of Ulugh-Beg in Bukhara, Samarkand, PL. 68, and Gizhduvan). Mausoleums progressed from the single-domed type with a portal (Gūr-i-Mīr in Samarkand, PL. 68, FIG. 99; Shāh-i-Zind tombs in Samarkand, PLS. 69–70), or two-chambered ones (mausoleums of Saīf ad-Dīn Bākharzī and of Bayān Kūlī Khan in Bukhara) to more complex ones (mausoleums of Aq Saray and of Ishrat Khan in Samarkand). Bold vaulting and dome systems were worked out. Embellishment consisted of carving in stone and wood, polychrome majolica and mosaics, and wall paintings with a gold background (see also TIMURID ART).

The greatest achievement in architecture of the 14th–17th century was the creation of large architectural complexes: the Rigistan (XII, FIG. 121) and Shāh-i-Zind (PLS. 69, 70) in Samarkand and the Pā-i Kalyān, Chār-Bakr, and Lab-i Khauz in Bukkara. After a period of decline in the late 18th and the early 19th century architectural activity commenced in Khiva, Bukhara, and the towns of the Kokand khanate. Characteristic features of folk architecture were the small inner courtyards with airy liwans supported by columns; the houses were decorated with carving in wood and plaster and with paintings on ceilings and walls.

The polychrome ceramics of the 14th century gave way in the 15th–16th century (under the influence of Chinese porcelain) to monochrome painting in blue on a white background or in black on light blue. The names of numerous miniatures artists who worked in Samarkand in the 15th century are known: 'Abd-al-Hājj, Aḥmad Bāgh-i Shamālī, Shihāb ad-Dīn 'Abdullāh, and Zahīr ad-Dīn Azhar. In the 16th and 17th centuries miniature painting developed along the lines of a single school connected with the artistic traditions of Timurid Herat, but it presented traits of an original style: lucid compositions, a rich but restrained color scheme, and scenes with few figures. The leading artists of this school were Maḥmūd Muzāhib, 'Abdullāh, Muḥammad-Chagry Muḥāsin, and especially Muḥammad Murād of Samarkand, who illustrated a *Shāh-nāma* of 1556 for the prince of Khiva (Tashkent, Inst. of Oriental Studies). In the 17th century some major artists worked in Bukhara and Samarkand — Hājjī-Geda'i, Hājjī-Muqīm, Āvāz-Muḥammad, the anonymous illustrator of the *Shāh-nāma* of 1628, and others — but the exodus of the masters to other countries had already begun. The Fergana manuscript of the works of Navā'ī (1824) and the miniatures of Aḥmad Kalle (2d half of 19th cent.) testify to the fact that this art had grown stereotyped. In the 18th–19th century the crafts were developed: various schools of ceramics (the Rishtan one was especially outstanding); chasing on copper and sewing in gold thread (arts for which Bukhara was famous); embroidery; and handwoven and printed cloth.

With the incorporation of Turkistan into Russia (2d half of 19th cent.) the newest principles of town planning were adopted (in Tashkent, Namangan, Fergana, Samarkand, etc.). Some Russian artists related their art to Turkistan: V. V. Vereshchagin (1842–1903), N. N. Karazin (1842–1908), and I. S. Kazakov (1873–1935).

c. The Soviet period. Town building was undertaken on a vast scale. The development of architecture in the 1920s and 1930s was within the context of contructivism and functionalism, yet used the local architectural heritage. In the postwar years the revival of the local heritage has manifested itself in the use of ogive arches, liwans supported by columns, and rich ornamental carving.

Easel painting, graphic art, and, later, sculpture developed. In 1918 the Samarkand Art School was opened and in 1919 the Regional Turkistan Art School in Tashkent (now the Benkov Art School). Artists who had been working in Uzbekistan before the Revolution (I. S. Kazakov; L. L. Bure; A. V. Isupov, 1889–1957) engaged in teaching activities. In the 1920s, along with realistic tendencies existing in book and poster graphic art (L. L. Bure, 1887–1943; V. L. Rozhdestvenski, 1897–1949), stylization, decorativism, and primitivism also prevailed. Working in the 1930s and 1940s were the realist painters P. P. Benkov (1879–1949), N. V. Kashina (b. 1896), Z. M. Kovalevskaya (b. 1902), O. K. Tatevosyan (b. 1889), and B. Khamdani (1910–43) and the graphic artists V. E. Kaidalov (b. 1907), S. A. Malt (b. 1900), and M. V. Reikh (b. 1904). Among the leading younger artists are painters U. Tansykbaev (b. 1904), N. G. Karakhan (b. 1900), V. Eremyan (b. 1897), and R. Timurov (b. 1912) and the portrait painters N. V. Kashina, L. Abdullaev (b. 1912), A. Abdullaev (b. 1918), V. A. Fadeyev (b. 1912), R. Akhmedov (b. 1924), and T. Oganesov (b. 1922). Themes of history and modern life are employed by M. A. Arinin (b. 1897), V. I. Ufimtsev (b. 1899), M. Saidov (b. 1923), V. Inogamov (b. 1919), and V. N. Zhmakin (b. 1928). Working in the field of landscape painting are the young artists V. A. Volkov (b. 1928), A. A. Krivonos (b. 1930), and G. I. Ulko (b. 1925). In sculpture the work of A. N. Ivanov (b. 1905), G. G. Massonts (b. 1904), O. S. Korzhinskaya (b. 1900), P. P. Chelyshev (b. 1917), and N. E. Feodoridis (b. 1924) is noteworthy. The traditional forms of the minor arts are being developed. Carving in plaster, stone, and wood are used for large public buildings. The blending of professional and folk art is especially fecund in textiles.

Art centers. Tashkent. The capital of the Uzbek S.S.R. is situated in the valley of the Chirchik River. It was mentioned in Chinese annals in the 2d century B.C. under the name of Yuni; in the Middle Ages it was a major feudal town (until the 11th cent. under the name of Shash or Chach). The mausoleums in the former cemetery of Shaikhān-taur, including the Yūnus Khan Mausoleum, date from the 15th century. The Kukeltash Madrasah was built in the 1560s. The Barāk Khan Madrasah (1st half of 16th cent.) includes two mausoleums, one of them the burial of the Shaybanids of Tashkent (1531).

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

The Kaffāl Shāshī Mausoleum (1541) was built by Ghulam-Ḥusayn. After the union with Russia (1865) the new town was constructed next to the old feudal town with its chaotic layout. During the Soviet period both parts of the city have fused and their layout has been radically transformed. The Museum of Art of the Uzbek S.S.R. was founded in 1918; there is also a Fine Arts Museum.

Bukhara. The city is situated in the valley of the Zeravshan River, on the banks of the Shakhrud Canal. The settlement on the site of Bukhara dates from the beginning of our era. A town (named Numijket) began to develop in the 6th–7th century; in the 9th–10th century Bukhara was the capital of the Samanids, in the 11th–12th century of the Qarakhanids, in the second half of the 16th century of the Shaybanids, and in the 17th century of the Astrakhanids. From the end of the 18th century to 1920 it was the capital of the emirs of the Manqyt dynasty. During the Soviet period many houses, schools, and public buildings have been constructed.

The many fine architectural monuments give the city the aspect of a "museum." The *arg* (citadel) is the nucleus of the feudal town and was constructed over many centuries. The mausoleum of Ismā'īl the Samanid (early 10th cent.) is a square, central-plan, domed building with patterned brickwork on the exterior and interior walls (XII, PLS. 381, 382, FIG. 676). The Maghāk-i 'Aṭṭārī Mosque was built in the 12th century (rebuilt in the 16th cent.). The Pā-i Kalyān architectural complex consists of the Kalyān minaret (1127), Kalyān Mosque (1514), and the Mīr-i 'Arāb Madrasah (1535–36). The Ulugh-Beg Madrasah (1417) was built by Ismā'īl ibn-Ṭāhir ibn-Maḥmūd al-Isfahānī. The 'Abd al-'Azīz Khan Madrasah dates from 1652. The Kösh Madrasah consists of the Mādar-i Khan Madrasah (1566–67) and the 'Abdullāh Khan Madrasah (1588–90). The Lab-i Khauz (16th and 17th cent.) consists of the Kukeltash Madrasah, the Nādir Dīvān-Beg Madrasah and Khankah, and a large reservoir. The Bālā-i Khauz is made up of a mosque (1712) and a minaret (1917, built by Ustād Shirīn Murādov). Other mausoleums are that of Chashma-i Ayyūb (14th cent.), of Bayān Kūlī Khan (14th cent.), and of Saif ad-Dīn Bākharzī (13th–15th cent.). Balyand Mosque (16th cent.) has a picturesque interior. Buildings of the 16th century include the Zayn ad-Dīn Khankah (1st half of 16th cent.), the Faizābād Khankah (1598–99), and some domed commercial buildings. The Chār-Minār Madrasah dates from 1707. In the environs are the Namāzgāh Mosque (1119, with a 16th-cent. gallery) and the Chār-Bakr complex (16th cent.). The Historico-Ethnographical Museum of Bukhara was founded in 1927.

Bukhara, plan of the Islamic city. Principal monuments: (1) Mausoleum of Ismā'īl the Samanid; (2) 'Abdullāh Khan Madrasah; (3) Mādar-i Khan Madrasah; (4) Bālā-i Khauz Mosque; (5) *arg* (citadel and Historico-Ethnographical Mus.). Inset: Detailed map of the market district: (6) Kalyān Mosque; (7) Mīr-i 'Arāb Madrasah; (8) Ṭaq-i Zargarān Bazaar; (9) Ulugh-Beg Madrasah; (10) 'Abd al-'Azīz Khan Madrasah; (11) Tim-i 'Abd al-'Alī Khan; (12) Ṭāq-i Tilpak-Furushān Bazaar; (13) Kukeltash Madrasah; (14) complex of Khudāyadād; (15) Jūybār-i Kalyān Madrasah. (16–26) Fortified gates: (16) Karakul; (17) Shirgarān; (18) Tālipach; (19) Uglan; (20) of the Imām; (21) of Samarkand; (22) of the Mazār (Cemetery); (23) of Karshin; (24) Ṣalla Khan; (25) Namāzgāh; (26) of Sheikh Jalāl.

Khiva. The town is situated on the left bank of the Amu Darya River. According to archaeological evidence it existed in the 6th–8th century; first mentioned as a town of medieval Khwarizm in the 10th century, it became an important center from the second half of the 16th century when the Khiva khans made it their capital. Building activity was especially intensive in the 18th and 19th centuries. Interesting architectural monuments include: the Īchan-Kala — the old feudal town surrounded by walls, containing the citadel Kunya-arg (12th–19th cent.) and other buildings such as the Mausoleum of Sayyid 'Alā ad-Dīn (14th cent.) with a magnificent majolica tombstone; the Jāmi' Mosque with numerous carved wooden columns (11th–late 18th cent.) and a minaret (late 18th cent.); the Mausoleum of Pahlavān Maḥmūd (1835) with a portal and dome, faced with blue and white tiles; and the Tash Khaulī Palace (1832–41). There are numerous madrasahs, including those of Qatlī Murād Īnak (1809), of 'Arab Muḥammad Khan (1838), and of Muḥammad Amīn Khan (1845–55). Noteworthy are the minarets of Sayyid-Beg (1842), of Kuk-Minār (1852–53), and of Pahlavān Kārī (1905). The Museum of History and the Revolution includes ancient artifacts and folk art.

Samarkand (anc. Maracanda). One of the oldest towns of the U.S.S.R., situated in the valley of the Zeravshan River, it was referred to by Greek authors in the 4th century B.C. under the name of Maracanda. The capital of Sogdiana, later a very important medieval center, Samarkand was destroyed in 1220 by the Mongols. It developed again in the 14th century, and flourished from the late 14th to the first half of the 15th century when it was the capital of Tīmūr and then of Ulugh-Beg; in the early 16th century it was the capital of the Shaybanids. In 1868 it was incorporated into Russia; from 1871, alongside the old town with its narrow winding streets and one-and two-storied houses of beaten clay with flat roofs, a new Samarkand with a regular and radial layout was built.

Samarkand, plan of the Islamic city with monumental complexes of the Timurid and Safavid periods. (*a–e*) Fortified gates: (*a*) Khayrābād; (*b*) Āhanī; (*c*) Firūzā; (*d*) of Sūzangarān; (*e*) of Kūrizkūh; (*f*) remains of the Bībī Khānum Madrasah; (*g*) to the necropolis of Shāh-i-Zind; (*h*) the Rigistan; (*i*) Gūr-i-Mīr Mausoleum.

Excavations have brought to light a paleolithic site in the center of Samarkand. In the ruins of Afrasiyab (on the northern side of Samarkand) the remains of the palace of the Samanids (10th cent.) with rich carved plasterwork and of the Qarakhanid Mausoleum with incised facings of terra cotta have been uncovered. Architectural monuments of the 14th–17th century include: the grandiose Bībī Khānum Madrasah (1398–1405); the Timurid mausoleums of Gūr-i-Mīr (1405, PL. 68, FIG. 99), polygonal in shape, bearing a massive fluted dome on a high drum and with interior "gold-woven" embellishments (wall paintings, an onyx panel, etc.), of Ishrat Khan (1464), and of Aq Saray (1470s) with an original spacious vaulted interior and wall paintings; and the Shāh-i-Zind neocropolis (14th–15th cent., PLS. 69, 70), with carved polychrome terra cotta, majolica, and mosaic decoration. The Rigistan ensemble (XII, FIG. 621) consists of three enormous madrasahs: that of Ulugh-Beg (1417–20, PL. 68), of Shīr Dār (1619–36), and of Ṭila Kārī (ca. 1646–60), all with monumental decorated façades. Near Samarkand are the remains of Ulugh-Beg's observatory (1424–29). The Museum of the Cultural and Artistic History of the Uzbek S.S.R., founded in 1896, has an extremely rich collection of Samarkand antiquities and articles of the minor arts.

Shakhrisyabz (Shahr-i Sabz). This town arose in the 13th–14th century under the name of Kesh; it flourished in the 14th–15th century. Surviving from this period are the portal decorated with dazzling polychrome facings of Tīmūr's huge palace, the Aq Saray; buildings of the Dār al-Sa'ādat complex, including the stately Hazrat-i Imām Mausoleum (part of the Timurid tombs) with a pyramidal dome; and buildings of the Dorut-Tilāvat complex, consisting of the mosques of Kök-gümbez and of Gumbaz-i Sayyidār.

Termez (anc. Tarmita; Antiochia Tharmata; Tibetan, Tar-mi-ta; Chin., Ta-man, Ta-mo, Ta-mi, Tu-mi; Ar., Tirmid). The town is situated on the right bank of the Amu Darya River. Near the present town lies the huge ruin of ancient Termez, founded by the Greco-Bactrian king Demetrios (2d cent. B.C.) and enlarged in antiquity and the Middle Ages. Among the remains are the defensive walls; a Buddhist cave monastery of the first centuries of our era; the fortified Kyrk-kyz country estate (9th cent.); the rulers' palace (11th–12th cent.) with a reception hall of state whose walls were decorated with lavish carving in plaster; a nine-piered mosque (11th cent.); the cult complex of Hakīmī-al-Tirmizī with remains of superb plaster carving (11th cent.) and a tombstone carved in white marble (15th cent.); and the complex of mausoleums of the Sayyid Sulṭān-Sa'ādat (11th–17th cent.). The Surkhan-Darya Ethnographical Museum, founded in 1933, contains a large collection of local antiquities and figural arts.

Varakhsha (in Arabic geographies Afrakhshah, Barakhshah, Farakhshah, Warakhshah and also Dakhfandūn). The ruined town, covering an area of about 250 acres, is situated about 25 mi. from Bukhara. Archaeological excavations were begun in 1937 and continued in 1947-53. Founded in ancient times, the town flourished in the 7th–8th century and declined in the 11th century. The excavations have exposed the citadel with "grooved" walls and a palace of sun-dried brick of the 7th–9th century. The palace is decorated with wall paintings and stucco in low and high relief (geometric and plant ornamentation, deer, hunt scenes, and fantastic landscapes); see XIII, cols. 131–32.

Galina PUGACHENKOVA

TADZHIKISTAN (Tadzhik S.S.R.). *Historical and artistic periods.* Rock paintings, mainly of mountain goats, remain from the Neolithic period. Remains have been found of a Bactrian dwelling complex (7th–5th cent. B.C.) in the south. In the Kobadian district gold and silver objects belonging to the Amu Darya hoard were discovered: vessels, figurines of people and animals, and jewelry (5th–2d cent. B.C.). On the lower Vakhsh and Kafirnigan rivers are ruins of towns dating from the late Bactrian and Kushan periods (2d cent. B.C.–3d cent. of our era); the streets are laid out at right angles and the towns are surrounded by walls of sun-dried brick or stone with square towers (see BACTRIAN ART; KUSHAN ART). Hellenistic stone column bases and capitals have been uncovered as well as polished pottery (on a red background), terra cotta, silver coins, and objects of gold and bronze.

In the early medieval period a series of independent feudal dominions (Sogdiana, Usrushan, Khuttal) existed. In the 7th–8th century towns flourished and along the caravan routes isolated castles and fortifications were erected (e.g., Mug, see XIII, col. 125), whose ruins have survived. Building material was clay and sun-dried bricks; in the mountains, stone. Roofs were vaulted or flat and beamed. The appearance of an early medieval town is shown by the excavations of ancient Pyandzhikent (see SOGDIANA): within the town walls were large residential blocks with closely connected buildings of two or three stories with vaulted rooms, square four-piered halls of state, and porticoes; public buildings and workshops were distributed among the domestic buildings. Around the town square were temples of the local religion with a four-piered square hall open to the east and a porticoed façade (XIII, FIG. 130). Secular and cult buildings were adorned with wall paintings representing battle and cult scenes, banquets, and epic subjects, sculpture in the round, bas-reliefs of clay and wood (including wooden caryatids), and painted and carved ornamentation in wood and clay, mostly with a plant motif (XIII, PLS. 83–90). Outside the town walls were two-storied suburban estates and a necropolis with vaulted burial chambers (*nausi*) where small ornamented clay coffins (*astodani*) containing bones were stored. In the valley of the Vakhsh the ruins of an 8th-century Buddhist sanctuary with remains of sculpture have been discovered. Terra-cotta figurines of animals, sacred images with representations of divinities in bas-relief, masks on clay objects, coins with portraits of rulers and heraldic zoomorphic motifs, seals, jewelry, unglazed pottery, and glass objects have been found. In Sogdiana patterned silks were produced and, to judge from the wall paintings, toreutics. After the Arab invasion (1st quarter of 8th cent.) the introduction of Islam disrupted the development of the figural arts.

The period of the formation of the Tadzhik nationality (9th–10th cent.) coincided with the flourishing of the Samanid dynasty (see SAMANID ART). During these and the following centuries the Tadzhiks, who were widely distributed throughout the valley of the Zeravshan River, made a great contribution to the development of Central Asian art, notably in Bukhara and Samarkand (in architecture, miniatures, and the minor arts). Unique archaeological monuments of carved wood (columns, consoles, friezes, and mihrabs) with plant and zoomorphic decoration have survived in the valley of the Zeravshan. Baked brick was employed for the patterned brickwork characteristic of ensuing centuries; for the embellishment of buildings, molded and designed brick (Aq-Astān Mausoleum, 2d half of 10th–early 11th cent.; the two Khwāja Nakhshirān mausoleums, 2d half of 11th-13th cent.) and incised terra cotta began to be used. Stuccowork was also adopted (interior of the palace at Khulbuk, 11th cent.). Incised terra cotta persisted until the 14th century; at the same time a glazed embellishment began to appear on façades (portal of the Muḥammad Bāshsharā Mosque-Mausoleum near Pyandzhikent, 1343). The minor arts included glazed ceramics (widespread in the 8th–9th cent.), thin-walled gray clay vessels with relief ornamentation (11th–13th cent.), and glass (a cup with horses in relief from Khulbuk, 11th cent.). Remaining from the 15th and 16th centuries are parts of the cathedral-mosques in Ura Tyube and in the village of Navgulem (Fergana) of the characteristic Central Asian type: with a tall portal, a domed hall, and wings in the form of domed galleries; on the façades are glazed decorations. In the 18th century Tadzhikistan became part of the khanate of Bukhara and suffered an economic decline, which affected monumental building.

The folk architecture preserved the old traditions. In Gorny Badakhshan, until the 20th century, the type of large, patriarchal family dwelling was preserved: a square dwelling with bunks placed high along the walls, lit by an aperture in the beamed dome (similar to ones in the Hindu Kush and in Transcaucasia), and decorated with carved doors and column bases and sometimes with primitive wall paintings with ornamental and figural motifs. The typical house in the Fergana valley was symmetrical in plan with rooms on both sides of the entrance hall, a tall portico on the façade, and with latticed shutters that could be raised; it was adorned with handsome polychrome wall paintings (ornamentation on the ceilings, bushes and bouquets on the walls) and carved stucco and wood (plant and geometric designs). The minor arts had a decorative character: silk and cotton textiles, white cotton with red and black patterns, embroideries, patterned woolen stockings, chased copper, jewelry, and polychrome glazed or unglazed pottery with molded and painted ornamentation (see also SIBERIAN CULTURES).

During the Soviet period the old settlements have been enlarged and new towns and villages have been built. The architectural decoration follows the national traditions.

Painting and graphic arts have developed, particularly in the 1950s and the early 1960s. Leading artists include painters M. Khoshmukhamedov (b. 1912), I. Abdurakhmanov (v. 1923), A. Ashurov (b. 1904), D. Ilyabaev (b. 1924), Kh. Khushvakhtov (b. 1926), N. A. Matasov (b. 1919), and A. M. Ponomarev (b. 1917); graphic artists M. A. Krasnopolski (b. 1916) and B. I. Serebryanski (b. 1920); and sculptors A. Ganiev (b. 1927) and K. Zakirov (b. 1920).

Articles), Stalinabad, 1960; V. L. Voronina, Kariatidy v arkhitekture Srednei Azii (Caryatids in the Architecture of Central Asia), Trudy XXV mezndunarodny kongress vostokovedov (Moscow, 1960), III, Moscow, 1963, pp. 117–24.

Art centers. Dushambe (from 1929–61, Stalinabad). The capital (from 1924) of the Tadzhik S.S.R. is situated in the foothills of the Hissar Mountains along the Dushambinka River. It was a small village until the 1930s, when it was transformed into a well-planned, richly verdant city with four-storied houses, parks, an artificial lake, a stadium, and public buildings. A broad throughfare runs the length of the city; Moscow Square, one of the many fine squares, has notable fountains. The Museum of History, Ethnography, and the Figural Arts was founded in 1934, the Andreyev Museum of Archaeology and Ethnography, forming part of the Aḥmad Donish Historical Institute, in 1949, and the Folk Art Center in 1935.

BIBLIOG. D. A. Chumichev, Stalinabad, Moscow, 1950.

Khulbuk. The former center of the medieval Khuttal district is now in ruins. Excavations have brought to light the citadel with remains of a palace. The patterned brick floor paving and remains of stucco ornamentation have survived.

BIBLIOG. B. A. Litvinski, Predvaritel'ny otchët o rabote khuttal'skogo otryada (Preliminary Report on the Work of the Khuttal Expedition), Doklady Akad. nauk Tadzhikskoi SSR, XI, 1954, pp. 53–60.

Leninabad (until 1936, Khojend Khodzhent). This northern town on the Syr Darya River was founded by Alexander the Great in the 4th century B.C. under the name of Alexandreia Eschate (Outer Alexandria); in the Middle Ages it was a large trading center. There are remains of the beaten-clay walls and the citadel of the 18th century. The Mausoleum of Sheikh Muṣliḥ ad-Dīn (14th cent.), of baked brick, has a portal and dome; inside is a carved wooden funerary monument. A cathedral-mosque with a spacious hall and a large covered terrace (1912–13) now houses the Museum of History and Ethnography. During the Soviet period the town has been modernized.

Pyandzhikent. On the southern side of this town lie the ruins of ancient Pyandzhikent (5th–8th cent.), which was the center of a district of the same name on the middle Zeravshan River. The irregular polygon formed by the town wall enclosed the town and the citadel; excavations (since 1947) have brought to light the citadel on a hill, remains of houses and of temples (XIII, FIG. 130), suburban estates, and a necropolis (see XIII, cols. 128–130). The buildings contain remarkable wall paintings and sculpture (XIII, PLS. 83–90). The Rudaki Museum in the modern city was founded in 1958.

About 20 mi. to the east, in the village of Mazar-i-Sharif, is the Muḥammad Bāshsharā Mosque-Mausoleum (1343; the eastern part may be earlier), of baked brick, with a portal richly adorned with carved terra cotta and terra-cotta and majolica panels.

BIBLIOG. Trudy Sogdiisko-Tadzhikskoi arkheologicheskoi ekspeditsii (Transactions of the Sogdiana-Tadjikistan Archaeological Expedition) (MIA, I, 15), Moscow, 1951; A. Yu. Sayat. In this village in southern Tadzhikistan two brick, domed mausoleums called Khwāja Mashkhad (11th–12th cent.), joined by the ogive arch of a portal, have survived. It is possible that they formed part of a complex that has not been preserved.

Ura Tyube. This town in the north was presumably the ancient Kyropolis (founded by Cyrus) and the medieval Bundzhikat, the main town of the Usrushan principality. There are remains of early medieval town walls of beaten clay. The Khāk Gumbaz Cathedral-Mosque (16th cent.) has a domed hall and remains of glazed adornment on its façade. The Bābā Tagā Mosque-Mausoleum is from the 16th century. During the Soviet period modern houses and industrial and public buildings have been erected.

KIRGHIZIA (Kirghiz S.S.R.). *Historical and artistic periods.* The oldest artistic monuments belong to the Bronze Age (3d–middle of 1st millennium B.C.): numerous rock pictures (figures of animals, hunt scenes, cult dances, scenes of everyday life, etc.) in the Saimaly-Tash gorge, funerary statues (*balbal* images), figurines of humans and animals made of bone, clay, and metal, and items of jewelry. In the 2d millennium B.C. painted ceramics began to be widespread among the settled agricultural population of southern Kirghizia; pottery of the 4th–1st century B.C. has especially rich ornamentation. Dating from the 5th to the 3d century B.C. are numerous bronze objects related to the cult of fire (lamps, sacrificial altars, cauldrons with realistic representations of animals) of the nomadic Śaka tribes (Lake Issyk Kul).

In the 4th and the 5th century of our era cities were established along the caravan routes in Sogdiana (q.v.), whose inhabitants brought with them their characteristic art (terra-cotta statuettes, pottery, and reliefs on ossuaries) and their building techniques (see above, *Tadzhikistan*). During the period of the Turkic khanate (6th–8th cent.) the residences of Turkic khans arose along the Ili River in T'ien-shan. The 1953–54 and 1955–58 excavations of the ruins of Ak-Beshim have revealed remains of a castle of the 6th–7th century and two Buddhist temples of the 7th–8th century that bear a direct resemblance to the temples of eastern Turkistan and Pyandzhikent (see *Tadzhikistan*). In the 8th and the 9th centuries towns such as Ak-Beshim and Saryg were enlarged; the buildings were typical medieval Central Asian constructions made of *pakhsa* (beaten clay) and sun-dried brick. During the period of the Qarakhanids (10th–12th cent.) towns were established (Uzgen) and the basic architectural and building techniques were evolved. Noteworthy brick buildings appeared (minarets and mausoleums): the Buran tower-minaret south of Ak-Beshim (early 11th cent.); a minaret (11th cent.) and three mausoleums (11th–12th cent.) at Uzgen, demonstrating the development of the domed memorial building with a portal; and the Mausoleum of Shah Fāzil (13th cent.?) at Safid-Buland. The Kirghiz mausoleums are domed buildings with a portal, a square plan, and varied and rich embellishments (patterned brickwork, incised stucco and terra cotta).

The Mongol invasion in the beginning of the 13th century interrupted the economic and cultural development of Kirghizia. The large towns were destroyed and plundered and building was brought to a stop. Only the tradition of erecting mausoleums over graves (Manas Mausoleum, 14th cent.) survived.

The chief type of dwelling of the nomadic population was a felt tent over a wooden frame, adorned with long patterned strips of cloth and plaited mats (*chi*) at the entrance. The nomadic way of life was also the framework of reference for the artistic activity of the Kirghiz people (see SIBERIAN CULTURES).

From the second half of the 19th century, after Kirghizia was incorporated into Russia, intensive urbanization took place. In folk art, embroidery in silk and cotton thread on black velvet became widespread and, in the southern districts, on red and white cloth. The Dungan tribe executed original embroideries in colored silk depicting bizarre subjects, collars and pendants, and women's silver jewelry.

During the Soviet period new towns have been erected and old ones rebuilt. National motifs have been utilized in decorating the façades of private houses and public edifices, and in recent years much use has been made of painting and decorative sculpture in buildings (e.g., Theater of Opera and Ballet in Frunze, 1955).

An important role has been played in forming the style of Kirghiz figural art by the Russian artists V. V. Obraztsov (1891–1934) and especially S. A. Chuikov (b. 1902). In 1934 the Union of Artists was founded, and a regional art exhibit was organized with the participation of the Kirghiz artists G. Aitiev (b. 1912) and S. Akylbekov (b. 1914). The most important modern Kirghiz artists are: painters S. A. Chuikov, G. Aitiev, A. I. Ignatev (b. 1906), S. Akylbekov, D. Kozhakhmetov (b. 1921), and K. Kerimbekov (b. 1922); graphic artists L. A. Ilina (b. 1915), A. N. Mikhalev (b. 1910), and A. S. Ostashev (b. 1929); and sculptors O. M. Manuilova (b. 1893) and T. Sadykov (b. 1935).

Art centers. Frunze (until 1926, Pishpek). The capital of the Kirghiz S.S.R. was founded in 1862 on the site of a destroyed fortress

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

of the Kokand khanate. In 1872–73 a town plan with a network of streets at right angles and small public squares was drawn up; in 1939 the plan was revised and it was carried out between 1948 and 1958. The city has many mosques, churches, caravansaries, and houses of beaten clay and undressed stone. During the Soviet period large government and apartment buildings have been built, as well as cultural edifices (theaters, libraries, institutes) and the complex of the Academy of Sciences. The Kirghiz Museum of Figural Art (1935) contains Kirghiz, Russian, European, and Chinese art. The Historical Museum of the Kirghiz Academy of Sciences (1926) has a collection of Khirghiz folk art.

Ak-Beshim. The site of Ak-Beshim is located about 5 mi. southwest of Tokmak. Excavations have brought to light ruins of a *shahristān* (an area of ca. 88 acres) with a citadel and walls with defensive towers; remains of a castle of the 6th–7th century built of sun-dried brick with a foundation of *pakhsa*; and two Buddhist temples (late 7th–early 8th cent.). The temples are rectangular in plan, with a hall for worshippers, a cella, and a surrounding gallery (see XIII, col. 126); one of the temples has an open courtyard. In the temples are remains of wall paintings, sculptures, and terra-cotta bas-reliefs.

Zyablin, Vtoroi buddiiski khram Ak-Beshimskogo gorodishcha (The Second Buddhist Temple at the Site of Ak-Beshim), Frunze, 1961.

Buran. This tower-minaret of the early 11th century is located about 4 mi. south of Ak-Beshim and 11 mi. southwest of Tokmak. The columnar minaret is made of brick with ornamental bands of geometric designs. The interior staircase in covered by a semicircular vault.

BIBLIOG. A. N. Bernshtam, Bashnya Burana (The Tower of Buran), Frunze, 1946.

Manas Mausoleum. This 14th-century mausoleum is located on the upper Talas River. It was built as the tomb of Kjanizjak-khātūn, the daughter of Emir Abuk; according to legend it is considered to be the tomb of the legendary folk hero, Manas. The brick mausoleum with a portal and an inner ogee dome (ca. 23 ft. high) has a main façade faced with incised terra-cotta panels with the characteristic Kirghiz ornamentation.

BIBLIOG. M. E. Masson and G. A. Pugachenkova, Gumbez Manasa (The Manas Dome), Moscow, 1950.

Safid-Buland. The central-plan, domed Mausoleum of Shah Fāzil (13th cent.?) is near the town of Dazhalalabad. The interior has trimmings of carved stucco (on a colored background), with rich ornamentation.

BIBLIOG. A. N. Bernshtam, Arkhitekturnye pamyatniki Kirgizii (Architectural Monuments of Kirghizia), Moscow, Leningrad, 1950.

Uzgen. This is the ancient capital of the Qarakhanids. The architectural complex of the 11th–12th century includes a circular-plan minaret (late 11th cent.) with ornamental brickwork and three central-plan mausoleums whose façades form a single unit. The central façade (11th cent.) has a design of bricks against an incised stucco background; the "northern" (1152) and "southern" (1186) façades, with portals, are richly adorned with patterned brickwork and incised terra cotta (ornament and inscriptions).

Anna PRIBYTKOVA

THE AUTONOMOUS REPUBLICS OF SIBERIA. *Yakutia* (Yakutsk A.S.S.R.). The art of ancient Yakutia (see II, col. 13) is represented mainly by decorated pottery and colored rock drawings. The early neolithic pottery on the middle Lena River (near the city of Yakutsk) is covered with net imprints and has an incised line around the rim. Clay vessels from a settlement on the Kulata River, about 21 mi. south of Yakutsk, are decorated with a checkerboard mock-textile pattern. The same type of ornamentation appears on pottery of the late Neolithic period (from the site of Malaya-Munka near the town of Olekminsk). The vessels from this site also bear a small molded-knot motif. Later clay vessels (end of the Neolithic to beginning of the Bronze Age) are decorated at the rim with a band of zigzags and with superimposed dot marks.

The rock drawings are mostly of elk in contour, executed in a naïvely realistic manner (village of Churu, situated between Vitim and Yakutsk; Suruktaakh-Khaya cliff, in the valley of the Markha River).

In the Bronze Age, in addition to pottery and rock drawings, sculptures carved of bone and decorated metal objects made their appearance. The ornamentation on the pottery was essentially the same as in the earlier times (mock-textile patterns); in addition to a small trowel, a comb stamp was used for the geometric designs (settlement on the Kulata River).

A pictograph by the Sinyaya River represents elk, hunters with bows, large horned anthropomorphic figures, emblems, and what seem to be boats carrying people. In some pictographs (e.g., on the Suruktaakh-Khaya cliff) stylized people are shown holding objects resembling tree branches. Pictures that resemble domed dwellings are also found. Of interest among bone objects are the flat figurine of a person (from a tomb by the Kulata River), a fragment of a bone plaque with a carved zigzag design, and an ornamented horn plaque with a spur-shaped design found at a Bronze Age site in the territory of Yakutsk. Bronze spear tips (at the mouth of the Markha River, at Aldan) are decorated with parallel lines and zigzags.

The pottery of the Iron Age has geometric designs, made with a comb stamp, similar to those of the Bronze Age. Dot and cylindrical patterns occur frequently and, on the lower Lena, rectangles arranged in bands.

In rock drawings elk are depicted, with dogs nearby, but on the whole the pictographs in this period assumed a different character. The naïvely realistic drawings became more complex and schematized, resembling pictographic writing, which was probably their function. The signs include sticks, intersected circles, semicircles, angles, swastikas, and tridents; sometimes representations of men or animals are interspersed. The signs and figures form horizontal rows.

The art of the Yakuts in historical times shows a perpetuation of the culture inherited from the ancient tribes (see XII, cols. 28, 32–33). The minor arts are represented by various kinds of dress adornments and objects of leather, bone, fur, birch, bark, wood, and metal (XIII, PLS. 28, 29).

Tuva (Tuva A.S.S.R., formerly Tannu Tuva). Ornamentation on pottery of the Neolithic and Bronze ages consists of extremely simple geometric designs. The stone steles covered with incised representations, the so-called "deer stones" (*olēnnye kamni*), date from the 7th to the 3d century B.C. The figures include deer, wild boar, goats, and horses; weapons are also depicted on the steles. These figures of animals resemble those on the "deer stones" of Transbaikalia and Mongolia. Artifacts made of horn belong to the Scythian period (5th–4th cent. B.C.): carved plaques representing horses, antelopes, aurochs, and griffins executed in the typical Scythian "animal style" (see GRECO-BOSPORAN AND SCYTHIAN ART; STEPPE CULTURES). These objects, and others of gold, were found in barrows of the Pazyryk type at the juncture of the Tsagan Shibetu and Tannu Ola mountains, at the border of the depression of the Great Lakes of Mongolia. Also belonging to the same series of objects are bronze plaques shaped like animals and a bronze hook on which to hang a quiver, shaped like the head of a mountain goat. A series of rock representations, mostly of elk, deer, and wild camels, dates from the Scytho-Sarmatian period.

The most interesting archaeological remains of Hunnish art are the clay vessels decorated with horizontal and vertical bands, arches, and molded round "teats" or dots. The decoration on these vessels is similar to that of the Hunnish bronze cauldrons found in Mongolia. Wooden objects with carved and painted ornament also occur.

The artistic production of the ancient Turki (6th–9th cent.) includes stone sculptures (PLS. 217, 218), bronze and gold plaques (PLS. 291, 220), decorated birch bark, bone, and felt articles, and petroglyphs (see TURKIC ART). Works of sculpture similar to the stone statues of Altai and Mongolia have been found in many parts of Tuva, but mainly in the southwestern part, in the locality of Mongun-Taiga. Most of the sculptures represent men clothed and wearing headgear; from their belts, decorated with plaques, hang small purses, daggers, and swords. The sculptures were for the most part buried in the ground near the walls of quadrangular enclosures made of stone slabs. The figures are treated in a simplified way, and in many cases the proportions of the body are distorted; attention is given mostly to the face and the accessories. There are two schools of thought regarding the meaning of the sculptures: some scholars hold that they represent Turkic notables; others, that they portray powerful enemies defeated by the military leaders of the Central Asian tribes.

The Turkic petroglyphs of the 7th–8th century bear stylized, somewhat simplified figures mostly of animals, both wild and do-

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

mestic, infrequently of humans. Petroglyphs have been found in many regions, most frequently near Ovyura (in the valley of the Khadagaita and Mugur rivers).

Kirghiz goods of metal, such as bronze plaques richly decorated with plant and geometric ornamentation (in the Sut-khol district), date from the 9th–10th century; in many respects they resemble the objects of Kirghiz art found outside the borders of Tuva.

The figural art of the Tuvintsy varied in character according to their place of residence and occupation (see XIII, cols. 28, 34–35). In the steppe regions, among the stock-raising Tuvintsy, it was more highly developed and found expression in various forms; among the reindeer breeders and hunters inhabiting wooded regions, it was more modest and uniform and consisted of carved geometric designs on wood, quilted designs on felt rugs, and embroidery with reindeer hair on shaman costumes and headgear. Toys consisted mostly of contour figurines of animals cut from birch bark. Typical of the art of the stock-raising Tuvintsy are embossed leather articles and carved and painted wooden coffers, cupboards, and dishes. Wooden and stone sculpture of small dimensions was widely developed.

Buryat (Buryat-Mongolian A.S.S.R.). In 1928–36 archaeologists excavating settlements of the Paleolithic period came upon the first female statuettes carved of mammoth tusk ever to be found in Siberia: 20 statuettes were from Malta on the Belaya River (VIII, PL. 235) and one was from Buret in the valley of the Angara River. Most of the statuettes are in a realistic style; some of the figurines are shown wearing hooded dresses. The finds of Malta include birds made of bone, various objects of adornment, a bone plaque with three serpents, and a remarkably expressive representation of a mammoth engraved on bone.

Among the artifacts of the Neolithic period discovered around Lake Baikal the most interesting are the decorated pottery, objects of bone and stone, and colored rock drawings (see II, cols. 11–13). The pottery of the Isakovo culture (4th millennium B.C.) is ornamented with netlike impressions and sometimes bands of dots. On pots of the Serovo culture (3d millennium B.C.) the ornamentation is net-and-plait with square rhomboid cells, as well as geometric patterns applied with a comb stamp. Other motifs are half-moons, swastikas, zigzags, and horizontal cylindrical shapes. Stone fish of the Serovo culture have also been found. Still richer ornamentation decorates the pottery of the Kitoi culture (2d half of 3d–beginning of 2d millennium B.C.). During this period stamped patterns predominated: a triple zigzag with offshoots, horizontal parallel lines, vertical short ones, strips of arches or hexagons, and other geometric designs. Zoomorphic motifs (small snakes) also appeared. Objects of bone included sticks adorned with stripes and angles, daggers decorated with triangles, tubular needle cases with swastikas and small circles with a dot in the center, and representations of fish. Finds include a realistically portrayed head carved in marble.

Large numbers of rock drawings have been found along the Lena River, especially near the village of Shishkino. They consist mostly of outlined or silhouetted figures of elks, many in motion. At the end of the Neolithic period anthropomorphic figures with curved torsos and one leg appeared among the cliff drawings.

The Copper and Bronze ages are represented by the art of the Glazkovo culture. Geometric and mock-textile designs predominate in the ceramics. Of great interest are the bone anthropomorphic amulets shaped like single or paired figures (at Verkholensk and Novy Kachug) and the bone fish used as lures (XIII, PL. 21).

In rock drawings (the Shishkino cliffs) new subjects appeared: processions of boats with seated people, monsters, and human figures or anthropomorphic spirits in the orant pose. In Transbaikalia painted rock drawings are encountered in the valley of the Selenga River and its tributaries and on the western shore of Lake Baikal, along the Angara River. The drawings include small human figures, sometimes a row of people holding hands, flying birds, circles, and ovals and rectangles filled with dots; horses are occasionally depicted. The figures are in contour and are extremely simplified. These cliffs drawings are contemporaneous with the slab graves and resemble the cliff drawings in northern Mongolia.

To the Bronze Age (7th–3d cent. B.C.) belong the so-called "deer stones" left by early nomads and resembling the ones in Tuva and Mongolia.These monumental memorials were generally set up over the graves of wariors; on them are carved stylized representations of deer with outstretched muzzles resembling a bird's open beak, as well as bows, war axes, daggers, and mirrors.

In the 2d century B.C. the dominion of the Huns spread to the shores of Lake Baikal. In Transbaikalia (the southern districts of the Buryat-Mongolian A.S.S.R.) objects of the Hunnish period were found in a few tombs and ruined towns. The most interesting finds are bronze and gold plaques and buckles with figures of animals in relief: horses, yaks, birds of prey, wild goats, mythical birds, and serpents, mostly shown in motion and expressively portrayed.

The ornamentation on the pottery is extremely simple and geometric: undulating lines, zigzags, S-shaped spirals, vertical stripes, net motifs, and arches. Fantastic winged animals are depicted on bone articles. All these objects resemble finds from Noin-Ula (northern Mongolia), Ordos (q.v.), and some objects in the Siberian collection of Peter the Great at The Hermitage in Leningrad.

Of great interest are the cliff drawings, apparently done by the Kurykan Turks who inhabited western Baikalia in the 6th–10th century of our era; these drawings are especially numerous on the Shishkino cliffs. In contrast to the earlier cliff drawings, those of the Kurykans include numerous human figures, horses, and mounted riders; also shown are elk, deer, goats, camels, wolves, dogs, water birds, and various scenes such as a hunt and a nomadic migration. The animals are often portrayed in motion. The riders and the people on foot carry bows and arrows, lassos, spears, and banners. The Kurykan pottery is decorated with geometric and plant motifs.

During the excavation of the Mankhai ruins (in western Baikalia) stone slabs were found with representations of riders, armed with spears and bearing pennants, and of galloping wild goats, in a style similar to the rock drawings. Other slabs have curved plantlike designs; on the one hand, they resemble some of the designs found on Kurykan pottery and, on the other, the decoration on metal objects belonging to the era when the forebears of the Hungarians migrated from Lebadea to the Danube (9th cent. of our era).

The most widespread form of artistic activity among the Buryats in historical times was decorative applied art (see XIII, cols. 28–29, 33–34). Men made silver adornments, ornamental metal trimmings for harnesses and saddles, carved and painted woodenware, and carved toys. Women decorated clothing and items of felt and cloth, knitted patterned woolen stockings, embroidered tobacco pouches, and made cloth rugs with appliqué plaques and white shells.

From the 17th to the early 20th century painters and specialists in woodwork and metalwork made icons, statuettes of various personages in the Lamaist pantheon, furniture, and religious vessels for the Transbaikalian Lamaist monasteries and executed brightly colored paintings for the monastic buildings.

The ancient shaman boxes were decorated with drawings, sometimes in color, of persons and animals. Representations of the sun, the moon, humans, and animals were depicted on objects consecrated to the god Ongon. The shaman costumes were adorned with iron figurines representing animal spirits (XIII, PL. 2). Occasionally the Buryat made shaman masks (XIII, PL. 26). See also SHAMANISM.

UNION OF SOVIET SOCIALIST REPUBLICS: MODERN MOVEMENTS. The history of art of the peoples of the U.S.S.R. is very complex owing to the multiplicity of ethnic cultures that make up the country. Various areas of artistic activity achieved a measure of unity in the course of an extended period of development, but not until the economic and political unification of the country (18th–19th cent.) did the peoples of the present-day Soviet Union evolve a common basis in art.

The originality of the art of the peoples of the U.S.S.R. in the early stages of its development was due largely to their strategic position at the crossroads of the cultural currents flowing between western European and Asian centers; while this art was considerably influenced by Eastern traditions, it nevertheless remained part of European civilization. However, the fact that the Russian state shed the structure of feudalism much later than most European countries explains the tenacity of medieval concepts in art, which persisted up to the 18th century. Meanwhile, beginning in the 17th century and throughout the 18th, Russia was avidly absorbing European ideas and transmitting them to the other nationalities of the U.S.S.R. During the 18th and 19th centuries Russian art underwent stylistic changes that paralleled those of western European art, but its own peculiar historical evolution caused some significant departures from the general direction taken by European art. The baroque and classical styles in Russia were not followed by a surge of romanticism (q.v.), as was the case in France and Germany, nor was there a particularly strong impressionist movement. However, critical realism developed more vigorously in Russia than anywhere else; for when the U.S.S.R. began to build a socialist society after the 1917 Revolution, it laid the cultural foundations for an artistic evolution that took a radically different turn from that of 20th-century western Europe and America.

SUMMARY. The 18th century (col. 569). The 19th century (col. 573): *The birth of realism; The Itinerants (Society for Traveling Art Exhibitions)*. The 20th century (col. 578): *Before the Revolution; The Soviet period and socialist realism; Developments since 1945.*

THE 18TH CENTURY. The building of a common artistic culture among all the peoples of the U.S.S.R. was a direct consequence of the end of feudal isolation and of the emancipation from medieval concepts in favor of new tendencies in art. In Russian art this process began in the 16th century and continued vigorously throughout the 17th. The reforms introduced by Peter the Great in the years bridging the 17th and 18th centuries dealt a final blow to the more obsolete medieval aspects of the economic, social, political, and spiritual life of Russian society; they also had a telling effect on the arts.

The changeover to new esthetic standards and principles during the first quarter of the 18th century resulted in a revolution in the arts, principally in Russia, but also — though to a less striking degree — in the Ukraine, Byelorussia, and the Baltic States. Benefiting from European realism (q.v.), with its traditions harking back to the Renaissance, Russian art took on a secular character. It would not be correct, however, to regard the era of Peter the Great as a "belated Renaissance"; Russia did not experience a renaissance either in the sense of a decisive break with the spiritualized and poetically conventionalized medieval representation or that of the postulation of a rational, clear, and joyfully harmonious vision of a world of concrete objects in a unified three-dimensional space. The new concepts were being formulated by Russian art at a time when an absolutist, baroque-classicist civilization was developing. Consequently even the earliest examples of the use of architectural orders — by I. P. Zarudni, Domenico Trezzini, M. G. Zemysow, and others in the construction of Leningrad (St. Petersburg) under Peter the Great and his immediate successors — for all their rather stiff simplicity and almost pedestrian matter-of-factness, show an original interpretation of the baroque style. From the 1740s on, architecture reflected the growing might of the state and was dominated by the festive and sumptuous idiom of court baroque, which achieved a truly monumental sweep and splendor in the buildings of Bartolomeo Francesco Rastrelli (PL. 237). The works of the mid-18th-century baroque architects D. V. Ukhtomski, I. F. Michurin (PL. 237), and S. I. Chevakinski, who are considered to have been influenced by the picturesque, national "Naryshkin" style of the late 17th century, are now categorized under European baroque.

The artistic revolution was even more evident in painting and the graphic arts, in which the conventional, flat iconographic tradition was discarded and interest shifted to secular subjects. Portrait painting flourished first and retained its ascendancy throughout the 18th century. The forceful and staid realism of I. Nikitin was tempered in A. Matveev's work by a pictorial softness and a prerococo gracefulness. Both these painters had studied abroad at Peter's expense, as it was his policy to send young painters to more advanced countries in western Europe for their artistic training — a practice that quickly bore fruit. Archaic traditions, however, lived on for a long time, especially in portrait painting. Throughout the 18th century and early in the 19th there existed a distinct tendency in portraiture (exemplified by the work of A. P. Antropov of Leningrad) that combined character delineation and, at times, true psychological expressiveness with a restrained, flat treatment and an archaic fixity of pose, gesture, and look. This kind of portraiture was widely represented in the Ukraine, in Byelorussia, and later in Transcaucasia (e.g., A. Ovnatanian) and was produced by many obscure painters who were serfs by birth (e.g., I. P. Argunov).

During the first half of the 18th century the art of engraving made great headway (e.g., L. Tarasevich and D. G. Levitski in the Ukraine, A. Zubov and M. I. Makhaev in Russia). Michel Lomonosov, a man of encyclopedic versatility, strove to foster a revival of mosaics. Sculpture in the round, which had been virtually unknown in old Russia, made its first appearance in the works of Carlo Bartolomeo Rastrelli, a shining exponent of the baroque style. The climax of this period was the founding, in 1757, of the Academy of Fine Arts in Leningrad, which not only helped to confirm the principles of classicism (q.v.) in the late 18th and the early 19th century but also — and this was more important — fostered the general spread and vigorous flowering of the arts in Russia, the Ukraine, Byelorussia, the Baltic States, Georgia, and Armenia. The Academy of Fine Arts remained for a long time the main art-training center in the Russian Empire, though from the middle of the 19th century an increasingly important role was played by the liberal School of Painting, Sculpture, and Architecture in Moscow.

Russian architecture at this time constituted one of the most remarkable and original schools of neoclassicism in Europe. The feeling of Russia's might, the vast scale of urban construction schemes, the grandiose architectural complexes erected in cities and on country estates, and the tremendous vitality of an aristocratic civilization brimming with creative energies were

Pavlovsk, near Leningrad, plan of the park, end of the 18th century (architect, C. Cameron).

blended with a genuinely enlightened rationalism and with humanistic ideals. Russian neoclassic architecture eschewed the excessive pomp and decorative dynamics of the baroque, but retained the sense of grandiose spatial unity and of monumental grandeur (see X, cols. 534–538). The whimsy, fragility, and informality of the rococo were almost totally avoided. Russian architects did not concern themselves with the personal factors in home building until the 19th century, and the neoclassic country residences of the 18th century most often have an official air akin to public buildings. As in the early decades of the 18th century, many foreigners worked in Russia at this time: the Frenchman J. B. Vallin de la Mothe, creator of noble and elegant designs; Charles Cameron of Scotland (FIG. 571), a decorator of great subtlety; Giacomo Quarenghi of Italy (FIGS. 571, 573), designer of vast and majestic buildings. A group of Russian architects also became prominent and determined the character of the school: the versatile V. I. Bazhenov (PL. 238), known for colossal projects, who was a refined stylistic and a utopian idealist; M. F. Kazakov (PL. 238; FIGS. 572, 574), the acknowledged leader of the Moscow school (less official than that of Leningrad), who planned cities and built poetic country mansions that were admirably in tune with the Russian landscape; and I. E. Starov of Leningrad (FIG. 572), who strictly adhered to the principles of Palladio (q.v.).

The last third of the 18th century also witnessed the first brilliant achievements in Russian sculpture; the social ideals and optimism that understandably pervaded the country as it began to reap the harvest of Peter's reforms had created a favorable climate for the development of monumental art. By more than coincidence, it was in Russia that Etienne Maurice Falconet (q.v.), showing a bold disregard for existing traditions and canons of equestrian statuary, created that work of genius, his fine monument to Peter the Great in Leningrad. There were several first-rate sculptors working in the tradition of heroic classicism — among them I. P. Martos (PL. 239), M. I. Kozlovsky, and F. F. Shchedrin; but the artist who stands out for creative originality at this time is F. I. Shubin, who devoted himself almost exclusively to portrait busts. In Shubin's sculpture, size and ornateness are tempered by psychological truth, and despite their aristocratic splendor and refined spirituality they seem almost intimate at times.

While Russian painting in the last third of the 18th century produced a wealth of neoclassic historical paintings (e.g., those of A. P. Losenko), decorative landscapes, and even genre scenes — for the most part naïvely formal representations from peasant life — it was in the realm of portraiture that the best painters asserted themselves and that the most daring innovations were tried. The portrait had not yet become purely an easel painting divorced from its surroundings; it was still a

part of the over-all *décor* of palace interiors and of the ostentation that served to emphasize class distinctions. In spite of this, the strongly dynamic portraits of D. G. Levitski, with their soberly truthful characterization, F. S. Rokotov's refined and lyrical works (PL. 244), and V. L. Borovikovski's almost sentimentalized figures constitute a gallery of intere sting individuals, each with his own complex inner life and personal dignity.

THE 19TH CENTURY. Between 1800 and 1830 occurred the second phase in the artistic flowering of Russia's aristocratic culture. Literature, music, the theater, and the figural arts played a role of tremendous importance in shaping the social outlook of the peoples of the U.S.S.R. in the 19th century. Closely connected and concerned with the fundamental social problems of the day, they exposed the existing social evils and fostered the development of a civic consciousness. Whereas in France the brilliant development of the fine arts had aroused public interest in questions of esthetics, in Russia art was regarded primarily as a force for social progress. From the 1840s on there was an alliance of the arts with the most advanced currents of social thought.

The architecture bears the obvious hallmarks of neoclassicism, with parallels, if not strict analogies, in the French Empire style. Russian neoclassic architecture remained free of the urban bourgeois utilitarianism that characterized the work of Claude Nicolas Ledoux and his colleagues in France. In Russia large, solemn complexes — later marked by a somewhat frigid formality — continued to be built, perhaps even more extensively than before. In the first 30 years of the 19th century such excellent Petersburg architects as A. N. Voronikhin (PL. 240), A. D. Zakharov (PL. 242; FIG. 574), K. I. (Carlo) Rossi (PL. 241), Thomas de Thomon, and V. P. Stasov succeeded in giving Russian neoclassicism its definitive character, having created the best large urban complexes known to world architecture at that time. O. I. Bove (Beauvais) and D. I. Zhilyardi (Gilardi; PL. 241) played a similar role in Moscow, as did L. Stuoka-Gucevičius in Lithuania (PL. 240).

Restricted largely to a secondary role by the need for achieving a synthesis with architecture, sculpture was also basically neoclassic in style. Painting (the orthodox teachers of the Academy of Fine Arts excepted), however, took other courses outside the purview of orthodox neoclassicism and its dogmas. Though Russian painting was never submerged by the tidal wave of romanticism, O. A. Kiprenski, the country's greatest portraitist of the early 19th century, was drawn to it, as was the brilliantly talented K. P. Bryullov. But the emotional agitation and the dynamics of the romantic idiom remained foreign to Russian art. By combining a freely realistic treatment with a poetically inspired vision, Russian painting retained a fundamental plastic unity and simplicity, as seen not only in the portraits of O. A. Kiprenski (PL. 244) but also in A. G. Venetsianov's genre paintings of peasant life and in the landscapes of S. F. Shchedrin, one of the first 19th-century painters of the plein-air school. A more austere and prosaic touch characterized the portraits of V. A. Tropinin of Moscow; born of peasant serfs, he was, together with Venetsianov, largely responsible for the emergence of the early school of realism in the 1840s.

Leningrad, Admiralty (1806–23), ground plan (architect, A. D. Zakharov).

The birth of realism. From 1840 to 1850 Russian painting underwent a crisis. The autocratic regime revealed all its corruption and the civilization of the aristocracy was no longer able to produce anything new or forward-looking. Neoclassic architecture declined, only to be succeeded by an official, pseudo-

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Russian style (e.g., K. A. Thon) and by other forms of architectural eclecticism. The Academy of Fine Arts turned into a stronghold of cautious conservatism, and all that was truly alive in art at this time was produced either outside the Academy or in defiance of its rules. The youthful forces of Russian society, banding together to bring about a democratic renewal and, above all, the liquidation of serfdom, found ideological support in literary and artistic circles. The writers of the day, inspired by the stanchly democratic revolutionist V. Belinski, were searching for effective answers to the burning social issues of their time. So were the figural artists, who by the same token were turning more and more to a realistic idiom, to an unprejudiced vision and direct study of life. Paralleling the trend in literature exemplified by Gogol, Turgenev, and Nekrasov, there emerged an analogous movement of critical realism in painting and the graphic arts.

The Itinerants (*Society for Traveling Art Exhibitions*). The realistic school of painting of the second half of the 19th century had been ushered in by Ivanov and Fedotov. Its rapid and vigorous development may be ascribed to a number of contributing factors: the reforms which the autocracy, under pressure from the liberating movement, had been forced to institute in the 1860s; the powerful surge of democratic sentiment; and the rapid ramification of newly developed bourgeois attitudes with the resultant exacerbation of class conflicts. Architecture entered a period of decline and "stylelessness," and in sculpture only one artist was outstanding — M. M. Antokolski. Russian painting, owing to its consistent liberalism, its close association with the popular movement, and its meaningful and socially significant content, constitutes one of the period's most brilliant and distinctive national styles.

The shaping of the new esthetic concepts was greatly influenced by N. Chernyshevski, the materialist philosopher, an irreconcilable opponent of autocracy, and author of *The Aesthetic Relations of Art to Reality* (1855). This book became the bible of the young democratic generation of painters, who had an advocate and spokesman in V. P. Stasov, the critic, who though at times one-sided was passionately dedicated to the ideas of artistic truth. Two events in the art world played an important part in forming the new school. In 1863, 13 students of the Academy of Fine Arts clamorously refused to illustrate the prescribed test subject and demanded the right to select themes from everyday life. This "mutiny of the 13" publicly proclaimed the birth of a new school that was severing all ties with the stagnating Academy. The leader of the dissenters was the painter I. N. Kramskoi, one of the moving spirits and principal theoreticians of the realist movement. In 1870 this movement was crystallized in the newly founded Society for Traveling Art Exhibitions (Tovarishchestvo peredvizhnykh khudozhestvennykh vystavok). The Itinerants (Peredvizhniki), as they were called, intended to bring their art closer to the masses not only by dealing with subjects that were familiar or of particular concern to the people and through a realistic pictorial idiom but also in the physical sense; their exhibits traveled across the country and awakened interest in the new art everywhere, particularly among many of Russia's nationalities that were seeing contemporary art for the first time. The society existed until 1923 and became, in the early years following the October Revolution of 1917, the link between 19th-century realism and the young generation of Soviet painters. But the period of its true greatness falls in the 1870s and 1880s, when the Itinerants drew to themselves practically all the vital creative forces in Russian art and were joined by artists of the Ukraine, the Baltic States, and, to some extent, Transcaucasia.

The evolution of critical realism can be subdivided into two stages. The first, from the end of the 1850s to the end of the 1870s, was distinguished by the prevalence of critical and at times bitterly satirical works, by an austere, often almost ascetic pictorial treatment, and by an intent scrutiny of nature. The most prominent artist of this period was the leader of the Moscow school of painters, V. G. Perov (PL. 247), author of satirizing genre works and of sincere, restrained, and notably psychological portraits. Also noteworthy among the many artists dedicated primarily to genre painting are K. A. Savitski, G. G. Myasoedov, and V. E. Makovski.

Concurrent with the powerful surge of social movements, the second stage in the history of the Itinerants (late 1870s–mid-1890s) is associated with the highest creative achievements of the foremost artists. Though the painters showed a preference for immense, epic canvases, they nonetheless retained their direct approach to nature; their style, devoid of its former dryness, acquired a rich plasticity, rendering reality with great freedom and animation. In its ultimate manifestations the style is reminiscent of impressionism (q.v.), even though the pre-20th-century plein-air works of the Russian painters always shunned the shimmering vision of the world characteristic of impressionist painting. Russian painters in the last quarter of the 19th century manifested great interest in the artistic developments of European art, but they remained, for the most part, aloof from impressionism and from the subsequent trends in European painting.

Two men incarnate the apogee of Russian realism. The first, I. E. Repin (PLS. 245, 247), was a man of remarkable artistic temperament and a supremely versatile and brilliant painter; in his epic genre scenes, his sensitive and finely characterized portraits, and his dramatic historical compositions he presented a truly comprehensive panorama of Russian life. In Repin's work a passionate devotion to truth and an ingenuous approach to reality are particularly well integrated with the philosophical depth and ideological bias characteristic of democratic painting. The other great master of Russian realism, V. I. Surikov (PL. 247), was a painter of historical subjects and of huge dramatic scenes breathing with the rebellious spirit of popular movements; in his works formal realism acquires a high degree of decorativeness. This quality is even more pronounced in the epic and historical canvases of V. M. Vasnetsov, a leading exponent of a neoromantic tendency, who, on the threshold of the new century, was attempting to create a "Russian style" derived from native folk art. An important role in this trend — which from about 1880 to the early 1900s manifested itself widely in architecture, the decorative and applied arts, and scenography —

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

was played by the Abramtsevo Circle, organized by S. I. Mamontov, an art patron who succeeded in bringing together, at his home in Abramtsevo, the most prominent artists of his day.

The Itinerant school in its second phase granted a privileged place to landscape. The romantic and emotional A. Savrasov and the prosaically precise I. I. Shishkin were succeeded by I. I. Levitan, a superb painter of landscapes, whose perception of the enchanting quality of Russian nature made him the counterpart of Chekhov in literature. Another follower of the Itinerants was V. V. Vereshchagin, a passionate antimilitarist who gained wide renown through his battle scenes, painted with an objective directness bordering on documentary reporting. Very special mention must be made of N. N. Ge (Gay), a vivid and emotional painter whose work runs the gamut from postromantic academicism and ruthless realism to intense psychological expressiveness in his religious scenes inspired by the philosophy of Tolstoy.

Russian painting of the second half of the 19th century constitutes an important and original national style. It was also at this time that the democratic painters obtained their own exhibition center: the Tretyakov Gallery, founded in Moscow in 1856 and later transformed into a national museum of art. An important factor in the artistic evolution of the people of the U.S.S.R. in this period was the great attraction of Europeanized Russian art for the artists of the various Russian regions who were participating in the development of democratic realism. Even though artistic activity in Central Asia and, to a great extent, in Transcaucasia was still dominated by medieval forms and took the shape of traditional folk art and crafts, the well-advanced art of Russia was exerting an ever-growing influence and impelling many young cultures toward a more developed and more complex esthetic taste. This is borne out by painting in the Ukraine, directly derived from the Itinerant movement (e.g., N. K. Pimonenko), and by some aspects of Baltic art (e.g., K. Hūns and J. Rozentāls in Latvia, J. Köler in Estonia).

The last stage in the prerevolutionary history of Russian art began at the close of the 19th century. This was a complex and contradictory period in which Russia was fast approaching the revolutionary explosions of 1905 and 1917. The tensions created by social inequities had reached the breaking point, giving rise to an extraordinary wealth and complexity of artistic manifestations. A renewed impulse manifested itself not only in painting, graphics, and sculpture but also in architecture, the decorative arts, and scenography.

Some painters, such as N. A. Kasatkin and S. V. Ivanov, turned their attention to the life and struggles of the working class and to the revolutionary activities of the masses. But on the whole, toward the beginning of the 20th century, the Itinerants' guiding principle — the investigation of life — was replaced by a new synthetically poetic form of realism that gathered its lyrical inspiration from the turbulence of the period. The most prominent painter of the time is V. A. Serov (PL. 246), whose psychologically astute and artistically refined portraits and fine poetic scenes drawn from nature, history, and contemporary life combine a feeling for living truth with a harmonious beauty of form that is almost classical in its simplicity. The monumental and dramatic work of the painter M. A. Vrubel testifies to his realization — however vague and confused — that a glorious turning point in history was not far away. Vrubel's works show a leaning toward legendary and symbolic forms, and their decorative qualities coincide with those of Art Nouveau (q.v.). The Art Nouveau style in architecture, which gained acceptance in Russia in the 1890s and the early 1900s mainly through the work of F. O. Shekhtel, was supplanted in the first decade of the 20th century by neoclassic tendencies (see PL. 243).

THE 20TH CENTURY. *Before the Revolution.* The growth of estheticism, the self-defeating cult of form, and the exclusive concern with sheer technique — symptoms of a cultural crisis and of ideological disintegration — also manifested themselves in Russia in the early years of the 20th century. However, the seriousness of the social conflicts in a revolutionary atmosphere continued to keep alive an interest in social and philosophical issues, in the dramatic and, at times, even tragic aspects of reality. As a result, impressionism (q.v.) in Russia remained a marginal phenomenon, manifesting itself mainly in landscapes (e.g., K. A. Korovin and I. E. Grabar) or assuming an almost melodramatic theatricalism (e.g., the painting of F. Malyavin and the sculpture of A. Golubkina). In 1898 an association significantly named Mir Iskusstva (World of Art) came into being, proclaiming its fundamental hostility to the tenets of democratic realism as it had been practiced by the Itinerants (see SCENOGRAPHY). This association cultivated a farfetched stylization and indulged in a sophisticated cult of the aristocratic past. However, the best artists of the Mir Iskusstva, breaking through the bonds of their narrow estheticism, created works of great artistic value, particulary A. N. Benois (Benua), M. Dobuzhinski, and E. E. Lansere (Lanceray) in the graphic arts and A. Ya. Golovin and Leon Bakst in stage decoration (XII, PL. 442).

During the period between the two revolutions (1905–17) Russian artistic thought was torn by tragic contradictions. The young artists, for the most part out of touch with the roots of national life and with the ideas of liberty, searched desperately for new directions through experimentation — at times making significant artistic discoveries, at other times plunging into individualistic anarchy. The poetic unity that characterized the advanced currents of artistic thought in the first years of the 20th century was transformed into an affected symbolism in the work of certain artists who were members of the Golubaya Roza (Blue Rose) group of 1907. But here, for the first time,

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Russian painters came in touch with the work of Cézanne, Gauguin, and the French Fauves (qq.v.). In addition, symbolism influenced the work of such talented artists as the painter V. Borisov-Musatov and the sculptor S. Konenkov.

Even more contradictory was the movement of the Russian "Cézannists" (I. I. Mashkov, P. P. Konchalovski, A. V. Kuprin, and others), who in 1910 organized a group colorfully named Bubnovi Valet (Jack of Diamonds). Many extremely talented artists took their first creative steps under the aegis of this group, which sought a renewal of artistic thought and battled with determination against the obsolete canons of the past. The experiments of the Bubnovi Valet artists were, however, basically leading them toward the disintegration of objective form and ultimately toward the artist's isolation from everyday life and nonobjective art (q.v.). During the years immediately prior to the Revolution this process took on a frantic pace, at times outdistancing similar developments in other countries. The rayonism of Nathalie Gontcharova and Michael Larionov, the fantastic expressionism of Marc Chagall's (q.v.) early work, the suprematism of Kazimir Malevich (q.v.), and the abstractionism of Wassily Kandinsky (q.v.) expressed most eloquently the impasse reached by the more extremist forms of individualism and esthetic subjectivism that were undermining the very foundations of representational painting. The tragedy of the crisis, deeply rooted in social antagonisms, was felt acutely and painfully by those more sensitive artists who eagerly awaited the coming Revolution, from which they expected liberation and the opening up of new creative horizons. It is no wonder that many artists fervently welcomed the coming of the socialist revolution in 1917.

At the end of the 19th century and the beginning of the 20th the various peoples of the U.S.S.R. had completed the transition to a European type of art. The national schools of painting, graphics, and even of sculpture and architecture, founded on the example of Russian and western European art, were intensely active in the Ukraine, Byelorussia, the Baltic States, Georgia, and Armenia. At the same time the various contradictory currents of esthetic thought characteristic of the times were also reflected in the art of these peoples (e.g., the Lithuanian symbolist painter M. K. Čiurlionis and the Georgian primitivist N. Pirosmanishvili). Just before the Revolution, national democratic trends appeared in the art of Azerbaijan.

The Soviet period and socialist realism. The November Revolution of 1917 marked a radical turning point in the cultural development of all the peoples of the U.S.S.R. The founding of a new socialist society called into being new ideas and forms and also created a new position for the artist in society and a new understanding of the social function of artistic creativity. Great difficulties were encountered in the creation and development of Soviet art. Aside from general historical difficulties — the civil war, the destruction of the economy, and, subsequently, the war against Nazi Germany — there were also internal difficulties, since the young socialist culture had to find new ways to solve tremendously complex problems without any previous experience. The foremost issue, formulated by Lenin in the early years of Soviet rule, consisted in overcoming the hiatus between art and the people that had come about as a result of centuries of exploitation of man by man. It was essential to make art belong to the masses and, at the same time, to raise the consciousness of the masses to the level of the peaks of culture attained by mankind. This was to be achieved not only by nationalizing museums and other art treasures, as was done in 1918, but also by channeling every creative activity into close contact with the practical aspects of everyday life and the building of socialism, as well as by constant concern with raising the general cultural and artistic level of the working class. The second issue was how to make use of art in teaching communism to the masses, how to dislodge art from the dead end of bourgeois individualism, and how to counter esthetic disintegration with healthy trends in art that would give rise to a new culture in a socialist society. This meant directing art in the traditions of realism, demanding that it maintain an active role in the people's revolutionary struggle and in the elaboration of communist ideas. The third objective was to create conditions for the development of indigenous art among all the peoples of the U.S.S.R., to liquidate cultural backwardness, and to call to life dormant creative potentialities among the masses.

The cultural development in the U.S.S.R. is directed by the Communist party, whose role it is to assure the conditions necessary for the successful solution of basic artistic problems and for a complete and well-rounded development of the arts in a future communist society. The basic tool for bringing about this cultural flowering is a technique that since the early 1930s has been termed "socialist realism" (see REALISM); its premise is a free development of art, a truthful approach imbued with a feeling of social responsibility and expressing the ideals of communism, while allowing a multiplicity of forms of expression and individual experimentation.

As early as 1918 Lenin put forward the idea of "monumental propaganda," which meant the erection of statues and memorial plaques and, in the abstract, a *rapprochement* of art with the masses and the creation of socially significant and useful works of art. Because of the civil war and the destruction of the economy, "monumental propaganda" did not achieve any outstanding artistic result; yet noted artists took part in it (e.g., the sculptors N. A. Andreev, S. D. Merkurov, S. T. Konenkov, A. Matveev), and it had considerable social repercussions. In the early years of the Soviet Union there was a great deal of activity in the field of the political poster, which for the first time acquired great eloquence [especially the propagandistic and satirical posters for the windows of the Russian Telegraph Agency (ROST), painted by the highly talented poet and artist Vladimir Mayakovsky and others]. In the same period Soviet artists were actively engaged in graphic design, mainly of a satirical nature (e.g., D. S. Moor and V. N. Deni) and, later, in painting and small-scale sculpture.

Soviet art in the 1920s was typified by revolutionary-propagandistic works of an original realistic nature, with intense expressiveness, conventionalized, quite often symbolic figures, and a preponderantly poetic rendering of reality. This trend can be seen in the drawings of A. I. Kravchenko and V. A. Favorski, in the sculpture of I. D. Shadr and V. I. Mukhina (PL. 250), and in the painting of K. S. Petrov-Vodkin, A. Deineka, and others. At the same time, other painters turned to a closer investigation of the new reality and sought to establish closer ties between art and the daily life of the people. This trend, which became consolidated in the Association of Artists of Revolutionary Russia (1922), was based on the traditions of the Itinerants and on the democratic realism of the 19th century. It contributed a great deal to the early artistic record of the great revolutionary events; such important masters of realism as M. B. Grekov, B. V. Ioganson (PL. 248), and I. D. Shadr belonged to this group.

The achievements of realistic art, and — what was more important — the historic task of making art a participant in the spiritual life of the masses, brought about the rapid defeat

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

of formalist and estheticist tendencies. As early as 1921 there was an exodus of the abstractionists into industry, where they sought to find a place for themselves as industrial designers, while other "leftist" tendencies very soon lost ground in the face of the practical demands of society. As a result, in the early 1930s, formalism in Soviet art was on the wane, and the dominant trend was realism in all its multifarious manifestations. Thus the crisis that struck the realist movement throughout the world at the beginning of the 20th century was counteracted in the Soviet Union by a reverse process — the renewal of realistic traditions.

Soviet architecture of the 1920s was affected in its development by the need to solve the new social problems of socialist town planning, mass housing, and the creation of public buildings of a new type, such as workers' clubs and other institutional edifices. A number of talented men of the constructivist school, including M. Ya. Ginzburg and the three Vesnin brothers, based their work on the principles of contemporary functional architecture and applied them on a large scale, falling at times into an ascetic paucity of artistic solutions and at other times into a self-defeating abundance of constructivist forms (PL. 252).

A new period in the history of Soviet art began in the first half of the 1930s. The victory of socialism in the economic and social field had aroused a spirit of enthusiasm among the people. The decade was characterized by a passionate admiration for the classical periods of art, by a tendency toward monumentality, toward the "grand style," not only in architecture and sculpture but also in painting, which became concerned primarily with the large-scale canvas and ideological generalizations. The dissolution of various, at times mutually hostile, art groups in 1932, the call to socialist realism as the principal instrument of Soviet art, and the struggle to produce an art permeated with the ideals of communism resulted in a number of significant artistic achievements in the second half of the 1930s. The artists who took part in this "renaissance" of realism included both old masters, such as the prominent portraitist M. V. Nesterov (PL. 248), and artists who had come to prominence just before or even during the revolutionary period: P. P. Konchalovski, I. Mashkov, M. S. Saryan, S. V. Gerasimov, P. D. Korin, S. D. Lebedeva, and Kukryniksy (collective pseud. of M. V. Kupryanov, P. N. Krylov, and N. A. Sokolov).

In architecture, constructivism was replaced by a type of building that through sheer size, generous recourse to classical forms, and, later, abundant decoration was meant to embody the new spirit. A number of grandiose public structures were the work of such prominent architects as A. V. Shchusev (PL. 251), I. Zholtovski, L. Rudnev, I. Fomin, A. Burov, A. N. Dushkin, and A. V. Vlasov. However, architecture and other plastic arts were eventually marred by the pompousness, showy rhetoricalness, and cold formality that pervaded Soviet art until the early 1950s. Nevertheless, this trend, which was contrary to the spirit of socialist realism, did not penetrate every aspect of the wide variety of artistic endeavors; nor was it able to destroy the logical historical development of socialist art. But its braking effect (especially in the years immediately following World War II) was felt not only in the works directly celebrating the personality of Stalin but also in the spread of a dogmatic approach to the theory and practice of the arts.

In the 1920s and 30s very significant advances were made in the national development of the figural arts, and a number of Soviet nationalities made rapid strides in overcoming an age-old cultural backwardness. Where a more or less advanced and independent artistic tradition had already existed before the Revolution, as in the Ukraine, Georgia, and Armenia, an intense creative activity could be seen. In Azerbaijan, Uzbekistan, Turkmenistan, Tadzhikistan, Kirgizia, and Kazakhstan, this period marks the first appearance of easel painting and sculpture in the European tradition and the establishment of national schools of architecture. Among the foremost Soviet artists of this period are the painter M. S. Saryan and the architect A. I. Tamanyan of Armenia; the sculptor Ya. I. Nikoladze and the painters A. Kutataladze, L. Gudiashvili, and I. Gamrekeli of Georgia; the architects S. A. Dadashev and M. A. Useinov of Azerbaijan; the architect V. I. Zabolotni, the painters A. Shovkunenko, A. Petritski, and T. Yablonskaya, and the graphic artist V. I. Kasiyan of the Ukraine; the sculptors A. Grube and A. Azgur of Byelorussia; the sculptor J. Mikėnas and the graphic artist V. Jurkūnas of Lithuania; the sculptor T. Zaļkalns and the painter E. Kalniņš (Kalninsh; PL. 249) of Latvia; and the painters E. Kits and E. Okas of Estonia, S. A. Chuikov of Kirgizia, and U. Transykbaev of Uzbekistan.

The active participation of all the creative forces of the country in the struggle against fascism during World War II proved that the Leninist idea of a union between art and the people had taken a solid hold in cultural circles. The grim and heroic atmosphere of the period was accurately reflected not only in placards and satirical posters, memorial sculpture, and paintings representing battle scenes but in all artistic creations.

Developments since 1945. After 1945 Soviet artists translated into esthetic terms the nation's tragic experience during the war period; for ten years the war and its sequels remained one of the main themes in the work of painters, graphic artists, and sculptors. The herculean task of reconstructing the ruined cities was undertaken by the architects, who were sometimes confronted with complex town-planning problems, as in the rebuilding of Volgograd, Minsk, Kiev, and other cities. At the same time, there was a continued struggle against formalism and estheticism on the one hand and the dogmatic tendencies connected with the cult of Stalin on the other. Positive measures were taken against these tendencies by the 20th and especially the 22nd Communist party congress. Without making any concessions to bourgeois ideas in art, Soviet artists sought new forms of expression, put forth new esthetic ideas, and multiplied the techniques and manifestations of realism. Joining artists of the older generation, a bevy of young painters searched for a more expressive kind of representational approach to realism.

The new policy of the Communist party called for an extensive program of art education for the masses, with the ultimate aim of producing citizens with a well-rounded general education; this gave rise to a rapid and intense development of the applied arts and to the introduction of creative ideas in broad areas of everyday life and in industry. The enormous housing construction program forced architects to reject ostentatious decoration and to make a persistent effort to create comfortable, economical, and, at the same time, artistically pleasing projects (PL. 254). There was a tremendous proliferation of town-planning projects, which in the U.S.S.R. could proceed unhampered by any restrictions of private land ownership (PL. 167). The increase of activity in the field of design (furniture, ceramics, textiles, etc.) has continued to advance the applied arts, bringing them from the "luxury" category into the sphere of everyday life.

Considerable progress may be noted in the artistic activity of the various nationalities. Whereas before the war allowances still had to be made for a lack of development among peoples who had previously experienced no modern movement in painting, sculpture, or architecture, in the succeeding years most of the national schools have come to make fully valid contributions to the arts. In the immediate postwar years the painters of the Ukraine assumed the lead; they have since been followed to the fore by painters from Azerbaijan, Turkmenistan, Latvia, and Kazakhstan and by sculptors and graphic artists from Lithuania and elsewhere.

UNITED STATES OF AMERICA. The United States of America derives its name from the union of the separate states that had developed from the original colonies and grants on the mid-Atlantic coast of North America — the northern of the two continents named after Amerigo Vespucci. The original area of the states was only the strip of land between the coastal mountains and the Atlantic Ocean, but the claims, usually based on the vaguely defined original grants, included much land to the west. The treaties that were made after the conclusion of the Revolutionary War (1775–83) recognized the territory of the new nation as extending westward to the great central river, the Mississippi. The Louisiana Territory was purchased in 1803 and Florida in 1819; Texas was annexed in 1845; the Oregon Territory was acquired in 1846 and California and the Southwest in 1848. Settlement of these territories was in general extremely rapid, and by 1912 all the 48 states comprising the continental United States had been admitted to the Union. Alaska and Hawaii, long held as territories, were admitted as the 49th and 50th states in 1959. The capital city is Washington, coextensive with the District of Columbia, a Federal district.

The present article deals only with the contiguous continental states. For Alaska see the article of that title and for Hawaii see POLYNESIA and POLYNESIAN CULTURES.

The indigenous art of the United States is covered in AMERICAN CULTURES and NORTH AMERICAN CULTURES. However, a number of Indian sites, most of them in the Southwest, are described in the *Monumental centers* below.

Architecture is comprehensively treated in AMERICA: ART SINCE COLUMBUS, as well as in the Encyclopedia articles on individual architects. Therefore in the present article attention is centered on a subject that is little known: early town planning and land division in the United States.

Other Encyclopedia articles to be consulted as complements to this one are EXHIBITIONS, FOLK ART, FURNITURE, INTERIOR DECORATION, MONUMENTS, MUSEUMS AND COLLECTIONS, NEOCLASSIC STYLES, NEO-GOTHIC STYLES, TOWN PLANNING, and the biographical articles on the major painters and sculptors.

SUMMARY. Historical introduction (col. 587): *Settlement, the frontier, and urbanization; Town plans of the Renaissance, baroque, and neoclassic styles; Planning, 1830–1930; The city in the automobile age.* Monumental centers (col. 592): *Washington; New England States; Middle Atlantic States; South Eastern States; South Central States; East Central States; West Central States; South Western States; North Western States; California.*

HISTORICAL INTRODUCTION. *Settlement, the frontier, and urbanization.* Attempts to colonize the area now within the United States were unsuccessful until the establishment of the Spanish colony at Saint Augustine, Fla., in 1565. Early in the 17th century, while the French were establishing posts north of the St. Lawrence River, the strip of coastal plain between the Spanish and French lands was settled by north European maritime countries — England, the Netherlands, and Sweden. After the Dutch suppressed the Swedish colony, the English took over the Dutch colonies, which gave them complete control of the coastal plain. The French traversed the St. Lawrence to the Great Lakes, made the short portages to the headwaters of the rivers feeding the Mississippi, and by 1682, under the command of the Sieur de La Salle, had followed the Mississippi to its outlet in the previously entirely Spanish Gulf of Mexico. La Salle saw the need for colonies, and reported to Louis XIV: "Should foreigners anticipate us, they will complete the ruin of New France, which they already hem in by their establishments of Virginia, Pennsylvania New England, and Hudson's Bay."

The success of the English was due in great part to the fact that they not only built forts and trading posts but established towns and farms as well. The buildings and sites in the eastern half of the United States that today reflect the occupancy of the Swedes, Dutch, Spanish, and French are a record of cultures the influence of which has passed almost as completely as that of the Indians.

The English knew the art of land division and control, probably, notes Garvan (1951), because of their experience in developing towns for the "plantations" in the Irish colonies early in the 17th century. In general, the first thing the English settlers did in America was to found a town and establish societies that, though provincial, were clearly urban. Plymouth, Mass., was settled in 1620, and by 1626 had houses so much like those of the mother country, and enough of them, that it was exporting finished clapboards and wainscots to England. The movement across New England was by groups of people who settled not separated wilderness homes but towns. Philadelphia was laid out in 1681 before the Pennsylvania settlers left England. According to Forman (1948), Jamestown, Va., founded in 1607, was building groups of London-like brick row houses by 1636. Even in the predominantly plantation areas of the south important towns such as Williamsburg, settled 1633, were established and courthouses and lading places were set out by law. As the Americans moved west into the frontier, according to Wade (1959), "the towns were the spearheads of the frontier. . . . The establishment of towns preceded the breaking of soil in the transmontane [i.e., Appalachian] west." The ability of England to control shipping gave her the Dutch colonies and a good part of the French ones and prevented the Spanish colonies from expanding; but the ability of the English settlers to manage land created the American colonies and eventually formed them into a nation.

Town plans of the Renaissance, baroque, and neoclassic styles. Specific examples of town planning are treated in the regional introductions below, but it is of interest to consider here, in terms of the whole area, the contribution that a study of town planning may make to the vexing problem of style in American cultural productions. Both Hitchcock (see I, cols. 246, 247, 251) and Morrison (1952) have discussed the relationship between American and English architectural styles, noting particularly the problem of the varying time lag. Garvan (1951) has established that when New Haven, Conn., was founded in 1637–38 its streets were laid out according to Vitruvian principles regarding the avoidance of unhealthy winds. The same principles were perhaps applied in the layout of Bergen, N.J., 1660, and this may be the distant source for the consideration of noxious winds evident in the schemes for Azilia, Ga., 1717, and Los Angeles, Calif., 1781–82. The emphasis not only on an extremely ordered plan but also on laying it out according to Vitruvian principles is clear proof that the English settlers utilized Renaissance planning ideas; thus attempts to "medievalize" the earliest period of American architecture simply because its builders carried over many older methods are not valid.

Italian Renaissance site planning is also evident in the gardens of the 17th century, such as the one in the French settlement at St. Croix island, Maine, 1604, those of Dutch New Amsterdam in the survey of 1660, and the garden beside the English fort at Charleston, S.C., of 1680. Clarity of design combined with specific details emphasized in Renaissance planning also occurs in later examples, for instance, Philadelphia in 1682 and, particularly, Savannah in 1733, which Bannister (1961) thinks was ultimately based on ideal city plans derived from antique military encampment practices. Even in Samuel McIntire's plans of 1799 for the garden of Derby Mansion (destroyed) in Salem, Mass., one of the alternative designs was for a formal setting of the type that had reached its height in 17th-century Europe. These examples illustrate that such Renaissance ideas were still influential later on, but the important point to note is that they were introduced and used as early as the New Haven plan of 1641.

By the end of the 17th century an awareness of baroque planning principles, then receiving their most important European emphasis in the development of Versailles (II, FIG. 299; VIII, PL. 437), is evident in the leading American designs, and it is only necessary to study the plans for the two capital cities of the Chesapeake Bay area — Williamsburg and Annapolis, both laid out in the 1690s — to see these principles in operation at their most imaginative. Williamsburg seems to have had no very clear individual antecedents, though it is interesting to compare the plan with that of Mannheim, Germany. Annapolis is obviously based on the plan for London that Christopher Wren submitted after the Great Fire of 1666 (his project was not carried out) and on Bloomsbury Square (built ca. 1660) in London.

The dramatic vistas, emphatically sited buildings, and radial avenues of the baroque reappear in later American plans. A prime mid-18th-century example, Middleton Place Gardens outside Charleston, S.C., shows the continuance of this style. The plan of John Penn's "Solitude" in Pennsylvania, of about the same time, combines Renaissance and baroque elements, as do McIntire's Derby Mansion garden plans of 1799. The most notable examples of the later use of baroque planning are Washington, D.C., in 1792, Detroit in 1807, and several lesser schemes extending to the present, even including the Metropolitan Life Insurance Company's housing developments of Parklabrea and Parkmerced in the Los Angeles area, with a plan somewhat like that of Karlsruhe, Germany (VI, FIG. 258). An important element of the plan for Washington was a grid superimposed on the axial framework, and this element of classical order (presumably used with some knowledge of its Greek origins) is the single most dominant feature of American planning from Jamestown to the present.

The early national period found a natural coincidence with the burgeoning neoclassicism (see NEOCLASSIC STYLES) of the European style centers, and the smaller town plans of the period reflect this element not only in their frequently Greek names and their conception in Greek terms but also in their use of a Romano-Greek geometry derived from the work of C. N. Ledoux. An example is J. J. Ramée's 1811 plan for Union College in Schenectady, N.Y. In America the early neoclassic period is often called the Federal period, and it dates approximately from the 1790s, when Charles Bulfinch's (q.v.) first buildings were being erected in the Boston area, to the 1820s, when the Greek revival style became the characteristic architectural mode.

It is interesting to note that only the last of these great variations on the classical theme, the neoclassic, has received much attention in analyses of American architecture, presumably because a great many important public and private buildings in this style still exist. But if the theories of style proposed here are correct, there must have been structures comparable in classical intent to that of the plan of New Haven. The mill at Newport, R.I., dating from about 1673, in the style of Inigo Jones, and the Hutchinson House in Boston of the 1680s cannot have been merely flukes. Similarly the Isaac Royall House at Medford, Mass., Shirley Place in the Roxbury section of Boston, and St. James's Church at Goose Creek, S.C., all dating from the 18th century, are too strongly baroque to be defined simply as Georgian; their monumental form and architectural decoration seem to represent a distinctly baroque phase of American architecture, comparable to the contemporaneous plans of Williamsburg and Annapolis.

Planning, 1830–1930. As with the dominant Burlingtonian approach of the 18th century, the dominant romantic eclecticism of

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

the 19th and 20th centuries revealed itself in site plans as well as in buildings. (Where in the 18th century the interest in natural situation was evidenced by names of estates such as "Bel Air," "Monticello," "Belmont," and "Mount Pleasant," the 19th century more concretely experimented with octagonal houses to allow the maximum of sunshine in each room at all seasons.) Beginning with the distinctly artificial planning of the type of Laurel Hill Cemetery, 1838, in Philadelphia and continuing through the 1840s with such schemes as the comparable though more extravagant plan for "Belmont" near Nashville, Tenn. (said to have been laid out by an Italian designer), this movement took on a less geometric framework and turned to greater naturalism in Andrew J. Downing's plan for the Mall in Washington of 1853 and in the chef d'œuvre of the school, the style setter for the rest of the century, New York's Central Park, designed by Frederick Law Olmsted in 1858. Olmsted went on to design most of the largest city parks of the period, Boston's park system, Philadelphia's Fairmount Park, and San Francisco's Golden Gate Park being the most important. Olmsted and George Perkins Marsh were leaders in the conservation movement, which was instrumental in causing great wild stretches of the country to be set aside (Yosemite National Park and the Mariposa Grove of Big Trees in 1864, Yellowstone National Park in 1872, Hot Springs Reservation in 1880).

More importantly, this naturalistic impulse inherent in the romantic movement gave to American culture the land mode typical from the mid-19th century to the present: a wedding of city and hinterland in a web of natural spaces and patterns inserted into and among the ever-extending urban patterns and services. This approach began in a simple way in the project for a California suburb planned in 1854 in which each house lot was to have its own orchard and each block of lots was to be surrounded by poplar trees. It was also the impetus behind the romantic suburb, first introduced with the plan for Llewellyn Park, Orange, N.J., 1857, and it reached a full-scale "naturalized urban" statement in Riverside, Ill., planned by Olmsted in 1868–69, Garden City, N.Y., laid out by A. T. Stewart in 1869, Tuxedo Park, N.Y., laid out by Bruce Price in the 1880s, and Roland Park, Baltimore, Md., laid out by Olmsted in 1891.

This movement received its final impetus from 1890 to 1910, largely through the influence of Olmsted and Daniel H. Burnham, in the plan for the World's Columbian Exposition in Chicago, 1893 (V, PL. 190, FIG. 287), the McMillan Commission plan for Washington, 1902, and the plan for Chicago, 1909. These extremely popular plans formed the taste not only of the leaders of the day but also of a vast part of the American populace. To enumerate all the plans combining the romantic naturalism of Olmsted and the romantic formalism of Burnham would be to list all the growing cities of the United States in a period when, as Schlesinger (1949) says, "urbanization for the first time became a controlling factor in national life." The most important plans, in addition to the three noted above, are Cleveland, Ohio, 1902; San Francisco, Calif., plan by Burnham, 1906; New Haven, Conn., plan by Cass Gilbert and Olmsted, before 1910; Buffalo, N.Y., Terminal plan by George Clary, before 1910; Olympia, Wash., 1911; Denver, Colo., 1912; Minneapolis, Minn., 1917; Fairmount Parkway in Philadelphia, Pa., by Jacques Gréber, 1919; Lincoln, Nebr., 1920; St. Paul, Minn., 1921; and Palm Beach, Fla., 1930. The succeeding developments of the classicized naturalistic city are interesting to follow in one site, Balboa Park, San Diego, Calif.: the park, created in 1868–70 (following the example of Golden Gate Park), received a heavy planting of trees in 1889; the road system was laid out in 1902–09; it was the site of the Panama-California Exposition in 1915 and of the California-Pacific Exposition in 1935–36, and the massive group of huge "White City" buildings remaining from these exhibitions is now used as the city's civic center.

The city in the automobile age. The expansion of public transportation and the recent increase in automobile traffic have produced a new period in American city history. It is a period of remarkable urban sprawl, as exemplified by Los Angeles. This extension has created a development toward clusters or groups of cities — defined as "urban regions" by Tunnard and Reed (1955) — and a shift of residency toward the edges of the cities, to "suburbia," "exurbia," the "urban fringe," to use some of the popular terms of the day. Since the advent of the automobile the tendency has been, first, for the rural regions to lose population to the city and, second, for the central city to lose population (and function) to its edges. Thus the vast building programs on the edges of the cities have been accompanied by major rebuilding in the service cores and by a mammoth highway-building program to serve the new-scaled metropolitan and urban regions. So far no pattern for controlling these features has emerged that is both practicable and desirable, nor have any solutions yet been reached to prevent the automobile from strangling the major cities.

The international style is reflected in the severe skyscraper developments of the larger cities, though most of the projects for planning these in relation to each otner and to other structures and land uses have not come to fruition except for the 1930s Rockefeller Center in New York. In 1961 Nathaniel Skidmore, one of the most important leaders of the international school, expressed his doubts about the universal applicability of such schemes.

MONUMENTAL CENTERS. In the following repertory the monumental centers are grouped by regions that are based, with slight variations, on the regions defined by the Human Relations Files of Yale University. Washington, D.C., the nation's capital, is described first.

Washington. Established as the permanent seat of the national government by act of Congress in 1790, the city is approximately in the center of the states that then constituted the nation. The early history of the land is typical of most of the eastern seaboard: occupation by grain-raising Indians of the Algonquian linguistic group, exploration by Europeans in the 16th and 17th centuries, land division and settlement in the late 17th and the 18th century, and the creation and gradual rise of towns, principally as ports and county seats. Evidence of Indian occupation is an extensive quarry along the gorge of the stream, Rock Creek, bisecting the city. Nothing remains of the European activities from before the mid-18th century. Georgetown, formerly in Maryland but now the western quarter of Washington, was settled in the late 17th century and officially laid out in 1751. The old street pattern and many early houses still exist (see below).

The present form of the central district of Washington was planned by Major Pierre Charles L'Enfant (who had designed the temporary capital in New York City) in 1790–93. L'Enfant chose Jenkin's Hill on the Potomac River (it was "a pedestal waiting for a monument," he said) for the site of the Capitol, and then placed the White House (or President's House) upriver, in a relationship probably suggested by that of the Grand Trianon to the Palace at Versailles (Kimball, 1918). He then laid out the series of radiating avenues and "star" intersections that still dominate the city, and superimposed a grid of streets on them (FIG. 593).

Although several majestic government buildings were erected, the city developed very slowly, and it was only in 1871 that the framework of streets was made really usable. Preparations for the centennial celebration of the establishment of the seat of government, which

Washington. *Left*: General plan. *Key*: (1) Area of the original plan by Pierre Charles L'Enfant in 1792. *Right*: Plan of the center of the city. Principal monuments: (*a*) White House; (*b*) Treasury Building; (*c*) Corcoran Gallery of Art; (*d*) Lincoln Memorial; (*e*) Washington Monument; (*f*) Jefferson Memorial; (*g*) Freer Gallery of Art; (*h*) Smithsonian Institution; (*i*) United States National Museum; (*j*) National Gallery of Art; (*k*) Capitol; (*l*) Supreme Court Building; (*m*) Library of Congress Building; (*n*) Grant Memorial.

was to take place in 1900, brought forth a rash of schemes, mainly inspired by the architecture of the World's Columbian Exposition in Chicago, for completing the beautification of the city. In 1894 the architect Glenn Brown suggested that the framework for the erection of these buildings should be a revitalized and expanded version of the L'Enfant plan. A commission headed by Senator James McMillan included the sculptor Augustus Saint-Gaudens, the architects Burnham and Charles F. McKim, and the landscape architect Olmsted. In their report, the McMillan Commission plan of 1902, they recommended that the L'Enfant framework be readopted, filled out some of the details he had not specified, and designed an extensive park system. This has been the general guide of the vast 20th-century classicization of the city. Only in the 1950s was this trend altered, with the planning and construction of a number of great governmental complexes in the nearby countryside (e.g., the Prince George Town satellite city, designed by Edward D. Stone) and with the projected dispersion of further in-city government buildings throughout the central business district rather than only in its classically framed core.

Secular buildings: The White House (originally called the President's House), begun 1792 from designs by the Irish-born architect James Hoban; the neoclassic main façade resembles Leinster House in Dublin. Burned by the British in 1814; rebuilt 1815–17 on Hoban's plans as modified by Benjamin Latrobe (q.v.). South portico added in 1824 and north portico in 1829. Interior structure rebuilt 1902 and 1948–52. Oval-shaped Blue Room with early-19th-century furnishings. Red Room decorated with Empire-period pieces. Green Room with furnishings of about 1800. – The Capitol (I, PL. 79), begun 1793 from designs of William Thornton. North wing completed 1800; south wing by Latrobe, based on original Thornton designs, completed 1811. Interior burned by the British in 1814; redesigned and rebuilt by Latrobe 1815–17. Central part completed by Charles Bulfinch (q.v.) in 1829. Side wings and iron dome added 1851–65 by Thomas U. Walter. Terraces and grounds 1875–92 from designs of Olmsted. East front extended and rebuilt 1960–61. – Octagon House, by Thornton, 1798–1800. – Decatur House, by Latrobe, 1818–19. – Old City Hall (now the Courthouse), by George Hadfield, 1820, in the English Roman manner; extended 1849 and 1935. – Blair House (the President's guesthouse), 1824; restored 1963–64. – Treasury Building (I, PL. 79), the first major public building in the city to use the temple form and portico as primary architectural elements, by Robert Mills, 1836–42; west wing added by Isaiah Rogers 1826–69. – Old Patent Office (now part of the Smithsonian Institution), by William P. Elliot, Ithiel Town, and Mills, built 1836–40, 1849–67, a handsome Greek Doric building; later changes. – Smithsonian Institution, by James Renwick, completed 1852, in Norman style. – Library of Congress Building, by Smithmeyer & Pelz, 1886–97, inspired by French Beaux-Arts classicism. – Pan-American Union Building, designed by Paul Cret and Albert Kelsey, 1907–10, a mixture of classical architecture and Mayan and Aztec influences. – Folger Shakespeare Library, by Cret, 1929–32, in neoclassic style. – Supreme Court Building, by Cass Gilbert, 1935, in the form of a Corinthian temple. – National Archives Building, by John Russell Pope, completed 1939, in neoclassic style. – National Gallery of Art, by Pope, with Otto Eggers and Daniel Higgins, completed in 1941, also neoclassic.

Churches: Christ Church, by Latrobe, 1806–07, early Neo-Gothic; later changes. – St. John's Church, by Latrobe, 1815–16, in a Roman classical design; tower and portico by Latrobe, 1820; interior remodeled 1883 by Renwick. – New York Ave. Presbyterian Church, 1820 and later, in the style of James Gibbs. – Cathedral of SS. Peter and Paul (also called National, or Washington, Cathedral), begun 1908 (work still in progress) from designs by George Bodley and Henry Vaughan, Neo-Gothic.

Monuments: Washington Monument, an obelisk designed by Mills in 1833, erected 1848–84. – Lincoln Memorial (I, PL. 88), by Henry Bacon, 1914–22, a Greek Doric temple; the seated figure of Lincoln is by Daniel Chester French. – Jefferson Memorial, by Pope, Eggers, and Higgins, 1939–41, a colonnaded rotunda enclosing a standing figure of Jefferson by Rudolph Evans. See also MONUMENTS.

Georgetown: Notable examples of buildings in the classical revival manner include "The Lindens" (transported from Danvers, Mass.), 1754, with three sets of French scenic wallpaper; the Foxall, Thomas Beall, Decatur, and Laird-Dunlop houses, all built in the 1790s; Tudor Place, by William Thornton, 1794–1815, with extensive formal gardens; St. John's Church, also by Thornton, 1803–06, enlarged 1843; and the Dumbarton, Walker, Harriman (also called Riggs-Riley), and John Stoddart Haw houses, all erected in the early 19th century.

Museums: The Smithsonian Institution, founded in 1846 by James Smithson, has numerous branches and administers the following five museums: (1) National Gallery of Art, which includes the Mellon, Kress, and Widener collections, with European painting and sculpture from the 13th to the 19th century, American painting, French impressionist and postimpressionist painting, European minor arts, Chinese porcelain, and prints and drawings from the 15th century to the present. – (2) Freer Gallery of Art, with an outstanding collection of Oriental bronzes, ceramics, jade, and paintings and a group of works by Whistler, including his Peacock Room (PL. 421). – (3) National Collection of Fine Arts, with American and European painting, sculpture, and minor arts. – (4) National Portrait Gallery. – (5) Bureau of American Ethnology, with American Indian material. – Corcoran Gallery of Art, with American painting, sculpture, prints, and drawings, French 19th-century painting, Oriental rugs, and European minor arts. – Howard University Gallery of Art, with American painting, sculpture, and graphic arts, African Negro sculpture, and European graphic arts. – Textile Museum, with rugs and textiles from Spain, Portugal, Oceania, Africa, and the Americas. – Phillips Collection, with American and European art since 1870. – Dumbarton Oaks Research Library and Collection, with Byzantine mosaics, textiles, ivories, sculpture, and metalwork.

New England States (Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut). Beginning with the settlement of Plymouth, Mass., in 1620 and Salem, Mass., in 1626, Englishmen seeking religious haven established their close-knit church-centered towns in New England's rocky landscape. There they measured out the lands between the ocean and the French and Dutch posts. A typical plan was that of Wethersfield, Conn., as it existed in 1640–41, with several "ladders" of divided land carrying over manorial field-division practices (though farming in common was speedily abandoned for individual control). A compact village of relatively small home lots centered around the meetinghouse and the common grazing land. By the mid-18th century most of New England was divided in this manner, giving its life the basically town-centered cast it still retains.

Most of the settlements on the North American continent included, or developed from, forts of the usual European design. In New England it was necessary to adapt the land system to some sort of fortification for protection against the Indians. Windsor, Conn., was a typical example of the manner in which the home lots in the center of the town were fortified in the mid-17th century: they were surrounded by a ditch, which was enclosed by a palisade of wooden posts.

Though these concepts of land division were basically developments of late medieval European practices, the colonists were also aware of the rebirth of classical town-planning principles. These were reflected in the beautifully regular plan of New Haven in 1641, in which one great square was divided by four intersecting roads into nine equal squares. The meetinghouse and burying ground were in the central square, which was held in common. As the cities grew, more attention was given to the planning of individual architectural groupings as well; when Stoughton Hall (1699) and Massachusetts Hall (1718–20) were erected adjoining the original Harvard College building of 1677 in Cambridge, what was undoubtedly the finest urban architectural group of the first century of New England's colonial existence was created.

The buildings of this period reflected the Anglo-Dutch background of the settlers; from England came the wooden architecture of Essex and Middlesex counties and the brickwork of Lincolnshire, and the use of vertical boarding in Providence, R.I., was probably derived from the Low Countries. Master builders, using builders' guides imported from Europe, decorated the houses with simple Renaissance details. Peter Harrison of Newport, R.I., was the only architect to create academic designs that compare favorably with, and, in fact, were inspired by, the work of the great English designers, and professional architectural practice has been continuous in New England, as in the country as a whole, only since the time of Bulfinch. His work, much influenced by the designs of the Adam brothers, included notable urban units, such as Franklin Crescent in Boston, and city plans, such as his radial avenues for the filled-in Mill Pond in Boston, 1808.

Horticultural correspondence was carried on throughout the colonial period, but as a branch of science rather than in terms of landscape design and architecture. However, as the three alternative projects prepared by Samuel McIntire for the garden of Derby Mansion (destroyed) in Salem, Mass., show, European trends of the 18th century were known in the New World.

After the Revolution many mill towns developed in New England. In addition to the mill buildings there were workers' houses and dormitories, and sometimes a lyceum and schoolhouse. In Lowell, Mass., Kirk Boott laid out a whole factory community in 1822; the handsome factory buildings were placed between the residential area and the river.

Though the trading wealth of Newport, superbly situated on Narragansett Bay, made it a city of sophisticated buildings before the Revolution ruined its trade, Boston has been the great city of the region since the mid-17th century. Its role as a provincial and national center for the dissemination of the international architectural style has varied, but not ceased, since the days of Bulfinch. The first American school of architecture was established by William R. Ware in 1865 at the Massachusetts Institute of Technology in Cambridge. Henry H. Richardson's (q.v.) "Romanesque" Trinity Church (I, PL. 84) and McKim, Mead & White's (q.v.) Italianate Public Library, both in Boston, announced two of the major modes of American architecture in the late 19th century. Louis Sullivan's (q.v.) beginning was in the Boston of Richardson's great period. Since 1930 New England has been an important center in the development of the American use of the international style.

Maine. The first permanent settlement was established in 1622 on Monhegan island. Maine was part of Massachusetts from 1652 to 1820, when it was admitted to the Union as a separate state. The Canadian boundary was settled by a treaty with Great Britain in 1842. Augusta became the capital of the state in 1831.

Augusta. Fort Western, a colonial wilderness fort with a stockade and a blockhouse. – State House, designed by Bulfinch, 1829–31, in Roman classical style; heavily altered in 1911.

Bangor. Samuel Farrer House, designed by Richard Upjohn, 1836, in Greek revival style. – St. John's Church, also by Upjohn, Neo-Gothic.

Brunswick. Bowdoin College Chapel, by Upjohn, 1845–55, in Romanesque style. – First Parish Congregational Church, also by Upjohn, 1846, Neo-Gothic. – Bowdoin College Museum of Fine Arts, located in the Walker Art Building, an exquisitely Italianate building of 1894 by McKim, Mead & White, with American portraits, classical and antique art, European drawings, and Chinese and Korean ceramics.

Columbia Falls. Ruggles House, designed by Aaron Sherman of Duxbury, Mass., 1816–18, with a notable flying divided staircase.

Gardiner. Christ Church, 1819, Neo-Gothic. – "Oaklands," by Upjohn, 1835, a Neo-Gothic stone house.

Kittery Point. Lady Pepperell House, 1760, with a highly organized Palladian façade; characteristic period furnishings.

Ogunquit. Museum of Art of Ogunquit, with 20th-century American sculpture, painting, graphic arts, and ceramics.

Portland. Tate House, 1755, with beautiful interior paneling. – Wadsworth-Longfellow House, 1785. – Sweat Mansion, by Alexander Parris, 1800, an exceptionally fine example of the Federal period. – Portland Observatory, a 233-foot tower erected in 1807. – St. Luke's Cathedral, by Henry Vaughan, 1855, in English Gothic style. – Victoria Mansion, by Henry Austin, 1859, a classic example of the Victorian style. – City Hall, by Carrère & Hastings and Stevens & Stevens, 1912, in Federal style. – Portland Museum of Art, with American painting, sculpture, and graphic arts.

Rockland. William A. Farnsworth Library and Art Museum, with contemporary Maine painting, prints, and drawings. – Next to it is the Farnsworth Homestead, a Greek revival building with Victorian furnishings.

Rockport. Spite House, erected 1806 in Phippsburg and moved to its present location in 1925.

Sedgwick. Baptist Church, by Benjamin Deane, 1837, sophisticated Greek revival.

South Berwick. Sarah Orne Jewett Memorial, 1774. – Hamilton House, 1785–88, a Georgian style house with terraced gardens.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

South Windham. Parson Smith Homestead, 1764, erected on the site of Old Province Fort.

Waterville. Colby College: Memorial Hall, 1821; Champlin Hall, by Thomas U. Walter, 1836. – Colby College Art Museum, with American painting, especially of the 19th century, and folk art.

Wiscasset. Nickels-Sortwell House, 1807–08, in the Federal style. – Lincoln jail, 1809–11, and adjoining county courthouse, 1824.

York. Old Gaol Museum, 1653, the oldest existing English public building in America. – Old School House, 1745. – Wilcox House, before 1766. – Jefferd's Tavern, a pre-Revolutionary building.

BIBLIOG. FWP, Maine: A Guide 'Down East,' Boston, 1937; Maine Writers Research Club, Historic Churches and Homes of Maine, Portland, 1937; FWP, Portland City Guide, Portland, 1940; G. A. Mellon, ed., Maine and Its Role in American Art: 1740–1963, New York, 1963; W. B. Miller, ed., Maine and Its Artists: 1710–1963, Waterville, Maine, 1963 (cat.).

New Hampshire. First settled by the English near Portsmouth in 1623, New Hampshire was governed by Massachusetts until 1741. One of the 13 original colonies, it was admitted to the Union in 1788. Concord became the capital in 1808.

Concord. State House, 1819; enlarged in Italian style 1863–66; enlarged again 1909–10. – New Hampshire Historical Society headquarters, containing furniture made in New England from 1680 to 1730.

Cornish. Saint-Gaudens Memorial: main building, erected in 1800 and originally a tavern, was the home of the sculptor Augustus Saint-Gaudens; the Little Studio was his workshop; in the Large Studio are casts, reliefs, and busts.

Exeter. The garrison house, ca. 1658, with 18th-century additions. – Cincinnati Memorial Hall (formerly Ladd-Gilman House), 1721. – Liberty Emery House, ca. 1775. – Meetinghouse, by Ebenezer Clifford, 1798. – Simeon Folsom House, 1816, with addition of 1830.

Hanover. Captain Aaron Storrs House, 1771 or 1774. – Choate House (formerly Sylvanus Ripley House), 1786. – Woodward-Lord House, 1802. – Dartmouth College campus, with a group of buildings by Ammi B. Young: Thornton and Wentworth halls, both 1827–28; Reed Hall, 1839; Shattuck Observatory, 1854. – Carpenter Art Galleries in Carpenter Hall on the campus, with American and French painting, sculpture, graphic arts, and Chinese art. – Baker Library on the campus, containing a great mural series by José Clemente Orozco (q.v.; I, PL. 145).

Lyme. Congregational Church, 1812; second floor added 1847. Horse sheds next to the church, also built 1812. – In the vicinity of Lyme are the Enos Snow Farm, ca. 1790, and the Wittenborn-Wagner House, with wall paintings of ca. 1825.

Manchester. First Methodist Episcopal Church, 1829; moved from Derryville in 1888–89 and raised above a new first story. – Currier Gallery of Art, with European and American painting and American minor arts.

New Ipswich. Barrett House, 1800, a three-story country mansion.

Peterborough. Unitarian Church, by Bulfinch, 1827. – Goyette Museum of Americana.

Portsmouth. Jackson House, ca. 1664. – Warner House (also called the McPhedris-Warner House; I, PL. 77), ca. 1716. – Portsmouth Historical Society headquarters (also known as the John Paul Jones House), 1758. – Wentworth-Gardner House, 1760, one of the most perfect examples of Georgian architecture in America. – Moffatt-Ladd House, 1763, with a great "hall" in the English sense, the finest one in New England, and beautiful French scenic wallpaper; the terraced garden dates from the time the house was built; the counting house was added in 1830. – Governor John Langdon Mansion Memorial, 1784, one of the finest Georgian houses in America. – Thomas Bailey Aldrich Memorial, 1790. – Governor Levi Woodbury Mansion, 1809.

Walpole. Buffum House, ca. 1785; Greek revival additions in 1820s. – General Amasa Allen House, 1792. – Knapp House, 1812. – Walpole Academy, 1831. – Howland and Howland-Schofield houses, both erected in the 1840s, with classical revival details.

BIBLIOG. P. D. Orcutt, The Moffatt-Ladd House, Portsmouth, 1935; J. M. Howells, The Architectural Heritage of the Piscataqua, New York, 1937; FWP, New Hampshire: A Guide to the Granite State, Boston, 1938; E. A. Speare, Colonial Meeting-houses of New Hampshire, Littleton, N.H., 1938; Architecture near the Piscataqua, Portsmouth, 1964.

Vermont. It was not until 1724 that a permanent settlement was established, in what is now Brattleboro. Vermont was claimed by various states, and was admitted to the Union as a separate state in 1791. Montpelier has been the capital since 1805.

Arlington. St. James's Church, 1829, early Neo-Gothic.

Bennington. Congregational Meetinghouse, by Lavius Fillmore, 1805–06. – Bennington Museum, with Bennington pottery, early American glass, American painting, and French sculpture.

Burlington. "Grassmount" (now part of the University of Vermont), 1804, considered the best example of Georgian architecture in the state. – Unitarian Church, 1816, in the Boston manner, Charles Bulfinch and Peter Banner, consultants.

Middlebury. Congregational Church, by Lavius Fillmore, 1806–09, with complex cross-vaulted ceiling. – Community House (also known as Battell House), 1815. – Painter Hall (part of Middlebury College), 1816.

Montpelier. State House, by Ammi B. Young, 1833–37; new interior, cupola, and wings by J. Richards 1857–58; west wing extended 1885.

Rockingham. Rockingham Meetinghouse, 1787–1800, with a noteworthy pulpit.

Shelburne. Shelburne Museum, a collection of 18th- and 19th-century New England buildings, all moved to the site for preservation, filled with displays of Americana. Noteworthy buildings include the Prentis (ca. 1733), Dutton (ca. 1782), Vermont (ca. 1790), Stencil (ca. 1800), and Dorset (ca. 1840) houses; the Vergennes School (ca. 1830); the Shaker Homestead Shed (ca. 1834); the Stone Cottage (1840); the Charlotte Meetinghouse (ca. 1840); a covered bridge (ca. 1845); and barns, a general store, a blacksmith shop, and a jail. The Stagecoach Inn (ca. 1783) contains American sculptured folk art. The Webb Gallery has 18th- and 19th-century American primitive and academic paintings. Wildlife paintings are exhibited in the Beach Gallery. In the Lighthouse Gallery are marine paintings and prints. The Electra Havemeyer Webb Memorial Building contains the collection of furniture and furnishings and of European paintings of the late Mr. and Mrs. J. Watson Webb, the founders of the Shelburne Museum.

Weston. Farrar-Mansur House, originally a tavern, 1797, with an interesting L-shaped kitchen.

Windsor. Old Constitution House, before 1777. – Congregational Meetinghouse (Old South Church), by Asher Benjamin, 1798.

Woodstock. Colonial village with an unusual oval village green. – Dana House, 1807. – Old White Meetinghouse, 1808.

BIBLIOG. V. Ravi-Booth, Concerning the Old First Church of Bennington, New York, 1933; M. G. Nye, Vermont's State House, Montpelier, 1936; FWP, Vermont: A Guide to the Green Mountain State, Boston, 1937; H. W. Congdon, Old Vermont Houses, New York, 1940 (2d ed., 1946).

Massachusetts. Plymouth, founded in 1620, was the first permanent English settlement in New England. In 1629 a charter was granted to the Massachusetts Bay Colony, which remained in effect until 1684. Boston, settled in 1630, was made the capital of the Colony in 1632. A new charter was granted to the Colony in 1691. Massachusetts was the center of resistance to the British trade restrictions and other policies, leading to the outbreak of the Revolution. Massachusetts was one of the 13 original colonies, and was admitted to the Union in 1788.

Amesbury. Macy-Colby House, ca. 1650, typical pioneer home. – Rocky Hill Meetinghouse, 1785.

Amherst. Nehemiah Strong House, 1774. – Amherst College, with a fine group of buildings: two dormitories of 1821 and 1822; chapel of 1827; and the Octagon (formerly the observatory), by Henry A. Sykes, ca. 1850. – Amherst College, Mead Art Building, with European and American furniture and textiles, English and American portraits of the 18th and 19th centuries, and the banqueting hall of 1611 from Rotherwas House in England, an outstanding example of Elizabethan paneling.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Andover. Bradstreet House, 1667. – Pearson Hall at Phillips Academy, by Bulfinch, 1817. – Deacon Amos Blanchard House, 1819. – Phillips Academy, Addison Gallery of American Art, with American painting and minor arts from the 18th century to the present.

Attleboro. Two high schools by Walter Gropius (q.v.), designed in association with The Architects Collaborative, one of 1948 (I, PL. 93) and the other of 1955.

Barnstable. Coach House, 1640. – Sturgis Library, 1645. – Congregational Church, 1717. – Crocker Tavern, ca. 1754.

Beverly. John Balch House, ca. 1636. – John Hale House, 1694. – John Cabot House, 1781.

Boston. Settled by the Puritans in 1630, Boston was named after the city in England from which most of the Puritan leaders had come. Situated on Massachusetts Bay, it has always been an important port. Landmarks exist from all periods of the city's history. Since 1960 Boston has been undergoing an extensive redevelopment program.

Secular buildings: Paul Revere House, ca. 1676. – Moses Pierce-Hichborn House, ca. 1680. – Old State House, built 1713, rebuilt 1748; restored 1880–82. – Faneuil Hall, known as the "Cradle of Liberty," by John Smibert, 1742; burned in 1761 and rebuilt 1762–63; doubled in size on the same bay system by Bulfinch, 1805. – Shirley Place, in the Roxbury section, 1746, remodeled 1819, a superb baroque house. – Dillaway House, also in Roxbury, 1750. – State House (I, PL. 78), central part, the original section, of red brick, designed by Bulfinch 1787–88 and erected 1795–98, probably his greatest public building. Two white-marble wings and rear section added in 1831, 1859, 1889, and 1914. – Three Harrison Gray Otis houses designed by Bulfinch in 1796, 1800, and 1806. – Massachusetts General Hospital building (now known as the Bulfinch Pavilion), designed by Bulfinch in 1816–17 and executed by Alexander Parris in 1818–20. – Quincy Market, by Parris, 1825–26, Greek revival. – Tremont House (I, PL. 80, FIG. 254), by Isaiah Rogers, 1828–29. – U.S. Custom House, by Ammi B. Young, 1837–47, Ionic temple style. Tower added by Peabody & Stearns, 1913–15. – Boston Public Library, by McKim, Mead & White, 1888–95, a masterpiece in Italian Renaissance style. Famed series of mural paintings by Puvis de Chavannes, John Singer Sargent (qq.v.), and Edward A. Abbey. Addition, to be erected, designed by Philip Johnson in 1967.

Churches: Christ Church (Old North Church), by William Price, 1723. – Old South Meetinghouse, by Robert Twelves, 1729–30, modeled on 17th-century type. – King's Chapel, by Peter Harrison, built 1749–54; Ionic portico, by Thomas Clement, 1785–87. – Old West Church (now West End branch of Boston Public Library), by Asher Benjamin, 1806. – Park Street Church, by Peter Banner, 1809–10. – St. Paul's Church (now Cathedral), by Parris with carvings by Solomon Willard, 1819–20, important example of Greek revival style; pulpit by Richard Upjohn, ca. 1845. – Brattle Square Church (now First Baptist Church), designed by Henry Richardson (q.v.) in 1870, erected 1871–72. – Trinity Church (I, PL. 84), the great statement of the Romanesque revival, designed by Richardson in 1872, built 1873–77; porch added by Shepley, Rutan & Coolidge in the 1890s. – First Church of Christ, Scientist, 1904, in Italian Renaissance style.

Museums: Isabella Stewart Gardner Museum, with Italian Renaissance painting and sculpture, 16th- and 17th-century Dutch painting, classical and Far Eastern minor arts, and prints. – Museum of Fine Arts, with Egyptian art (especially Old Kingdom sculpture), Chinese, Japanese (X, PL. 219), and Indian painting and sculpture, Chinese export porcelain, Greek and Roman art, French impressionist and postimpressionist painting, American and European period rooms, American colonial silver, textiles, and graphic arts. – Institute of Contemporary Art, with modern painting and sculpture.

Brookline. Edward Devotion House, ca. 1750. – Old Heath House, 1791. – Harvard Church, by Edward Potter, 1873–75; interior restored after a fire in 1931.

Cambridge. Houses: Cooper-Frost-Austin House, 1657. – Lee-Nichols House, 1660. – Vassal-Craigie-Longfellow House, 1759. – Apthorp House, 1760. – Fayerweather-Merriam House, 1760. – Riedesel House, 1762. – John Hicks House, 1762. – "Elmwood," 1766. – Dexter Pratt House, 1811. – Stoughton House, by Henry Richardson, 1882–83, a fine example of his "shingle style."

Churches: Christ Church, by Peter Harrison, 1761, in the manner of Sir Christopher Wren. – First Parish Church (Unitarian Church), by Isaiah Rogers, 1833. – St. John's Chapel at Episcopal Theological Seminary, by William R. Ware, 1859.

Harvard University buildings: Massachusetts Hall, attributed to John Leverett, 1718–20. – Wadsworth House (now offices of Harvard Alumni Association), 1726. – Hollis Hall (XIII, PL. 260), 1736. – Holden Chapel, by John Smibert, 1744. – Harvard Hall, by Sir Francis Barnard, 1766; later additions. – University Hall, by Bulfinch, 1813–15. – Memorial Hall, by William R. Ware and Henry Van Brunt, 1870–78, Neo-Gothic. – Sever Hall, 1878–80, and Austin Hall, 1881–83, both by Henry Richardson. – Extensive building program in the Georgian style during the 1920s and 1930s, of which the best examples are Dunster, Lowell, and Eliot houses, by Coolidge, Shepley, Bulfinch & Abbott, 1930–31. – Graduate Center (VII, PL. 84), by Gropius and The Architects Collaborative, 1949–50. – Visual Arts Center, by Le Corbusier, 1961–63.

Massachusetts Institute of Technology buildings: Original main group, by Welles Bosworth, 1912–15, in classical style. – Baker House, the senior dormitory (I, PL. 2), by Alvar Aalto, 1947–49. – Kresge Auditorium and Chapel, by Eero Saarinen, 1953–56; the Auditorium was the first major shell construction in the United States. – Earth Sciences Center, by I. M. Pei, 1963.

Museums at Harvard University: Fogg Art Museum, with master prints and drawings, Romanesque sculpture, Italian primitives, French 19th-century painting, and Chinese sculpture, bronzes, and jades. – Busch-Reisinger Museum of Germanic Culture, with German late medieval sculpture, 18th-century sculpture and minor arts, and 20th-century painting, including the Bauhaus research collection. – Peabody Museum of Archaeology and Ethnology, with prehistoric, Oceanic, African, and pre-Columbian art.

Concord. Orchard House, two homes, one of 1650 and the other of 1730, remodeled and joined together. – Colonial Inn, 1716. – The Wayside, before 1717; remodeled 1845, 1860. – Wright Tavern, 1747. – The Old Manse, 1769. – Emerson House, 1828.

Danvers. Judge Samuel Holten House, 1670. – Rebecca Nurse House, 1678. – Page House, 1754. – Glen Magna, a colonial house with gardens. On the property is the Derby Summer House (moved from nearby Peabody), by Samuel McIntire, 1793, the finest extant American summer, or garden, house.

Danversport. Samuel Fowler House, 1810, a fine brick house, with several original wallpapers.

Dedham. Fairbanks House, 1636; later additions. See I, col. 248.

Deerfield. The mile-long main street of Old Deerfield is lined with historic old houses, almost 30 of them dating from the 18th century, 13 from the early 19th century, and the rest from the late 19th century. Many are open to the public and contain outstanding collections of early American furniture, silver and pewter, paintings, glassware, ceramics, and textiles. Architecturally the most significant structure is Memorial Hall (the original Deerfield Academy building), designed by Asher Benjamin, 1799; exhibited here are colonial furniture, paintings, ceramics, and fabrics. Other fine buildings include Frary House, late 17th century, with a central section added about 1717 and a front section built in the mid-18th century; Ashley House, 1732; Sheldon-Hawks House, ca. 1734; Dwight-Barnard House, 1754; Hall Tavern, 1765; Asa Stebbins House, 1799, with an ell dating from the 1750s; Wilson Printing House, 1816; and Wright House, 1824.

Gloucester. White-Ellery House, ca. 1640. – Babson House, 1740. – Hardy-Parsons House, 1750. – Sargent-Murray-Gilman-Hough House, 1768; remodeled 1916. – Captain Elias Davis House, 1804. – Universalist Church, 1806. – "Beauport," with over 20 rooms of different types and periods. – Hammond Museum, in the style of a medieval castle, with architectural fragments from European churches and castles and Gothic and Renaissance sculpture, furniture, and textiles.

Hancock. Hancock Shaker Village, with 17 Shaker buildings of the late 18th and the early 19th century. Of particular interest is the great barn of 1826, with a round stone ground story, a wooden superstructure, and a hexagonal cupola above that.

Hingham. The Old Ordinary, 1650. – "Old Ship" Meetinghouse, 1681; additions of 1731, 1755; perhaps the most important public building in America remaining from the 17th century. See also I, col. 249. – Samuel Lincoln House, ca. 1741; later additions.

Ipswich. John Whipple House and garden, ca. 1640; additions of 1670, 1700. – Preston-Foster House, ca. 1640. – Hart House (now an inn), 1640. – Emerson-Howard House, ca. 1648; addition of 1709. – Thomas Franklin Waters Memorial (formerly John Heard House), 1795. – Lakeman-Johnson House, second quarter of 19th century, a typical sea captain's home.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Lancaster. Old Lancaster Church, by Bulfinch, 1816, his finest remaining church and probably his most sophisticated design.

Lexington. Buckman Tavern, 1690. – Munroe Tavern, 1695. – Hancock-Clarke House, 1698; front section added 1734. – Marrett Munroe House, 1729; restored 1915. – Dr. Joseph Fiske House, 1732. – Jonathan Harrington House, before 1775; restored 1910. – First Normal School, 1822.

Lincoln. Gropius (VII, FIG. 179), Breuer, and Ford houses, by Walter Gropius and Marcel Breuer, 1937–39. – De Cordova and Dana Museum and Park, with contemporary New England art.

Malden. Malden Public Library, by Henry Richardson, 1883–85, the last of his small libraries, in Romanesque style; contains European and American painting, sculpture, prints, and drawings of the 17th–19th century.

Marblehead. St. Michael's Church, 1714. – Old Town Hall, 1727. – King Hooper Mansion, 1728, with additions of 1745; fine paneled rooms and a formal garden. – Powder House, 1755. – Jeremiah Lee Mansion, 1768, one of the best examples of Georgian architecture in the country, three stories high with a glassed-in cupola; with rare furnishings and English wallpaper.

Medford. Isaac Royall House, 1631, 1677; completely rebuilt in 1732 in handsome wooden baroque style based on contemporary architecture of Antigua; later changes. – Peter Tufts House (formerly Cradock House), 1678, a gambrel-roofed brick residence. – Grace Church, by Richardson, 1867–68, Neo-Gothic.

Nantucket. The old section has 400 houses antedating the fire of 1846, most of them in the Federal and Greek revival styles. The Jethro Coffin House, built in 1686, is the oldest house on the island. Noteworthy are the three identical brick houses erected in 1838, known as the East Brick, Middle Brick, and West Brick houses, in Federal style. The Jared Coffin House (formerly Ocean House) was built in 1845 in Greek revival style; later altered, it has recently been restored.

Newbury. Tristram Coffin House, ca. 1651; additions of late 17th and the 18th century. – Swett-Ilsley House, ca. 1670; later additions. – Short House, 1730s, an early brick-ended wooden house.

Newburyport. Old South Church, 1760. – Church of the First Religious Society in Newburyport, attributed to Timothy Palmer, 1800–10. – Cushing House, 1808. – Custom House, by Robert Mills, 1835, with superb Greek-massed stonework.

Northampton. Smith College Museum of Art, with American and European painting (particularly 19th- and 20th-century French masters), sculpture, prints, and drawings from the 18th century to the present.

North Easton. Ames Memorial buildings (town hall, library, railroad station) and Ames Gate Lodge (I, PL. 83), by Richardson, built in the 1880s.

Pittsfield. Berkshire Museum, with Hudson River School and European painting, Far Eastern art, and ancient and modern sculpture.

Plymouth. Plimouth Plantation, a re-creation of the original Pilgrim village. – Replicas of the first Pilgrim house, the First Fort and Meetinghouse (1622–23), and the 1627 house. – Sparrow House, 1640, the oldest house in Plymouth. – John Howland House, 1666. – Harlow House, 1677. – Spooner House, ca. 1750. – Winslow House (headquarters of the General Society of Mayflower Descendants), 1754. – Antiquarian House, 1809, with Federal furnishings, dolls, and costumes. – Pilgrim Hall, 1824, in Greek revival style; contains Pilgrim relics, furniture, silver and pewter, and 17th-century American paintings.

Quincy. John Quincy Adams Birthplace, 1663. – John Adams Birthplace, 1675. – Adams Mansion, now the Adams National Historic Site, erected 1731, enlarged several times in the 19th century. Home of the Adams family from 1788 to 1927; original furnishings. – Colonel Josiah Quincy House, 1770. – Stone Temple, by Alexander Parris, 1828, a fine church in Regency style. – Crane Memorial Library (I, PL. 85), by Henry Richardson, 1880–83.

Salem. Pioneers' Village, a reproduction of the village as it appeared about 1630. – Witch House, 1642. – Pickering House, 1651. – Retire Beckett House, 1655. – House of Seven Gables, 1668. – Hathaway House, 1682. – John Ward House, 1684. – Ropes Mansion, 1719; later additions. – Crowninshield-Bentley House, 1727. – Derby House, 1761–62. – Derby Wharf, begun ca. 1762; rebuilt 1938–39. – Many fine buildings by Samuel McIntire, among which are Peirce-Nichols House, 1782, Pingree House, 1804, and Hamilton Hall, 1806. – Market House, 1816. – Old Town Hall, 1816. – Custom House, 1819. – St. Peter's Church, 1833. – First (Unitarian) Church, originally called North Church, 1835. – City Hall, 1837. – Second (Unitarian) Church, by Minard Lafever, 1846, Neo-Gothic. – Peabody Museum, housed in the handsome East India Marine Hall of 1824, with Polynesian, Japanese, and American Indian ethnological collections, maritime history exhibits, and ship models, figureheads, and paintings. – Essex Institute, with American portraits of the 18th and the early 19th century, furniture, and minor arts.

Springfield. U.S. Armory, 1794, the first arsenal in the United States. – Alexander House (Linden Hall), built from designs of Asher Benjamin, 1811. – First Church of Christ, by Isaac Damon, 1819. – A group of buildings by Henry Richardson: Unity Church, 1866–68, Neo-Gothic; Western Railway offices and Agawam National Bank, late 1860s, in Renaissance style; Hampden County Courthouse and North Congregational Church, 1871–73. – Municipal Group, by Pell & Corbett, 1931, two structures in temple form between which is an Italianate clock tower topped by a spire. – Museum of Fine Arts, with Dutch 17th-century painting, American, French, and Italian painting of the 17th–19th century, Far Eastern art, and prints. – George Walter Vincent Smith Art Museum, with paintings, minor arts, and Oriental art.

Sturbridge. Old Sturbridge Village, a re-creation of a representative New England community of the period 1790 to 1840, has over 50 structures, many moved from other towns in New England. There are two meetinghouses: the Friends' (Quaker), 1796, and the Village, 1832, a fine Greek revival building. Houses include the Mashapaug, late 17th century with additions of the 18th century; Fenno, 1704; Stephen Fitch, ca. 1735; Solomon Richardson, ca. 1748; Oliver Wight, 1787, with wall paintings by Rufus Porter of ca. 1825; General Salem Towne, 1796; and Freeman, ca. 1801. The Thomson Bank, ca. 1835, and Levi Lincoln House, 1836, are in the Greek revival style. Other structures are a saw mill, grist mill, barns, general store, covered bridges, printing office, and tin, gun, blacksmith, and boot shops. The crafts of weaving, candlemaking, woodworking, ceramics, and metalworking are demonstrated.

Topsfield. Parson Capen House (I, PL. 74), 1683.

Waltham. Lyman House ("The Vale"), built from plans by Samuel McIntire, 1793; altered and enlarged 1884, 1917. This is the only extant country house designed by McIntire; the great ballroom and bow parlor are his own work. On the landscaped grounds are a stable by McIntire and two greenhouses, one dating from 1800 and the other from 1804. – Gore Place, 1804; restored. An enormous red-brick mansion, it is a magnificent example of the Federal period; it contains period American and English furniture.

Wellesley. Town Hall and Library, by Shaw & Hunnewell, completed 1881, in Flemish style. – Wellesley College, Jewett Arts Center, designed by Paul Rudolph, 1956–58, with sculpture, painting, and drawings of all periods.

Williamstown. Sterling and Francine Clark Art Institute, with American and European painting of the 15th–19th century (especially French Academic and impressionist works), 18th- and 19th-century furniture and sculpture, European and American silver, and prints and drawings. – Williams College, Lawrence Art Museum, housed in an octagonal building of 1846 in Greek revival style with an Ionic rotunda, later enlarged; contains medieval and Renaissance art, Spanish painting, Italian, Spanish, and early American furniture, English and American portraits of the 18th–19th century, ceramics, and glassware.

Worcester. Several houses by Elias Carter (1781–1864), who may have introduced the Greek revival style to the region. – Union Station, by Ware & Van Brunt, 1875–77, with a high machicolated clock tower. – Worcester Art Museum, with ancient sculpture and ceramics, Romanesque sculpture and a Benedictine chapter house, Near and Far Eastern art, and European and American painting. – John Woodman Higgins Armory, housed in the Worcester Pressed Steel Company building, by Joseph Leland, 1930, a fine example of open steel and glass construction; contains armor and metalwork of all periods, stained glass, paintings, and tapestries.

Rhode Island. The state was founded by religious exiles from Massachusetts; their first settlement was at Providence in 1636. A charter was granted by Charles II in 1663, when the province was known as Rhode Island and Providence Plantations. Rhode Island was admitted to the Union in 1790. Providence is the capital.

Bristol. Barrack, Bosworth, and Reynolds houses, all pre-Revolutionary. – Bristol County Courthouse, 1817, in Federal style; renovated in 1930s. – William G. Low House (I, PL. 85), by McKim, Mead & White, 1887, in "shingle style."

Coventry. Nathanael Greene Homestead, 1770.

East Greenwich. Kent County Courthouse, 1750; interior renovated. – James Mitchell Varnum House and Museum, 1773. – Friends' Meetinghouse, 1804. – Armory of the Independent Company of Kentish Guards, ca. 1842.

Johnston. Clemence-Irons House, ca. 1680, a stone-end, one-story house with loft; restored.

Kingston. Washington County Courthouse (now a library), 1775. – Helme House, 1802.

Lincoln. Eleazar Arnold House, 1687, a stone-end house with an unusual pilaster-top stone chimney; restored. – Friends' Meetinghouse, 1703. – "Hearthstone" (Smith Mansion), early 19th century.

Middletown. "Whitehall," a 17th-century farmhouse that Bishop George Berkeley purchased in 1729 and enlarged; restored. – Green End Fort, 1777.

Newport. Newport was a prosperous city in the colonial era, and over 350 pre-Revolutionary buildings still exist. After the Revolution commerce declined, but in the late 1830s the city was reborn as a summer resort and a large number of magnificent villas and mansions were erected.

Pre-Revolutionary buildings: Old Stone Mill, ca. 1673; the theory that it was built by the Norsemen in the 11th century has been discarded. – White Horse Tavern, 1673; restored. – Wanton-Lyman-Hazard House, 1675, one of the finest Jacobean houses in New England; restored. – Mawdsley-Gardner-Watson-Pitman House, ca. 1700, a two-story hip-roofed house. – Captain Peter Simon House, 1725, with a fine pedimented doorway. – Captain John Warren House, 1736, a two-story gambrel-roofed building. – Colony House (I, PL. 76), by Richard Munday, 1739–40, with a columned Great Hall and a paneled Council Chamber. – Dennis House (now St. John's Rectory), 1740. – Redwood Library, central wing by Peter Harrison, 1748, based on a design for a casino for Sir Charles Hotham by Inigo Jones; additions of 1858, 1875, and 1913; restored. Contains an important collection of American portraits. – Hunter House, 1748, one of the ten best examples of colonial residential architecture in America; restored. Furnished with 18th-century Newport pieces. – John Bannister House, 1751. – Vernon House (now Family Service Society building), ca. 1758, with 18th-century wall paintings in Chinese style. – Governor John Tillinghast House, 1760, a three-story gable-on-hip-roofed house; later enlarged. – Brick Market, by Peter Harrison, 1762, based on Somerset House by Inigo Jones; restored. – William Finch House, 1770, a two-story gambrel-roofed house.

Summer mansions: "Kingscote," by Richard Upjohn, 1839, Neo-Gothic. – Edward King House (now People's Library), by Upjohn, 1845–47, in Italian villa style. – "Malbone," by A. J. Davis, 1848–49, Neo-Gothic. – "Beechwood," by Andrew Downing and Calvert Vaux, 1851–52, in Italian villa style; rebuilt by Vaux in 1855 after a fire. – Willoughby Villa (now Ocean Vista Hotel), by Leopold Eidlitz, 1854, in Swiss chalet style. – Home of Richard Morris Hunt, 1870–71, a mixture of American colonial style and Viollet-le-Duc. – Cram House by Dudley Newton, 1871–72, in Queen Anne style. – Watts Sherman House (now Baptist Home of Rhode Island), by Henry Richardson and Stanford White, 1874; additions by Dudley Newton, 1875. – H. A. C. Taylor House, by McKim, Mead & White, 1885–86, the first colonial revival house. – Newport Casino, by McKim, Mead & White, 1880–81, in "shingle style." – Isaac Bell, Jr., House (I PL. 85, FIG. 258), by McKim, Mead & White, 1881–82, in "shingle style." – "Belcourt," by Richard Morris Hunt, 1882, French Renaissance. – "Ochre Court" (now part of Salve Regina College), by Hunt, 1888–91, French Renaissance. – "Marble House," by Hunt, 1888–92, Italian Renaissance. – "The Breakers," by Hunt, 1892–95, Italian Renaissance. – "The Elms," by Horace Trumbauer, 1901, inspired by the Château d'Asnières near Paris. – "The Waves," John Russell Pope's own home, 1927, in an English cottage style related to Lutyens.

Churches: Quaker Meetinghouse, 1699–1705; enlarged 1808, 1818. – Trinity Church (I, PL. 76), by Richard Munday, 1725–26; steeple 1741; enlarged 1762; tower and steeple rebuilt 1768. In this beautiful church Munday incorporated features of several of Wren's London churches. The three-tier wineglass pulpit is the only one of its kind in America. – Sabbatarian Meetinghouse (now part of the Newport Historical Society building), attributed to Munday, 1729. – Touro Synagogue (I, PL. 75), by Peter Harrison, 1759–63; splendid interior based largely on that of the Whitehall Banqueting House as shown in Kent's *Designs of Inigo Jones*. – St. Paul's Methodist Church, 1806, with interior detail by Benjamin Pitman. – St. George's School, chapel by Cram & Ferguson, 1928, a succinct statement of their brilliant Gothic.

Pawtucket. Pidge Tavern, ca. 1640. – Daggett House, 1685. – Old Slater Mill, 1793; restored. The cradle of the textile industry in America.

Providence. Many buildings remain from the 18th and the early 19th century in the city's historic East Side. In the downtown business and shopping district a program of urban renewal is in progress and a new civic center is being planned (PL. 178).

Secular buildings: Stephen Hopkins House, ca. 1743. – Old State House (now Sixth District Court), 1762. – "Shakespeare's Head," 1763, a square wooden house with a garden. – Brick School House, 1769. – Betsy Williams Cottage, 1773. – Joseph Brown House, by Joseph Brown, 1774. – Market House (now part of Rhode Island School of Design), 1774; third story added 1797; restored 1938–39. – John Brown House (now Rhode Island Historical Society headquarters), by Joseph Brown, 1786; with furniture by 18th-century Newport cabinetmakers and early American portraits. – Joseph Nightingale House (also known as John Carter Brown House), 1792. – Sullivan Dorr House, by John Holden Greene, ca. 1810; said to be modeled after Alexander Pope's villa at Twickenham, England; with wall paintings by Michele Felice Corné. – Edward Carrington House, 1810–12; contains rare Chinese ceramics, sculpture, ivories, and wallpaper. – Eliza Ward House, 1813; with French wallpaper. – Truman Beckwith House, by John Holden Greene, 1820. – The Arcade, by Russell Warren and James Bucklin, 1827–28, in Greek temple form with superb monolithic unfluted columns. – Providence Athenaeum, by William Strickland, 1836–38, a chaste Greek revival building; later changes. – State House, by McKim, Mead & White, 1895–1904, inspired by Bulfinch. – Brown University group: University Hall, by Joseph Brown, 1770–71; Hope College, 1822; Manning Hall, by James Bucklin, 1835, a fine Greek Doric temple; Rhode Island Hall, 1840; and Slater Hall, 1879.

Churches: First Baptist Meetinghouse, by Joseph Brown, 1775; the steeple is based on one of Gibbs's rejected designs for St. Martin-in-the-Fields; restored 1957–58. – Beneficent Congregational Church (known as "Round Top"), 1809; neo-Greek remodeling by James Bucklin, 1836. – St. John's Cathedral, by John Holden Greene, 1810,

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

generally inspired by Bulfinch's New South Church in Boston; early use of Gothic details (perhaps from Langley); Renaissance chancel added by Cram & Ferguson in the 1920s. – First Congregational Church, by John Holden Greene, 1816. – Grace Church, by Richard Upjohn, 1846, Neo-Gothic.

Museums: Rhode Island School of Design, Museum of Art, with classical art, Far Eastern art, 18th-century English and American furniture, and 19th-century French painting. – Brown University, Annmary Brown Memorial, with paintings, incunabula, and manuscripts, and John Carter Brown Library, with pre-Columbian manuscripts, medieval miniatures, and Americana.

Saunderstown. Samuel Casey Farm, ca. 1750. – Gilbert Stuart Birthplace and Snuff Mill, 1751.

Wickford. Old Narragansett Church (formerly St. Paul's), built 1707 in Narragansett, moved to Wickford in 1800; English nonconformist style. – In nearby Cocumscussoc is Smith's Castle, ca. 1679.

Connecticut. The Dutch erected a fort on the present site of Hartford in 1633, but the first permanent settlements were established by colonists from Massachusetts Bay in Wethersfield, Windsor, and Hartford in 1635. Connecticut was admitted to the Union in 1788. Hartford is the state capital, but from 1701 to 1875 it shared the honor with New Haven.

Branford. Swain-Harrison House, ca. 1680. – Old Academy, 1820, in late Georgian style.

East Haddam. "The Mowings," late 17th century. – "Dunstaffnage," 1738; remodeled 1790. – Nathan Hale Schoolhouse, 1773. – Goodspeed Opera House, 1876; restored.

Essex. Pratt House, mid-18th century; with a fine collection of American furniture and furnishings. – Lord House, late 18th century. – Hill Academy, 1831.

Fairfield. Sun Tavern, 1780. – Benson House, 1780; enlarged 1832. – Town Hall, 1794; restored and extended 1936. – Burr Mansion, 1790; altered 1840. – Old Academy, 1802–04.

Farmington. Stanley-Whitman House (now Farmington Museum), ca. 1660. – Congregational Church, 1771. – General Solomon Cowles House, 1782. – George Cowles House, 1804. – Hill-Stead Museum, with French impressionist paintings and Japanese prints.

Guilford. Henry Whitfield House, 1639; rebuilt in 1868 after a fire; restored 1930–39. A large stone house of the "bawn" type with 17th-century furnishings. – Hyland House, ca. 1660; restored 1916. – Thomas Griswold House, 1735.

Hartford. Old State House (now a museum), by Bulfinch, 1792–96, with a magnificent Senate, or Council, Chamber; later changes. – First Church of Christ (Congregational), 1805–07. – Christ Church Cathedral, by Ithiel Town, 1827–38, a distinguished Neo-Gothic structure; later additions, including roof pinnacles, 1902. – Wadsworth Atheneum, by Town & Davis, 1842–44, a crenelated brownstone building; Colt wing, by B. W. Morris, 1906–07; Morgan wing, by Morris, 1910; Avery wing, by Morris & O'Connor, 1932–34. – Trinity College group, by William Burges, 1873–76, Neo-Gothic. – State Capitol, by Richard Upjohn, 1878–82. – Constitution Plaza, a successful redevelopment of the central city area completed in the early 1960s. – Wadsworth Atheneum, with American and European painting from the 15th century to the present, early American furniture, bronzes, silver, ceramics, tapestries, pre-Columbian art, and Oriental art. – Connecticut Historical Society, with furniture, paintings, silver, and glassware by Connecticut artists. – In East Hartford is the Test Laboratory, Pratt & Whitney Aircraft Company, by Albert Kahn, ca. 1935; Kahn at his peak in industrial design. In Bloomfield is the Connecticut General Life Insurance Company building, by Skidmore, Owings & Merrill, 1955–57, with interior court gardens and a monumental sculpture group, *The Family*, by Isamu Noguchi.

Lebanon. War Office, 1720s. – Governor Trumbull House, ca. 1735. – Congregational Church, by John Trumbull, 1804–09.

Litchfield. Sheldon House, 1760. – Tapping Reeve House and Law School, 1773; restored 1930. – Congregational Church, 1829; restored 1929.

Middletown. Mansfield House, 1807. – Russell House (now part of Wesleyan University), by Town & Davis, 1828, in Greek revival style; wing added later. – Wesleyan University, Davison Art Center, located in Alsop House, 1838–40, a Greek revival building with unique exterior and interior paintings in oil on plaster; renovated 1952. The Art Center contains an outstanding collection of prints dating from the early 15th century to the present.

Mystic. Mystic Seaport consists of a group of buildings, some originally built here and the rest moved from neighboring towns, ships, and maritime exhibits, which give a picture of a typical New England seaport of the mid-19th century. In addition to the Buckingham House of 1768 with a kitchen ell dating from the 1690s, the Counting House of 1833, the Thomas Greenman House of 1842, and the Aloha Meetinghouse of 1851, there are ship chandleries, sail lofts, a school, a general store, a tavern, and an apothecary shop. The *Charles W. Morgan*, built in 1841, the last of the wooden whaling vessels, is permanently berthed here. The exhibits include ships' figureheads, scrimshaw, ship models, and marine paintings. A few miles from the port is the Denison Homestead, also known as Pequotsepsos Manor, erected in 1717.

New Britain. Art Museum of the New Britain Institute, containing American paintings and drawings from the 18th century to the present, with emphasis on works since 1900.

New Canaan. Silliman House, ca. 1770. – Edwin Hoyt House, by Hoyt, 1859; very early use of poured concrete. – New Canaan contains a large group of interesting contemporary houses, mainly influenced by the international style, of which the most important undoubtedly are Marcel Breuer's own homes, one erected in 1947 and the other in 1951, and Philip Johnson's own "glass house" (I, PL. 93), 1949–50.

New Haven. Morris House, 1680–85; wing added 1767. – Superb grouping of three churches in central green: First Church of Christ (Center Church), by Asher Benjamin and Ithiel Town, 1812–18; United Church, by David Hoadley and Ebenezer Johnson, 1813–15; and Trinity Episcopal Church, by Ithiel Town, 1814–15, very early Neo-Gothic, later changes. – Yale University: Connecticut Hall, 1752, later changes; Old Library (now Dwight Chapel), by Ithiel Town, 1842, Neo-Gothic inspired by King's College Chapel in Cambridge, England; Farnam Hall, by Russell Sturgis, 1869–70, Neo-Gothic; Harkness Memorial Quadrangle, by James Gamble Rogers, 1917–21, probably the finest "collegiate Gothic" complex in the United States; Sterling Memorial Library, rendered as a huge Gothic donjon by Rogers, 1931; and several important buildings of present sculpturally structured phase of architecture, including extension to Art Gallery, by Louis Kahn, 1952–54, Forestry Building, by Paul Rudolph, 1959–60, and Ingalls Hockey Rink (XIII, PL. 229), by Eero Saarinen, 1958. – About one-third of the city is undergoing an urban renewal program; leading architects, such as Paul Rudolph, Ludwig Mies van der Rohe, I. M. Pei, Skidmore, Owings & Merrill, and Eero Saarinen, have designed a community center, schools, housing developments, and shopping center. – Yale University Art Gallery, with early American painting, silver, and furniture, Italian Renaissance painting, Near and Far Eastern art, Greek and Roman vases, 20th-century painting and sculpture, pre-Columbian art, and African sculpture (X, PL. 220).

New London. Hempsted House, 1678; enlarged 1728. – Shaw Mansion, 1756. – Courthouse, 1784. – Deshon-Allyn House, 1828–29. – Lyman Allyn Museum, with Connecticut painting, furniture, and minor arts of the 18th and the early 19th century, Chinese art, drawings, modern sculpture, and modern French painting.

Norfolk. Church of Christ, by David Hoadley, 1813–14. – Academy, 1840.

Norwich. Leffingwell Inn, 1675; enlarged 1741, 1760; restored 1960. – Backus House, 1750. – Rockwell House, 1818.

Stamford. Barnum House, 1730. – First Presbyterian Church (IV, PL. 186), 1958.

Stonington. "Anguilla," 1660; rebuilt in 1707 after a fire. – "Stonecrop," 1750. – Old Lighthouse, 1843.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Suffield. Burbank-Phelps-Hetheway House, 1736. – Hastings Hill, 1737. – King House, 1764.

Wallingford. Nehemiah Royce House, 1672. – Samuel Parsons House, 1759.

Wethersfield. Old Warehouse, before 1692. – Buttolph-Williams House, 1692, an outstanding example of a "mansion house"; restored 1947. – Joseph Webb House, 1752, with an ell of 1678; restored 1916. – First Church of Christ (Congregational), 1761–64. – Silas Deane House, 1766; restored. – Isaac Stevens House, 1788–89; restored. – Old Academy (now a museum), 1801.

Windsor. Fyler House, 1640; enlarged 1773. – Ellsworth Homestead, 1740.

Middle Atlantic States (New York, New Jersey, Pennsylvania, Delaware, Maryland). Henry Hudson, an Englishman in the employ of the Dutch East India Company, discovered the Hudson River in 1609 and sailed up as far as Albany. New Amsterdam (the present New York City) was founded in 1625, and the following year the Dutch purchased Manhattan Island from the Indians. New Amsterdam had stepped-gable houses, formal gardens, blocks walled around, and even a canal. The old street patterns remain. The street running along the city wall is now called Wall Street; part of the area is still called the Bowery, from the Dutch word *bouwerie* (tarm); the wide space in front of the original fort is still called Bowling Green, and the great avenue leading away from it is still Broadway.

Though the streets, following the watercourses and the walls, reveal the primary purpose of the city as a late medieval fortified port, the ubiquitous formal gardens of the settlers clearly show their knowledge of the Italian Renaissance. In 1660 Jacques Cortelyou surveyed New Amsterdam (see FIG. 611, A), and in the same year he also surveyed the regular plan for the first village in New Jersey, across the Hudson River from New Amsterdam, named Bergen after a town in the Netherlands. Here Cortelyou laid out a square town, with two roads meeting in the central plot (reserved for public use), surrounded by stockades, and with fields and farms beyond the walls. The plan of Bergen was similar to that of New Haven and also to that of New Castle, Del., which Peter Stuyvesant is said to have planned after the Dutch took over New Castle from the Swedes. Other Dutch towns recall the cities of the mother country; for example, Albany, in the 1695 plan, looks like a segment of old Amsterdam, completely walled. Even in the relation of towns to each other the Dutch looked homeward: New Bruckelen and New Utrecht were placed in the same relation to each other and to New Amsterdam as the originals of their names in the Netherlands.

Maryland was settled by the English and became a refuge for Roman Catholics. Delaware and New Jersey were first settled by the Dutch, then the Swedes; as part of New Netherland, they were ceded to the English in 1664. The Quakers established themselves in New Jersey and Pennsylvania during the 1680s. The most visionary city plan created for America in the colonial period was that of Philadelphia. In 1682 William Penn and his surveyor, Thomas Holme, stretched out the framework of a great city on a superb site at the confluence of the Delaware and Schuylkill rivers, with one great central square for public purposes and four lesser residential squares (FIG. 619). Those whose households were of sufficient size would be granted a lot in the city as well as a larger lot in the "Northern Liberties" (where Penn envisioned English-style country-house living) and vast acres in the western farming lands. Though the plan proved so extensive that it took a century to fill it up, the city, half-grown into it in the mid-18th century, was already the second city in the British Empire, surpassed only by London itself.

The plan of Philadelphia, with its grid and its squares and its creation of so large a city framework, set a style. The only other plan that was subsequently as influential on other cities is the century-later one for Washington.

Although the plans for Philadelphia and Annapolis (PL. 136) were the great glories of the early settlements in the Middle Atlantic area, of equal interest are the plans for the smaller towns, which reflected a simpler approach: space was set aside for a market, a meetinghouse, and sometimes a courthouse, with streets placed for easy access, and more or less regular grids of lots laid off the streets within the patented bounds. This regularity at its best was of the Philadelphia variety, as in the central-square plan for Lancaster, Pa., and its improved copy for Reading, Pa.

The real revolution in city development in the Middle Atlantic section, and through it in the development of the whole United States as the eastern settlers streamed west, came with the highly ordered and generally very regular plans of the neoclassic age. It was the extremely geometric approach to design (most usually exemplified in the completely regular grid) that came to dominate American city planning in the neoclassic age and later.

The desire for order is seen in the leveling of the hills of Albany in 1794 and the application of a grid pattern to the old Dutch city; in the survey of a grid for Pittsburgh in 1803, replacing the more contained plan of 1764, resurveyed 1784; in the extension of New York City's Dutch pattern with a vast gridwork to the north in 1811; and even in so small a change as that in Reading, which in 1830 discarded names and substituted numbers for its Philadelphia-type grid of streets. A similar search for the geometric expression can be seen in Ramée's 1811 plan for Union College in Schenectady and in the many small cities laid out along the burgeoning Hudson and Mohawk valleys in New York, as Bannister (1942) has noted.

But the fading of the classical impulse in the late 1830s was inexorable, and there was a return to the naturalistic plan in Laurel Hill Cemetery, Philadelphia, of 1838, in the irregular site plans of the 1840s popularized by Downing, and in the spate of such designs in the 1850 and 1860s including Downing's plan for the Mall in Washington, Llewellyn Park, Orange, N.J., 1857, which was one of the earliest developments of a romantic suburb, Olmsted's Central Park in New York, and other work in Boston, Philadelphia, and Baltimore in the succeeding decades.

The transformation of the classical idea continued and the Paris Beaux-Arts approach was adopted. The attempt to join the central Philadelphia square to Fairmount Park by a Paris-style avenue was suggested as early as 1871. In 1907 Trumbauer, Zantzinger, and Cret proposed that the avenue should turn toward the park through the focus of an art gallery; they revised the scheme in 1908, and it was carried out in the 1920s, from Gréber's detailed design of 1917. McKim, Mead & White turned to the architecture and site planning of the Italian Renaissance for their development of Columbia University in New York City, and even Olmsted's rolling Riverside Drive in that city was dotted with classical monuments and columnar screens.

This is basically the mode that has continued in the cities up to now. It has led to the great American interest in the garden-city idea, which has had its most concrete continuing expression in the Middle Atlantic States. It was a force in shaping the romantic suburbs, such as Olmsted's Roland Park in Baltimore and Grosvenor Atterbury's Forest Hills Gardens in New York, as well as in the "complete society" concept of factory communities expressed by the Duplan Silk Company in Hazleton, Pa., early in the 20th century and the Bata shoe factory outside Baltimore of three decades later. The great experiments have been the model town of Radburn, N.J., designed by Clarence Stein and Henry Wright in the 1920s, and the Federal government's four greenbelt towns of the 1930s, of which the leading example is Greenbelt, Md. (PL. 164), by Hale Walker, town planner, and Reginald Wadsworth and Douglas Ellington, principal architects. Frank Lloyd Wright's expression of the movement in his Broadacre City project (PL. 147) was concretely realized in the Middle Atlantic area in his "Suntop" House at Ardmore, Pa., 1939.

A major theme in the period of the development of the modern cities has been the continual look backward. For example, in New Castle the Town Hall of 1823 was built in the 18th-century style, the public library of about 1890 was a kind of Adam-Art Nouveau version of the style, and the old Arsenal was given an 18th-century entrance and details in 1930. Similarly, in the Independence Hall area of Philadelphia its essentially English forms have been re-restored and reinterpreted, as in Strickland's 1828 restoration of a steeple in the manner of the 18th-century one that had burned down four decades before, the restoration of Carpenters' Hall in 1857, and the present restoration of the whole area, which involves not only the re-creation of certain long-built-over 18th-century streets but also the creation of a purely 20th-century Mall as a glorified setting for the main buildings, necessitating the destruction of many actual 18th-century buildings and a host of 19th-century ones, including the important Guarantee Safe Deposit and Trust Company by Frank Furness, Louis Sullivan's master.

It is only in the changing sorts of cities of today that the past can no longer be stretched to the present. Skyscrapers are everywhere. Large governmental complexes and factories have been erected on the outskirts of the cities, and new residential areas have been constructed in the countryside. The centers, renewing, and the edges, accreting, have utilized the new forms in architecture.

BIBLIOG. R. F. Bailey, Pre-Revolutionary Dutch Houses and Families in Northern New Jersey and Southern New York, New York, 1936; T. C. Bannister, Early Town Planning in New York State, JSAH, III, 1–2, 1942; R. S. Allen, Covered Bridges of the Middle Atlantic States, Brattleboro, Vt., 1959; B. H. Macdonald, Historic Landmarks of Delaware and the Eastern Shore (ed. J. Eckman), 2d ed., Wilmington, 1963.

New York. The Dutch established the colony of New Netherland in 1613; it was conquered by the English in 1664 and renamed New York. During the first half of the 18th century the area was a battleground in the colonial wars between Great Britain and France. New York was one of the 13 original colonies admitted to the Union in 1788. Albany is the capital of the state.

Albany. A fortified trading post was erected by the Dutch in 1614 at Fort Nassau (later called Fort Orange and now Albany), and in 1624 the first colonists arrived. The city was a center for the fur trade with the Indians. Albany became the capital in 1797.

Secular buildings: Schuyler Mansion, 1762, a beautiful red-brick Georgian mansion; restored 1916, 1950; contains period furnishings. – "Cherry Hill," 1768, in Georgian style. – Ten Broeck Mansion, 1798, in Federal style with period furnishings. – Joseph Henry Memorial, by Philip Hooker, 1815. – State Capitol, begun by Thomas Fuller and Augustus Laver in 1869; continued by Henry Richardson and Leopold Eidlitz in 1875, who modified the original design; completed in 1899. – City Hall, by Richardson, 1880–81, in Romanesque style. – Court of Appeals, by Henry Rector, 1884, in Greek revival style. Richardson's courtroom, designed in 1881 and originally in the State Capitol, is now an addition to the Court of Appeals building.

Churches: First Church in Albany, by Philip Hooker, 1798, with a pulpit of 1656 carved in the Netherlands. – St. Peter's Episcopal Church, by Richard Upjohn, 1859, with a collection of Queen Anne silver. – All Saints' Cathedral, by Robert W. Gibson, 1884–88, in English Gothic style.

Museums: Albany Institute of History and Art, with American painting of the 18th–20th century, European painting, sculpture, silver, and furniture. – New York State Museum, with Iroquois art and six dioramas depicting Iroquois life.

Amsterdam. Guy Park Manor, attributed to Samuel Fuller, 1766; rebuilt after a fire in 1773; two wings added in 1858.

Bedford. Courthouse (now Town Hall), 1787. – John Jay House, 1800; restored 1965. On the grounds are a schoolhouse, barns, stables, and a coach house. – St. Matthew's Church, 1807–10.

Buffalo. St. Paul's Episcopal Cathedral, by Richard Upjohn, 1849–51; spire 1870; rebuilt by R. W. Gibson after fire of 1888. – State Hospital, by Henry Richardson, designed 1870 and erected 1872–77. – Guaranty (now Prudential) Building (I, PL. 87), one of the two or three greatest structures by Louis Sullivan, 1894–95. – Martin House, by Frank Lloyd Wright, 1904. – Kleinhans Music Hall, by Eliel Saarinen, 1938–40. – Albright-Knox Art Gallery, housed in two buildings, one of 1905 by Edward B. Green and the other of 1962 by Skidmore, Owings & Merrill. The Gallery contains 18th-century English painting, 19th-century French and American painting, contemporary American and European painting, and sculpture of all periods. – Buffalo Museum of Science, with Near and Far Eastern, pre-Columbian, African, and American Indian art.

Canajoharie. Van Alstyne House, 1749, a stone story-and-a-half house. – Canajoharie Art Gallery, with American painting and sculpture.

Constableville. Constable Hall, 1810–19; restored 1948–49. A stone house, two stories in the front with a columned recessed portico and three stories in the rear with a double-tiered gallery. Contains furniture dating from 1800 to 1830. On the grounds stands St. Paul's Church, 1837, modeled after St. Paul's Chapel in New York City.

Cooperstown. Farmers' Museum and Village Crossroads, 18 buildings showing rural village life from 1783 to the 1840s, and Fenimore House, with American painting and folk art of the 18th and 19th centuries. – Pomeroy Place, 1804. – Near Cooperstown is Hyde Hall, designed by Philip Hooker in 1811 and remodeled by him in 1833, in Greek revival style.

Corning. Corning Glass Center, designed by Harrison, Abramovitz & Abbe, completed 1951, including Corning Museum of Glass, with superb comprehensive collection of glass products from 1500 B.C. to the present.

Croton-on-Hudson. Van Cortlandt Manor, 1697; enlarged 1748–49; restored 1954–59. This is a stone and wood manor house, with a double porch and divided flight of exterior stairs; it contains family portraits and original furniture. On the grounds are a smokehouse and a ferry house with a separate kitchen.

East Hampton. "Home Sweet Home," ca. 1660 with later alterations, a fine example of a salt-box house. – Mulford House, 1680, a duplicate of "Home Sweet Home." – Clinton Academy, 1784. – Hook Windmill, 1806. – Guild Hall, with contemporary American painting.

Elmira. Arnot Art Gallery, housed in a Greek revival building of about 1830, contains 17th-century European painting. – Elmira College, with a collection of Chinese porcelains and French bronzes.

Fort Johnson. Fort Johnson, 1749, a baronial stone residence; contains period furniture and Indian relics.

Garrison-on-Hudson. "Boscobel," 1806–08, one of the finest examples of Adam-style architecture in America. The Adam moldings, mantels, and exterior ornamentation were commissioned by States Morris Dyckman, who built the house, in London, where he also purchased the silver, china, glassware, and the rare Moorefields carpet designed by Robert Adam.

Glens Falls. The Hyde Collection, with European painting, sculpture, and drawing from the 14th to 20th century.

Herkimer. Fort Herkimer Church, 1737; enlarged 1767; a blending of German and English styles.

Hudson. Many late-18th- and 19th-century residences, including Center House ("Old Turtle"), late 18th century, with a pediment carried on a curve of oval projections, and "The Hill," 1788–89 and 1801, a fine Regency house.

Hurley. A number of the Dutch stone houses of the original settlers still exist.

Irvington. "Sunnyside," the home of Washington Irving, originally a stone cottage built in the early 1700s and remodeled by Irving from 1835 to 1839; with many of Irving's own furnishings. – "Nevis," 1835, a fine example of the 19th-century architecture of the area. – Armour-Carmer House, 1860, an octagonal residence.

Ithaca. Cornell University, Andrew Dickson White Museum of Art, with 19th- and 20th-century American and European painting and sculpture, graphic arts, and Japanese and Chinese paintings and ceramics.

Johnstown. Johnson Hall, by Samuel Fuller, 1763, a baronial mansion; restored. Next to the Hall is a blockhouse erected in 1763. – Fulton (formerly Tyron) County Courthouse, also by Fuller, 1772. – Fulton County Jail, 1772. – St. John's Episcopal Church, 1836.

Kinderhook. House of History, designed and built by Barnabas Waterman in 1810 in Federal style.

Kingston. Senate House, 1676; rebuilt after fire during the Revolution. Next door is the Senate House Museum, containing American painting of the 18th and 19th centuries. – Bevier House, a stone house built by the Huguenots in the early 18th century. – Sudan House, ca. 1795, in Federal style. – Old First Dutch Church, 1852, in Greek revival style.

Lawrence. Rock Hall, 1767, an elegant Georgian mansion; east wing added 1881; with beautiful furniture.

Little Falls. General Herkimer House, attributed to Samuel Fuller, 1764. – Indian Castle Church, 1769, the only Indian mission church extant in New York.

Monroe. Museum Village of Smith's Clove, 37 buildings showing the life and crafts of a typical 19th-century New York village.

Newburgh. Washington's Headquarters (Jonathan Hasbrouck House), 1750–70, a Dutch stone house. – Knox Headquarters, 1754, a stone house with furniture of the Revolutionary period.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

New York City. (A) Plan of New Amsterdam in 1660, after the Castello plan based on the survey of Jacques Cortelyou. (B) Plan of Manhattan. Principal monuments: (1) Empire State Building; (2) Pan American Building; (3) Airlines Terminal Building; (4) St. Paul's Chapel; (5) St. Mark's-in-the-Bouwerie; (6) Mission of Our Lady of the Rosary; (7) Trinity Church; (8) Grace Church; (9) St. Patrick's Cathedral; (10) "Little Church Around the Corner"; (11) Tribune Building; (12) Cathedral of St. John the Divine; (13) Shearith Israel Synagogue; (14) St. Thomas's Church; (15) St. Bartholomew's Church; (16) City Hall; (17) Custom House; (18) Low Library at Columbia University; (19) Seventy-First Regiment Armory; (20) Flatiron Building; (21) Pennsylvania Station (destroyed); (22) Daily News Building; (23) Rockefeller Center; (24) George Washington Bridge; (25) Museum of Modern Art; (26) Solomon R. Guggenheim Museum; (27) United Nations Headquarters; (28) Lever House; (29) Manufacturers Trust Company, Fifth Ave. at 43d St.; (30) Chase Manhattan Bank, main office; (31) Statue of Liberty; (32) Grant's Tomb; (33) Washington Arch; (34) National Academy of Design; (35) Metropolitan Museum of Art; (36) Cooper Union Museum; (37) New York Public Library; (38) Hispanic Society of America; (39) Pierpont Morgan Library; (40) Museum of the City of New York; (41) Frick Collection; (42) Jewish Theological Seminary of America; (43) Museum of Primitive Art.

New Paltz. A number of the original Huguenot stone houses remain. In the environs is the Colonel Josiah Hasbrouck House (known as "Locust Lawn"), 1814.

New York City. Officially designated the City of New York but popularly called New York City (PLS. 125, 137, 139), it comprises the five boroughs (FIG. 613) of Manhattan (FIG. 611, B), Bronx (settled 1641), Brooklyn (settled 1636), Queens (settled (1635), and Richmond (settled 1639). Each borough is described separately below.

Manhattan. Site of a trading post established by the Dutch in 1614, the first permanent settlement was made in 1625. Peter Minuit purchased the island from the Indians in 1626, when it was named New Amsterdam. It was captured by the English in 1664 and renamed New York in honor of the Duke of York.

Secular buildings: Fraunces Tavern, 1719, in Georgian style; completely reconstructed in 1907. – Jumel (or Morris-Jumel) Mansion, 1765, in Georgian style; restored in 1810, it contains French furniture of that period. – Dyckman House, ca. 1783; restored 1915. A Dutch farmhouse with a garden, smokehouse, and replica of a Revolutionary log hut. – Gracie Mansion (the mayor's residence), ca. 1799, in Federal style; enlarged ca. 1811; restored 1927; side wing 1966. – Clubhouse of the Colonial Dames of America (originally a stable), 1799, a simple stone building with balustraded porch. – "The Grange" (also called Hamilton Grange), by John McComb, 1801–02, in Federal style. – City Hall, by Joseph Mangin and McComb, 1803–12, in Federal style with French influences; restored; contains American 19th-century portraits. – Castle Clinton, a fort by McComb, 1808–11. – Old Merchant's House (Seabury Tredwell House), ca. 1830, attributed to Minard Lafever or John McComb, Federal variation of Georgian style. – Federal Hall (originally the Customs House and then the U.S. Sub-Treasury), exterior by Town & Davis, interior by William Ross and John Frazee, 1833–42, one of the most outstanding examples of Greek revival architecture in the United States. – First National City Bank on Wall St.: lower portion was originally the Third Merchants' Exchange, by Isaiah Rogers, 1836–42, in Greek revival style; upper portion was added by McKim, Mead & White, 1907–09, in the same style. – Colonnade Row (formerly La Grange Terrace), by A. J. Davis, 1832–36, in Greek revival style with a freestanding Corinthian colonnade. – Arsenal, by Martin Thompson, 1847–48; altered by Richard M. Hunt in 1862. – Laing Stores, by James Bogardus, 1848, one of the first cast-iron buildings. – Brooklyn Bridge (I, PL. 82), by John Roebling, 1869–83. – Tribune Building, by Richard M. Hunt, 1874, the first real skyscraper in New York; later addition of many more stories. – Jefferson Market Courthouse, by Withers & Vaux, 1876, Neo-Gothic. – Three structures by McKim, Mead & White expressing their Italian Renaissance phase: Villard Houses (I, PL. 85), 1883–85, Low Library at Columbia University, 1895–97, and Morgan Library, 1902–05. – Grand Central Terminal (I, PL. 88), by Reed & Stem and Warren & Witmore, 1903–13. – Seventy-First Regiment Armory, by Clinton & Russell, 1902–05, in Romanesque style. – Development of the second, or post-Sullivan, phase of the skyscraper: Flatiron Building, by Daniel Burnham, 1902; Singer Building and Tower, by Ernest Flagg, 1908, Italianate; and Woolworth Building (I, PL. 89), by Cass Gilbert, 1911–13, Neo-Gothic. – American Academy of Arts and Letters, two buildings, one by Cass Gilbert with an exquisite Italian Renaissance façade and the other by McKim, Mead & White, completed 1919. – The new skyscraper age: American Radiator Building, 1924, by Raymond Hood, in which Eliel Saarinen's Tribune Tower competition concepts were carried into practice; McGraw-Hill Building (I, PL. 89), 1928–31, by Hood, F. Godley, and J. A. Fouilhoux; Daily News Building, 1930–32, by Howells & Hood; and Empire State Building, by Shreve, Lamb & Harmon, 1930–32. – The great statement of the skyscraper city in the grouping of Rockefeller Center (I, PL. 95): original concept by Benjamin Wistar Morris, 1926; final design by Reinhard & Hofmeister, Corbett, Harrison & MacMurray, and Hood & Fouilhoux, 1931–40; additional buildings after World War II. In the Center are sculptures by Isamu Noguchi, Lee Lawrie (*Atlas*), and Paul Manship (*Prometheus*, I, PL. 130). – George Washington Bridge (I, PL. 393), by Othmar Ammann, chief engineer, and Cass Gilbert, consulting architect, 1931; second deck added 1961. – Museum of Modern Art (X, PL. 218, FIG. 395), by Philip L. Goodwin and Edward D. Stone, 1939; two additions by Philip Johnson, one completed in 1951 and the other in 1965. – Municipal Asphalt Plant, by Kahn & Jacobs, 1944, with a dramatically industrial exterior. – Solomon R. Guggenheim Museum (X, PL. 217, FIG. 414), one of Frank Lloyd Wright's major buildings, designed in 1943 and erected in 1956–59, which has a domed interior with galleries opening off a continuous spiral ramp. – United Nations Headquarters, by a committee of international architects headed by Wallace K. Harrison, with the final scheme principally by Le Corbusier and Oscar Niemeyer, 1947–52; includes the dramatic glass-sided tower of the Secretariat. – Lever House (I, PL. 95), by Skidmore,

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Owings & Merrill, Gordon Bunschaft, chief designer, 1950–52, a glass tower rising beside a garden court. – Manufacturers Trust Company, Fifth Ave. at 43rd St., by the same firm and designer, 1954, a glass-walled bank, with a metal screen wall by the sculptor Harry Bertoia. – Seagram Building (I, PL. 95; X, FIG. 81), by Ludwig Mies van der Rohe and Philip Johnson, 1956–58. – Institute of International Education Building, by Harrison, Abramovitz & Harris, 1964; the conference rooms and furniture for them were designed by Alvar Aalto. – Chase Manhattan Bank, main office, by Skidmore, Owings & Merrill, 1961; plaza 1963. – Lincoln Center for the Performing Arts: Philharmonic Hall, by Max Abramovitz, 1962; New York State Theater, by Philip Johnson, 1964; Vivian Beaumont Theater, by Eero Saarinen, 1965; Metropolitan Opera House, by Wallace K. Harrison, 1966; Julliard Building, by Pietro Belluschi and Catalano & Westermann, 1967.

New York City, plan of the city including outer urban complex. *Key*: (1) New York City limits; (2) the five boroughs.

Churches: St. Paul's Chapel, by Thomas McBean, 1764–66, influenced by Gibbs's St. Martin-in-the-Fields in London; steeple 1793–94. – St. Mark's-in-the-Bouwerie, 1795–99; tower 1807; steeple 1829–35; porticoes 1836, 1854. – Mission of Our Lady of the Rosary (formerly Watson House), attributed to John McComb, east half 1794, west half 1806; interior completely remodeled. – Sea and Land Church, 1817, in Georgian style with Gothic touches; restored 1960. – St. Peter's (Roman Catholic) Church, attributed to Isaiah Rogers, 1836–40, Greek revival. – Trinity Church (I, PL. 82), by Richard Upjohn, 1839–46, outstanding example of Neo-Gothic. – Church of the Ascension, by Upjohn, 1840–41, Neo-Gothic. Interior, 1880–82, decorated by John La Farge, Augustus Saint-Gaudens, and Stanford White. – Mariners' Temple, attributed to Minard Lafever, 1843–44, Greek revival. – Grace Church, by James Renwick, 1843–46, Neo-Gothic. – St. Patrick's Cathedral, by Renwick, designed 1853 and built 1858–79, fine Neo-Gothic example; spires 1888; Lady Chapel, by Charles Matthews, 1901–06; baldachin and high altar, by Maginnis & Walsh, ca. 1945, with sculpture by John Angel. – Friends' Meetinghouse, by Charles Bunting, 1860, in Georgian style. – Church of the Transfiguration ("Little Church Around the Corner"), 1856, Neo-Gothic. – Central Synagogue, by Henry Fernbach, 1872, in Moorish revival style. – Cathedral of St. John the Divine, original Romanesque plan by Heins & LaFarge, 1891; foundations, arches, and buttresses, 1892–1911; design entirely restudied in English and French Gothic by Cram & Ferguson in 1911 and again in 1919–21; nave completed in 1920s and 1930s; towers and transepts still unfinished. – Shearith Israel Synagogue, by Arnold Brunner, 1897, a turn to Greco-Roman style following publications of excavations of synagogue remains in Galilee. – St. Thomas's Church, by Cram, Goodhue & Ferguson, 1913, Neo-Gothic. – St. Bartholomew's Church, by B. G. Goodhue, with Mayers, Murray & Phillips, completed 1930, in Byzantine style; portico by McKim, Mead & White, ca. 1902, in Romanesque style.

Monuments: Statue of Liberty, by Frédéric Bartholdi, on a base by Richard M. Hunt, 1886. – Grant's Tomb, by John H. Duncan, 1892–97. – Washington Arch, by McKim, Mead & White, 1895, with sculpture by Harmon A. McNeil and A. Stirling Calder.

Museums: Metropolitan Museum of Art, the greatest art museum in the country, with over 1,000,000 works from all areas and periods. The American Wing houses a series of original rooms from early residences, each furnished with objects of its period; American portraits of the 18th and the early 19th century are also displayed. There are two semiautonomous museum units: The Cloisters, with medieval European architecture, sculpture, stained glass, metalwork, and tapestries, and the Costume Institute, with costumes and textiles. – Frick Collection, with painting, sculpture, graphic arts, and minor arts of the 14th to 19th century. – Pierpont Morgan Library, with medieval and Renaissance manuscripts, early printed books, bookbindings, paintings, sculpture, and graphic arts. – Museum of Modern Art, with a superb collection of European and American art of the late 19th and the 20th century in all media. – Whitney Museum of American Art, with American painting, sculpture, and graphic arts of the 20th century. – Solomon R. Guggenheim Museum, with an important collection of 20th-century painting, mainly European and American. – Gallery of Modern Art, with 20th-century art. – Cooper Union Museum, with European and American textiles, ceramics, metalwork, glass, and designs and drawings. – New York Public Library, with an important print collection. – Hispanic Society of America, with Spanish and Portuguese painting, sculpture, and minor arts. – Museum of the City of New York, with paintings, prints, folk art, silver, and costumes of New York. – New-York Historical Society, with American portraits (particularly from New York) and Audubon prints. – Museum of the American Indian, with Indian art from North, Central, and South America. – Riverside Museum, with Tibetan painting and art objects and contemporary American art. – Jewish Museum, with Jewish ceremonial art from all parts of the world. – Scalamandre Museum of Textiles, with textiles, mainly Western, from the 17th century to the present. – Museum of Primitive Art, with art of Africa, Oceania, pre-Columbian America, and prehistoric Europe and Asia.

Bronx. Van Cortlandt Mansion, 1748, a Dutch Georgian residence. – Poe Cottage, ca. 1812. – Bartow-Pell Mansion, by R. O. Bolton, 1836–42, in Greek revival style; beautiful sunken garden.

Brooklyn. Pieter Claesen Wyckoff House, ca. 1641, a Dutch farmhouse. – Lefferts Homestead, 1777, in late Dutch style. – Erasmus Hall High School, attributed to Pierre Charles L'Enfant, 1786, in Federal style. – Flatbush Dutch Reformed Church, by Thomas Fardon, 1793–98, in Georgian style. – Borough Hall, attributed to Gamaliel King or V. G. Griffin, 1836–49; cupola by C. W. and A. A. Stoughton, ca. 1900. – Holy Trinity Church, by Minard Lafever, 1844–47, in Flamboyant style. – Litchfield Mansion, by A. J. Davis, 1853–56. – Brooklyn Museum, with pre-Columbian, American Indian, African, and Near and Far Eastern art, Greek and Roman art, American period rooms, and American and European painting, sculpture, and minor arts.

Queens. Bowne House, 1661. – Old Quaker (Friends') Meetinghouse, ca. 1694. – King Mansion, ca. 1750; restored after fire of 1964. – Bodine Castle, attributed to A. J. Davis, 1840, Neo-Gothic.

Richmond (Staten Island). Britton Cottage, 1677. – Stillwell-Perrine House, ca. 1679. – Conference House (Billopp House), ca. 1680. – Richmondtown Restoration: The village of Richmond is being restored to show the evolution of an American village during the 17th, 18th, and 19th centuries; upon completion it will include more than 30 buildings. The following buildings have been restored: Voorlezer's House, 1695; Treasure House, 1700; Lake-Tyson House, 1740; Third County Courthouse, 1837; offices of the surrogate and county clerk (now the Staten Island Historical Society headquarters), 1848; and St. Andrew's Church, by William Mersereau, 1872. – Sailors' Snug Harbor, by Martin Thompson, 1831–33, in Greek revival style. – Verrazano-Narrows Bridge, by Othmar Ammann, 1964. – Staten Island Institute of Arts and Sciences, with regional paintings and European and American graphic arts. – Jacques Marchais Center of Tibetan Arts, with Far Eastern art.

Ogdensburg. Remington Art Memorial, with paintings, water colors, and bronzes by Frederic Remington (1861–1909).

Old Chatham. Shaker Museum, housed in seven buildings, with displays of furniture, textiles, and minor arts made by the Shakers.

Oswego. Fort Ontario, a British military fort, erected in 1759; rebuilt 1839–42; remodeled 1863–72. – Bates-Richardson Mansion, 1850, with fine Victorian furnishings.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Oyster Bay. Raynham Hall, original part before 1738, when it was enlarged; Victorian wing added ca. 1851; restored 1953; with colonial and Victorian furniture. – Sagamore Hill, 1884, the summer home of Theodore Roosevelt; furnished as it was when he lived here.

Port Chester. Bush Homestead, ca. 1770, in Georgian style. – Kneses Tifereth Israel Synagogue (I, PL. 92), by Philip Johnson, 1955–56.

Poughkeepsie. Clinton House, ca. 1765; later altered and enlarged. – Hudson River State Hospital, by Withers & Vaux, 1866–72, Neo-Gothic. – Vassar College: Main Hall, by James Renwick, 1861–65, in Second Empire style, and Dwight Perry, Jr., Cooperative House, by Marcel Breuer, 1949–51. – Vassar College Art Gallery, with European and American painting, sculpture, and graphic arts from the 15th century to the present and Far Eastern ceramics and jades.

Rensselaer. Fort Crailo, ca. 1704, a Dutch fortified house; rear wing added 1762 in Georgian style; remodeled 1790, 1800; restored.

Rochester. Stone-Tolan House, 1789–92. – St. Luke's Episcopal Church, 1824. – Campbell-Whittlesey House, 1835–36, in Greek revival style; restored; contains a fine collection of stenciled Empire furniture. – Jonathan Child House, by Hugh Hastings, 1838, in Greek revival style; restored. – "Woodside," 1838–40, a Greek revival mansion, with regional paintings and furniture. – First Unitarian Church, by Louis Kahn, 1962. – Midtown Plaza, by Victor Gruen & Associates, 1962. – Rochester Memorial Art Gallery, with American and European painting from the 15th century to the present, Far Eastern art, ancient and medieval sculpture, and primitive art. – George Eastman House, a museum of photography; also contains American and European painting. In the garden is the Eastman Birthplace, 1846–61, moved from Waterville and restored.

Sag Harbor. Old Custom House, 1789. – Whalers' Presbyterian Church, by Minard Lafever, ca. 1840. Egyptian form in wood. – Suffolk County Whaling Museum, by Lafever, 1845, in Greek revival style; contains scrimshaw, toys, figureheads, and whaling implements.

St. Johnsville. Fort Klock, 1750, a fortified farmhouse and trading post. – Palatine Church, 1770, a gambrel-roofed stone Lutheran church.

Schenectady. St. George's Episcopal Church, by Samuel Fuller, 1759–69, in Georgian style with hipped roof. – Union College, laid out by J. J. Ramée in 1811 on a classical revival plan; only two of his buildings remain, the more notable being South College, erected in 1820. Ramée's domed library scheme was replaced by the Nott Memorial Library, designed by Edward T. Potter, 1858–76, in Neo-Gothic style. – Dutch Reformed Church, also by Potter, 1862, in Neo-Gothic style. – In what is called the stockade area of the city are a large number of residences dating prior to 1825.

Setauket. Thompson House, early 18th century, a salt-box house. – Caroline Church of Brookhaven, 1729. – Presbyterian Church, 1811.

Southampton. "The Hollyhocks" (Halsey Homestead), 1648, a salt-box house; 18th-century additions; with furnishings of the 17th and 18th centuries and period gardens. – Parrish Art Museum, with American painting of the 19th and the early 20th century, Roman sculpture, and Italian Renaissance painting.

Stone Arabia. Reformed Church, 1788. – Lutheran Church, 1792.

Syracuse. Syracuse University, Lowe Art Center, with American painting, modern sculpture, and Japanese and Korean ceramics. – Everson Museum of Art, with ceramics, especially contemporary and Oriental, and American painting.

Tarrytown. "Lyndhurst," the Jay Gould mansion, by A. J. Davis, 1838, Neo-Gothic; enlarged in 1864 from Davis's plans; with original furnishings. – In North Tarrytown are the Old Dutch Church of Sleepy Hollow, ca. 1699, and Philipse Castle, 1683, a Dutch stone manor house with a wooden wing erected in 1785.

Troy. Rensselaer County Historical Society, located in a beautiful sandstone Federal house designed by Philip Hooker and completed in 1827; fine furniture of the 1830s and 1840s. – Troy Public Library, with Hudson River School paintings and Renaissance engravings.

Utica. Utica State Hospital, ca. 1837–43, in Greek revival style with a monumental four-story Doric portico. – "Fountain Elms," by William J. Woollett, Jr., 1850, in Italian villa style; restored; now a museum of 19th-century Americana. – City Hall, by Richard Upjohn, 1852–53, in his Italian villa mode. – Dowling Hospital (formerly Munn House), by A. J. Davis, 1850, in Italian villa style. – Grace Episcopal Church, by Upjohn, 1856–60, Neo-Gothic; entrance tower, by his son Richard M. Upjohn, added 1870. – Munson-Williams-Proctor Institute, in a noteworthy building designed by Philip Johnson in 1960; contains modern sculpture, American painting of the 18th–20th century, and European and American prints.

White Plains. Washington's Headquarters (Miller House), ca. 1738. – In North White Plains is Hammond House, ca. 1719.

Yonkers. Philipse Manor Hall, stone wing ca. 1682, brick wing ca. 1745, with rococo decoration of ca. 1760; contains portraits of the presidents of the United States as well as other paintings and furniture. – Sherwood House, ca. 1750, a colonial farmhouse; restored.

Youngstown. Old Fort Niagara, including the "Castle," built 1726 by Gaspard de Léry in the style of a French manor house; restored 1934. In the Castle are a superb chapel, officers' quarters, and a great council chamber.

New Jersey. First settled by the Dutch and then the Swedes, the territory was ceded to the English in 1664. In 1676 the province was divided into East and West Jersey; in 1702 they were united. One of the 13 original colonies, New Jersey was admitted to the Union in 1787, and Trenton became the capital in 1790.

Burlington. Bishop Doane's House, by John Notman, 1836, in Italian villa mode. – St. Mary's Church, by Richard Upjohn, 1846–54.

Hackensack. Abraham Ackerman House, 1704, fine example of Dutch colonial stone architecture. – Terhuen House, ca. 1709, Dutch colonial. – Nearby, in River Edge, is the Jacobus Demarest House, before 1720, Dutch colonial.

Holmdel. Hendrickson House, ca. 1715, with period furnishings.

Middletown. Marlpit Hall, 1684, a Dutch colonial farmhouse enlarged in 1725, with period furnishings.

Morristown. Ford Mansion, 1772–74, Washington's headquarters during the winter of 1779–80.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Newark. Trinity Cathedral, 1742–43; rebuilt 1809–10; portico and steeple added later. – County Courthouse, by Cass Gilbert (1859–1934), with Egyptian details. – Newark Museum, with painting and sculpture (principally American), Oriental art, and minor arts.

New Brunswick. Ross Hall, ca. 1729 (razed). – Lowe House, ca. 1741. – Field House, ca. 1743. – Buccleuch Mansion, mid-18th century.

Perth Amboy. Governor's Palace (now a hotel), 1764.

Princeton. "Morven," central section ca. 1701; west wing possibly earlier; east wing mid-18th century; later restorations and changes; very early use of Palladian concepts in America. Garden of 1767 based on Alexander Pope's garden at Twickenham, England. – Princeton University, Nassau Hall, by William Shippen and Robert Smith, 1754–56; cupola and other alterations by John Notman, 1855. – Princeton Theological Seminary, Alexander Hall, by John McComb, 1815–17. – Princeton University, Graduate College (I, PL. 88), by Cram & Ferguson, completed 1913; Neo-Gothic. – Princeton University, Art Museum, with American and European painting, prints and drawings, Chinese painting, and ceramics.

Ridgefield. Old Dutch Reformed Church (now English Neighborhood Church), 1793.

Swedesboro. Trinity Church, 1733, in Swedish style; rebuilt 1786.

Tennent. Old Tennent Church, 1751.

Trenton. Trent House, 1719, a brick mansion in Queen Anne style; restored 1934–36; with early American furniture. – Friends' Meetinghouse, 1739; later enlarged. – St. Michael's Protestant Episcopal Church, 1747–48; rebuilt 1819; later enlarged and remodeled – Old Barracks, 1758–59, a beautiful U-shaped stone building; restored 1917; contains early American furniture, silver, paintings, china, and costumes. – State House, originally built 1792–94; restored by John Notman in 1848; after a fire in 1885 the front portion was replaced in 1889 by Lewis H. Broome in French Renaissance style; interior additions in 1891, 1904. – Old Masonic Lodge Building, 1793. – First Presbyterian Church, 1841.

West Orange. Entrance lodge, 1857, and cottage, ca. 1860, in early romantic suburb of Llewellyn Park, both by A. J. Davis.

Pennsylvania. The first settlement was made in 1643 by Swedish colonists at Tinicum Island near Chester. William Penn received the grant of Pennsylvania in 1681, and the colony was settled by the Quakers and then by the Mennonites, the Moravians, and the Scotch-Irish. One of the original 13 colonies, the state was admitted to the Union in 1787. Harrisburg has been the capital since 1812.

Allentown. Trout Hall, 1770; restored. – Allentown Art Museum, with Italian Renaissance, Flemish, Dutch, and German painting. – In the environs are the Troxell House (Trojan Farm), 1744; the Troxell-Steckel House, 1755–56, a fine example of German medieval architecture; and the George Taylor House, 1768, with handsome woodwork.

Ambridge. Old Economy, consisting of the 17 remaining buildings of the Harmony Society, 1824–32, including the 45-room Great House of the leader, the gambrel-roofed Feast Hall, the Grotto in the gardens, and shops and dwellings.

Bear Run. "Falling Water" (FIG. 862; I, PL. 91), by Frank Lloyd Wright, 1936, a cubistic treatment of cantilevered balconies over a waterfall.

Bethlehem. Buildings of the original Moravian settlement, including the Gemein Haus (Community House), 1742–43, a large log structure; Sisters' House (now a museum), 1744, with wings added 1752 and 1773; Bell House, 1746, with additions of 1748 and 1749; Brethren's House (now a museum), 1748, a large, plain stone structure renovated in 1814 and restored 1959–61; Old Chapel, 1751; Widows' House, 1768, with addition of 1794; and Central Moravian Church, by John Cunius, 1806. – Many fine Victorian mansions, including the Robert H. Sayre House, 1857, in Neo-Gothic style, later altered; Packer Hall (now Lehigh University Center), by Edward T. Potter, 1866, in Neo-Gothic style; the George H. Meyers and Francis Weiss houses, 1870s, in Italian villa style; and the Charles M. Dodson House, 1874, with fine stained-glass windows. – Cathedral Church of the Nativity, by Edward T. Potter, 1863; enlarged by C. M. Burns 1884–87; tower added 1899. – Lehigh University Art Galleries, with contemporary American and French painting, prints, Chinese porcelain, and glassware.

Brownsville. St. Peter's Church, ca. 1850, a small masterpiece of Neo-Gothic stonework.

Carlisle. Hessian Guardhouse (now a museum), 1777. – Dickinson College, "Old West," by Benjamin Latrobe, 1802–03.

Chester. Courthouse, 1724, very English in style. – Nearby, in Upland, is the Caleb Pusey Home, 1683; restored 1963.

Doylestown. Mercer Museum, a unique reinforced-concrete structure built by Dr. Henry C. Mercer between 1913 and 1916, contains an important collection of tools and machines of the days before steam power.

Elkins Park. Beth Sholom Synagogue, by Frank Lloyd Wright, 1956.

Ephrata. Ephrata Cloister, consisting of the surviving buildings of a Seventh-Day German Baptist community erected between 1735 and 1749: the Saron (Sisters' House), Saal (Chapel), Almonry, founder's log cabin, and three cottages. The buildings are in the medieval style reminiscent of the German architecture of the community's motherland. A later building, the Academy, was erected in 1837.

Erie. Perry Memorial House, 1809. – Old Custom House (now Erie County Historical Society), by William Kelly, 1839, in Greek revival style. – St. Luke's Evangelical Lutheran Church, 1844, Egypto-Greek.

Gettysburg. Gettysburg College, "Old Dorm," by John C. Trautwine, 1835–38, in Greek revival style.

Harrisburg. State House, by Joseph M. Huston, 1898–1906, inspired by the U.S. Capitol; remodeled.

Horsham. "Graeme Park," 1721–22, a stone country house in north European style; interior, remodeled ca. 1765, has beautiful Georgian woodwork.

Lancaster. Trinity Lutheran Church, 1729. – St. James's Episcopal Church, 1754. – "Rock Ford," 1793–94, a brick Georgian mansion. – Old City Hall, 1795, a fine example of colonial architecture. – "Wheatland," 1828, home of President Buchanan, with furniture, china, and silver belonging to him. – Franklin and Marshall College, 1854–55, one of the few remaining examples of early "collegiate Gothic." – Near Lancaster is the Pennsylvania Farm Museum of Landis Valley, consisting of over 10 buildings housing objects illustrating rural Pennsylvania farm and folk life.

Lewisburg. Bucknell University, College Building, by Thomas U. Walter, 1848–59, in Greek revival style.

Merion. Barnes Foundation, with impressionist painting, Pennsylvania furniture, and medieval hardware. – Buten Museum of Wedgwood, with Wedgwood ceramics.

Millbach. Georg Müller House, 1752, an excellent example of a German Renaissance farmhouse; interiors are in Philadelphia Museum of Art.

New Kensington. Aluminum City Housing, community plan and individual structures by Walter Gropius and Marcel Breuer, 1941; excellent use of terraced site with unified structural design.

Paoli. "Waynesborough," 1724 and 1740, a fine colonial stone house. – In the environs are St. Peter's Church, in Great Valley, 1744, and Diamond Rock School, in Chester Valley, 1818, a well-preserved octagonal structure.

Philadelphia. In the 18th century the city was the largest one in the American colonies and the second largest city in the British Empire, surpassed only by London. Philadelphia was the capital of the United States from 1790 to 1800. An extensive urban renewal

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

program has been under way since the 1950s (PLS. 151, 177). Germantown, originally a separate township, was consolidated with Philadelphia in 1854; it has many fine colonial houses (see below).

Secular buildings: Letitia Street House (in Fairmount Park), 1703–15, plan based on Swedish type. – "Cedar Grove" (in Fairmount Park), ca. 1721. – Group of buildings in Independence Square: Independence Hall (originally the State House), by Andrew Hamilton, 1732–45, tower and steeple 1750–51, steeple rebuilt by William Strickland in 1828, one of the most beautiful Georgian public buildings in the country; Philosophical Hall, 1785–89; Congress Hall, 1787–89, altered by L'Enfant in 1800; and City Hall, 1789–91. – Pennsylvania Hospital: east wing, by Samuel Rhoads, 1755–56; matching west wing, designed by Rhoads, 1798; central pavilion, 1794–1805, on a revised, Adamesque scheme. – "Woodford" (in Fairmount Park; I, PL. 77), 1756, a late Georgian house. – "Mount Pleasant" (in Fairmount Park), 1761–62, a small Georgian house with hipped roof topped by a balustraded roof deck. – Powel House, 1768; interiors are in Metropolitan Museum of Art and Philadelphia Museum of Art. – Carpenters' Hall, by Robert Smith, 1768–70. – Dilworth-Todd-Moylan House, ca. 1775. – "The Woodlands," 1787–89, very Adamesque plan, with Tuscan portico; stone Anglo-Palladian stable. – First Bank of the United States (also called the Girard Bank), by Samuel Blodgett, 1793–98, modeled on the Royal Exchange in Dublin. – Head house of the Old Second Street Market, ca. 1803. – Fairmount Waterworks, probably by Robert Mills, with Frederick Graff as engineer, 1819–20. – Second Bank of the United States (now offices), by William Strickland, 1819–24, modeled on the Parthenon. – Eastern State Penitentiary, by John Haviland, 1823–35, planned on the radial cellular system. – Pennsylvania Institution for the Deaf and Dumb (now Philadelphia Museum School of Art), by Haviland, 1824–25. – Old Franklin Institute (now Atwater Kent Museum), by Haviland, 1825–27. – Naval Asylum (now U.S. Naval Home), by Strickland, 1826–33, on the order of the Temple on the Ilissos in Athens. – Merchants' Exchange (I, PL. 80), by Strickland, 1832–34; the lantern is modeled on the choragic monument of Lysikrates in Athens. – Girard College, Founders' Hall, by Thomas U. Walter, 1833–47, a great temple with interior domes. – Preston Retreat (Preston Maternity Hospital), by Walter, 1837–40; enlarged 1909. – Philadelphia Athenaeum, by John Notman, 1845–47, in the Italian Renaissance mode of Sir Charles Barry. – American Academy

Philadephia, plan of the city in 1682, after the published version of the original made by William Penn's surveyor, Thomas Holme. Inset, the geographical position of the plan.

of Music, by Napoleon LeBrun and Gustavus Runge, 1857, based on the Teatro alla Scala in Milan. – Group of buildings at the University of Pennsylvania: College Hall, by Thomas W. Richards, 1871–72, "collegiate Gothic" in the manner of Viollet-le-Duc; University Museum, by Wilson Eyre, Jr., Frank Miles Ray & Bro., and Cope & Stewardson, west court 1893–99, rotunda 1912, middle section 1926, massive Italian scheme; Little Quad, by Cope & Stewardson, begun 1895, leading use of relatively correct English "collegiate Gothic"; Richards Medical Research Building, by Louis Kahn, completed 1960. – Pennsylvania Academy of Fine Arts, by Frank Furness, 1872–76. – Provident Life and Trust Building (I, PL. 82), also by Furness, 1879, fine Neo-Gothic. – City Hall, by John McArthur, Jr., 1874–1901, somewhat inspired by the French Renaissance. – Ridgway Library (Library Company of Philadelphia), by Addison Hutton, ca. 1876, well-detailed temple. – Girard Trust Building, by McKim, Mead & White, 1908. – Philadelphia Museum of Art, by Horace Trumbauer, C. L. Borie, and C. C. Zantzinger, 1919–27, a great Greek temple. – Rodin Museum, by Paul Cret and Jacques Gréber, 1920s, in the French classical manner. – Naval Hospital, 1931–35, as architecturally distinguished as any government building between the wars. – Philadelphia Savings Fund Society Building (I, PL. 89), by Howe & Lescaze, 1932, one of the great modern skyscrapers. – Penn Center, a complex including offices, hotels, and apartments, completed 1964.

Churches: Gloria Dei (Old Swedes) Church, 1698–1700; wings 1705; tower ca. 1733; later alterations. – Christ Church, by Dr. John Kearsley, 1727–44; tower and spire, probably by John Harrison, 1752–55; spire reconstructed by Robert Smith 1771. – St. Peter's Protestant Episcopal Church, by Robert Smith, 1758–61; tower in Gothic style added by William Strickland in the early 19th century. – St. Mary's Roman Catholic Church, 1763. – Arch St. Meetinghouse, by Owen Biddle, 1803–05, extended 1810–11, the largest Quaker meetinghouse in the world. – St. Stephen's Church, by Strickland, 1822–23; Neo-Gothic. – St. Andrew's (now St. George's) Church, by John Haviland, 1822–23, details from Temple of Dionysos at Teos near İzmir in Turkey. – Third Presbyterian Church, 1837. – Cathedral of SS. Peter and Paul, Palladian plans by Napoleon Le-Brun from original scheme of Fathers Mariano Maller and John B. Torratore, built 1846–64; final supervision by John Notman. – St. Mark's Church, by Notman, 1848–51, based on plans by R. C. Carpenter; later Lady Chapel. – Keneseth Israel Synagogue, by Louis C. Hickman and Oscar Frotcher, 1892, a great medieval campanile thrusting out of an Italian Renaissance church. – Henry S. Frank Memorial Synagogue, by Arnold Brunner, 1901, inspired by the excavated synagogue at Kfar Birim (cf. VIII, PL. 334).

Germantown: "Wyck," first unit ca. 1690, second unit ca. 1720, later connected; remodeled by Strickland in 1824. – Stenton Mansion, 1728, in early Georgian style. – "Grumblethorpe," 1744, a Georgian stone house. – Green Tree Inn (Pastorius House), 1748, a typical example of the Pennsylvania style. – Public School of Germantown (Germantown Academy), 1761. – "Cliveden" (Chew Mansion), 1763–64, a notable late Georgian residence. – Johnson House, 1765–68, a Georgian stone residence. – Morris House, 1772–73, with period furnishings.

Museums: Philadelphia Museum of Art, with Romanesque and Gothic architectural ensembles, European and American period rooms, European and American painting and sculpture from the 13th century to the present, Oriental art, prints and drawings, ceramics, glass, textiles, and tapestries. – Rodin Museum (X, PL. 216), administered by the Philadelphia Museum of Art, with sculpture and drawings by Auguste Rodin. – Pennsylvania Academy of the Fine Arts, with American paintings and sculpture. – University of Pennsylvania, University Museum, with ethnological and archaeological collections from the Americas, the ancient world, Near and Far East, Africa, and Oceania.

Pittsburgh. Allegheny County Courthouse and Jail (I, PL. 83), by Henry Richardson, 1884–88, in Romanesque style, one of Richardson's masterpieces. – East Liberty Presbyterian Church, by Cram & Ferguson, 1931–35, boldly Neo-Gothic. – Frank House (VII, PL. 82), by Walter Gropius, 1939. – Alcoa Building, by Harrison & Abramovitz, 1952. – Civic Auditorium, completed 1961, with the world's largest retractable dome. – Carnegie Institute, Department of Fine Arts, with American and European painting, prints, drawings, sculpture, and minor arts.

Pottstown. "Pottsgrove," 1752, an imposing stone country house, with period furnishings. – Nearby, in Baumstown, is the Daniel Boone Homestead, ca. 1750, with a two-story stone house, a bank barn, and a blacksmith shop.

Prospect Park. Morton Homestead, a hewn-log construction of Swedish type, consisting of two units, the original portion of 1654 and the second portion of 1698, connected ca. 1806.

Reading. Trinity Lutheran Church, 1793, in Georgian style. – Berks County Jail, by John Haviland, 1846, in Tudor style. – Reading Museum and Art Gallery, with early American and Hudson River School painting, Pennsylvania folk art, and American Indian relics. – Near Reading, at Womelsdorf, is the Conrad Weiser Home, 1729, enlarged in 1751, and stone springhouse.

Somerfield. Great Crossing Bridge, built by Kinkead, Beck & Evans, 1818, the greatest of the remaining early-19th-century bridges.

Trappe. Augustus Lutheran Church, conceived by Henry Muhlenberg and built 1743–45; interior renovated 1795. Brumbaugh (1933) states that this is "the most distinctively Germanic church in Pennsylvania."

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Washington Crossing. Thompson-Neely House, 1702; additions of 1757, 1788. – Old Grist Mill, 1740. – Old Ferry Inn, 1757; later enlarged.

West Chester. David Townsend House, first section built ca. 1790; second section 1830; third section 1849. – First Presbyterian Church, by Thomas U. Walter, 1832–34, apparently inspired by J. F. Chalgrin's St-Philippe-du-Roule in Paris; remodeled 1862. – National Bank of Chester County and Trust Company, by Walter, 1835–37, with details from James Stuart and Nicholas Revett's *Antiquities of Athens*. – Chester County Prison, by Walter, 1836–40, in the manner of C. N. Ledoux. – Chester County Courthouse, by Walter, 1846–47, a cast-iron structure that was sheathed with stone in 1859; later additions. – Nearby, in Dilworthtown, is the Brinton House, 1704; restored 1954.

York. Plough Tavern, 1740s, medieval Germanic half-timber construction; restored. – Gates House, ca. 1751–54; restored. – Quaker Meetinghouse, 1766.

Delaware. The Dutch made the earliest settlements in 1631, but the first permanent settlement was made by the Swedes in 1638 at Fort Christina (present-day Wilmington). The colony was captured by the Dutch in 1655 and by the English in 1664. Delaware, one of the 13 original colonies, was admitted to the Union in 1787. Dover became the capital in 1777.

Dagsboro Hundred. Prince George's Chapel, ca. 1717; enlarged ca. 1750; with a barrel vault and 17th-century details in unpainted wood.

Dover. The House on the Green, 1728, one of the beautiful brick houses that border the town green. – Old State House, 1787–92; later additions and remodeling. – Old Presbyterian Church (now a museum), 1790; restored. – Near Dover is the John Dickinson Mansion, 1740, in Georgian style; wings added 1752 and 1754; remodeled after a fire in 1804; restored 1956.

Downs Chapel. "Aspendale," 1771, notable example of an early brick country house.

Middletown. St. Anne's Episcopal Church, 1768, with excellent interior woodwork and a great triple-decker pulpit.

New Castle. Plan and many structures preserved from 17th, 18th, and early 19th centuries. – Courthouse (formerly the State House), originally built ca. 1676; main building 1708; wings 1767; later changes. – Immanuel Church, 1703–06; reworked to present aspect by William Strickland 1820–22; later changes. – Presbyterian Church, 1707; later changes. – George Read II House, 1791–1801, in Federal style. – Old Academy, 1798–1811. – Town Hall, 1823.

Odessa. David Wilson Mansion (now a museum), rear wing ca. 1747; main section, 1769, in Georgian style; restored. – Corbit-Sharp House (now a museum), 1772–74, a fine example of Delaware Valley brick architecture. – Near Odessa is the Old Drawyers' Church, 1773.

Wilmington. Holy Trinity (Old Swedes) Church, 1698–99; porches 1750–51; tower 1802; restored 1899. – First Presbyterian Church (now Colonial Dames House), 1740. – Old Brandywine Academy, 1796. – Old Town Hall (now Delaware Historical Society), by Peter Bauduy, 1798. – Old Bank of Delaware (now Delaware Academy of Medicine), 1816; later changes. – Wilmington Public Library, by Alfred M. Githens and Edward L. Tilton, 1923. – Wilmington Society of the Fine Arts, Delaware Art Center, with Pre-Raphaelite painting, American painting, and drawings. – Hagley Museum, housed in a stone textile mill of 1814, with exhibits of the industrial history of the United States. On the Museum grounds are over 20 stone mill buildings from the early 19th century and the Du Pont family residence, which was erected in 1803.

Winterthur. Henry Francis du Pont Winterthur Museum, located in the founder's ancestral home of 1839 and enlarged in 1927 and 1956, with 125 period rooms dating from 1640 to 1840 and containing American furniture, metalwork, ceramics, glassware, textiles, and paintings as well as Oriental export porcelain made for American use and English china.

Hubbard, Historic Houses and Buildings of Delaware, Dover, 1962.

Maryland. The first settlement was made in Saint Marys City in 1634, which was the capital of the colony until 1694, when Annapolis became the capital. Maryland was one of the 13 original colonies, and was admitted to the Union in 1788.

Annapolis. Settled in 1649, the city was originally called Providence, then Anne Arundel Town. Annapolis has many homes in the Georgian style dating from the early Colonial and Federal periods. Characteristic of these residences are the brick chimneys, which were required by law. Noteworthy are: Shaw House, 1720, with a unique Scottish stairway of 1745; Brice House, ca. 1740, with later additions; Peggy Stewart House, 1760–72; Chase-Lloyd House, by William Buckland, 1769–74, an elegant three-story structure; and Hammond-Harwood House (now a museum), by Buckland, 1773–74, a fine Georgian mansion. – McDowell Hall (now the administration building of St. John's College), begun by Simon Duff in 1744; completed in 1784. – State House, possibly by Joseph H. Sharpe, 1772–80; dome and cupola replaced 1785–93; later restorations and annex; the woodwork in the Old Senate Chamber is attributed to William Buckland. Next door is the Council Chamber, ca. 1694–95.

Anne Arundel County. "Tulip Hill," 1756, a Georgian mansion, with Chinese ceramics and sculpture. – "Whitehall," ca. 1764–65, with a giant portico in temple form, perhaps inspired by Thomas Jefferson's first design for Monticello; wings added ca. 1793.

Baltimore. Secular buildings: "Homewood," perhaps by William Thornton, 1801–03, small country house in Adam style with superb detailing. – University of Maryland, College of Medicine, by Robert C. Long, Sr., 1812, brilliant use of the Roman Pantheon scheme in which a great domed room formed the anatomical theater. – House at 107 West Monument St. (X, pl. 274), early 19th century. – McKim Free School, by William Howard and William Small, 1822, after the Theseion in Athens. – Ross Winans House, 1882, by McKim, Mead & White, inspired by the Italian Romanesque. – Assembly Building, Glenn L. Martin Company, designed by Albert Kahn, 1937. – One Charles Center, by Mies van der Rohe, 1961–64, an office tower in Charles Center.

Churches: German Evangelical Reformed Church ("Otterbein Church"), 1784; apse added later. – Cathedral of the Assumption (I, pl. 81), by Benjamin Latrobe, 1805–21, one of the finest neoclassic churches; towers 1832; portico (closely related to the Erechtheion in Athens) added by John H. B. Latrobe, 1863; eastern extensions 1879 and 1890. – Chapel of St. Mary's Seminary, by Maximilian Godefroy, 1806–07, in Neo-Gothic style. – Unitarian Church, by Godefroy, 1817–18, showing influences of C. N. Ledoux; interior remodeled in 1916. – St. Alphonsus' Church, by Robert C. Long, Jr., 1842, imaginative brick Neo-Gothic. – Franklin Street Presbyterian Church, also by Long, 1844, a fine Tudor-style building. – Grace and St. Peter's Church, by John R. Niernsée, 1850–52, fine English Neo-

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Gothic. – St. Paul's Church, by Richard Upjohn, 1852–56, an Italianate design. – Greenmount Cemetery Mortuary Chapel, by Niernsée and John C. Nelson, 1856, Neo-Gothic. – First Methodist Church (now Lovely Lane Methodist Church), by McKim, Mead & White, 1882–86, massive stonework inspired by Italian Romanesque. – Episcopal Cathedral of the Incarnation, monumental Neo-Gothic scheme by Bertram G. Goodhue, 1920s, of which only the Synod (now the Cathedral) has been built. – Cathedral of Mary Our Queen, designed by Eugene F. Kennedy, Jr., of Maginnis & Walsh, 1957–60, a huge "modern Gothic" structure. – Church of the Redeemer, by Pietro Belluschi, 1958–60, a barnlike addition to a 19th-century country church.

Museums: Walters Art Gallery, with Byzantine and medieval manuscripts, ivories, and enamels, Near Eastern art, Egyptian and classical antiquities, ceramics, and European painting. – Baltimore Museum of Art, with American and European painting and sculpture from the Renaissance to the present, prints, silver, and period rooms. – Peale Museum, housed in a building of 1813, with paintings by the Peale family and local artists and contemporary paintings. – Maryland Historical Society, housed in the Enoch Pratt residence of 1847, with American portraits, furniture, silver, and costumes.

California. St. Andrew's Episcopal Church, by Richard Boulton, 1767, with a handsome Palladian façade.

Dorchester County. Trinity Church on Church Creek, built before 1690, a typical example of the brick "Tidewater" church.

Monkton. Breezewood Foundation, with collection of Siamese sculpture, principally religious.

Prince Georges County. "Montpelier," 1751, in Georgian style; wings added ca. 1770.

Saint Marys County. "Cremona," 1819, a large brick mansion with a noteworthy hanging double stairway.

Talbot County. "Troth's Fortune," late 17th century, a small manor house with an engaged staircase tower on the rear façade. – "Boston Cliff," early 18th century, a small manor house with 18th-century English and American furniture.

Wye. Wye House, 18th century, with an orangery dating from this period.

South Eastern States (Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi). In this area, settled by the Spaniards, English, and French, the towns were often small and the law courts, churches, lading places, and mills were located there. The economy was based on the great plantations. Each plantation had much the aspect of a village, with many buildings, extended families, and servant population.

Even in the most famous of the ideal schemes for settling the area, Sir Robert Montgomery's 1717 plan for the margraviate of Azilia, Ga., based largely on the Locke-inspired Fundamental Constitutions of Carolina, the emphasis was entirely on division into individual farms and estates, and the city so sketchily indicated in the plan was primarily the site of the governmental palace. Although Montgomery's plan reflected the Vitruvian concern for protection against unhealthy air, the central city was provided with streets of apparently equal breadth in both the principal and secondary compass directions, which was not in accord with Vitruvian principles. Montgomery's plan combined an internal nine-square grid (somewhat like that of New Haven) with external radials. The Franco-Italian inspiration of the plan, very clear in the land patterns themselves, was further emphasized by the statue-topped façade indicated for the palace of the margrave. Montgomery's plan, like other Utopian schemes for colonization, did not materialize.

The typical method in which the area gradually acquired some urban aspects, especially along the rivers, is most neatly illustrated by developments along the Mississippi. The Spanish Fort Ferdinand was taken over by the French and became Fort Des Ecores (present-day Memphis, Tenn.). The plan of about 1790 shows that near the port, along the waterway, a town had gradually developed with extensive formal gardens on one side and the fort's own garden and orchard on the others; farther downstream were a hospital and its gardens, a habitation with its outbuildings and gardens, and the site of a projected additional fort. These elements were built over after the 1819 planning of Memphis, but the grid plan of the city recalls somewhat this random placement of formal gardens along the river, with four random-placed open squares for parks, and a large public promenade along the river itself. (The random placement of squares was typical of river-town planning.) Although this type of development was common in the late 18th century, it was already apparent in, for instance, the 1725 map of the Natchez, Miss., area and the 1733 map of the county of Savannah, Ga.

The centers of these settlements were the forts. Some of the residences were also fortified, as in New England, for example, "Mulberry" near Charleston, S.C., of 1714, erected on the fortlike plan of a central block with four strong towers attached at the corners. In fact, Mulberry was one of the three frontier forts in the Indian war of 1715. The finest early American fort plan was probably that of the English Fort Loudoun, Tenn., on the Tennessee River; in the 1757 plan of Fort Loudoun a highly sophisticated use of an advantageous site is evident.

Forts also existed in conjunction with well-established cities by the early 18th century. An extensive grid for the city of Mobile, Ala., was laid out around Fort Louis in 1711. The grid plan of English Charleston, S.C., laid out in 1680, existed within fortified walls in 1715, interestingly very close in pattern to the plan created by the French for New Orleans, La., in 1718.

When relatively large urban settlements were attempted, they were always carefully laid out. The simplest of layouts was that of the regular grid with dimensions based on the length of the surveyor's rod (16½ feet) and chain (66 feet), and this was the dominant approach throughout the period of settlement and growth. Richmond, Va., was laid out essentially on a grid plan in 1737. The grid was used for Alexandria, Va., in 1749, and the same scheme was continued in 1798. Egmont Town on Amelia Island, Fla., was laid out in 1767 as a grid with streets one chain wide, lots one chain by two, and one open square for public purposes, along the river. As the settlers went west they carried the grid with them, and George Rogers Clark planned Louisville, Ky., in 1779 as a grid along the river. Many of the towns on the Mississippi were planned in the same way. Even the Spanish were unable to resist the grid plan, replotting irregular Fernandina, Fla., in 1811 with a regular grid, moving houses to conform to it, and creating a square fronting against the fort on the little peninsula.

Although the surveyor's grid was the dominant form, at least in the number of cities for which it was used, there were notable experiments in urban forms in the South Eastern States, as there were in other parts of the country. Perhaps richest in terms of baroque variety was Williamsburg, the inland capital of Virginia, which, because it was not a port, was laid out in 1699 to display the public buildings to best advantage: at one end of the main street was the handsome edifice of the College of William and Mary and at the other end the Capitol, and the streets radiated out from them to either side to form frames for these settings. In the center of this main street was Market Square, the porticoed Courthouse, the Magazine, and (originally) the Gaol. South of Market Square stood Tazewell Hall, probably the most sumptuous of the private homes. Westward, toward the College, the towered church appeared across the expanse of the widest avenue in the town, the Palace Green, whose northern end was closed by the most magnificent structure in the town, the Governor's House, or "Palace." The whole town was then related to this plan.

Another equally interesting, though in some ways less individual, plan reflecting the care in setting public spaces and structures was that contrived for Savannah, the largest city and chief port of Oglethorpe's colony of Georgia, settled beginning in 1733. The river city was fortified (as it was in the buffer area near the French and Spanish) and was laid out with the use of a repeating pattern of grid-pattern blocks with central squares. The individual unit of the plan was not unusual, but its regular repetition was, and it created a fine framework that was repeated as the city developed; today there are 24 such squares. Governor Oglethorpe liked this plan so well that it was prescribed for Ebenezer and New Ebenezer, both settled in the 1730s. The concept of repeating squares was carried out in a somewhat different general plan at Brunswick, Ga., as late as 1837.

Salem (now part of Winston-Salem), N.C., was laid out in 1765 for the Moravians in a plan combining elements of the Philadelphia

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

and Savannah approaches. Middleton Place Gardens outside Charleston, S.C., the oldest landscaped gardens in America, was laid out in a very French manner in 1764–74. Boonesboro, Ky., reflected the German influence from western Pennsylvania in its linear town lots.

The plantation areas of the coastal south were influenced by English and north European fashions, which set the style of life. Thus there was a stronger baroque architectural expression here than in the northern colonies. The rather Danish character (jerkin-head roof, painted stucco exterior, and very plastic paneling and ornament) of St. James's Church, Goose Greek, S.C., of 1708, derives from the fact that it was erected by a group of settlers who had come from Barbados. The north European baroque flavor is seen in the Prince George Winyah Church in Georgetown, S.C., of 1742, and is reflected in the marvelous Brick House of about 1725 at Edisto Island, S.C. Perhaps it is this same influence that accounts for the widespread use of the great gambrel roofs in Princess Anne County, Va., and in Richmond into the 1790s. In isolated instances this bolder manner continued well beyond the introduction of the romantic classic styles, as in St. John's Lutheran Church in Pomaria, S.C., 1809, the Presbyterian Church at Edisto Island, 1831, and the Danish Palladian framework of the Mobile, Ala., City Hall, 1857–58 (originally built as the Market and Armory), which Thomas James spattered with 19th-century Italianate details.

Baroque influences are also apparent in the architecture, particularly the British style. Beginning with the Cupola House of about 1715 in Edenton, N.C., with its overhang, heavy chimneys, and distinctly Jacobean cupola and gable, the south reflected, often in a retarded or provincial way, the English manner. The most Anglo-Palladian of American residences was the Miles Brewton House in Charleston, S.C., built between 1765 and 1769; Ezra Waite of London was the carver and joiner and perhaps the architect. The William Gibbes House of about 1772 in Charleston reflects a similar English influence in the Gothic basement. One of the Hawks family of architects from England designed the first Gothic structure in North Carolina, St. Matthew's Church in Hillsboro, 1815. The finest houses of the great period of Savannah's wealth were designed in a superb Regency manner by the English architect William Jay, who worked in the area from 1817 to 1824. This style was also brilliantly used in public buildings throughout the south by Robert Mills. As late as 1876 the Regency style was used for the First African Baptist Church in Richmond, Va.

Sometimes the English influence came from New England, which sent prefabricated house frames, the design for Davenport House in Savannah, 1815, the workmen for Brumby House in Athens, Ga., 1818, and later the inspiration for the romantic folly of "Longwood" near Natchez, Miss., begun in 1860 and never completed. Georgia's commercial relations with New England must partly explain the copying of Old College at the University of Georgia in Athens from Yale University's Connecticut Hall.

During the first half of the 19th century an extremely wealthy class of planters built extravagant houses that made a regional style of the Greek revival, with elaborate gardens of Continental rather than English inspiration. The Greek revival style was taken up again after the Civil War and is still being used today.

In Florida in the early 20th century Spanish architecture was influential. Addison Mizner and others developed a type of Mediterranean Renaissance in Coral Gables and Palm Beach, and there was even a phase of "Moorish" architecture with fantastic Alhambrian shapes in poured concrete.

Though the South Eastern States have not in general been innovators in the recent development of architecture and the arts in the United States, there have been several notable exceptions. Frank Lloyd Wright's largest single-site grouping, Florida Southern College in Lakeland, Fla., was begun in 1938. The State Fair Arena in Raleigh, N.C., was built between 1951 and 1953 by Matthew Nowicki and William H. Dietrick. Dulles International Airport (XIII, PL. 229), located in Chantilly, Va., was designed in 1958–62 by Eero Saarinen (q.v.).

Waugh, The South Builds, Chapel Hill, N.C., 1960; D. W. Hollis, Look to the Rock: 100 Ante-bellum Presbyterian Churches of the South, Richmond, 1961.

Virginia. The first permanent English settlement in America was established at Jamestown in 1607. In 1779 Richmond became the capital city. One of the original 13 colonies, Virginia was admitted to the Union in 1788, seceded in 1861, and was readmitted in 1870.

Alexandria. Christ Church, by James Wren, 1767–73; tower and steeple 1818; later changes. – First Presbyterian Church, 1773–74; later changes. – Stabler-Leadbetter Apothecary Shop, 1792.

Arlington. Custis-Lee Mansion (also known as Arlington House), by James Hadfield, 1802–37, with great portico modeled on the temple at Paestum, Italy.

Berryville. "Berry Hill," ca. 1840, modeled on the Parthenon, flanked by two buildings of temple form.

Burrowsville. In the environs are "Brandon," ca. 1765, a five-part plantation house with beautiful gardens; Willow Hill, 1840, a plantation house with fine lace ironwork; and Brandon Church, 1856.

Charles City. Near here are several notable James River plantations. "Belle Air," ca. 1670, with a fine Jacobean staircase. – "Berkeley," 1726, with terraced boxwood gardens. – "Shirley," ca. 1769, with two-story, pedimented, colonnaded porticoes on the north and south sides. – "Westover," ca. 1730–34, one of the most distinguished Georgian houses in the United States; the wrought-iron entrance gate is outstanding. – "Sherwood Forest," 1780; enlarged by President Tyler in 1842.

Charlottesville. Michie Tavern, 1735. – Courthouse, 1803. – University of Virginia (I, PL. 80), original plan and buildings by Thomas Jefferson, 1818–26; rotunda restored by McKim, Mead & White 1896–98. – Nearby is "Monticello," by Jefferson (q.v.), built in 1769–84 on an Anglo-Palladian scheme; remodeled by Jefferson in the French manner in 1796–1809. – Near Monticello is "Ash Lawn," built by Jefferson in 1798 for President Monroe.

Fairfax. Fairfax County Courthouse, 1800, a late example of the English town-hall type.

Fredericksburg. Many pre-Revolutionary buildings, including "Kenmore," 1752, with exquisite plasterwork ceilings and overmantels, the Rising Sun Tavern, Mary Washington House, and Hugh Mercer Apothecary Shop.

Hanover. Hanover County Courthouse, ca. 1734, an arcaded building.

Hopewell. Appomattox Manor, main part of house dates from 1763; dairy kitchen and smokehouse were built in 1700. – Nearby is Merchant's Hope Church, 1657.

Jamestown. Excavated foundations of 17th-century settlement, including the church tower of 1699, behind which is Memorial Church, by Ralph A. Cram, 1907.

King William. King William County Courthouse, ca. 1734; flanking buildings 1885.

Lancaster. Nearby is Christ Church, 1732, whose superb proportions and architectural details make it the finest church of the colonial period in Virginia.

Lexington. Washington and Lee University, Washington Hall, by John Jordan, ca. 1830. – Virginia Military Institute, by A. J. Davis, 1848–60, in Neo-Gothic style; burned in 1864, it was rebuilt by Davis in 1870–73; rebuilt by B. G. Goodhue in 1914.

Lynchburg. Miller-Claytor House, 1791; restored 1935. – Quaker Meetinghouse, 1798; restored. – Old Courthouse, 1855, in Greek revival style. – Nearby is "Poplar Forest," designed by Thomas Jefferson, 1806–22.

Mount Vernon. The home of George Washington, "Mount Vernon," an early house of unknown date, enlarged on Palladian scheme by Washington 1757–58 and 1773–79; two-story portico added by Washington in 1784–87. – "Woodlawn," by William Thornton, 1802–05, a beautiful five-part mansion. – Pope-Leighey House, by Frank Lloyd Wright, 1940, a Usonian structure with furniture by Wright. – Nearby are Gunston Hall, 1755–58, with interiors by William Buckland, of which the Chinese Chippendale and Palladian rooms are outstanding, and Pohick Church, 1771–72.

Norfolk. St. Paul's Church, 1739. – Myers House, 1792, a brick mansion of the early Federal period. – Old Courthouse (now General Douglas MacArthur Memorial), 1847, in Greek revival style. – Custom House, by Ammi B. Young, 1859, a massive temple form. – Near Norfolk is the Adam Thoroughgood House, ca. 1636–40, a small brick farmhouse, one of the earliest in the country.

Palmyra. Fluvanna County Courthouse, probably by John H. Cocke, 1829–31.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Powhatan. Powhatan County Courthouse, 1849–50, modified from an Asher Benjamin design.

Reston. A "new town," with the master plan by Whittlesey & Conklin, begun 1963 (PL. 164), to be completed in 1980.

Richmond. Poe Museum, ca. 1685–88, the oldest house in the city. – St. John's Church, ca. 1740; addition 1772; steeple early 19th century; later changes. – "Wilton," 1783, a mansion in Queen Anne style. – Masonic Hall, 1785–87. – State Capitol (I, PL. 78), by Thomas Jefferson, assisted by C. L. Clérisseau, 1785–96, modeled on the Maison Carrée (XIII, PL. 245) at Nîmes, France; wings added 1904–06. J. A. Houdon's (q.v.) life-size statue of Washington, 1785, stands in the rotunda. – John Marshall House, 1790. – Wickham-Valentine House (now part of Valentine Museum), by Robert Mills, 1812. – Monumental Church, by Mills, 1812–14, an octagonal structure; tower and details never completed. – White House of the Confederacy (now Confederate Museum), by Mills, 1816–18. – St. Paul's Church, by Thomas S. Stewart, 1843–45, modeled on St. Luke's in Philadelphia. – Medical College of Virginia, "Egyptian Building," by Stewart, 1845. – First African Baptist Church, 1876, a late example of pure Regency design. – Broad Street Railway Station, by John Russell Pope, 1917, in classical style. – Virginia Museum of Fine Arts, with American and European painting, sculpture, and minor arts. – Near Richmond is "Mount Airy" (I, PL. 77), by John Ariss, 1758–62, very Palladian, with façades from James Gibbs's *Book of Architecture* and William Adam's *Vitruvius Scoticus*.

Smithfield. Old Brick Church (I, PL. 74), also known as St. Luke's and as Newport Parish Church, 1682 (modern scholarship rejects the date of 1632), in Gothic style with traceried windows; later changes; restored 1890s.

Stratford. Stratford Hall, ca. 1725–30, in early Georgian style with unique massing in a simplified Vanbrugh manner.

Surry. Near here are Bacon's Castle (I, PL. 74), ca. 1655, in Jacobean style, with decorative end gables and clustered chimneys, and Warren House, 1652.

Talleysville. Nearby is St. Peter's Church, 1701; later changes, including addition of massive tower; one of the few English baroque structures in America.

Williamsburg. This was the capital of the Virginia colony from 1699 to 1779. The city has been restored to its original appearance by Colonial Williamsburg, Inc. There are over 450 preserved, restored, and reconstructed public buildings, residences, churches, taverns, and craft shops, as well as beautiful gardens. The most important buildings are listed here. – College of William and Mary, Wren Building, probably based on a design by Sir Christopher Wren, built on a U-shaped plan with a central block and two wings, one housing the chapel and the other the dining hall. The main block and the dining hall were erected between 1695 and 1702; burned in 1705, they were rebuilt in 1709–16; the chapel wing was added 1729–32. Damaged by fires, the building was rebuilt in 1859 and 1862–69 and restored in 1928–31. Brafferton Hall, 1723, and the President's House, 1732, are part of the College. – The Capitol, 1701–05, an H-shaped building with two apsidal-ended wings; rebuilt in 1751–53 after a fire; burned in 1832; rebuilt in 1928–34. The Council Chamber is magnificently paneled. – Governor's Palace, perhaps designed by Wren, 1706–20, a handsome Georgian mansion; ballroom wing, by Richard Taliaferro, added ca. 1749–51, with a beautiful ballroom and supper room. Burned in 1781, it was reconstructed 1931–34. Formal garden in geometric pattern with boxwood hedges. – Bruton Parish Church, built by James Morris after a plan by the governor, Alexander Spotswood, 1712–17; additions of 1752 and 1755; steeple added 1769; restored. – Powder Magazine, 1714, a fine octagonal brick structure. – Brush-Everard House, 1717. – Raleigh Tavern, ca. 1740; burned 1859; reconstructed. – George Wythe House, by Richard Taliaferro, 1755. – Old Courthouse (houses archaeological exhibit), 1770. – James Semple House, attributed to Thomas Jefferson, ca. 1780. – Abby Aldrich Rockefeller Folk Art Collection, with American painting, sculpture, and minor arts of the late 18th and early 19th centuries. – Near Williamsburg are Warburton House (I, PL. 74), ca. 1680, and Carter's Grove, probably designed by Taliaferro, 1750–53, a plantation house in early Georgian style, with superb interior woodwork by Richard Bayliss and a masterly entrance hall.

Yorktown. Thomas Sessions House (also known as Shield House), ca. 1693. – Old Custom House, 1706; restored 1929–30. – Nelson House (part of York Hall), ca. 1740. – Moore House, before 1768; restored.

West Virginia. A part of Virginia until the Civil War, West Virginia separated from it in 1861 and was admitted to the Union as a state in 1863. Charleston is the capital city.

Charleston. State Capitol, by Cass Gilbert, completed 1932, in his classical style.

Huntington. Huntington Galleries, with paintings, silver, rugs, tapestries, and prints.

Lewisburg. Old Stone Presbyterian Church, 1796. – Greenbrier County Courthouse, 1837; enlarged 1935.

Moundsville. Grave Creek Mound, an Indian cone-shaped burial mound of the Adena phase, 70 feet high and 320 feet in diameter. The Mound Museum houses an archaeological collection.

Wheeling. First Presbyterian Church, 1831, in classic revival style; multistoried tower and Ionic portico. – First Baptist Church (formerly Old St. Matthew's Church), 1837, in classic revival style. – Oglebay Mansion (now a museum), 1835, a beautiful Greek revival building.

BIBLIOG. J. W. Wayland, Historic Homes of Northern Virginia and the Eastern Panhandle of West Virginia, Staunton, Va., 1937; FWP, West Virginia: A Guide to the Mountain State, New York, 1941; C. J. Milton, Landmarks of Old Wheeling and Surrounding Country: A Record of Post-colonial Wheeling, Wheeling, 1943.

North Carolina. The first permanent settlement was established in 1660 at Albermarle. One of the original 13 colonies, North Carolina was admitted to the Union in 1788, seceded in 1861, and was readmitted in 1868. Raleigh is the capital of the state.

Asheville. Zebulon B. Vance Birthplace, 1790s, a log dwelling with six farm outbuildings. – All Souls' Episcopal Church, by Richard M. Hunt, 1893. – Nearby is Biltmore House, also by Hunt, 1895, in French château style; extensive formal gardens by Frederick Law Olmsted; inside are a Gothic banquet hall and a tapestry gallery.

Bath. St. Thomas's Church, 1734–40; restored. – Buzzard Hotel, ca. 1740. – Palmer-Marsh House, ca. 1744; restored. – Bonner House, ca. 1825.

Carthage. The House in the Horseshoe, ca. 1770, with fine woodwork and handsome carved mantel and cornices.

Chapel Hill. University of North Carolina: "Old East" (a dormitory), 1793–95; Old Library (now Playmakers' Theater), attributed to A. J. Davis, 1850; William Hays Ackland Memorial Art Center, with painting, sculpture, furniture, and minor arts. – Chapel of the Cross, by Francis Hawks, 1842–46, Neo-Tudor.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Charlotte. Mint Museum of Art, by William Strickland, 1836, in Greek revival style; destroyed by fire in 1844; rebuilt on same plan in 1936; contains European and American painting and sculpture from the Renaissance to the present.

Cherokee. Oconalaftee Indian Village, a reconstruction of a Cherokee village of the period 1750 to 1800. Cherokee crafts and activities are demonstrated.

Edenton. Sycamore Plantation, 1660. – Cupola House, ca. 1715, in Jacobean style. – St. Paul's Episcopal Church, 1736. – Edmund Hatch House, ca. 1745. – James Iredell House, ca. 1760. – Chowan County Courthouse, probably by Gilbert Leigh, 1767; considered the finest Georgian courthouse in the south. – Barker House, ca. 1782; restored. – Hayes Plantation, ca. 1789. – Beverly Hall, 1810. – Pembroke Hall, ca. 1840.

Fayetteville. Old Market House (now public library), 1838, in Regency style with Gothic arches.

Greensboro. University of North Carolina, Weatherspoon Art Gallery, with modern European and American painting, sculpture, prints, and textiles.

Halifax. Constitution House, 1758; restored. – "Dutch Colonial" House, ca. 1760; restored. – Colonial Jail, 1764. – Davie Home and Eagle Tavern, pre-Revolutionary buildings.

Hertford. Perquimans County Courthouse, ca. 1731, in Georgian style; additions in 1818.

Hillsboro. St. Matthew's Church, 1815, in Neo-Gothic style. – Orange County Courthouse, by John Berry, 1845, with classical details from Asher Benjamin and Minard Lefever.

New Bern. Haslen-West House, 1761. – Tryon Palace, by John Hawks, 1767–70, in English Palladian style; burned 1798; rebuilt 1957–59. Formal gardens in 18th-century manner. The Palace contains one of the best public collections of English 18th-century furniture in the United States. – John Wright Stanly Home (now public library), also by Hawks, 1780. – Taylor-Ward House, 1792. – Smallwood-Ward House, 1812, in Georgian style. – Richardson House, 1828. – Hollister-Swan House, 1840.

Oldtown. Bethabara Moravian Church, by Frederick W. Marshall, 1788, in Germanic country classicism.

Raleigh. Wakefield House, ca. 1770; restored. – State Capitol, by Ithiel Town and A. J. Davis, 1833–40, in Greek revival style. – Christ Church, by Richard Upjohn, 1848, in English Gothic style, with a detached tower. – State Fair Arena, by Matthew Nowicki and William H. Deitrick, 1951–53, one of the most important modern buildings in the country. – Legislative Building, by Edward D. Stone, completed in 1963, a modern adaptation of the Greek classical style. – North Carolina Museum of Art, with European painting from the early Renaissance to the baroque, American painting, tapestries, bronzes, and minor arts.

Wilmington. Cornwallis House, 1771; restored. – St. John's Art Gallery (originally Masonic Lodge), 1801. – St. James's Episcopal Church, by Thomas U. Walter, 1839, in Neo-Gothic style; vestry contains an *Ecce Homo* taken from a captured Spanish ship in 1748. – Near Wilmington is Orton Plantation, 1725; Greek Doric façade, 1840; set in the midst of beautiful gardens.

Winston-Salem. Old Salem, a Moravian congregation town founded in 1766, was a planned community; 45 of the original buildings still stand, of which 21 have been restored. Noteworthy buildings include the Brothers' House, 1766–69, a half-timbered structure, enlarged in 1786 and later altered; Miksch Tobacco Shop, 1771; Anna Catharina House, 1772; Salem Tavern, 1784; Boys' School, 1794, now housing the Wachovia Museum; Christoph Vogler House, 1797; Home Moravian Church, by Frederick W. Marshall, 1798–1800; and the John Vogler House, 1819. – Belo House, 1849, in Greek revival style, with a two-story colonnade.

Bibliog. FWP, North Carolina: A Guide to the Old North State, Chapel Hill, N.C., 1939; Garden Club of North Carolina, New Bern: Cradle of North Carolina, Raleigh, 1941; F. B. Johnston and T. T. Waterman, The Early Architecture of North Carolina, Chapel Hill, N.C., 1941; M. B. Owen, Old Salem, N.C., Winston-Salem, 1941; FWP, Raleigh: Capital of North Carolina, Raleigh, 1942; J. C. Harrington, Fort Raleigh, 1585, JSAH, XIII, 4, 1954, pp. 27–28; J. K. Rouse, Some Interesting Colonial Churches in North Carolina, Kannapolis, N.C., 1961; J. V. Allcott, Colonial Homes in North Carolina, Raleigh, 1963.

South Carolina. The first permanent settlement was established at Beaufort in 1711 by the English. In 1786 Columbia became the capital city. One of the original 13 colonies, South Carolina was admitted to the Union in 1788, was the first state to secede, in 1860, and was readmitted in 1868.

Beaufort. Hepworth House, 1717. – St. Helena's Episcopal Church, 1724. – Edmund Rhett House (also known as Secession House), 1743, in modified Greek revival style; later changes. – Lafayette Building (Verdier Home), 1795. – Fraser House, 1804. – John Joyner Smith House, ca. 1813, in Greek revival style. – "Marshlands," 1814, in late Adam style. – "Tidewater," 1830s; addition of 1892. – Baptist Church, ca. 1844, in Greek revival style. – Means House, early 1850s, with unusual semicircular entrance steps and portico. – Outside Beaufort is Retreat Plantation, ca. 1740; porch probably added later.

Charleston. Charleston, founded in 1670 by English settlers, is perhaps the most beautiful city in the United States. The city was a great port of the south in the 18th and the early 19th century and preserves much of its 18th-century character.

Secular buildings: George Everleigh House, ca. 1738. – Colonel Othniel Beal House, ca. 1740. – James Hartly House, ca. 1755, in Georgian style. – Thomas Legare House, ca. 1760; Regency piazza added in 1816. – Miles Brewton House, probably by Ezra Waite, 1765–69; brick mansion with superb Palladian pediment and two-story portico. – Old Exchange Building, 1767–71, in Anglo-Palladian style. – Young-Johnson House, ca. 1770. – William Gibbes House, ca. 1772, in Georgian style; redecorated ca. 1800 in Adam style. – John Stuart House, ca. 1772, in Georgian style; woodwork of two principal rooms in Minneapolis Museum of Fine Art. – County Courthouse, by William Drayton, 1788–1800; extension 1941. – Timothy Ford House, ca. 1800, in Adam style. – City Hall (originally a branch of the First Bank of the United States), 1801–02. – South Carolina Society Hall, by Gabriel Manigault, 1804; Greek revival portico by Frederick Wesner added in 1825. – Nathaniel Russell House, 1807–09, one of the best examples of Adam *décor* in the country, with a beautiful flying staircase. – Ashley Hall (now a girls' school), ca. 1816, an outstanding example of a Regency villa. – William Mason Smith House, perhaps by Robert Mills, ca. 1822, in Regency style. – Fireproof Building, by Mills, 1822–27, Mills's most Anglo-Roman building. – College of Charleston, Revolutionary barracks remodeled by William Strickland, 1828; wings, portico, and gate by E. B. White, 1850. – Robert William Roper House, ca. 1838, in Greek revival style. – Market Hall, by E. B. White, 1841, in temple form. – Bennett's Rice Mill, 1844 and later, a mill rendered as a Renaissance palace. – U.S. Custom House, by E. B. White, 1849–79, in Greek revival style. – Farmers' and Exchange Bank, by Francis D. Lee, 1853–54, in Moorish revival style. – The Ansonborough district contains more than 100 ante-bellum structures of architectural importance now undergoing restoration.

Churches: St. Michael's Church (I, PL. 75), attributed by some to Peter Harrison, 1751–53, with a monumental portico and a great tower and steeple. – Unitarian Church, 1772–84; remodeled by Francis D. Lee, 1852–54; with fan-tracery vaulting and pendant copied from Chapel of Henry VII at Westminster, England. – French Huguenot Church, 1797; remodeled in Neo-Gothic style by E. B. White, 1845. – Second Presbyterian Church, by James and John Gordon, 1809–ca. 1816, in Georgian style. – St. John's Lutheran Church, possibly by Frederick Wesner, 1815–18; steeple added by Charles Fraser in 1859. – First Baptist Church, by Robert Mills, 1819–22, with full temple portico. – St. Stephen's Chapel, probably by H. and E. Horlbeck, 1835–36. – St. Philip's Church, by Joseph Hyde, 1835–38; interior columns copied from St. Martin-in-the-Fields in London; steeple added by E. B. White, 1848–50. – St. Mary's Church, 1838–39, in Greek revival style. – Beth Elohim Synagogue, by Cyrus L. Warner, 1841, Greek Doric. – Centenary Methodist Episcopal Church, by E. B. White, 1842, in Greek temple style. – Grace Protestant Episcopal Church, also by White, 1847–48. – Trinity Methodist Church, by E. C. Jones, 1848–50.

Museums: Charleston Museum, with local furniture, costumes, minor arts, and Indian relics. – Carolina Art Association, Gibbes Art Gallery, with painting, sculpture, and prints by South Carolina artists.

Near Charleston are some fine plantation houses: "Medway," 1686 with later additions; "Middleburg," 1699; "Mulberry," 1715, a baroque country house with formal gardens; Drayton Hall, 1738, in Palladian style; Middleton Place Gardens, landscaped between 1764 and 1774; and "Seabrook," 1810, in Adam style.

Christ Church Parish. Christ Church, 1724–27; rebuilt 1782; spire 1835–38.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Columbia. Hampton-Preston House, perhaps by Robert Mills, ca. 1818. – De Bruhl-Marshall House, probably by Mills, 1820. – South Carolina State Hospital, original building by Mills, ca. 1825. – Ainsley Hall Mansion, by Mills, 1823; restored. – Robertson House, attributed to Mills, ca. 1832. – Crawford-Clarkson House, 1838, with Greek revival details. – South Caroliniana Library, 1840, in Greek revival style. – Trinity Episcopal Church, 1846; transepts 1861–62; generally inspired by York Minster, England. – State House, by John R. Niernsée, begun 1854; work resumed in 1885; dome and porches added by Frank P. Milburn in 1900; building completed by Charles C. Wilson in 1905. – University of South Carolina, Undergraduate Library, by Lyles, Bissett, Carlisle, & Wolff, Edward D. Stone, associated architect, completed 1958. – Columbia Museum of Art, with Italian Renaissance painting, contemporary American art, and minor arts.

Georgetown. Masonic Temple, 1735. – Prince George Winyah Church, 1742, in north European baroque style. – Market Building, 1842. – Near Georgetown are Hampton Plantation, 1735, enlarged 1757, giant portico and pediment added 1791; Hopseewee Plantation, before 1748; St. James's Church (also known as Wambaw Church), 1768, with curved-brick Tuscan columns; "The Wedge," 1818, a plantation house; and Brookgreen Gardens, an outdoor museum with American sculpture of the 19th and 20th centuries.

Goose Creek. St. James's Church, 1708, built by planters from Barbados in their ornamented stucco style.

Greenville. Bob Jones University Collection of Sacred Art, with religious art of the 13th–18th century.

Pompion Hill. Pompion Hill Chapel, 1763, a small brick structure with jerkin-head roof and charming interior.

Sumter. "Milford," 1840, in Greek revival style; restored. – Nearby is the Church of the Holy Cross, 1850.

Georgia. The first permanent settlement was made by the English at Savannah in 1733. The last of the 13 original colonies to be founded, Georgia was admitted to the Union in 1788, seceded in 1861, and was readmitted in 1870. Atlanta became the capital in 1887.

Athens. University of Georgia: Chapel, 1831, and President's House, 1854–55, both in Greek revival style; Georgia Museum of Art, with American painting. – Henry Grady House, 1845, in Greek revival style.

Atlanta. State Capitol, by Edbrooke & Burnham, 1885–89, in Italian Renaissance manner. – Henry Grady High School, Football Stadium, by Richard L. Aeck and Associates, 1948. – Georgia Institute of Technology, Coliseum, also by Aeck and Associates, 1956. – Peachtree Center, a complex of office buildings, hotels, and trade mart designed by John C. Portman for the downtown area in the 1960s. Regency Hyatt House, a hotel by Portman completed in 1967, is built around a great skylit courtyard. – Atlanta Art Association Galleries, with Italian Renaissance painting and sculpture, contemporary graphic arts, Oriental art, and American art. On the grounds is Thornton House, ca. 1780, moved from Union Point, Ga.

Augusta. Mackay House, ca. 1760, with fine interior features; restored. – Richmond County Courthouse, ca. 1811, with influences of French classicism. – Nicholas Ware Mansion, 1818. – St. Paul's Church, by John Land, 1819, in Roman style.

Cartersville. The Etowah Mounds date from the Mississippi phase of the Woodland stage (see NORTH AMERICAN CULTURES). The largest of the seven pyramids, Mound A, is 53 feet high and occupies several acres. On the south side of the mound is a clay ramp stepped with logs, which led to the top, on which a temple or residence for the chief or priest stood. The museum houses archaeological exhibits, which demonstrate the high artistic level reached by the Etowah Indians.

Columbus. Columbus Museum of Arts and Crafts, with European and American painting from the 16th century to the present, prints, and Indian relics.

Greensboro. Jail, ca. 1837, superb small crenelated stone keep.

Macon. Many beautiful Greek revival mansions, including: Solomon-Smith-Martin House, ca. 1823; Washington-Watson House, 1826, with later additions and remodeling; "The Cedars," 1830s, remodeled 1840; Ralph Small House, ca. 1835; "Overlook" (now Stratford Academy), 1836–40; Munro-Goolsby House, 1841; Leroy Napier House, 1842; Nisbet-Huguenin-Proudfit-Birdsey House, 1843–44; W. Rock Rogers House, 1840s; Raines-Miller-Carmichael House, late 1840s; and Judge Asa Holt House, 1853. – Just outside Macon is the Ocmulgee National Monument, preserving the remains of six successive occupations by different Indian groups dating from approximately 8000 B.C. to A.D. 1717.

Milledgeville. Former buildings of state government when the city was the capital of the state (1804–68), including: Old State Capitol (now Academic Building of Georgia Military College), 1804, and Old Executive Mansion (now President's House, Georgia State College for Women), 1838.

Sapelo Island. South End House, 1810–12, fine example of Greek revival architecture.

Savannah. Herb House, 1734. – Pirates' House, ca. 1754. – Pink House, 1789, in Georgian style; north wing added 1812. – Davenport House (now a museum), 1815, fine example of late Georgian style; restored. – Owens-Thomas House, by William Jay, 1816–19, one of the most beautiful Regency houses in America. – Independent Presbyterian Church, by John H. Greene, 1817–19; burned in 1889, it was rebuilt after Greene's designs. – Scarbrough House, by Jay, 1818. – Juliette Low Gordon Birthplace, 1818–21, in Regency style. – Chatham County Courthouse, by Jay, ca. 1820, a Doric temple form. – Sorrel-Weed House, 1837–40, in Greek revival style. – Christ Episcopal Church, by James H. Couper, 1838, an Ionic temple form. – Stoddard-Hull Barrow House, 1844–48, in Greek revival style. – Green-Meldrim House, 1850–61, Neo-Gothic. – St. John's Episcopal Church, 1852–53, Neo-Gothic. – Cathedral of St. John the Baptist, 1873, fine example of Neo-Gothic architecture. – Telfair Academy of Arts and Sciences, with American painting and American and English minor arts.

Spring Place. Vann House, 1804, built by a Scotch-Cherokee chieftain, in modified Georgian style.

Toccoa. Jarrett Manor (also called "Traveler's Rest"), 1784, a frontier fort and stagecoach inn.

Washington. Robert Toombs House, 1794, with a fine Doric colonnade. – Berry-Hay-Pope House, 1818, in Greek revival style; later alterations. – Fickeleen-Lyndon-Johnson House, ca. 1825; remodeled 1851; restored. – Presbyterian Church, 1825, in the style of the colonial churches of New England. – Barnett-Slaton House (now a museum), ca. 1835–36; later additions; restored. – MacEdwards House, 1850–60, in Greek revival style. – Mary Willis Library, 1889, characteristic late Victorian structure; stained-glass window by Louis C. Tiffany.

Florida. Florida was discovered by Juan Ponce de León in 1513. Saint Augustine, founded in 1565 by the Spaniards, is the oldest

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

permanent white settlement in the United States. The province was ceded to England in 1763 and retroceded to Spain in 1783; it was purchased by the United States in 1819. Admitted to the Union in 1845, Florida seceded in 1861 and was readmitted in 1868. Tallahassee is the capital.

Coral Gables. The city was planned as one unit in "Spanish" style in the 1920s; architecturally the most interesting buildings are the Congregational Church and the Bank of Coral Gables, both by Kiehnel & Elliott. – University of Miami, Joe and Emily Lowe Art Gallery, with European masterworks from the 14th to the 18th century and American Indian artifacts.

Ellenton. Gamble Mansion, 1845–50, in Greek revival style; restored 1950s.

Jacksonville. Cummer Gallery of Art, with American and European painting and French and English 18th-century furniture.

Lakeland. Florida Southern College, entire plan and all buildings by Frank Lloyd Wright, begun 1938.

Miami. Dade County Art Museum, housed in "Vizcaya," designed by J. B. Hoffman and Paul Chalfin, 1912–16, a Venetian Renaissance palace; contains European architectural elements, European interiors of the 16th–18th century, tapestries, and furniture; formal gardens with fountains and statuary. – Miami Museum of Modern Art, with contemporary painting, sculpture, and graphics and Oriental art. – In Miami Beach is the Bass Museum of Arts, with European masterworks, sculpture from the 14th century on, and tapestries. – In North Miami Beach is the Episcopal Monastery Church of St. Bernard of Clairvaux, the cloister portion of a Cistercian monastery built in 1141 in Sacramenia, Spain, a fine example of early Gothic architecture.

Saint Augustine. Castillo de San Marcos, 1672–96, enlarged 1738–39, one of the finest Spanish monuments in the country and the best surviving example of the type of fortress developed in Europe in the late medieval period. – 32 houses remain from the period 1703 to 1821; most have a loggia or a porch opening onto a side yard with the main entrance through the loggia, balconies facing on the street, high fences, and flat or pitched roofs. Noteworthy are: "Oldest House," Llambias House, Rodriguez-Avero-Sanchez House, Fatio House, "Old Spanish Treasury," Prince Murat House, Sanchez House, Fornells House, Paredes House, and the Old Spanish Inn with furnishings from the early 18th century brought from Spain. – Cathedral of St. Augustine, by Mariano de la Rocque, 1793–97; burned 1887; restored and transept, tower, and belfry added. – Ponce de Leon Hotel, by Carrère & Hastings, 1885–88. – Flagler Memorial Church, 1889–90, in Venetian Renaissance style. – U.S. Post Office and Custom House, 1937, built to conform to a drawing of the Royal Governor's Palace of 1764, embodying a part of the building of 1690. – South of Saint Augustine stands Fort Matanzas, 1741–42, medieval-fortress type with a keep.

Sarasota. House on Siesta Key (I, PL. 92), by Paul Rudolph, 1952. – Sarasota High School, by Rudolph, 1957–58. – John and Mable Ringling Museum of Art, housed in a villa in the Italian style designed by John H. Phillips, 1927–30, with European painting from the 16th to the 18th century (especially baroque), Cypriote and Indian sculpture, and medieval minor arts. On the Museum grounds are the theater from Asolo, Italy, 1798, remodeled 1857; the Ringling Residence, "Ca d'Zan," by Dwight J. Baum, 1925–26, in the style of a Venetian Gothic palace; and the Ringling Circus Museum.

Tallahassee. State Capitol, 1838–42; north and south wings and dome, by Frank P. Milburn, 1902; east and west wings and main porticoes, by H. J. Keutho, 1923; north wing extended by M. L. Elliott in 1936–37. – Florida State University, Art Gallery, with 17th-century European painting.

West Palm Beach. Norton Gallery and School of Art, with Chinese jades and sculpture and American and European painting and sculpture

BIBLIOG. FWP, Florida: A Guide to the Southernmost State, New York, 1939; A. Manucy, The Houses of St. Augustine, 1565–1821, St. Augustine, 1962.

Kentucky. Originally a part of Virginia, Kentucky became an independent state in 1792. The first permanent settlement was established by the English at Harrodsburg in 1775. Frankfort became the capital in 1792.

Bardstown. "My Old Kentucky Home," 1795–1818. – St. Joseph's Proto-Cathedral, by John Rogers, begun 1816, showing Baltimore influence in the handsome façade with niches, Ionic portico, and baroque towers.

Danville. McDowell House and Apothecary Shop, ca. 1795; restored; contains apothecary equipment of the late 18th and the early 19th century.

Frankfort. Liberty Hall, ca. 1796, in Georgian style with a fine Palladian window; restored. – Old Governor's Mansion, 1798. – Old State House (now Kentucky Historical Society building), by Gideon Shryock, 1827–30, in Greek revival style. – Orlando Brown House, 1835. – State Capitol, by Frank Andrews, completed 1910.

Lexington. "Ashland," 1811, the home of Henry Clay. – University of Kentucky, University Art Gallery, with paintings, prints, and drawings.

Louisville. Jefferson County Courthouse, by Gideon Shryock, 1835–60, in Greek revival style. – Bank of Louisville (now Louisville Credit Men's Association), by Shryock, 1837, in Greek revival style. – City Hall, by John Andrewartha, 1870–73, in French Second Empire style. – J. B. Speed Art Museum, with Kentucky art, European minor arts, and American Indian objects. – University of Louisville, Allen R. Hite Art Institute, with paintings, sculpture, prints, and drawings. – Near Louisville are "Locust Grove," ca. 1790, in Georgian style, restored 1961, and "Farmington," by Thomas Jefferson, 1810, a simple brick building with Doric-columned portico and two magnificent octagonal rooms.

BIBLIOG. R. Newcomb, Old Kentucky Architecture, New York, 1940; A. J. Andrews, Gideon Shryock, Kentucky Architect, and Greek Revival Architecture in Kentucky, Filson Club H. Q., XVIII, 1944, pp. 67–77; R. Newcomb, Architecture in Old Kentucky, Urbana, Ill., 1953; FWP, Kentucky: A Guide to the Bluegrass State, 2d ed., New York, 1954; C. Tennessee. The first permanent settlement was established in 1771 near Rogersville. Tennessee was admitted to the Union in 1796, seceded in 1861, and was readmitted in 1866. Nashville became the capital in 1843.

Fontana Dam. Fontana Dam and Power House, by Roland Wank, 1942–45, probably the most architecturally significant of the many interesting structures by the Tennessee Valley Authority.

Gallatin. Near here is "Cragfont," ca. 1802, in Georgian style; restored.

Knoxville. Governor William Blount Mansion, 1792; restored 1920s. – City Hall (formerly Tennessee School for the Deaf), 1848, in simplified classical style. – Bleak House (now Confederate Memorial Hall), an ante-bellum mansion with terraced gardens; restored 1960. – Near Knoxville is Ramsey House (also known as Swan Pond), 1797, a simple marble house; restored 1950s.

Maryville. Maryville College, Fine Arts Center, by Schweiker & Elting, 1950, with contemporary prints. – Nearby is Cades Cove, a pioneer village of the early 19th century.

Memphis. Brooks Memorial Art Gallery, with European and American painting, prints, textiles, and glassware.

Nashville. St. Mary's Church, 1845–47, by William Strickland, in Greek revival style. – State Capitol, by Strickland, 1845–55, Greek revival, with the tower modeled after the choragic monument of Lysikrates in Athens; restored 1953. – First Presbyterian Church, by Strickland, 1848–51, in Egyptian style. – The Parthenon, an exact reproduction of the Athenian Parthenon as restored, containing American paintings. – Near Nashville are "Traveler's Rest," 1792, later additions; "Oaklands," early 1800s, later additions; "Belmont" (now Acklen Hall of Belmont College), by Strickland, 1850; "Belle Meade," by Strickland, ca. 1853, in Greek revival style, with Victorian furnishings; and "The Hermitage," Andrew Jackson's home, 1819, wings added 1831, rebuilt after fire in 1835, when the great Corinthian portico was added, with original furnishings. On The Hermitage grounds are log cabins of ca. 1804, the Presbyterian Church of 1823, and a smokehouse of 1831.

Natchez. First Presbyterian Church, 1829, in the style of New England church classicism.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Sewanee. University of the South, Art Gallery, with paintings and graphic arts.

BIBLIOG. R. S. Brandau, ed., History of Homes and Gardens of Tennessee, Nashville, 1936 (repr. 1964); FWP, Tennessee: A Guide to the State, New York, 1939; G. A. Cochran and F. B. Hoffman, Grandeur in Tennessee: Classical Revival Architecture in a Pioneer State, New York, 1946; A. E. Gilchrist, William Strickland: Architect and Engineer, 1788–1854, Philadelphia, 1950.

Alabama. The first permanent settlement was made by the French at Mobile in 1711. Alabama was admitted to the Union in 1819, seceded in 1861, and was readmitted in 1868. Montgomery has been the capital since 1847.

Birmingham. Birmingham Museum of Art, with European and American painting, graphic arts, silver, classical, Near Eastern, and Oriental antiquities, and American Indian and pre-Columbian art.

Demopolis. "Gaineswood," purportedly from designs of the owner, N. B. Whitfield, 1842–60, one of the most architecturally imaginative of the southern Greek revival mansions.

Mobile. Many fine Greek revival structures, including Bragg House, before 1827, remodeled in the 1850s; City Hospital, completed 1830, with a magnificent three-storied portico; "Oakleigh" (headquarters of Historic Mobile Preservation Society), 1833, with a unique curving outside staircase; Christ Church, 1835–40; Barton Academy, by James Gallier, 1836, with an Ionic porch and a double-domed, double-colonnaded cupola; and Palmetto Hall, 1846.

Montgomery. State Capitol, by Stephen D. Button, 1847; rebuilt after fire on revised scheme by Button, 1851–52; wings added later. – St. John's Church, by Wills, Dudley & Humbage, consecrated 1855, in Neo-Gothic style. – Alabama Agricultural Center, by Sherlock, Smith & Adams, ca. 1950. – Montgomery Museum of Fine Arts, with American painting, graphic arts, and Indian artifacts.

Moundville. At the Mound State Monument is a group of domiciliary mounds built by the Indians from about 1200 to about 1400. Mound B, the largest one, is 58½ feet high and covers almost 2 acres. The Archaeological Museum displays the art of the Moundville Indians and 57 burial groups.

Tuscaloosa. University of Alabama: Gorgas House (originally college dining hall), 1830, and President's House, a fine ante-bellum mansion.

Tuskegee. Tuskegee Institute, George Washington Carver Museum, with African art and sculpture and painting by American Negro artists.

BIBLIOG. FWP, Alabama: A Guide to the Deep South, New York, 1941; The Tintagil Club, Official Guide to Montgomery, Montgomery, 1948; R. C. Hammond, Ante-Bellum Mansions of Alabama, New York, 1951; W. H. Davidson, Pine Log and Greek Revival, Alexander City, Ala., 1964.

Mississippi. Biloxi, settled by the French in 1699, was the first permanent settlement. Mississippi was admitted to the Union in 1817, seceded in 1861, and was readmitted in 1870. Jackson has been the capital since 1822.

Jackson. Old Capitol (now State Historical Museum), by William Nichols, 1833–39, in Greek revival style; restored 1959–61. – Governor's Mansion, completed 1841, Greek revival. – State Capitol, by Theodore C. Link, 1901–03.

Natchez. There are 30 ante-bellum houses in and around Natchez. Typical of the French colonial style, with an open colonnaded veranda running around the house on both floors, are Connelly's Tavern, ca. 1796–99, restored, and a later example, "Dunleith," 1847. "D'Evereux," 1840, and Stanton Hall, 1851, are beautiful Greek revival mansions. "Longwood," by Samuel Sloan, begun in 1860 and never finished, is in pseudo-Oriental style.

Pascagoula. De la Point Fort, 1718, a fort erected by the Spaniards.

Vicksburg. "McRaven," frontier cottage of 1797 altered to plantation house in 1836; addition 1849. – Planters Hall, 1832; restored. – Cedar Grove, 1840–58; restored. – Old Courthouse (now a museum), 1858.

Tyree, Natchez Ante-bellum Homes, Natchez, 1964.

South Central States (Arkansas, Louisiana, Oklahoma, Texas). The earliest settlements in the area were in Texas, where Spanish Franciscans founded missions in the 17th century. The oldest extant building is at Ysleta, near El Paso, founded in 1681; the finest mission, San José y San Miguel de Aguayo, begun in 1720, is located in San Antonio. Very small-scale Spanish settlements were developed in the mission areas, the most important being San Antonio, which combined the three Spanish-colonial functions of town, presidio, and mission.

The region was dominated by the French. Outposts for exploitation were established following La Salle's reports of the Louisiana country (as he named it in honor of Louis XIV), including Mobile, Ala., Biloxi, Miss., Natchitoches, La., and New Orleans, La., all founded by the Lemoyne brothers, Pierre (Sieur d'Iberville) and Jean Baptiste (Sieur de Bienville). Permanent settlement on a truly urban scale was first made when Bienville founded New Orleans in 1718; the city was named for Philippe II, duc d'Orléans, when he was regent for Louis XV. The engineers Le Blond de la Tour and Adrien de Pauger laid the city out in 1721. The city framework they created was, like that of Philadelphia in the same period, far vaster than was required by immediate building and served to control the growth and form of the city for nearly a century (FIG. 637). The fortifications shown in the plan were never built.

When Louisiana was purchased by the United States from Napoleon in 1803 the entire Mississippi valley was quickly settled and New Orleans became a great trading center and port. The architecture of the plantation houses in Louisiana was generally of three types: French colonial; Greek revival; or "Plantation Greek," a combination of French colonial and Greek revival styles.

Although American settlers were in Texas when it was part of Mexico and during its brief independence, it was only after its union with the United States in 1845 that the flow of agricultural settlers commenced. The influence of the eastern states can be seen in such plans as that of 1846 for Rusk, Tex., with a central square in a grid plan. This reliance on the past is suggested in the various planning devices in the area around Fort Brown, Tex., established 1846, which by 1875 included a Renaissance star fort, a simple grid pattern town (Brownsville, founded 1848), a French-influenced plan of avenues radiating from a central point (the army post), and a romantically "natural" plan of roads on an island (set aside for a cemetery) in a lagoon.

The decline of the plantation system and of river transportation slowed and changed New Orleans' growth, but after World War II the city began a new economic advance. Were it not for the development of great cattle ranches and the discovery of oil Texas too might have been affected by the decline of the plantation system. Since World War II Texas and Louisiana have turned to the leading architects for their new buildings. Texas has been an innovator in city planning. Victor Gruen's plan to resuscitate and beautify the downtown area of Fort Worth is so basic and so attractive that it has been studied with the greatest interest by many other cities, suffering from the same problem of a decaying core.

Arkansas. The first permanent white settlement was at Arkansas Post in 1686. The area was claimed by France and then by Spain. In 1803 it was included in the Louisiana Purchase, and subsequently became part of the Louisiana and Missouri territories. The Arkansas territory was formed in 1819, and Arkansas was admitted to the Union in 1836. The state seceded in 1861 and was readmitted in 1868. Little Rock is the capital.

Fayetteville. University of Arkansas' Arts Center, by Edward D. Stone, Haralson & Mott, associated architects, completed 1951.

Little Rock. Arkansas Territorial Capitol Restoration, a group of 13 buildings dating from Arkansas' pre-statehood era, restored 1939–41; includes three residences and the Territorial Capitol, 1820, remodeled 1834, with period furnishings. – Old State House (now a history museum), by Gideon Shryock, 1833–40, fine example of Greek revival architecture; enlarged 1885; restored. – State Capitol, by George R. Mann and Cass Gilbert, 1900–15.

BIBLIOG. FWP, Arkansas: A Guide to the State, New York, 1941.

Louisiana. This area was claimed by France in 1682. The first permanent settlement was at New Orleans in 1718. Louisiana was ceded to Spain in 1763, and was returned to France in 1800. In 1803 it was part of the Louisiana Purchase. The state was admitted to the Union in 1812, seceded in 1861, and was readmitted in 1868. Baton Rouge is the capital.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Baton Rouge. "Magnolia Mound" (also known as Murat House), late 18th century, in French colonial style. – Prescott-Dougherty House, ca. 1840. – "Goodwood," 1856, a fine plantation house. – Old State Capitol, by W. A. Feret, 1879, in Neo-Gothic style; the interior vault of iron and stained glass was apparently inspired by J. B. Bunning's Coal Exchange of 1846–49 in London. – State Capitol, by Weiss, Dreyfous & Seiforth, completed 1932. – Louisiana State University Art Museum, with period rooms of the 17th, 18th, and 19th centuries.

Burnside. Houmas House, 1840, in Plantation Greek style, with a hexagonal guest house on either side of the main house.

Darrow. Nearby is "Ashland-Belle Hélène," attributed to James Gallier, Jr., 1841, an unusual mansion in Plantation Greek style; restored.

Derry. In the environs is "Melrose," 1833, a fine example of the French colonial style. Behind the residence is "African House," a square building with a shingled hip roof with an extensive overhang to shelter wagons.

Destrehan. "Ormond," 1780s, in French colonial style; wings added later; restored.

Edgard. Nearby is Evergreen Plantation House, ca. 1840, in Plantation Greek style; the curving exterior stair leading to the second-floor portico is noteworthy.

Hahnville. Keller House (also known as "Home Place"), ca. 1801, in French colonial style, with furniture, curtains, and wallpaper imported from France.

Jeanerette. Albania Plantation House, 1842, in Plantation Greek style, with a beautiful spiral staircase in the central hall.

Napoleonville. "Madewood," 1840–48, well-preserved Greek revival plantation home with connecting wings in the same style.

New Iberia. "The Shadows" (also known as "Shadows-on-the-Teche"), 1830–34, one of the most beautiful houses in Plantation Greek style; restored 1920s, 1961.

New Orleans. The Vieux Carré, also called the French Quarter, was the center of the original city (FIG. 637); Jackson Square was the *place d'armes*. Characteristic of the architecture in this quarter are iron balconies, fan windows, spiral staircases, and courtyards. In the Garden District, planned in the 1820s, are some fine old mansions and gardens.

Secular buildings: "Madame John's Legacy," ca. 1729, one of the oldest houses in French colonial style. – Old Ursuline Convent (now presbytery of St. Mary's Italian Church), by De Batz and Broutin, 1730–34; rebuilt by them in 1748–52 in Louis XV style; later alterations. – Lafitte's Blacksmith Shop, 1772–91. – Miro House, 1784, built by the Spanish governor. – The Cabildo (now part of Louisiana State Museum), 1755, first two stories probably based on the Casas Reales of 1791 in Antequera, Mexico; third story, with a mansard roof, added in the 1850s. – French Market, 1812; later additions. – The Presbytery (now part of Louisiana State Museum), completed 1817, is almost identical to the Cabildo. – Old Louisiana State Bank (now a store), by Benjamin Latrobe, begun 1819; completed after his death by Benjamin Fox in 1821. – Warrington House, ca. 1832, with magnificent murals. – Old U.S. Mint (now a federal prison), by William Strickland, 1836–38, in neoclassic style. – Louisiana State Arsenal (now Battle Abbey), by James H. Dakin, 1839. – U.S. Custom House, by A. T. Wood, 1847, with beautiful marble staircase and marble hall. – Pontala Buildings, by James Gallier, Sr., 1849–51, two buildings flanking Jackson Square that were America's first apartments. – City Hall, also by Gallier, 1845–50, an Ionic temple form.

Churches: Basilica of St. Louis, King of France, 1789–94, remodeled by J. N. B. de Pouilly, 1851. – Church of Our Lady of Guadalupe (formerly Church of St. Anthony of Padua), by Claude Garlie and Joseph Guillot, 1826–27, in classical style; later changes. – St. Mary's Italian Church, 1846. – Church of St. John the Baptist, by Albert Diettel, 1869–72, bold forms and Italianate details in brick.

Museums: Isaac Delgado Museum of Art, with Italian Renaissance masterworks, European and American painting and sculpture of the 19th and 20th centuries, and ancient and Oriental art. – Tulane University, Middle American Research Institute, with sculpture, ceramics, and manuscripts from Mexico and Central America.

Norwood. Nearby is "Richland," 1820, a sumptuous home with beautiful Greek revival portico and notable interior unsupported staircase.

Reserve. Voisin Plantation House, ca. 1785, in French colonial style, with original furniture. – In the environs is "San Francisco," ca. 1850, a plantation house in "Steamboat Gothic" style.

Saint Francisville. Near the town is "Rosedown," 1835, a mixture of the Louisiana, Georgian, and classical styles; the formal gardens were copied from those at Versailles and contain marble statues of gods and goddesses.

Vacherie. "Oak Alley" (I, PL. 81), 1836–37, a magnificent Plantation Greek mansion.

White Castle. "Nottoway," 1857, the largest extant plantation home in the state; noteworthy are the White Ballroom and the ornate cast-iron filigree work.

Oklahoma. Oklahoma was part of the Louisiana Purchase in 1803. The area was settled by the Indians and known as the Indian Territory. Part of the land was opened to white settlement in 1889, and in 1890 was organized into the Oklahoma Territory. The Indian and Oklahoma territories were merged in 1906 and the state of Oklahoma was admitted to the Union the following year. Oklahoma City became the capital in 1910.

Bartlesville. Price Tower (PL. 437, FIG. 868), by Frank Lloyd Wright, 1953–55, based on his 1929 scheme for a skyscraper church for New York City.

Oklahoma City. State Capitol, by S. A. Layton and S. Wemyss-Smith, 1914–17. – Oklahoma Art Center, with contemporary American art.

Tulsa. Boston Avenue Methodist Church, by Adah Robinson, 1925–29, with details inspired by Goodhue, Eliel Saarinen, and Wright. – Richard Lloyd Jones House, by Wright, 1929, showing the most direct influence of the Bauhaus in Wright's work. – Philbrook Art Center, with Italian Renaissance painting and sculpture, American Indian painting and sculpture, and painting of the 18th and 19th centuries. – Thomas Gilcrease Institute of American History and Art, with American art from colonial times to the present (particularly sculpture by Frederic Remington) and Indian artifacts from Middle and North America.

Texas. Texas was explored by the Spaniards beginning in 1519, and missions were established during the 17th century. Texas was under Spanish domination until it became a province of Mexico in 1821. In 1836 the Republic of Texas was established, which was annexed by the United States in 1845, in which year it was admitted to the Union and Austin became the capital. Texas seceded in 1861 and was readmitted in 1870.

Austin. French Legation (now a museum), 1840, with period furnishings; restored. – Governor's Mansion, 1853, in Greek revival style. – State Capitol, by E. E. Myers, 1882–88. – Texas Memorial Museum, by John F. Staub, with Paul Cret as consulting architect, ca. 1937.

Dallas. Temple Emanu-El, by Eric Mendelsohn, 1951, a massive molded tower rising from a horizontal grouping not unlike his Einstein Tower in Potsdam (V, PL. 104, FIG. 236). – Dallas Theater Center, by Frank Lloyd Wright, completed 1960. – Dallas Museum of Fine Arts, with American painting of the 19th and 20th centuries, Renaissance and contemporary prints, and minor arts. – Dallas Museum for Contemporary Arts, with modern painting, sculpture, and graphic arts.

El Paso. El Paso Museum of Art, with European art from the 15th century to the present, minor arts, and pre-Columbian art. – Nearby are missions at Ysleta, 1681, Socorro, 1682, and San Elizario, whose Presidio Chapel dates from 1777.

Fort Worth. Amon Carter Museum of Western Art, housed in a building by Philip Johnson, 1961. – Kimbell Art Museum, designed by Louis Kahn. – Fort Worth Art Center, with American painting of the 19th and 20th centuries, prints, and drawings.

Houston. Rice Institute: Administration Building, by Cram, Goodhue & Ferguson, 1909–12, in the Byzantine mode; Chemistry Laboratories, by William W. Watkin, with Cram, Goodhue & Ferguson, 1924–25. – Jesse H. Jones Concert Hall, by the firm of Caudill Rowlett Scott, completed 1966; in the interior is *Gemini II*, by the sculptor Richard Lippold. – Museum of Fine Arts of Houston, housed in two buildings, one an Italian Renaissance edifice of 1924, and the other, Cullinan Hall, by Mies van der Rohe, 1958 (X, FIG. 83); the Museum contains Italian and Spanish Renaissance painting and sculpture, Indian art of the Southwest, pre-Columbian art, and ancient art. In the garden is a 50-ton abstract sculpture, *Abesti Gogora V*, by Eduardo Chillida, 1966. – Contemporary Arts Museum, with modern painting and sculpture.

San Antonio. San Fernando Cathedral, 1734–49; later changes. – "The Alamo" (the church of the mission of San Antonio de los Álamos), 1744–57; restored. – Palace of the Governor, 1749, with a fine carved and paneled entrance door; restored 1931. – "La Villita," seven houses of the 18th and 19th centuries reconstructed in the 1930s as a museum of early Texas life. – Marion Koogler McNay Art Institute, with 20th-century French painting, American painting, New Mexican arts and crafts, and medieval art. – In the environs are four missions: San José y San Miguel de Aguayo, 1720–31, is the finest surviving example of Spanish colonial architecture; it was restored in 1933. The Churrigueresque main portal and baptistery window of the church are by the Mexican sculptor Pedro Huizar. Nuestra Señora de la Purísima Concepción de Acuña, San Francisco de la Espada, and San Juan Capistrano were all built in 1731.

Sequin. Juan Sequin Post Office (now a museum), 1838; restored. – Magnolia Hotel, 1840, with concrete walls; later additions.

East Central States (Ohio, Indiana, Illinois, Michigan, Wisconsin). This land was first explored by the French, to whom it belonged until 1763, when it was ceded to Great Britain. The area was known as the Old Northwest until 1783, at which time it became part of the United States. Congress gave the area the name of Northwest Territory in 1787. Here Congress awarded land to soldiers of the Revolution for whom there was no other pay.

The typical settlements of the area during the French period were fortified trading posts and religious missions. One such mission was at Cahokia, Ill., settled in 1699. In a drawing of the town about 1735 the highly organized disposition of the buildings within and without the enclosure (presumably a palisade) compares with the baroque Spanish missions of California and the South Western States, though the Spanish examples presented rather different street aspects owing to their use of the arcade to connect all elements and surround the plazas. The settlements of this period were generally small units, often contiguous, but occasionally they developed into real towns. Kaskaskia, Ill., was founded in 1703; a plan of about 1765 shows the typical separation of the fort and mission into distinct units and also shows the way in which this town, like others, grew beyond the mission area. The land division indicates that the Jesuits did not have an ordered plan. Although the topography dictated the odd shape of the southern edge of the town, the essentially medieval character of the plan is inescapable.

During the English period of control a series of well-designed forts was erected. Later on the Americans continued this type of building activity with such handsomely planned examples as the first Fort Dearborn (present-day Chicago) in 1803.

A few town plans date from the late 18th century, notably Cincinnati's Philadelphia-inspired plan of about 1790. The influence of the national capital and of the neoclassic style was felt throughout the whole area. The most spectacular plan was the one for rebuilding Detroit following the fire of 1805, which destroyed most of the town that the French had established in 1701. This scheme provided for a series of equilateral triangles bisected by perpendicular lines, with the triangles radiating from a circular open space. The great central place was called the Grand Circus. Unlike the block plan used in most American cities, the plan of Detroit had streets of different widths (like that of Washington). The area around the Grand Circus was constructed, but otherwise the original plan was not carried out for the rest of the city. However, the plan was an interesting attempt, ranking with Jefferson's experiments, to make the radial principles of the plan for Washington (which L'Enfant tailored to the topography of the site) into a system as endlessly applicable as the grid. That this approach was not forgotten in the ensuing years is suggested by its use in another of the lakeside ports, Cleveland. The city was planned in 1796, but the area in the loop of the river shown in the figure was not platted until 1833; the radial plan was used in this part of the city (FIG. 642).

Other interesting experiments in the area, usually of a simple geometrical type appropriate to the severe classicism of the age, and most often centering on a courthouse square or circle, included the following:

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Chardon, Ohio, 1808; Circleville, Ohio, 1810, which borrowed the circular form from the Indian mounds in the area (the town was replatted from 1838 to 1856); Tallmadge, Ohio, 1807, with the classical form of courthouse-centered town with bisecting and quartering radial avenues; and Knoxville, Ill., with a circular courthouse plot in a rectangular place with streets leading from the centers of the short sides and from the ends of the long. Among the grander plans of the area was, most notably, that for Indianapolis, laid out in 1821 by Christopher Harrison of Baltimore and Alexander Ralston, who had assisted L'Enfant in laying out Washington. They planned a mile-square city with a grid street system having a circular central place and four square places on quartering radials leading from the center to each corner. Madison, Wis., planned in 1836, is a combination of diagonal streets and a grid pattern. Cairo, Ill., was planned in 1838–39, somewhat in the London manner, by the architect William Strickland and the English engineer Richard Taylor, but their plan was not carried out.

The neoclassic style was not the only source of the area's plans. The linear plan of two-lot grids along the road at New Salem, Ill., 1829–39, is rather Germanic. The first town in Ohio, Schoennbrun, was laid out by the Moravians in 1771 (it was abandoned in 1777 and has recently been reconstructed on the original foundations). New Harmony, Ind., was founded by George Rapp, the leader of the Harmonites, in 1814. The Oberlin colony, in Ohio, another Utopian experiment, reflected New England origins in its plan of 1832–33 with relatively small home lots along the few streets of the nuclear village.

In the late 19th century many company towns were built by industrialists. One of the best of these was Pullman, now part of Chicago. Pullman was planned along romantic-classic lines by Solon S. Beman in 1879; the architecture was in Queen Anne style. Still remaining are the workers' houses, and the Florence Hotel, erected between 1879 and 1884.

Chicago was discovered by the French in 1673, and soon a trading post was established there. But it was only with the development of the whole area in the early 19th century that the city began to grow. The city's first plan was the simplest kind of unimaginative grid, rigidly laid out along the water by James Thompson in 1830, without any public space. (For a plan of the city in 1834 see PL. 136). But in a city whose population increased from 30,000 in 1850 to 300,000 in 1870 no plan would have sufficed, and even if the great fire of 1871 had not done away with the slapped-up wooden city its complete replanning would eventually have been necessary. Even after the fire there was no unified attempt to plan the city, the best efforts being such small-scale designs as the interesting Aldine Square of 1874, with row houses arranged around a romantically irregular park.

Although the World's Columbian Exposition, held in Chicago in 1893 (V, PL. 190, FIG. 287), changed the architectural taste of Americans and was influential in future town planning, its most concrete result was the monumental undertaking of the plan of Chicago by Daniel H. Burnham in 1909. Lewis Mumford has referred to the whole plan as "municipal cosmetic," and it was of course planned from the standpoint of beauty — indeed, the design of the main park is reminiscent of nothing so much as a Louis Sullivan architectural ornament. But the plan was far more than mere cosmetic; it dealt in a major way with three of the greatest problems of the modern city: transportation, recreation, and slums. Burnham's plan for Chicago's street system was most advanced, providing different types of streets and road systems ranging from local to regional. The entire plan was never realized, but elements of it were — such as Grant and Burnham parks and Lake Shore and Wacker drives — and the spirit of the project led to later proposals, most notably Eliel Saarinen's project for the lake front of 1923.

Unified urban planning in Chicago has resulted in such influential schemes as the plan by Ludwig Mies van der Rohe for the Illinois Institute of Technology. This plan, first made by Mies in 1939 and in part carried out in buildings designed by him (X, PL. 59, FIG. 82), was altered by the firm of Skidmore, Owings & Merrill, now the supervisory architects and engineers. The plan shows Mies's own highly developed organization, but the direct influence of the Bauhaus plan by Walter Gropius (cf. VII, PL. 81, FIG. 176) is not to be discounted, especially in the grouping of buildings close to the main arteries. The plan has had great influence in other designs for institutions of study and research, most notably in Eero Saarinen's General Motors Technical Center in Warren, Mich. (I, PL. 94; IV, PL. 198), 1951–55.

Ohio. Ohio was included in the Northwest Territory in 1787. The first permanent settlement was at Marietta in 1788. The Western Reserve was ceded to Ohio in 1800, and Ohio was admitted to the Union in 1803. Columbus became the capital in 1812.

Akron. Akron Art Institute, with American art of the 19th–20th century, European painting of the 15th–18th century, and Oriental art.

Canton. Canton Art Institute, with European and American painting from the Renaissance to the present.

Chillicothe. "Adena," by Benjamin Latrobe, 1806–07, a fine brick mansion in Georgian style; restored.

Cincinnati. St. Peter in Chains, by Henry Walter, 1841–45. – St. Michael's Church, 1847, perhaps related to Godefroy's work in Baltimore. – Isaac M. Wise Temple, by James K. Wilson, 1863–65, in Moorish revival style. – Waterworks Entrance Arch, ca. 1840. – Rookwood Pottery, late 19th century, in Queen Anne style. – Union Terminal, by Alfred Fellheimer and Steward Wagner, completed 1933. – Terrace Hilton Hotel, by Skidmore, Owings & Merrill, 1950, with murals by Joan Miró and Saul Steinberg. – Cincinnati Art Museum, with ancient, Near Eastern, Middle Eastern, and Far Eastern painting, sculpture, and minor arts, European and American 19th- and 20th-century painting, sculpture, and minor arts, primitive art, and musical instruments. – Hebrew Union College, Jewish Institute of Religion, The Jewish Museum, with Jewish ceremonial objects and ancient and modern painting, sculpture, and graphics by Jewish artists. – Taft Museum, located in an outstanding house in Federal style built in 1820, with period furnishings; the Museum contains European painting of the 16th–19th century, Chinese porcelains, French Renaissance enamels, and jewelry.

Cleveland. Dunham Tavern (now a museum), 1830. – Stone House (now a museum), 1838. – Rockefeller Building, by Knox & Elliot, 1903–05; enlarged 1910. – Interesting use of great dome as central feature of a synagogue, in "modern Byzantine" Temple by C. R. Greco, 1924, and a gunite dome on typically futuristic wedge-shaped base by Eric Mendelsohn, 1948–50. – Cleveland Museum of Art, with classical and Oriental art, European and American painting from the Renaissance to the present, Gothic (X, PL. 222) and Renaissance minor arts, and African and Oceanic objects.

Cleveland, plan of the center of the city in 1835.

Columbus. State Capitol, 1839–61, in Greek revival style with Doric columns; Judiciary Annex erected 1899–1901. – Columbus Gallery of Fine Arts, with European painting of the 16th–19th century, early modern European and American painting, sculpture, prints, and minor arts.

Dayton. Air Force Museum (at Wright-Patterson Air Force Base), by Kevin Roche, completed 1964, a soaring wedge-shaped shed. – Dayton Art Institute, with European and American painting and sculpture and classical, Oriental, pre-Columbian, and primitive art.

Gallipolis. Our House (formerly Cushing Tavern), 1819, in Federal style; restored 1933–36.

Gambier. Kenyon College: Old Kenyon, attributed to Bulfinch, 1827, in Gothic style, very rare for him; and Ascension Hall, by the Irish architect William Tinsley, 1857–ca. 1865, in "collegiate Gothic" style.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Lebanon. "Golden Lamb," 1803, a stagecoach inn. – "Glendower," ca. 1840, a fine mansion in Greek revival style with furnishings of the pioneer families of the community. – Nearby is Fort Ancient, an Indian earthwork above the Little Miami River. Built by the Hopewell Indians, who inhabited Ohio between 300 B.C. and A.D. 600, the earthen wall, in places more than 20 feet high, extends for 3½ miles and encloses an area of 100 acres. Within this area are several burial mounds, as well as the sites of two Indian villages built between 1200 and 1630. Archaeological exhibits are displayed at the Fort Ancient Museum.

Lima. Ohio Steel Foundry Company, Roll Shop, by Albert Kahn, Inc., 1939.

Locust Grove. Nearby is Serpent Mound, a so-called "effigy mound"; it is the largest and finest serpent mound in the country. Some authorities attribute the mound to the Adena Indians and believe it was built between 900 and 1300. Serpent Mound is 1,335 feet long; partly within the open jaws of the serpent is an egg-shaped mound 30 feet by 86 feet.

Marietta. Campus Martius Museum, with exhibits portraying life in the frontier communities. One wing of the Museum consists of the Rufus Putnam House, 1788, a fortified log dwelling. To the rear is the old Land Office, 1788, a one-room log structure.

Mount Pleasant. Quaker Meetinghouse, 1814, a large brick structure, with an interesting hanging partition in the gallery.

Oberlin. Oberlin College, Allen Memorial Art Museum, with paintings, sculpture, and minor arts.

Sidney. Hotel Wagner, 1830s, a stagecoach inn. – People's Savings and Loan Association Bank, by Louis Sullivan, 1917–18, a little building with large ornaments.

Somerset. Courthouse, 1829, square hip-roofed type of 17th century, with cupola, a remarkable case of retarded style.

Tallmadge. Congregational Church, 1822–25, in the manner of the New England churches.

Toledo. Toledo Museum of Art, with ancient and medieval art, European and American painting, and an extensive collection of glassware.

Wooster. The College of Wooster, Josephine Long Wishart Museum of Art, with American and European prints and Oriental paintings, bronzes, and ceramics.

Youngstown. Lanternam Mill, 1845. – Butler Museum of American Art, with American art from 1750 to the present and American Indian paintings and drawings.

Zanesville. Art Institute of Zanesville, with European and American painting, sculpture, prints, and Oriental, pre-Columbian, and primitive works.

Chapman, Cleveland: Village to Metropolis, Cleveland, 1964.

Indiana. The French settled Vincennes about 1735. Indiana was part of the Northwest Territory until 1800, when it became the Indiana Territory. Indiana was admitted to the Union in 1816, and Indianapolis became the capital in 1825.

Bloomington. Indiana University, Museum of Art, with European painting, and sculpture, Egyptian, Greek, and Oriental art, and prints and drawings.

Columbus. Tabernacle Church of Christ, by Eliel Saarinen, 1940–42. – North Christian Church, by Eero Saarinen, 1962–64.

Corydon. Old Indiana State Capitol and Harrison County Courthouse (now a museum), 1811–12, in Roman revival style.

Evansville. Evansville Museum of Arts and Sciences, with painting, sculpture, graphic arts, and minor arts.

Indianapolis. Institute for the Blind, by Francis Costigan, from original scheme of W. H. Churchman and John Elder, begun 1832, in neoclassic style. – Christ Episcopal Church, completed 1860. – State Capitol, Edwin May, architect, Adolph Schorror, supervising architect, 1878–88. – Public Library, by Paul P. Cret, 1917, the style setter for classical libraries of the next two decades. – Butler University, Clowes Memorial Hall, by John Johansen, completed 1963. – Herron Museum of Art, with European painting from the Renaissance to the present, Chinese jades and tomb objects, and minor arts.

New Harmony. The town of Harmonie was founded by the Harmonites under George Rapp in 1814; in 1825 Rapp sold the property to Robert Owen, who renamed it New Harmony. Extant are 35 of the original Harmonite buildings, most in the provincial German baroque manner. The Laboratory Building was erected by one of Owen's sons, David Dale, in 1859. The Roofless Church, by Philip Johnson, completed in 1960, is an outstanding example of contemporary architecture; inside is a bronze Virgin by the sculptor Jacques Lipchitz. The sculptures on the monumental gates leading to the church are also by Lipchitz.

South Bend. University of Notre Dame, University Art Gallery, with paintings, sculpture, and graphic arts from the Renaissance to the present, minor arts of the 17th and 18th centuries, and pre-Columbian pottery.

Vincennes. Cathedral of St. Francis Xavier, 1825–ca. 1840, possibly by John Rogers, in any case related to his St. Joseph's Proto-Cathedral at Bardstown, Ky.

BIBLIOG. L. Burns, Early Architects and Builders of Indiana, Indianapolis, 1935; FWP, Indiana: A Guide to the Hoosier State, New York, 1941; W. D. Peat, Pioneer Painters of Indiana, Indianapolis, 1954; W. D. Peat, Indiana Houses of the 19th Century, Indianapolis, 1962; J. M. Dixon, Columbus, Indiana: The Town That Architecture Made Famous, Arch. Forum, CXXIII, 5, 1965, pp. 40–49.

Illinois. The French established settlements at Cahokia in 1699 and Kaskaskia in 1703. Illinois was part of the Northwest Territory until 1800; from that date to 1809 it was included in the Indiana Territory. Illinois was admitted to the Union as a state in 1818. Springfield has been the capital since 1837.

Aurora. Ford House (I, PL. 93), by Bruce Goff, 1950, a great steel umbrella.

Cahokia. Courthouse (originally a dwelling), ca. 1737, a typical French colonial structure; restored. – Church of the Holy Family, 1799, a French colonial construction; restored. – The Cahokia Mounds are not located in the village of Cahokia but about 4 miles from East Saint Louis. The Cahokia site consists of a group of Indian mounds built sometime between 900 and 1500. One of the mounds, constructed in the form of a quadrangular pyramid and measuring about 100 feet in height and about 100 feet at the base, is the largest prehistoric earthwork in the United States.

Champaign-Urbana. University of Illinois: Assembly Hall, by Max Abramovitz, completed 1962, a mushroom-shaped concrete structure; Krannert Art Museum, with European and American painting, sculpture, and graphic arts and Oriental art.

Chester. Nearby in Fort Kaskaskia State Park, is the Pierre Ménard House, ca. 1802, an outstanding example of French colonial architecture, with many original furnishings.

Chicago. Chicago (PL. 137; XIII, PL. 246) was the center of the modern architectural movement, and the Chicago school of the 1880s and 1890s was world-famous. The importance of the city as an

CC-0. Agamnigal Digital Preservation Foundation Chandigarh

architectural center continued almost to World War I thanks to the work of Louis Sullivan and Frank Lloyd Wright (qq.v.). After 1930 Chicago again became influential with Wright's "second career," the work of Ludwig Mies van der Rohe (q.v.), who became Director of Architecture at the Illinois Institute of Technology in 1938, and Skidmore, Owings & Merrill's local production.

Buildings. Henry B. Clarke House, 1836, in classical style; the oldest building in the city. – First Leiter (now 208 W. Monroe) Building, by William Jenney, 1879; considerably remodeled. – Rookery Building, by Burnham & Root, 1885–86. – Glessner House (now Lithographic Technical Foundation), by Henry Richardson, 1885–87, great fenestration in superlative stonework. – Auditorium Building (now Roosevelt University), by Adler & Sullivan, 1886–89, with outstanding ornamentation by Sullivan. The design was directly derived from Richardson's Marshall Field Wholesale Store (I, PL. 84) of 1885–87, which unfortunately has been demolished. – Second Leiter (now Sears, Roebuck & Company) Building, by Jenney, 1889–91. – Reliance Building (I, PL. 86), by Burnham & Root, 1890, extended 1894, classic statement of the skeleton-frame tower. – Monadnock Building, by Burnham & Root, 1891, the last and the tallest of the solid masonry structures in the city. – A group of buildings by Wright: Charnley House, 1891–92; Blossom House (FIG. under WRIGHT), 1892; Heller House, 1897; and Robie House (now part of the University of Chicago; PL. 435), 1908–09. – Museum of Science and Industry (originally Palace of the Fine Arts of the World's Columbian Exposition), by Charles B. Atwood, 1892–93, in neoclassic style; later remodeled. – Gage Building group: two units by Holabird & Roche, 1898; third unit (I, PL. 86) by Sullivan, 1898–99, top four stories added 1902. – Carson Pirie Scott & Company Store (formerly Schlesinger & Mayer Department Store; I, PL. 86), Sullivan's last major work, 1899–1901, extended 1903–04, with Art Nouveau cast-iron ornament (I, PL. 469); additional section, by D. H. Burnham & Company, 1906, following Sullivan's original design. – Our Lady of Lebanon Church (formerly First Congregational Church of Austin), by Guenzel & Drummond, 1908, fine composition of rectangular masses in brick. – Carl Schurz High School, by Dwight Perkins, Sr., 1909–10, with dramatic, high-pitched roofs. – Tribune Tower, by Howells & Hood, the winner of the competition held in 1922, executed 1923–25, in Neo-Gothic style. – University of Chicago: Rockefeller Memorial Chapel, by Bertram Goodhue, 1928, the architect's severe Neo-Gothic at its best; Law School, by Eero Saarinen, 1960. – Daily News (now Daily News Sun-Times) Building, by Holabird & Root, 1928–29. – Adler Planetarium, by Ernest Grunsfeld, Jr., dedicated 1930, splendid classic domed form. – Illinois Institute of Technology campus, planned by Mies in 1939; most of the buildings (X, PL. 59, FIG. 81) are by Mies, 1942–58; a few later ones are by Skidmore, Owings & Merrill. – Group of apartments on or near the lake front by Mies: Promontory Apartments (X, PL. 58), 1949; Lake Shore Drive Apartments (X, PL. 58), 1951; and Esplanade Apartments, 1956–57. – Inland Steel Company Building, by Walter Netsch of Skidmore, Owings & Merrill, 1957–58, with many examples of modern art. – Atrium Houses, by Y. C. Wong, 1961. – University of Illinois campus, designed by Netsch, first units completed 1966.

Museums: The Art Institute of Chicago, with European painting of all periods (particularly French works of the 19th century), prints and drawings from the 15th century to the present, Oriental painting, sculpture, and minor arts (especially Chinese bronzes and Japanese prints), sculpture, glassware, ceramics, textiles, enamels, furniture, and silver from medieval times to the present, Thorne miniature rooms (VIII, PL. 112), and primitive art. – University of Chicago, Oriental Institute, with an outstanding collection of art from the ancient Near East. – George F. Harding Museum, with arms and armor, ship models, musical instruments, and painting and sculpture by Frederic Remington. – Chicago Natural History Museum, with Oceanic art, Roman bronzes, wall paintings, ceramics, and glass, and art of the ancient Near East.

Fort de Chartres. Stone fort built by the French in 1755 and partially destroyed by the British in 1772.

Galena. Old Market House (now an architectural museum), 1845, in Greek revival style; restored.

Highland Park. Willits House (FIG. 859; I, PL. 90), by Frank Lloyd Wright, 1902.

Kankakee. Two "Prairie" houses by Wright of 1900: Hickox House (FIG. 859; I, PL. 90) and Bradley House.

Knoxville. Knox County Courthouse (now an auditorium), by John Mandeville, 1840, in classical revival style; later changes.

Moline. Deere & Company Administrative Center, by Eero Saarinen, completed 1964.

Oak Park. A number of buildings by Frank Lloyd Wright, including his own house, 1889, later changes; Heurtley House, 1902; Cheney House, 1904; and Unity Church (PL. 434; I, PL. 91), 1906–07, his first great public monument and one of the most influential in Europe.

Plano. Farnsworth House (X, PL. 59), by Mies van der Rohe, 1950–51.

River Forest. A number of structures designed by Frank Lloyd Wright, including Winslow House, 1893; Williams House, 1895; and Roberts House, 1908, on a "windmill" plan. – River Forest Women's Club, by Guenzel & Drummond, 1913, directly influenced by Wright.

Riverside. Coonley House, by Wright, 1908. – Coonley Kindergarten (also known as Coonley Playhouse), by Wright, 1912, which prefigures his brilliant design for Midway Gardens in Chicago of 1914 (PL. 434), now demolished.

Springfield. Old State Capitol (now Sangamon County Courthouse), 1837–52, very closely related to the U.S. Patent Office in Washington; additional basement and new dome (copied from present State Capitol) added 1895–1901. – State Capitol, by Alfred Piquenard, 1868–88, in a fully Beaux-Arts Renaissance manner. – Illinois State Museum of Natural History and Art, with contemporary American painting, sculpture, Japanese prints, furniture, and ceramics.

Vandalia. Old State Capitol (now Fayette County Courthouse), 1836, Italianate details on basically Georgian structure.

Waukegan. Lake County Tuberculosis Sanatorium, by Ganster & Pereira, 1939–40.

Wilmette. Baker House, by Frank Lloyd Wright, 1909. – Bahai Temple, by Louis Bourgeois, 1917–21, superstructure 1930–53, a nine-sided building in Persianized Art Nouveau style.

Winnetka. Congregational Church, by Charles Klauder, ca. 1925, successful "modern Gothic," influenced by the Tribune Tower. – Crow Island School, by the Saarinens in collaboration with Perkins & Will, 1940, an exemplary modern school.

BIBLIOG. W. McAdams, Antiquities of Cahokia, or Monks Mound, in Madison County, Illinois, Edwardsville, Ill., 1883; Records of Ancient Races in the Mississippi Valley, St. Louis, 1887; D. I. Siegel, Chicago's Famous Buildings, Chicago, 1965.

Michigan. The first permanent settlement was established by the French at Sault Sainte Marie in 1668. Although Michigan was part of the Northwest Territory, the British retained control until 1796. Part of the Indiana Territory from 1800 to 1805, Michigan then became the Michigan Territory and was admitted to the Union as a free state in 1837. Lansing has been the capital since 1847.

Ann Arbor. University of Michigan: Museum of Art, with American and European painting, sculpture, and graphic arts; Kelsey Museum of Archaeology, with Egyptian and Near Eastern art, Greek and Roman antiquities, and Coptic and Islamic textiles.

Bloomfield Hills. Cranbrook School for Boys and Cranbrook Academy of Art, by Saarinen, 1926–43. There are many sculptures at the Academy by Carl Milles, who also designed the fountains. The Galleries of the Academy contain pre-Columbian and Oriental art, contemporary painting, sculpture, graphic arts, and minor arts.

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

Dearborn. Ford Motor Company Rotunda, by Albert Kahn, 1933, industrial futurism. – The Henry Ford Museum, divided into three main sections: the Fine Arts Galleries, containing magnificent examples of American furniture, textiles, folk art, and lighting devices and American and English ceramics, silver, and glassware; the Street of Early American Shops; and the Mechanical Arts Hall, devoted to agriculture, manufacturing, and transportation. – Greenfield Village, an outdoor museum consisting of nearly 100 buildings, most of them dating from the 19th century, brought together from all sections of America, restored, and fully furnished, showing how Americans worked from colonial times to the recent past.

Detroit. Detroit Public Library, by Cass Gilbert, 1921–23, in Roman classical style. – Temple Beth El, by Albert Kahn, 1922, in a classical style related to Bacon's Lincoln Memorial in Washington, D.C. – Chrysler Corporation Press Shop, Half-Ton Truck Plant, and Export Building, by Albert Kahn, Inc., completed 1938, showing Kahn's use of handsome forms and daringly simple construction applied to industrial needs. – Northland Shopping Center, by Victor Gruen, 1952. – Wayne State University, McGregor Memorial Community Center, by Yamasaki, Leinweber & Associates, 1958. – Lafayette Park, by Mies van der Rohe, 1960, an apartment tower and two-story terrace houses. – The Detroit Institute of Arts, housed in a building by Paul Cret and Zantzinger, Borie & Medary, associated architects, 1922–27, important Roman classical building; contains painting, sculpture, tapestries, ivories, enamels, furniture, glass, metalwork, ceramics, silver, textiles, arms and armor, and theater arts and puppets of every period and phase in the history of art from prehistoric times to the present. The frescoes in the Garden Court were done by Diego Rivera in 1932–33.

Grand Rapids. Jewish Community Center, by Eric Mendelsohn, 1948–52. – Grand Rapids Art Gallery, housed in a fine Greek revival building of 1841, with modern painting (especially the expressionists) and prints.

Lansing. State Capitol, by Elijah E. Myers, 1873–78.

Okemos. Winkler-Goetsch House (FIG. 863), by Frank Lloyd Wright, 1939, a typical Usonian residence.

Sault Sainte Marie. John Johnston House, 1815, a French-Canadian chamfered log structure; restored 1949. – Agency House, 1827.

Warren. General Motors Technical Center (I, PL. 94; IV, PL. 198), by Eero Saarinen, 1951–55.

BIBLIOG. S. F. Kimball, The Old Houses of Michigan, Arch. Record, LII, 1922, pp. 227–40; FWP, Michigan: A Guide to the Wolverine State, New York, 1941; Representative Detroit Buildings, Mich. Grigaut, ed., Treasures from the Detroit Institute of Arts, Detroit, 1960; Detroit's New Generation, Progressive Arch., XLII, 1961, pp. 90–117.

Wisconsin. The first permanent settlement was made by the French at Green Bay in 1745. Wisconsin, part of the Northwest Territory, was attached to the Indiana Territory from 1800 to 1809, then to the Illinois Territory until 1818, and then to the Michigan Territory until 1836, when it was organized as the Wisconsin Territory. Wisconsin was admitted to the Union in 1848. Madison is the state capital.

Columbus. Farmers' and Merchants' Union Bank, by Louis Sullivan, 1914–19.

Green Bay. Roi-Porlier-Tank Cottage, 1776, a wattled construction, the oldest house in the state. – Fort Howard Buildings, ca. 1816. – Baird Law Office, ca. 1836, small Greek revival structure. – Cotton House, ca. 1840, fine example of Jeffersonian architecture. – East Moravian Church, 1851–52.

Greenbush. Wade House (a stagecoach inn) and Butternut House, ca. 1850; restored 1953.

Madison. Unitarian Church (FIG. 868), by Frank Lloyd Wright, 1947–52, plan and elevation in triangular form. – State Capitol, by George B. Post & Sons, 1909–17, a handsome structure in Renaissance style.

Middleton. Herbert Jacobs House (FIG. 867), by Frank Lloyd Wright, 1948.

Milwaukee. Kilbourntown House, by Benjamin Church, 1844, in Greek revival style. – Lowell Damon House, 1844–47, New England-style cottage. – War Memorial Center, by Eero Saarinen, 1953–57. – Milwaukee Art Center, with American and European painting of the 19th and 20th centuries, sculpture, graphic arts, and minor arts. – Charles Allis Art Library, with American and European painting, sculpture, and graphic arts, Oriental ceramics and rugs, furniture, and an art reference library.

Racine. Johnson Wax Company Administration Building (PL. 437; I, PL. 415), 1937–39, and Research Laboratory Tower (FIG. 866), 1947–50, both by Frank Lloyd Wright and showing influences of Dutch architecture.

Spring Green. A group of buildings by Wright: Windmill (called "Romeo and Juliet"), 1896; Hillside Home School, 1902; and Taliesin, first built 1911, destroyed by fire and rebuilt 1914, again destroyed by fire and rebuilt 1925.

Watertown. Octagon House, 1854, a huge residence in octagonal form, with a hanging spiral staircase and original furnishings.

Wauwatosa. Greek Orthodox Church, by Frank Lloyd Wright, designed 1956–59, completed 1964, a saucer-shaped structure.

West Central States (Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, Kansas, Montana, Wyoming). This land was explored by the French, and missionaries and fur traders were active here in the late 17th and the 18th century. But except for a few towns along the Mississippi, including the important city of Saint Louis, when the area was bought from the French as part of the Louisiana Purchase of 1803 it was for the most part unexplored and unexploited. With the coming of the homesteaders and ranchers and the development of a railroad network the territory was gradually settled. This is not an essentially city-dominated area, nor is the culture urban. The basic pattern has been determined by the farms and grazing lands.

The great city of the area is Saint Louis — the "Gateway to the West" — laid out on a superb site in 1764, with a plan modeled on that of New Orleans. In Saint Louis the farmlands pattern was very significant. A strictly French land measure was used up to the 1790s: fields were laid out by the *arpent de Paris*, and were usually one or two *arpents* wide and, at Saint Louis, 40 *arpents* long. Even today, as Peterson (1949), has pointed out "the location of Saint Louis streets is still dominated by the 18th-century pattern of the plowlands." Throughout most of the area the dominance of the farm surveying system established by President Jefferson may be seen in the pattern of the fields, the farms and sections they make up, and the roads they thus determine.

Remaining from the French period are a few houses in Sainte Genevieve, Mo., and some classical tombs at Bellefontaine Cemetery in Saint Louis. Between 1850 and 1880 almost 500 commercial buildings with cast-iron fronts were erected in Saint Louis, of which a few remain in the old river-front area. Louis Sullivan's Wainwright Building (I, PL. 86; XIII, PL. 218) in Saint Louis of 1890–91 was a milestone in the evolution of modern architecture, influencing all subsequent skyscraper design.

BIBLIOG. C. E. Peterson, Colonial St. Louis; Building a Creole Capital, Saint Louis, 1949; P. C. Henderson, Landmarks on the Oregon Trail, New York, 1953; W. J. Petersen, The Pioneer Log Cabin, The Palimpsest, XLI, 1960, pp. 485–516.

Minnesota. The area east of the Mississippi became part of the Northwest Territory; the area west of the river was part of the Louisiana Purchase. The land was included in various territories until the Minnesota Territory was established in 1849. Minnesota was admitted to the Union in 1858, in which year Saint Paul became the capital.

Collegeville. St. John's Abbey buildings, by Marcel Breuer, 1952–55. The Catholic Church, also by Breuer, was completed in 1964.

Duluth. Civic Center, designed by Daniel Burnham, consisting of the County Courthouse, 1909, City Hall, 1928, and Federal Building, completed 1930. – University of Minnesota, Tweed Gallery, with 19th-century painting (especially the Barbizon school).

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Minneapolis. City Hall, by Long & Kees, begun 1887, modeled after Richardson's Allegheny County Courthouse (I, PL. 83) in Pittsburgh. – Flour Exchange Building, by Long & Kees, 1892, 1909, and Butler Brothers Wholesale Store, by Harry Jones, 1906, both very Sullivanian. – W. G. Purcell House, by Purcell & Elmslie, 1914, an original contribution to the Sullivan-Wright school. – Willey House, by Frank Lloyd Wright, 1934. – Mount Olive Lutheran Church, by Walter Huchthausen, 1941–42. – Christ Lutheran Church (I, PL. 95), by Eliel Saarinen, 1949, with brick patterns reminiscent of Auguste Perret. – Neils House, by Frank Lloyd Wright, 1951. – General Mills headquarters, by Skidmore, Owings & Merrill, 1957–58. – Northwestern Life Insurance Company headquarters, by Minoru Yamasaki, 1963–65, with a giant six-story portico. – The Minneapolis Institute of Arts, with European painting from the 14th to the 20th century, American and English period rooms, ceramics, and silver, American painting and minor arts, Oriental art (particularly Chinese bronzes and jades), sculpture of all periods, and prints and drawings. – Walker Art Center, with paintings from the Renaissance to the present, contemporary sculpture and graphic arts, Chinese ceramics and jades, and Greek and Roman minor arts. – University of Minnesota, University Gallery, with contemporary painting, sculpture, prints, and drawings.

Owatonna. National Farmers' Bank (now Security Bank and Trust Company), by Louis Sullivan, 1907–08; remodeled in the 1950s.

Rochester. Franklin Substation, by Ellerbe & Company, 1950–51, a utility substation rendered as an elegant urban cube. – International Business Machines Center, by Eero Saarinen, 1957–58.

Saint Paul. Muskego Church (on the campus of Luther Theological Seminary), 1843–44, a log meetinghouse built by Norwegian settlers in Muskego, Wis., and moved here in 1904. – Pioneer Building, by Solon S. Beman, 1889; four top floors added later. – James J. Hill House (now Catholic Archdiocese of Saint Paul building), by Peabody & Stearns, 1889–91, in the manner of Richardson. – State Capitol, by Cass Gilbert, 1896–1904, in neoclassic style. – Cathedral of St. Paul, by Emmanuel Masqueray, 1906–15, with lavish neobaroque interior decoration. – Mount Zion Temple and Community Center (XIII, FIG. 573), by Eric Mendelsohn, 1950–54. – St. Paul Gallery and School of Art, with 20th-century painting, sculpture, and drawings and handicrafts.

Wayzata. Richard S. Davis House (I, FIG. 275), by Philip Johnson, 1954.

Winona. Merchants' National Bank, by Purcell & Elmslie, 1911–12, in the Sullivan manner.

BIBLIOG. FWP, The Minnesota Arrowhead Country, Chicago, 1941; FWP, Minnesota: A State Guide, 2d ed., New York, 1954; H. E. McClure, Twin Cities Architecture: Minneapolis and St. Paul, 1820–1955, New York, 1955; W. V. O'Connor, A History of the Arts in Minnesota, Minneapolis, 1958; D. R. Torbert, ed., A Century of Minnesota Architecture, Minneapolis, 1958; H. F. Koeper, Historic St. Paul Buildings, Saint Paul, 1964.

Iowa. The land was part of the Louisiana Purchase and was included in various territories from 1812 to 1838, when the Iowa Territory was organized. The first permanent settlement was made at Dubuque in 1833. Iowa was admitted to the Union in 1846; Des Moines became the state capital in 1857.

Cedar Rapids. St. Paul's Methodist Church, by Louis Sullivan, 1913–14.

Davenport. Davenport Municipal Art Gallery, with European, American, and Mexican colonial painting and sculpture, Japanese prints, and contemporary prints and drawings. – Davenport Public Museum, with Indian artifacts and archaeological collections from Egypt, Greece, Rome, and the Orient.

Decorah. Norwegian-American Historical Museum, with objects belonging to the pioneers who came from Norway and an outdoor museum of two Norwegian pioneer homes, a schoolhouse, a mill house, and a drying house for grain.

Des Moines. State Capitol, by Cochrane & Piquenard, 1871–86. – Drake University: Harvey Ingham Hall of Science and Pharmacy Building, by Eero Saarinen, 1950. – Des Moines Art Center, located in a building by Eero Saarinen, 1944–48, with European and American painting and sculpture (particularly contemporary).

Fort Dodge. Blanden Memorial Art Gallery, with contemporary European and American painting and sculpture.

Grinnell. Merchants' National Bank (now Poweshiek County Bank), by Louis Sullivan, 1914.

Iowa City. Old State Capitol (now part of the University of Iowa), by John F. Rague, 1839.

Mason City. City National Bank Building and Hotel, by Frank Lloyd Wright, 1909–10.

BIBLIOG. FWP, Iowa: A Guide to the Hawkeye State, New York, 1938 (2d ed., 1949); Z. B. Ness and L. Orwig, Iowa Artists of the First Hundred Years, Des Moines, 1939.

Missouri. The first permanent settlement was made by the French about 1735 in Sainte Genevieve. Missouri was part of the Louisiana Purchase, and was organized as a separate territory in 1812. Missouri was admitted to the Union in 1821. In 1826 Jefferson City became the capital.

Jefferson City. State Capitol, by Tracy & Swartout, 1913–24, with a dome resembling that of the U.S. Capitol.

Kansas City. St. Francis Xavier Catholic Church, by Barry Byrne, ca. 1950. – Business Men's Assurance Company Tower, by Skidmore, Owings & Merrill, 1964. – William Rockhill Nelson Gallery of Art and Mary Atkins Museum of Fine Arts, with sculpture from the ancient Near East, Egypt, Greece, and Rome, Byzantine art, European and American painting and sculpture from the Romanesque era to the present, period rooms, and minor arts, Oriental painting, ceramics, jades, and sculpture, and primitive art.

Sainte Genevieve. A fine group of residences in French colonial style dating from the 1770s and 1780s: Louis Bolduc House, Jean Baptiste Vallé House, Janis-Ziegler House (originally Green Tree Tavern), Jacques Guibourd House, and St. Gemme-Amoureaux House.

Saint Louis. Secular buildings: Old Courthouse, main block, by Henry Singleton, 1839–51, in Greek revival style; enlarged 1853–59; dome, by William Rumbold, 1861–62, in Renaissance style. – De Menil House, 1840s; Ionic façade and iron railings added 1863. – Eads Bridge, by James B. Eads, 1867–74, the world's first steel-truss bridge. – Wainwright Building (I, PL. 86; XIII, PL. 218), by Adler & Sullivan, 1890–91. – Wainwright Tomb (in Bellefontaine Cemetery), by Louis Sullivan, 1892, a domed cube with rich carving. – City Hall, by Eckel & Mann, 1896, in French Renaissance style, modeled after the Hôtel de Ville in Paris. – Union Station, by Theodore C. Link, 1891–96, in Romanesque style, inspired by the architecture of Carcassonne, France; in front of the building is a fountain by Carl Milles, 1940. – Central Public Library, by Cass Gilbert, 1912, in Italian Renaissance style. – Climatron at Missouri Botanical Gardens, by R. Buckminster Fuller with Murphy & Mackey, architects, 1960, unpartitioned geodesic dome. – McDonnell Planetarium, by Hellmuth, Obata & Kassabaum, 1963, a flared thin shell. – Jefferson National Expansion Memorial, Gateway Arch, designed in 1948 by Eero Saarinen, completed 1965, stainless-steel arch in the shape of an inverted weighted catenary curve. – Busch Memorial Stadium, by Edward D. Stone, 1966.

Churches: Basilica of St. Louis, King of France (Old Cathedral), by Morton & Laveille, 1830–34, in Greek revival style, with an octagonal spire topping a square belfry; renovated 1963. – Christ Church Cathedral, by Leopold Eidlitz, 1867, early English Gothic; later additions; restored 1961–63. – Second Presbyterian Church, by Shepley, Rutan & Coolidge, 1896, following Richardson's Trinity Church, Boston (I, PL. 84), in design; auditorium added by Theodore C. Link, 1899. – St. Louis Cathedral, by Barnett, Haynes & Barnett, 1907–14, in modified Byzantine style.

Museum: City Art Museum of St. Louis, housed in the former Palace of Arts building, designed by Cass Gilbert for the Louisiana Purchase Exposition of 1904; the Museum contains painting, sculpture, graphic arts, and minor arts from ancient times to the present.

In the environs are B'Nai Amoona Synagogue, by Eric Mendelsohn, 1946–50; the Lambert-St. Louis Municipal Airport, by Hellmuth, Yamasaki & Leinweber, 1953–56, one of the first thin-shell dome structures in the United States, with sculpture by Henry Moore and Harry Bertoia, and the Chapel of the Benedictine Priory, by Hellmuth, Obata & Kassabaum, 1962, three tiers of white thin-shell concrete arches.

North Dakota. This was the northern part of the Dakota Territory, which was organized in 1861. In 1889 North Dakota became a separate state and was admitted to the Union in that year. Bismarck is the capital.

Bismarck. State Capitol, by Joseph B. DeRemer and William F. Kurke, Holabird & Root, associated architects, 1932–34, the only capitol building to break entirely with the classical form established in the early 19th century, with a slab tower housing the executive offices and a low cylinder for the legislative offices.

BIBLIOG. K. W. Simons, North Dakota's State Capitol, Bismarck, 1934; FWP, North Dakota: A Guide to the Northern Prairie State, New York, 1950.

South Dakota. This constituted the southern part of the Dakota Territory from 1861 to 1889. South Dakota was admitted to the Union in 1889, and Pierre became the capital then.

Mitchell. Corn Palace, 1921; domes and steeples added ca. 1940, giving it the aspect of a latter-day countrified Brighton.

Mount Rushmore. In the Black Hills in the Mount Rushmore National Memorial (X, PL. 147), by Gutzon Borglum, 1927–41; the heads (each 60 feet high) of four presidents carved into the granite face of the mountain.

Pierre. State Capitol, 1905–10, in neoclassic style.

BIBLIOG. FWP, A South Dakota Guide, Pierre, 1938.

Nebraska. Nebraska was part of the Louisiana Purchase and then of the Missouri Territory, and became a separate territory in 1854. Nebraska was admitted to the Union as a free state in 1867, when Lincoln became the capital.

Lincoln. State Capitol, by Bertram Goodhue, 1920–33. – University of Nebraska, Sheldon Memorial Art Gallery, housed in a beautiful building by Philip Johnson, completed 1963, containing contemporary painting, sculpture, graphic arts, and ceramics.

Minden. Pioneer Village, a group of 22 buildings with displays illustrating the evolution of progress since 1830.

Omaha. Joslyn Art Museum, housed in the Joslyn Memorial, by John MacDonald, completed 1931, with classical art, European painting, sculpture, and graphic arts, frontier arts, and American Indian material.

BIBLIOG. C. Bucklin, ed., Nebraska Art and Artists, Lincoln, 1932; FWP, Nebraska: A Guide to the Cornhusker State, New York, 1939; W. Payne, Examples of Architectural Style in Omaha, Omaha, 1948; H. F. Cunningham, The Capitol, Lincoln, Nebraska: An Architectural Masterpiece, Lincoln, 1954.

Kansas. Part of the Louisiana Purchase, Kansas was organized as a separate territory in 1854. Kansas was admitted to the Union as a free state in 1861, at which time Topeka became the capital.

Fairway. Shawnee Methodist Mission, an early Indian mission with three fine brick buildings erected between 1839 and 1845 and containing period furnishings.

Larned. Nearby is Fort Larned, an excellent example of a frontier military post, consisting of nine massive stone buildings erected in the 1860s.

Lawrence. University of Kansas Museum of Art, with European and American painting and sculpture and European and Oriental minor arts.

Topeka. State Capitol, by E. Townsend Mix, 1866–70; wings 1873, 1879. – Washburn University, Mulvane Art Center, with contemporary regional painting, sculpture, and prints.

Wichita. Located in Riverside Park is the Cowtown, consisting of several original buildings moved here to illustrate an old cowtown, including the Munger House of the 1860s and the original Presbyterian church and first jail, both dating from 1872. – Wichita Art Museum, with contemporary American art and prints.

BIBLIOG. FWP, Kansas: A Guide to the Sunflower State, New York, 1939 (2d ed., 1949).

Montana. Montana was part of the Louisiana Purchase and later included in various territories. Established as the Montana Territory in 1864, Montana was admitted to the Union in 1889, at which time Helena became the capital.

Browning. Museum of the Plains Indian, with American Indian arts and handicrafts.

Helena. State Capitol, by C. E. Bell and J. H. Kent, 1898–1902. – Historical Society of Montana, with painting and sculpture by Charles M. Russell and other Western artists and Indian artifacts.

BIBLIOG. FWP, Montana: A State Guide Book, New York, 1939.

Wyoming. This was part of the Louisiana Purchase. The British and Americans occupied the area jointly between 1818 and 1846. The Wyoming Territory was organized in 1868; Wyoming was admitted to the Union in 1890. Cheyenne is the state capital.

Cheyenne. State Capitol, by D. W. Gibbs & Company, 1887–88; wings added 1890 and enlarged 1915.

Cody. Buffalo Bill Historical Center, comprising the Buffalo Bill Museum, with Buffalo Bill memorabilia and items relating to the West, and The Whitney Gallery of Western Art, with American Indian material and works by Frederic Remington and Charles M. Russell.

Fort Laramie. Of the original 65 buildings, 25 remain, the first of which was erected in 1834. This was a fur-trading center from 1834 to 1849 and a fort until 1890, when the post was abandoned. Recently restored, the buildings include a sutler's store, officers' quarters, guardhouse, and barracks.

BIBLIOG. FWP, Wyoming: A Guide to Its History, New York, 1941.

South Western States (Colorado, New Mexico, Arizona, Utah, Nevada). Though the Spaniards had explored part of this region in the 1530s and 1540s, it was only with the establishment of Santa Fe, N. Mex., in 1609–10 (on a plan now thought to have been sent out from Madrid) that permanent settlement began (PL. 136), and it was largely confined to a few Spanish missions in New Mexico and Arizona until the late 18th century. The Spanish colonial architecture in New Mexico is a mixture of Spanish and Indian influences: the plans of the missions were European but the Indian workmen employed native construction techniques and decorative details. A peculiar development of mission architecture in New Mexico was the placement of the altar at the west and a transverse clerestory window between the roof of the nave and the sanctuary so that the morning light was cast on the altar.

In the late 18th century many military posts were erected along the trails that went east to New Orleans (especially during that city's Spanish rule) and west to the missions of Spanish California. American settlers came to the area in the 19th century, and their main urban type was the fortress-post as late as the 1870s. The greatest impetus to their influx was the Colorado Gold Rush of 1859, which, passing, left some permanent settlements, such as Denver, and many ghost towns and empty mining camps. The camps, towns, and cities of the American settlers almost universally employed a grid plan. Some of these were remarkably bad, especially when the town was laid out in a hurry, but occasionally the grid was thought out in great detail, as in the plan of Salt Lake City (settled by the Mormons in 1847), which not only provided open spaces and civic structures of great merit but also alternated the axial direction of the rectangular lots so that every street had equal numbers of lots fronting on it.

Notable in the creation of architecturally unified groups have been the plans and buildings of the mining towns of Ajo, Ariz., by Kenyon & Maine, 1915, and Tyrone, N. Mex., by Bertram Goodhue, 1917. The University of Colorado campus in Boulder was planned by Klauder & Day in the 1920s in Mediterranean baroque style.

One of Frank Lloyd Wright's most extraordinary houses was created in the Arizona desert — Taliesin West (PL. 437, FIG. 863; VIII, PL. 116) — his winter living and teaching quarters. He also built a number of other houses in Arizona.

BIBLIOG. C. Hallenbeck, Spanish Missions of the Old Southwest, Garden City, N.Y., 1926.

Colorado. The eastern part of Colorado was included in the Louisiana Purchase; the rest was part of Mexico and Texas. Colorado was organized as a territory in 1861, and admitted to the Union in 1876. Denver is the capital.

Boulder. National Center for Atmospheric Research, by I. M. Pei, completed 1966, bold composition in concrete.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Central City. A mining camp built in the 1860s, it became a ghost town after the gold in the mines was exhausted. Remaining structures include the Victorian opera house (restored and operating), assay offices, St. Paul's Church (erected by Cornish miners), a bank, hotels, and stores.

Colorado Springs. U.S. Air Force Academy, by Walter Netsch of Skidmore, Owings & Merrill, 1957–60. – Colorado Springs Fine Arts Center, with European and American painting and sculpture; the Taylor Museum, located in the Center, contains Spanish-American religious art, American Indian art, and Latin American handicrafts.

Denver. State Capitol, by E. E. Myers, 1890–96, adapted from the U.S. Capitol. – Red Rocks Amphitheater, by Burnham Hoyt, 1941–44, carved in the living rock. – Mile High Center, by I. M. Pei, completed 1955. – Denver Art Museum, with European painting of the 14th–16th century, period rooms, American Indian arts and crafts, and ancient Mediterranean, Oriental, Oceanic, and African arts. – Colorado State Museum, with Mesa Verde archaeological exhibits and Indian costumes, weapons, and crafts.

Mesa Verde National Park. Here are located Cliff Palace and Spruce Tree House, two groups of cliff dwellings dating from the Classic or Great Pueblo phase of the Anasazi culture (1050–1300). These multistoried dwellings, with round, rectangular, or triangular chambers and round and square towers, accommodated hundreds of people. In the courtyard are numerous ceremonial chambers, or kivas (see X, cols. 698–699).

Bibliog. W. R. Birdsall, Cliff-Dwellings of the Cañons of the Mesa Verde, J. Am. Geog. Soc., XXIII, 1891, pp. 584–620; F. H. Chapin, Land of the Cliff-Dwellers, Boston, 1892; G. Nordenskiöld, The Cliff Dwellers of the Mesa Verde (trans. D. L. Morgan), Stockholm, 1893; J. W. Fewkes, Antiquities of Mesa Verde National Park: Spruce-Tree House, Washington, 1909; J. W. Fewkes, Antiquities of Mesa Verde National Park: Cliff Palace, Washington, 1911; D. Watson, Cliff Palace: The Story of an Ancient City, Ann Arbor, Mich., 1946; FWP, Colorado: A Guide to the Highest State, New York, 1941 (2d ed., 1951); S. Davis and B. Baldwin, Denver Dwellings and Descendants, Denver, 1963.

New Mexico. The land was explored by the Spaniards during the 16th century, and in 1609–10 they founded Santa Fe (pl. 136), which is the oldest capital city in the United States. New Mexico was ceded by Mexico in 1848, and became a territory in 1850. New Mexico was admitted to the Union in 1912.

Acoma. One of the 18 inhabited Indian pueblos in the state. The great Church of S. Estevan and the *convento* (living quarters), a fine example of a Spanish colonial mission center, date from ca. 1630 to ca. 1642. The end wall of the sanctuary and the corbels in the church were painted by the Pueblo Indians.

Aztec Ruins National Monument. The pueblo here was built during the Classic or Great Pueblo phase of the Anasazi culture (1050–1300), and accommodated over 1,000 people. The complex is rectangular in shape and is surrounded by a wall. The Great Kiva (reconstructed in 1934) is 50 feet in diameter, with an entrance from the side rather than from the roof.

Chaco Canyon National Monument. There are ruins of 12 great pueblos, as well as many smaller ones, in Chaco Canyon; these pueblos were constructed during the Classic or Great Pueblo phase of the Anasazi culture (1050–1300). Pueblo Bonito and Chetro Ketl are the most important pueblos. Pueblo Bonito was constructed in the form of an amphitheater, with the more than 600 dwelling units, four or five stories high, built around a court that contained about 25 circular kivas. Chetro Ketl was of the same type; the Great Kiva here is 60 feet in diameter, with the entrance from the side instead of the roof.

Coronado State Monument. This contains the partially restored ruins of the Indian pueblo of Kuaua, dating from the Regressive Pueblo phase of the Anasazi culture (1300–1692). The wall paintings from the kivas have been removed to the Hall of Ethnology in Santa Fe.

Laguna. One of the 18 inhabited Indian pueblos in the state. The Church of S. José, 1699–1706, contains superb Pueblo Indian murals on the walls of the nave depicting the sun, rain, and thunder. The three walls of the sanctuary are decorated with sun and moon symbols, floral and geometrical patterns, and paintings of saints and the Trinity. The church is preceded by a walled court. Attached to the building are a *convento* and a baptistery.

Ranchos de Taos. Church of S. Francisco de Asís, 1772, a massive adobe structure, with a fine altarpiece by Manuel Aragon.

Roswell. Roswell Museum and Art Center, with 19th- and 20th-century painting and sculpture of the Southwest and ethnological and archaeological collections.

Santa Fe. Palace of the Governors (now part of the Museum of New Mexico), 1610–14, partially destroyed in 1680 and repaired in 1692; many later changes; recently restored from a plan in the British Museum. This is a long, low, single-storied structure with an open porch running the length of the building and an enclosed patio; it was constructed by local Indians in adobe brick. – Church of S. Miguel, before 1680, with ruins of earlier structures under the church. – Cathedral of St. Francis, 1869. – Church of Cristo Rey (Christ the King), 1939, a large adobe structure, with a superb stone altarpiece of 1761 that was originally in the Chapel of Our Lady of Light. – State Capitol, a modern structure by W. C. Kruger & Associates incorporating parts of the earlier domed building. – Museum of New Mexico, composed of the Palace of the Governors, with archaeology of the Southwest; Museum of International Folk Art, with examples from over 50 countries; Fine Arts Museum, with regional paintings and sculpture; Hall of Ethnology, with modern Indian crafts and wall paintings from the kivas at Kuaua; and Laboratory of Anthropology, with Indian pottery, textiles, and jewelry. – Museum of Navajo Ceremonial Art, with sand paintings and ritual objects.

Taos. University of New Mexico, Harwood Foundation, with contemporary regional paintings, Spanish colonial religious art, Indian artifacts, and Persian miniatures. – In the environs is Taos Pueblo (San Gerónimo de Taos), with old and new Indian structures, including two community houses five stories high (ca. 1540) that are among the finest examples in the Southwest.

Trampas. Church of S. Tomás, ca. 1760, with important carved and painted woodwork.

Bibliog. W. H. Jackson, Report on the Ancient Ruins Examined in 1875 and 1877, Ann. Rep. of the U.S. Geological Survey of Territories, X, 1878, pp. 411–50; L. B. Arizona. The Spaniards explored the area in the 16th century. The northern part of Arizona was ceded by Mexico in 1848 and the southern part in 1853. In 1863 the Arizona Territory was organized. Arizona was admitted to the Union in 1912, when Phoenix became the state capital.

Awatobi. In the Hopi Indian Reservation are the remains of the pueblo of Awatobi, dating from the Regressive Pueblo phase of the Anasazi culture (1300–1692). The interiors of the kivas were decorated with noteworthy wall paintings representing divinities, animal spirits, and offerings and with abstract designs (see III, col. 579, and X, col. 704).

Casa Grande National Monument. The pueblo dates from the Classic phase of the Hohokam culture (1200–1400). Originally four stories high, only two floors of the pueblo still stand. The complex is surrounded by thick walls made of large blocks of a mixture of adobe and gravel.

Montezuma Castle National Monument. The cliff dwellings, dating approximately from the 14th century, are halfway up the face of a perpendicular cliff. This community house, very well preserved, has five stories and housed over 300 people.

Phoenix. State Capitol, by J. Reilly Gordon, 1900; later additions. – Luhrs Tower, by Trost & Trost, ca. 1940, Wrightian orna-

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

ment on typical New York setback-style skyscraper. – Phoenix Art Museum, with modern European and American art and Chinese art. – Heard Museum, with primitive art and handicrafts of the Indians of the Southwest. – Nearby is the Pueblo Grande Museum, preserving the ruins of a Hohokam village.

Scottsdale. Taliesin West (PL. 437, FIG. 863; VIII, PL. 116), Frank Lloyd Wright's great complex of winter living and teaching quarters for his family and students, begun 1938 and always in process of growth and change during the architect's lifetime. – David Wright House (I, PL. 424), also by Wright, 1952, a circular patio house.

Tempe. Arizona State University: Grady Gammage Auditorium, by Wright, designed 1957–59, completed 1964, a striking round building with scalloped edges, approached by two flying ramps; Collection of American Art, with American painting and sculpture and Indian art.

Tombstone. Remaining from the time when this was a mining center are Cochise County Couthouse, by Frank Walker, 1881–82, and St. Paul's Episcopal Church, 1882, a Victorian Gothic structure in adobe brick.

Tucson. University of Arizona Art Galley, with Italian Renaissance art and contemporary American, European, and Oriental art. – Outside the city is S. Xavier del Bac, erected in 1784–97 and restored in 1906. This is one of the finest Spanish mission churches in America. The main section of the façade, of red brick, is Churrigueresque; it is flanked by two towers of white stucco. The interior, decorated in baroque style, contains an elaborate polychrome altar screen.

Tumacacori National Monument. The Church of S. José was built in 1785–1800. The entrance is flanked by columns, above which is a steep pediment resting on columns; the façade is topped with a semicircular gable. The interior and the roof were burned in 1840 and have not been restored.

Utah. The land was explored by the Spaniards in the 16th century, and was ceded by Mexico in 1848. The Mormons (more technically, members of the Church of Jesus Christ of Latter-day Saints) reached Utah in 1847 and founded Salt Lake City. The Utah Territory was organized in 1850. Utah was admitted to the Union in 1896. Salt Lake City is the capital.

Brigham City. Mormon Tabernacle, 1876, Mormon-Gothic details superimposed on a plain meetinghouse.

Logan. Mormon Temple, in the distinctive Mormon-Gothic style.

Manti. Mormon Temple, a Mormon-Gothic structure.

Saint George. Mormon Temple, 1871–77, in Mormon-Gothic style. – Mormon Tabernacle, in colonial style.

Salt Lake City. Two residences built by Brigham Young: Beehive House, a beautiful two-story colonnaded and galleried structure, and Lion House, a domestic stone dwelling. – Mormon Temple, by Truman O. Angel, 1853–83, the most spectacular of the Mormon-Gothic structures; interior, by Joseph Young, 1883–93. – Mormon Tabernacle, conceived by Brigham Young, built by William H. Folsom and Henry Grow, 1865–67, a great domed structure. – Z.C.M.I. Department Store, 1868, with a cast-iron front. – State Capitol, by Richard Kletting, 1913–16, a fine colonnaded building of granite and marble.

BIBLIOG. F. K. Winkler, Building in Salt Lake City, Arch. Record, XXII, 1907, pp. 15–37; FWP, Utah: A Guide to the State, New York, 1941 (2d ed., 1954); J. L. Haseltine, ed., 100 Years of Utah Painting, Salt Lake City, 1965 (cat.); D. Hill, Early Mormon Churches in Utah, Dialogue, I, 3, 1966, pp. 12–20.

Nevada. Part of the region ceded by Mexico in 1848, Nevada became part of the Utah Territory until 1861, when it was organized as the Nevada Territory. Nevada was admitted to the Union in 1864. Carson City is the capital.

Carson City. State Capitol, by Peter Cavanaugh, 1870.

Virginia City. A mining camp established when the Comstock Lode was discovered, now a ghost town. Remaining from this period is St. Mary's in the Mountains, 1877, in Neo-Gothic style.

BIBLIOG. FWP, Nevada: A Guide to the Silver State, Portland, Ore., 1940.

North Western States (Idaho, Washington, Oregon). These states formed part of what was known as the Oregon Country from about 1818 to 1846; the area was claimed by the British and the United States. In 1846 Great Britain ceded the land below the 49th parallel to the United States.

As their cities show, the settlers looked east for inspiration. Portland, laid out in 1844, reflected the New England towns familiar to its planner, Amos L. Lovejoy of Boston. The brick architecture of Philadelphia was influential, and the bricks used to construct the Old Whatcom County Courthouse in Bellingham, Wash., were shipped from Philadelphia in 1858. The influence of Saint Louis is seen in the buildings with cast-iron fronts. It was to Stanford White of McKim, Mead & White in New York that the proprietors of the Portland Hotel turned in 1885 when they wished to remodel it, and White sent his assistants William M. Whidden and Ion Lewis to supervise the construction. The L. C. Smith Building in Seattle, for many years the tallest building in the west, was erected by the New York firm Gaggin & Gaggin in 1914 and was inspired by New York's Woolworth Building.

The painting and architecture of the present, though clearly related to international trends, draw deeply on Oriental influence, particularly the planar architecture and painting of Japan. The designs of architects such as Pietro Belluschi and John Yeon are sensitive to the regional landscape, and the houses and churches they erected in Oregon and Washington are appropriate to the terrain.

BIBLIOG. T. R. Garth, Early Architecture in the Northwest, Pacific Northwest Q., 1947, pp. 215–32.

Idaho. Included in the Oregon Territory in 1848, then in the Washington Territory in 1853, Idaho became a separate territory in 1863. Idaho was admitted to the Union in 1890, at which time Boise became the capital.

Boise. U.S. Assay Office, 1872, a stone building in eclectic style. – State Capitol, by Turtelott & Hummell, 1906–12. – Boise Gallery of Art, with contemporary paintings and prints.

Cataldo. Old Mission of the Sacred Heart, ca. 1842, built by Jesuit priests and their Indian converts.

Idaho Falls. Mormon Temple, completed 1945, Mormon-Gothic in a striking modern form.

BIBLIOG. FWP, Idaho: A Guide in Word and Picture, 2d ed., New York, 1950.

Washington. This area was organized as the Washington Territory in 1853. Washington was admitted to the Union in 1889. Olympia is the state capital.

Olympia. Old State Capitol, by Willis Ritchie, 1893, in Romanesque style. – State Capitol group of buildings, by Wilder & White, with Bebb & Gould as associated architects, 1911–35; the Legislative Building has a dome 287 feet high.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Seattle. Seattle Museum of Art, with Near and Far Eastern art, pre-Columbian and primitive art, classical antiquities, European painting and sculpture from the 14th–18th century, and contemporary regional painting and sculpture. – Charles and Emma Frye Art Museum, with European and American painting of the 19th–20th century. – University of Washington: Henry Art Gallery, with French and American painting of the 19th–20th century, prints, ceramics, and sculpture; Washington State Museum, with primitive art of the Northwest and the Pacific area.

Vancouver. Vancouver Number Two Barracks, dating from the time when a fort and trading post was established here in 1825 by the British and was reorganized as a U.S. Army post in 1848. – McLoughlin Heights Shopping Center, by Pietro Belluschi, 1942.

BIBLIOG. FWP, Washington: A Guide to the Evergreen State, Portland, Ore., 1941; W. Steinbrück, Seattle Architecture 1850–1953, New York, 1953.

Oregon. The Oregon Territory was organized in 1848. In 1859 Oregon was admitted to the Union, at which time Salem became the state capital.

Cottage Grove. First Presbyterian Church, by Pietro Belluschi, 1951.

Eugene. University of Oregon Museum of Art, with Oriental art (chiefly Chinese and Japanese), Russian icons, paintings, sculpture, and minor arts, and a reference library of Oriental art.

Portland. Hotel Portland, begun 1870s; redesigned by Stanford White in Renaissance style, built 1885–89. – Old Federal Post Office, by A. B. Mullett, 1875, in the Second Empire manner. – A number of structures by John Yeon, including Watzek House, 1938, Visitors' Information Center, 1949, and Lawrence Shaw House, 1951. – An important group of buildings by Pietro Belluschi: Equitable Life Insurance Building, 1948, glass and aluminum sheathing in the international style; Zion Lutheran Church, 1950; and Central Lutheran Church, 1951, international style in wood and brick. – Portland Art Museum, with European and American painting from the Renaissance to the present, Pacific Northwest Indian art, pre-Columbian art, classical antiquities, Japanese prints, lacquer, and screens, and Chinese bronzes, ceramics, and sculpture.

Salem. State Capitol, by Francis Keally, 1936–39, a mixture of classical and modern with a cylindrical tower. – Salem Art Museum, located in the Bush House of 1877–78, with contemporary Northwest paintings and early portraits.

The Dalles. Fort Dalles Museum, housed in the surgeon's quarters of the fort, ca. 1850, whose pointed wooden arches perhaps reflect the influence of early Russian settlements in the area.

BIBLIOG. FWP, Oregon: End of the Trail, Portland, Ore, 1940; C. E. Fowler, The Old Days in and near Salem, Ore., Seattle, 1940; M. D. Ross, Architecture in Oregon, Oregon H. Soc. Q., LVII, 1956, pp. 4–64.

California. The Spanish decided to colonize California in 1767 From 1769 to 1823, 21 missions were founded by the Franciscans; the road connecting these missions, which ran from San Diego to Sonoma, was called the Camino Real. The plan of Mission S. Juan Capistrano, founded in 1776 and the most ambitious of the missions, is illustrated in Newcomb (1925); it shows the dependence of the builders on the baroque formulas used by their order in Spain. At the same time, presidios and towns were established.

The growth of multifunction towns was extremely slow. A rare exception was Los Angeles. Here Governor Neve carried out his dream of establishing the nucleus of a real city in 1781–82 (FIG. 659, left). His plaza-centered plan was simple. The main streets were placed at the quarter points of the compass, following the royal directive, "so that no street would be swept by the wind" (a Vitruvian principle). The rectangular plaza and surrounding lots at the intersections of the main streets were in accord with typical Spanish practice in presidios and other nonmission settlements. An arcade was indicated in front of the public buildings. (The whole central area of the city, including the plaza, was replanned in 1815 after it was virtually destroyed by a flood.)

American traders and merchants began to settle California about 1840. In addition to domestic architecture in the so-called "Spanish colonial" style, houses began to be built that owed much to the neoclassic structures of New England, such as Colton Hall in Monterey, as well as salt-box houses. The Spanish colonial style might have lasted longer in the area but for the influx of settlers upon the discovery of gold in 1848. This was also the year in which Mexico ceded California to the United States. California was admitted to the Union in 1850. Sacramento became the state capital in 1854.

The first plan for San Francisco in 1847 was the simple grid, which revealed the eastern background of its makers. In 1848 gold was discovered at John Sutter's sawmill in Sacramento. That same year his son, John Sutter, Jr., donated 500 town lots to the city for public use, in the tradition of the many-squared cities of the east coast. Oakland was laid out in 1853 in another grid plan, with four public squares. The buildings erected during this period reveal a northern European cum North American look: the Greek revival State Capitol built at Benicia in 1853, the Octagonal House built on Russian Hill in San Francisco in 1854 (one of the few early buildings to survive the devastating fire of 1906), and the Greek revival Wells Fargo building rendered in handsome, simple stonework at Mokelumne Hill in the same year.

San Francisco turned to Olmsted in 1865 for the first design of the land that in the 1870s became the Golden Gate Park. In Los Angeles Pershing Square was first planned as a series of irregular walks around a central flower bed in 1886, replanned around a bandstand in 1904, and entirely remade as a formal park in the French style in 1910. The influence of the World's Columbian Exposition in Chicago reached western shores when Burnham revised the plan of San Francisco with widened roads and new diagonal avenues in 1906 (almost none of Burnham's proposals were carried out), and in the same year the romantic suburb of Beverly Hills was laid out near Los Angeles. The influence of the Orient is apparent in the superb houses built by the Greenes from about 1900 to 1915 in the Pasadena area (I, PL. 92), in which both landscape and structure reflected Japanese practice. The impetus to grand planning, which had produced Burnham's work in San Francisco in 1906, culminated in the period just before World War I with the design for the San Francisco Civic Center by John Galen Howard and Meyer & Reid. During this period two great university groupings were planned: Stanford University in Palo Alto and the University of California campus in Berkeley. The grandiose manner met the Spanish colonial style in Goodhue's San Diego Panama-California Exposition buildings of 1915.

Since the beginning of the 20th century Los Angeles has absorbed many surrounding communities and has become the classic example of "urban sprawl" (FIG. 659, right). In the burgeoning medium- and high-density residential developments in the Los Angeles area there have been several experiments at unified planning. One of the most interesting is Parklabrea, originally designed by Leonard Schultze & Associates for the Metropolitan Life Insurance Company before World War II, with an extremely controlled plan heavily influenced by the neoclassic tradition. Parklabrea's antecedents seem to be such European schemes as Karlsruhe, Germany (VI, FIG. 258), and Arc-et-Senans, France. Two other especially notable experiments have been Baldwin Hills Village and Channel Heights Housing (1943–44) by Richard Neutra (q.v.).

Many new towns are being constructed in California at the present. Among them are Irvine Ranch, designed by William Pereira, and Laguna Niguel, planned by Victor Gruen, both south of Los Angeles; Foster City, near San Francisco; and Sunset, near Sacramento.

Benicia. Old State Capitol (now a museum), 1853, an early example of the Greek revival style in the area.

Berkeley. University of California campus, plan by H. J. E. Bénard, 1898–99, later modified by John Galen Howard; buildings by Howard and by Bernard Maybeck, ca. 1901–ca. 1925. – First Church of Christ Scientist (I, PL. 88), by Maybeck, 1910–12; wing, by Maybeck and Henry Gutterson, 1929. – University of California, Robert H. Lowie Museum of Anthropology, with primitive art and anthropological and ethnological Indian collections.

Carmel. Mission S. Carlos Borromeo: stone church, by the master mason Manuel Estevan Ruiz, 1793–97, with a unique tunnel vault that has recently been restored.

Claremont. Pomona College has two important murals: *Prometheus*, by José Clemente Orozco (q.v.), 1930, and *Genesis*, by Rico Lebrun, 1961.

Coronado. Hotel del Coronado, by Reid & Reid, 1886–88, ballooning spaces and majestic roofs. – First Church of Christ Scientist, by Irving Gill, 1931.

Eureka. Carson Mansion, 1886, so Victorian as to be almost a parody of the style.

Fillmore. In the environs is Rancho Camulos, original section 1839, wing added 1849, fine adobe house with separate kitchen and chapel built around a garden.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Jenner. Nearby is Fort Ross, with the Greek Orthodox Chapel, Commandant's Quarters, and Stockade (all restored) remaining from the Russian settlement of 1812–41.

Jolon. Near the town is one of the handsomest of the old missions, S. Antonio de Padua, with a church of 1810–13.

Lafayette. Acalanes Union High School, by Kump & Franklin, 1940–41. – James Dinwiddie Home (XIII, PL. 247), by J. E. Dinwiddie, 1948.

Lompoc. Nearby is Mission La Purísima Concepción, the only complete mission in the state, with a church of 1813–21; restored 1935–40.

Los Angeles. Buildings: Church of Nuestra Señora la Reina de los Ángeles, 1818–22; reconstructed as the Plaza Church in 1861. – Lugo House (now part of Loyola University), 1840s, the only old two-story adobe in the city; many later changes. – Bradbury Building, by George Wyman, 1893. – Banning House, 1911, and Dodge House, 1915–16, both by Irving Gill. – A group of structures by Frank Lloyd Wright: Barnsdall (Hollyhock) House, 1920; Storer House (FIG. 861), 1923; Ennis House, 1924; and Sturges House (in Brentwood Heights), 1939–40. – A number of structures by Richard Neutra: Jardinette Apartments, 1926–27, the first building in the international style in the city; Lovell ("Health") House, 1929, which made Los Angeles architecture known in Europe; Bell Avenue Experimental School, 1934–35; Channel Heights Housing (in San Pedro), 1943–44; and Northwestern Mutual Life Insurance Company Building, 1952. – Hollywood Terminal Storage Warehouse (in Hollywood), by Morgan, Walls & Clements, 1926. – City Hall, by Austin, Parkinson & Martin, 1926–28. – Public Library, by Bertram Goodhue, with Carleton Winslow, 1927. – Dunsmuir Apartments, by Gregory Ain, 1938. – Falk Apartments, 1939, and Bethlehem Baptist Church, 1944, both by Rudolph Schindler. – Colby Apartments (in West Los Angeles), by Raphael Soriano, 1951. – Music Center for the Performing Arts, consisting of three buildings by Welton Becket: Dorothy Chandler Pavilion, 1964; Howard Ahmanson Theater, 1967; and Mark Taper Forum, 1967.

Museums: Los Angeles County Museum, housed in three connected buildings by William Pereira, 1965; with classical antiquities, European painting, sculpture, and minor arts from Gothic to baroque, Oriental art, and American painting, sculpture, and folk art from the 18th–20th century. – Southwest Museum, with American Indian art and paintings from the California missions. – University of California at Los Angeles, Art Galleries, with European painting and prints from the 15th century to the present. – University of Southern California, Fisher Gallery, with European and American painting from the 17th–20th century.

Monterey. Royal Presidio Chapel of S. Carlos Borromeo, 1794, enlarged 1858; on the façade is a relief of Our Lady of Guadalupe; the chapel contains fine examples of sculpture. – Old Custom House, north wing built 1814, middle section 1822, south wing 1840s; restored. – Casa Amesti, 1823–24, the prototype of what is known as the "Monterey style" of architecture; with formal gardens and antique Spanish and French furniture. – Soberanes House, 1830, fine adobe residence. – Thomas Larkin House, 1834, classic example of the Monterey style. – House of Four Winds, 1834. – First Theater, 1844. – Casa del Oro, 1845, simple adobe structure. – Pacific Building (originally a hotel), 1847, in Monterey style. – Colton Hall, 1847–49, provincial Greek revival. – Old Whaling Station, 1855, late example of the Monterey style.

Oakland. Mills College Art Gallery, with graphic arts, textiles, and minor arts.

Pacific Palisades. Eames ("Case Study") House, by Charles Eames, 1949, one of the most imaginative and influential of the postwar residences.

Palm Springs. Mensendiek House (VIII, PL. 450), by Richard Neutra, 1937. – Kaufmann House (I, PL. 412), also by Neutra, 1946, in international style.

Palo Alto. Paul R. Hanna House (FIG. 862), by Frank Lloyd Wright, 1937. – Center for Advanced Study in the Behavioral Sciences, by Wurster, Bernardi & Emmons, 1955. – Stanford University: Art Gallery, with Oriental and 18th century Venetian art; Museum, with anthropological and archaeological collections.

Los Angeles and vicinity. *Left*: Los Angeles, plan of the original nucleus in 1781–82. (1) Main water ditch; (2) lands for future private claims. *Right*: Los Angeles and surrounding cities. *Key*: (1) Area covered by the original nucleus of the city in 1849; (2) development by 1915. Surrounding cities and districts: (*a*) San Fernando, independent city; (*b*) Santa Monica, independent city; (*c*) Hollywood, district of Los Angeles; (*d*) Culver City, independent city; (*e*) Pasadena, independent city; (*f*) San Pedro, district of Los Angeles; (*g*) Long Beach, independent city. Both, courtesy M. G. Scott and the Haynes Foundation.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Palos Verdes Estates. Nearby is the Wayfarers' Chapel, by Lloyd Wright, 1949–51, with glass sides and roof.

Pasadena. Center of the work of the Greene brothers, Orientalist innovators of the early 20th century, and possessing their two greatest residences: Blacker House, 1907, and Gamble House (I, PL. 92), 1908–09. – Millard House ("La Miniatura"), by Frank Lloyd Wright, 1923, using a new type of concrete-block construction.

Sacramento. Sutter's Fort was erected in 1839; remaining from the original fort is the two-story central building. The fort's outer walls and rooms were reconstructed in 1890. – On the riverfront is Old Sacramento, a historical-preservation project, with many buildings that date from 1849 to 1870. – State Capitol, by Miner F. Butler, 1874, in Greek revival style; extensive alterations 1906–08. – E. B. Crocker Art Gallery, housed in a building of 1870, with European and American painting and graphic arts and Korean pottery.

San Diego. Three fine adobe structures: Casa Estudillo, 1925–26, José Antonio Aguirre House, 1825–30, and Santiago Argüello House, 1833. – Thomas Whaley House, 1857; restored 1959. – First Church of Christ Scientist, by Irving Gill, 1904–07. – Balboa Park, with the Spanish Renaissance buildings of the Panama-California Exposition by Bertram Goodhue, 1915, now housing various civic organizations and museums. – Grossmont Hospital, by Pereira & Luckman, 1956. – Concourse, including the Civic Theater, Convention and Exhibit Hall, and City Administrative Building, completed 1965. – Fine Arts Gallery, with European painting from 1300 to 1870, modern painting (especially Spanish) and sculpture, prints, tapestries, Oriental art, and American minor arts. – Nearby is Mission S. Diego de Alcalá, with a church of 1808–13 which has a great three-storied bell tower; restored 1931. – In La Jolla suburb are two important buildings by Gill, the Wilson Acton Hotel of 1908 and the Women's Club of 1913; Miramar (Airmen's) Chapel, by Richard Neutra, with R. Alexander, 1958; and the Art Center in La Jolla, located in the Ellen Scripps House of 1917 by Gill, containing European and American painting of the 19th and 20th centuries, sculpture, graphic arts, and Oriental art.

San Francisco. Buildings: Mission S. Francisco de Asís (also called Mission Dolores), with a church of 1782–91 containing a superb Churrigueresque altar screen; restored. – Old U.S. Mint, 1869–74, in Greek revival style. – Ferry Building, 1896, a high tower based on the Giralda in Seville, Spain. – Palace of Fine Arts, built for the Panama-Pacific Exposition by Bernard Maybeck, 1915, in classical style; rebuilt with permanent materials 1960–61. – City Hall, by Bakewell & Brown, 1915. – 450 Sutter Street Building, by Timothy L. Pfleuger, 1928–30, using Mayan motifs. – War Memorial Opera House, 1932, probably the most monumental permanent building executed in the spirit of the World's Columbian Exposition. – San Francisco-Oakland Bay Bridge, completed 1936. – Golden Gate Bridge, opened 1937. – Maimonides Hospital, by Eric Mendelsohn, 1946–50. – V. C. Morris Shop, by Frank Lloyd Wright, 1948–50, with an interior helical ramp under a plastic bubble ceiling. – John Hancock Mutual Life Insurance Company Building, by Skidmore, Owings & Merrill, 1959. – Golden Gateway renewal project (PL. 165), first units completed 1965.

Museums: M. H. de Young Memorial Museum, with painting, sculpture, tapestries and textiles, furniture, period rooms, stained glass, and ceramics of the Western world from ancient times to the present, Chinese and Japanese art, and pre-Columbian, Oceanic, and African collections. – San Francisco Museum of Art, with contemporary painting, sculpture, and graphic arts from Europe and North and South America. – California Palace of the Legion of Honor, with European and American painting, sculpture, minor arts, graphic arts, and period rooms.

San Gabriel. Mission S. Gabriel Arcángel, with a church of 1794–1806; many changes but retaining more original early-19th-century decoration than any of the other missions.

San Juan Bautista. Mission S. Juan Bautista, with a church of 1803–12, the only mission church with a nave and four aisles. – Plaza Hotel (Zanetta House), 1813–14; second story added 1858. – Castro House, ca. 1838.

San Juan Capistrano. Mission S. Juan Capistrano, with an adobe chapel of 1777 and a great stone church by Isidoro Aguilar, master mason, of 1797–1806. The church was badly damaged in an earthquake of 1812 and has never been restored.

San Luis Rey. Mission S. Luis Rey: quadrangle, 1798–1804; church, 1811–15 and later, with a domed crossing and octagonal chapel, restored.

San Marino. Henry E. Huntington Library and Art Gallery, with Italian and Flemish Renaissance painting, 18th-century British and French painting, furniture, tapestries, and sculpture, and rare manuscripts and books.

San Rafael. Marin County Civic Center (PL. 438), by Frank Lloyd Wright, 1959.

San Simeon. Hearst San Simeon State Historical Monument, consisting of the Hearst castle, three guesthouses, the Neptune Pool with an ancient Greek temple, and magnificent gardens. The castle contains period rooms, architectural elements from European churches, castles, and temples, and furniture, tapestries, rugs, sculpture, and minor arts of all periods imported from Europe.

Santa Barbara. Mission S. Bárbara, founded 1786, with extensive water works, gristmill, octagonal fountain of 1808, and laundry; stone church, by Father Ripoll, 1815–20, with a façade based on an illustration in a Spanish edition of Vitruvius; church restored 1926–27. – De la Guerra House, 1819–26, an adobe structure built around a patio. – Santa Barbara County Courthouse, by William Mooser, 1929, in Moorish style. – Tremaine House, by Richard Neutra, 1947. – Santa Barbara Museum of Art, with classical antiquities, Oriental, African, and pre-Columbian art, and European and American painting from the 18th century to the present.

Santa Catalina. Wolfe House, by Richard Schindler, 1928, cubist tour de force with six levels cantilevered off a hill by the sea.

Ventura. Mission S. Buenaventura: church, 1794–1809, rebuilt 1812–15, with a lovely bell tower. – Nearby is Rancho Olivos (now part of the Max Fleishman Foundation), 1841, fine example of Spanish colonial style.

UNKEI. Son of the sculptor Kōkei (see JAPANESE ART), Unkei (d. 1223) doubtless drew in part from his father the artistic inspiration that was to make him the major sculptor of the Kamakura period (1185–1333). Kōkei and his famous pupil Kaikei (q.v.) were outstanding artists, but Unkei is commonly credited with giving Kamakura sculpture a vital new impulse in keeping with the warlike, realistic spirit of the time.

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

An event that played an important part in Unkei's art was the rebuilding of Nara's Kōfukuji and Tōdaiji, which had been largely destroyed in the course of the feudal strife that led up to the establishment of the shogunate in 1192. Working with his father, who was in charge of the sculpture for the reconstructed temples, Unkei had the opportunity to study the magnificent Buddhist images of the Nara period (645–793); it was on these works, in fact, that he based his early style, not in mere imitation but rather in inspired adaptation, which achieved a perfect fusion of the splendor of the Nara period with the dramatic realism typical of Kamakura art.

Numerous works have been ascribed wholly or in part to Unkei. As the head of an atelier and the founder of a school, he was artistically an extremely influential figure and set the standard of quality for the works of those associated with him. It is not always possible, in a particular piece, to differentiate between Unkei's influence, his direction, and his own hand.

Of all the works linked with Unkei's name, the most impressive, from the point of view of immediate impact, are the two Kongōrikishi, also called Niō, housed in the Great South Gate, or Nandaimon, of the Tōdaiji of Nara (PL. 255; VIII, PL. 291). According to documents in the archives of the monastery, these two gigantic figures of Buddhist guardian deities were executed in 1203 by Unkei and Kaikei, with the help of two other sculptors and sixteen assistants. Called Kongōrikishi because of the symbolic thunderbolt (Skr., *vajra*; Jap., *kongō*) that they wield, the figures are about 27 ft. high and are made of several blocks of wood, carved separately and then joined (a technique brought to perfection by Unkei); despite the discoloration due to the passage of time, it is still apparent that the original polychromy must have been vivid. The statues are notable for the dynamism of the attitudes and the tremendous force emanating from the bodies. The dramatically expressive faces, the muscular tension of the arms and legs, in violent motion, and the sharp diagonals of the limbs and the wind-whipped drapery convey a sense of the terrifying and make clear the fiercely protective nature of the function of these beings (see DEMONOLOGY; TERROR AND THE MALIGN). The close connection between the Niō and the lokapala of the Nara period is unmistakable, but the Nara guardians cannot compare with the Kamakura figures for realism and intensity of vigor and energy.

Unkei, unlike the Buddhist sculptors of Nara in the Heian period (794–1185), did not slavishly accept the legacy of the style of the Nara period but profoundly modified it, giving his figures a dynamic but nonetheless composed expression of power that had been lacking in Heian sculpture. Unkei's fresh and vigorous touch is discernible even in a work of his youth, the Dainichi Nyorai (Vairocana Tathāgata; VIII, PL. 292) in the Enjōji, Nara. Begun late in 1175 and completed in less than a year, the statue still retains something of the style of the Late Heian (Fujiwara) period (895–1185); but close observation of the deliberately irregular carving of the virile face, the hair knotted up in a high tuft, and the eyes of mounted crystal, reveals the realistic trend of the Kamakura period. Moreover, the authority with which the draped lower limbs are modeled is typical of Unkei's handling of his material.

The statues that embody the elements typical of Unkei's developed style, however, are two life-size standing figures representing two patriarchs of Mayahana Buddhism, Asaṅga (Jap., Muchaku) and Vasubandhu (Jap., Seshin), in the Hokuendō (North Octagonal Hall) of the Kōfukuji in Nara. These two figures stand as attendants to a seated Bodhisattva Maitreya (Jap., Miroku Bosatsu), the inscription on whose pedestal provides the basis for dating this triad 1208 and attributing it (in the broad sense of the term) to Unkei. A contemporary document raises some questions, since it names other artists and designates as Genjō (Chin., Hsüan-tsang) the figure generally regarded as representing Muchaku, but can hardly cast doubt on the responsibility of Unkei for this group. The figures of Muchaku and Seshin can scarcely be considered portraits in the strict sense, since the two monks lived in the 3d–4th century, but the remarkable realism of these carved wooden statues surely brings them into the domain of portraiture: they represent not types but individuals. In the animate faces and the delicate drapery of the robes, responsive to any slight motion, there is apparent the masterly carving that has prompted one writer to characterize Unkei as "the Michelangelo of Japanese sculpture."

URARTU. In the mountainous territories lying north of upper Mesopotamia and corresponding to the future Armenia, the kingdom of Urartu (Bib., Ararat) flourished during the first half of the 1st millennium B.C., with particular ethnological characteristics and with an artistic achievement whose originality distinguishes it from the other civilizations of ancient West Asia (see ASIA, WEST: ANCIENT ART). On the one hand its production is linked to Assyrian art, which is its main source of inspiration, while on the other it shows contacts with the cultures of Anatolia and northern Iran. Of special interest is the output of bronze objects, which were exported westward to the lands of the Mediterranean and there imitated (see ORIENTALIZING STYLE).

SUMMARY. Introduction (col. 664). Architecture (col. 665): *Citadels; Temples; Tombs.* Sculpture (col. 668): *Bronzes.* Diffusion of Urartian influence (col. 672).

INTRODUCTION. The name Urartu was mentioned as early as the time of the Assyrian king Shalmaneser I (first half of the 13th cent. B.C.), and the first reference to a king of Urartu, a certain Aram who resided in Arzashkun, appears in the annals of Shalmaneser III (r. ca. 858–824 B.C.). With Sardur I (r. ca. 832–825), son of Lutipris, an energetic dynasty established itself and succeeded during the weak period of the Assyrian kingdom — under King Menuas (r. ca. 804–790) and his suc-

Principal centers of archaeological interest in Urartian territory. *Key:* (1) Modern national boundaries.

cessors Argishtis I (r. ca. 789–766) and Sardur II (sometimes called Sardur III; r. ca. 765–733) — in making Urartu one of the leading powers of the Near East. Menuas's inscriptions report military campaigns that extended as far as Transcaucasia. Sardur II, son of Argishtis, conquered Kumaha (Commagene) in the west and Halap (Aleppo) in the southwest, thus coming into contact with the Syrian coast of the Mediterranean. But at the time of the great Assyrian king Tiglath-pileser III (745–

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

727 B.C.) the Urartians were pushed back into their original mountain region; subsequently Sargon II (721–705 B.C.) was even able to lead a great military expedition into the interior of their country.

Since in the succeeding period the Urartians contented themselves with ruling the mountainous area, they were able to coexist with the Assyrians. The Cimmerian invasion, in which Rusas I is said to have taken his own life (714 B.C.), must have considerably weakened Urartu, which was then further stricken by the Scythian invasion in the first half of the 7th century B.C. Yet the kingdom of Urartu did not come to an end until the coming of the Armenians and Iranians to the area. The final dissolution of the state must have taken place toward the beginning of the 6th century B.C., following the Median conquest and some years after the fall of the Assyrian kingdom.

Goetze (1957) considers the language of Urartu (sometimes called Khaldian), which is known from inscriptions written in Assyrian cuneiform characters, to be a later Hurrian dialect; according to him the Urartians were the successors of the Hurrians, who flourished in upper Mesopotamia in the 2d millennium B.C. Besides raising cattle and horses on a large scale, as the Hurrians had done before them, the Urartians were masters in the construction of irrigation systems. They were fine craftsmen, being especially skilled in weaving and the metal crafts.

The Urartian religion is known from the large inscription on the portal of Mheri-dur (Mher-kapısı, "gate of Mher") near Van, dating from the joint rule of Ispuinis and Menuas (end of 9th cent. B.C.), which offers a survey of the entire Urartian pantheon. The most powerful deities were Khaldis the national god, Teisheba the weather god (a name only slightly altered from the Hurrian Teshub), and Shivini the sun god. The portal of Mheri-dur, with its monumental niche, was a sanctuary and may be compared to similar niched rock façades found in Phrygia (I, PLS. 528, 532).

ARCHITECTURE. *Citadels.* The mountainous and rocky nature of their land as well as their own warlike character caused the people of Urartu to become great masters in rock architecture. C. A. Burney (1957, 1960) has studied and photographed a considerable number of Urartian citadels (PL. 257).

The walls of these fortresses consist of approximately square or rectangular thick stone blocks, which were roughly or smoothly dressed according to their quality; they are mainly black basalt, being usually rather more than 20 in. high, and occasionally reaching 40 in. The defense walls are everywhere about 10–13 ft. thick. Generally the outer and inner surfaces are built of large blocks while the inside is filled in with rubble, but the best walls are of ashlar throughout. Most citadel walls are reinforced with numerous buttresses or "towers." These are generally 13 ft. wide and project about 3 ft.; they are rectangular in plan, never curved. Characteristic also is the rusticated ashlar that can be seen in the wall of the Temple of Khaldis in Toprakkale (apparently the ancient Rusahina). In the 2d millennium the Hittites, neighbors of the Hurrians, knew the technique of rustication, as can be seen from the monument in Eflatun-Pınar.

An idea of the structure of a Urartian fortress is given in the lost Assyrian relief from Dur Sharrukin (mod. Khorsabad) and by two fragments of a bronze model from Toprakkale (Br. Mus., 91177, 91250). In both representations the walls are crowned with battlements; on the Assyrian relief, moreover, the towerlike buttresses can be seen.

The rock steps of these citadels (PL. 257) were generally built not as passageways but as foundations for walls. The stairways cut as tunnels in the rock sometimes served for fetching water but in some cases were used as sally ports.

The citadels, which varied in size, contained within their walls the most important buildings — palace, storehouses, sanctuaries. Normally a lower town lay at the foot of the fortified acropolis. K. L. Oganesjan (1955, 1961) differentiates two types of Urartian dwellings: one with a central courtyard, which was used in the southern, warmer parts of the kingdom, and one with a covered central room in place of the courtyard. In the excavations of Arin Berd the remains of palace buildings were brought to light. Particular mention should be made of a large hall whose ceiling was once supported by 30 columns. Some of the interior walls had painted decoration in red and blue; the figural motifs included genii and animals.

Temples. In Altıntepe and Patnos the lower part of the temple wall, which was 13 ft. thick, consisted of regular ashlar masonry while the upper part was of mud bricks. In Toprakkale, as indicated by H. Rassam's excavations of 1880, the foundation wall, which in places was preserved to a height of 15 ft., was executed in a sort of rusticated ashlar composed of alternating light and dark courses. Later excavators could find only meager remains of the walls, yet these sufficed to establish the approximate ground plan of the temple. Reconstruction of the ground plans of these three temples shows in each case a square structure measuring approximately 46×46 ft., within which was a square chamber measuring approximately 17×17 ft.

The temple of Altıntepe (PL. 258) is oriented in a north–south direction. As with the Temple of Khaldis in Toprakkale, the entrance is on the south side. One ascends two steps and passes through a corridorlike entry into the cella, on the north wall of which is a plinth for a statue. The plinth is covered with stone slabs and has a stone step at its northwestern corner. In front of it votive gifts — several spearheads, clubs, and vases — were found. Low stone benches run along the inner walls of the cella, the floor of which consisted of packed earth. The interior walls were painted in red and blue, but it is no longer possible to establish the ornamentation. All the exterior angles of the temple were emphasized by tower-shaped buttresses, which projected only about 20 in., and the structure as a whole gives the impression of a freestanding tower. This plan, inspired by military architecture, while it has analogies among the contemporaneous religious buildings of Mesopotamia (for example the Temple of Ishtar in Babylon), represents a new temple form that can be considered a Urartian creation. The temple of Altıntepe with its square ground plan and slightly projecting buttresses at all four corners must have looked something like the Achaemenid fire temple of Naqsh-i-Rustam (VIII, PL. 137), and it seems likely that this Achaemenid structural form goes back to a Urartian model.

Similar corner projections can be seen in the Temple of Khaldis at Arin Berd, which also has in common with the Altıntepe sanctuary its use of columns. At Arin Berd they are used as supports for an entrance hall that included two-thirds of the temple façade. In Altıntepe, according to the excavator, the columns formed a sort of pronaos. The decoration of the façade with columns or pillars is also to be seen in the relief, now lost, that was found in the palace of Sargon II in Dur Sharrukin (mod. Khorsabad), representing the plundering of

Teishebaini (mod. Karmir Blur), plan of citadel, 7th cent. B.C. (*from Piotrovski, 1950, III, fig. 1*).

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

the temple of Musasir in 714 (FIG. 667). The relief shows the temple set on a fairly high base with six pillars that support a tiled gabled roof. Each pillar is regularly divided by three transverse moldings. On the fronts and sides of the pillars and on the flat areas between are attached shields, which appear either in a front view or in profile. In the center of the front is a door with a gabled tympanum, perhaps leading into the room in which stood the statues of Khaldis and his consort Bagbartu, the two divinities worshiped at Musasir. The presence of the triangular tympanum constitutes a significant link with the religious architecture of Phrygia and the Aegean (see ARCHAIC ART; ASIA MINOR, WESTERN; GREEK ART, EASTERN). The symbol of Khaldis, a spearhead, was used as an acroterium. Each of the two central pillars has before it a male statue and a spear

Front view of Urartian temple at Musasir, from an Assyrian relief from Dur Sharrukin (mod. Khorsabad), now lost (*after P. E. Botta and E. Flandin, Monuments de Ninive, Paris, 1849–50*).

reaching to the eaves. The statue on the right is followed by the figure in the round of a cow suckling her calf. In the foreground of the temple are two large vessels on tripods.

The temple of Patnos is the oldest Urartian sanctuary of which remains have been found. According to inscriptions containing the names of the kings Ispuinis and Menuas, it dates from the end of the 9th century B.C. The temple of Musasir was destroyed in 714 B.C. by Sargon II and must therefore belong to the 8th century B.C. at the latest. The Temple of Khaldis in Toprakkale probably already existed in the time of Rusas II (r. ca. 678–654 B.C.), according to a now-lost shield inscription from the British Museum. The other shields found there, dedicated to Khaldis (Br. Mus., 22482 and fragments), are from the time of Rusas III (r. ca. 605–585 B.C.).

Tombs. Urartian burial monuments are known chiefly from those preserved in the citadel on Lake Van (PL. 258) and those which have recently come to light in the Turkish excavations of Altıntepe.

The tombs found on the slopes of Altıntepe are subterranean structures. In rectangular graves, situated 7–8 ft. deep in the earth or rock, from one to three chambers were built of carefully dressed stone blocks. Most burial chambers were provided with several often symmetrically placed small niches that served as depositories for the tomb furnishings. The chambers were covered with either a gabled roof or a corbeled vault, and almost all of them had a long or short dromos. Each tomb was surrounded on all four sides by a wall built of large stone blocks; the whole was then covered with earth. In one of these tombs were found two plain stone sarcophagi, with barrel-vaulted covers, one containing the skeleton of a woman, the other that of a man. The woman was buried in richly ornamented clothing. Other material in the same grave consisted of fine pieces of furniture, arms, and vases.

Sculpture. The inscription of Sargon II, in which he reports his campaign against Urartu and the plundering of the temple of Musasir, bears witness to the fact that in the 8th century B.C. the Urartians were making important pieces of large-size sculpture. Among the booty are listed "four bronze statues that guarded the gates, a statue of Sardur, one of his son Ispuinis, a bronze statue of Argishtis, and a bronze statue of Ursa [Rusas] with his chariot, driver, and two horses." It is noteworthy that these were mainly bronze statues and that the bronze founders of Urartu were already capable of representing freestanding groups, but unfortunately no examples have survived. Nor are there examples of large works in marble or stone. However, the fine large relief of Adılcevaz (Adelyevas; Burney and Lawson, 1958), of which fragments survive (some *in situ* and some in the museum at Van), confirms the fact that the Urartians really did make monumental figural sculpture. The god Khaldis was represented on this relief with a second divinity opposite him. Khaldis, standing on a bull, is almost completely preserved, but only the middle part of the other figure remains. The motif of a divinity standing on an animal goes back to Anatolian-Hurrian models. The characteristic profile of the face and above all the thick swelling form of the eyebrows and the strong nose (see below), as well as the spearhead motif (the symbol of Khaldis), indicate that this is a Urartian work. The figure of the bull, like another one on a rock relief of Adılcevaz, is closely related in all its details to the bulls on the Urartian shields. Although strongly influenced by the Assyrian bulls, they are an original Urartian interpretation. The same can be said for the figure of the god: his richly ornamented dress, for instance, is strongly reminiscent of the richly patterned clothing in Assyrian art (IV, PL. 16), yet a comparison shows the individual motifs to be quite different; the closest parallels to the decorative motifs of the Adılcevaz relief appear in Urartian small bronzes in the British Museum (see below). The horned headdress, the astral type of crown, and the position of the arms and hands are modified imitations of Assyrian models. The vertical volutes with the astral symbol that are shown on the polos of the god reappear in a Urartian bull figure now in Leningrad (The Hermitage). The motif of the triple spearhead is, as pointed out by Burney (1958) and Piotrovski (1962), also known in Urartian art and recurs in the art of Zawiyeh (see IRANIAN PRE-SASSANIAN ART CULTURES). Since in the relief the nape of the god's neck is missing, it is not possible to establish a definitive date from the coiffure, but the hair seems to have a Sargonic form, as in the minor bronzes of Toprakkale; thus the relief may be dated about 700 B.C. at the earliest. Another worthy example of Urartian relief is the representation of a lion (PL. 259) from Erzincan — a characteristic example of the so-called "ringlet" style (see below).

The Urartians also produced monumental pottery vessels (some of them found in their entirety in the Turkish excavations of Patnos) that demonstrate their special talent for sculptural decoration. Often these vessels seem to be imitations of the great bronze vessels discussed below, with lion and bull figurines applied to the rim in the same style as the lions on the votive shield of Rusas III (see below); these vessels seem to belong, like the shield, to approximately the time of that monarch (r. ca. 605–585 B.C.). The minor Urartian production of terra-cotta figurines of a more or less popular character also shares certain sculptural features of the artistically important bronzes.

Bronzes. Excavations have brought to light figural bronzes as well as bronze furnishings and weapons with sculptural decoration. The oldest examples dated by inscriptions were revealed by the Russian excavations of Teishebaini (mod. Karmir Blur), which was founded or transformed into a royal fortress by King Rusas II (r. ca. 678–654 B.C.). Two shields and two helmets (PL. 259) found there, inscribed with the names of Argishtis I (r. ca. 789–766 B.C.) and Sardur II (r. ca. 765–733 B.C.) evidently came from the treasuries of older residences. The character of these works, which can be dated with certainty to the 8th century, is so linked to Assyrian models — in the pointed form of the helmets themselves, the winged genii, the

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

round caps with horns, and the coiffures — that they may be considered as provincial products of pre-Sargonid Assyrian art (see I, col. 874; IX, PLS. 489, 490, 493). The same can be said of the representations of horses and chariots, which repeat the types appearing on the Assyrian reliefs of pre-Sargonid times. M. Pallottino (1958) has justly compared the horseman with pointed helmet and small round shield who appears on an orthostat from Tell Halaf with the horsemen on the helmets from Karmir Blur. The existence of a common Assyrian prototype is attested by the 9th-century bronze relief from Imgur-Enlil (mod. Balawat), now in the British Museum.

Nevertheless, in addition to the clear and strong Assyrian influence, the art of Urartu displays unique features that can be considered as constituting a characteristic Urartian style. This is particularly evident in the somewhat squat human figures of a facial type that differs from the Assyrian. The originality of Urartian works of art can best be grasped in the animal figures, which are treated with special fluency and skill. Where Assyrian art represents the lion in powerful action, attacking or preparing to spring (IX, PL. 493), the Urartian lion is, so to speak, strolling along (PL. 259), despite the wide-open maw with extended tongue, the furrowed face, and the curled tail — all characteristics of a raging lion. This type of "inoffensive" lion, often repeated ornamentally in friezes, was later to become a dominant element of the Orientalizing style (q.v.) and of the archaic iconography of Greece and Italy.

Urartian animal motifs display one peculiarity that amounts to a stylistic formula, namely, the curling or ring-shaped termination of various parts of the figure such as the locks of the mane, the ears, and the lower lip. The most striking characteristic of the Urartian lions or bulls is the ringlet used in the stylization of the leg and the shoulder, either issuing from the curve of the line of the muscle or simply added at this point (PL. 259). It will be seen below that the same formula is employed on the "siren" appliqués from Toprakkale. This "ringlet style" (*Ringelstil*) was typical of the oldest period of bronze production in Urartu.

The famous caldron appliqués from Toprakkale are stylistically related to the shields and helmets from Karmir Blur. The ringlet style also affords evidence as to the much-debated provenance of the caldron appliqués found in Greece and Etruria. An appliqué in the form of a "siren's" head (see X, cols. 785, 789), now in Istanbul (Archaeol. Mus.), exhibits small ringlet shapes on the corners of the triple triangles that decorate the breast of the bust and on the ends of the small bars that hang down from the necklace. Another appliqué in the same museum in Istanbul, whose provenance is unknown, shows the same ringlet style. It is the same size as the previous piece and very similar in execution; both may therefore belong to a single caldron. The profile of these heads, with the nose strongly arched right from its root, seems to be characteristic of Urartian work. A similar nose shape appears in the previously mentioned Adılcevaz relief and on the gold medallion in Berlin (PL. 262).

The female appliqués of the bronze caldron recently found in Gordium (in Phrygia) show an almost identical facial type and an identical coiffure (PL. 260; X, PL. 403). The female heads from Toprakkale are so like those from Gordium as to be interchangeable. Common to both is the egg-shaped head with a receding brow, the strongly aquiline nose, the eyelids and eyebrows consisting of thick, crosshatched, elongated rolls ending in a point at the outer side, the small angular mouth, and the small chin joining the neck with a simple diagonal line. The herringbone strokes of the hair, which falls down in several large locks, are almost identical in the heads from both places. It is decisive that the four women's busts on the caldron from Gordium have the characteristic Urartian ringlet motif; these also appear here on the upper corners of the triangles that decorate the breasts of the appliqués. The ringlets are absent in the other caldron from Gordium, which is decorated with two female appliqués. Singularly enough, the male heads of the same caldron are quite different in style; but since the female heads are identical in facial type to the female heads of the other caldron from Gordium and to the appliqués from Toprakkale, this work must also be the product of a Urartian workshop. A series of female-head appliqués found in Olympia as well as the head from Ptoion (in Boeotia) probably also come from Urartu.

A close examination of the female heads of the caldrons found in Etruria leads to the conclusion that the "sirens" of the Bernardini tomb in Praeneste (mod. Palestrina; Rome, Mus. Pigorini) and those of the "Tomba dei Lebeti" at Vetulonia (X, PL. 403) are also Urartian works. Not only are the facial forms and the hair of the Urartian type, but the breast decoration of the Etrurian "sirens" is also just like that of the Toprakkale pieces: the rosettes and triangles of the Toprakkale examples recur in the female appliqués of the Vetulonia caldron. One of the female heads from Praeneste, moreover, shows triangles with ringlet decoration in the upper angles, as is general in the Urartian works.

Stylistic analysis of the bearded appliqués from Vetulonia, Olympia, and Gordium indicates that the art of Urartu was greatly influenced by the traditions of Syro-Hittite art (see ASIA, WEST: ANCIENT ART). This is demonstrated by several characteristics: the absence of mustaches; the curly beards on the male heads of the caldron found recently in Gordium which, particularly in their somewhat oblique profile, recall the bearded heads from Sam'al (mod. Zincirli); the cloaks, whose folds are represented in a way encountered only in sculptures from Zincirli and Sakçegözü; and, lastly, the pointed cap folded forward on the bearded heads from Vetulonia, a feature that appears also on the late Syro-Hittite reliefs of Karatepe. This apparent eclecticism and confluence of styles can be explained by the close contacts between the kingdom of Urartu and northern Syria during the 8th century. Other decorative motifs that recur are hatched bands (*Strichelstil*) and rows of incised dots; on the basis of these two elements, Kunze (1950) has rightly identified a small bronze bull from the Heraion of Argos as Urartian (see X, col. 789). The same may be said of a winged appliqué with a griffin head from Olympia (Athens, Nat. Mus.), decorated with the same hatched bands and rows of depressed dots. Despite the eclecticism shown in the male heads, however, the scheme of the surface decoration, the thick crosshatched rolls forming eye outlines and eyebrows, and the powerful aquiline nose are common characteristics of both the male and the female heads of the Vetulonia caldrons, and justify the conclusion that they are products of the same workshop,

Both the caldon with a tripod (PL. 260) from Altıntepe near Erzincan and the caldron appliqués in the shape of bull heads from Toprakkale (Br. Mus.) are further evidence of the skill of the Urartians in the production of fine bronze vessels. P. Amandry (1956) has convincingly argued that the bull-head appliqués from Toprakkale and Altıntepe form a homogeneous group, distinctly different from the others found in the Mediterranean world. Characteristics are, above all, the narrow, curving horns whose point of juncture with the head is marked by a raised ring. The stylized curls of the forelock lying on the forehead, like a rectangular piece of cloth (see I, PL. 524), the similarly stylized collar running from ear to ear, and the wing-shaped plaque on which the head rests are further common features of the bull heads from Toprakkale and Altıntepe. One may therefore conclude that the bull caldron believed to come from Cumae (mod. Cuma, near Naples; Pallottino, 1955) in the National Museum in Copenhagen, which shows similar characteristics, is also of Urartian origin.

The griffin and lion appliqués from Greece and Etruria (I, PL. 340; X, PLS. 402, 408) exhibit a late Syro-Hittite character, and it does not seem that they can be specifically connected with the art of Urartu. The fact that lion heads in this style appear next to "siren" heads in Urartian style on the rim of a caldron from the "Tomba dei Lebeti" in Vetulonia (Florence, Mus. Archeol.) does not invalidate this view, especially as there is some doubt whether the caldron has been correctly reconstructed. If the present form is correct then it was put together in this eclectic fashion by the Etruscans, who may have used, on caldrons of their own manufacture, attachments of various provenance according to their taste. It is of interest that a lion protoma with an exaggeratedly long neck, similar to those

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

found in the Regolini-Galassi tomb in Caere (mod. Cerveteri), has come to light in Karmir Blur (see X, col. 788). In the drawing published by Piotrovski (1962), the head of the lion is characterized by two stylized palmette leaves closely encircling the eyes and by a gable-shaped forehead — two features that would appear to establish it as a Urartian lion type, in contrast to the Syro-Hittite type of protoma that was found in the Barberini tomb in Praeneste.

The other finds from Toprakkale also show a style closely related to Assyrian art and influenced by late Assyrian models. The bronze "eunuch" in Berlin (Staat. Mus.) and a bronze centauress in the British Museum (both, PL. 261; IX, PL. 497), as well as the lovely mythical being in Leningrad (The Hermitage), and various other Urartian figures, wear a coiffure which appears in the Assyrian art of the time of Sargon II (IX, PLS. 488, 489) and which remained fashionable throughout the entire 7th century B.C. In these figures the luxuriant mass of curls falling vertically to the shoulders and resting on them is completely different from the diagonally combed hair of the genii represented on Urartian 8th-century helmets; the Urartian artists seem to have followed the Assyrian change in hair style. The so-called "eunuch" is also Assyrian in other details and, like its Assyrian models, represents a royal attendant, so identified by the long band of cloth that he carries over his left shoulder and holds with his left hand. The other works of art from Toprakkale are also of Assyrian stamp. Besides the lions, the winged bull-men display a strong Assyrian influence. The figures standing on lions also betray Late Hittite influences, if this motif does not go back through local traditions to Hurrian models of the 2d millenniun.

The Urartian style of the 7th century B.C. is richer and more developed than that of the 8th. The differences between the two styles can best be seen in the lion images, of which many have been found. The ringlet style survived in the 7th century next to a new style tending to sculptural round forms. Very characteristic is the disklike stylization of the mustache on the lion images found on the shields of this time. The lions' claws and also some of the bulls' hoofs are done in the same protuberant form. That in this case too one can speak about a specific style ("boss style," *Buckelstil*) is shown by the presence of protuberant forms not only in the bronzework but also on the terra-cotta lions from Toprakkale. The shield in the British Museum representing lions in this style bears the inscription of Rusas III, the last king of Urartu (r. ca. 605–585). The *Ringelstil*, however, was not superseded, as is shown by another shield recently found at Toprakkale, also from the reign of Rusas III.

The Urartian lion type of the 7th century B.C. is dependent on Assyrian models of the Sargonid period, like the coiffures of human figures of the time. The Aramaean-influenced examples of Late Hittite art may also have served as models (see VII, col. 574). Both the formation of the lower jaw and the stylization of the upper part of the face are indeed closest to examples from Zincirli and Sakçegözü. The stylization of the nose, which ends below in a U shape and is stepped above, is a Urartian feature. A similar stylization of the nose recurs in a Phrygian relief of the 6th century B.C. (I, PL. 529).

Proof that the Urartian style was indigenous is provided by the previously mentioned relief from Erzincan (PL. 259), where the important Urartian ruins of Altıntepe are to be found. The lion represented on this slab, which is quite thick and was surely worked *in situ*, is the same type as the lion on the Urartian shields. There is the same stylization of the leg, with the upper curve provided with a ringlet, while the mane also ends in a volute so as to present a stylized ear. It is impossible to tell the exact form of the nose since the relief is damaged at this point, but the stylization under the eye consisting of two palmettes, as in other Urartian examples, is also present here. Both the curve of the lower lip and the generally rounded curve of the upper lip appear as they do in the Urartian lions represented on 8th-century shields. Only the shoulder stylization on the lion from Erzincan differs from that of the lions in metalwork. A similar stylization of the shoulder muscle appears in Late Hittite art. The M-shaped stylization of the high mandible is a transformation of the W-shaped haunch stylization which is encountered as an Assyrian characteristic and which predominates in 9th-century Assyrian reliefs (IX, PL. 493). The sculptor also gave the body of his lion different proportions from those used by the metalworkers of the Toprakkale shields; although both made short-legged lions, the torso and the neck of the stone lion are slenderer and more elongated.

The close relationship between the lion of the Erzincan relief and the lions from Toprakkale on Lake Van shows that a uniform Urartian style existed in the 7th century B.C. This uniformity of style is also evident in other figural representations from Toprakkale. Barnett (1950) has recognized that Urartian bronze statuettes in human and animal form to be found in various museums and private collections throughout the world belong to a throne, on which at that time the seated image of the god was set. The beautifully preserved bronze statuette of a winged fabulous beast, now in Leningrad (The Hermitage), is so closely related to these throne figures as to be identified with them in time and place. A particularly lovely work of art — the figure of a woman on a tripod in Assyrian style (Erlangen, Archaeol. Inst.) — belongs with this group. While the hands laid one within the other in humility and devotion indicate an Old Babylonian influence, transmitted through Assyria, this gesture recurs in the winged centauress belonging to the throne figures from Toprakkale, now in the British Museum (PL. 261), and was therefore also common to Urartu; the coiffure also corresponds to those of the throne figures. But the decisive clues to its Urartian provenance are the *Ringelstil* motifs that appear on the sort of capital surmounting the figurine's head, on the base beneath its feet, and on the necks of the duck heads (see H. Frankfort, *The Art and Architecture of the Ancient Orient*, Harmondsworth, 1954, pl. 117). A gold pendant medallion from Toprakkale (PL. 262) can be mentioned in this context. The cloak that covers the head and the trailing garment seem to indicate a prevalently Hittite influence, but the position of the hands has nothing to do with Hittite art. The finely patterned dress is characteristic of the richly ornamented Urartian clothing as known from Assyrian sources. In the booty taken by Sargon II from the temple of Musasir are listed 130 many-colored garments and 9 robes for gods with gold ornaments. The garments of the throne figures are strewn with geometric motifs similar to those on the Berlin pendant; still richer is the garment of the figure on the colossal relief in Adılcevaz, discussed above. The lively gestures of the figures indicate a late date for the pendant, probably the late 7th or early 6th century B.C.

DIFFUSION OF URARTIAN INFLUENCE. The stylistic analysis of works of art from Urartu has shown that the Urartians, although strongly influenced by the Assyrians, created an art of their own that included stylistic elements derived from local tradition. The ringlet style in particular is found as far back as the gold bowl from Hasanlu near the southern shore of Lake Urmia (Teheran, Archaeol. Mus.; Dyson, 1962). The same style using small circles recurs on another gold bowl with lion-demons and gazelles, from northwestern Iran. The manifold relationship of Urartian art with works from Zawiyeh and other Scythian or Iranian examples has already been recognized by various scholars — Herzfeld (1941), Ghirshman (1962), Barnett (1956), Piotrovski (1962), Kantor (1960), Porada (1962). (See IRANIAN PRESASSANIAN ART CULTURES.) In an earlier study (1959) the author mentioned the occurrence of the ringlet style on gold works from Zawiyeh (VI, col. 406; see also Byvanck and Quarles van Ufford, 1962, 1963). The goldsmith of the Zawiyeh pectoral used small circles in an almost identical way and for the same body details, for example in representing the breasts, as the artist of the gold bowl from Hasanlu, but at Zawiyeh the connection with the manner of Urartian metalworkers seems to be still closer.

These comparisons can be extended also to the Scythian goldwork of southern Russia (see GRECO-BOSPORAN AND SCYTHIAN ART). The griffins and bulls on the gold sword sheath from Kelermes (I, PL. 437), display not only the specifically Urartian leg stylization of the animal figures from Toprakkale but also

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

the same muscle stylization on the flank as is found in the lion images on the votive shields of Rusas III. There is a strong affinity with Urartian art, too, in the choice, the arrangement, and the handling of the figures of genii and of the stylized tree in the form of a candelabrum, set between two genii. Even some of the stags from this region, tied as they are to the typical Scythian animal style, and above all the lions on the gold handle of an iron ax from Kelermes show circular stylizations on the muzzles, feet, and leg joints that unequivocally stem from the circle style of the Hasanlu bowl and the ringlet style of Urartian art.

In conclusion, the influence of Urartian art on the archaic cultures of Greece and Etruria should be mentioned. If the Greeks and Etruscans imported and copied Urartian caldron appliqués in human and animal form, it is extremely likely that the granulation work of the Etruscan goldsmiths is also to be explained, at least in part, by the influence of Urartian models such as those brought to light recently at Altıntepe and Patnos. The continuing Russian and Turkish excavations will probably provide further important finds that will throw light not only on the history of Urartu but also on the question of the Orientalizing styles in Greece and Etruria.

URUGUAY. The Eastern Republic of Uruguay (República Oriental del Uruguay), recognized as an independent state in 1828, borders Brazil on the north, Argentina on the west and south, and the Atlantic Ocean on the east. Apart from a narrow coastal plane, Uruguay can be described topographically as an undulating plateau with higher elevations known as *cuchillas*. Archaeological finds have so far disclosed little of artistic interest. From the time of European settlement the small indigenous population, the Charruas, made no significant contributions to the country's artistic heritage. Spanish influences remained predominant in the colonial period, during which the course of the country's development gave rise to a scant artistic production. Modern Uruguayan art falls within the mainstream of international movements, with some original local developments.

SUMMARY. Pre-Columbian period and indigenous production (col. 674). Colonial and modern periods (col. 675): *Architecture; Sculpture; Painting*. Modern centers (col. 679).

PRE-COLUMBIAN PERIOD AND INDIGENOUS PRODUCTION. The lower and middle basins of the Río Negro, which crosses the country from northeast to southwest and empties into the Río Uruguay, held settlements of aborigines who produced pottery of limited artistic value. Known historically as the Chaná Timbú, they were ethnically and culturally related to the inhabitants of the Paraná delta and the lower basin of the Río Uruguay. Following the shores of the Río de la Plata, this population spread toward the environs of Montevideo. From an artistic viewpoint the territory occupied by the Chaná Timbú is related to littoral Argentina (q.v.). Their highest artistic expression was reached in the incised decoration on their crude and badly fired pottery, which usually lacked handles or other additions.

In the archaeological deposits found in the fluvial littorals of the departments of Soriano, Colonia, and San José the sparse artistic patrimony is enriched by expressive forms similar to those which characterize the riparian pottery of the Argentine subarea, both in decoration and in the occasional presence of handles.

Works in stone are represented by the so-called "litos con pocillo" (stones with cuplike depressions) in human and zoomorphic forms, such as those of Mercedes, Cabo Polonio, Tacuarí, and San Luis; but they were without doubt of external provenance, belonging to the neolithic culture of southern Brazil.

In other cases Uruguayan archaeological finds pertain to a culture analogous with that of Patagonia, which the Charruas, already spread throughout the country by historical times and overflowing into the border areas of Brazil and Argentina, had further developed, with several local peculiarities. This culture is characterized by a stonework industry of the Patagonian type, which produced a substantial number of round or star-shaped bolas, as well as by burnished or incised pottery, subspheroidal in form and lacking handles. Rare examples of tubular stones about 8½ in. long with deeply incised geometric decoration come from the middle stretch of the Río Uruguay; these should probably be attributed to the Uruguayan extension of the Patagonian culture.

The Charruas, an indigenous population of nomadic hunters with a social and economic structure similar to that of the Patagonians, constituted the predominant element in Uruguay. The Charruas may have been responsible for a large number of the petroglyphs found in their territory, as there is a similarity between the geometric motifs found in the petroglyphs and the designs on hide robes in historical times. The mainly geometric motifs of the petroglyphs — such as those of the Arroyo Maestre Campo, Los Porongos, Cerro Copetón, Pan de Azúcar, and Chamanguá — bring to mind those of the incised plaques and rock carvings of northern Patagonia. The pictographs of the Arroyo de la Virgen, unlike their Patagonian counterparts, include human and animal figures.

Also worthy of mention are the sculptured plaques with motifs arranged in echelon found on both sides of the Uruguay River on the heights of Salto Grande and the painted pottery, typically Guaraní, discovered in some archaeological deposits in lower Uruguay; particularly important is that of Las Tunas, which has provided ceramics with an ocher, red, or cream-color slip.

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

Uruguay, principal localities of archaeological interest and modern centers. (1) Modern national boundaries; (2) pictographs on rock; (3) petroglyphs.

Remains of mounds, locally called *cerritos* or *terremotos*, have been found in eastern Uruguay.

In historical times the coast of Uruguay was inhabited by the Guayaná tribe, which was at the least linguistically influenced by the Guaraní. It would seem that the Guaraní should be credited with the diffusion throughout Uruguay of certain elements of the stone culture of southern Brazil.

Antonio Serrano

The colonial and modern periods. *Architecture.* Uruguay, in contrast to other South American countries, has little colonial architecture, which furthermore is marked by an extreme sobriety of style. As in the other arts, this situation can be traced to the lack either of a sufficiently advanced pre-Columbian culture or of an opulent style of Spanish life capable of engendering a rich and brilliant art. The first works of architectural significance in the Banda Oriental, as Uruguay was called by the Spaniards, appeared toward the middle of the 18th century. Built by military technicians, these works display stylistic imperfections. In fact, in the whole viceregal domain there was no center for the training of architects, and the only person in this profession to arrive from Spain in this period was the academician Tomás Toribio, who came to Uruguay in 1799. Consequently there are no structures revealing a full knowledge of architecture that date from before the 19th century. The colonial buildings also reflect the guiding concepts of the era. Thus the Christian virtue and moral values ascribed to education set a religious stamp on all academic and official buildings, while the patriarchal structure of the family determined the unusual amplitude of colonial dwellings. Urgent strategic necessities led not only to the founding of cities endowed with defensive works, such as Colonia del Sacramento, Montevideo, and Maldonado, but also to the elaboration of regional plans that were destined to ensure royal sovereignty over the settled population.

Works by military technicians are the citadel of Montevideo, conceived by Diego Cardoso (1742); the reconstruction of Fortaleza Santa Teresa on the Brazilian border, completed by Juan Bartolomé Howel (1780); the completion of the parish church (begun 1792) of the city of San Carlos by José Pérez de Brito, Juan del Pozo y Marquy, and José García Martínez de Cáceres; and the groundwork, according to the settlement plans of the viceroy Avilés, of the city of San Gabriel de Batoví in the north by Félix de Azara (1800) and of Belén in the west by Jorge Pacheco (1801). The most significant and typical example of colonial domestic architecture is the house of Manuel Cipriano de Mello y Meneses in Montevideo, constructed in 1783 by an anonymous architect; the scale of its plan clearly reflects the importance of the occupants.

The work of academically trained architects began when the above-mentioned Tomás Toribio of the Academia de S. Fernando in Madrid arrived to supervise the erection of the parish church in the most important church in the Banda Oriental, which was designed in 1784 by Custodio de Saa y Faría. When Toribio died in 1810 among the works he left behind were his own house, projected seven years before, which was unusually functional in style for those times; the unfinished plans for the Cabildo (Town Hall) and Reales Cárceles (Royal Prisons), initiated in 1804, in which he adhered to the purest neoclassical canon; and the designs made in 1808 for the reconstruction of the parish church of Colonia del Sacramento. The monumental chapel of the Hospital de S. José y la Caridad in Montevideo, probably completed in 1807, is attributed to Toribio. The hospital itself was designed in 1825 by José Toribio, son of Tomás, who prolonged the academic hegemony in the field of architecture until 1831, the year in which he constructed an exceptionally opulent house for the Montero family in the Uruguayan capital.

With the birth of the republic in 1830 the preeminence of Spanish culture ended. In spite of aspirations to a national art that exceeded the possibilities, France took the place of Spain as the main source of cultural influences from abroad. Architecture in the 19th century was therefore dominated by the historical eclecticism that was characteristic of the Ecole des Beaux-Arts in Paris. The new style was introduced into Uruguay both by European architects and engineers who settled in the country and by Uruguayans who had studied in Europe. Not until 1890 was the first school of architecture in Uruguay organized by a group of European-trained architects whose teaching left the prevailing architectural doctrine and style unaltered.

In 1837 Carlos Zucchi, an Italian architect from the Ecole des Beaux-Arts in Paris, designed the Plaza Independencia in Montevideo, combining the scheme of the "places royales" of Paris with arcades like those of Rue de Rivoli. Víctor Rabú, also from the Ecole des Beaux-Arts, introduced the Neo-Gothic style to the Uruguayan capital with his chapel for the Jackson family (1870), a Chinese-inspired style in the villa of Fynn (1872; demolished), and the Moorish style in his own house at Eastman. Luis Andreoni, an Italian engineer who was trained in Turin, carried to completion the Central Railway Station in Montevideo in 1897, enveloping the glass and steel structure with decoration in historical styles, predominantly Palladian. The last-mentioned edifice, the Huérfanos (Orphanage) built by Rabú in 1875, and the Vilardebó Asylum, erected three years later by the Uruguayan engineer Eduardo Canstatt, show a growing concern with practical considerations in architecture.

The early 20th century brought currents derived from the Art Nouveau movement. Uruguayan architecture was further endowed when the school, transformed in 1915 into the Facultad de Arquitectura of the Universidad de la República, began to award scholarships to its most promising students. Travel in Europe and the United States and contacts with pioneers in contemporary architecture enabled returning architects to contribute to the diffusion of new architectural trends through their teaching, professional activity, and writings. Modifications and changes began to be introduced in relation to the needs that architecture must satisfy. Liberal influence reduced the religious direction of assistance and educational programs and emphasized their practical objectives, while the abandonment of the austere, patriarchal order of family life led to a fashion for villas surrounded by exotic gardens.

In 1908 Américo Maini founded the "Brazil school" of architecture in Montevideo, which in its forms was fashioned after the models of the Vienna Sezession movement and in its functionalism reflected the pedagogical precepts imposed by the scholastic reform of 1877. In 1916 Leopoldo J. Tosi used reinforced concrete — a material that had been introduced in Montevideo in 1891 — in the Casa Comercial Pablo Ferrando, which was designed with large windows and open interior spaces. The work of Mauricio Cravotto shows the rationalist tendency taken by architecture in Montevideo. Though Cravotto's Palacio Municipal, the winning project in the competition of 1929, is a work of uncertain category among the various antihistorical currents, his master plan for the city of Montevideo, drafted in 1930, and his design for the Rambla Hotel, conceived in 1931, are rationalist in essence.

In the same decade, also in Montevideo, two edifices with highly functional plans were built: the Hospital de Clínicas (1930), designed by Carlos Surraco in accordance with modern criteria of medical practice and instruction; and the Faculty of Engineering and Surveying (1938), by Julio Vilamajó, in which the disposition of volumes and articulation of spaces are expressive of the structure's use for a specific program of higher education and research. In 1946 Vilamajó planned the town of Villa Serrana in the department of Lavalleja, adapting it to the lay of the land and creating the first buildings, Ventorrillo de la Buena Vista and Mesón de las Cañas, in the construction of which he used local materials, techniques, and workmen and conserved the natural features of the surrounding landscape. In 1947 Vilamajó — and, in effect, contemporary Uruguayan architecture — received international recognition through his appointment

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

to the Board of Design Consultants for the construction of a permanent seat for the United Nations in New York.

Residential construction has been oriented in three directions, as witnessed by the following examples in Montevideo: single-family dwellings, such as the house incorporating the various plastic arts that Mario Payssé Reyes designed and had built for himself in 1954; integrated community development (centralized since 1937 under the Instituto de Vivienda Económicas), of which district no. 16, planned in 1956, is based on the concept of neighborhood unity; and multiple housing, with units for rent or for sale, among which the Edificio Panamericano, designed by Raúl Sichero in 1957, is notable for its size and attention to layout. Between 1956 and 1958 the architect Carlos Gómez Gavazzo, as acting executive of a commission that he had organized, formulated the standards of the over-all development plan for Montevideo.

Aurelio LUCCHINI with the collaboration of Nydia CONTI DE QUEIRUGA

Sculpture. In Uruguay the art of sculpture has no discernible antecedents in a native tradition or in a colonial style, and its legitimate reliance on European traditions arose from the fact that the population, an amalgamation of immigrants from the Mediterranean area, naturally turned to the styles of their countries of origin. In fact, the lack of a strong tradition and the apathy of the public proved to be the determining factors in setting Uruguayan sculpture on its course toward modernity.

Uruguay's first renowned sculptor was Juan Manuel Ferrari (1874–1916), whose gift for romantic evocation culminated in his ambitious work commemorating General San Martín's passage over the Andes, situated on the Cerro de la Gloria in Mendoza, Argentina. Other works by Ferrari display a naturalism of the highest order.

The work of Antonio Pena Rego (1894–1947) dates mainly from the post-World War I era. Eclectic in his sculpture and teaching, he spread in Uruguay the modernism of the French sculptor Emile Antoine Bourdelle (1869–1929). The latter sculptor's stylistic influence can also be observed in the works of Gervasio Furest Muñoz, Federico Moller de Berg, who later assimilated other teachings, and José Zorrilla de San Martín, best known for his monumental works, whose rich humanistic inspiration in the baroque vein found its fullest expression in a series of figures that were not subject to the inevitable conditions imposed by commissions. The sculptor and teacher Severino Pose (1894–1962) studied under the Vienna-trained sculptor Anton Hanak (1875–1935).

Pablo Mañé, whose sculpture is in the tradition of Aristide Maillol and Charles Despiau, executed almost all his works in France. Vicente Morelli, who also lived outside his country for a prolonged period, established his reputation with a small but well-conceived production of portraits. After 32 years in Italy, Edmundo Prati (b. 1889) returned to Montevideo in 1937, where, in addition to his activities as sculptor and teacher, he lectured on esthetics as the principal opponent of avant-garde movements.

José Belloni is well-known for his forthright naturalism, exemplified by the monumental group *La Carreta* ("Covered Wagon") in the Batlle y Ordoñez Park in Montevideo, as well as for his powerfully accented composition and high decorative criteria, found in such works as the *William Tell* or the *Aquador* ("Water Vendor") in Montevideo's Plaza Viera.

Bernabé Michelena (1888–1963) was less compliant with traditional concepts or with established norms of good taste, which he regarded as not always being consonant with artistic imperatives. His work was not, however, weakened by forced attempts at originality. Many of Michelena's disciples distinguished themselves, while developing their own individual styles: Armando Gonzales, whose highly organized compositions reveal a naturalistic tendency, and Homero Bais, one phase of whose work is marked by expressionistic accents in the rendering of folk themes, a line also followed by Fernando Tuduri. Alberto Savio felt the same influence, but he always retained a profound lyricism in his work. In the works of Juan Martín rather simple schemes are developed with a sensitive modeling on impressionistic lines.

Germán Cabrera (b. 1903), after excellent academic training, completely broke with all traditional roots and turned to abstract composition. Other sculptors who work in the abstract current are María Freire, Salustiano Pintos, and Julio C. Costa. Also drawn to this style is Ramón Bauzá, an Argentine by birth, who is one of the few sculptors in Uruguay to seek expression of volume through the material itself, an approach that has led him to the discovery of unsuspected qualities in native stone. Some of his animal figures must be counted among the most expressive in Uruguayan sculpture.

Most of the foreign artists whose work can be placed wholly or partially within the cultural ambit of Uruguay are in the vanguard of this art form. An exception among the major artists is María Carmen Portela of Argentina, an exponent of a simple naturalism that coincides with her predilection for figures of women and children. In Montevideo other foreign sculptors, such as the Spaniard Pablo Serrano, participated in the arduous process of transition from a thoroughly mechanical mannerism to an expressionist tendency, including various textural and compositional experiments. Eduardo Yepes, also a Spaniard, was young when he arrived in Montevideo, but he was fully developed artistically, with a comprehensive knowledge of pre-Renaissance tradition and of all contemporary currents. After passing through and transcending an abstract period, he began to execute soaring and highly dramatic works, many of which have been placed on public sites.

Nerses Ounanian, a Greek of Armenian descent, lived in Uruguay from childhood and died in Montevideo at the age of 37. After a journey through Europe and the Near East, Ounanian departed ever more pronouncedly from the principles and concepts of his teachers, Pena Rego and Prati. Although traditional modeling was the basis of his art, which reveals a strong interest in the basic material, he established an individual, essentially modern style, with an element of conscious iconoclasm. If this style did not reach full maturity, it was owing to the briefness of Ounanian's career.

Fernando GARCÍA ESTEBAN

Painting. Also in the art of painting Uruguay did not experience a highly creative colonial period. Because of its almost entirely immigrant population, mainly from Spain and Italy, the country has always maintained close ties with Europe. Uruguayan painting began to develop during the second half of the 19th century, at a time when steam navigation facilitated transatlantic travel. Almost all Uruguayan artists traveled and studied abroad, especially in Florence and Rome and, later, in Paris, and among these there were many painters who invested the basically European orientation of their works with individual qualities.

Uruguay's first important painter, Juan Manuel Blanes (1830–1901), was one of the most imbued with European culture and training. He studied in Florence, where he acquired a mastery over his medium that enabled him to paint those historical themes which met his country's need for visual depiction of the outstanding events in its short history. He treated historical themes with the emphasis that was then fashionable but always with a notable narrative power, Blanes also executed pictures of life in the interior of Uruguay, then practically uninhabited, where the most compelling and picturesque personage was the Gaucho, and he painted excellent portraits of high artistic quality.

Rafael Barradas (1890–1929) spent part of his brief, intense life in Spain, where he produced the greater number of his paintings, in which he developed a modality that relates them to certain tendencies in Spanish art of this period. In his work, always strong and individual, sharply drawn lines define the contours of the figures, which are full of rhythm and evocative power. His subjects are often Spanish folk types, though other canvases are recollections of the Montevideo of his childhood. Barradas has been identified with certain aspects of expressionism.

Pedro Blanes Viale (1879–1926) introduced impressionism into Uruguay. Besides his pictures of Uruguay, he left warm and vibrant landscapes of Mallorca, which had captivated him with its color and luminosity.

Though Pedro Figari (1861–1938) had painted since his youth, he did not seriously begin his belated, persistent, and valuable production until 1920. He is perhaps Uruguay's most original painter. His European training, although intense, did not modify his robust, personal outlook. In Uruguayan painting he has neither direct antecedents nor important followers. Though some critics have with reasonable criteria related him to the postimpressionists, Figari eludes classification in any particular school. All his works are compelling for their richness and perfect harmony of colors, for their free but rigorous composition, and for their constantly accentuated poetic feeling. Among his nostalgic themes are the patios of old town or country houses, great trees standing alone on the plains, and celebrations among the Negroes that hark back to the days of slavery. He conferred on everything a strong local flavor, and in his rural scenes conveyed the penetrating melancholy of the landscape. His expressive technique, an unusual mixture of European and personal elements, consisting of color without outline, short brushstrokes, and pictorial excellence, give Figari a preeminent place in American painting of his time.

Joaquín Torres García (1874–1949), one of the most prominent figures in Uruguayan painting, worked in Spain and in Paris, where, with Michel Seuphor, he founded the review *Cercle et Carré* (see NONOBJECTIVE ART). His close friendship with Mondrian is revealed by certain elements in his work. When Torres García returned to Uruguay in 1934, he created a school of great consequence. In lec-

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

tures he expounded an artistic doctrine and a number of works of art that were later published in such works as *Estructura* and *Universalismo Constructivo*. Apart from his masterful easel painting (landscapes and portraits), he developed in Uruguay the idea of a constructivist art, which was applied mainly in murals; the basic composition consists in establishing a network of vertical and horizontal lines in golden sections, within which are inscribed austere emblems. Torres García's palette was muted, sober, and ascetic. He was a master owing to the force of his ideas and to his painting, of metaphysical aspiration, with its balanced tones, deep significance, and powerful individuality. Many notable painters received their formative training in his studio school, and traces of his influence can be seen in the works of artists who have not kept faith with his teachings.

The impact of nonobjective art was felt immediately in Uruguay, and diverse orientations appeared within the over-all trend. In Uruguayan painting the ties with European trends have become even more intimate with easier travel and with the increased dissemination of books and publications pertaining to this field. After a period of uncertainty and disorientation, nonobjective art now has a dominant place and excellent exponents in Uruguay. In the area of "informal art," to use the term in its broadest connotation, Uruguayan artists have made some noteworthy contributions. There is also a strong tendency to incorporate nontraditional materials into the medium of painting and to obtain compelling effects in monochrome or, on the contrary, in vivid colors. At the same time, as is true in other places, representational art is on the decline, though a current of realism continues on a minor scale.

MODERN CENTERS. Colonia del Sacramento. Founded in 1680 by Portuguese settlers from Brazil, the town contains dwellings of the colonial period, most noteworthy of which are the viceregal mansion and the houses of General Mitre and Almirante Brown, all constructed toward the end of the 18th century. The parish church also dates from colonial times. The town and many of its buildings, with the exception of the parish church, are distinctively Portuguese in style.

BIBLIOG. F. Capurro, La Colonia del Sacramento, Montevideo, 1928.

Maldonado. In the town, which was founded in 1757, the colonial structures of major interest are the watch tower known as Torre del Vigía, dating from the last quarter of the 18th century, and the parish church, S. Fernando, begun in 1801.

At nearby San Carlos, founded in 1763, the parish church is the most important edifice.

Montevideo. The city, founded in 1726 by Bruno Mauricio de Zabala, governor of Buenos Aires, became the capital of independent Uruguay in 1828. Notable monuments in the old center of the city are the dwelling of Cipriano de Mello y Meneses, now the Museo Histórico Nacional; the Cathedral, formerly the parish church; the Cabildo and Reales Cárceles (Town Hall and Royal Prisons); the Hospital de S. José y la Caridad and its chapel; the residence of the Montero family; the classical Teatro Solís, constructed between 1840 and 1850 on a plan by Carlos Zucchi that was adapted by Francisco Xavier Garmendia; and the Neo-Tudor house of Francisco Gómez, now seat of the departmental council, constructed by Ignacio Pedralbez between 1865 and 1875. Outside the old city

Montevideo, plan of the center of the city. Principal monuments: (*a*) Museo Municipal de Bellas Artes Juan M. Blanes; (*b*) Vilardebó Asylum; (*c*) Law Courts; (*d*) Prison; (*e*) Italian Hospital; (*f*) Hospital Clínicas; (*g*) Museo Nacional de Bellas Artes; (*h*) Faculty of Engineering and Surveying; (*i*) Palacio Municipal; (*j*) Plaza Independencia and Teatro Solís; (*k*) Cabildo and Reales Cárceles, Cathedral, and Museo Histórico Nacional; (*l*) Central Railway Station; (*m*) the Cerro.

are the fortress on the hill known as the Cerro, finished in 1802 by José del Pozo y Marquy; the villa that now houses the Museo Municipal de Bellas Artes Juan M. Blanes, a Palladian construction by Juan A. Capurro, built in 1870; the classical Estévez residence, today the Government House, constructed by Capurro between 1878 and 1880; the Neo-Gothic Berro villa, now the Argentine Legation, a work by the above-mentioned Pedralbez, dating from 1880; the classical Italian Hospital, erected between 1885 and 1890, and the Central Railway Station, both by Luis Andreoni; the house of Julio Vilamajó, by whom it was designed in exquisite Mediterranean taste in 1930; the Hospital de Clínicas; the new Palacio Municipal and the Faculty of Engineering and Surveying; the Edificio Panamericano, a large apartment building; and, in the Toledo district, the Archdiocesan Seminary, begun in 1954 by Mario Payssé Reyes.

UTAMARO. The Japanese painter and printmaker Kitagawa Utamaro (1753–1806) is considered by many the greatest representative of the movement, or school, called Ukiyo-e (q.v.). The success that Utamaro's works had when they were shown in the Paris Exhibition of 1889, and Edmond de Goncourt's biography of him, which appeared in 1891, contributed to his becoming perhaps the first among Japanese artists really to be

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

known in the West. Utamaro's formation as an artist took place under the guidance of the painter and poet Toriyama Sekien (1713–88), but his artistic personality developed to maturity in relation — and in opposition, so to speak — to that of Torii Kiyonaga (1752–1815).

It was the noted publisher and patron of art and letters Tsutaya Jūzaburō, sponsor of the great series of prints by Sharaku (PL. 234), who discovered and promoted Utamaro's talent; his seal, a stylized Fuji surmounting an ivy leaf, appears on many of Utamaro's prints. It almost seems as if Tsutaya wanted to counterpose Utamaro to his contemporary, the already famous Kiyonaga, in order to stimulate the market for prints, as well as to solicit patronage. But Utamaro's unquestionable brilliance, his profound psychological insight, and the technical innovations of which he made use did not diminish the success of Kiyonaga. However, when, in the late 1780s, Utamaro's own idiom emerged in its mature form, his ascent to a dominant position was rapid, and Kiyonaga suddenly ceased to produce prints, although he outlived Utamaro by almost a decade. During the period when they were both producing, they were the two poles of the Ukiyo-e movement; yet Utamaro drew from Kiyonaga (IV, PL. 448) the vision of idealized feminine beauty that he pursued, a quest that led him to the peak of his artistic achievement.

The output of Utamaro was enormous and diversified, his productivity being matched by his versatility; his finest works are probably his figures of individual courtesans. Among his depictions of beautiful women are many bust portraits (PLS. 265, 266, 268; IV, PL. 446). This form, previously used only for actors (PL. 234), was first applied to the portrayal of women by Utamaro in about 1790. The setting of the subject in the immediate foreground made it possible for the artist to concentrate on the details of the face and the attitude of the head. Keenly sensitive to psychological factors, Utamaro took full advantage of the potentialities afforded him by the new approach. Thus, in the *Kasen-koi-no-bu* series, illustrating love poems, he succeeded in delineating various aspects of love, classified in the traditional categories, by stressing the most subtle nuances of feeling. The rendering of hair styles and costumes is always exhaustively detailed. The expression of the face is determined by infinitely minute elements: in the well-known *Pensive Love* (Narazaki, 1966, pl. 61), for example, the stylized and very delicate eyes of the young woman are lost in an absorbed, dreamy gaze, an effect obtained more by the position and the compositional handling of the head and the deeply serious face than by the treatment of the pupils of the eyes, here reduced almost to simple, oblique lines.

Utamaro also rendered episodes from real life, everyday scenes (PLS. 263, 267, 268), and mythological subjects. In the two beautiful series devoted to the story of the "mountain woman" Yamauba and her infant son Kintaro (Kintoki), a Hercules-like figure of Japanese legend, Utamaro gives proof of an extraordinary feeling for plasticity and demonstrates a restrained but profound sensuality. His albums devoted to insects, birds, and shells reveal the acuteness of his powers of observation, and some of the images they contain give evidence of a prodigious striving to depict nature and life in their most significant manifestations.

Above all, Utamaro is the interpreter of Japanese feminine beauty, psychologically plumbed and studied with a realism and a plastic sense that render superfluous any lyrical embellishment or literary point of reference — *vide* the portrait of Okita holding a teacup (Michener, 1959, pl. 159). Utamaro's immense success is perhaps due also to this particular immediacy of expression, the fruit of prolonged studies, clarified by exceptional artistic experience. Also contributing to his fame is that profound sensual content which is never missing, not even in compositions of the greatest delicacy and psychological depth.

Utamaro's innovations were not limited to the introduction into the portrayal of women of the new style of placing large-faced figures in the foreground. He made the most of the material qualities of the white paper on which the designs were printed for representing effects of snow and white objects in general, and he was the first to indicate facial contours, for instance, without the use of lines (PL. 264). In practice, the use of the empty space in a wood block, according to the technique called *kara-oshi* (from *kara*, emptiness, and *oshi*, a weight), adds what Berenson called "tactile value" to the print, as Akiyama (1961) rightly points out. In the use of this technique and the innovation of printing without outline, Utamaro is revealed as talented and sensitive, vitally interested in all facets of artistic creation and, in a sense, an anticipator of esthetic and critical positions that the West was to adopt, with a different and clearer awareness, only much later.

Not only was Utamaro one of the greatest of the Ukiyo-e artists; he was an unequaled master in the art of the print. His female images, sometimes extraordinarily alive, constitute an interpretation of feminine beauty that contrasts with the delicate figures of Suzuki Harunobu (PL. 233; IV, PL. 446), but in the last analysis the creations of both artists merge as eternal aspects, opposite and complementary, of the reality of life and love.

UTENSILS AND TOOLS. Utensils and tools are of interest in art from several points of view. By their form or decoration they may be objects of art in themselves; as instruments employed in the production of art objects they may have an important influence on formal development; and tools and their use may appear in art as themes and motifs, sometimes with symbolical or emblematic significance. In addition, the study of utensils and tools is of prime importance in prehistory (q.v.), since they are the first material evidence of man's activity as *homo faber* — the activity in which all art is rooted.

Many specialized types of instruments and practical equipment are treated in other articles (see ARMS AND ARMOR; CERAMICS; HOUSEHOLD OBJECTS; LITURGICAL AND RITUAL OBJECTS; MUSICAL INSTRUMENTS; SCIENTIFIC AND MECHANICAL WORKS; TABLE AND FOOD) and are therefore excluded here. This article is devoted primarily to work tools of elementary and immediate utility — that is, those types of instrumental objects usually originally conceived entirely in terms of function, without primary esthetic intent, especially equipment for hunting and fishing, the implements of agriculture, and the tools of the crafts and trades. Examples are drawn from a variety of cultures and periods, but the treatment is intended to be illustrative rather than inclusive.

SUMMARY. Introduction (col. 682). The development of utensils and tools (col. 684). Utensils and tools as works of art (col. 687). Representations of utensils and tools in art (col. 689).

INTRODUCTION. The basic design of most ordinary hand tools was arrived at in the prehistoric and protohistoric periods; subsequent modifications were directed toward achieving increased efficiency or were necessitated by the use of new materials. There is basically no difference between a modern steel ax and a neolithic stone ax: a woodsman today would have no difficulty in recognizing the ancient counterpart of his

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

tool. Originally the craftsman himself either made his tools or supervised their making. These objects had an inherent formal beauty in that their form was determined by their function; and the craftsman had in addition a natural feeling for the material used and for what was "fitting" in his tools, as was pointed out in a comment on a 1948 exhibition of old English hand tools: "Everybody who appreciates the qualities of materials loves wood, and here wood was formed into . . . a special kind of tactile sculpture made to be felt with the hand. . . . Old craftsmen, when they buy a new set of modern chisels, throw away the handles and carefully fit their own" (Singer et al., 1954–59, III, p. 114). To modern eyes the coinciding of function and form in itself suffices to make an object a work of art. In pre-Platonic Greece, according to L. Grassi (1962), the most common commendatory word was that corresponding to "good," denoting the ability of an object to perfectly fulfill its function, in consideration of both its utility and its structure. The term "beautiful" was used only, as in the case of royal gifts, for qualities over and above their pure utility. It is interesting to note that this equating of functional simplicity with good design, and therefore beauty — which was to become a basic premise of modern industrial design — reappeared in the New World as early as James Fenimore Cooper's observation of 1828, in *Notions of the Americans*, that American plows were more "graceful and convenient" and American axes more "admirable for form, for neatness, and for precision of weight" than their English counterparts. The British Commission's report on the United States Centennial Exhibition of 1876 in Philadelphia came to the same conclusion, although some foreign observers were still rigidly attached to the old European standards of decoration: a German delegate objected that "certain objects of daily use which ought to be richly decorated . . . show the sad state of American taste by the complete absence of ornamentation" (Kouwenhoven, 1962, pp. 16–17).

Tools kept pace with the increasing specialization of trades and crafts in successive cultures. When they were decorated, the decoration either followed tradition or echoed the style of the period. Particular care was lavished on instruments and utensils such as scales, oil lamps, and surgical and astronomical instruments (PLS. 274, 275; see also SCIENTIFIC AND MECHANICAL WORKS, col. 805). With the advent of machine technology and the subsequent distinction of handicrafts from industrial production, tools and utensils also entered the field of industrial design (q.v.; see also AMERICAS: ART SINCE COLUMBUS, cols. 328–330).

Utensils and tools cross the boundary of functionality when they become adjuncts to some symbolic activity. As symbols of temporal or religious power (see LITURGICAL AND RITUAL OBJECTS; SYMBOLISM AND ALLEGORY) they may completely lose their functionality (double ax, Cretan royal symbol; ceremonial adzes from Mangaia in the Cook Islands, XI, PL. 208; jadeite ceremonial axes from New Caledonia, symbol of authority) or change their significance (the flabellum once used to drive flies away from the Eucharist; the Egyptian flail, symbol of kingship, IV, PL. 393); while the emblematic representation of specific tools (see EMBLEMS AND INSIGNIA) may suffice to evoke a specific deity, person, or group (PL. 285). The category of simple implements is transcended when utensils and tools are made for specific persons or classes and become insignia (for instance, implements used by royalty; VI, PL. 244), to be judged according to fine-art standards. In primitive societies, equipment for hunting and fishing was often connected with magic (q.v.) and hence an object of particular decoration; and where the hunt became an aristocratic prerogative — a sport rather than a prime necessity — its accouterments came to be differentiated by ornamentation and material from more humble forms. Applied decoration is especially characteristic of folk art (q.v.) and of the tools and implements of primitive peoples (PL. 284; IX, PL. 456).

Genre representations of the utensils and tools of various occupations (see GENRE AND SECULAR SUBJECTS) provide some of the most charming pages in man's representation of the life around him, in addition to their importance to historians and scholars in providing information on the technology and tenor of a given period. Finally, a knowledge of the tools available and their bearing on the execution of a work of art may contribute to the artistic judgment of the work and establish its position in the historical context.

• •

THE DEVELOPMENT OF UTENSILS AND TOOLS. The panorama of tools and utensils offered by the Paleolithic (see PREHISTORY) is not too vast, at least in its early phase — perhaps partly because many of the artifacts of that distant epoch seem to modern eyes almost identical. Among the earliest tools may be counted the great Abbevillian (Chellean) hand ax, with its jagged cutting edge, and its more refined successor the Acheulean hand ax (XI, PL. 242), in which a dawning esthetic sense is recognizable (see XI, col. 566). The most rudimentary prototype of the hammer and ax can be recognized in this implement, which lent itself well to many uses. Produced usually from large pebbles or small rocks of flint or quartzite, these artifacts have a convenient grip and a sharp, tapered cutting edge. The tools of the Middle and Upper Paleolithic were gradually perfected. The Mousterian industry with its large retouched-flake tools led the way to the blade-flaking technique (see TECHNIQUES) and a variety of tools including scrapers, burins, long blades of extraordinary sharpness, and awls — all devised, with surprising skill, from flakes of flint and then used for working other materials.

Along with stone utensils, which gradually became smaller and more carefully finished, the processing of bone and horn improved; the soil of France has yielded remarkable examples of this workmanship. The Magdalenian period, indeed, is characterized by a plentiful production of implements and weapons made from the long bones of animals and from their horns — materials that combined a durability not offered by wood with a greater ease of processing than stone afforded. The type stations of this epoch have yielded an abundance of utensils in which the artistic sense of these early peoples is evidenced in engravings and carvings that range from a naturalistic depiction of fauna to a geometric interlacing of lines and notches (XI, FIG. 599).

Justly famous are the hunting spears — direct prototypes of those still in use among certain peoples — furnished with one or two rows of teeth and embellished with linear engravings; and especially notable are the *bâtons de commandement* (or, as they are sometimes considered to be, straighteners for arrow shafts), among which may be noted some unearthed at La Madeleine, in the Dordogne region of France, that bear engravings representing horselike animals, fish, and snakes; and one from Le Placard that is tipped by a stylized animal head (XI, PL. 247). In these implements Magdalenian man created genuine masterpieces of art, intuitively exploiting the natural forms of the materials he found at hand.

Alongside these more elaborate implements existed other simpler ones (PL. 269) such as the awls made of horn, the long bones cut in the shape of a flute mouthpiece (for purposes as yet unexplained), and the fishhooks made from large fishbones, as well as the endless and ever more specialized succession of stone scrapers, polishers, graters, awls, knife blades, and unevenly flaked blades (saws?). The sharp points of these tools served for carving animal figures on the walls of caves or on objects; while small spatulas for spreading thick paints, hollowed bones through which liquid paints were blown (according to a technique documented at Lascaux), and paint mortars — concave stones in which colored minerals were ground — are related to the activities of these early men as painters.

The advent of the Neolithic period signals the first major change in the life of early human groups. New activities then originated that were destined to transform the cultural horizon radically: agriculture, the use of clay, spinning and weaving, and livestock breeding — activities engendering new needs, for which new implements were created by adapting and transforming those already known. The Neolithic period is characterized by its polished stone celts. Adz and ax heads, often helved with horn in the Swiss and Italian lake villages, began to take on the appearance they were to retain for thousands of

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

years. Specialized chisels and gouges with their edges sharpened by grinding were produced. Side by side with scrapers and knives of flint, sharper ones came into use that were made of obsidian, the volcanic glass found in the Mediterranean basin in the area centering around the Lipari Islands — evidence of an active maritime commerce already in existence. The hammer or, more accurately, the mallet, with its two striking heads divided by a groove for fastening the straps that secured it to its handle, assumed definition; and annular and spheroid mallets utilized the principle of the centrally perforated tool, which was to be adopted in nearly all utensils of this type.

Pottery called for the use of much more delicate instruments and accounted for an increase in equipment made of bone and horn: gravers and scrapers, punches, spatulas, and small burnishers made up the ensemble of lighter, more manageable tools with which the first pottery products were molded, smoothed, and decorated. Domestic life entailed new activities and thus new implements: the rudimentary needle, with its large eye suited for holding the strips of leather that had made sewing possible, became finer, and its eye was narrowed; along with spinning (which made use of a rudimentary distaff), weaving was born, as is shown by remains of textiles discovered in pile dwellings and by the use (thenceforth customary) of pottery or stone weights for looms. An array of implements already well defined was available to agriculture: the scythe, in its typical curved form, composed of thin sheets of flint mounted in a wooden helve and fastened with resin; the digging stick weighted with a stone; and hoes derived from the forkings of stag antlers. Wooden specimens of all these implements must also have existed but have not survived. Probably based on the same principle as the hoe, the first plow — a forked tree branch — made its appearance, as attested by rock engravings that show it being hauled by oxen.

The discovery and processing of metals gave a revolutionary new impetus to man's slow forward progress. Use of a material which could assume a desired shape and which, even reduced to sheets, offered the same hardness as stone led to the creation of new utensils and to the perfecting of those types which had first found form in stone. Utensils as well as weapons — which were the first implements to benefit from this new discovery — underwent profound transformations. To be sure, mankind was not at a uniform level of civilization in all areas touched by the Mediterranean: indeed, while the first flat-bladed metal axes were being made in Italy, in the East (the area of man's discovery of copper) this implement had already attained definitive form — single-edged, double-edged, or with curved blades.

Stone industry continued without interruption, however, and by this time provided products that, in form and workmanship, could vie with the new metal ones. Blades were increasingly fine and their edges better finished; knives, razor-sharp, had blades, straight or curved, made of obsidian or flint; the scrapers and graters that had originated in the Paleolithic were now crescent-shaped, circular, or elliptical, with extremely delicate retouching that rendered their cutting edges ever sharper. Hand-grasped tranchets continued to be made, and the tombs at Anghelu Ruju, in Sardinia, have yielded parts of rudimentary scissors. There were as many different axes and adzes — large and small, long and short, flat like the metal ones and thick like the oldest stone specimens — as there were pointed implements (gimlets, awls, chisels). The axes, usually single-edged and attached to their handles by means of a central perforation, were sometimes also made with two blades (like an unusual specimen from Monte Olladiri, in Sardinia, that has two blades of different sizes and, at the center, a rectangular perforation). The rhomboid pickax with perpendicular cutting edges — which, together with the mallet and the various types of mallet-hammer, was among the principal implements used by stone quarriers — was thicker. Among the most noteworthy and well-made specimens of hammer may be mentioned one found at Palaikastro that consists of a barrel-shaped nucleus, provided with a round perforation, and two domed striking heads set off from this nucleus by two circular grooves. To preserve the keenness of weapons, sharpeners were used; a noteworthy example (Cagliari, Mus. Archeol.) unearthed at Anghelu Ruju consists of a long piece of stone perforated at each end so that it could be suspended. The sharpener was kept in a bone case decorated, austerely but pleasingly, with engraved circlets. Also made of stone were the molds in which tools, weapons, and other copper objects were cast.

The drill — the instrument that in all probability assured man's mastery of that indispensable element, fire — had certainly already been known in earlier epochs, in the primitive guise of a small stick of dry wood spun at high speed between the hands. Its greatest use and its perfecting undoubtedly began, however, with the advent of the metal age; it was fire that made metal extraction and processing possible. Also closely bound up with the use of metals is the anvil properly so called. Since the Paleolithic, man had tended to use large blocks of stone, fixed or mobile, as working surfaces; but the true function of the anvil as the complement of the hammer was born when the processing of metals began. The first anvils, obviously, were stone blocks, more or less regular, placed near the smelting furnace; the metal to be beaten was placed upon these with the aid of rudimentary U-shaped tongs.

The discovery of the correct blend of copper and tin to produce the new alloy, bronze, brought about the abandonment of obsidian blades, flint burins and points, and copper axes, and a complete series of pointed and cutting instruments of metal appeared: these included chisels, burins, gouges (with an increasingly curved cutting edge), and punches. Born, too, was the auger, a small instrument that man no longer drove home as before by striking it but used by applying the principle of the screw, which was to be developed in so many ways. Aided by the hardness of bronze, saws were perfected (there is evidence for this throughout the Mediterranean basin) in both the single- and the double-handled variety: the former in the guise of a large, ribbed knife with a toothed edge, the latter long-bladed, with a wooden handle at each end. Specimens originating in Thera, Gournia, and Hagia Triada demonstrate the existence of saws with fine close teeth and of others with wide large ones; and there is a curious tool akin to both the hatchet and the saw: its form is that of a broad, thick ax, but the cutting edges — one rectilinear, the other curved — are toothed like saws.

During the Bronze Age winged axes and palstaves developed from the flat and flanged celts and were in turn replaced by socketed axes. There were also hatchets, axes with two perpendicular blades, ax hammers, pickaxes, and long-bladed hoes. Among the smaller implements were files, U-shaped tongs, blunt-ended shears, and the so-called "razors" — small rectangular or crescent-shaped sheets of bronze furnished with a stalk or a ring — of unknown use (VIII, PL. 122). The scythe had by now attained its definitive form as a long, curved blade, with or without a flange along its edge, hafted to a wooden handle; short sickles with socketed handles are also found. Spatulas, spoons, and small scythes further enrich the array of bronze implements. Also worthy of mention are the molds for casting, which became increasingly refined and complex; the portable anvils (like that of Chilivani, in Sardinia); and the first weighing scales, with plates made of sheet bronze and weights mostly either pear-shaped or roughly hemispherical.

Giovanna ALVISI

From these basic types of tools, developed first in stone and then in metal throughout the millenniums of the Paleolithic and Neolithic, stemmed the enormous variety of specialized utensils and tools of the crafts and trades of the ancient civilizations and the medieval and postmedieval world. The continuity of the perfectly functional forms is clear in every age and culture, despite minor modifications to adapt them to varying uses: to cite only a few examples, the Bantu ceremonial ax from southern Tanganyika (II, PL. 129) and the 18th-dynasty Egyptian hatchet from the tomb of Queen Hatshepsut (PL. 271) alike trace their ancestry to the prehistoric and protohistoric ax and adz (PL. 270; V, PLS. 158, 159); the tools and utensils of the Greek foundry shown on an Attic kylix (VI, PL. 56) find counterparts in the Roman smithy (PL. 273), the 14th-century Tubalcain (PL. 278), and the 18th-century foundry (XIII, PL. 457); the tools of the

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Viking shipwright (PL. 275) could have been exchanged with those of the shipbuilders on the façade of S. Marco (PL. 277) or those Raphael painted at work on the Ark (II, PL. 291) or those of the men building the boats for William the Conqueror's invasion fleet on the famous Bayeux tapestry (who are shown using large felling axes and long-handled T axes to prepare the timber, while the carpenters work with the short T ax, adz, hammer, and breast auger); the shoemaker of the Altarpiece of St. Mark (VI, PL. 374) might have borrowed his tools from his Greek brother on the amphora in Boston (PL. 272) or the 3d-century Gallo-Roman shoemaker in Reims (PL. 273); and the plane carved on a Marquesas Islands earplug (VI, PL. 53) or the chisel and mallet on the Pöhlde choir stall (PL. 278) could have come out of the cabinetmaker's workshop on the chest made for Gustavus II of Sweden, or Bourdichon's 16th-century carpentry shop (PL. 279), or the workshop of St. Joseph by the Master of Flémalle (VI, PL. 66).

UTENSILS AND TOOLS AS WORKS OF ART. The decorative quality of utensils and tools has basically cultural roots. An implement, by being consecrated to a use that had significance beyond the everyday (e.g., utensils for the ceremonies of hospitality; implements for the royal hunt), might transcend its primary functional use, and this might be indicated by the material, as in the gold ceremonial knife from Peru (I, PL. 215), or by elaborate and precious decoration that made it less suitable for that use or even negated its functionality, as with the Mexican pre-Columbian ax in the form of a temple (IX, PL. 157) or with votive and funerary objects (see DEVOTIONAL OBJECTS AND IMAGES, POPULAR; ESCHATOLOGY). This tendency has an analogy today in the collecting of formerly functional objects whose use has been superseded; it might even be said that their purely decorative character becomes more apparent when they have ceased to be useful.

Even without any loss of functionality, certain categories of utensils and implements were traditionally associated with ceremonial or ritual aspects of agricultural and domestic life that called for fitting commemorative ornamentation. Thus the cult worship of fire and the importance of the family hearth are undoubtedly related to the rich elaboration of fireplace implements (IX, PL. 522; XII, PL. 181); and the association of spinning and weaving with marriage (preparation of the bridal trousseau; furnishing of the home) has influenced the decoration of the implements of these traditional household crafts in every culture — usually on the folk-art level. It is interesting to compare the decoration of distaffs and other weaving and textile implements of, for instance, the Mediterranean region (PL. 283; V, PLS. 339, 344) with that of similar implements of northern Europe (V, PL. 343) and even the distant Orient (I, PL. 497). Among the decorated weaving implements of modern primitive peoples might be mentioned the loom pulleys of the Maori (*turutura*), often artistically elaborated and adorned with heads or human figures with eyes made of shell; the shuttle of the Indonesian *tumpoh*, with its geometric engravings; the distaff of the Iban of Sarawak; and the pulleys of the Guro of Guinea and the Baule of the Ivory Coast, elegantly carved with human heads and animal figures for the most part inspired by the masks of the region. Of interest, too, are the various instruments for weaving discovered in the Inca and pre-Inca tombs, especially the spindles with a painted or carved stick and a delicately incised pottery, bone, or stone whorl. The beaters used in the preparation of tapa (q.v.) may be considered in the same category; among the most attractive are those of the Celebes, usually ornamented with floral motifs or arabesques, although on a Toradja beater coming from the Mapane district of Pebato (Dresden, Mus. f. Völkerkunde) the schematized head of a buffalo has been identified.

In the ancient Orient, the metal tools of Iran were outstanding artistically for their refinement of form and ornamentation, as shown in the famous Luristan bronzes (12th–8th cent. B.C.), in which the primary role of animal art in this mixed civilization of horseman-hunters and sedentary cultivators is already apparent. Horses, rams, and stags, bovines and felines, wild boars, birds, and even, rarely, fish (II, PL. 5) made their appearance in the Luristan bestiary (PL. 270; VIII, PL. 122) and, in varying interpretations and in every medium, were to remain the favorite motifs of Iranian art for more than two millenniums.

Other objects found in the Luristan tombs include the equipment of huntsmen and warriors, which was to continue into the Parthian and Sassanian periods: halberds, swords and daggers without hilt guards but often with decorated pommels, bow braces (also usually decorated), and whetstones with zoomorphic handles. Also important are the horse trappings: the bits are particularly fine, the cheekpieces in which they terminate at the sides being made up of openwork plaques representing twisting or leaping animals. In the Achaemenid period (6th–4th cent. B.C.) the same predominantly zoomorphic motifs continued to be beautifully used in the decoration of such implements as whetstones and on the hilts and scabbards or sheaths of swords and daggers (VIII, PL. 140). Besides the objects themselves, the many representations of hunting scenes in toreutics (XII, PLS. 402, 407), ceramics (VI, PL. 256), textiles, and especially relief sculpture show the decoration of hunting equipment and of horse trappings almost unchanged, from the reliefs of Assyrian Arslan Tash (8th cent. B.C.; I, PL. 516) through the decorations of the royal tombs and of great palaces of Persepolis and Susa (on which may be seen the large, ornamented quivers of the archers; IV, PL. 21) to the Sassanian stucco plaques from Ṭāq-i-Bustān (Philadelphia, Mus. of Art) showing a royal boar hunt. The bow is often ornamented with zigzag lines, and the hafts of the cutting weapons (lance or spear, sword, dagger or dirk) show linear decoration or raised knobs to ensure a good grip. The long sword sheaths and large quivers are richly decorated with zigzag lines, crossed bands, and superimposed small squares, lozenges, and other motifs, giving an effect of incrustation. The trappings of the mounts are no less rich: the details of the trappings shown on reliefs and on silver rhytons include nosebands and cheek straps with decoration of small bars and dots or of beads joining plaques with rosettes or incised lines; wide collar, bellyband, and crupper from which hang cutwork ornaments or large tassels; and saddlecloths covered with linear ornament within a frame of "pearls." The horse's head was often adorned with plumes or with disks set on rods.

Utensils and tools have, in general, not given rise to a specific and characteristic type of decoration but have rapidly assimilated and adapted styles and motifs elaborated in other spheres. The types of decoration commonly used may be classified in three broad categories related to the shape and the function of the implement: decoration, often figural, adapted to broad plane surfaces; geometric or stylized decoration that expresses the dynamics of the implement without constituting an interruption in its form; and what may be termed "vital" decoration, conferring a sort of zoomorphic or even human quality on the implement as an enhancement or extension of its function.

The first type of decoration, even in the ancient cultures, often produced compositions of great elegance and superb artistry (IX, PL. 497). Decoration was especially applied to the handles of axes, knives (PL. 284; I, PL. 215; VII, PL. 324), and hammers; while not only the handles of planes but also the sides of the chest in which the blade was kept lent themselves well to decoration (a famous example is the plane of Adolphus Frederick of Sweden, PL. 281). The handles of knives, daggers, and swords are particularly adaptable to a type of decoration that emphasizes the functional line, as in short-bladed artisan knives attached to a long, slender handle ending in a carved animal head that both complements the basic form and serves to guard the hand from the blade when pressure is exerted; the hilt of a sword served the same double purpose. Household implements such as mirrors (IV, PL. 263; VII, PL. 333) and chests and recipients of all sorts (XII, PL. 181) were also favorite objects for elaborate decoration of this type. The betel-lime spatulas used on many of the islands of the South Seas also deserve special mention in this category; the handles, beautifully carved in relief or in the round (or sometimes combining both types of carving) are small works of art, employing more or less stylized human and animal figures as well as curvilinear ornament (PL. 284; IX, PL. 456).

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Perhaps largely because the early evolution of utensils and tools corresponds chronologically to the diffusion of geometric styles, the geometric form of decoration accentuating visually the movement of the tool in use is especially frequent and elaborate. These geometric motifs, usually placed a short distance from the edge of the tool and paralleling it, may frame figural decoration of the first type or may give rise to other geometric ornament. This type of decoration is especially frequent in primitive cultures and in folk art (q.v.), where lines, circles, rhombuses, dentils, and the like fill small surfaces without interrupting the line of the decorated implement (PL. 269; II, PL. 129; V, PLS. 339, 343). Stylized decorations derived from animal and plant forms, too, are found; among the Alpine peoples both utensils and household goods may be covered with densely interwoven forms of both sorts.

The third form of decoration has no doubt grown from the attribution of a magical, inherent force to certain categories of utensils and tools and the desire to characterize this power in their very forms. Essentially it consists in the use of a sort of visual metaphor suggesting the postures and forms of animals: the zigzag serpentine knife; supporting elements in the shape of feet or paws; movable elements resembling wings or fins; and the like. Particularly interesting examples are found in the fishing equipment of the modern primitive cultures of the South Pacific: thus the fishhooks of the Sepik region of New Guinea assume anthropomorphous form, the Papuans of Waropen often decorate their fishing rods with figures of ancestors and use wooden floats in the form of fishes or crocodiles, and the Solomon Islanders attach a series of 12 different wooden floats to the hook, decorated with birds, fish, or mythical figures. Among the Eskimos of the Kobuk River in Alaska and those of Ingalik and Tanana, the fishhook, of caribou bone, is carved in ichthyomorphic form; and the Chugach Eskimos and the Northwest Coast Indians (especially the Tlingit) make richly carved wooden fishhooks with superimposed animal and human figures. Still other examples are the Diaguita bronze axes from northwestern Argentina with the blade in the form of the muzzle of a beast-demon and often decorated with masklike faces.

REPRESENTATIONS OF UTENSILS AND TOOLS IN ART. Implements and the domestic or artisan environment in which they are used have, in every period and culture and in every medium, been frequent, if modest, subjects of representation, whether in genre scenes (see GENRE AND SECULAR SUBJECTS), as emblems (see EMBLEMS AND INSIGNIA) or symbols (see SYMBOLISM AND ALLEGORY), or in other forms. One of the earliest such appearances of the tool is in Egyptian hieroglyphics (III, PL. 2; note especially the hoe, the cleaver, and the spade), where implements assume a direct and explicit semantic significance. Egyptian tomb paintings, models, and reliefs present innumerable scenes of craftsmen and their tools (PL. 272; IV, PLS. 384, 460): particularly important in this respect are the tomb of Ti at Saqqara (ca. 2500 B.C.), where goldworkers are shown blowing their fire with long blowpipes and carpenters busily saw wood and build a ship; and the tomb of Rekhmira at Thebes (ca. 1440 B.C.), where leather dressers and sandal makers, stonecutters and bronze casters, carpenters and wheelwrights are to be seen at work. Representations of Anubis weighing the souls of the dead before Maat in judgment provide beautiful examples of scales (IV, PL. 464); and there are numerous lively hunting and fishing scenes (IV, PL. 366; VI, PL. 54) and harvest scenes (IV, PL. 384) in which the net, the spear, and the agricultural implements form striking design elements.

Apart from these Egyptian representations and the Iranian hunting scenes already mentioned, tools and utensils usually appeared in the art of the ancient Orient only incidentally rather than as actual subject matter. Some reliefs of the Han dynasty (3d cent. B.C.–2d cent. of our era), however, constitute an interesting exception — for example, those of T'eng-hsien (Shantung province) representing iron founders at work.

Such representations abound in Greek and Roman art. Greek vase painting offers the scales of the "Arkesilas Kylix" (I, PL. 338), the mining scene on a Corinthian pinax and the bronze foundry of an Attic kylix (VI, PL. 56), and the shoemaker on an amphora in Boston (PL. 272); and those masterworks of the goldsmith's art, the Cretan-Mycenaean cups from Vaphio (1600–1500 B.C.; Athens, Nat. Mus.), show marvelously vivid scenes of the use of nets to capture large animals. The work of the potter is itself the subject of some Corinthian plaques in Paris (Louvre; XIII, PL. 447). Etruscan tools and utensils in stucco are important decorative motifs of the Tomb of the Reliefs in Cerveteri (XIII, PL. 268), and the Etruscan plowman from Arezzo (PL. 272) still has a moving immediacy. The equipment pictured in the Tomb of Hunting and Fishing at Tarquinia (VI, PL. 55) finds counterparts in late Roman works on the same theme such as the fishing and hunting scenes in the mosaics of Villa Casale near Piazza Armerina in Sicily (Hall of the Amorini-Fishermen, Corridor of the Great Hunt, Corridor of the Little Hunt) and the hunting scenes from Hippo Regius (VI, PL. 61). Among scenes of the crafts and trades may be mentioned the well-known relief of the bakery on the tomb of the baker M. Vergilius Eurysaces in Rome (VIII, PL. 229); and the paintings of Pompeii offer a wealth of such scenes: the dyers and other craftsmen painted in the shop of a cloth merchant (VI, PL. 61), the cupid-craftsmen on the frieze above the dado of the triclinium in the House of the Vettii (VI, PL. 60), the building scenes with Neptune and Apollo in the House of Siricus. An interesting relief in the Vatican Museums (Gall. Lapidaria, Inv. No. 9277) from the Flavian tomb of L. Cornelius Atimetus (A.D. 80–90) depicts, with great realism, an ironmonger's shop. Standing before a perplexed customer, the shopman seems to be enumerating the virtues of his wares, arranged and hung on the walls in an orderly array: sickles, billhooks, tranchets, razors, knives, and files of every kind — butchers, cooks, hunters, woodcarvers, and shoemakers might all find in the shop something to suit them (cf. also PL. 273).

In the East and Near East, it was only with the spread of Islam that artisan's tools and agricultural implements entered into art, in genre scenes or as decorative motifs, appearing for the first time in Seljuk miniatures of the first half of the 13th century. A *Shāh-nāma* of 1340, perhaps from Tabriz, illustrates the legend of Alexander the Great building an iron barrier against Gog and Magog, showing utensils of smiths and masons: long tongs, pliers, hammers, adzes, trowels, and lime buckets. The scene of the building of the citadel of Khvarnaq, from the *Khamsa* of Nizāmi, was a frequent occasion for illustrations of masons, carpenters, and others at work by Persian artists in the Middle Ages, including Bihzad (II, PL. 300). Various artisan tools are also shown in a miniature of a 1469 copy of the *Annals* of al-Ṭabarī, from Herat (Dublin, Chester Beatty Lib., P. 144), showing a tailor cutting material with a large scissors; two carpenters nailing boards, within reach of saw, files, awls, pincers, pliers, and hammer; smiths with heavy hammers and anvils; a man at a loom weaving a rug; and a woman spinning.

The traditional hunting scenes continued in favor in the Persian miniatures: rich and lively scenes adorned many copies of Firdausi's *Shāh-nāma* in the Middle Ages (IX, PL. 8; X, PL. 88) and other manuscripts, in which, though the horses might be less gaily caparisoned than those of ancient Persian art, the huntsmen's accouterments were much the same. This tradition spread to Islamic India and reached a peak in the Moghul miniatures (see MOGHUL SCHOOL; X, PL. 117), from which it was to find some continuation even into modern times in the miniatures of the Rajput school (q.v.; XI, PL. 413).

In the European Middle Ages, representations of the Holy Family and of saints engaged in their occupations or in the crafts and trades for which they served as patrons led artists to make frequent use of workshop scenes and of tools as attributes in the iconography of various saints (q.v.), with the carpenter's shop and tools, for St. Joseph, the most frequent. The Virgin was shown with the implements of the household crafts (XIII, PL. 177), and the vivid life of the towns continued to find expression in shop scenes (VI, PL. 63). Favorite themes in every medium were the building of the Tower of Babel and the building of the Ark. On a secular level, though still in a broadly religious framework, were the innumerable genre scenes of the Labors of the Months: in illuminated Books of Hours and other devotional books and calendars (II, PLS. 24,

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

25; IX, PL. 8), in the reliefs of Gothic churches and cathedrals, in frescoes (IV, PLS. 1, 5), on the façades and the great bronze doors of churches (XII, PL. 256).

In postmedieval Europe, the tools and utensils of crafts and trades that had been adopted by the guilds as pleasing and readily identifiable emblems (PL. 285) were seized upon by the men of the Renaissance as elements of characterization (III, PL. 203; VII, PL. 306). The nobility of the crafts in the historicosocial context that had already given them importance in monumental portrayals of the Virtues and the Arts (see SYMBOLISM AND ALLEGORY) — such as those on the Campanile of the Cathedral of Florence (PL. 278; I, PLS. 231, 232) — was carried over into secular genre portrayals, where the crafts and their tools gained new liveliness and human interest. In more modern times representations of such implements began sometimes to carry an esoteric or occult didactic and allusive meaning, as among the Freemasons and similar groups (XIII, PL. 353); and in the 20th century their emblematic and symbolical significance again came to the fore in paintings and decorations exalting the ideology of labor (e.g., the hammer and sickle).

* *

The two preceding sections incorporate material contributed by the following: Bianca Maria Alfieri (Islamic Iran); Giovanna Alvisi (Greece and Rome); Olga Ammann (primitive cultures); Etta Becker-Donner (pre-Columbian American cultures; primitive cultures); W. L. Goodman (medieval and modern Europe); Madeleine Hallade (pre-Islamic Iran; India); and Lionello Lanciotti (China).

UTRILLO, MAURICE. French painter and graphic artist (b. Paris, Dec. 25, 1883; d. Dax, in Landes, Nov. 5, 1955). Utrillo's mother, Suzanne Valadon, was a painter and the celebrated model of Degas, Renoir, and Toulouse-Lautrec. Utrillo never knew who his father was; he took his name from a family friend, Miguel Utrillo y Molins, a Catalan architect and art critic. Depressed by his failure at school and by ir-

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

regular employment, Utrillo became an alcoholic by the time he was eighteen and was constantly in and out of sanatoriums thereafter. He began to paint as a therapeutic diversion but by 1903 was painting full time. Utrillo exhibited for the first time in the 1909 Salon d'Automne and had his first one-man show in 1912. Under the care of his mother from 1924 and, later, of his wife, he produced prolifically; as late as 1950 he was represented in the Venice Biennale. His last important commission was to design the *décor* for Gustave Charpentier's *Louise* for the Opéra-Comique.

Utrillo's output can be divided roughly into three periods: his impressionist phase, when the influence of Pissarro and Sisley was uppermost; his "white period," from 1908 to 1914, generally considered his finest; and his "late period," after 1914, when he used bright, often shrill color, when his brushwork was less controlled, and when he included larger and more numerous figures.

Although Utrillo was self-taught, his art has an authority and a sophistication not associated with primitives. He painted largely from memory, using common picture postcards as guides, and employed a ruler and T square to lay out a composition. His best work catches the melancholy of the sunless, half-deserted streets of Montmartre with deep perspectives and subtle harmonies of warm grays, olive greens, buffs, and off-whites, which frequently appear luminous against an opaque, leaden sky. Utrillo tended to emphasize and define contour with a heavy line, as in the *Quai d'Anjou* (V, PL. 138). His style is personal and characteristic, with some of the near-abstract quality of a Cézanne.

Robert F. REIFF

VANBRUGH, SIR JOHN. English architect (b. London, 1664; d. London, 1726). The son of a rich sugar baker and grandson of a Protestant refugee from Ghent, Vanbrugh had some military experience in youth and underwent 18 months of imprisonment in France on suspicion of being a spy after being arrested at Calais in 1690. In 1696 he became a captain of marines, serving until his regiment was disbanded in 1698. By then he had made his name as a playwright for the London stage, his two most successful comedies, *The Relapse* and *The Provok'd Wife*, having been produced in 1696 and 1697 respectively. He was the author of ten plays in all.

Vanbrugh's architectural career opened in 1699 with the design of Castle Howard, Yorkshire, for the Earl of Carlisle. However much assistance he may have received in matters of detail and execution from Nicholas Hawksmoor, this was an astonishing performance for one who apparently had turned to architecture, as Swift put it, "without thought or lecture" (Colvin, 1954). In 1702 Carlisle secured Vanbrugh's appointment as Comptroller of the Royal Works. This post he held, with an interruption due to political events in 1713–15, until his death. In 1715 he was appointed Surveyor of Gardens and Waters, and in 1716 Surveyor to the Royal Hospital, Greenwich (of whose board of directors he had been a member since 1703), succeeding Christopher Wren. He was knighted by George II in 1714 for his visit to Hanover in 1706, when as Clarenceux King-of-Arms he conferred the Order of the Garter upon the future King.

Vanbrugh's greatest work was Blenheim Palace (VI, PL. 436), in Oxfordshire, begun in 1705 as a monument to the Duke of Marlborough's victories over Louis XIV. His other works included his own house in Whitehall, London (ca. 1700; destroyed); the King William Block at the Royal Hospital, Greenwich, London (ca. 1703); the Italian Opera House (Queen's Theatre), Haymarket, London (1705; destroyed); the remodeling of Kimbolton Castle, Huntingdonshire (1707–09); King's Weston, Gloucestershire (1711–14); Cholmondeley Hall, Cheshire (ca. 1713–15; rebuilt 1804); Claremont House, Surrey (1715–20; destroyed); Eastbury Park, Dorset (1718 onward; mostly destroyed); Vanbrugh Castle, Greenwich (ca. 1717); Seaton Delaval, Northumberland (1720–28); and the north front of Grimsthorpe Castle, Lincolnshire (1722–24).

Vanbrugh shared with Nicholas Hawksmoor and Thomas Archer the leadership of the English baroque school of the first quarter of the 18th century. His style, which has been characterized as "heroic baroque," owed almost nothing to the Italian baroque, something to France, and a great deal to his personal feeling for effects of mass, silhouette, and movement. Many of his works have what he himself called "something of a castle air"; in several — notably Vanbrugh Castle — the medievalism is explicit.

VAN GOGH, VINCENT. The painter, the oldest son of a Protestant minister, was born in Groot Zundert, in the Dutch province of North Brabant, on Mar. 30, 1853. In 1869, after he had finished his studies at a boarding school in Zevenbergen, he found employment in the Hague branch of the art dealer Goupil. His brother Theo, with whom he maintained a regular correspondence that can be characterized as a kind of continuous examination of the artist's conscience, joined the Brussels branch of the Goupil firm in 1873, the same year that Vincent was transferred to the firm's London branch, where he proved himself an exemplary employee. In London he fell in love with his landlady's daughter, Ursula Loyer, to whom he proposed and was mockingly rejected. The values of his Protestant bourgeois background shaken for the first time, he sought consolation in the Bible. His parents perceived his deep melancholy when he vacationed in Holland, and his employer subsequently sent him to Paris to recover his mental balance; but he suddenly returned to London in order to see Ursula Loyer once more.

In 1875 Goupil transferred him to Paris, where he visited the museums and attended exhibitions, while continuing to read the Bible in his free time. Meanwhile, he neglected his employment, proved impatient and irritable with clients, and quarreled with his superiors. Consequently he was dismissed, and he returned to his parents. In the spring of 1876 he accepted a post as a teacher of languages at a boarding school in Ramsgate, England. There and at Isleworth, the town to which the school was subsequently moved, he saw clearly the dismal poverty of the working people. This revelation of social misery plus his reading of the Bible and his mystical bent caused a reorientation

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

in his attitude toward society. That summer he entered the service of a Methodist pastor and was entrusted with the duty of preaching in a community of poor working people. Though he exalted poverty above joy in his sermons, he lacked eloquence and consequently suffered another defeat. Discouraged, he once more returned to his family.

At the beginning of 1877 he accepted a position in a bookstore in Dordrecht, but he was haunted by his religious calling. Obsessed by the example of his father, he decided to prepare himself for a theological career and left for Amsterdam to take the Greek and Latin courses required for admission to the theology department. This effort exceeded his piety, and disillusioned by the differences he felt between the teachings of the Bible and the official practice of Christianity, he had to give up. He did not renounce his vocation, however, but with his father's help and with the goal of preaching to the poor mineworkers he attended the school of practical evangelizing in Brussels. At the end of 1878 he left for the Borinage district, where he settled in the village of Pâturages, near Mons. There he taught the Holy Scriptures, cared for the sick, and instructed the children. At the beginning of 1879 he was appointed to preach at Wasmes. His zeal, further kindled, led him to complete solidarity with the miners, so that he shared what he owned with his fellows, took their side in strikes, and tended those who were stricken by typhoid fever. But his devotion to the miners' cause scandalized his church superiors, and his mission was discontinued.

His first drawings seem to date from this period. Two of them were sold to a pastor in Brussels, who sent Van Gogh on a mission to Cuesmes in the Borinage district. He stayed there through the winter of 1879–80, living in the most abject poverty and prey to gnawing moral torments since he despaired of his religious vocation. His correspondence with his brother halted for months while Vincent wandered through the Borinage and ventured on foot as far as Courrières (Pas-de-Calais), the residence of Jules Adolphe Breton, a painter he admired and would have liked to visit. But lacking courage and discouraged by the splendor of Breton's studio, he turned back. This unfulfilled visit to the painter Breton might be the first sign of a reorientation of his course toward the vocation of painting, though his aims remained obstinately the same: to share with his neighbors and to communicate to his fellows his passion, his pity, and his need for truth and consolation. In the fall of 1880, after these months of anguish and solitude, Vincent left for Brussels, determined to embark on a career of painting and eager to renew his ties with painting and painters. He accepted the advice of the Dutch painter Willem Roelofs (1822–97) and became a close friend of the painter Alexander (Anthon) Ridder van Rappard, with whom he corresponded for the next five years. In Brussels he took lessons in anatomy and perspective. It seems characteristic that among his drawings of this period there are copies of works by Jean François Millet (q.v.), the painter of laborers and the poor (e.g., *The Sower*, Amsterdam, Stedelijk Mus.).

In the spring of 1881 he returned to the home of his parents, who now lived in Etten, and started to work with enthusiasm. But during the year he suffered a new disappointment in love when he was rejected by his cousin Kee Stricker. As a result, he left Etten and moved to The Hague, where he sketched farm laborers and peasants in a style that aspired to expressiveness but still revealed a lack of animation and movement. There he also received advice from his uncle, the painter Anton Mauve, but he was soon irritated by this uninspired and routine teaching. His dispute with Mauve was aggravated by the fact that the latter reproached him for having taken in a pregnant prostitute known as Sien. During 1882 he lived with Sien and her child in his studio at Schenkweg 138, leading the life of a workingman and feeling proud of this lowering of his social position, which alienated him from his friends and family. He spent a month in the hospital at the same time as the painter George Hendrik Breitner (1857–1923), who accompanied him on his tours through the city in search of subjects among the common people. During this productive period he experimented with various techniques, tried lithography as a means to the people, executed charcoal and pencil drawings (e.g., *Sad Old Man, Head of a Woman with White Cap, State Lottery*; all, Amsterdam, Stedelijk Mus.) as well as water colors, and painted his first landscape (e.g., *Scheveningen Beach*, Amsterdam, Stedelijk Mus.). He also read a great deal (Emile Zola, Jules Michelet, Victor Hugo, and others) and acquired a collection of works by popular English engravers. This episode came to an end when his brother Theo convinced him that his stubborn endeavors to reform Sien morally were destined to failure.

Van Gogh left The Hague and took refuge in the lonely, picturesque province of Drenthe, in northern Holland, where he was enchanted by the vast horizon and the somber colors. Examples of his work there are the paintings *Huts* and *Two Women Working on the Land* (both, Amsterdam, Stedelijk Mus.). After three months he left Drenthe and returned to his family in Nuenen, a small village northeast of Eindhoven, where his father had been appointed pastor. He adapted himself to family life, devotedly caring for his mother, who had broken a leg, and he continued his reading. Difficulties presented themselves as the result of a love affair with a neighbor, Margot Begemann, and tension with the villagers who had been forbidden to pose for him by the parish priest. Nevertheless, it was at Nuenen that Van Gogh took the decisive steps in his formation as a painter: he painted and drew the peasants (*Head of a Peasant*, Brussels, Mus. Royaux des B.A.; peasant heads, Amsterdam Stedelijk Mus.), made studies of the weavers and their workrooms (*The Weaver*, The Hague, H. P. Bremmer Coll.), and painted the cemetery, the church (*The Garden of the Parish Church*, Kinderdijk, The Netherlands, M. L. C. Smit Coll.), and the thatched huts. His efforts as a painter of peasants were crowned by his first masterpiece, *The Potato Eaters* (PL. 286), for which he made two sketches (Amsterdam, Stedelijk Mus., on loan from the V. W. van Gogh Coll.; Otterlo, Netherlands, Rijksmus. Kröller-Müller). This painting, executed in somber but intense colors, represents the peak of his first period, which came to an end shortly after his father's death in March, 1885, when Vincent left Nuenen for Antwerp. There he entered the Academy and at first docilely accepted the discipline imposed by his professors, though this soon began to tell on his nerves. The crucial discovery of this sojourn was the work of Rubens, which revealed to Van Gogh the laws governing the principles of color that he himself had approached in his endeavors at Nuenen. It was also in Antwerp that he first became familiar with Japanese prints. The works he executed in Antwerp include two self-portraits (1885) as well as the *Back Side of Old Houses* and the *Old Man with the Head of Victor Hugo* (all, Amsterdam, Stedelijk Mus.).

In March, 1886, he rejoined his brother Theo in Paris, where, after a warm reunion, the two brothers shared their life for almost two years. On his arrival in Paris he enrolled in the atelier of Fernand Cormon, and through his brother he met and made friends with Toulouse-Lautrec, Emile Bernard, Louis Anquetin and Armand Guillaumin. The years in Paris yielded Van Gogh a series of discoveries: impressionism (q.v.), the impasto technique of Adolphe Monticelli (1842–86), and further knowledge of Japanese prints.

Although the daily testimony of letters is lacking for this period, the works themselves testify to an essential change in Van Gogh's art. His palette became brighter with the use of light, pure colors, and owing to his contact with the impressionists he adopted the pointillist technique (e.g., *A Woman of the Café aux Tambourins*, Amsterdam, Stedelijk Mus.). This trend is especially notable in his self-portraits (see detail, X, PL. 508) and in a series of still lifes, including *Still Life with Flowers* (The Hague, Gemeentemuseum), *Roses Trémières* (Zurich, Kunsthaus), *Shoes with Laces, Basket with Crocuses*, and *Apples* (last three, Amsterdam, Stedelijk Mus.). The importance of Van Gogh's Parisian period lies particularly in his assimilation of the most progressive currents in the painting of the time, In those years he absorbed the impressionist vision and technique and enriched his art with a new range of colors without losing his initial propensity for humble subjects.

In February, 1888, he left Paris for Arles, in the south of

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

France. With the coming of spring, the sunny country reminded him of his native Holland, as evidenced by his painting *The Drawbridge* (PL. 287). Intoxicated with gaiety by the sun and colors, he painted his first orchards in blossom (examples in Amsterdam, Stedelijk Mus.). In May, owing to Theo's generosity, he was able to rent a small house in Place Lamartine in Arles, which he planned to furnish and occupy with fellow painters. During this period he became aware of the fact that for him the lessons of the impressionists had been only a transitional phase and that he was about to turn once more to the masters he had previously admired, Delacroix and Millet. In June he first saw the Mediterranean when he passed a week at Saintes-Maries-de-la-Mer (PL. 290), where, under the bright summer sun, he painted his most harmonious and balanced canvases: *A View of La Crau* (PL. 291) and *Fishing Boats on the Beach at Saintes-Maries-de-la-Mer* (PL. 288). He was in very high spirits and applied his new manner to portraits, such as those of his friend the postman Roulin (Boston, Mus. of Fine Arts; Otterlo, Netherlands, Rijksmus. Kröller-Müller). In September he settled into the yellow house on Place Lamartine, which he immortalized in his painting *The Small House of Vincent at Arles* (Amsterdam, Stedelijk Mus.). For the bedroom intended for Gauguin he began to paint a series of sunflowers, of which the best-known composition is now in the Tate Gallery. (For an earlier treatment of the same subject from his Parisian period, see PL. 289.) Inspired by Delacroix's theory of colors, he set out in search of the autonomous and symbolic values of color — for example, to express with red.

Paul Gauguin (q.v.) arrived in Arles toward the end of October, and during the two months they were to share the yellow house the two painters fired each other's genius. Van Gogh's *L'Arlésienne* (New York, Met. Mus., Bequest of S. A. Lewisohn) and *Les Alyscamps* (New York, E. C. Vogel Coll.) emanated from their exchange of points of view and their mutual influence. However, daily contact and working together caused mounting tension between these extremely different temperaments: Vincent, the religious enthusiast, and Gauguin, the critical creator. At Christmas the crisis exploded, and Van Gogh cut off his ear lobe after a quarrel with Gauguin, who consequently fled from Arles. Van Gogh was taken in at the hospital, where he was placed in the devoted care of Dr. Felix Rey, and Theo came to visit him there. In February, after Vincent had returned to his house, he was overtaken by a second crisis and was hospitalized again. In March, on the basis of a petition signed by 80 townspeople, he was once more placed in the hospital. In the intervals between seizures he painted the versions of *La Berceuse* (PL. 292), the portrait of Dr. Rey (Moscow, Mus. of Mod. Western Art), and a self-portrait. In the hospital he received the news of his brother's marriage on April 17; at about the same time he expressed the wish to be admitted to the Asylum of St-Paul-de-Mausole at Saint-Rémy. On May 9, he left Arles and entered the asylum in Saint-Rémy. On his arrival there Van Gogh began to paint again, first in the garden of the hospital and then in the surrounding countryside. In his landscapes, such as *A Road with Cypresses* (PL. 290), *Cypresses and Stars* (XI, PL. 371), and *Cornfields at Sunset* (PL. 288), there is a marked change in technique and color. His brush described dynamic curves, and stronger tones issued from his palette. In the summer and again in December he was overtaken by crises, during which he could not leave his room. Thus confined, he made black-and-white copies of works by Delacroix, Millet, Honoré Daumier, and Gustave Doré, rendering highly personalized variations on themes provided by the masters he most admired. Among these works are *The Good Samaritan* (V, PL. 120) and *Pietà*, after Delacroix; *Sheaving Girl* and *Sower*, after Millet (last three, Amsterdam, Stedelijk Mus.); *Men Drinking*, after Daumier (Chicago, Art Inst., J. Winterbotham Coll.); and *La Ronde des Prisonniers*, after Doré (Moscow, A. S. Puskin Mus. of Fine Arts). He also copied canvases he had done in Arles.

In January, 1890, he received news of the birth of his brother Theo's son, who was named Vincent. In the same month an enthusiastic article by Albert Aurier — the only printed comment on Van Gogh to be published before his death — appeared in the periodical *Mercure de France*. From February to April he experienced another, more serious attack. In March one of his pictures, *The Red Orchard* (Moscow, Mus. of Mod. Western Art), the only one to be sold in the open market during his lifetime, was bought in Brussels. By April the artist was recovering slowly and had started to paint again.

On May 17, 1890, Van Gogh arrived in Paris for an extraordinarily harmonious three-day visit with his brother and sister-in-law. From Paris he went on to Auvers-sur-Oise, where he entrusted himself to the care of Dr. Gachet, a patron and friend of painters. Working with great zest, Van Gogh painted portraits of Dr. Gachet (Paris, Mus. du Jeu de Paume; New York, S. Kramarsky Coll.; Frankfurt am Main, Städtische Galerie) and of Dr. Gachet's daughter (Paris, Mus. du Jeu de Paume), as well as peasants and landscapes (IX, PL. 25; *Cornfield with Crows* and *Fields with Blue Sky*, both in Amsterdam, Stedelijk Mus.; and *Les Chaumières*, Moscow, A. S. Pushkin Mus. of Fine Arts). Theo with his wife and child came to visit Vincent one day in June, and the artist spent Sunday, July 1, in Paris, where he visited with friends. On his return to Auvers he became despondent for having abused his brother's generosity. He painted some large canvases in which he "tried to express extreme solitude and melancholy." On July 27, 1890, he shot himself and died two days later, aged thirty-seven, with Theo at his bedside. The artist and his brother, who died on Jan. 25, 1891, are buried in the cemetery at Auvers-sur-Oise.

Though Van Gogh had devoted only about nine years of his brief, intense life to his art, he left almost 600 paintings and more than 800 known drawings and water colors. Through impressionism he advanced from the traditional, almost provincial Dutch painting of the beginning of his career to horizons unknown in his time. He created fresh domains for painting and paved the way for a school of painters that has not yet attained the summits reached by him. He had a clear sense of mission, which he did not succeed in satisfying. Like many of the greatest artists of the 19th century, Van Gogh was impelled in his work by an inspiration that was fed by his experiences with poverty and social injustice (in London) and by his commiseration with fellow men (the miners of the Borinage). By painting he was simply continuing his vocation as a preacher. His letters to his brother Theo constitute a passionate testimony of his life and stand as a literary monument of far-reaching importance. In a letter to Theo (No. 279) he declared that "the love of man is something one might suppose exists in every human being as the foundation of almost everything." And, with exemplary modesty, he practiced this love of mankind in his daily work. To Van Rappard he wrote: "Let your light shine for men — I think that is the duty of every painter. In my opinion, it does not follow, however, that this light should be spread through exhibitions. I must tell you that I hope for more and better opportunities to take art to the people than those given by exhibitions" (No. 43). With his paintings Van Gogh hoped to console men, and especially the poor, for their misery. This sentiment inspired the words he wrote in connection with a portrait: "There you can sense how much I feel in my element, and that somewhat consoles me for not being a doctor" (No. 560). He summed up this feeling in another moving and revealing passage: "You known, the more I think about it, the more I realize that nothing is more truly artistic than to love people" (No. 538). This sublime truth, which he reached through his consideration of human misery, directed all his work.

But Van Gogh's love also extended itself to things: "Is it not true that when one loves a thing one sees it better and more exactly than when one does not love it?" (No. 591). Herein lies the basis of the close tie between the work of the artist and nature itself; it explains his devotion to nature and the natural appearance of things.

As a follower of the Dutch school, he saw himself as a realist so dedicated to the truth that he wished to subordinate his profession as an artist to it. He expressed his view on this matter in a letter to Theo (No. 371): "But strictly speaking, isn't it enough if one says what one says clearly? Expressing something with elegance may render it more pleasurable — and I

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

do not scorn this — but that which is true cannot be enchanced by embellishment, for truth is beautiful in itself."

Indeed, it was this feeling about truth that caused him to reject accepted rules of beauty: "Look, Theo, I cannot do 'types of beauty.' I do my best with 'heads of the people' " (No. 252). Dutch realism provided the foundation and starting point for Van Gogh's art. And, his realism, like his love of mankind, was directed towards the humble: "I must say that, as far as I am concerned, I shall try to maintain a straight course and paint the simplest, most everyday things" (No. 390).

Because of his love of simple things he scorned routine and did not attach too much importance to technique or to the profession of artist in itself: "Technique is only a means, and an artist should not be seduced by the profession." He even apologized for his professional knowledge of painting: "In one way I am happy not to have learned to paint. If I had, I should probably have learned to scorn effects like these, but now I say *no*, they are just what I need" (No. 228). He also wrote: "Let the Pharisees babble about technique as much as they like in their empty, hypocritical words . . . real painters are guided by their conscience, which is called feeling, and by their soul; their brain is not the servant of their brush, but their brush serves their brain" (No. 426).

A realist who was full of affection for even the humblest object, Van Gogh did not aspire to reproduce the natural appearance of things: "What I try to capture is not a hand but a gesture, not a mathematically accurate head but an expression. The whistling of the wind, a digger looking up from his work, for example, or the act of speaking. In short, life" (No. 408).

His goal was to express more than the tangible truth: "To express hope with a star. The ardor of a being with the radiance of the setting sun. This is certainly not trompe l'oeil realism, but is it not a thing that really exists?") (No. 531).

Even in the works of Van Gogh's Dutch period there can be detected signs of this tendency to subordinate appearance to the essentials of expression: "Tell him that my great ambition is to achieve those inaccuracies, deviations, deformations and changes of reality that may well be lies, if one wishes, but are truer than literal truth" (No. 418). This propensity, which led to the exaggeration of form and color as they served the needs of expression, reached its culmination in the works of his French period (see his letter to Theo, No. 520, XI; col. 500).

In this fashion Van Gogh surmounted the realist tradition of Dutch painting, without repudiating his origins, and devoted himself to the task of perceptibly rendering inner truth. Thus his work and conception of art paved the way for 20th-century painting.

It was, above all, this comprehension of painting that revolutionized the world of art. Van Gogh gave painting new purpose, a true mission, which he himself pursued with evangelical zeal. In an epoch that aspired to the perfect, isolated work he could write: "It is therefore agreeable to work for people who do not even known what a picture is" (No. 604). In connection with *La Berceuse* (PL. 292) he noted: "It is very true that the common people who treat themselves to color prints and enjoy the sentimental music of hand organs are somehow more in the right and perhaps more sincere than certain men about town who frequent the Salon" (No. 592). To his brother he explained the mission he sought to fulfill by painting: "In my life and in my painting I can very well do without God, but wretched as I am, I cannot do without something that is greater than myself, something that is my life: the power to create. And if one is frustrated physically and seeks to create ideas instead of children, he thus becomes part of humanity everywhere. And in a picture I should like to say something as consoling as music. I should like to paint men or women with that suggestion of the eternal which used to be symbolized by the halo, and which we seek to achieve by the radiance and vibration of color itself" (No. 531). Driven by his charitable emotions and missionary zeal, Van Gogh consumed himself in the creation of his imposing body of work. Of his unbridled will to create he wrote: "I must warn you that everybody will think I work too rapidly. Don't believe it. Is it not our emotion and the sincerity of our feeling for nature that directs us; and if these feelings are sometimes so strong that we work without being aware that we are doing so, and the strokes follow one another with the coherence of words in a speech or a letter, we must remember that this has not always been the case, and that in the future there are sure to be heavy days without inspiration. So one must strike while the iron is hot and put aside the bars that have been forged" (No. 504).

An innovator and visionary, Van Gogh changed the meaning of painting. He transformed it from an art on the fringe of human life into a true message to humanity. In his art the genius of the man dominates the talent of the painter.

VASARI. GIORGIO. Italian painter, architect, and biographer (b. Arezzo, July 30, 1511; d. Florence, June 27, 1574). His active life embraced the first two generations of mannerism (q.v.), and he himself was a prolific painter in the mannerist style, although he is better known as an architect and a biographer. Vasari's *Lives*, written at the close of the Renaissance, was able to view that movement in perspective; this compendious work, the scope of which is revealed by its title (*Le Vite de' più eccellenti architetti, pittori et scultori italiani, da Cimabue insino a' tempi nostri*, Florence, 1550, 2d ed. 1568), has made Vasari's name famous and ranks him among the Humanists. Without it he would still be known as the architect of the Uffizi (IX, PL. 312, FIG. 470) but would appear as a secondary personality instead of as the important figure he was in his time in Italy and has been ever since in the world of art.

Vasari is a lively writer rather given to anecdote. To gather material for his *Lives* he traveled widely in Italy, endeavoring to see things firsthand and to speak with the artists themselves if they were still living or else with persons who had known them. Modern criticism has often corrected Vasari's attributions, but the *Lives* provides an invaluable original source. The second edition of the *Lives* was considerably reworked by Vasari and is more valuable than the first. The standard modern edition used by scholars is that of G. Milanesi, in nine volumes (Florence, 1878–85).

It is generally considered that Vasari is better on the Tuscan than on the trans-Appennine artists. He was a passionate admirer of Michelangelo, and his own mannered style as an artist derives ultimately from Tuscan precepts; but the fact that he thus favors design (*disegno*) over color and prefers his own school to the Venetian in no wise detracts from the value of his work (see RENAISSANCE, cols. 104–105).

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

He appears to have been in the employ of Cosimo I de' Medici for the first time in 1554, and in that year he began to work on the paintings in Palazzo Vecchio (Palazzo della Signoria; II, PL. 28; VIII, PL. 102; XII, PL. 78). In 1560 the Uffizi, intended at first for government offices but soon to house the famous picture gallery, was begun. The elongated window enframements and supporting consoles, the repeated vertical emphasis of the columns and the other members, the conscious break with classical proportions (but with the use of classical detail), and the elegant, somewhat frigid effect of the whole combine to make this building a fine example of mannerism in architecture — an art in which this style is not always recognized — and give Vasari a place among the truly distinguished architects of Italy. Vasari's other chief monument as an architect is the Palazzo dei Cavalieri di S. Stefano (formerly Palazzo degli Anziani) in Pisa. In addition he designed the monument to Michelangelo in Sta Croce, the elegant small interior study (*studiolo*) of Francesco I de' Medici in the Palazzo Vecchio (VIII, PL. 103), and the Loggia in the Mercato Vecchio (1567), which was demolished in 1889 to make way for the Piazza Vittorio Emanuele, now Piazza della Repubblica. Stairs and rooms in the Palazzo Vecchio and numerous alterations and decorations in churches in Florence, Arezzo, Cortona, Pistoia, and elsewhere testify to a busy life with constant commissions. Vasari was among the founders of the Florentine Accademia del Disegno, which held its first session in 1562.

Vasari's numerous paintings have been harshly judged: Venturi has even used the term "insupportable" in this connection. The paintings are best viewed, not separately as depictions of incidents or persons, but rather as parts of a decorative whole. Vasari painted rapidly and lacked color sense. He was extremely accomplished in working on the basis of mannerist formulas, which he handled superficially but with great skill (cf. XIII, PL. 355); there was nothing in his work that was personal, intimate, or lovingly drawn out as with the Renaissance painters. Although Vasari's paintings are scattered about central Italy, an adequate idea of his style can be obtained from examining those in Florence, which include the 20 rooms in Palazzo Vecchio and in the Uffizi, a portrait of Alessandro de' Medici, the posthumous portrait of Lorenzo de' Medici, and Vasari's self-portrait.

VEDUTE PAINTERS. See CANALETTO; GUARDI.

VEHICLES. The many categories of products with which the history of art is more or less collaterally concerned include that of the various means of transport. Even in the typological variety, bound to technical factors, of these means of transport, there lie common formal characteristics which follow their functional development. These are as recognizable in the sedan-chair as in the colossal construction of the modern ocean-going ship, and are not without partial parallel — and sometimes even concrete interdependence — with the functional characteristics of furniture, architecture, and interior decoration (qq.v.). As in analogous cases, the esthetic qualification involved is determined also by decorative means, especially in ceremonial and luxury products, often independently of the functional structure and in more direct contact with dominant styles of the relative epoch or culture. The representation of vehicles in works of art has occupied artists from very early times; man has obviously taken great pleasure in recording, even in mythological themes, his conquest of nature in the area of means of locomotion.

SUMMARY. Formal aspects of vehicles (col. 702): *Function, form, and symbolism; The relationship to architecture; The influence of tradition.* Vehicles in relation to contemporaneous culture (col. 705): *Vehicles in art.* The decoration of vehicles (col. 707): *Wheeled vehicles; Sleighs; Boats and ships.* The representation of vehicles in art (col. 713).

FORMAL ASPECTS OF VEHICLES. *Function, form, and symbolism.* The various types of vehicles are normally classified in general categories according to their method of locomotion (and consequently in relation to the element on which they rest while in motion: land, water, air) and according to their specific functions (vehicles for the transportation of persons or specific things, over short or long distances; vehicles used in war; ceremonial vehicles; sporting vehicles). These distinctions would remain at the level of a purely technical typology — and would therefore be of no interest artistically speaking — were it not for the fact that, as for any other man-made product, in vehicles the correspondence of the structural elements to the specific technical and functional requirements is translated into markedly individual forms, which are in turn susceptible to modifications of an expressive, decorative, or symbolic nature.

It can readily be seen how the various techniques of locomotion have given rise to the elaboration of basic structural elements which, while they present close analogies to each other from the mechanical point of view, present individual characteristics in the various vehicles in relation to their specific qualifications. It can be noted for example how the system of transport by sliding has resulted in typical forms which recur, in a sense, in quite different vehicles. The shafts of primitive haulage vehicles, the runners of sleds, skis, and skates, the outriggers in many of the boats of the ethnological world, and even the keels themselves, constitute a single broad formal tendency. The multiple differentiations are the result of the search for a structural integration of the varying characteristics of the vehicles themselves and improvements dictated by purely practical factors. Vehicles whose element is water, for example, have the two fundamental requirements of stability and movement. The ideal type of stable floating unit is one which covers the greatest possible water surface, as in the raft, which evolved into paired hulls. Concave floating units, however, also guaranteed stability, and the need for ease of movement led at the very beginning to the use of oblong flowing forms. These two forms — the raft and the shell or hull — have found separate fields of development and specialization in different cultural areas: the former principally in the ethnological cultures of the Pacific Ocean, the latter in the historical sphere of the West, where it achieved the greatest complexity of technical and formal expression. But even in hulls the general esthetic effect was conditioned by the means of locomotion. The long, low triremes and galleys (PL. 311) powered by oars express a completely different concept from the multimasted clipper ships and sailing vessels (PLS. 313, 316), which multiply the surfaces in contact with the air as much as possible.

In elaborating these basic forms man has often drawn inspiration from the animal world — not only in the sense of a simple morphological paraphrasing but in that of a careful structural interpretation of the functional suggestions. The motivation behind the inclusion of additional formal qualifications referring more or less explicitly to these models, whose interpretation is of a strictly empirical nature, must be considered. It is not so much a superimposition of decoration on structural elements (although this is sometimes the case, and even outspokenly imitative), as it is a confirmation of the general tendency toward a resolution of the entire process of the formal construction of the manufactured object in a phenomenological unity which takes into consideration its various aspects and is suited to the different functions for which the vehicle is intended, expressive and symbolic as well as utilitarian. Thus, for example, similarities to natural shapes are quite evident in the sail and the wing (so essentially functional in their form), but also apparent are references to motives recurrent in mythology and symbolism, almost as if to stress a kind of supernatural dominion over the forces of nature that was realized though them.

The wheel, in its purely structural aspects, already presents so many elaborations of such complexity, within the ambit of its basic reference to the ideal and perfect form of the circle, that it can be considered an exemplary product of form determined by function. Yet precisely for its reference to the circle, the formal qualifications of the wheel have often adopted the

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

universal iconographical themes of that shape, in their own complex decorative (see ORNAMENTATION), symbolical (see SYMBOLISM AND ALLEGORY), cosmological (see ASTROLOGY AND ASTRONOMY), and esoteric significations. Among the ancients the wheel aroused such perpetual wonder that it became universally attributed to the astral gods, or to meteorological phenomena. From such attribution originated various mythical images, such as that of the sun-charioteer, which became very widespread with the adoption of the fast war-chariots. These images persisted for a long time in the thematic repertory of the figural arts, with numerous variants ranging from the cult wagon, with the solar disc drawn by a horse (14th cent. B.C.; found at Trundholm; Copenhagen, Nationalmuseet; V, PL. 169), to the classical representations that refer to Sol-Helios, or Phoebus-Apollo, and to Aurora, and that recur in Western art up to recent times. These mythic transpositions — of which extensive literary and iconographic documentation is still extant — augment the scant historical data available on the actual distribution and use of wheeled vehicles in the various prehistoric and protohistoric civilizations. The iconographic forms connected with the symbology of the wheel occupy an important place — both quantitatively and qualitatively — in the broad thematic current of such transpositions. Such forms often condense the visual manifestation of the myth, occasionally embodying a multiplicity of meanings simultaneously, as the cosmic circle or the emblematic flower, or even simple decorative motifs, while the spokes often denote the parts of the world (the hub is the "navel," and so on). These universal iconographic meanings may moreover be joined by others of a more limited extension, connected to particular forms of worship. In the Celtic world, for example, the wheel was considered the typical form of the thunderbolt, of meteors, of the sun itself; in certain ceremonies that still take place in areas of the Rhine and the Alps flaming hoops are rolled down the mountainsides.

A study of the motivations behind the formal and decorative subject matter of the wheel, of other parts of vehicles, and of vehicles as a whole, must among other things not lose sight of the mythical-allegorical features commonly attributed to that in which the vehicle is instrumental, namely the voyage, the "transitus," often thought of as a relatively exceptional existential condition — the synthesis, or better the resolution, of the life cycle, which gave rise to the need to confer a propitiatory value upon some of the formal or decorative motifs of vehicles. A fine example is the funeral barque of the ancient Egyptians, modeled on a prototype with high, curling prow made of bundles of rushes. A model in the Metropolitan Museum in New York has the high prow painted to reproduce a heavy meshwork of colored beads; between the bulwarks is a row of nine carved ostrich plumes. Another model, from the tomb of the chancellor Wekhhotpe of Mir, has painted eyes on the bows and rudder blades and small falcon heads on the rudders and bars.

Symbolic decoration was also used in ancient Greek boats; a fine example is to be seen in the painting on a kylix by Exekias (V, PL. 185) in which the prow has an eye and dolphins painted on it, while the stern rises up into the gracefully curved head of a seabird. The boat depicted in the Etruscan Tomb of Hunting and Fishing (VI, PL. 55) also has a dolphin carved into its prow, protecting its occupants and "seeing" its way through the depths. A similar meaning can be read into the figureheads of the great sailing vessels of modern times; these fall into the sphere of folk art (examples in the museums of the New England fishing towns: Salem, Mass., Peabody Museum; Mystic, Conn., Museum).

The relationship to architecture. One of the fundamental requisites of any vehicle, after meeting the technical requirements of mobility, is that of providing a place for the load. In all vehicles a mechanical part can be distinguished from the cab, or space reserved for transporting persons or objects. Obviously, the relationship between these two parts is of necessity a close one. The need for ease of mobility imposed particular conditions of smoothness, robustness, and relative flexibility upon the superstructure, in addition to the obvious requirements of well-articulated connections between the superstructure and the mechanical parts which have favored the development of particular structural techniques.

Particularly from this point of view, the structure of vehicles (and more specifically the superstructure — the "internal space") overlaps in essential points with architecture, from which it has borrowed (and in a few cases to which it has transmitted) various structural details and even some entire models. Especially interesting iconographically are the Hindu rathas, the temples built in the form of wagons (IV, PL. 213), with plinths sometimes adorned with wheels in relief and entrance stairways lined with stone horses and elephants (IV, PL. 257; VII, PL. 486). In a certain sense, therefore, at the base of the empirical idea of "vehicle" is the concept of "small mobile house." It suffices here to mention the interrelations between various types of tents, huts, pavilions and the forms of many wagons, coaches, and animal-borne conveyances. Elaborate constructions could be placed on the broad backs of elephants. In the early Indian armies war elephants were provided with small archers' towers (VI, PL. 255), while in the Borobudur reliefs in Java some of the elephants are shown carrying pavilions in the form of little temples. Litters and sedan chairs were actually traveling rooms, with a chair or couch inside, and in India so spacious as to contain various utensils, food supplies, and hookahs. When longer journeys were involved and protection from dust and inclement weather was a necessity, the wagons and coaches used were real houses on wheels. The American Conestoga Wagon (PL. 297) has its direct antecedents in the Roman (PL. 296) and medieval traveling wagons (PL. 299). Particularly close to a house in form are the Chinese and Japanese covered carts (PL. 298). A similar relationship can be discerned between boats and ships and wooden buildings, not only in their structural techniques but in the actual appearance and use of many parts. Shipbuilding is "naval architecture," and in many languages the nomenclature of parts of ships borrows from architectural terminology (bridge, castle). A good example of this tendency is the passenger boat of the 19th century, in which the design of the superstructure was so similar to that of a building that the whole seemed a kind of floating, self-propelled house (PL. 316).

The confirmation of the relationship between vehicles and certain building structures and types permits the former to be considered as an ephemeral branch of architecture, obviously tending to an autonomous development.

The influence of tradition. Preliminary mention should be made here of another typical characteristic of vehicles that has conditioned their formal and structural development. Only rarely has the production of vehicles risen above circumstantial factors determined by the fact that they long continued to be a craft product. This is clearly seen in the marked persistence of certain traditional types (see FOLK ART). With the stabilization of a sort of ideal model — which is realized anew in the construction of each individual vehicle — is reproduced the phenomenological schema, peculiar to all forms of folk art, characterized by the deliberate employment of an ideal model fixed by tradition and by the corresponding complex social and cultural values. Occasionally a certain friction has arisen between these structural methods, which long retained certain basic "imprints," even in vehicles quite different from each other, and the stimulus to the elaboration of new forms supplied by the technical-functional development of the locomotive parts themselves. It suffices to cite the coaches which betray their origins in the sedan chair (PL. 300), or, even more strikingly, the first automobiles, whose form was clearly a free translation of that of the coach (PL. 306).

Only recently has the search for the rational integration of the requirements for a maximum capacity with existing technical data become the basis of vehicle design. On the whole this process has seen the superstructure fused with the entire carrying complex inherent in its locomotion. Note particularly the fusion and solidity of the various parts exemplified by a modern transatlantic liner (PL. 317), between the body and the chassis of an automobile (PL. 307), and particularly between the cabin and the fusilage of an airplane (PL. 318).

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Note should be taken that these new ways of doing things, conditioned by the modern mass production techniques, were arrived at after a preliminary phase which, in the 19th century, witnessed the reduction of the great variety of vehicles to a more limited number of canonical types, clearly differentiated from the functional point of view (an extremely interesting study could be made of the motivation behind the realization of so many unique examples in the 18th and 19th centuries, despite the above-mentioned persistence of tradition). This was the case with some of the light animal-drawn vehicles: the cabriolet (or gig), the *fiacre*, the tilbury, the brougham, the duchess, the victoria, the coupé, the phaeton, the landau (PL. 305). Although still within the bounds of craft production, a selective process, analogous to that which occurred contemporaneously in the field of musical instruments, took place.

Until very recently the forms of many vehicles have often been considerably out of step with their contemporaneous figural cultures, for reasons deriving from the craft production and the persistence of certain traditional "imprints." An outstanding exception was the baroque period, in which the structural and decorative forms of vehicles came very close to the formal values of the major arts of the period. However, generally when this happened the functionalism of the vehicle suffered (PLS. 301, 309).

VEHICLES IN RELATION TO CONTEMPORANEOUS ARTISTIC CULTURE. For a better understanding of the various aspects of the historical problem of the relationships between the form and decoration of vehicles and other kinds of artistic expression, it is useful to distinguish between the cases in which the formal-decorative qualification was an exponent of the preeminent expressive functions of the vehicle in question and the cases in which the qualification tended rather to complement and emphasize the form corresponding to the prevalently practical aspects of the vehicle as such.

Coming under the first classification are ceremonial vehicles, which were conceived of primarily as expressive instruments of determined content. The requisites of mobility are reduced to the basic minimum. Created for religious purposes, or intended as signs of power, prestige, or luxury, these vehicles, taken as a whole, can be characterized as symbolic forms.

The expressive functions have determined not so much the ideation of the structural forms, and the resulting specific typological classes, as they have determined modifications — even deep-seated — in the exterior aspect of certain types of vehicles in common use. These modifications may consist in the simple employment of valuable materials, but more frequently they comprise an emphatic accentuation of the decorative characteristics, whether by adding carved or painted ornamental or figural motifs, or by means of a more radical reshaping of the parts, even those functionally essential, so that they take on anthropomorphic, zoomorphic, or phytomorphic aspects. The forms of shafts, sides, and hubcaps in so many wagons offer an example. Under this aspect, the ceremonial vehicles, whether land (such as the ancient triumphal cars, the *carroccio*, the gala coronation coaches) or sea (such as the Venetian Bucintoro; PL. 315; VII, PL. 101), present close affinities with the trophies or "machines" of the festive apparatus (see DEVOTIONAL OBJECTS AND IMAGES; SCENOGRAPHY). The mobility of the festive apparatus is, however, almost accidental; they can be considered architecture or sculpture in the true sense of the word (IV, PL. 213). Floats and cars for pageants are also objects to be considered as works of art rather than as vehicles. An interesting survival in the 20th century of the 17th-century baroque tradition, related in spirit to the exotic chariots designed by great artists (XII, PLS. 432, 433) for triumphal entries and political pageants were the great gilt circus parade wagons, lavishly decorated and pulled by as many as 40 horses (examples in the Ringling Circus Museum, Sarasota, Fla.).

The decorative themes are usually part of the general iconography of each artistic culture: thus motifs drawn from Greek mythology appear on the bronze "tensa" in the Capitoline Museum (Rome), sacred scenes and figures pertaining to the various religions appear on the pictorial or sculptural decoration of vehicles for religious use, epic figurations on war cars or on those which have become the symbol of a given society (a reflection may be found in the decorations of Sicilian carts, in a way signifying the commemoration of a folk epic; V, PL. 345), themes from the classical repertory on the luxury vehicles of the age of absolutism. Emblematic or heraldic representations, as an obvious reference to the person, family, or social group who owned the vehicle, have often recurred, especially in the post-Renaissance carriage (see EMBLEMS AND INSIGNIA, col. 731). Allegorical representations in which intentions of a propitiatory nature are discernible and which are clearly derived from decorations on folk vehicles were also quite frequent. In successive phases allegorical representations became much more general, even in ceremonial vehicles. A clear shift of decorative accent from the properly ceremonial function to that expressive of prestige emerges from the representations of arcadian scenes, floral ornament, cupids, and *chinoiserie* on so many 18th-century carriages and sedan chairs (PLS. 301, 303) and sleighs (PL. 302). It is thus evident that formal qualifications expressly intended to be realized as artistic expressions, and therefore particularly rich and meaningful, are found above all in the case of ceremonial vehicles.

Vehicles in art. The search for a balance between expressive functions and practical ones, with the former in some way referring to the latter, is evidenced in every type of vehicle not properly ceremonial. To some extent the technical aspects that condition the form of each basic class of vehicles must be kept in mind. These often result in the persistence of specific forms or decorations consecrated by tradition, fixed in a kind of spontaneous conceptual definition of archetypes with their own formal and decorative peculiarities; or unique symbolic and emblematic iconographies may be established, occasionally autonomous in respect to those normally occurring in other forms of figural expression. These then are the phenomena lying at the root of those inconsistencies that so often occurred between the formal aspects of vehicles and their contemporaneous artistic cultures. But it is also precisely these phenomena that highlight the fact that a consideration of any purely stylistic correspondence which may exist (such as that found in ceremonial vehicles) is only part of the problem of the relationship between vehicles and the different stylistic periods and artistic cultures. A mechanical and antihistorical comparison between the form of a vehicle and a particular "style" — like so many other artificial concepts — should by all means be avoided. To formulate effectively historical criteria of vehicles (insofar as they are objects into whose production esthetic factors enter) it is necessary to establish the bases of a few consonances — that is, how the general esthetic currents of a period are transferred to vehicle design. An investigation undertaken in this sense provides a broad historical interpretation of the expressive characteristics of the forms and decorations of vehicles. The 17th–18th century carriage (PL. 301), for example, expanded in proportion, open and diffuse in form, and overloaded with gilded, polychromed ornamentation, was in its entirety a sort of splendid and fanciful metaphor of itself — a typically significant expression of baroque taste. By the same token the neoclassic carriage — small, of closed and compact form, sparing of ornament, chromatically sober — reveals the general esthetic tendencies proper to the early 19th century.

Particularly illuminating is a comparison of the 19th-century passenger boats, trains, the first airplanes, and the first automobiles, in which a certain mechanical stress is associated with an unrestrained and fragmentary formal-decorative eclecticism, with their modern counterparts. The latter, thanks to the concept of industrial design, have been redetermined as a unified formal unit and can be considered as among the most meaningful exponents of modern taste and of the present-day tendency toward the "recapture of a style."

Lastly, what may be considered as proof of this substantial assonance between vehicles and the general esthetic sentiment of the civilization which has produced them is also the fact that they often have recourse to the thematic repertory of the figural arts, not only in generically descriptive ways, but also

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

as a typical and distinctive motif of given, formal predilections, so that the vehicles themselves become, metaphorically, "decorative" subjects: in this regard it is enough to consider the special value assumed by the representations of contemporaneous vehicles (especially of ships) in Greek vase-painting, in Roman reliefs, sometimes in medieval art, and later in the canvases and prints of the 17th and 18th centuries, particularly in England and France and, especially, in Holland (PLS. 311–314; see below).

THE DECORATION OF VEHICLES. *Wheeled vehicles.* While in antiquity the representations and models of vehicles are often of interest more as indications of technological achievements rather than as actual works of art, for sheer beauty and simplicity of form the Egyptian war chariot (18th dynasty) from the necropolis of Thebes (PL. 294) has seldom been surpassed. As with many ceremonial or representative objects, the Egyptian chariots found in the tomb of Tutankhamen were highly decorative and comparable in style to other furnishings of the period. They were entirely open at the back, with lozenge-shaped openings at the side and a double rim providing support at the top of the body. The whole vehicle, including the wheels (which had leather tires), was encased in gold and encrusted with semiprecious stones, glass, and faïence.

One of the earliest extant examples of a wagon preserved almost in its entirety is that of the Oseberg ship burial (ca. 850), which also included a ship and four sleighs. The rich carved ornamentation on all six vehicles (PL. 296; IV, PL. 176; V, PL. 340) is typical of the period (see SCANDINAVIAN ART), an adjunct to, but on the whole quite distinct from, the basic structural form of the vehicles.

In the traveling wagon of Emperor Friedrich III of Austria (ca. 1475), of which only the superstructure (PL. 299) has survived, the relationship to the art of the time is equally striking. Although to a certain extent this, like many of the examples which have escaped destruction, should be considered a ceremonial wagon, it was basically practical as well as representative. The decoration stresses various functional members and also forms some of the autonomous parts. The example in question, while it must have been quite uncomfortable (it had no springs), has all the characteristics of the late Gothic style in its carvings, its crocketed pinnacles, its agitated draperies. The whole box is gilded, parts of the figures are painted in flesh tones, and the coat of arms is polychromed.

Of importance, both sociologically and as an explanation of the diffusion of the carriage at the time of the Renaissance, is the fact that it was no longer limited in use to carrying women or as a ceremonial vehicle used in wedding processions, coronations, triumphal entries, and so on. Descriptions in contemporary literature give an idea of the richness of accouterment of these ceremonial vehicles. Beatrice, wife of Charles I of Anjou, entered Naples in 1207 in a wagon covered with blue velvet embroidered with golden lilies. In 1300, for the wedding of Galeazzo Visconti with Beatrice d'Este, a four-horse wagon was built in Milan. By 1471 the Florentines could gaze in wonder at the 12 wagons with silver-embroidered gold cloth in Maria Galeazzo's suite. But it was not until the 16th century that wagons and carriages came into more general use, particularly after the invention of a method of springing the body. While previously representations of carts and wagons were incidental, appearing as genre elements in other scenes (see a cart for the transport of crops in the frescoes in Trent, VI, PL. 64; the two-wheeled carts in the Luttrell Psalter, London, Br. Mus., Add. Ms. 42130, fol. 162 and 173b), they now came to be the prime elements of many compositions (see water-color woodcut by Nicolaus Solis of the entrance procession of the Duchess Renata von Lothringen for her wedding with Duke Wilhelm V of Bavaria, printed in 1568 by A. Berg, Munich; water colors by Jost Amman of the entrance of the emperor Maximilian II in Nürnberg, 1564, Munich, Staat. Graphische Sammlung; projects for imperial coaches from the first quarter of the 17th century, engraved in 1771 by Roubo the Younger in his *L'art du menuisier carossier*, part of the French Academy publication, *Les arts et les métiers*, after originals in Paris, Bibl. Nat.).

With the 17th century the coach began to have an artistic form of its own, no longer borrowing from the throne, the armchair, or the simple covered wagon. The earliest existing example of a closed coach with glass windows is the coach of Alexis I Mikhailovich, dating from about 1658, now in the Hall of Arms in the Kremlin (PL. 300). Its over-all architectural form and its structural members were no longer hidden by draperies but were accented and brought into prominence by ornamental fittings and wood carvings. As was the case with furniture, prominent artists furnished designs for the decoration and appointments of coaches (without, however, any technical interest, in contrast to the 18th-century developments). In France such artists as A. and J. Le Pautre engraved design projects for the structure of the carriage body (see the examples by J. Le Pautre in *Nouveaux dessins pour orner et embeler les carosses et chairés roullantes*, published by Mariette ca. 1670). A French coach similar in design to the earlier style of Le Pautre exists in Madrid (Kreisel, 1927, pl. 6A); it is a classic example of a closed carriage of the 17th century, luxurious, but restrained. There are no extant examples of the contemporary "half-open" ceremonial coaches of Italian design, but descriptions, engravings, and drawings present a good picture of some of these splendid carriages with their flamboyant decorations, ornaments, and sculptured figures. Each view of the carriage is picturesque: allegorical paintings and floral ornaments (acanthus) burst out of the limits of the functional form to become a commanding baroque framework for the person being honored in the procession (see the engravings of Louis Rouhici, Mus. Civ. di Como).

During the reign of Louis XIV France became the unchallenged dictator of style in carriage construction, and so remained throughout the 18th century. The "great coach" for ceremonial occasions became ever more ostentatiously elaborated. For some time, the outstanding example of this type was considered to be the coach designed by Bernard Picard (1673–1733) in 1714 for the Spanish ambassador to Paris, the Duke of Ossuna (the engraved designs for this coach may be found in almost all European engraving collections). In contrast to the classic closed coach, the ornamentation began to take on a gay spirited life of its own; it flowed over the now lightly bulging coach body and its ornamentally concealed structural elements, assuming the strength and weight of its baroque antecedents. A beautiful example of French production is the great coach of King John V of Portugal, produced about 1715 and still in Lisbon (Museu Nacional dos Côches); also in Lisbon is the coach of the Portuguese ambassador to Rome (PL. 301). The German court also had many of its "great coaches" made in Paris, as, for example, the coronation coach of Emperor Charles VII made in 1741 (Munich, Marstallmus.). By this time the body panels of the coach were almost always covered with representational paintings, as in the case of the coach of Catherine the Great of Russia (Leningrad). The more mobile berlin came into common use during the middle of the 18th century (examples in Munich, Marstallmus.; Paris, Mus. de Cluny). The open four- to eight-place city coach, which made its appearance as early as 1620, and the phaeton, the luxury carriage of the Parisian *jeunesse dorée*, had a relatively high body and large fore wheels; even more common than these was the *calèche*, a sort of phaeton in coupé form, the most elegant models of which developed into the cabriolet. Here the rococo fantasy achieved its most daring realizations (PL. 300): the whole shape of the vehicle gave way to pure ornament. This can be seen in the examples of *calèches* in Heidelberg (Kurpfälzisches Mus.) and in Munich (Marstallmus.). The decisive turn toward the development of the modern vehicle began during the reign of Louis XVI, when the great ceremonial coaches, which moved slowly and cumbersomely, were gradually relegated to the background by the demand for lighter and faster carriages. Technical development corresponded to the practical requirements. England became the leader in construction of light sporting vehicles (coupé, London, Vict. and Alb. 1770/80; English phaeton, Hanover, Herrenhausen Castle, end of 18th cent.). Italian carriage construction competed with the French, especially in Milan, Bologna, and Naples. Their berlins, however, were decorated with a classic reserve, omitting the paintings on

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

the body panels (examples in Milan, Mus. Naz. della Scienza e della Tecnica; Florence, Pitti, the coupé of King Victor Emanuel I of Sardinia, ca. 1800). The décor, still following the lead of Parisian style, began to lose its national characteristics and assume a more international aspect. In addition to the light mobile berlins which continued to remain in use, there appeared in the 19th century several especially ornate state carriages (the coronation coach of Emperor Napoleon I, Versailles, ca. 1804; the coach of state of Queen Maria Cristina of Sardinia, done in Egyptian style by G. Pregliasco, 1819, Florence). This neo-baroque revival reached its extreme in the ostentatious carriage of King Ludwig II of Bavaria (ca. 1870) at about the time when the invention of the automobile was on the eve of condemning the carriage to a gradual disappearance.

Sleighs. Beginning with the Oseberg examples sleighs, like carriages, echoed the contemporaneous taste. The sleighs themselves, as well as the trappings for the horses, were often designed by artists; very often the entire body of the sleigh was composed of three-dimensioned figures and animals. That they served for the amusement of princes is evident in the sleighs that were decorated with allegorical scenes such as "the ship of gold," "Justice with sword and scales," and "fabulous beasts of the forest" (Dresden Armory Inventory of 1606), as well as the bizarre sleighs of the court jesters (see the engraving in Georg Lohneysen's *Della Cavalleria*, Nürnberg, 1632). Since the figures were of papier-maché with raiment of real cloth, it is not surprising that no examples survive of these figure-sleighs. There is a sleigh from the first half of the 17th century, with the figure of a Ceres in wood (Coburg, Kunst-Sammlungen Veste) which stylistically owes its form to the German Renaissance; the Centaur sleigh (Stuttgart) from the second half of the 17th century, however, is a prime example of baroque. These led to the peak of sleigh construction art in the court of King Friedrich I: the racing sleigh with Samson and the one with Apollo, which are attributed to Andreas Schlüter (Berlin, Schloss Monbijou). The sleighs became in effect sculptured representations with baroque metaphorical character — even the runners became part of the over-all composition. Some of the most beautiful sleighs of the 18th century (such as the south German racing sleighs from Stuttgart and the elegant Régence example from Venice, PL. 302), in fact, cannot be said to be decorated, but are in themselves large ornaments. The more reserved decoration of the fashionable "arm-chair" Parisian sleigh of about 1760 (Paris, Mus. de Cluny) stands in high contrast to the exaggerated Munich racing sleighs produced only slightly earlier (ca. 1730–40). However, the greater preference of the 18th century was not for these ornament-sleighs, but for those decorated with allegorical scenes or comedy figures (Munich, Stuttgart, and Leningrad have large collections of these examples, with figures rising on the front of the sleigh body; see also the elegant design of a Dresden artist of 1740/60 in the Dresden copper-engraving collection). Near the end of the 18th century the fashion for sleighing declined, and André Jacques Roubo in his engraving of 1771, *L'art du Menuisier carossier*, proposed for the sleigh a form more clearly compatible with its function and with a reduction of ornamental embellishment and a complete rejection of all accessory figures.

Litters and sedan chairs. Palanquins supported by porters were in use in Egypt from the time of the Old Kingdom (see the wooden model from the tomb of Queen Hetepheres, mother of Cheops, at Giza, and that appearing on the reliefs of the mastaba of the dwarf Seneb, 5th dynasty, also from Giza) as in Mesopotamia (protodynastic impression from Susa). In the art of ancient India, however, litters are represented only rarely and generally for the transport of sacred images in procession; in the majority of cases they appear as a platform provided with a low border and two shafts. Luxurious pavilions with several tiers of couches were often erected on this platform, as may be observed, for example, in the reliefs at Amaravati (see ANDHRA; BUDDHIST PRIMITIVE SCHOOLS). Other types, no less rich, may be observed in the reliefs at Borobudur (see INDONESIA; INDONESIAN CULTURES). The litters of the Hindu princesses were shaded by gilded parasols whose number varied in relation to the rank of the occupant. Since every irregularity in the gait of the porters produced annoying jolts, the above types of litter were replaced by litters similar to those of the late Khmers, that is, hung from a single sturdy pole whose ends rested alternatively on the right and on the left shoulders of the porters. Litters of both types are to be noted in many miniatures of the 18th and of the early 19th century (original models — richly painted and lacquered — are still today in the possession of many temples and princes' palaces, but such models are now reserved only for the transport of sacred images in processions).

In the medieval West the use of the sedan chair was in general reserved for women, invalids, and ecclesiastical authorities. The sedan chair, however, came into fashion again during the baroque and rococo periods as a ceremonial or, more generally, luxury vehicle, for sovereigns and the aristocracy: all of these examples have a characteristically conspicuous decorative accentuation, either plastic or pictorial, and a structural concept that calls to mind a small throne, an intimate palace room, or even, sometimes, a valuable piece of furniture. Examples of sedan chairs conceived for purely utilitarian purposes are rare.

The sedan chair was only sporadically diffused among the peoples of the ethnological level and in general was reserved for persons of high rank or for particular ceremonies, such as the Santal marriage litters of Bihar, India, adorned with valuable intaglio (PL. 293).

In the early Mexican-Andean civilizations sedan chairs were in common use for high dignitaries, as is testified by the frequent representation of them in clay and stone sculptures and in painting. Only a few original sedan chairs have survived, but something of what must have been their esthetic value can be seen in a model from the Chimu kingdom of northern Peru (PL. 293).

Boats and ships. In order to recreate the atmosphere of magic that originally surrounded the construction of boats (and of which there is still a recollection in the launching ceremony), it is probably necessary to go back to the habits of the oceanic populations even more than to the splendid Viking burial-ships, which represent ceremonial types belonging to military leaders. Thus still in Melanesia the decoration of pirogues, which are considered not only as means of transport but as having personality, occupies a foreground position in the rich local artistic production. In New Guinea the sides of the canoes are decorated with polychrome designs representing mythical beings and with ornamental motifs in the style native to each artistic area (see MELANESIAN CULTURES; NEW GUINEA). But the part of the boat where the genius and technical mastery of the artist are more fully developed is the prow, where a figural representation, usually of an ancestor, is placed to guide and to protect the crew against the dangers of the sea. The best realizations are naturally found in the areas of Massim and Sepik, given the artistic level achieved in these stylistic zones. In the Massim area the minuscule and anthropomorphic figure of the ancestor, with the limbs stylized, is inserted into a spiral-motif construction — an abstract recollection of the plumage of the frigate bird. This bird also appears alone, always extremely stylized and connected with a series of geometrical curvilinear motifs which are also often ophidiomorphic. In the Sepik area the form is often constituted in the graceful silhouette of a stylized crocodile's head and various totemic symbols.

On the northern coast of northwestern New Guinea, the canoe prows are of various types. In the Geelvink Bay area sculpture and decoration are stylistically similar to those of the *korwar* (see NEW GUINEA); the figures, even though they are rather small (rarely over 2 ft. high), have a monumental character lent them by the accentuated size of the head, legs, and arms in comparison with the rest of the body. The scroll decoration shows traces of Indonesian stylistic influences. Two other types of decorated prow are encountered on the northern coast: one trapezoidal, with rich openwork arabesques, clearly of Indonesian character, and the other, curved, formed of a complex interweaving of human and animal figures.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

In the Bismarck archipelago, in spite of the high level of artistic production, boat ornamentation does not compare with the elegance of the New Guinea boats. However, note should be made of the prows of the Gazelle Peninsula, New Britain, which are carved and painted in geometrical motifs. In New Ireland, the pirogue's prow, stern, and often even the lift of the hull approaching the bow or stern are decorated with simple but harmonious geometric friezes, achieved with shells and white discs.

In the Solomon Islands great importance is given to the ornamentation of the pirogues, which are the most beautiful in all Melanesia, with the ends raised and without outriggers. Mother-of-pearl is delicately inlaid on the sides, giving emphasis to the designs (painted in black on a white background) representing the frigate bird. Large shells are fixed into the prow and at the stern end is fixed a small, crouching figure with an overlarge head and mother-of-pearl inlay eyes. Still on the stern there are also sculptures in high relief of two human faces, one facing to starboard and the other to port. Of even greater artistic importance is a small, crouching figure representing a guardian spirit, placed on the lower part of the prow at the water level. Mother-of-pearl inlay indicates the line of the eyes and the features of the face; the hands are generally clasped under the chin to support the large head, and the elbows are generally propped on the knees. The massive body possesses an extraordinary monumental quality. The oars are also splendid — mythical figures are carved and painted in red, black, and white on both sides.

Proceeding southward, as far as New Caledonia, boat decoration becomes less and less refined. In the New Hebrides it is reduced to a prow ornament, so abstractly stylized that its avimorphic character is recognizable only through its name.

Boat ornamentation of consistently high quality is achieved in New Zealand (see NEW ZEALAND; POLYNESIAN CULTURES), where the exceptional taste and technical virtuosity of the Maori sculptors, present in all their artistic production, finds a superb medium in the decoration of the sides, which are carved in low relief with the intricate spiral motifs characteristic of this area, and in the creation of the well-known prow and stern ornaments which are formed by raised sections in wood where the same motifs elaborated on the sides are executed in openwork and interspersed with figures carved in the round. In the other Polynesian archipelagos (except in the Society Islands, where the ancient double pirogues — of which, unfortunately, only arbitrary drawings by the early Pacific explorers remain — were decorated with elaborate paliform sculptures) the boats do not show exceptional ornamentation, but for their technical perfection are to be counted among the finest realizations in the field by peoples at the ethnological level. The use of the single or double outrigger and the strength of the hull permitted sailing on the high sea, and perhaps even overcoming, in one last leap, the great oceanic distance between the most southerly island, Easter, and the American continent. The same is true for Micronesia, where the prow and stern of the canoes end in two points which in a stylized form represent the forked tail of the frigate bird. On Truk atoll a sculpture representing a pair of sea swallows, very highly stylized, was fastened to the prow. The hull was also often decorated with rather crude figures painted in black, white, red, and sometimes yellow (see MICRONESIAN CULTURES).

In Indonesia, among the peoples that are at the ethnological level (Alfuri, Dayak, etc.), pirogue decoration is frequent. The large openwork prow ornaments are similar to those already mentioned in northwestern New Guinea. The geometrical motifs are also interesting (triangles, zigzag, circle with an inscribed star), as are the anthropomorphic representations painted on the sides of the beautiful boats of the Yami tribe on Botel Tobago, near Formosa (PL. 311), strangely similar to the representations of the Solomon Islands (see INDONESIA; INDONESIAN CULTURES).

In Africa boats are generally not decorated. The only notable exceptions are the large pirogues (up to 75 ft. long) used by the Duala tribe of the Cameroon coast. On the prow an ornament is fixed which continues its line and which is formed by polychromatic sculptures often representing a man flanked by two animals and preceded by a bird with a serpent in its beak. It is extraordinary how native artists succeed in fusing the complex realistic, stylized, and imaginary motifs into a homogeneous and balanced composition. Also deserving of mention are the boats used by the Haruro tribe of Lake Margaret (Ethiopia). These, though undecorated, in their slender and refined form call to mind the elegance of the Venetian gondola. Canoes and pirogues decorated mainly with polychromatic paintings are to be encountered among some coastal peoples of the Gulf of Guinea, such as the Bidyogo of the Bijagos Islands (see GUINEA), the Fanti of Ghana, etc. Other notable African boats include the royal pirogues of the Rotse tribe in Rhodesia (see RHODESIA, ZAMBIA, AND MALAWI), which are beautifully carved.

Among the American peoples at the ethnological level boats are undecorated, except in the area of the northwest coast, where, especially among the more northern native groups (northern Kwakiutl, Tsimshian, Haida, Tlingit), splendid pirogues are to be found decorated with sculptures in the round and polychromatic paintings. The two- and three-dimensional motifs are no different from those which stand alone or which are attached to other objects (see NORTH AMERICAN CULTURES). They represent anthropomorphic and zoomorphic figures or legendary beings, and understanding of them would very often be impossible without knowledge of the myths, legends, and iconographic symbolism of these peoples.

The larger craft, which were meant to be used for a longer period of travel and had therefore to function as living quarters, presented, because of their very size, different problems of decoration. An outstanding example of decoration for sheer ostentation were the Roman ships of Nemi. With luxurious internal fittings, mosaic pavements on the decks, and gardens with statues and ponds, they were less vessels than floating palaces. Similar in luxury in later times were the royal pleasure boats, such as that of Charles IV of Naples (PL. 319). The most magnificent example of a galley was the "Capitana nuova" of the Medicis, which was used in 1600 to take Marie de' Médicis to Marseilles on her bridal voyage (see M. Buonarroti the Younger, *Descrizione delle felicissime nozze di Madame Maria Medici, Regina di Francia*, Florence, 1600; and the paintings by Rubens in the Louvre). Another in this series of ceremonial showpiece galleys is the Bucintoro of the Republic of Venice (PL. 315; VII, PL. 101), designed for the annual ceremonial marriage of Venice to the sea, with its two lavishly decorated decks and groups of sculptured allegorical figures, including the figure of Venezia on the bow.

In contrast to the galleys, the wide-beamed sailing vessels designed for longer voyages (such as galleons and carracks) were equipped with high, ornate bows and aftercastles as early as the 15th century. These were often complex constructions in house or pergola form. The many high masts increased the splendidly showy character of these ships (see the model reproductions in Venice, Mus. Storico Navale). Descriptions of the aftercastles (Bosio, *Istoria della sacra Religione di San Giovanni Gerosolimitano*, Rome, 1594) make it evident that this was concerned with naval architecture only in its relation to ordinary architecture as applied to the various levels (decks), with galleries, balconies, and decorative gardens. This is to be compared with the castlelike superstructure derived from medieval architecture and applied to famous northern ships such as the *Great Harry* of 1523 (engraving from a painting of Holbein the Younger). However, as early as the 16th century there began the development of a more functional construction of both the interior and exterior of the hull of the ship, corresponding more closely to the demands of an operational sailing vessel. The proportions became more attenuated, the superstructure was reduced, the deck lines simplified; however, decorations of various zones of the fore part of the raised aftercastle, using reliefs or ornamental members, remained a characteristic of ship construction of the times. Note, for example, the stern of the *Sovereign of the Seas* (1637) with allegorical scenes arranged one above the other (Vocino, 1942), or the design of P. Puget (1667) for one of the royal French warships

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

(Marseilles; Mus. des Beaux-Arts). Basically this type of ship continued in use throughout the 18th and 19th centuries, while the galleys went completely out of fashion in the 18th century. The development of technique with its demands on rational and functional ship construction also put an end to the ornamentation of the ship from a solely decorative point of view. The style of construction determined by technical demands on the modern means of transport can no longer be considered under the aspect of art history. Since the time of the Bauhaus the esthetic problems of the industrial production of commodities, including the production of vehicles, has been a concern of industrial design (q.v.).

THE REPRESENTATION OF VEHICLES IN ART. The earliest representations of vehicles are of interest not so much for their artistic quality as for indications of the technological level attained. The pottery of the Naqada culture of Egypt shows many-oared ships complete with cabins, oars, and pennants, and boats are also shown on works from the predynastic period. While chariots did not appear in Egypt until the 18th dynasty, both ships and chariots continued to be important elements in recording the exploits of the Pharaoh as well as in tomb models (PL. 311; IV, PLS. 368, 369).

In the Far East the presence of boats is attested as early as the 3d millennium B.C. Simple types of boats furnished with oars or paddles frequently appear on pottery and bronze objects and in paintings and wall engravings in the tombs. More important as subject matter for art are the miniature boats in clay forming one of the various types of *haniwa*. One of the best known was found in a tumulus at Saito (Miyazaki), representing a boat with six banks of oars. In China ideograms for "boat" and "cart" appear on the oracle bones, but representation of these vehicles in art does not appear general until the 5th–4th century B.C. Again it is the tomb models which are of most interest (PL. 298; III, PL. 239).

Various models of carts and wagons have survived from Mesopotamian times. They also appear on vases and on the famous standard from Ur (VIII, PL. 77). Seals often bore representations of vehicles, particularly chariots; certain Cretan seals show ships with the sternpost ending in a zoomorphic figure or plant appendix. The oldest representations of Greek ships appear on the Dipylon vases (VI, PLS. 95, 96). One of the earliest representations of a three-masted sailing vessel is to be seen in the Tomb of the Ship (Tarquinia).

Representations of chariots and ships as well as of various kinds of wagons are to be found in Roman art and much of the knowledge of these vehicles is owed to their representation in scenes of battle, triumph, and commercial activities (PL. 311).

Interestingly enough, there is an almost complete lack of representation of wheeled vehicles in Islamic art, but beautifully decorated ships appear frequently.

From a technological point of view it must be kept in mind that the artist often gives a schematic or imaginary representation of a vehicle he may perhaps never actually have seen. This is particularly true of depictions of ships, in which the artist may tend to shorten the hull and to accentuate the curves, arbitrarily putting in or leaving out parts of the gear. This does not, however, detract from their importance as subject matter. Although vehicles were often treated decoratively by artists, they remained important primarily symbolically or as adjuncts to certain events until the 17th and 18th centuries. Ships and carts appeared in early Biblical scenes (IX, PL. 83) or in such depictions as that in the Bayeux Tapestry of William the Conqueror crossing the Channel (PL. 312), or they served to identify a specific site (e.g., Port of Classis, mosaic in S. Apollinare Nuovo, Ravenna), but they appeared only much later as themes in themselves. Ships, particularly naval battles or fleets in port, became a favorite theme for painters from the 17th century on. The same kind of animism that caused primitive peoples to consider their boats as people, as living organisms, and to decorate many of their other vehicles with apotropaic symbols may perhaps have survived in the imagination of the painters of relatively modern vehicles. The fascination that early steamboats (PL. 316) and locomotives held for 19th-century artists is a case in point.

For a short time balloon ascensions also provided the painter with inspiration. Not only was the whole event full of a sort of festive excitement, with the air of an outing, but the balloon itself was often gaily painted in designs quite in keeping with the period (PL. 318).

In recent times vehicles have often become the symbols of modern civilization; they have been the object of industrial design (q.v.) and have provided subject matter for posters and publicity.

VELÁZQUEZ, DIEGO RODRÍGUEZ DE SILVA Y. Spanish painter (b. Seville, June 4/5, 1599; d. Madrid, Aug. 6, 1660). That, as tradition has it, he was a pupil of Francisco Herrera the Elder has never been documented; in any event, this would have been before Dec. 1, 1610, when he started as an apprentice in the studio of Francisco Pacheco. The apprenticeship ended in 1616. On Mar. 14, 1617, after having been examined by the overseers of the town council, Juan de Uceda and Francisco Pacheco, Diego received his credentials and diploma as a painter; and on Apr. 23, 1618, he married the daughter of his master, Juana Pacheco, who bore him two daughters, Francisca (baptized on May 18, 1619) and Ignacia (b. 1621). On Feb. 1, 1620, Velázquez, now owner of a workshop, took into his service an apprentice, Diego de Melgar. In April, 1622, wanting to see El Escorial and other royal residences, Velázquez went to Madrid, armed with recommendations to such important personages as Luis and Melchor del Alcázar and Juan de Fonseca, chaplain of His Majesty's Chamber. The visit was brief, but was to be repeated a year later at the behest of the prime minister, Conde-Duque de Olivares. This time Velázquez, accompanied by Pacheco, lodged in Fonseca's house. In 1623, in August, he painted the portraits of Pacheco and Philip IV and that of the Prince of Wales (later Charles I of England) in September. As a consequence he was commanded to reside in Madrid in the future, and on Oct. 6 he was appointed court painter, with a salary of 20 ducats per month, aside from what he was paid for each painting.

In 1624 he established himself in Madrid. On Mar. 7, 1627, he was named *ugier de cámara* (usher of the chamber), and in the same year he obtained the prize in a competition for a large picture depicting the expulsion of the Moriscos. Between September, 1628, and April, 1629, he befriended Rubens, and together they undertook a trip to El Escorial. Immediately afterward Velázquez began to prepare for a long-desired journey to Italy. Royal permission for the trip was granted on June 28, 1629. Velázquez embarked at Barcelona and arrived in Genoa on Sept. 19. From there he went to Milan, possibly also to Verona; then to Venice, where he copied Tintoretto's paintings; and then to Ferrara, where he presented his credentials to Cardinal Sacchetti. In Bologna he was well received by Cardinals Ludovisi and Spada; he went from there to Loreto and finally to Rome. Francesco Niccolini, administrator of Villa Medici, recorded that on Apr. 30, 1630, the Spanish ambassador requested quarters for the painter. On May 4 Velázquez was installed in the villa, where he stayed for two months, until a bout of fever forced him to take refuge in the ambassador's own house. Velázquez next went to Naples, and from there, early in 1631, he returned to Spain, where the royal favors continued. On May 8, 1633, he was accorded the office of *alguacil de casa y corte* (constable of the royal household and the court), an honor yielding the sum of 4,000 ducats. On Oct. 3 Velázquez and Vincenzo Carducci (Vicente Carducho) appraised the portraits of the royal family painted by some minor artists of Madrid. In the following year his daughter Francisca was married to the painter Juan Bautista Martínez del Mazo, Velázquez' pupil and gifted assistant. At the end of July, 1636, Velázquez was made *ayuda de guardarropa* (assistant of the wardrobe), and until 1644 his activities were divided between his court duties and painting. In 1644 he followed Philip IV on a military expedition to Aragon, and in 1645 he accompanied Prince Baltasar Carlos on a journey to Saragossa. On Nov. 25, 1648, the King ordered Velázquez to Italy to acquire paintings and sculptures for the royal collections; he was to accompany the Duque de Nájera, who was going to Trento to escort the new queen, Mariana of Austria. Velázquez left Madrid on Nov. 8 but did not sail from Málaga until Jan. 21, 1649. On Mar. 11 he landed at Genoa; he visited Milan and Padua and arrived in Venice on Apr. 21. From there he went to Parma, Modena, Bologna, and Florence. He stopped in Rome and then proceeded to Naples, where he made his principal purchases of antique sculptures. He returned to Rome, where he painted the portrait of his attendant, Juan de Pareja (Longford Castle, Earl of Radnor Coll.); the portrait was exhibited in the Pantheon on Mar. 19, 1650, and was admired by all. He then painted the portrait of Pope Innocent X (PL. 324).

Philip IV, displeased by the prolonged absence of the painter, demanded his return, and Velázquez canceled his planned trip to Paris. On Dec. 12 he went to Modena and from there to Genoa, and in June, 1651, he landed in Spain. The royal favor continued more abundantly than ever. He was paid arrears of salary for two years, and on Feb. 16, 1652, he was named *aposentador mayor de palacio* (chief steward of the palace). This forced him to leave his old residence and move into the so-called "Casa del Tesoro" (Treasury House) next to the palace. In 1654 his daughter Francisca and his father-in-law died. In 1657 Velázquez wanted to go to Italy for a third time, but he was refused royal permission. He was generously compensated when on June 12, 1658, the king invested him with the Order of Santiago. The patents of nobility required for this honor were not entirely satisfactory, but Philip IV settled the suit by asking papal dispensation from Alexander VII. The dispensation arrived, and Velázquez was dubbed a knight on Nov. 27, 1659.

In the spring of 1660 Velázquez accompanied the court to Pheasant Island in the Bidassoa River, where Philip IV and his daughter María Teresa were to meet her bridegroom, Louis XIV. Velázquez left Madrid on Apr. 8 and arrived in Fuenterrabía on May 1; he returned to Madrid on July 26, exhausted by the voyage. On July 31, complaining of a high fever, he abandoned his duties at the palace and took to his bed. He died on Friday, Aug. 6, and was buried in the Church of S. Juan Bautista (destroyed in 1811).

The foregoing biography is that of a fortunate man, and it parallels that of his friend Rubens (q.v.). The inventories made after Velázquez' death proved that he had lived comfortably, almost luxuriously; his house was richly appointed with fine furniture and tapestries. His serene, swarthy, southern aspect and superb self-assurance are immortalized in two self-portraits — the one included in *The Family of Philip IV*, called *Las Meninas* (PL. 330), and the one in Valencia (Mus. Provincial de Bellas Artes) — that show a serious-looking gentleman, a nobleman by nature. Marco Boschini, who knew him, described him as a "*cavalier, che spirava un gran decoro, quanto ogn'altra autorevole persona*," at the same time noting his independent judgment when he declared how little Raphaels' paintings pleased him: "*A dire el vero (piasendome esser libero e sinciero) stago per dir che nol me piase niente.*" But there was always a certain measure of indolence beneath the assurance and self-control of his southern temperament, in which Andalusian and Lusitanian mingled. "*Ya conoceis su flema,*" Philip IV reminded the Spanish ambassador in Rome. It was because of this disposition and, in later years, because his duties at court took much of his time that Velázquez painted little. Other details confirm his self-assurance, which was the product of an extraordinary mental balance. Velázquez' library, although not large, was certainly superior in quality to those of his colleagues: it contained a few devotional books, some volumes of poetry, and books on divination, mechanics, medicine, horsemanship, hunting, and mathematics; others by Aristotle, Horace, Ovid, Ariosto, and Castiglione; and, finally, works by Pliny, Vasari, Vesalius, Dürer, and Juan de Arfe, as well as a large collection of treatises on architecture by Vitruvius, Leon Battista Alberti, Vincenzo Scamozzi, Sebastiano Serlio, Francesco dall'Abacco, P. Cataneo, Andrea Palladio, and Giacomo de Vignola. Although Velázquez did not introduce an abundance of architecture into his works, he well understood that this art was the definer of plastic balance. Such a respect for the moderating and regulating power of architecture in a man who so seldom

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

employed it for backgrounds indicates a solid Renaissance schooling. It is here that one detects the rigorous teachings of Francisco Pacheco. From the time of Pacheco to the present the esteem in which Velázquez has been held has not varied, except for that interval in the 1800s and in the romantic era when another Spanish painter, Murillo, was exaggeratedly evaluated. During this period any painting of an interior in some degree of shadow in which rustic figures appeared was considered a work by Velázquez; well into the 19th century mediocre works were attributed to him, with the consequent lowering of the value of his paintings. Only later did new genuine pictures by Velázquez appear, permitting much more complete studies of his artistic personality. The study of Velázquez and his work is thus a 20th-century science: the earlier body of criticism, after the clear memory of Velázquez as a person had dimmed in Madrid, incorporated so many errors and created such confusion that the study of his work has had to be totally reevaluated. It must be borne in mind that of the 130 pictures that today constitute his *catalogue raisonné*, 25 or 30 were discovered and analyzed in the 20th century.

As an apprentice in Pacheco's studio in Seville Velázquez had to undergo a hard and rigorous course in drawing. Pacheco himself was a mediocre painter (cf. XII, PL. 376), totally lacking in inspiration and imagination; but he had absorbed the more lasting principles of the mannerist school, and he admired Caravaggio, whose work he scarcely knew, eulogizing him as a "bold imitator of the natural." There is no reason to assume that Velázquez himself could have known the work of Caravaggio during his Sevillian period, and when he might have known it later, in Madrid or Italy, his esthetic sense was too firmly set to admit such influences. The sharply profiled outlines, which Velázquez rapidly lost after his Sevillian period, are not enough to be considered Caravaggism.

The criticism of two centuries has not improved on the evaluation of *The Water Seller of Seville* (London, Wellington Mus.) by Anton Raphael Mengs, who in a letter observed that the very imitation of the natural gave the painting a certain "hardness" and "dryness." But even with this hardness, it is the most important painting of this period, a forerunner of the *aldeanillo* (village boy) figure of whom Pacheco speaks and whom Velázquez drew in numerous versions. The *aldeanillo* is present in the *Old Woman Frying Eggs* (1618; Edinburgh, Nat. Gall. of Scotland) and in the *Adoration of the Kings* (1619; Prado). The charming and anonymous model always appears with angular and rough features, characteristic of this period before 1623. Other more beautiful models of the same period also reappear: thus the youthful Mary in the *Immaculate Conception* (ca. 1619; London, Mrs. Woodall and the Misses Frere Coll., on loan to Nat. Gall.) could well have been Pacheco's daughter — in fact, Pacheco filled in the background and drew the outline of the figure. Notable in all the work of this period is a feverish desire to render every detail faithfully and to be sure that nothing of the true content is lost. What began as an exercise, which basically consisted of grouping figures and several inanimate objects, turned into habit, as is evident, for instance, in the scheme of *The Breakfast*, in the versions in Leningrad (The Hermitage), Budapest (Mus. of Fine Arts), and London (Wellington Mus.); in *Three Musicians* in Berlin (Mus. in Dahlem); in the *Christ in the House of Martha and Mary* in London (Nat. Gall.); in the *Christ at Emmaus* (also known as *La Mulata*) in Russborough, Co. Wicklow, Ireland (Sir Alfred Beit Coll.); and in *The Servant* (VI, PL. 71).

All this was a novelty in Spain, and Palomino (1724) commented that Velázquez did it "to differ from others and follow a new course" and that instead of emulating Raphael he preferred to be "first in this vulgarity rather than second in delicacy." A. Vegue y Goldoni ("Un lugar común e la historia del arte español: El cambio de estilo en Ticiano, Navarrete, el Greco y Velázquez," in *Archivo español de arte*, Madrid, 1928, IV, pp. 57–59) has shown that the same criterion had been applied to Titian, Navarrete, and El Greco. And the novelty was relative: Pablo Legote and Francisco Herrera the Elder also painted folk types more or less in conjunction with *bodegones* (genre scenes). Furthermore, in these early pictures of the Sevillian period Velázquez had already begun a personal mode of expression to which he was to remain constant for many years; he juxtaposed two distinct spheres of action in one canvas — one in the foreground, given heightened significance, the other in the distant background but expressive in its narrative message. In the London *Christ in the House of Martha and Mary* (ca. 1622) the foreground is occupied by a young girl and an old woman preparing a meal, while the scene with Christ preaching to the two sisters is placed in the background in an almost arbitrary manner. In the *Christ at Emmaus* in the Beit Collection, the servant, in the foreground, busies herself with the preparations while in the background is the scene of Christ with the disciples. The transition between the foreground and the background is executed with a certain heaviness and a precarious narrative continuity but with a logical balance of light and dark areas. This preoccupied Velázquez during his entire career, and it reemerged, handled with surpassing mastery, in his late period, especially in depicting the fable of Arachne in *Las Hilanderas* (PL. 332; II, PL. 193).

In speaking of this first period Palomino insisted that Velázquez imitated El Greco in his portraits. This is an obvious absurdity, as young Diego could not possibly have known anything about El Greco before his first trip to Madrid in 1622. And before this date he had done portraits, for the *St. Thomas* (Orléans, Mus. B. A.) and the *St. Paul* (Barcelona, Mus. de Arte de Cataluña) are indeed portraits. From this period are also the *Portrait of a Man* (Prado); the portrait of Don Cristóbal Suárez de Ribera, in the Church of S. Hermenegildo in Seville; and those of Sister Jerónima de la Fuente, two versions in Madrid (Prado; Fernández de Araoz Coll.) and one in Derbyshire (Tissington Hall, William Fitzherbert Coll). Although these works have certain similarities, the Prado portrait of the nun (1620) is perhaps the most characteristic and the most closely related to the technique of the *bodegones* in its concise characterization. It is possible that had Velázquez remained in Seville, exempt from the numerous later influences, he would not have transcended the dark and contrasting manner that he adopted in 1619 with the *Adoration of the Kings* (Prado). This picture reveals a paucity of imagination that appears to be a carry-over from his master, Pacheco; with a theme so rich in possibilities, Velázquez concerned himself only with the placement of certain figures — here the *aldeanillo*; there the old king, an unmistakable portrait of Pacheco; then one of the gift bearers, an obvious Andalusian gypsy; the Virgin, a portrait of Juana Pacheco, and the Child, the little Francisca. Strangely enough, in only one picture of the Sevillian period does Velázquez rise above this imaginative rut; in the *Christ at Emmaus*, in New York (Met. Mus., Altman Coll.), he still groups figures with harsh realism, but they are contrasted with the luminous figure of Christ. Here there is no trace whatsoever of the presumed influence of Caravaggio.

Velázquez saw clearly that the only outlet for his inborn force lay in Madrid; Pacheco, too, realized this and made the trip possible by resorting to his influential friends. It is certain that during this first trip Velázquez became acquainted with pictures by El Greco. Velázquez' *Investiture of St. Ildefonso with the Chasuble*, in the Archbishop's Palace, Seville, dates from the period (1622–23) between the two trips to Madrid; from the first of these trips, the portrait of Luis de Góngora (Boston, Mus. of Fine Arts) retains some of the Sevillian hardness, considerably attenuated and softened by looser treatment. But the radical change of style is seen in the *Investiture of St. Ildefonso with the Chasuble*, indeed a strange picture, with violent light and restrained shadow in which, not too felicitously, the image of the Virgin is repeated seven times from the same model, who must have been the wife of the artist. J. Allende-Salazar (1925) was the first critic to see in this work definite influences, although poorly assimilated, of El Greco. Later these influences were to become stronger, not so much in the iconography or in the lighting as in the technique.

From here on Velázquez' works are clearly separated from the Sevillian prologue. When he triumphantly entered the Madrid court and began to portray the monarch, the doors to the palace were flung open and with them the royal art col-

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

lections. The palace in Madrid was full of works by Venetian masters, in particular Titian, whose influence Velázquez was never to deny. But what the young Sevillian first learned was sobriety, practically required of the royal portraitist. Velázquez placed his models, lighted from the left, before a neutral background, with no other element but the end of a table. The colors were neutral, muted, and still; the profusion of details that only a few years earlier formed part of Velázquez' compositions disappeared. The result is that these portraits leave a certain impression of delicacy and fragility, although the one of the Infante Don Carlos (XIII, PL. 150) must always be counted among the most perfect examples of masculine portraiture.

But Velázquez' success at court did not protect him from criticism, especially from practitioners of the Italian school of painting in Madrid, among them Angelo Nardi, Eugenio Caxés, and Vincenzo Carducci (Vicente Carducho). Carducci, a writer of treatises as well as a painter, entrenched in the restraining norms of mannerism, attacked Velázquez openly in two passages of his *Diálogos de la pintura* (1633), calling him unschooled for the imperfections he regularly portrayed, adducing the strange reasoning that the "great and eminent painters were never portraitists," and adding that he worked more "from natural impetus than from studies." It was, in fact, a miracle for a 24-year-old man to have triumphed so quickly in Madrid; and his preeminence was officially established in 1627 by his victory over Carducci, Caxés, and Nardi in the competition for a painting depicting the expulsion of the Moriscos by Philip III. The winning picture was destroyed by a fire in 1734, and it is known only from a brief description by Palomino. From this same period, before the first journey to Italy, the following portraits are preserved: two of Philip IV (Met. Mus.; Prado), one of the Bourbon queen Isabel (Madrid, Trauman Coll.), three of the Conde-Duque de Olivares (São Paulo, Mus. d'Arte; London, private coll.; New York Hispanic Society), and others of unidentified persons, one of which is thought to be a self-portrait.

The masterpiece of this period is the celebrated *Drunkards*, or *The Triumph of Bacchus* (PL. 322). The first title is better and more fitting than the second, for whatever mythological meaning can be given to the picture is far removed from the sharp realism it conveys. This painting is, in a way, a regression to the tavern and kitchen scenes (*bodegones*) of the Sevillian period, except that it denotes a hitherto unmanifested influence, which E. Lafuente Ferrari (1943, 1944) with reason supposes to have come from Rubens. C. B. Curtis (1883) with fine perspicacity praised the act of "seizing a laugh and fixing it on the canvas without converting it into a grimace" as an "unparalleled triumph of skill." And C. Justi (1889), although he praised the picture, was surprised by the meagerness of the space, by the bareness of the sky (which was left unfinished), and by the agglomeration of figures. A. de Beruete (1898), who did not admire the composition, concluded sagely that Velázquez had thought of each figure separately, resulting in an ensemble with a forced and artificial over-all look. Later, two illustrious writers, José Ortega y Gasset and Eugenio d'Ors, agreed in their commentary on this vulgarization of mythology. "The bacchanal turns into a drunken bout. . . . There are no gods," said Ortega (*Notas*, Madrid, 1900, pp. 85–86); and D'Ors added: "But art redeems all; when it converts a god into a picaresque figure, it, in its way, immortally elevates the picaresque figure into a god" (1963, p. 55). About this composition, which definitely closed one of Velázquez' periods, D. Angulo Iñiguez (1947) has wondered if the left-hand part was not partially inspired by the similar postures to be observed in Titian's *The Bacchanal* (PL. 93).

The trip Velázquez made to Italy in 1630, above all a study trip, marked the beginning of a new period. During his stay in Venice, Rome, and Naples Velázquez strengthened his identification with Venetian painting, assessed Ribera's fusion of this active realism with the Italian, and was exposed to the classical nude. The discovery of the classical took precedence over all else, and its influence is evident in the two magnificent works of 1630, *The Forge of Vulcan* (PL. 321; VII, PL. 386) and *Joseph's Bloody Coat Brought to Jacob* (PL. 322). However, the seduction of the classical was not accompanied by a taste for the mythological: Velázquez never came to regard the gods of paganism as other than mortals, and his greatest concession was in *The Forge of Vulcan*, with Apollo entering Vulcan's smithy to inform him of the infidelity of his wife. Everything else is realism, in both paintings mentioned above, but with the great novelty of some perfectly observed nudes. Speaking of the nude figures in the *Joseph's Bloody Coat Brought to Jacob*, Francisco de los Santos (*Descripción breve del Monasterio de S. Lorenzo el Real del Escorial . . .*, Madrid, 1657) said that they were drawn "with such art and character that they could serve as examples for anatomy." The composition in both paintings is one of extreme freedom, diametrically opposed to the agglomeration of figures in the *The Drunkards*. D. Angulo Iñiguez (1947) has pointed out that the smith in *The Forge of Vulcan* repeats the position of a centurion in El Greco's *Martyrdom of St. Maurice and the Theban Legion* (VI, PL. 459) and that the general ensemble of the *Joseph's Bloody Coat Brought to Jacob* derives from Dürer's print of *Christ Before Caiaphas*. C. Justi (1889) thought that the two landscapes of Villa Medici (Prado; PL. 323) were painted during this first stay in Italy, the reason being that the villa had then been his residence. But it would have been too whimsical even for Velázquez to express himself at the same time in the classical contour of sculptural nudity and also in the rapid idiom of "impressionism." Later reference will be made to this pair of landscapes. It is more certain that this trip produced the portrait of the Infanta of Spain, Doña María, Queen of Hungary (Prado).

It is likely that on Velázquez' return to Spain he was sent to Orihuela to paint *The Temptation of St. Thomas Aquinas* (Orihuela, Mus. Diocesano). It was E. Tormo y Monzó (1910) who brought it to light, attributing it to an obscure Murcian painter, Nicolás de Villacis; but J. Allende-Salazar (1925) catalogued it as a work by Velázquez. Painted with admirable facility in some parts — almost Goyaesque in the figure of the temptress — this painting marks the first instance of native audacity that Velázquez permitted himself on returning to Spain after having resided in an atmosphere of concentrated classicism.

The long span of 20 years as a courtier, between the two journeys to Italy, constitutes a great period in Velázquez' career, prodigious in portraits and single figures but scarce in large compositions. The paintings of this period are the most typical of Velázquez, equally far from the hardness of the Sevillian prologue and from the "impressionistic" splendor of the last ten years. During this middle period Velázquez executed 60 paintings, which made up almost half of his lifework. It is well to remember that these years were, at the same time, those of the disintegration of the monarchy and the political hegemony of Spain; but none of this is reflected in Velázquez' work.

From this period of creative fullness, the few pictures with religious themes, constituting a very limited series, have given rise to disquisitions about the religious and mystical sentiments of the artist. F. J. Sánchez Cantón Oviedo (1943) has written at length of Velázquez' spirituality; but his interpretation appears to be erroneous, for no Spanish painter of the 17th century was less attracted than he by sacred themes, which to him were as far removed and strange as mythology. That he was a practicing believer like almost all Spaniards of his century is beyond doubt, but this does not exclude an insensitivity to the mystical, in strong contrast to his friend Francisco de Zurbarán (q.v.). In any case, his most important creation of a religious subject is his *Christ on the Cross* (PL. 325). This theme was interpreted hundreds of times in Spain during that century, but Velázquez' reduction of the subject to a geometrically skeletal form is unique. The picture is a noble creation above the trivia of iconographic preoccupations advanced by Pacheco, who, as a functioning *asesor iconístico* (assessor of iconography) for the Office of the Inquisition in Seville, upheld the necessity of representing Christ fastened to the cross by four nails, one for each of the extremities; he had affirmed this thesis with a mediocre *Crucifixion* of his own (Madrid, Gómez-Moreno Coll.). But although Velázquez followed the iconographic lesson of

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

his father-in-law, the result was completely different; in Velázquez' painting the detail of the four nails is unimportant and easily forgotten before the naked solitude of the dead Christ. Another painting by Velázquez of the same great theme, which came to light not many years ago in the Convent of the Bernardas Recoletas in Madrid (now at the Prado), appears to be an earlier version; it is smaller in size.

The *Christ after the Flagellation Contemplated by the Christian Soul* (PL. 320) is a picture without history and practically without mention in critical works; it became part of the collection of the National Gallery, London, in 1883 but was not correctly interpreted until 1904, when Friedrich Schneider recognized it as a representation of the vision of St. Bridget of Sweden, a subject not unknown in Spain. The existence of an analogous picture by Juan de las Roelas in the Church of la Encarnación in Madrid has been mentioned; Roelas's picture is much less beautiful than Velázquez' and certainly not so unusual in composition, nor is it divided into two distinct sections. In Velázquez' canvas the figure of Christ is, in fact, a study of the nude, painted perhaps on Italian models; the beautiful boy is undoubtedly a portrait of someone close and familiar; and the angel, as D. Angulo Iñiguez (1947, pp. 83–85) has shown, is copied from Dürer's print, *The Angel with the Key of the Bottomless Pit*, although the figure is reversed.

About 10 years later Velázquez painted *St. Anthony Abbot and St. Paul the Hermit* for one of the hermitages located at the Buen Retiro. Because of its style it is a work of disputed chronology; A. L. Mayer (1913) dates it latest, as not before 1642. The controversial point in this canvas is its medieval conception, which follows the custom of representing, in one painting, various consecutive scenes of a hagiographic cycle. In the background St. Anthony is depicted with the centaur and the satyr; then he is shown calling at the grotto of St. Paul. The principal scene, that of both saints together, chronologically precedes another of the secondary scenes, that of St. Anthony kneeling before the dead body of his friend. These are iconographical elements that could have composed a Gothic panel, and it is surprising that Velázquez, so little given to fictions removed from immediate physical reality, could have arrived at this extraordinarily anachronistic medievalism. In this devotional picture the landscape, which occupies seven-eighths of the space, is rendered in delicate blue and green tones, with a subtlety and exquisiteness of palette seldom attained by the great artist. Here once more the Italian memories prevail, in the repetition of one of the compositions of Pintoricchio in the Borgia Apartments in the Vatican.

Velázquez' last picture with a religious subject is *The Coronation of the Virgin* (Prado), also of disputed date but which, in the opinion of J. Allende-Salazar (1925), should be placed about 1641 or 1642. Its scheme is hardly original, but it does follow the formula recommended by Pacheco for such iconography. It is possibly the least original painting by Velázquez; notwithstanding the central and bilateral arrangement of the sacred figures, the first glance calls to mind the same subject by El Greco and by Dürer (the latter in one of his prints), as pointed out by D. Angulo Iñiguez. More recently M. S. Soria (1953) has shown the close dependence of the Velázquez version on two prints, one by Jan Sadeler from an original by Marten de Vos and the other, possibly also a vulgarization of the De Vos, by Karel von Mallery. This work makes use of intense, bright tonalities, contrasted in an almost violent manner, exulting in a masterful boldness of palette and sureness of brushwork. The six small angels that surround Mary are of little account beside the severe and utterly serene truth with which Velázquez, with the tools of the true portraitist, depicts the Virgin, Christ, and God the Father. The great sacred integrity of the picture arises from the same dignity that is found in the portraits.

This decorum, this exalted sense of dignity, was at its greatest in *The Surrender of Breda* (*Las Lanzas*; VII, PL. 276). But before discussing this masterwork, other works that date from the same time must be mentioned, such as the splendid equestrian portraits of King Philip IV, Queen Isabel of Bourbon, and Prince Baltasar Carlos (PL. 326). In these canvases, the gallantry of the riders and the vigor of the horses, outlined against the limpid mountain landscape of the Sierra de Guadarrama, are worked out with large, sober, rigorous brushstrokes, so masterfully calculated that even the unconcealed pentimenti on the hind feet of the king's horse give an extraordinary suggestion of reality. It should be noted that the Spanish painter has always been concerned mainly with the human and the divine, paying little attention to the animal world and the landscape. With these equestrian portraits Velázquez revolutionized this traditional attitude; the horses in these paintings and the bluish landscape, so exquisitely delicate in tonality, of the Madrid mountains are as important as the riders. These portraits were much admired by Manuel de Gallegos in his *Silva topográfica* (1637). Another, very similar portrait, the one of Conde-Duque de Olivares on horseback (PL. 326) shown as a general in action, is considered to be of later date on the supposition that the battle seen in the distance refers to the siege of the plaza of Fuenterrabía in 1638.

The royal equestrian pictures were painted for the Palacio del Buen Retiro, where a large room was to be decorated with battle scenes of military triumphs gained during the reign of Philip IV. The themes to be painted were distributed among various artists: Zurbarán, Jusepe Leonardo, Carducci, Antonio de Pereda, Felix Castello, and G. B. Mayno collaborated according to their abilities. The direction of the series appears to have been entrusted to Velázquez, who reserved for himself the task of depicting the most celebrated of these triumphs, the capitulation of Breda in 1625. Velázquez had never seen Flanders, but for the veracity of the detail in the projected picture he counted on the victorious general, Ambrosio de Spínola, in whose company he had traveled to Italy in 1629.

Very simple in composition, *The Surrender of Breda* shows only the two general staffs of the contending armies behind the leading generals, the victorious and the vanquished. Maurice of Nassau is bowing and delivering the keys of the city to Ambrosio de Spínola. In the background an armed company marches by, and the city is seen in the distance. There is a parallel between this canvas and the play by Pedro Calderón de la Barca, *The Siege of Breda*, dated ten years earlier, immediately after the event. C. Justi (1889) and later E. W. Hesse (1951), studying the relation between the two works, deduced that Velázquez was familiar with Calderón's drama; the cordial meeting and conversation between the two generals had an illustrious literary precedent. The sources of the compositional scheme have been studied and recognized: J. Meier Graefe (1923) determined that the groups on the right side, supposedly somewhat altered, came from an analogous scheme in El Greco's *Expolio*, or *Disrobing of Christ*. D. Angulo Iñiguez (1947) detected precedents in Veronese's *Christ and the Centurion* and in Rubens's *Meeting after Nordlingen*. The entire composition, as P. Jamot (1934) demonstrated, is derived from *The Encounter between Abraham and Melchisedech*, one of the engravings by Bernard Salomon illustrating the *Quadrins historiques de la Bible*, by Claude Paradin, published in Lyons in 1553. Clearly visible in the engraving is the field of upright lances described by Calderón; these spikes of steel are so characteristic of the painting that it has come to be popularly known as *Las Lanzas* (The Lances).

A. Borelius (1949) recognized that the city of Breda, seen in the distance, was faithfully copied from an engraving in *Obsidio Bredana*, by Hermannus Hugo, a work published in Antwerp in 1629; Velázquez knew the engraving directly through the version that Pieter Snayers presented in his *Taking of Breda* (Prado). In spite of the numerous sources, Velázquez recreated the event with prodigious originality. Although he was personally unfamiliar with the Low Countries, he recreated a Dutch landscape with exact fidelity; and although he had never taken part in a military action, he succeeded in conveying, in the background of the picture, the terrible reality of the anguish that follows a great battle. Finally, facing the difficult theme of the meeting between a victorious soldier and a defeated one, Velázquez painted a scene of noble and seignorial magnanimity, weighted with psychological and emotional values. Most important of all, however, in *The Surrender of Breda* are its figural

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

and technical aspects: the rich color; the powerful drawing; the unsurpassed collection of portraits; the natural attitudes; the masterful composition that keeps the keys to the city, the principal symbolic element, in the center of the picture, profiled against a light background. In the effort to make everything authentic, no detail was overlooked; Velázquez devoted as much attention to the secondary as to primary elements in his paintings, even at the midpoint of his career. The care for each small object continued, as in his early *bodegones*, but was refined and enriched by the artist's subtler perception. In 1655, when he painted *The Surrender of Breda*, Velázquez, scarcely 36 years old, had already reached his peak, and although he continued to gain in mastery, *The Surrender of Breda* remains an incomparable feat.

To this period belong numerous portraits in which the figure represented — whether the king, a prince, a court jester, or a dwarf — was always observed with the same impassive objectivity. The portraits (more than a dozen) of jesters and dwarfs, no doubt executed on royal commission, include those of Diego de Acedo (Prado), Sebastián de Morra (PL. 327), Antonio el Inglés (Prado), Juan de Calabazas (Calabacillas; XI, PL. 219), and Francisco Lezcano (Prado). In these portraits Velázquez was concerned mainly with the essential characteristic and with the outline of the figure; and perhap because of the difficulty in posing these unfortunates, he was forced to sharpen his gift for observation: some of these pictures show many corrections, others are unfinished, and one — the portrait of Antonio el Inglés — was provisionally attributed by Allende-Salazar (1925) to J. Carreño de Miranda.

Also from this period, or shortly before, are portraits of King Philip, Cardinal-Infante Fernando, and Prince Baltasar Carlos (all, Prado) at the hunt, seen against the landscape of El Pardo and the Sierra de Guadarrama; Velázquez was in fact the first painter to grasp the beauty of this vigorous mountain landscape. More important and successful portraits followed: that of the Duke of Modena, Francesco I d'Este (PL. 327), a profound and flattering likeness painted in Madrid toward the end of 1638; that of the great sculptor Juan Martínez Montañés (Prado), portrayed in the act of modeling a bust of Philip IV; that of Cardinal Borgia, known only through the preparatory drawing in the Academia de S. Fernando in Madrid and through several studies; that of Cardinal Astalli (known as Cardinal Pamphili; New York, Hispanic Soc.); and the fine portrait of the King during the military expedition of Fraga (New York, Frick Coll.).

Velázquez seemed able to appraise models of varying social conditions with the same degree of mental concentration and self-discipline, just as he did not establish clear-cut distinctions between classical and Christian divinities, seeing in both no more than their human incarnation. It is not known whether the dissolute man in the *Mars* (Prado) conceals a strong criticism of mythology or masks a ruffianly personality; or whether the *Menippus* and *Aesop* (both, Prado) are more than figures out of the picaresque life of Madrid. In this manner of portraiture Velázquez scarcely seems to belong to the baroque era; he leaves kings and dwarfs alike deprived of background as if to isolate them in solitude. J. Ortega y Gasset's analysis (1944) is expressed in the statement that "the repose of Velázquez is obtained and sustained to the end, thanks to a constant tension, indeed, to an unceasing struggle against his whole century."

A similar antibaroque attitude in Velázquez is manifested by his few paintings of animals and landscapes, subjects that, as already indicated, were almost totally foreign to Spanish painting. It is not to be supposed that these subjects were favorites of Velázquez; but as a servant of the king he could not refuse any commission, and with Philip IV's extravagant addiction to hunting there was ample opportunity to paint hunting scenes and animals, such as the *Head of a Stag* (Madrid, Vizconde de Baiguer Coll.). *La Tela Real*, or *Philip IV Hunting Wild Boar* (London, Nat. Gall.), shows the types of human landscape, swelling with action and full of life, that is the most characteristically Spanish version of this genre. Given by Ferdinand VII to Lord Cowley, this painting was considerably restored after being damaged in the palace fire of 1734. One of Velázquez most captivating works, it was possibly done in collaboration with his son-in-law, Juan Bautista Martínez del Mazo. This collaboration, indicative of the important stature of Martínez del Mazo, is evident in another masterful landscape by Velázquez, the *View of Saragossa* (Prado). Here, however, although the collaboration is generally recognized, there is no agreement as to the attribution of the different parts. A. de Beruete (1898) and J. Allende-Salazar held that the figures in the foreground were by Velázquez, while the landscape itself, which W. Stirling-Maxwell (1855) considered an anticipation of Canaletto, was the result of Martínez del Mazo's collaboration. At present the contrary opinion seems to hold: the sunny background of the Aragonese city is so masterfully executed that it should be attributed to Velázquez. Nevertheless, most of the figures in the foreground also merit this attribution.

The study of the gradual development of Velázquez' style must follow a chronological order, because, if his complicated formative period (which ended in 1630 during the first voyage to Italy) was followed by a long period of mature development, then only in 1649, beginning with the second voyage to Italy, did the search for a personal style begin, a theory not sustained by observation of the artist's personality. It is true that his brushstrokes grew freer, gaining in assurance and precision, and that his color sense was perfected, so that he dispensed with impasto, letting each hue stand by itself in individual dots of color. All this, however, does not suffice as an explanation. Velázquez, in his personal artistic development, was discovering impressionism, which the more perspicacious of his contemporaries had already noted in his style. As early as 1629, Francisco Gómez de Quevedo (little versed in questions of art but a wise observer), in his *Al pincel*, had spoken of the *manchas distantes* in Velázquez' works. Before the second trip to Italy, this "separate spot" technique, known in modern terminology as divisionism, was already recognized as the essence of a personal style. Obviously this style needed to be developed, and this was realized with the second voyage to Italy.

During his second Italian journey Velázquez produced some exceptional works: the portrait of Pope Innocent X (PL. 324), the one of Juan de Pareja, and the two landscapes of Villa Medici (PL. 323). The first one chronologically (1650) is the portrait of Juan de Pareja, the servant who accompanied him on the trip — a servant, but also a colleague, whose style differed so from that of the master that he cannot really be called a pupil. (In fact, except for half a dozen pictures signed by Pareja, little is known about him). Velázquez painted this portrait before that of the Pope to "loosen up the hand," which implies that for a year and a half, since he had begun preparations for the voyage, he had not been at work. Exhibited at the Pantheon in Rome, the portrait of Pareja aroused great interest; even beside the brilliance of the red that lights up the portrait of Innocent X, the Pareja portrait is in no wise inferior. The latter is a more precise and strict portrait, manifesting the close relationship between the artist and the model, while the Doria Pope appears more introverted and retired, as he must have seemed to Velázquez during the brief audience granted. Innocent X, then 75 years old, was a secretive and reserved old man, often vulgar and surly. All this was caught by Velázquez in the time allowed for the sitting, short but enough to fix the traits of the stubborn head so well that it coincides completely with the bust by Bernini (II, PL. 277), even though the latter was more kind to his model. The extraordinary portrait seems painted without beginning or end, in a moment of inspiration. "It has the enchantment of the immediate," said C. Justi (1889) perspicaciously. Much later, Reynolds (in a letter dated June 23, 1786, to the Duke of Rutland) judged it "one of the first portraits in the world," a judgment that refers not only to the force of the physical portrait but also to something for which the great English painter himself strove, the unsought-for pomp that envelops the Pope — unsought for, because the old Doria Pope merely consented to sit at ease in his armchair before the Sevillian. Even a quick glance at this marvelous picture will reveal the mastery in the nuances of the reds of the cape, biretta, and chair and the white of the alb. "Too real" seems to have been the comment, half-satisfied and half re-

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

proachful, of the Pope; but he did not fail to reward the painter, giving him a gold medal, with his effigy in half-relief, on a gold chain. Palomino, who supplies this information, adds that Velázquez took a copy of this portrait with him to Spain; possibly this copy is the one formerly in The Hermitage, Leningrad, and now in the Mellon Collection of the National Gallery, Washington, D.C.

The two landscapes of Villa Medici (both, Prado) were for a long time thought to be works from the year 1630, simply because Velázquez had resided in that palace during his first stay in Rome. C. Justi upheld this dating, but V. von Loga, in his translation (1909) of A. de Beruete's book on Velázquez, called attention to the fact that the loose and synthesizing brushstroke, the concept of the work (more like a color sketch), and the interplay of light correspond to a more advanced period that could only be the year 1650. This opinion was upheld by A. L. Mayer (1913), J. Allende-Salazar (1925), E. Tormo y Monzó (1940), and E. Lafuente Ferrari (1943). Surely Velázquez went back to visit his residence of twenty years before and was captivited by the splendid panorama of cypresses seen through the loggia and by the contrasts offered by the beautiful Renaissance architecture against some rough scaffolding and boards. Lafuente Ferrari has given these two pictures, alike in size and in concept, the titles *Morning* and *Evening*, according to the dominant lighting of each picture.

Both these pictures are valuable intimations of Velázquez' capabilities had he been free of his palace duties, which also prevented a longed-for trip to Paris. During the next ten years Velázquez, with increasing excellence, painted no more than two pictures a year on the average, perhaps because, in his undeviating search for perfection, he retouched and corrected previous works, the majority of which were always accessible to him in the palace. At present it is thought that Velázquez himself retouched and perfected his own finished works, which for this reason present difficult problems of chronology.

These problems are totally absent in his work of the last ten-year period, some 20 paintings, for the most part somewhat repetitious court portraits: three likenesses of Queen Mariana of Austria (Prado; Paris, Coll. Maurice de Rotschild; Lugano, Switzerland, Thyssen-Bornemisza Coll.), four of the Infanta María Teresa (Met. Mus., Jules S. Bache Coll.; New York, R. Lehman Coll.; Louvre; Vienna, Kunsthist. Mus.), and five of the Infanta Margarita (II, PL. 190; two others, Vienna, Kunsthist. Mus.; Prado; Louvre). In addition there are two portraits of Philip IV (Prado; London, Nat. Gall.) and a portrait of the little Prince Felipe Próspero (PL. 328).

To this period (1651) belongs one of Velázquez' most impressive works, *The Toilet of Venus* (*The Rokeby Venus*; PL. 329), which was formerly thought to be connected with the *Mercury and Argus* (1659; Prado). This last was an overdoor for the Hall of Mirrors in the palace, where it was accompanied by similar ones, now lost (*Psyche and Cupid*, *Venus and Adonis*, *Apollo and Marsyas*); Argus, badly lit in the darkness of the cave, appears with indistinct features, not even half sketched, but suggested with such precision that the beholder supposes them to be there and sees them.

It was formerly believed that *The Toilet of Venus* was another overdoor for the palace, but in reality Velázquez painted it for Gaspar Méndez de Hare, Marqués de Eliche. It entered the National Gallery, London, in 1905 and five years later a group of English critics and painters suggested that the picture was not by Velázquez but by Martínez del Mazo or by Mengs; the issue was raised again in 1930, and the painting was examined radiographically. Not only is *The Toilet of Venus* indisputably an authentic work by Velázquez, but it is also one in which the Italian experience is clearly manifested, allowing it to be dated as close to the second Italian voyage as 1651, when the work was first mentioned, in the *Libro primero del menaje de la casa del Excmo. Sr. D. Gaspar Méndez de Haro....* This Italianism is not Giorgionesque or Titianesque; rather it consists in a natural beauty less artificially assembled and prepared in spite of its unequivocably baroque pose. Unavoidably, much has been written about its great similarity to a nude of a Negress by Rembrandt, in which the positions of the torso and the legs coincide with those in Velázquez' *Venus*. Rembrandt's nude, however, could not have influenced Velázquez, because the etching by the Dutch painter is dated 1658, seven years after Velázquez' beautiful picture had been placed in the house of the Marqués de Eliche. The similarities, therefore, merely indicate the coincidental employment of the same baroque posture by two of the greatest painters of the century. Nevertheless, it is certain that this nude, in a posture so baroquely Italian, was inspired by a Nordic model, as pointed out by M. S. Soria (1953) — the *Venus and Adonis* by the Dutch Anthonie van Blocklandt (van Montfoort), undoubtedly known by Velázquez through an engraving published by P. Galle.

In the later paintings the stylistic perfection was apparently obtained without effort or struggle. To this period belong two masterworks, *The Family of Philip IV* (PLS. 330, 331) and *Las Hilanderas* (PL. 332; II, PL. 193).

The Family of Philip IV, more commonly known as *Las Meninas*, has received only praise. The first "monograph" dates from 1724; Palomino, in Chapter VII ("In which is described the most illustrious work, by Don Diego Velázquez"), unmistakably identifies the personages and the room represented; with artistic integrity he considers its qualities and adds the opinion of Luca Giordano, who called the canvas a "theology of painting." Most of the later critics have succeeded merely in repeating the praise. Worthy of mention, however, are three monographs, those by V. von Loga (1909–10), M. Alpatoff (1935), and F. J. Sánchez Cantón (1943), and the paragraphs dealing with this painting in the numerous studies on Velázquez, of which the most important are those by W. Stirling-Maxwell (1855), C. B. Curtis (1883), and C. Justi (1889).

The title by which the canvas is more commonly known today, *Las Meninas*, did not appear until 1843, in the Prado Museum catalogue, which emphasized the two *meninas* (little ladies-in-waiting) instead of the main subject of the picture, Princess Margarita María of Austria (1651–73). The little princess, then five years old, stands between María Agustina Sarmiento, kneeling, who offers her water, and the other *menina*, Isabel de Velasco. To the left stands Velázquez before his easel, in the act of painting the royal couple whose images are reflected in the mirror in the background; to the right, next to Isabel de Velasco, are the monstrous dwarf María Bárbola and a smaller dwarf, Nicolasito Pertusato, who is teasing a dog. In back stand two figures: the woman is Marcela de Ulloa, while the identity of the man is unknown. In the far background is seen the Queen's *aposentador*, José Nieto Velázquez, possibly a relative of the artist. The scene is set in the so-called "prince's room," which is decorated with two pictures, copies of Jordaens and Rubens by Martínez del Mazo; this room was in fact Velázquez' palace studio. The charming intrusion of the little princess and her suite of servants into the studio has been depicted.

Because of the improvisational nature of *Las Meninas* it is useless to search for iconographic precedents, which played such an important role in the preparation of other paintings by Velázquez. M. Alpatoff (1935), studying the composition, has pointed out that the head of the Infanta occupies the exact center of the canvas, whose surface has been rigorously subdivided; this leads to the supposition that Velázquez knew the golden section and the divine proportion, certainly learned in Italy. In this light, the eulogy by C. Justi (to the effect that "one of the most original creations in modern painting is, more than any other, the result of a moment captured by chance") loses some of its force. Furthermore, the subject matter — i.e., the invasion of the studio by the little girl and her suite — is in itself secondary to the extraordinary domination suggested in the unity of the surrounding, the spatial depth linking the different planes, the measured luminous balance of the whole, and the reproduction of the atmosphere. F. J. Sánchez Cantón (1943), in explaining the implications of this overwhelming tour de force, concludes by considering *Las Meninas* a negation of time, a permanence of "History."

Las Hilanderas (*The Spinners*) also bears a title of relatively recent date. Actually this work was painted, apparently in 1657, for Pedro de Arce, in whose inventory it was recorded in 1664

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

under the title *The Fable of Arachné*, that later investigations have proved to be the correct one. But this title was either lost or not understood when the picture became royal property in the 18th century. In 1794 it was called *Las Hilanderas*, and under this title it entered the catalogues of the Prado. Critics of the 19th century and many 20th-century ones saw in it nothing more than an interior of the tapestry factory of S. Isabel in Madrid, with five employees at work in the foreground and, in the background, two ladies, undoubtedly customers, inspecting a tapestry hanging on the wall. These same critics rightly observed that the problems of atmosphere were resolved as excellently in this work as in *Las Meninas*, perhaps even bettered by a less uniform light, an element analyzed successively by C. Justi (1889), A. Borelius (1951), and E. Lafuente Ferrari (1943), who compared the luminous central rectangle to the landscapes of Villa Medici. Justi praised the work on the basis of its realism, and Lafuente Ferrari pointed out that for a work so clearly baroque there is a lack of hierarchic arrangement of the figures in the action represented. Later critics held that if a dominant element existed in the painting it was the luminous background.

Careful study of *Las Hilanderas* has proved it to be of a most complicated iconography. Philip Hendy, in his catalogue (Boston, 1941) of the Isabella Stewart Gardner Museum, pointed out that the tapestry in the background of Velázquez canvas represented Titian's *Rape of Europa* (PL. 102), which during the 17th century hung in the Madrid palace, where it was copied by Rubens. This mythological background sufficed to lend a classical accent to a picture that seemed to show no more than the interior of a tapestry factory. In 1947, D. Angulo Iñiguez revealed that the two principal spinners in the foreground had a role similar to the Michelangelesque *ignudi* of the Sistine Chapel. A year later the same critic identified the figures of the action taking place against Titian's tapestry: the story is the struggle between Pallas and Arachne, contained in Book VI of Ovid's *Metamorphoses*, one of the classical books that Velázquez had in his library. With this interpretation everything is explained, including the bass fiddle resting close to Pallas (because, according to the pseudoclassical superstitions of the Renaissance, music was a cure for the bite of the spider, *Arachne*). Through an extremely complex baroque caprice Velázquez placed the essential story in the background; he obscured his chief actors by placing them against the Titian tapestry, so that they seem to the figures in the tapestry. The figures in the foreground, the authentic spinners, although merely complementary to the action, continue to be, pictorially, the chief actors in one of the most astounding creations of the great painter.

The bulk of Velázquez' production after *Las Hilanderas* consists of portraits, including those of Prince Felipe Próspero and the Infanta Margarita (both, Vienna, Kunsthist. Mus.). Another portrait of the Infanta Margarita (Prado, No. 1192), dating from 1660, is the artist's final painting; and it is very possible that the hands and the face were done by Martínez del Mazo. However, the splendid chromatic spectacle of the dress, in rose and silver, executed with the rapid impressionistic touch to which the master had inclined since 1650, is certainly the work of Velázquez. It is one of the most enchanting and harmonious of Velázquez' pictures, even more charming because it was never finished. It is said that this is the portrait that Velázquez is painting in *The Family of the Artist* (Vienna, Kunsthist. Mus.), by Martínez del Mazo. This is not possible, however, as M. L. Caturla (1944) has pointed out, because the female figure that Velázquez is painting there is dressed in green; it must therefore have reference to a lost portrait.

VELDE, HENRY VAN DE. Belgian painter and architect and a pioneer designer, teacher, and theoretician of the modern movement (b. Antwerp, Apr. 3, 1863; d. Zurich, Oct. 25, 1957). The extraordinary diversity of van de Velde's activities in the arts stems directly from his central insistence on an integrated reforming of the whole human environment. He pursued this mission resolutely over a long career that straddled Belgium, France, Germany, and Holland during a period of two world wars. For Henry van de Velde there were not countries but a continent, not arts but art, not styles but rather "rational conception" and "pure form."

He began as a neoimpressionist painter and in 1888 became a member of Les XX, the remarkable Brussels group that exhibited George Seurat's *Island of La Grande Jatte* in 1887; Paul Cézanne and Vincent van Gogh in 1890; posters by Jules Chéret, books by Walter Crane, and Paul Gauguin's pottery and polychrome wood reliefs in 1891; and Maurice Denis, Paul Signac's portrait of Fénéon, a poster by Henri de Toulouse-Lautrec, ceramics by Auguste Delaherche, and a project for an embroidery by van de Velde in 1892. The completed embroidery was exhibited the next year, and in 1894 van de Velde's lecture, "L'art futur" (published as *Déblaiement d'art*), predicted the end of easel painting, criticized the term "minor arts," hailed the power of the machine, and called for a meaningful and organic relationship between art and life.

Impelled by social and moral considerations, van de Velde, totally and tirelessly dedicated, became over the next six decades a European presence — writing, lecturing, teaching, and playing a major role in the seminal Deutscher Werkbund. A prodigious reader, van de Velde was influenced by John Ruskin, William Morris, E. E. Viollet-le-Duc, and Prince Kropotkin, as well as by Japanese art, by Charles Henry, and by the whole synthetist-symbolist current with which he was linked in Les XX. Van de Velde denounced the successive 19th-century revivals of historical styles and called for a new, modern style, using new forms, new materials, and the new industrial techniques. Functionalism was essential for beauty, but not every functional object was necessarily beautiful. Van de Velde saw beauty not as a property of any particular material or technique in itself but rather in the appropriateness and sensitivity with which it was used. In 1902 he prophesied "a great future" for iron, steel, aluminum, and even such misused products as cement, celluloid, and linoleum, and he wrote, "The engineers stand at the entrance to the new style, and the principle of logic is its basis."

An abstract pastel of the early 1890s (Otterlo, Netherlands, Rijksmus. Kröller-Müller) and book designs of 1892 and 1893 show van de Velde's style to be characterized by a unique abstraction that sets him apart from his contemporaries. This abstraction grew out of his intellectual and theoretical approach to the rationalization of structure and the dynamic function of line and ornament; it was the logical outgrowth of the theories of Charles Henry, Seurat, and the symbolists, but van de Velde anticipated Kandinsky (q.v.) by two decades.

Convinced as he was of the necessity for a unified harmony in the environment, soon after his marriage in 1894 van de Velde proceeded to design and build his own house and the fittings and furniture for it (Bloemenwerf, near Brussels, completed early in 1896; I, PL. 467). He had studied painting in Antwerp and in Paris (with Carolus-Duran); as architect and designer he was self-taught. In 1895 a visit from Julius Meier-Graefe, the German critic, and Siegfried Bing, the Paris dealer in Japanese art, brought van de Velde a commission to do three complete rooms for Bing's Maison de l'Art Nouveau, a gallery that opened in Paris in December, 1895. These rooms were shown again in Dresden in 1897 and had a revolutionary impact on the decorative arts in Germany, where they immediately established van de Velde as a major figure. As a result he is generally associated with Art Nouveau (q.v.), which takes its name from Bing's gallery, despite the fact that his furniture is unornamented and achieves its effects rather by the taut energy of the structural lines of the bare wood. As Siegfried Giedion has put it, "Van de Velde's earliest work pointed farther into the future than Horta's house in the Rue de Turin" (*Space, Time and Architecture*, 3d ed., Cambridge, Mass., 1952, p. 292). In his writings van de Velde repeatedly denounces the meaningless ornament and modish decorative excesses that came to be identified with Art Nouveau or Jugendstil. In contrast, Edmond de Goncourt's term "yachting style" for van de Velde's rooms captures the essence of their fresh and spare rationality. Van de Velde was led to the design of books, textiles, ceramics, silver (I, PL. 469; VI, PL. 278; VII, PLS. 325, 342), and jewelry and even to the reform of women's dress; and wherever ornament is present it is abstract and organic, energizing form with the active play of positive and negative shape which also characterizes the three-dimensional forms of his architecture and which he called "dynamography." In his *Kunstgewerbliche Laienpredigten* of 1902 van de Velde wrote, "A line is a force" and "a force which traces the energy of its maker"; while this concept of line is derived from his devotion to van Gogh and the symbolists, it also looks forward to the futurists (see CUBISM AND FUTURISM) and Jackson Pollock (q.v.).

In the years following the success of his rooms at the Dresden exhibition of 1897, van de Velde's career centered in Germany. His posters, packaging, and advertising designs for the Tropon-Werke in 1898 were an early instance of an artist's collaboration with industry. Van de Velde exhibited at the Munich Sezession in that same year and in 1900 moved to Berlin. Over the next two years he designed the interior of the Folkwang Museum (now the Karl-Ernst-Osthaus Mus.) at Hagen and worked with the Krefeld textile industry on redesigning its fabrics, also designing dresses and lecturing on the reform of women's clothing. In 1902 van de Velde was appointed artistic adviser to the Grand Duke of Saxe-Weimar; he lived in a house of his own design in Weimar (I, PL. 467) until World War I. In Weimar, as director of the Kunstgewerbeschule, he revolutionized the teaching of design and crafts and created a meeting ground for the artist-designer, the craftsman, and the industrialist. He had earlier given courses in Antwerp and Brussels, but in Weimar he organized workshops where students of the various crafts worked together in the study of color, line, and the esthetics of form and ornament. Van de Velde designed the new buildings for the Weimar Neubau Kunstschule (1904) and the Kunstgewerbeschule (1906–07); the Kunstschule, with its unornamented and rational straight-line façade and wide rectilinear window panels that curve into the mansard roof, prefigures the exterior of Peter Behrens's A.E.G. Turbinenfabrik in Berlin (V, PL. 103). When van de Velde left Germany, it was on his recommendation that Walter Gropius (q.v). was named director of the two schools, which merged to become the Bauhaus School. Pevsner (1963) points out that van de Velde's program was actually more advanced than that of the Bauhaus in its early years.

During his Weimar period van de Velde also designed the Nietzsche-Archiv, a house for Count Kessler, and other buildings in Germany and abroad. His role in the design of the Théâtre des Champs-Elysées in Paris (1911–13) with Auguste Perret has been the subject of controversy (see *Geschichte meines Lebens*, 1962, pp. 327–40); it remains undisputed that the decision to build in concrete was van de Velde's. Earlier he had visited and written on the Greek theater at Syracuse and discussed with Gordon Craig and Max Reinhardt a project for a circular theater at Weimar that was never built. In 1914 he built the concrete theater for the Werkbund Exposition at Cologne (now destroyed; see V, FIG. 231), which made an important break-

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

away from the single-perspective proscenium stage and whose supple plastic curves influenced the design of Eric Mendelsohn for the Einstein Tower in Potsdam (V, PL. 104, FIG. 236). The purpose of the Deutscher Werkbund, which was founded in 1907 to raise the artistic level of crafts and industry, was van de Velde's own central purpose. At the Werkbund meetings in 1914 he was the spokesman for the artists (including Gropius and Bruno Taut) who reacted to Hermann Muthesius's call for standardization of designs with the protest that the artist is essentially a fervent individualist who will never freely consent to the sterilizing effect of an imposed canon that inhibits his response to new situations.

With the beginning of the war that same year, van de Velde's position in Weimar was ended. He wrote during the war years and in 1917–19 lived in Switzerland, making such friends there as Ernst Ludwig Kirchner and Romain Rolland. Van de Velde knew an extraordinary number of the more important European figures over a period of several generations. He was a friend of Constantin Meunier and of the socialist Emile Vandervelde. In Brussels, where Les XX was a center for symbolist writers as well as artists, among van de Velde's associates were Mallarmé and Verlaine, Toulouse-Lautrec, Camille Pissarro, Paul Signac, and Maurice Denis. Later, in the Weimar years, there were not only such colleagues as Behrens and Gropius in the Werkbund but also the lively circles of Count Kessler and Elisabeth Förster-Nietzsche, which included Edvard Munch, Hugo von Hofmannsthal, Rainer Maria Rilke, and André Gide.

In 1920 van de Velde became architect to the Kröller-Müller family in Holland, an association that led to the design of the Rijksmuseum Kröller-Müller in Otterlo (1937–53). Functional and beautiful in its forest setting, this is surely the most visited of van de Velde's buildings, and critics have unanimously praised its gracious dignity, clarity, and spatial flow.

Van de Velde returned to his native Belgium in 1925 and became professor of architecture at the University of Ghent and director of the Brussels Institut Supérieur des Arts Décoratifs, the latter especially created for him by King Albert I and the socialist minister Camille Huysmans. In the late 1920s and the 1930s van de Velde did much building in Belgium, notably the library for the University of Ghent, and also a large rest home in Hannover. He designed the superstructure and interiors of new metal railway trains and the channel boat *Prince Baudouin* in 1933–34 (the Kaiser's opposition had cost him a commission to design an ocean liner for the Hamburg-America line in 1903). The major responsibility for the Belgian pavilions at the Paris Exposition Internationale in 1937 and the New York World's Fair of 1939–40 was van de Velde's. He was attached to the office of the Belgian Minister of Public Works in 1935, and he continued in this post and as director of his school in Brussels during World War II.

At the age of eighty-four, in 1947, Henry van de Velde left Belgium, settling in Oberägeri, near Zurich, where he lived with his daughter Nele for the next ten years, writing his memoirs, the center of a devoted circle that included Alfred Roth, Johannes Itten, and Hans Curjel and such visitors as Alvar Aalto and Ernesto Rogers (*Casabella*, no. 237, 1960). Curjel edited the memoirs and in 1962 published a German translation as *Geschichte meines Lebens* (not yet published in the original French). In 1959 the Henry van de Velde-Gesellschaft (in the Karl-Ernst-Osthaus Mus.) in Hagen and the Association Henry van de Velde in Brussels were founded.

SELECTED WRITINGS. The list of van de Velde's books and articles is a long one, the articles extending from appearances in *L'art moderne*, *Pan*, and *La revue blanche* in the 1890s to *Werk* in the late 1940s. Among his most important works are the following: Déblaiement d'art, Brussels, 1894; Die Renaissance im modernen Kunstgewerbe, Berlin, 1901; Kunstgewerbliche Laienpredigten, Leipzig, 1902; Les formules de la beauté architectonique moderne, Weimar, 1917, Brussels, 1923; Les formules d'une esthétique moderne (1902–12), Brussels, 1932; Pages de doctrine (1917–39), Brussels, 1942; Newness and Novelty, Mag. of Art, XLI, Dec., 1948, pp. 296–300; Henry van de Velde, Extracts from His Memoirs, 1891–1901, ed. and trans. P. Morton Shand, Arch. Rev., CXII, Sept., 1952, pp. 143–55; Zum neuen Stil (a selection), ed. and trans. H. Curjel, Munich, 1955 (bibliog.); Geschichte meines Lebens, ed. and trans. H. Curjel, Munich, 1962 (bibliog.).

Libby TANNENBAUM

VENEZUELA. The Republic of Venezuela was discovered by Spanish explorers in 1499; the country threw off colonial control in 1823. It is now an independent federal republic of 20 states and three territories bounded by Colombia on the west, Brazil on the south, and Guyana on the east, while to the north it reaches the Caribbean Sea. The southern forest area of the country is practically unexplored, but the western, central, and eastern areas have revealed numerous archaeological remains belonging to a succession of periods. The population is made up mainly of Spanish, Indian, and Negro ethnic groups (see SOUTH AMERICAN CULTURES).

SUMMARY. Prehistoric and protohistoric cultures (col. 732): *Western area*: *a. Joboid series; b. Dabajuroid series; c. Tocuyanoid series; d. Tierroid series. Central area*: *a. Barrancoid series; b. Valencioid series. Eastern area*: *a. Manicuaroid series; b. Saladoid series.* Contemporary indigenous production (col. 735). Colonial and modern art (col. 736): *Painting; Architecture. Centers of artistic interest.*

PREHISTORIC AND PROTOHISTORIC CULTURES. Prehistoric Venezuela is divisible into three areas: western, central, and eastern (FIG. 732). The western area includes the Maracaibo basin, the Venezuelan Andes, and the adjacent parts of the Llanos (plains), and the coast. The Netherlands Antilles islands of Aruba, Curaçao, and Bonaire also belong culturally to this area. The central division extends from the middle Orinoco River Valley northward through the central Llanos and the Valencia and Caracas basins to the coast. The eastern area comprises the lower part of the Orinoco River Valley, the eastern third of the Llanos and the coast, and the islands immediately offshore, including the former British colony of Trinidad. The southern part of the country may constitute a fourth area but is too little known to discuss here.

Venezuela, principal centers (main Indian groups shown in slanting capital letters). *Key*: (1) Modern national boundaries; (2) western area; (3) central area; (4) eastern area; (5) forest area.

It has been possible to distinguish three epochs; Paleo-Indian, Meso-Indian, and Neo-Indian, which correspond respectively to the Paleolithic, Mesolithic, and Neolithic periods of the Old World. Radiocarbon dates for the Paleo-Indian epoch range from 15,000 to 12,000 B.C.; the Meso-Indian epoch is fixed by radiocarbon dating between 5000 and 1000 B.C.; and the Neo-Indian epoch between 1000 B.C. and the arrival of Columbus in A.D. 1493. For each epoch Rouse and Cruxent (1963) have differentiated a number of cultures named after typical sites and have grouped these cultures into lines of development called "series." In some cases a people has produced a series by developing a succession of cultures. Other series are the result of acculturation: one group of people has transmitted customs and art forms to a second group; the second group has passed them on to a third group, and so on. Each series has been named by adding the suffix "-oid" to the name of a typical culture.

Western area. Four major series are presently recognized in western Venezuela: Joboid (from El Jobo in Falcón state), Dabajuroid (from Dabajuro, near Coro, in Falcón state), Tocuyanoid (from Tocuyano, in the Barquisimeto area in Lara state), and Tierroid (from Tierra de los Indos, in the mountainous part of the Barquisimeto area, Lara state). All four appear to have originated there. The first three subsequently spread eastward into other parts of Venezuela but reached their highest development in the west.

a. Joboid series. So far as is known, the first people to settle Venezuela were hunters who arrived during the Paleo-Indian epoch. Most of their remains belong to a Joboid series. The earliest sites of this series have yielded only crude stone choppers, which would have been useful in the production of wooden spears for hunting the mastodon and other large game upon which the Paleo-Indians depended for food. Later sites also contain large unifacially or bifacially chipped blades, which may possibly have been hafted on thrusting spears; and the latest sites, dating from the close of the Paleo-Indian epoch and the beginning of the Meso-Indian epoch, have smaller, more finely made projectile points. Most of the sites are concentrated in the state of Falcón in western Venezuela, but the latest remains come mainly from the Guiana Highlands of eastern Venezuela, as if the Joboid Indians had taken refuge there.

The Joboid series lacks a true form of art, such as the cave paintings and bone carvings of the contemporaneous Aurignacian-Magdalenian people of Europe, but its artisans had a rudimentary interest in design, as is evidenced by the finish and the shapes of their blades and projectile points. These are rather finely rechipped along the edges, sometimes in serrate form, and tend to be leaf-shaped. At the very end of the Paleo-Indian epoch, the Joboid artisans developed a new type of point, with stem and triangular blade; it was this form which survived into the Meso-Indian epoch in the Guiana Highlands.

b. Dabajuroid series. By the beginning of the Meso-Indian epoch, the mastodon and other large game had become extinct and the Meso-Indians found it necessary to develop new sources of food. Those on the coast turned to fishing and the gathering of shellfish, and they left large piles of shells along the shores of Venezuela and on the nearby islands, to which they were drawn by their exploitation of marine resources. Little has been done with these shell heaps in western Venezuela; they are therefore discussed below, in the section on the eastern area, where they are better known. The Meso-Indians of the interior came to depend upon fruits and vegetables, which they gathered wild, though they soon began to cultivate them in a primitive way. They also began to make pottery, unlike the contemporaneous fishermen on the coast. They gradually improved their agricultural techniques until farming became the principal means of subsistence, at which point it may be said that they passed from the Meso-Indian to the Neo-Indian form of life.

These developments are best illustrated at the site of Rancho Peludo near the Colombian border, where a new, Dabajuroid series had come into existence by 2000 B.C., according to radiocarbon analysis. The Dabajuroid series had a remarkably long life. Beginning in the Meso-Indian epoch, while farming was still rudimentary, it persisted throughout the Neo-Indian epoch. Late in that epoch it spread southward into the Andes, northward to the Netherlands Antilles islands of Curaçao, Aruba, and Bonaire, and eastward along the coast as far as the Peninsula of Araya and Margarita Island in eastern Venezuela.

The earliest Dabajuroid pottery, of the Meso-Indian epoch, is surprisingly elaborate. It comprises not only bowls and ollas, sometimes resting on tall, perforated, annular bases, but also burial urns. The bottoms of many vessels have been roughened by impressing fabrics into the wet clay, and some necks are corrugated. Decoration consists of appliqué strips and gashes or punctations, occasionally portraying human faces. The later pottery, of the Neo-Indian epoch, also has bulging hollow legs and complex geometric designs painted in black or red (or both) on a white background, which may be the result of influences from the Tocuyanoid series, discussed below. Human or animal *adornos* and figurines of clay are also present in the later sites; they continue the earlier tradition of appliqué features, although the "coffee-bean" eye had become prevalent.

c. Tocuyanoid series. This series centers around the modern city of Barquisimeto at the foot of the Andes in western Venezuela, whence it extends southeast into the Llanos and northeast to the coast of central Venezuela around Maiquetía, the airport for Caracas. Its pottery bears some sort of relationship to that of northern Colombia (q.v.), but this remains to be investigated. It is known only that the Tocuyanoid series was fully developed in Venezuela by about 300 B.C. and that it persisted through the early and middle Neo-Indian periods. Its remains consist almost entirely of pottery, which is characterized by hollow bulbous legs extending up the sides of the vessels almost to the rim; simple modeling and painting of human faces and of snakes; and elaborate curvilinear designs, either incised or painted in red or black (or both) on a white background.

d. Tierroid series. During the late Neo-Indian period the Tocuyanoid series gave way throughout most of the area of its distribution to a new, Tierroid series, which is also to be found in the high Andes of Venezuela. Tierroid pottery lacks the Tocuyanoid incision and modeling but continues its tradition of bulbous legs (though not in so exaggerated a form) and its polychrome painting, which becomes more angular.

The Tierroid people were apparently responsible for most, if not all, of the monuments and ceremonial artifacts found in the places where they lived. On the Llanos they constructed mounds and causeways (*calzadas*), not so much for esthetic reasons as to provide refuge in time of floods. In the Andes they produced tombs (*mintoyes*) consisting of stone-lined shafts leading to burial chambers; caves were also used as places of burial and worship. These have yielded the greatest variety of artistic objects in Venezuela: effigy vessels and incense burners of clay; figurines and amulets, made of both clay and stone; and the so-called "bat-wing" pendants of stone. Both human and animal forms are represented and are modeled or sculptured in greater detail than those of the Tocuyanoid series. It may be supposed that this is the result of influences from Colombia, since resemblances to the art of that country are strong.

Central area. In the central area the Paleo-Indian epoch is known only from a few scattered projectile points of the Joboid types, already discussed; and the Meso-Indian epoch only from preliminary studies of the coastal shell heaps. The earliest Neo-Indian remains are those of the Tocuyanoid series, which seems to have intruded from western Venezuela about the time of Christ. This series was eventually succeeded by several other polychrome series, which are too localized to discuss here. The two major central series, Barrancoid (from Los Barrancos, on the lower Orinoco River) and Valencioid (from Lake Valencia), are both characterized by unpainted pottery.

a. Barrancoid series. This is in two parts: one in the Valencia basin and on the adjacent coast of central Venezuela, where the Tocuyanoid series had previously been; and the other around the delta of the Orinoco River in eastern Venezuela. There is reason to believe that both these segments are intrusive; perhaps the series developed from a third, as yet undiscovered, segment in the central part of the Orinoco basin, farther south and west. This series had reached the lower part of the Orinoco River Valley by 800 B.C. and was in central Venezuela by A.D. 250, according to radiocarbon dates. It flourished in both areas during the early and middle Neo-Indian period and then became extinct, except for a small remnant on the central coast.

Barrancoid pottery has solid annular bases and rim flanges, which were incised with curvilinear designs. It is also distinguished by elaborately modeled and incised figures of human beings and animals on the vessel wall or on lugs attached to the rim. Clay pipes bearing similar designs occur in association with the central part of the series, but there are no freestanding figurines, except for one specimen found on the Orinoco; nor, curiously, is the art much reproduced in materials other than clay. Archaeologists have been attracted to the Barrancoid pottery by the artistry and complexity of its decoration and have seen resemblances to the art of various other parts of the New World — that of the Mayas in Yucatán, of Chavín civilization in Peru (q.v.), and of certain Meso-Indians of Colombia, for example. The significance of these resemblances remains to be determined; the prehistory of the series in Venezuela must be studied before its broader relationships can be evaluated.

b. Valencioid series. The Barrancoid series was succeeded throughout most of the central area by a new series named after the Valencia basin. This basin is noted for its mounds, which were constructed partly for burial purposes and partly in order to raise the houses above the level of floods. The pottery of the mounds consists of bowls decorated with tiny biomorphic lugs; collared jars bearing human faces; and animal effigies. The features are done in appliqué work rather than modeling, and the coffee-bean eye is typical. Incised designs are simple and rectilinear. The Valencioid people also made burial urns, figurines, and pipes of clay. The figurines typically portray women, some with babies on their backs, and have broad flat heads. There are also carved amulets of stone and shell.

Because the Valencioid material was the first to be excavated it has come to be regarded as the classic Venezuelan form of art, but it is not the most advanced. It may be considered a degeneration from Barrancoid art, tempered by influences from the ceramics of the Llanos and western Venezuela, to which it must yield in artistic quality.

Eastern area. The Paleo-Indian epoch is represented in the eastern area only by a few scattered finds of Joboid projectile points, to which reference has already been made. There is a single Meso-Indian complex of the Manicuaroid series (from Manicuare, on the Araya peninsula); and two Neo-Indian complexes of the Saladoid (from Saladero, near Los Barrancos, on the lower Orinoco) and Barrancoid series, the second of which has already been discussed in connection with its occurrence in the central area.

a. Manicuaroid series. The Meso-Indian fishermen of the coast are best known from excavations in shell heaps on the peninsula of Araya and the islands of Cubagua and Margarita. These have been radiocarbon-dated between 2500 B.C. and A.D. 500, when the Manicuaroid series gave way to the Saladoid series. The Manicuaroid people made projectile points of bone and shell rather than stone. They turned increasingly to shell for the production of artifacts: the lower levels of the middens contain only tools and utensils, such as hammers, cups, and later gouges, while the upper levels also have ornaments, including incisor-shaped pendants, several of which are transversely incised. One site has yielded a crude stone petroglyph, consisting of an irregular arrangement of small pits.

b. Saladoid series. According to radiocarbon dates, the Saladoid series had made its appearance in the middle and lower Orinoco River Valley by 1000 B.C. Soon afterward it was split in two by the intrusion of the Barrancoid series, one part remaining in the middle Orinoco Valley and the other part moving out through the delta of the Orinoco River to the east coast and the island of Trinidad. Both parts persisted through the early and middle Neo-Indian period before giving way to other series, which need not be discussed here since they are of lesser importance.

The typical Saladoid vessel is gracefully shaped like an inverted bell and is decorated with tabular lugs, simple curvilinear incisions, or geometric designs painted in white on a red background. After the Saladoid people came into contact with the Barrancoid potters, they began to make modeled and incised lugs. They produced no ceremonial objects but are probably responsible for most of the petroglyphs and rock basins in the Orinoco basin.

The Saladoid people introduced Neo-Indian culture to the islands of the eastern Caribbean. They colonized the West Indies during the early and middle Neo-Indian period and reached Margarita Island by A.D. 600. They seized Margarita from the Manicuaroid people, only to yield it to the Dabajuroid Indians, as already noted.

CONTEMPORARY INDIGENOUS PRODUCTION. Most of the Indians of the western, central, and eastern areas have been assimilated into the Spanish population. They remain distinct only along the Colombian border, where the Guajiras and Motilones still carry on their native crafts, and in the Orinoco delta, which is the home of the Warrau Indians. There are larger numbers of tribes in southern Venezuela, remote from the areas of European settlement.

The Indians are particularly skilled in making dugout canoes, which they sell on the general market in Venezuela. They also produce good basketry, and most still make pottery, though it is poor in comparison with the prehistoric pottery. The Guajira Indians, who have become herders, are noted for their colorful native clothing.

COLONIAL AND MODERN ART. *Painting.* During the colonial period, painters limited themselves to the execution of crude copies of religious paintings imported by European missionaries. Only toward the beginning of the 19th century was a local style of painting created, simple in expression with a grace born of popular feeling. The most distinguished painter in this style was Juan Lovera, who was also founder of the first local school of painting. His pupils included his son Pedro, Antonio J. Carranza, Carmelo Fernández, and Joaquin Sosa, who were also teachers in the first art institutes founded by the state.

Toward the middle of the 19th century there arose an authentic artistic movement whose representatives were educated in Europe and were bound to French and Italian academic tradition. The cold, severe style of this period lacks life in spite of the artists' feeling for the historical and popular subjects of the paintings. Martin Tovar y Tovar (1828–1902), founder of the classical movement, painted chiefly portraits and large historical paintings for the decoration of public buildings, including the dome of the Capitol. Arturo Michelena, an excellent draftsman, was a follower of Tovar in his allegorical-historical manner and practiced a rigid classicism. Cristóbal Rosa (d. 1954), on the other hand, although formed in a similar artistic climate, was strongly influenced by French impressionism. His paintings, always inspired by local historical events or social problems, reveal a new sensitivity, particularly in his use of color, that anticipates modern trends. However, such artists as Herrera Toto and Tito Salas, teachers at the Academia de Bellas Artes, carried the academic tradition into the 20th century.

During the first years of the 20th century a new generation, reacting against the academic school, formed an independent group, the Circulo de Bellas Artes, which included not only painters but avant-garde poets and writers. The painters of the Caracas landscape school also received their training within the sphere of the Circulo de Bellas Artes, emulating the impressionists in their rendering of the Venezuelan scenery; the works of Edmundo Monsanto (founder of the group), of the more contemplative and decorative Rafael Monasterios, and of Manuel Cabré are characterized by violent chromatic contrasts and chiaroscuro. The treatment of light is basic also in the style of other landscape painters, such as Luis Alfredo López Méndez, Marcelo Vidal, Próspero Martínez, and Armando Reverón.

In 1918 the Circulo de Bellas Artes was dissolved and the individual artists followed different paths, all open, however, to contemporaneous European artistic trends. The local schools were considerably influenced in this period by Emilio Boggio (trained in Paris), the Romanian Samys Mützner, and the Russian Nicolás Ferdinandov, all of whom were active within the sphere of neoimpressionism. The Venezuelan artists most strongly influenced by avant-garde currents included Rafael Ramón González, Antonio Alcántara, Bernardo Monsanto, and Marcos Castillo; among those more attached to the local tradition or working toward a free personal expression were Francisco Narváez, Elisa Elvira Zuloaga, and Juan Vicente Fabbiani.

In 1936 the Escuela de Artes Plásticas y Artes Aplicadas "Cristóbal Rojas," modeled on the Bauhaus, was founded in Caracas and placed under the direction of Edmundo Monsanto. Local and foreign artists who formed part of the school included Héctor Poleo, Armando Barrios, Pascual Navarro Velásquez, Alejandro Otero Rodríguez, Mateo Manaure, Mario Abreu, and Oswaldo Vigas, all identified with contemporary international trends. At the Venice Biennale of 1962, works were exhibited by Alejandro Otero Rodríguez (b. 1921), Jesús Raphael Soto (b. 1923), Mercedes Pardo (b. 1922), Carlo Cruz-Díez (b. 1923), Omar Rafael Carreño (b. 1927), Alirio Oramas (b. 1924), Manuel Quintana Castillo (b. 1928), and Oswaldo Vigas (b. 1926), all resident in Paris, and by the Berlin residents Mario Abreu (b. 1918) and Manuel Espinoza (b. 1937); almost all these artists work in an abstract style.

Architecture. The radical renewal of the country, which is bound to the phenomenon of urbanization typical of developing countries, has made Venezuela a leading nation in the field of modern South American architecture, but it has also contributed decisively to the disappearance of earlier buildings; only a few buildings, repeatedly restored or entirely rebuilt, survive to give an idea of the baroque colonial style. These early buildings usually consisted of an architectural unit built round a central patio, behind which were other secondary patios and gardens. The main patio was surrounded by

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

a portico of low-vaulted arches supported on Tuscan piers (*panzudos*), with the inner walls painted in lively colors imitating the Spanish ornamental tiles, or *azulejos*. Later, as gardens and secondary patios were eliminated to make room for construction and as subsidiary buildings were attached to the main architectural unit, the houses lost their original structural unity. The result was the creation of untidy and heterogeneous building complexes (*barriadas*), which still characterize certain old quarters of Caracas, for example.

In the first decades of the 20th century experiments were made, especially in Caracas, in new architectural styles, mostly inspired by European revival styles; only a few examples worthy of note survive. Today, the adoption of modern criteria of town planning and of architecture has resulted in a building revolution that has completely altered the face of numerous Venezuelan centers, such as Coro, El Tocuyo, Guanare, Mérida, Cumaná, and Píritu, which like Caracas preserve little trace of the colonial past. This revolution is the work of a group of Venezuelan and foreign architects including Carlos Villanueva (b. 1900), Oscar Niemeyer (q.v.), Graziano Gasparini, Carlo Scarpa, Diego Carbonell, and many others. Model villas by Carbonell are to be seen in the suburbs of Caracas, especially Altamira. Gasparini has been particularly successful in his work at Macuto and in the social centers of the Paraguana Peninsula, with their white façades in rustic *intonaco* and their blue windows and corridors protected by wooden grilles that provide the internal ventilation, necessitated by the climate.

Centers of artistic interest. Caracas. The capital of Venezuela, Caracas was founded in 1567 by Diego de Losada with the name of Santiago de León de los Caracas after a local Indian tribe. Its plan (FIG. 737) was based on straight lines with the streets oriented toward the four cardinal points. The town was rebuilt after the violent earthquakes of 1753 and 1812, and most of the examples of colonial architecture have disappeared. Another reason for the disappearance of remains of the past is the transformation of the city due to the enormous increase in population immediately after World War II. No religious buildings survive from the colonial period with the exception of the Cathedral, with its lovely façade, the Church of S. Francisco, noted for its colonial altars, and the Candelaria church, all considerably rebuilt. Of the civil architecture, inspired by the houses of southern Spain, only a few elegant portals in plateresque style and some patios remain (either modified or transformed at a later date), such as those of the Javier (1736), Granja, and Miranda houses, the Chavez College of 1783, and the houses in the La Pastora and S. José quarters.

In the center of town is Plaza Bolívar containing a bronze statue of the national hero. In 1938 the architect Cipriano Dominguez completely transformed this area (Centro Simón Bolívar) and surrounded the Plaza with administration buildings in the "international style," skyscrapers, and imposing commercial buildings. The Centro Bolívar is divided by a main artery running on four levels, three of which are subterranean. Other public buildings distinguished by an extremely modern functional style are the Capitol (with paintings in the Elliptical Salon), the Panthéon Nacional (containing Bolívar's tomb), and the various ministries built since 1936. Recently several imposing architectural complexes have given Caracas the appearance of a city of the future. Outstanding among these is University City (Ciudad Universitaria), by Villanueva, with large buildings for the individual faculties, library, and auditorium; there are murals and windows by Fernand Léger, sculpture by Jean Arp, a mobile by Alexander Calder, and statues by Henri Laurens. Here painting, sculpture, and stained glass are completely integrated in a coherent architectural complex of great buildings. Also notable are the Museum of Fine Arts by Niemeyer; the skyscrapers of the Centro Polar; the Teatro del Este by Vegas and Galia; the Maracay, Humboldt, and Tourism hotels; the Casa Monagas Club by Vegas and Galia; the Junco Country Club by V. Garatti; the pavilion of the Angloven Automobile Showrooms by Vegas and Galia; the new stands of the National Stadium by Villanueva; and the recent Banco Obrero housing complex, also by Villanueva, with its lively multicolored façades. In the suburbs are the San German building by Graziano Gasparini, the Villa Planchart by Giò Ponti (1953), Villa Villanueva, and the Church of St. Anne at El Junco.

Interesting art collections are to be found in the Museo de Arte Colonial, the Museo Nacional de Bellas Artes, and the Galeria de Arte Contemporaneo.

Maracaibo. The city was founded in 1571 by Alonso Pacheco under the name of Nueva Zamora and was destroyed by pirate attacks in the 17th century. Today the town is a great industrial center with oil refineries and a busy port. There are a few survivals of the colonial period, and near the docks are some interesting adobe houses. The great urban development dates from 1910. Modern constructions in the international architectural style include the Zulia University buildings and the merchant marine academy.

Mérida. The capital of the state of Mérida, this city possesses a few colonial buildings and many impressive modern ones such as those of the University of the Andes (founded 1785). The Museo del Estado de Mérida, at the University, contains an interesting collection of paintings.

Valencia. Founded by Alonso Diaz Moreno in 1555, this was the capital of Venezuela in the years preceding the War of Independence. As an important political and cultural center, the city has today completely transformed its appearance since its adoption of modern town-planning and architectural methods. In this, Valencia follows the example of numerous other towns of Venezuela — particularly Caracas. The capital of the state of Carabobo, Valencia preserves an 18th-century Cathedral; also of note are the Capitol and the Municipal Theater.

Francesco Negri Arnoldi

VERMEER, Jan (Johannes). Dutch painter (b. Delft, 1632; christened Oct. 31 of same year; d. Delft, 1675, buried Dec. 15).

The belated acknowledgment of Vermeer's greatness can be traced to a lack of appreciation of his art during the 17th century that was reflected in works by S. van Hoogstraeten (*Inleyding tot de Hooge Schoole der Schilderkonst*, Rotterdam, 1678) and A. van Houbraken (1718–21). Vermeer is not mentioned in the first of these works, which names his presumed teacher, Carel Fabritius (q.v.); in the second, Vermeer's name appears without comment. Van Houbraken's source was a description of Delft by Dirck van Bleyswijk (1667, p. 859), in which Vermeer's name appeared, with the year of his birth, in a list of Delft artists living at that time. The same work (p. 854) contains a poem by A. Bon on the death of Fabritius that ends with an evocation of Vermeer as the phoenix who would rise to succeed the master.

An 18th-century description of the town of Delft by R. Boitet, which deals extensively with local artists of the second half of the 17th century, mentions Fabritius but ignores Vermeer. Biographies of Dutch artists published in the 18th century (J. C. Weyerman, *De Levens-beschryvingen der Nederlandsche Konst-schilders*, 4 vols., The Hague, Dordrecht, 1726–69; J. van Gool, *De nieuwe Schouburg der Nederlantsche Kunstschilders en Schilderessen*, 2 vols., The Hague, 1750–51) also ignored Vermeer. He is named in one contemporary source (B. de Monconys, 1665, II, p. 149).

Vermeer's father, Reynier Jansz Vos, who later became known as Reynier van der Meer or Vermeer, was admitted to the Delft guild in 1631 as an art dealer; it can be presumed (see below) that after his father's death in 1655 Jan assumed direction of the art shop. On Apr. 5, 1653, Vermeer married Catharina Bolnes, daughter of a wealthy Catholic family from Gouda. On Sept. 29 of the same year Vermeer became a master painter of the Delft guild; he made a down payment on the admission fee and paid the balance in 1656. During the years 1662–63 and 1669–70 he was one of the heads of the guild. Other documents speak both of money borrowed and of security offered by the artist.

Documents that appeared after the artist's death are of special interest; they include the artist's inventory, although it does not include a list of his own paintings, and documentation of the measures taken by his widow and his trustee Anton van Leeuwenhoek to satisfy the artist's creditors. In 1676 Vermeer's widow stated that because of the war with the French her husband had been unable to earn money and that, in order to feed his eleven children, he had had to sell at a loss those works which he had purchased as an art dealer. Many of his paintings — and not only those of his later period — must have been in his possession at his death (though in 1663 De Monconys either was not able or was not permitted to see even one of these); this fact probably contributed to the obscurity in which Vermeer's work was shrouded both in Delft and elsewhere. The Delft printer Dissius (d. 1695) owned 19 paintings by Vermeer, which he had probably acquired when the artist's property was sold at auction (Mar. 15, 1677); no description or catalogue of this auction has been found, but there exists a catalogue of a second auction in Amsterdam (May 16, 1696) in which the paintings are described (G. Hoet, *Catalogus of Naamlijst van schilderyen*, The Hague, 1752–70). They were sold together with another painting that belonged to the art dealer Diego Duarte (F. Muller, *De Oude Tijd*, Haarlem, 1870, p. 397). This catalogue is a valuable document; with the exception of five paintings, all the works mentioned in it can be identified as paintings that are now well known. In 1677 the art dealer J. Coelenbier (Columbier) had in his house at Haarlem 26 paintings that had belonged to Vermeer; he was charged with selling them for the benefit of one of the late artist's creditors. Most of these works probably originated in Vermeer's art shop.

A cautious interpretation of all reliable data leads to the conclusion that from the time that he entered the guild Vermeer painted very little, perhaps only one or two paintings a year. The fact that he, like many other artists, often borrowed money during his lifetime is not necessarily an indication of hardship. In all likelihood he was quite capable of keeping himself and his family decently, with the support of his mother-in-law, who was wealthy (as can be ascertained from documents), and through his activity as an art dealer. It was only toward the end of his life in 1672 that the French invasion completely ruined his business. A high value was set on what he sold, or rather what his widow disposed of after his death in order to pay their debts; for instance, the baker Hendrik van Buyten accepted two genre pieces by Vermeer in lieu of a sum of 617 florins due for "bread supplied." Both the fact that he had credit at the baker's for such a long time and for such a large amount of money and the estimate of the value of the two paintings testify to the esteem enjoyed by the painter as a citizen and as an artist.

Why was so little notice taken of Vermeer? Surely the reason could not merely be that he painted so little. Carel Fabritius, who was killed accidentally at the age of thirty-two, left fewer works, yet his reputation was well established in the 17th century, extending even beyond Delft. It must have been that Vermeer painted mainly for his own pleasure or for that of a small circle of friends. More than was usual in the 17th century, he must have held himself aloof from the normal social relationship between patron and artist. Even before Thoré (Bürger; 1866) expressed his enthusiasm for the artist (he discovered several neglected works), some individual connoisseurs, dealers, and amateur collectors had come to appreciate Vermeer's greatness. Lebrun judged him "un très grand peintre" (*Gallerie des peintres Flamands, Hollandais et Allemands*, II, Paris, 1792, p. 49); R. van Eynden and A. van den Willigen called him "the Titian among the modern painters of the Dutch school" (*Geschiedenis der vaderlandsche schilderkunst*, I, Haarlem, 1816, p. 164); and C. Immerzeel mentions "in the Hague . . . a splendid piece painted by him. Bought in 1822 for 2,900 florins" (*De levens en werken der Hollandsche en Vlaamsche Kunstschilders*, III, Amsterdam, 1843, p. 180). Contemporary art historians have rectified Thoré's incorrect attributions of various works to Vermeer [there are several Dutch painters called Vermeer (or van der Meer; ThB, XXXIV, pp. 261–76), whom Thoré confused with the Delft artist], paintings and documents have been discovered and studied, a chronology has been established, falsifications have been detected, and iconographic and stylistic problems have been resolved. As a result of these investigations, some have taken a more critical view of the artist's work (A. Berendsen, *Verborgenheden uit het oude Delft*, Zeist, 1962, p. 89).

Presently 35 paintings have been recognized as authentic works by Vermeer (A. B. de Vries, 1948; V. Bloch, 1954; L. Gowing, 1962), but doubts persist regarding the authenticity of two of these pieces (*Young Girl with a Flute* and *The Girl with a Red Hat*, both, Washington, D.C., Nat. Gall.). Some

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

16 of the paintings are signed (P. Johansen, 1920, pp. 195 ff.); and two are dated: *The Procuress* (1656; PL. 334) and *The Astronomer* (1668; Paris, Coll. Baron Édouard de Rothschild). The counterpart of this piece, *The Geographer* (PL. 339), has a date, 1669, which was added later and which probably is a retracing of the original date that had vanished from the canvas. No drawings are known, although there have been serious attempts to ascribe drawings to Vermeer (E. Plietzsch, 1939, p. 2; J. Q. van Regteren Altena, *Holländische Meisterzeichnungen des siebzehnten Jahrhunderts*, Basel, 1948, pl. 43; J. Q. van Regteren Altena, 1960, p. 175).

The warm colors of *The Procuress* and the diffuse chiaroscuro and sensitive modeling of the surface clearly relate it to works of the school of Rembrandt (by Nicolaes Maes, q.v.; Christoph Paudiss; and Barent Fabritius) of the period 1650–60. In any case, it seems likely that Carel Fabritius, who worked at Delft 1652–54, familiarized Vermeer with this tradition. A unique and apparently characteristic element of Vermeer's artistic vision is the use of pure yellows and reds, as in the garments of the figures in *The Procuress*; these colors reappear in the Oriental rug in the foreground of the picture. It has repeatedly been asserted, because of its composition with half figures, that the subject was derived from the Utrecht school, but the argument is not convincing. *Christ in the House of Martha and Mary* (PL. 334) must have been painted before *The Procuress*, and in it a revival of an Italianism derived from Utrecht is noticeable, especially in the Italianate pose (cf. works of Andrea Vaccaro in Naples). A sense of form and color closely related to that of Hendrick Terbrugghen (q.v.; cf. II, PL. 186) and Jan Baptist Weenix is also present. When this painting, which was signed, was discovered in 1901, its possible attribution to Johann van der Meer of Utrecht was considered, and this theory is still defended by Swillens (1950, p. 163).

The third painting that belongs to the (presumed) earliest group of Vermeer's works is *Diana and Her Companions* (The Hague, Mauritshuis). The signature, which was almost invisible in 1895, became more legible after a careful restoration in 1954, though it is still badly deteriorated (A. B. de Vries, *B. of the Rijksmuseum*, II, 1954, pp. 40–42). Although the surface has suffered, the harmony of yellow, red, and blue characteristic of Vermeer is so evident that one might draw the conclusion that the work was painted shortly before *The Procuress*. Swillens (1950, pp. 157–61, pl. 33) holds that it is probably by Reynier Jansz Vos, Vermeer's father; opposed to this attribution is J. G. van Gelder (*Oud-Holland*, LXXI, 1956, p. 245). Van Regteren Altena (1960) has tried to expand the number of early Vermeer paintings by including certain newly ascribed pieces, of which the most noteworthy is an interior with a woman refusing a glass of wine (London, Nat. Gall., No. 2552), painted in Delft probably about 1660.

However one interprets the artist's earliest work, it remains impossible to identify Vermeer's teacher by stylistic analysis. Perhaps Vermeer learned the craft from a painter in Delft who did not, however, inspire him as an artist. An explanation that would reinforce the concept of Vermeer as a unique artist would be that he drew his inspiration from the art of the past with which he came in contact through his father's art shop and through engravings.

Regarding the chronology of Vermeer's paintings, apart from the earliest ones, which remain difficult to date, contemporary art historians are generally in agreement. Only Valentiner (1932) and Malraux (1952) differ: Valentiner dates a greater number of paintings to the earliest period because they are assumed to have preceded certain works of P. de Hooch (q.v.), which must be dated about 1655; Malraux places a great many of Vermeer's greatest creations in the 1660s and 1670s, basing his theory on the assumed ages of the figures in the paintings, whom he believes represent members of Vermeer's family.

Before 1660 and immediately after the artist had executed his youthful works, he is assumed to have done the following paintings: *A Girl Asleep* (PL. 333), *Girl Reading a Letter* (Dresden, Gemäldegal.), and the *Officer and Laughing Girl* (PL. 335). The painting in Dresden is noteworthy for its combination of splendid, warm colors [the dark green curtain and the still life recall the work of Willem Kalf (cf. V, PL. 313)], with the luminous construction of the space surrounding the figure. What Carel Fabritius had initiated in a modest way and with simple subject matter in *The Goldfinch* (V, PL. 324) was elevated by Vermeer into an art that expressed human dignity. In *A Girl Asleep*, the still life in the foreground is balanced by the light and dark surfaces of the background, with its many verticals and horizontals, and by a perspective view typical of Delft art, as in the popular interiors by P. van Hooch (cf. V, PL. 317). The father of this art of perspective was, again, Carel Fabritius, whose ability had already been recognized by his contemporaries.

The *Officer and Laughing Girl* is also a miracle of perspective within the limited area of the tiny room where the pompous officer, who is seen from the back and placed in the shade, sits in front of the laughing girl. For the first time, in this work, Vermeer achieved complete limpidity; and for the first time he employed the *pointillé* technique, using small grainy touches of paint to break up the light. This same technique relates three other paintings to this one: two views of Delft and *The Cook* (PL. 335). *The Cook* is, perhaps, Vermeer's most artfully constructed and most penetrating interpretation of an everyday scene. The pans, jars, baskets, and loaves can be regarded as abstract forms without prejudice to the realistic content of this work. The light is even more radiant and bright than in the *Girl Reading a Letter*. In opposition to other scholars, the author would place *The Lacemaker* (Louvre) in the same period as *The Cook*, reasoning that the tight *pointillé* and the strong coloring are too violent and open to belong to the artist's later periods. The girl in each painting, wholly absorbed in her activity of the moment, seems to express the same conception and the same observation of domestic work and bliss. The sober construction and perfect harmony of color transform the simple subject into a work of absolute beauty.

The above-mentioned two views of the town — *The Little Street* (PL. 336) and *View of Delft* (IX, PL. 20) — were probably painted in the same period. They are impressive for their sense of striking photographic authenticity: it is possible that Vermeer used a camera obscura. But more important than the observation of a charming subject is the structure of the paintings — the purity of horizontals and verticals, the succession of colored rectangles that intersect the flowing accents of movement in the foreground. At the middle of the 17th century there was a tendency in Dutch art toward a classicistic, balanced structure and a range of light colors. Vermeer's particular talent fused this tendency with the grainy splendor of his colors and added an intense feeling of space and depth, no matter what the limits of this space — the narrow interior of a tiny room or the expanse of a quiet Delft canal.

All the other known paintings by Vermeer are interiors or portraits; the portraits are of a genrelike or at least unofficial nature. The people who are depicted in these whitewashed rooms, against light walls on which are hung large paintings or maps, pose in a cautious, reserved fashion, with music or a glass of wine, writing or reading a letter. The *Young Woman Reading a Letter* (after 1660; Amsterdam, Rijksmus.) repeats the motif of the Dresden painting of a similar subject. The theme in the Amsterdam work is so concentrated as to achieve an effect of monumental simplicity. The lines of chair and table delimit the figure in space; the map on the wall serves to break up the surface. The *Woman with Water Jug* (Met. Mus.) has more complicated spatial effects with stronger color accents; these indicate an earlier period (before 1660). A similar difference exists between two interiors, *Man and Woman Drinking Wine* in Berlin (Mus. Dahlem) and *Girl with Wine Glass* in Brunswick (Herzog-Anton-Ulrich-Mus.), although in both paintings the artist used the half-open window adorned with a small coat of arms as an exhilarating element. Among the rich interior compositions, in which the colorful furniture contributes to the suggestion of depth, are the music scenes (London, Buckingham Palace, Royal Colls.; Boston, Gardner Mus.). In these paintings the figures are placed against the rear wall, framed by musical instruments, mirrors, and paintings. Eisler (1916) has attempted to date Vermeer's works according to the artist's

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

treatment of space, while Plietzsch (1939, p. 38) sees the artist as a man obsessed by the idea of conquering the dimension of depth in his paintings.

The Letter (II, PL. 210), however refined in its perspective and large number of interrelated subjects, is less remarkable than the *Girl Reading a Letter* in Dresden or the more simply conceived *Letter Writer* in Ireland (Russborough, Co. Wicklow, Sir Alfred Beit Coll.), *Mistress and Maid* (New York, Frick Coll.), and *Letter Writer* in Nassau (Lady Oakes Coll.). The three last-named pictures belong to the late period of the artist's activity. Sometimes the refinement depends more on a very delicate technique that uses changing colors than on a complicated structure. The *Lute Player* (Met. Mus.) is another example of slacker and softer brushwork. That this group of paintings dates from the end of the 1660s is proved by their stylistic affinity with *The Astronomer* in Paris and *The Geographer* in Frankfurt, in which the refinement of the treatment of light and materials (e.g., the folds of the rug) attains a level of sensitivity and a wealth of nuances that, although lacking in earlier paintings, were foreshadowed in *A Woman Weighing Gold* (PL. 337) and the *Girl with a Pearl Necklace* (Berlin, Mus. Dahlem). Vermeer's sober and precise rendering of space persisted into his late period, as is evident in the *Young Woman Standing at a Virginal* (PL. 338). The similar *Young Woman Seated at a Virginal* (London, Nat. Gall.) is an example of perfect treatment of the surface combined with a complete lack of expressiveness. The *Young Woman with Guitar* (London, Kenwood, Iveagh Bequest) is also a painting of great refinement, but it lacks the vigorous structure of the artist's earlier work.

Vermeer seems to have preferred genre — people playing music, reading or writing letters, enjoying leisure or work — and he carefully placed his figures in rooms, even when the space of these rooms is suggested only by the expanse of a yellow wall (as in *The Lacemaker*). Light and air give depth to his scenes, which are composed with great attention to detail. In the *Head of a Young Girl* (PL. 340) in The Hague and the similar portrait of a young girl in Houston (Charles B. Wrightsman Coll.), there is no clear delimitation of space; the colors are incredibly pure and the soft skin is unbelievably delicate; the eyes of the two girls catch the light, as do the pearl earrings they wear.

Vermeer cannot be regarded merely as a painter of genre scenes, although his ability in this field was extraordinary. The *Allegory of the New Testament* (PL. 339) and *The Painter in His Studio* (detail, PL. 338) are among the works that have attracted particular attention in recent years for their iconography. As early as 1914 Barnouw demonstrated that Vermeer's allegory in the first painting is based on the description of Faith in Cesare Ripa's *Iconologia* (1593; Dutch trans., 1644), particularly on the description of the Catholic faith; this would indicate that the artist lived in a Catholic environment or at least that his works were commissioned by Catholics. Apart from the symbols drawn from Ripa's work, the artist stressed the Catholic interpretation in the large painting of the Crucifixion in the background, a freely conceived copy of a painting by Jacob Jordaens. This painting does not fall within the framework of 17th-century Dutch allegorical art. It is not an allegory in the usual sense of the word but is rather the rendering of an interior (executed with the artist's customary refined sense of space) in which a model representing Faith is placed and in which certain selected objects acquire a symbolical importance that transcends the genre approach. It is sometimes difficult in this work to distinguish between veiled symbolism and sheer ingenuity of technique: is the crystal globe a symbol of the pure faith or is it merely a device to reflect light and distort perspective?

In the auction in Amsterdam on May 16, 1696, was included one of Vermeer's 21 paintings, "The Portrait of Vermeer in a Room with various accessories, most daintily painted by himself." If this painting is the same as a work in which the Art of Painting was depicted (given in 1676 by Vermeer's widow to her mother and, notwithstanding her protest, sold publicly on Mar. 16, 1677, by Anton van Leeuwenhoek, trustee of Vermeer's estate), this would prove that as early as twenty years after Vermeer's death the original title of the painting had been forgotten. The rediscoverers of Vermeer's art in the 19th century rightly in the meantime had been added the signature of P. de Hooch).

Modern art historians have considered *The Painter in His Studio* with special interest, and their conclusions have influenced the modern view of Vermeer's art. De Tolnay's (1953) thesis to the effect that this painting contains an allusion (in the map of the United Provinces) to a return to a beautiful past, when artists enjoyed princely privileges in the Netherlands, has no methodological or historical foundation. Sedlmayr's (1962) interpretation, according to which the Art of Painting here symbolizes Holland's glory, is no more convincing. In Ripa there is a clue to the mystery of the central figure: the model who is being painted is Clio, the Muse of history. The painter paints history — or would it be more exact to say that he is inspired by history? History, crowned with laurel, becomes almost a symbol of fame. However differently Van Gelder and Emmens (1958) and Steneberg (1957) interpret Clio and the objects in the painting, Vermeer's work is an allegory of the art of painting and not a straightforward representation of the artist's studio. The "Burgundian" costume worn by the painter was intended to take him out of the 17th century and to give him an archaic look. This work is undoubtedly one of the most successful illusionistic representations of space ever achieved by Vermeer. The curtain blowing upward is halfway between illusion and reality, while the chair, table, and tiles punctuate the perspective depth of the painting with a vigorous brightness of color and form. Swillens (1950) believed that he could reconstruct Vermeer's actual studio on the basis of the faithful rendering in this and other paintings. He and Hulthén (1949) came to the conclusion that the artist was sitting at his easel at a short distance from his model, and this resulted in a marked foreshortening that seems to draw the viewer into the space depicted. This exaggerated artificial perspective, together with the intense color and light, was a departure from everyday realism.

Since the Vienna painting has been interpreted as an allegory, the question arises as to whether other of Vermeer's genre pictures may have a deeper, or at least a different, significance. Could it be that *The Geographer* and *The Astronomer* are allegories of the application of human thought to the problems of the earth and the universe? Do the paintings and maps that adorn Vermeer's interiors have a symbolical significance? *The Woman Weighing Gold*, in which the subject stands in front of a painting of the Last Judgment, may represent Vanity; the *Girl with a Pearl Necklace* may perhaps allude to Luxury.

A. P. de Mirimonde (1961) has attempted to interpret the numerous music scenes as representations of profane love, a theme Vermeer had treated straightforwardly in his youth in *The Procuress*. It cannot be a mere coincidence that the musicians in the music scene in Boston (Gardner Mus.) are depicted below a copy of Dirk von Baburen's *Procuress* (II, PL. 187). A reference to love can be seen in the chivalrous offering of a glass of wine, in the writing or reading of a letter, in the presence of a second instrument that will be played by someone who is yet to arrive. Vermeer's evasive style, however, precludes a too-literal interpretation. Moreover, his genre paintings lack the anecdotal and picturesque details that make the domestic, bourgeois, and human art of his contemporaries so comprehensible and amusing. Perhaps the essential difference lies in the fact that Vermeer never was (and never wanted to be) a slave to the relations between client and artist. Because of this his art became less familiar and realistic but rose above that of his contemporaries as a pure expression of Dutch classicism. His artistic vision, his treatment of color and light, and his technique are less bound to his own period and environment than those of any other Dutch artist.

Nothing is known of any apprentices of Vermeer, and it is difficult to ascertain how great the influence of Vermeer's art was upon the younger artists of that period. De Vries points out that several talented contemporaries of Vermeer (e.g., Caspar Netscher) independently developed a similar classical style. Gabriel Metsu's *The Letter Received* and his *Young Man Writing a Letter* (both, Russborough, Co. Wicklow, Ireland, Sir Alfred Beit Coll.), a painting by Jacob Ochtervelt, and a few works by Cornelius de Man and Michiel van Musscher show clear traces

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

of direct influence, although none of these artists completely abandoned the bourgeois genre with its taste for anecdote. The rediscovery of Vermeer in the 19th century extended to a number of artists, many of whom, such as Claus Meyer (1856–1919), were but slavish imitators of the master. The renewed interest in Vermeer's limited production led to the appearance of many forgeries of his work (V, PL. 236; see FALSIFICATION AND FORGERY). Hans van Meegeren (1889–1947), a less than mediocre Dutch painter, produced one of the most successful forgeries of Vermeer's work in the *Christ at Emmaus* (Rotterdam, Mus. Boymans-Van Beuningen).

However, with regard to attributions, the only unresolved problem concerns the *Portrait of a Woman* (Budapest, Mus. of Fine Arts). The portrait of a man in Brussels (Mus. B. A.) is surely by Nicolaes Maes. A drawing signed by Jan Casteleyn so closely resembles the male portrait in The Hague (Foundation of Nederlands Kunstbezit) that it is possible to attribute the painting to that almost-unknown artist (A. Welcker, *Oud-Holland*, LXI, 1946, pp. 150–54).

VERONESE, PAOLO (PAOLO CALIARI). Italian painter (b. Verona, 1528; d. Venice, 1588). His birth date, documented by a Veronese registry entry of 1529 stating that Paolo, the last of five sons of one Gabriele *lapicida*, was then one year old, is confirmed by an obituary notice in the Church of S. Samuele (Venice) testifying that he died in 1588 at the age of sixty. C. Ridolfi (1648) says that Gabriele Caliari taught his son to model in clay. Although Vasari states that Veronese studied under Giovanni Caroto, V. Borghini (1584) considers him a pupil of Antonio IV Badile; Borghini's view is strengthened by a document of 1541 which refers to "Antonius Badilus pictor q. Hieronymi" and which mentions a "Paulus ejus discipulus seu garzonus." At an early age Veronese absorbed, in the artistic atmosphere of Verona, the teachings of a pictorial culture backward in comparison with that of Venice but nonetheless quite original in its coherent taste, tending to heighten color by juxtaposition and by a breaking-up of light. Veronese became part of an avant-garde group of painters that included Domenico Riccio (known as Brusasorci), Bernardino India, G. B. Zelotti, and Paolo Farinato, who turned their backs on the past to accept the new mannerist style that had taken over in Mantua with Giulio Romano (q.v.) and his collaborators, among them Francesco Primaticcio (q.v.). In Verona, moreover, not only had the classicism of Raphael (q.v.) taken root (through the Emilian painters), but also there developed a fashion for the Michelangelesque (through prints). C. Ridolfi in 1648 pointed out the importance of the Emilian painters, especially Parmigianino (q.v.), in the formation of Veronese's style.

The early years of Veronese's artistic activity are marked by a series of works tending toward a mannerism filtered through his personality and transformed into something new and original by his special feeling for color. One of Veronese's earliest works, a canvas with the daughter of Jairus, painted in 1546 for the Church of S. Bernardino in Verona, has been lost. The small Bevilacqua-Lazise altarpiece, with St. John the Baptist, St. Louis of Toulouse, and patrons paying homage to the Virgin (Verona, Mus. di Castelvecchio), painted in 1548 or shortly thereafter, may be considered Veronese's first known work, since it is difficult to confirm the same date for the *Christ among the Doctors* (Prado), as proposed by M. Levey (1960). Since the Bevilacqua-Lazise altarpiece, notwithstanding its spatial structure, still evidences a scholastic orientation, there is no clear and decisive documentation of Veronese's taste before 1551. In the portrait of Francesco Franceschini, dated 1551 (Sarasota, Ringling Mus.), Veronese used Brescian schemes to balance the figure in space; but in the fresco decoration of Sanmicheli's Villa Sorenza, Treville di Castelfranco Veneto, executed together with G. B. Zelotti (a decoration of which only fragments remain; Castelfranco, Cath. sacristy; Venice, Seminario Patriarcale; Vicenza, Mus. Civ.), he brought a breath of innovation to the intellectual concept, which moved closer to the mannerism of Mantua (Giulio Romano) and Emilia (Parmigianino). In the altarpiece executed perhaps in 1551 or shortly thereafter for the Giustiniani Chapel of the Church of S. Francesco della Vigna, Venice, Veronese was more circumspect, turning to the balanced Titianesque structures of the Pesaro altarpiece, but with a more decisive formulation of color in tonal areas. In 1552 Veronese, working beside Brusasorci, Farinato, and Battista Agnolo del Moro, painted the *Temptation of St. Anthony* for the Cathedral of Mantua (Caen, Mus. B. A.), in composition a genuinely manneristic work with clear Michelangelesque elements. The following year Veronese had a clamorous success in the Palazzo Ducale in Venice, introduced by the mediocre mannerist Giovanni Battista Ponchino (champion of the Michelangelesque in the Veneto region) and the untalented imitator Zelotti. In these early years of the 1550s Veronese and Zelotti worked more or less in the same idiom, based on similar cultural premises and on the same work program, so that for a few years they advanced side by side; yet, while the former renewed himself each day, the latter developed in an academic decorative direction. On the ceilings of the Sala del Consiglio dei Dieci (1553), with the Jupiter striking the Vices with his bolts and the Youth and Old Age, the *sottinsù* foreshortenings (designed to be seen from below) in the manner of Giulio Romano are allied to the Michelangelesque; in the detail of the girl bending forward, however, is

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

revealed all of Veronese's refined coloring, reaching a peak of originality in the presentation of Juno bestowing her gifts on Venice. The figures, skillfully foreshortened, create, against the blue of the sky, clearly distinct zones of color that, juxtaposed, generate a blinding luminosity in which shadow itself becomes color. In the compartments of the Sala dei Tre Capi (ca. 1554) the images assume the aspect of sudden apparitions, while columns of glowing clouds diagonally traverse the sky, accentuating the unstable rhythm of the composition.

In the Church of S. Sebastiano, Venice, Paolo Veronese comes to the fore no longer as a subordinate worker, as in the Palazzo Ducale, but with the authority of a master. The ceilings of the sacristy (1555), those of the church (1556), and the frescoes of the nuns' tribune (1558) testify to a considerable enrichment of Veronese's pictorial idiom. In the Coronation of the Virgin (sacristy) the luminosity is intensified through the use of complementary colors. In the surrounding Evangelists an exquisitely manneristic formal tension is accentuated; they are articulated according to a principle that was to become fundamental to the style of Veronese: a dilation of the surfaces with controlled exaggeration so that the figures present the greatest possible areas of color, standing out against the blue background. On the ceiling of the church (the story of Esther) Veronese developed a system of construction with a lowered perspective, rigorously organizing the structure of the groups, daringly foreshortened and treated as faceted prisms set against a sky split in two by the plumb line of the architecture. The structurally complex *Coronation of Esther* was followed, in the *Triumph of Mordecai* (PL. 341), by a spectacular contrast between the foreground, with the figures and horses, and the background, with the tiny figures, almost dissolved in *plein air*, realized by a few strokes of light.

Together with basically decorative perspective works, Veronese was producing altarpieces, small devotional works, portraits, and broadly narrative paintings. To this period belong the delicate allegories for the ceiling of the Capitoline Museum (Rome); the Madonna and Child with St. Peter and a female martyr (PL. 342), Raphaelesque in its formal harmony; and the Holy Family with St. George and the infant John the Baptist (Oxford, Ashmolean Mus.).

On June 3, 1555, Veronese signed the contract for the altarpiece (a Transfiguration) for the high altar in the Cathedral of Montagnana, to be completed for Christmas of the following year. The group of Apostles below, realized with a manneristic formal approach, is balanced above by the Christ between prophets and angels, bathed in a halo of yellow light that, reflected in the garments of the figures, almost makes the group float insubstantially. The same rhythms, the same principle of ribbing and spatial segmentation that can be observed in the ceilings of S. Sebastiano, have been perfected in the tondos (1556–57) of the Biblioteca Vecchia di S. Marco, Venice. The balanced division of the vault of a small room in the Palazzo Trevisan in Murano (ca. 1556–58) allows the divinities, which symbolize the four elements, to be foreshortened against the open skies, while other figures, seated on the cornices counterbalance them, anticipating some of the brilliant perspectives of the decoration of Villa Barbaro (now Volpi) at Maser, near Treviso.

Contemporaneous with these are new portraits: Conte Giuseppe da Porto with his son Adriano (PL. 344), Contessa Lucia da Porto with her daughter Porzia (ca. 1556; Baltimore, Walters Art Gall.), a gentleman against a landscape (Budapest, Mus. of Fine Arts), and the *Portrait of a Lady* ("Bella Nani"; PL. 344). The full-blooded, stately portraits of Titian (q.v.) and the bewitching and intimate ones of Tintoretto (q.v.) are countered by Veronese's serene and elegant ones, in which the pictorial values are enhanced by a freshness that springs from the direct impression made by the model. But Veronese's serene naturalism is transfigured by the richness of his colors and the elegance of his compositional framework. The various narrative paintings are generally inspired by episodes from the Old and New Testaments, following the fashion created a decade earlier by Tintoretto, using complex and dramatic scenic devices. One of the oldest canvases (ca. 1553–54), rather small in size, is the *Noli me tangere* (London, Nat. Gall.), of a subtle Parmigianino-like elegance, significant for the rhythm that binds the figures to the architectural background. The two large scenes of the Presentation in the Temple (Dresden, Gemäldegal.) and the Anointing of David (PL. 345) can be dated in the middle of the 1550s. They are perhaps followed by the *Christ among the Doctors* (Prado), which bears the stylistically unacceptable date of 1548 (see above).

Veronese tried to conceive his compositions on a large scale, giving smaller proportions to his figures and at the same time relating them to monumental architectural scenographic settings. In the frescoes of the nuns' tribune in S. Sebastiano (St. Sebastian before Diocletian and the death of St. Sebastian, finished on Dec. 8, 1558, together with the entire wall strip), the compositional structure becomes more agile, more loosely articulated. On Oct. 26, 1558, Veronese presented the designs for the organ case and loft, of an austere Palladian classicism, realized, according to the inscription, by one "Domenego Marangon." Then in 1559 he painted the two shutters, with the Presentation of Christ in the Temple on the exterior and the Pool of Bethseda on the inside; in these scenes, however, the figures are of large proportions, bound to one another in alternating rhythms. Between 1559 and early 1561 Veronese executed the altarpiece for the high altar, with the Virgin, surrounded by angels making music, appearing to St. Sebastian and other saints, a work in which is evident a refined command of lighting and back-lighting.

Apparently shortly before this altarpiece Veronese painted the *Christ at Emmaus* (Louvre) and the *Feast in the House of the Pharisee* (Turin, Gall. Sabauda), executed for the Convent of SS. Nazaro e Celso in Verona. In the former, following Tintoretto's example, Veronese introduced his contemporaries into the Biblical scene, narrated with great naturalness. The latter is one of Veronese's masterworks (the perfect state of preservation of the canvas permits an appreciation of the entire complex chromaticism). In scenes like these, and in particular in the Turinese one, there is no focal point: the crowd is placed all along the stage, with each figure bound to its neighbor through reciprocal overlapping, balanced and counterbalanced effortlessly. Each element of the composition is singled out by its tonality, realized through distinct and pure colors, set side by side according to a contrapuntal principle that was occasionally complementary. Reflections and highlights pervade and bind the entire composition, animating it and heightening the solar luminosity of the entire work. The architectural elements, which Veronese undoubtedly assimilated from his contacts with Sanmicheli, Palladio, and Sansovino, become valid chromatic supports, sustaining the entire composition as it spreads out into the airy horizons. Veronese, in contrast to Venetian tonal painting, which is organized on scales of warm tones in masses and glazes and which in Titian melts into a burning and liquid material, creates a cosmos of crystalline structures, where the air is rarefied and where the colors glow with an absolute clarity.

D. von Hadeln (ThB, s.v.) logically supposed that the payment made to Veronese in 1560 by the Biblioteca Vecchia di S. Marco refers to the two figures of philosophers which belong with others by Tintoretto and G. Schiavone and which are characterized by their resplendent sense of color.

C. Ridolfi (1648) corroborates the tradition according to which Veronese went to Rome at the invitation of Girolamo Grimani, procurator for S. Marco. This trip, as detailed by L. Coletti (1939), would have taken place in the spring of 1562. Significant is Ridolfi's remark that Veronese went "not so much to see the pomp of the court, as was the common custom, but as a painter to see the magnificent buildings, Raphael's paintings, Michelangelo's sculpture. . . ." Undoubtedly the Roman sojourn, in addition to confirming his early infatuation with Michelangelo, permitted him to enjoy the Raphaelesque classicism with greater conviction.

L. Coletti holds that Veronese had begun the decoration of the Villa Barbaro (now Volpi) at Maser, which Palladio had built for the brothers Daniele and Marcantonio Barbaro, immediately after his return from Rome. E. Arslan (1962), for

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

plausible reasons, attributes the execution of the frescoes to 1561, confirming a recent supposition of R. Pallucchini (1960). The Maser decoration should be considered a *punctum saliens* of Veronese's artistic activity. The villa, one of Palladio's masterpieces, is modulated in such a way as to adapt itself to the slope of the hill and to appear spatially articulated in a series of scenographic viewpoints (cf. VIII, PLS. 434, 435). Veronese brilliantly understood this spatial rhythm, and his fresco cycle constitutes a marvelous critical interpretation of it. Beyond a complex architectural framework, which can almost certainly be attributed to Veronese's brother Benedetto, comprising fluted columns, trabeations, caryatids, and cornices, Veronese conceived open spaces illusionistically breaking through the curtain walls and opening the ceiling to reveal glimpses of the sky. The interior of the villa is transformed into a space open toward skies peopled with allegorical figures (XIII, PL. 351) and toward imaginary lands strewn with classical ruins. Veronese interpreted classical mythology with a modern approach to nature, an endless spatial dimension within which light and atmosphere triumph; this artistic concept, although pervaded by a Pandean spirit, is marked by a flawless serenity, set off in the frame of the luxuriant Venetian countryside.

For N. Ivanoff (1961), who studied the subject matter of the decoration of Maser (unquestionably suggested by Daniele Barbaro), the paintings celebrate the serene rural life that Marcantonio and his family led in the villa. In the Sala dell'Olimpo (VIII, PL. 102) divine Wisdom descends from heaven, expressing with a gesture the grace and protection accorded to the Barbaro brothers; around her are mythological divinities symbolizing the planets according to medieval astrological tradition. In the two lunettes of the Sala dell'Olimpo Veronese conjured up figures to represent Spring (PL. 345) and Summer with Autumn, and in these he provides perhaps the best example of his method of composing in successive ligatures of monumental rhythms. A placid extension of forms and a slow unfolding of poses characterize the felicitous harmony of these two representations. To the imaginary fables on the ceiling and on the lunettes Veronese added, without the slightest disturbance to the unity of the composition, episodes that he could have observed in the villa. Under the ceiling, on one side of the gallery, appear Donna Giustiniani Barbaro (PL. 346), wife of Marcantonio, with an old nurse and a child, and, on the other side, two youths, perhaps the older sons of Barbaro, one of whom holds back a dog trying to get at a monkey. Only through manneristic techniques could such apparently contrasting elements become a stylistically homogeneous vision.

The landscapes in the Sala dell'Olimpo are of a very high quality. Direct and generous brushwork brings together various elements, realizing complex scenographic compositions of a heightened luminosity, always enhanced by the architectural framework. Veronese's attitude toward nature was neither realistic nor, for that matter, impressionistic. As E. Tea (1954) points out, his art was always mnemonic, the daughter of mannerism. The landscapes of Maser are, in fact, bound to an evocation of the airy Alpine foothills, of M. Grappa and the valley of the Piave, and of Lake Garda, but they are elaborated with a technique of montage in which the given natural element is incorporated and modified by an imaginative, strongly stylized structure. At Maser, then, Veronese created an ample decorative landscape of joyous fantasy in a new dimension of the Humanist fable, in which vestiges of antiquity reemerge in nature, renewed by the presence of man.

In the adjoining rooms Veronese represented, in the *Mystical Marriage of St. Catherine*, the "worldly forces, transient and decaying, with which Time and Passion attack" and, in the Holy Family, "spiritual forces, secure and eternal, which triumph. . . ." In the Crociera the female musicians, illusionistically represented in niches, symbolize the harmony of creation. In the rooms overlooking the plain, the intensity of color reaches its climax in the ceiling frescoes, which praise the pleasures of man (Bacchus revealing the mysteries of wine; the allegory of Venus).

Veronese had collaborators at Maser, including his brother Benedetto, but it is hard to identify them individually, for they were faithful executors of what the master, at the height of his powers, drew out on the plaster. Sinopias have not been found at Maser, which means that the image, roughly set down in a sketch or drawing, was fixed in the immediacy of the colors on the fresh plaster with rapidity and an unerring sureness of vision.

Closely related to the frescoes of Maser are the organ shutters of the Church of S. Geminiano, Venice (1558–61; Modena, Gall. Estense), and the small altarpiece with the Baptism of Christ (Church of the SS. Redentore, for a chapel dedicated in 1561). The *Preaching of John the Baptist* (Rome, Gall. Borghese) can readily be placed in this phase of Veronese's activity. It is one of his most moving works of chromatic invention.

The *Martyrdom of SS. Primus and Felician* (Padua, Mus. Civ.), executed for the Abbey of Praglia, and perhaps the altarpiece with the Virgin and saints (Venice, Accademia), formerly in the sacristy of S. Zaccaria, date from 1562. On March 30 of the same year final payments were made for the three altarpieces executed for the Abbey of S. Benedetto Po, only two of which are extant, one showing the consecration of St. Nicholas as bishop of Myra (London, Nat. Gall.) and the other a Madonna with St. Antony Abbot and St. Paul the Hermit (New York, W. P. Chrysler, Jr., Coll.). In Veronese's sacred subjects he introduced majestic figures of saints, felt in all their dignity and splendor, but it is still a classical splendor, lacking the rhetorical display of the baroque.

On June 6, 1562, Veronese contracted with the Benedictine monks of the Abbey of S. Giorgio Maggiore in Venice for the *Marriage at Cana*, a canvas finished in September, 1563 (the receipt for the final payment is dated Oct. 6), which passed to the Louvre early in the 19th century. Veronese, who (according to A. M. Zanetti, 1771) introduced several contemporaries into the banquet scene, transformed the Biblical event into a sumptuously worldly occasion, staged with grandeur, multiplying the station points and opening out the space in various perspective planes; in fact, in increasing the grandeur of the scenic layout he endangered the organic structure. Compared to the banquet itself, the upper part beyond the railing appears freer, with moving figures that are silhouetted against the sky or stand out against the buildings, bathed in light.

Later than the Maser frescoes and prior to the allegories in the National Gallery in London are several mythological compositions, such as *Venus and Adonis* (PL. 344) and *Venus and Mercury before Jupiter* (Florence, Coll. Contini Bonacossi), that reecho the spirit of Titian's "poems." This is a genre particularly in harmony with Veronese's serene and joyous spirit, realized with a felicity of color in an increasingly rarefied luminous atmosphere.

Toward the middle of the 1560s Veronese developed a more lively taste, and his pictorial idiom achieved a new vigor that enabled him to realize even more adventurous compositions, almost as if Tintoretto's examples had taken hold of him. A more daring concentration of luministic and pictorial structural effects is seen in the ceilings painted for the Church of the Umiltà, Venice (now in the Cappella del Rosario in SS. Giovanni e Paolo), representing the Annunciation, the Adoration of the Shepherds (reduced to an oval), and the Assumption. It is probable that in this case, as in the *Marriage at Cana* now at the Louvre, Benedetto helped his brother. But the daring perspectives and the prebaroque quality of the architectural backgrounds can be credited only to the scenic fantasy of the master himself.

The Family of Darius before Alexander (ca. 1565; XII, PL. 83), a composition magnificently balanced in its scenographic structure and realized with a resplendent rhythm of chromatic areas, is related to the canvases of the main chapel of S. Sebastiano, unfortunately badly preserved, which can also be dated about 1565. In this painting an exquisitely ornamental fantasy enters the narrative with a solemn air, in that grand manner, that *grand goût*, which was to reach its climax in the baroque style. Somewhat later is *Christ and the Centurion* (Prado), similar in structure and equally intense in its psychological narrative key.

The two paintings executed for churches in Verona can be considered contemporaneous and can be related to Veronese's

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

stay in his native city on the occasion of his marriage to Elena Badile, daughter of the painter (Apr. 17, 1566). The Marogna altarpiece in the Church of S. Paolo is still in the original chapel of 1565, and *The Martyrdom of St. George* (PL. 350) is in S. Giorgio in Braida. The latter is astonishingly well preserved; its scenic layout, with its low station point, takes into consideration its position in the curved apse that focuses the attention as one enters the church. While the group on the ground, with the brigands around the Christian hero, is brought to the fore by an accentuated chromatic tension, the heavenly apparition, melting into the luminosity, moves off in such a way as to give the impression that the entire scene is about to whirl around backward. *The Martyrdom of St. Mennas* (X, PL. 493) closely follows the scenographic scheme of the *St. George. St. Barnabas Healing a Sick Man*, painted for the Church of S. Giorgio in Braida, Verona (Rouen, Mus. B. A.), shows the same agitated coloristic rhythm. According to V. Zanetti (1866), the *St. Jerome in the Wilderness*, now in S. Pietro Martire in Murano, was executed in 1566. The landscape here is interesting: a colder atmosphere, which anticipates the approaching dusk, characterizes the pink and blue of the sky. The same effects can be observed in the Baptism of Christ on the altar of the parish church of Latisana (Udine), dated June 11, 1567. Related to the Marogna altarpiece is the *Madonna with Saints* (Louvre), which possesses the intimate quality of an ex-voto. The *Portrait of a Lady* (Douai, Mus. Municipal) is not much later than the Donna Giustiniani at Maser, but the *Man in Black* (Florence, Pitti) and the portrait of Alessandro Contarini (or Daniele Barbaro; Dresden, Gemäldegal.) are to be placed in the second half of the 1560s.

The cycle of canvases executed toward 1572 for the Cuccina family, formerly the pride of the Este family in Modena, is now in the Gemäldegalerie of Dresden. This group of works constitutes a masterly example of composition through the juxtaposition of brilliant colors, rhythmically alternated through the expansion of the surface of the figures, contrasting the colder stretches of sky against which the silvery buildings stand out. In the *Cuccina Family Commended to the Virgin* (PL. 345) the figures are arranged according to the demands of the composition and according to dignity and age. In this case, too, Veronese's ability to make the human image live with uninhibited naturalness is still subordinate to an organic pictorial idiom almost polyphonic in its alternation of chromatic zones in light and in shade, enlivened by brilliant juxtapositions but bound together by reciprocal and intricate reflections. In the Cuccina canvases Veronese began an evident modification of his colors: the crude glitter of a mosaiclike luminosity was gradually replaced by tones in harmony with a crepuscular atmosphere. The background architecture takes on new importance and its Palladian whiteness is tinged with silver reflections. After 1570 there were frequent examples of night scenes in Veronese's work; but unlike Tintoretto, Veronese did not weaken the brilliance of his colors; rather, he exalted them in a still richer selection of subtle and vibrant tones with results that bring to mind Jacopo Bassano.

Toward 1570 Veronese had returned to the theme of the great feasts, executing one with Christ in the house of the Pharisee for the Convent of S. Sebastiano, now in the Brera, and another with the same subject for the Servite monastery, now in the Louvre. In both, the aid of his workshop is evident. He painted the *Feast of Gregory* in 1572 for the refectory of the Monte Berico cloister in Vicenza (unfortunately in poor condition) and the *Feast in the House of Levi* (PL. 348; VI, PL. 67), dated Apr. 20, 1573, for SS. Giovanni e Paolo, Venice (now in the Accademia), justly considered as the high points of his monumental composition. The splendid arcades that frame the banqueters in the latter canvas coordinate the unfolding of the pictorial events, characterized by a tonal tension that is both sustained and vibrant. Evidently the worldly sumptuousness of these feasts, or suppers, raised the suspicions of the religious authorities, particularly tense at this time because of the Lutheran heresy. Suspected of heresy for certain irreverences allegedly present in the *Feast in the House of Levi* (originally titled *Last Supper*), Veronese appeared before the tribunal of the Inquisition on July 28, 1573. The minutes of the interrogation, which took place before the Santo Uffizio, testify to his candid simplicity; he proclaimed himself obedient to the inner needs of creator and artist: "Io fazzo le pitture con quella considerazione che è conveniente, ch'el mio intelletto può capire. . . . Nui pittori si pigliamo licentia, che si pigliano i poeti e i matti. . . ." Ordered to modify various elements within three months, he evaded this sentence, which would have wounded his artistic conscience, by changing the title of the work.

Also from 1573 is the *Adoration of the Magi*, painted for the Church of S. Silvestro, Venice (London, Nat. Gall.); in this canvas the setting of the classical architectural elements, contrasting with the humble shed, balances the rhythm of the figures. The strong "afternoon" color of the London canvas contrasts with the nocturnal coloring of the *Adoration of the Magi* in the Church of Sta Corona, Vicenza (PL. 347). Thematically the two resemble each other, but in their pictorial interpretation they are quite different. In the Vicenza *Adoration*, datable to the end of the 1570s, the falling night gives the scene a more intimate emotive quality. The tones have the luminosity of precious stones, while the background scene of the procession of the Magi reveals a richness of impasto that anticipates the baroque. The Vicenza scene shows the loving care for background detail, no longer a matter of the simple decorative episodes of summary type so common around 1560, but of figural elements that play an important part in the organization of the scene, realized with minute but precious flicks of the brush.

Veronese arrived at this new style after having gone through an "apprenticeship" oriented toward the realization of small canvases. In the *Allegory of the Battle of Lepanto* (ca. 1571; Venice, Accademia) this new sensitivity was already taking shape. It characterizes works of small format but great breadth of conception, such as the *Resurrection of Christ* (Dresden, Gemäldegal.) and the *Calvary* (Louvre), in which Veronese translated a Tintoretto-like idea with "a breath of emotion almost always lost in the large scenographic apparatus of suppers or martyrdoms" (A. Venturi, 1928). Other such works are the *Mars and Venus* (Turin, Gall. Sabauda, Coll. Gualino) and the *Rape of Europa* (Milan, Coll. Rasini), in which the exquisitely subtle transparencies enlivened by a flicking brushstroke anticipate Watteau. A print by Marcantonio Raimondi was the chance inspiration for the extremely elegant *Vision of St. Helen* (London, Nat. Gall.), a marvelous example of contained and essential intensity.

As Veronese gained renown, the work of his studio increased. Although his brother Benedetto (1538–98) was his official helper (his sons Carlo and Gabriele were still very young), numerous other collaborators frequented his workshop, including his nephew Alvise dal Friso (Luigi Benfatto). The marks of preponderant collaboration are evident in the Madonna with donors (1573) executed for the Church of S. Pietro Martire, Murano (Mus. Vetrario), as well as in the *Martyrdom of St. Justina* (1575; X, PL. 507), in which Benedetto's collaboration has been verified. Another collaborative work is the *Marriage at Cana* (which documentary evidence dates 1579–80) painted for the Convent of S. Teonisto at Treviso (Rome, Palazzo di Montecitorio).

In these years Veronese seemed to develop a more sumptuous pictorial vein, expressed in refined color schemes whose imaginative tones bathe in myth the aspects of contingent reality. A significant work is the four allegories of love in the National Gallery, London, whose *sottinsù* perspectives generate formal rhythms that are among Veronese's most harmonious. From this period, the second half of the 1570s, is also the *Mystical Marriage of St. Catherine* (Venice, Accademia). The same richness of pictorial layout is encountered in the *Rape of Europa* (Venice, Palazzo Ducale), in which, however, the studio collaborated. Rich and exuberant as was Veronese's inspiration at this time, it was always governed by a restraint, by a sense of elevated harmony, by a control that was still of the Renaissance.

The ceilings of the Sala del Collegio of the Palazzo Ducale (1575–77) sing out with a renewed pictorial joyousness. A com-

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

panion piece to them is the great wall canvas with Sebastiano Venier at the feet of the Virgin, undoubtedly executed with the help of Veronese's workshop. In the allegorical paintings on the ceiling (especially in *Dialectic*, PL. 350), which are attributed to the master himself (although in some the hand of Benedetto can be recognized), appear some of the purest structural simplifications, reverberating in sheer color against the blue of the sky.

The allegorical narratives painted between 1576 and 1584 for Rudolph II are on an equally high level. Various fragments of the composition with Mars and Venus, known from a copy, have been indicated by F. Zeri (1959) and G. Briganti (1960). The superb canvases with the *Choice of Hercules* (PL. 349) and *Wisdom and Strength*, probably from the story of Hercules (both, New York, Frick Coll.), were painted at this time. The *Mars and Venus* (perhaps mistitled) of the Metropolitan Museum, New York, as well as *Venus Disarming Cupid*, now in a private collection in Switzerland, correspond to the figural spirit of the mythological allegories, simultaneously erotic and moralizing, painted for the court of Prague. The touching *Venus and Adonis* (Prado) also belongs to this phase of Veronese's activity, which is marked by elegant and harmonious rhythms that recall Titianesque classicism. With these simplified compositions Veronese left behind him the moment of pleasing decorative works in which he had produced the *Mystical Marriage of St. Catherine* and the *Rape of Europa* at the Palazzo Ducale, Venice.

A still clearer example of the new orientation, based on a more profound knowledge of expressive colors, is the Crucifixion in S. Lazzaro dei Mendicanti, Venice, mentioned by F. Sansovino in 1581. A new vein of pathos that makes use of the melancholy tonalities of late afternoon gives color to a whole series of masterpieces. Large religious compositions executed for S. Niccolò dei Frari toward 1582 (*Temptation of Christ*, Brera; *St. Francis Receiving the Stigmata*, Venice, Accademia) and others of smaller size (*Hagar and Ishmael*, *Christ and the Samaritan Woman*, *Susanna*, all, Vienna, Kunsthist. Mus.) are related to one another in the coherent development of the landscape elements. An extreme elegance marks such paintings as the *Finding of Moses* in the Prado (PL. 349) and another of the same title in Dijon (Mus. B. A.), the *Sacrifice of Isaac* (Prado), the evocative *Christ in the Garden* (Brera), and the *Rape of Deianira* and *Venus and Adonis* (both, Vienna, Kunsthist. Mus.).

In isolated figures, such as the *Magdalen* (1583; Prado) and the *Lucretia* and the *Judith* (Vienna, Kunsthist. Mus.), the color harmony is intensified by luministic effects of a slightly tenuous subtlety. In the last years of his activity Veronese could still create noble works of religious art: the Virgin with St. Luke (after 1581; Venice, S. Luca), the Pietà with saints (before 1584; Venice, S. Giuliano), and the Pietà in Leningrad (Hermitage; also before 1584). In works destined for the provinces, such as the Assumption executed in 1586 for the Church of S. Antonio Abate, Pesaro (Dijon, Mus. B. A.), even though signed by Veronese, the assistance of his workshop (in this case, of his son Carlo) is preponderant. Perhaps the highest and most stringent example of this composition with forms held together by contrasts of light and shade in a luministically defined space is the *St. Pantaleon Healing a Sick Boy* (1587; PL. 350), to be considered the artist's last masterpiece. It should be remembered, however, that before 1585 Veronese had still been able to realize, with the aid of the studio, a work as solidly decorative as the ceiling (the Triumph of Venice) for the Sala del Maggior Consiglio of the Palazzo Ducale.

On Apr. 19, 1588, Veronese died "de punta e de febre" in his house on Salizzada S. Samuele, only eight days after having fallen ill at a religious ceremony in Treviso.

A painter of manneristic training such as Veronese could not but take advantage of all the possibilities offered by graphic means to put his compositions on paper according to the full rhythm of his imagination. Sources assure us that Veronese drew a great deal. An inventory of his family's possessions in 1682 lists 94 monochromes, 126 charcoal and black-chalk drawings, and 620 sketches, some in pen and some in chalk, as well as some motifs in monochrome.

Especially in the 17th century more finished drawings, similar to monochromes, done with brush on colored paper, were much in demand. C. Ridolfi (1648) lists some of this type in the possession of Cristoforo and Vincenzo Muselli in Verona. On the back of some were written phrases such as "I should like to reproduce this" or "If I had time I should like to paint this." The Tietzes (1944) wonder if these drawings did not constitute a collection of patterns or motifs for clients. Evidently Veronese's workshop, which after his death functioned under the name of *haeredes Pauli*, must have used these patterns. Certainly the sketches, drawn mostly in pen and sometimes tinted, are appreciated more nowadays. With a fluid, broken, and airy line Veronese feverishly sought not only to fix the framework of the figures according to a typical rhythm of movement but also to group them into a compositional structure and, through chiaroscuro, to determine the chromatic values that were later to be translated into sumptuous color on canvas. In these sheets the sudden swift mark, exquisitely mannerist, becomes obsessive at times in its search for poses and situations. Unquestionably these are Veronese's freest and most spontaneous graphic works. His work also includes formally completed drawings for isolated figures, mostly in charcoal. As the Tietzes observe, these various types of drawings pose diverse problems regarding their authenticity; the patterns and the finished figure drawings were the most copied by his school and by imitators.

In its formation Veronese's art drew a decisive facet of its character from mannerism, which Giulio Romano and Parmigianino had spread in northern Italy, and also felt the fascination for the Michelangelesque, which had been imported to the Veneto by Ponchino. Yet it is evident that his later work did not preserve that mannerist tension which characterizes the work of his contemporary Jacopo Tintoretto; rather, the emotive force of the colors redeemed the abstract and tormented composition common to the *maniera*. Veronese never repudiated his basic training but continued to use it insofar as form was concerned, that is, as a framework for his imaginative coloristic interpretation, eventually reaching the point where all formal elements were subordinated to his luminous, ever more temporalized tones. From his sunny "afternoon" coloring, as Baudelaire termed it, he passed to the more moving crepuscular and nocturnal tones that permitted a more decided definition of luminous space. Veronese's art may thus be considered the last great voice of the Italian Renaissance. After its initial period his expression is constantly classical in intonation (even though in later years more pathos entered into it), but his classicism is never a veiled academicism. It is rather a marvelous force capable of idealizing and transfiguring each element of expression in terms of an imaginative and serene harmony.

The greatest colorists of the European baroque turned to Veronese for inspiration, interpreting his message from a sensual and hedonistic point of view. In the 17th century Bellori (1672) spoke of figures by Rubens "executed with the intention of Paolo Veronese." Velázquez himself turned to the examples of the master when he wanted to tone down the Caravaggesque chiaroscuro so as to create his unmistakable atmospheric medium. Those currents of Italian 17th-century art which were not influenced by the Caravaggian reform paid full tribute to Veronese's art: from Scarsellino to the Carraccis (q.v.) and Francesco Maffei. It was not only Pietro da Cortona (q.v.), with his profoundly baroque decorativism, who was in debt to Paolo Veronese, but also Luca Giordano, who transformed the course of his painting, following Veronese's example.

The 18th century profited from the fanciful lightness of touch and from the skillful decorative schemes used by the master. Sebastiano Ricci, through his study of Veronese, was able to clarify his own painting, freeing it from the gloom of 17th-century chiaroscuro. Certain refined subtleties of Veronese's late period did not escape Watteau (q.v.), but it was Tiepolo (q.v.) who provided the most original and imaginative interpretation of Veronese's art, beginning with the prodigious early frescoes of the Palazzo Arcivescovile in Udine.

The romantics — notably Delacroix (q.v.) — and later modern artists, from Manet to Cézanne (qq.v.), studied Veronese's

CC-0. Agamnigam Digital Presevation Foundation Chandigarh

paintings with renewed awareness, discovering anew the internal laws that governed the lyrical world of the artist.

VERROCCHIO, ANDREA DEL. Italian sculptor and painter (b. Florence, 1435; d. Venice, 1488). Data regarding the artist's birth and family can be obtained from documentation of statements to tax officials made first by his father and later by Verrocchio himself. In addition to a statement of economic hardship, another document of 1452 offers the important information that Verrocchio no longer exercised his craft as a goldsmith for lack of work.

Verrocchio's fame as a sculptor must have been fully established by 1466, because the Tribunale di Mercanzia had already commissioned him in 1463 to do the bronze group, the *Doubting of Thomas* (PL. 358), to be placed in the tabernacle executed by Donatello and Michelozzo on one of the façades of Orsanmichele, which had been surrendered by the Guelph party and from which Donatello's statue of St. Louis of Toulouse had been removed. In following years the artist's commissions increased rapidly. In 1468 Verrocchio received partial payment for a candelabrum (Amsterdam, Rijksmus.; see below) for the Sala dell'Udienza in the Palazzo Vecchio. At about the same time he probably executed the slab for the tomb of Cosimo de' Medici the Elder, who died in 1464 but was buried in S. Lorenzo in 1467. In 1472 he completed the tomb of Giovanni and Piero de' Medici in the Old Sacristy of S. Lorenzo, one of his most important works (PLS. 352, 353).

In 1476 Lorenzo and Giuliano de' Medici sold Verrocchio's bronze *David*, which is, therefore, of an earlier date, to the Signoria of Florence. His many commissions overlapped and were protracted and sometimes unfulfilled; thus it becomes difficult, if not impossible, to establish a valid chronology. The silver relief representing the Beheading of John the Baptist was commissioned for the altar of the Baptistery in 1477 and was completed in 1480. In 1477 Verrocchio's model was selected for the monument of Cardinal Niccolò Forteguerri in the Cathedral of Pistoia. In 1483 the sculptures of the Forteguerri monument were finished for the most part, but the monument was still incomplete at the time of Verrocchio's death; although work was resumed at various times, it was not until more than two centuries later that it was given a final but unsuccessful arrangement. The model of the *Doubting of Thomas* was placed in the Orsanmichele tabernacle in 1481; the completed work, in bronze, replaced it in 1483.

So extensive was Verrocchio's renown that the governing body of Venice sought him out to execute the equestrian monument to Colleoni that had been approved in 1479. The model of the horse was executed in Florence and was completed in 1481; it is not known, however, when Verrocchio settled in Venice. In his will, drawn up on June 25, 1488, he appointed Lorenzo di Credi as his executor, leaving him his Florence studio and the task of finishing the monument. The governing body of Venice did not respect his wishes, however, and preferred to entrust completion of the work to the goldsmith and sculptor Alessandro Leopardi. The statue was placed on its base in 1495 and unveiled in 1496.

It is clear from the information summarized that, in spite of the number of documented works, their chronology is uncertain because of the lapses of time, often quite long, between commission and delivery. The works followed one another in quick succession during the 1480s. Information on Verrocchio's youth is scant, and the tradition regarding his formation seems very uncertain.

Although the chronology of the body of his sculptures, taken as a whole, appears reliable, Verrocchio's activity as a painter was not only quite limited but also problematical. The only documented painting, the panel depicting the Madonna and Child with John the Baptist and S. Donato, in Pistoia Cathedral, was commissioned from Verrocchio on the basis of the will of Bishop Donato de' Medici, who died in 1474. It was uncompleted in 1485 and was mentioned by Vasari as being the work of Lorenzo di Credi, who is now generally acknowledged to have executed most of it.

Verrocchio's earliest extant work, the slab of the tomb of Cosimo the Elder, executed between 1464 and 1467, belongs to a relatively late period, considering the general precocity of Renaissance artists.

A highly significant sculptural work is the marble lavabo in the Old Sacristy of S. Lorenzo (PL. 351). The two harpies that decorate the basin, as Cruttwell (1904) points out, had a precedent in the tomb of Carlo Marsuppini in Sta Croce, and the ribbon motifs clearly recall Desiderio da Settignano. The hypothesis formulated by Thiis (1913) is therefore to be accepted as the most probable one, that is, that Verrocchio's artistic development took place subsequent to that of Desiderio, who was five years older. Middeldorf's theory (*Mitt. des Kunsthist. Inst. in Florenz*, V, 1939, pp. 209–10) that the angel on the right of the Madonna in the lunette of the Marsuppini tomb is the most direct antecedent of Verrocchio's angels, although it cannot be attributed to Verrocchio with certainty, seems to be well founded. Verrocchio later abandoned the chiseling technique characteristic of Desiderio in favor of modeling the stone almost as if it were chalk; this approach is described in the monograph by C. Kennedy and E. Wilder (1932). The originality of the forms, which are conceived architecturally, together with the polychrome effect establishes a stylistic link between the lavabo and the more famous tomb of Piero and Giovanni de' Medici, executed between 1469 and 1472 in the same sacristy (PLS. 352, 353). The bronze candelabrum identified by Valentiner (BM, LXII, 1933, pp. 328 ff.), dated 1468 (cf. *Bronzetti italiani del Rinascimento*, Florence, 1962, No. 10, cat.), is to be placed between these two works; records of various payments exist for the candelabrum, which is the first documented work of Verrocchio. Unlike the lavabo, the candelabrum is a thoughtful, stately work; however, some decorative elements, such as the bean-shaped motifs, are common to the two works. The terminal elements of the base of the candelabrum occur again in the tomb of Piero and Giovanni and are derived from the Marsuppini tomb, as is the motif of the triangular base on which the cup rests. These forms, of a cold, deliberate elegance, mark the transition from the style of the lavabo to that of the Medici tomb, which, even in its complexity, aims at a supreme formal objectivity that is enlivened by a fanciful impulse incomparable in its decorative taste.

This type of tomb had no imitations, just as it had no antecedents; it is unique in the absence of all religious symbols and human figural elements, except perhaps for the putti that decorate the vases in the arch relief. The sarcophagus is placed in the arched opening that gives onto an adjoining chapel. Thus the monument has identical façades. In the area between the sarcophagus and the intrados of the arch is a bronze grille in the form of interlaced ropes, a motif that had already been used by Michelozzo in the Church of S. Maria at Impruneta and by the pupils of Bernardo Rossellino in the tomb of Neri di Gino Capponi in Sto Spirito in Florence. Verrocchio developed and refined the motif, giving it preeminence in the space under the arch and using it to create an evocative effect. He carried the same interlace motif over onto the lid of the sarcophagus. The arch is faced with a marble relief of garlands that spring from two highly decorated vases at the base to meet at the central point, where a pyramid, emblem of Piero de' Medici, is fixed. The relief decoration consists of a luxuriant succession of leaf and ribbon motifs, repeated alternately. The general motif was inspired by Ghiberti's frieze (I, PL. 229) for Andrea da Pontedera's Baptistery door, which was of an earlier date and which contributed another important element to Verrocchio's artistic formation. The sarcophagus, like a huge jewel case, is decorated with polychrome marble, recalling the slab of Cosimo's tomb. It stands on a marble base that rests on the backs of four bronze tortoises, an unusual and bizarre motif that creates a zone of shadow at the lower part of the work. The polychrome effect created by the porphyry sarcophagus and the white marble on the lid is accentuated by the lively bronze decoration: lion's paws, oak-leaf clusters, ribbons, and a wreath. The composition is held together by the rope motif that is repeated on the lid. The sarcophagus is crowned by a bronze decoration consisting of a central element, in which the pyramid motif is repeated, with cornucopias on either side. The motifs of the lion's paws, oak-leaf clusters, and ribbons appeared earlier in the Marsuppini monument. But Desiderio's dry, almost purist decorative style was transformed by Verrocchio in his

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

work, assuming a classicizing fullness and a 16th-century abundance. This work represents the final development of that style which had appeared in the three preceding works — the slab for Cosimo's tomb, the lavabo, and the bronze candelabrum — with no trace of interruption and with a unity of inspiration that marks Verrocchio's artistic personality as highly original and the antithesis of Donatello's.

No sculpture by Verrocchio can be considered anterior to the *David* with the exception of the *Resurrection*, a relief in polychrome terra cotta (PL. 352) originally in the Medici villa in Careggi. The controversy regarding the date of the *Resurrection* is of considerable importance in reconstructing the development of Verrocchio's style. Its similarities to the artist's other works are so many and of such a nature that attribution to him has been universally accepted; doubt exists only in regard to the dating of the work. Gamba's first opinion (*L'Arte*, 1904, pp. 59–61) was that this was Verrocchio's first work, and he correctly traced its iconographic derivation from the *Resurrection* executed in 1443 by Luca della Robbia on the door of the New Sacristy of Florence Cathedral. In a subsequent article (BArte, Nov., 1931, pp. 193–98) he revised his opinion on the date, shifting it to later than 1478. Cruttwell (1904) dates the relief at about 1464, and Planiscig (1941) puts it near 1465. Those who see evidence of considerable collaboration with Leonardo da Vinci, such as Valentiner (1950), tend to date it in a later period. And, although they reject any direct collaboration with Leonardo, Dussler (ThB) dates it about 1475 and Pope-Hennessy (1958) toward the end of the 1470s.

In Verrocchio's *Resurrection* there is a greater breadth of expression and monumentality than in the crowded composition by Della Robbia; nonetheless, the style is harsher than in those works which are grouped with the *David* and which show the influence of Andrea del Castagno. The *Resurrection* is noteworthy for its richness of motifs, which combine archaic characteristics with others of the 16th century, not without a certain lack of balance that seems to confirm an early date. The two trees appear particularly archaic in style. Discussing the soldiers, Valentiner refers directly to specific drawings of Leonardo; their conception is, in fact, more monumental and lively than that of the trees. The Christ is similar to that of the *Baptism of Christ* (PL. 356), the date of which is still uncertain but is generally fixed at about 1470; however, the figure appears to be executed in a style that is more archaic than that of the figure in the *Doubting of Thomas*, the Forteguerri monument, and the terra cotta in Budapest (Mus. of Fine Arts), recently attributed to Verrocchio by Balogh (1962). Another confirmation of an early date can be had from a comparison with works dated with certainty, such as the silver relief, of the Beheading of the Baptist, and the terra-cotta angels (PL. 354) that were executed as models for the Forteguerri monument. Verrocchio's later style tended to become softer and more concerned with atmosphere, and it is difficult to concede a reversal of this tendency or the coexistence of two extremely different styles. The similarity to drawings by Leonardo, upheld by Valentiner, derives from repertories common to both their studios; the style is more in the manner of Pollaiuolo than Leonardo (A. Bertini, "L'Arte del Verrocchio," *L'Arte*, 1935, p. 441). The terra-cotta *Sleeping Youth* (Berlin, Mus. Dahlem), so similar to the figure of the soldier stretched out in the foreground of the *Resurrection* that it has been considered a preparatory study for that, has been attributed to Antonio Pollaiuolo by A. Venturi (*L'Arte*, 1926, pp. 179–81), who also attributed to Pollaiuolo the screaming figure on the left; this figure recurs in Verrocchio's repertory, and Valentiner has related it to a study by Leonardo for the *Battle of Anghiari*, but it must be remembered that Leonardo observed Pollaiuolo in addition to Desiderio and Verrocchio. The *Resurrection* from the Medici villa at Careggi is a work of Verrocchio's mature youth; in it he approached Pollaiuolo's sculptural style and at the same time generally maintained his own unmistakably personal style.

The bronze *David* (PL. 354) was executed in a style that is more complex and intellectually more refined than that of the *Resurrection*. Together with its original, delicately sculptured marble base, it reveals an exceptional elegance of presentation, thoughtful and intellectualistic in comparison with Donatello's *David* (XII, PL. 15), which is more imaginative and ingenious. The similarity of Verrocchio's style in the *David* to that of Pollaiuolo in the latter's painting of the same subject (Berlin, Mus. Dahlem) lies in a lively feeling of aristocratic arrogance, while in his ceaseless search for nuances of tone Verrocchio is related to Desiderio and is a forerunner of Leonardo but lacks his profundity. A date between 1470 and 1476 seems probable for this work.

The terra-cotta relief of the Madonna and Child from S. Maria Nuova (Florence, Mus. Naz.), although not documented, is indisputably attributed to Verrocchio and is considered typical of his technique. The scheme seems to have been derived from works by Filippo Lippi and Alesso Baldovinetti and was to be a model for others of Verrocchio's paintings. The marble relief of an identical subject at the same museum is correctly considered to be a work of his school.

The terra cotta of the Madonna and Child is closely linked stylistically to the bronze *Putto with a Fish* (PL. 355), executed for a fountain in the Medici villa of Careggi and later placed on the fountain designed by Vasari for the courtyard of Palazzo Vecchio in Florence. The influence of Desiderio is still clear in the putto's face, while the conception, enlivened by a hedonistic sense of form, develops in the 16th-century manner the effects of three-dimensionality and movement, aiming at capturing the leap of the fish in time and space. Another putto, in terra cotta (Washington, D.C., Nat. Gall.), has been attributed by Adolfo Venturi (1925) to Leonardo, but it is otherwise, with the single exception of Pope-Hennessy (1958), generally regarded as a work of Verrocchio (Busignani, 1966). It presents elements similar both to those in the relief representing the Madonna and Child and to those in the *Putto with a Fish*; the softer chiaroscuro and the attempt at a greater synthesis suffused with intimate tenderness seem to suggest a later date, and it has been supposed that the terra-cotta putto may be related to the putto, lost but recorded by Vasari, that struck the hours on the clock in the Mercato Nuovo.

The *Bust of a Lady* (PL. 357) is to be linked to the group of works subsequent to the *David*; it is not documented but is considered typical of Verrocchio's technique as a sculptor. It is, in fact, of exceptional delicacy, closely related to the busts by Desiderio but possessing greater breadth of form. Resemblances to Leonardo's so-called *Portrait of Ginevra Benci* (Washington, D.C., Nat. Gall.) are more iconographic than stylistic: there is hedonistic form in Verrocchio's work, profound psychological depth in Leonardo's, expressed with a new painterly sensitivity. The collaboration of Leonardo in the extremely beautiful hands of the marble bust has been maintained repeatedly, and it is true that in them the execution becomes more spiritual and sensitive, but the perfect unity of the conception seems to exclude this collaboration. Nonetheless, this seems to be the only example of Verrocchio's sculpture in which a supposition of Leonardo's collaboration is not unreasonable.

Among the terra-cotta busts, the only one generally considered original, though without certainty, is that of Giuliano de' Medici (Washington, D.C., Nat. Gall.), while that of Lorenzo (Washington, D.C., Nat. Gall., Kress Coll.) seems to be the work of a later artist.

In the *Beheading of the Baptist* (PL. 354), executed for the altar of the Baptistery between 1477 and 1480, the setting is conceived in perspective while the figures seem to be executed in the round, in antithesis to the Donatello relief. The two groups are balanced in an organic composition, with the executioner occupying the center; the result is an effect which is typical of later, 16th-century art and which clashes with the minutely executed and rather trite ornamental motifs. This contrast is even more disconcerting because the relief is inserted in a preexisting Gothic work. However, the artistic inspiration is varied and rich; one warrior seems to anticipate Colleoni's profile, while the design of the other's helmet recalls the controversial drawing of a warrior in profile (Br. Mus.) generally attributed to Leonardo. The type is repeated in Verrocchio's sculpture, as in the relief of Alexander the Great (Washington,

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

D.C., Nat. Gall.), identified by Planiscig (1933) together with the Della Robbia copy (Berlin; Staat. Mus.) of a relief of Darius executed by Verrocchio as a companion piece to the first. The two reliefs are mentioned by Vasari as a gift from Lorenzo de' Medici to Matthias Corvinus.

The history of the monument of Cardinal Niccolò Forteguerri in Pistoia Cathedral is more complex; the exhaustive monograph by Kennedy and Wilder (1932) has demonstrated Verrocchio's major contribution in the 15th-century portions of the monument, to which additions were made in the 16th and 18th centuries. The head of Christ in the mandorla, surrounded by four angels according to a motif traditional in the 14th century but still widely used throughout the 15th century, although never completed, is worthy of consideration as an intermediate stage between the Christ of the *Resurrection* and that of the *Doubting of Thomas*. The quality of the work declines in the lower zones, although Verrocchio himself executed the fine head of the Faith figure and some parts of the figure of Hope; the figure of Charity in the center is a 16th-century work by Lorenzetto. The two terra-cotta angels in the Louvre are undoubtedly preparatory models for those of the monument, as is evident from the few variations of the finished marble angels. Only these models can give an idea of Verrocchio's over-all plan for the monument. In comparison, the small sketch of the tomb (Vict. and Alb.) appears weak and is probably a work of the studio: Berenson's attribution (1933) to Lorenzo di Credi lacks documentation, and the attribution by Wilder and Kennedy (1932) to Piero Pollaiuolo does not seem likely because of the similarities between the small model and Verrocchio's plan.

Of the other terra-cotta works, the statuette of St. Jerome (Vict. and Alb.), often disputed, is not among Verrocchio's most successful works in this medium, but its attribution to him is upheld by comparison of the figure of the saint with that of the soldier at the extreme right in the *Resurrection*.

Undocumented but universally accepted as Verrocchio's work is the *Entombment* (Berlin, Staat. Mus.; there is a copy in the predella of a Della Robbia altarpiece in the church of the Capuchin monastery in Camerino), which is one of his rarest and most important works because of its dramatic intensity. The drapery seems to imply as an antecedent that in the Forteguerri monument, but it has been simplified by a leaner, more summary style, without resorting to the archaic, to complement the pyramidal composition around the figure of Christ — a composition characteristic of the 16th century. It may be tentatively suggested that the *Entombment* belongs to the final development of Verrocchio's style in the Venetian period. Also of his mature phase are the three terra-cotta statues of the *Imago Pietatis* (Christ showing His wounds) — an attribution by Balogh (1962), who reconstructed the composition of the group: the statue of Christ in Budapest (Mus. of Fine Arts) and the two angels in Toledo, Ohio (Mus. of Art). This group, too, seems to be of a later date than the Forteguerri monument, but not so late as the *Entombment*.

Among the disputed works in marble, only the controversial relief representing the death of Francesca Pitti Tornabuoni (Florence, Mus. Naz.) is at least in part unquestionably the work of his hand. Although incomplete, the agitated scene of the lament is among the most original creations of Verrocchio and has some features in common with the Berlin *Entombment*. Francesca died in childbirth in 1477; the relief may have been executed several years later. H. Egger (*Francesca Tornabuoni und ihre Grabstätte in S. Maria sopra Minerva*, Vienna, 1934) has proved that it cannot have been, as Vasari writes, in the Church of S. Maria sopra Minerva, where Francesca's tomb had been executed by Mino da Fiesole. The other part of the relief, with the announcement of Francesca's death to her father, is a rendering by members of his school of a model by the master.

The bronze group of the *Doubting of Thomas* can be considered for its complexity and beauty the most representative work, before the Colleoni monument, of the period of the conclusion of Verrocchio's activity in Florence. In spite of the long lapse of time between commission and execution, its conception cannot have been prior to 1476–80, when documents indicate that payments to the artist became more frequent. This dating is supported not only by the stage of evolution of Verrocchio's style but also by evidence of the influence of Flemish art, particularly striking in the abundant drapery and derived from the Portinari Altarpiece of Hugo van der Goes (V, PL. 281; IX, PL. 10). The same taste for decoration appears in the leaf motifs and ornament on the tomb of Piero and Giovanni de' Medici. The broadly conceived effects of chiaroscuro give the head of Christ a phantomlike and solemn accent, while the head of Thomas is executed according to that ideal of delicate, regular beauty which appears in almost unvaried form in all Verrocchio's figures. The influence of Flemish art, observable also in the realistic attention to detail in the hands, is perfectly contained and synthesized by the style, which imposes a classical rigor on the overflowing fullness of the drapery, creating a most unusual effect. The composition has a precedent in the central group of the *Beheading of the Baptist*, but its salient characteristic is an exaltation of feeling that is resolved in lofty drama. In the *Doubting of Thomas* Verrocchio created a work which was unprecedented for monumental power of expression and which had no immediate repercussions, with the exception of some echoes in the painting of Filippino Lippi.

It is impossible to establish any date during the lengthy preparation of the Colleoni monument from the first mention of the model for the horse, executed in Florence and sent to Venice in 1481, until the death of Verrocchio, who left the work incomplete. Leopardi's contribution, in addition to the casting and execution of the base, was limited to the completion of the decorative details. While the inspiration of the Colleoni monument is the same as that of the *Doubting of Thomas*, there is a simplification of the decorative elements and a more summary execution, aimed at a more powerful and immediate synthesis. Verrocchio seems to have found a model for the face in Roman portraiture of the era of Constantine; this would account for the stiffness of certain of the features. The relation between the Colleoni monument and the "Gattamelata" of Donatello (IV, PL. 249) is analogous to that between the two Davids (see above), but the differences are more pronounced. The "Gattamelata" is resplendent with a glory that rises from the plane of human existence to the eternal, while the figure of Colleoni glows with the ephemeral force of life. Although the theme is the same as that contemporaneously treated by Leonardo in the unfinished Sforza monument, this coincidence does not lessen the radical difference between the two conceptions. Even if Verrocchio knew the studies for the mysterious background of Leonardo's *Adoration of the Magi* (IX, PL. 117), he did not share Leonardo's complex and profound stylistic endeavors, to which Pollaiuolo is much closer in his earlier design for the Sforza monument. The point of departure for Verrocchio's fantasy was the fresco of Niccolò da Tolentino (I, PL. 246) painted by Andrea del Castagno in S. Maria del Fiore about thirty years earlier. Verrocchio radically transformed this model, drawing inspiration for the face from late Roman sculpture, in a work that was to be more complex and lively than that realized by Donatello in the "Gattamelata," one that was sustained by an acute sense of drama, clear and concentrated.

Verrocchio's most famous painting is the *Baptism of Christ* (PL. 356) executed for the Convent of S. Salvi, attributed to him by Billi (1892), by the Anonimo Magliabechiano (1892), by Gelli (1896), and by Vasari (*Vite*), who also reports that Leonardo executed one of the angels, a fact already recorded by Albertini (1510). The state of the painting presents complex problems: it is unfinished, it was executed partly in oil and partly in tempera, and it was retouched in the 19th century. The most exhaustive discussion of this work is to be found in Passavant (1959). The compositional scheme is traditional, as in Baldovinetti's panel, the *Baptism of Christ* (Florence, Mus. di S. Marco), and in Pollaiuolo's representation of the Baptism in the silver reliquary from the Florence Baptistery (VI, PL. 265). The dominant group of Christ and the Baptist recalls the *Resurrection* from Careggi, both in the type of the Christ figure and in the folds of the drapery and harshness of form characteristic of Pollaiuolo. This harshness is attenuated in the painting by

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

Leonardo's contributions in oil, not limited to the kneeling angel in the foreground but undoubtedly including at least the hazy landscape in the background and the pebbly shore in the foreground. Controversy surrounds the question of Leonardo's partial collaboration on the figure of Christ and on the landscape at the right, so different from the other and more in keeping with the tradition of Baldovinetti and Pollaiuolo. Except for some differences of opinion regarding the extent of Leonardo's collaboration, critics agreed, until Ragghianti's new thesis (1954), that this collaboration took place within the framework of Verrocchio's scheme, work on which was begun about 1470 but may well have been prolonged for several years as often happened in the master's workshop, and that it included the assistance of lesser helpers. According to Ragghianti, however, the principal group is the work of Botticelli. This theory is supported by a penetrating analysis that revealed the weaker marginal part of the work and recalled related Botticellian features that show the extent of the influence of Verrocchio in Botticelli's painting; however, these features are not such as to permit attribution of the *Baptism of Christ* to him. From this would follow the necessity, upheld by Ragghianti, of attributing to Botticelli the drawing of the head of an angel (Florence, Uffizi, Gab. dei Disegni e Stampe, No. 130E) because of its marked stylistic affinity with the frontal view of the angel's head in the *Baptism of Christ*. But this drawing, although attributed by Adolfo Venturi to Leonardo, is typical of Verrocchio, not only in respect to the other drawings that are correctly attributed to him but also in respect to his sculptures; its attribution to Botticelli would imply a lack of understanding of Verrocchio's artistic personality.

Among all Verrocchio's paintings, the only one really close in style to the *Baptism of Christ* is the *Madonna and Child* (PL. 360), which has a stronger sculptural sense and greater harshness of color. It seems to be more archaic in style than the *Baptism of Christ* and is prior to it, at least in the date of its completion, given the rigorously unitary character of the work. It has great similarities to Pollaiuolo's style, in the volume of the body and arms, in the timbres of the reds, in the landscape similar to that on the right-hand side of the *Baptism of Christ*. The complicated superposition of the veils of the Madonna, executed with a goldsmith's delicacy, anticipates the monumental treatment of the drapery in the sculptures of the artist's mature period, without dispelling the effect of synthesis. The Virgin's face is similar to that of the terra cotta in Florence but is superior in the strength of its expressive force.

This Madonna is Verrocchio's masterpiece in painting, and none of the other Madonnas attributed to him — the Madonna (No. 108) in the same museum; those of the Metropolitan Museum in New York, the Städelsches Kunstinstitut in Frankfurt, and the National Gallery in London — can compare with it. Currently there is a tendency to attribute the greater part of this series of Madonnas to Perugino (q.v.), in the period when he would have been in Verrocchio's studio. Whether or not one accepts these attributions, this tendency is indicative of the impossibility or at least the difficulty of firm attribution of the paintings to Verrocchio. With the exception of the Madonna at the National Gallery in London (which must be considered separately because it is more significant and complex), all these Madonnas repeat the scheme of the marble relief from Verrocchio's workshop (Florence, Mus. Naz.) more faithfully than the terra cotta in the same museum, unquestionably by his hand. In the Madonna in Frankfurt Umbrian characteristics are most evident, and the work is attributed by F. Zeri (BArte, XXXVIII, 1953, p. 136) to the Master of the Gardner Annunciation. In the painting at the Metropolitan Museum in New York the style characteristic of Verrocchio is strongly mixed with northern accents; the other Madonna in Berlin (No. 108) is the most faithful to the marble relief and is also the closest stylistically to Verrocchio, even though it lacks something of his usual vigor of form. It has been attributed to Perugino and compared with the *Madonna with Two Angels* (London, Nat. Gall.), which it resembles in the type of the Virgin's head, although it does not appear to be by the same hand.

The present tendency to attribute the London Madonna to Perugino (M. Davies, *Catalogue of the National Gallery, The Earlier Italian Schools*, 2d ed., London, 1961, suggests an attribution to Verrocchio) is not convincing because of the painting's pure Florentine character. Of the entire series, it is the highest in quality, the one that can best be attributed to the mature Verrocchio. It is the product of an evolutionary phase in the artist's development, in which he elaborated the forms of Leonardo and Lorenzo di Credi. In conflict with the attribution to Verrocchio are the refinement and the variety in the colors, which prevail over the sculptural force characteristic of the master and correspond to a style that is softer and gentler than that of the work unquestionably executed by him, in which there is present an ever-increasing dynamism. Although an attribution to the master's studio may be unsatisfactory for a painting with such salient characteristics, this is the only well-founded hypothesis. If anything, the old attribution to Ghirlandajo seems more plausible than the recent one to Perugino, as comparison with the former's early works, such as the fresco in the church at Brozzi, bears out. Moreover, insufficient importance has been given to the painting's stylistic link, remarked by Berenson (1961, I, p. 99), with the head of an angel in Berlin (Staat. Mus., No. 2790E r.) and to the even more marked stylistic connection with two drawings by Verrocchio, a Madonna with S. Giovannino and an angel and a small head of an angel (Uffizi, Gab. dei Disegni e Stampe, Nos. 445E, 212F), both hypothetically attributed by Berenson to Domenico Ghirlandajo. Another painting, *Tobias and the Angel* (London, Nat. Gall., No. 781), presents similar problems, and it has been repeatedly, but without consensus, attributed to Perugino. Passavant (1959) has attempted to prove that it is by Verrocchio himself, but the execution of the painting, notwithstanding the convulsive form, is not related to that of the master; this difference is even more evident than in the *Madonna and Two Angels*. M. Davies (op. cit.) indicates the painter of *Tobias and the Angel* as "a follower of Verrocchio," while Berenson (1961, p. 90) attributes the painting to Botticini working from a cartoon by Verrocchio.

The panel depicting the Madonna and Child with John the Baptist and S. Donato, in the Donato de' Medici Chapel in Pistoia Cathedral, is the only painting of Verrocchio's that is documented: by a letter written in 1485 by the guild of workers engaged on the building of Pistoia Cathedral to request the continuation of payments to Verrocchio and to state that the work would have been finished more than six years previously if the payments had been regular. In spite of this, Vasari (*Vite*) had already attributed the altarpiece to Lorenzo di Credi, and this position has been followed by most modern criticism, with noteworthy exceptions and limitations. The effect of the whole is indeed characteristic of the work of Lorenzo di Credi in the painterly application of the smooth, polished color; the regularity of the form, which tends to eliminate every contrast; the intense freshness of the tones, above all the greens, which create gay silvery accents; and the marked but superficial Leonardesque qualities, especially evident in the folds of the lower part of the Virgin's mantle. The figure of S. Donato has a plastic structure that distinguishes it from the other figures; but this seems to derive from a diversity in the model and is expressed within a unitary pictorial structure. Returning to a consideration of the general effect of the altarpiece in relation to the other paintings of Lorenzo di Credi, one can perhaps recognize a greater perfection of form in addition to a greater breadth of expression. Verrocchio assisted Credi not with a complete cartoon but with partial designs that served as models. This seems to be proved by a series of drawings by Verrocchio, first among them the folio containing two heads (Br. Mus., Malcolm 338, r. and v.) that are unquestionably drawings by Verrocchio; whether or not they are preparatory studies for the Virgin of the altarpiece in Pistoia Cathedral, they constitute its prototype. Despite the fact that the attribution to Verrocchio by various critics of the underlying sketch in silverpoint does not seem to be certain, the charcoal drawing for the figure of John the Baptist (Louvre) by Lorenzo di Credi is more closely linked to a Verrocchian model than the painting, which is nonetheless a faithful translation of that model. Finally,

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

in a drawing at the Uffizi (Gab. dei Disegni e Stampe, No. 212F, v.) Passavant (1959, p. 238) holds that he has identified a preparatory study by Verrocchio for the Infant Jesus in the altarpiece; although it seems that this drawing should be attributed to the author of the *Madonna and Two Angels* in London who executed the small head of an angel, already mentioned, on the recto of the drawing, it demonstrates the common repertory of the workshop. The altarpiece in Pistoia is a masterpiece produced by Lorenzo di Credi while he was in Verrocchio's workshop.

Among recent attributions, the *Crucifixion* in the Church of S. Maria e Angiolo at Argiano is noteworthy. Ragghianti's attribution of this work to a youthful Perugino (*L'Arte*, 1935, p. 182) has been confirmed by Zeri (BArte, XXXVIII, 1953, p. 135), who had discerned in the figure of Christ the possible collaboration of Verrocchio himself. Passavant, however, attempts to attribute the entire painting to Verrocchio. Actually, as Marangoni had seen (*L'Arte*, 1927, p. 256), the painter of the *Crucifixion* at Argiano was an eclectic who, in common with Verrocchio, possessed many of the characteristics of the styles of Andrea del Castagno and Pollaiuolo but had no real affinity to Verrocchio in either quality or style.

It is clear from a study of Verrocchio's paintings that he abandoned painting quite early in favor of sculpture, which was better suited to his artistic genius. He entrusted the execution of paintings to his pupils, assisting them by means of drawings. The only two paintings that are unquestionably his show his ties with Baldovinetti and, above all, Pollaiuolo; other elements in his works show echoes of Filippo Lippi, of whom Passavant supposes him to have been a pupil. The new sense of form that he created in his sculptures, however, had a decisive effect on the immediately subsequent development of Florentine painting.

VIETNAM. This name, brought into use at the beginning of the 19th century (from the Chinese Yüeh-nan), is applied to a territory that includes the basins of the Red River and of the Mekong together with the narrow coastal strip that joins them; that is to say, Tonkin, Annam, and Cochin China. This territory is at present divided into the Democratic People's Republic of Vietnam (Việt-nam Dan-chu Cong-hoa), which comprises Tonkin and northern Annam, and the Republic of Vietnam (Việt-nam Cong-hoa), which includes central and southern Annam and Cochin China. In this article, however, Vietnam has been considered in its geographic unity and divided into the three large areas in which its artistic civilization developed. The most important of these is the ancient kingdom of Champa, which stretched along the coast of southern Annam from the so-called "Annam portal" in the north to the boundary of modern Cochin China in the south (see CHAM, SCHOOL OF).

In the contemporary period, alongside persisting forms of traditional local culture, industrial and residential nuclei, airports, hospitals, and the like have developed in the principal centers according to the most modern standards of international architecture.

SUMMARY. Historical introduction (col. 766). Principal archaeological and artistic centers (col. 768): *Tonkin; Northern Annam; Southern Annam: a. Quang-nam group; b. Binh-dinh group; c. Nha-trang and Phan-rang group.*

HISTORICAL INTRODUCTION. The first kingdom constituted in what is now North Vietnam was the kingdom of Au-lac, founded in 258 B.C. by King An-du'o'ng, who established his capital at Loa-thanh ("the city of the shell"), now the village of Co-loa (Tonkin). After a short-lived existence this kingdom was replaced by the kingdom of Namviet, which was annexed to China in 111 B.C. by the Han dynasty and made into a district of Giao-chi.

This period corresponds to the Bronze Age. It has been called the Đông-so'n culture after the site of this name in Thanh-hoa province where most of the objects connected with the culture were discovered. These objects indicate an "Indonesian" culture. The population, which was then proto-Vietnamese, lived under a feudal government and was ruled by totemistic beliefs (see TOTEMISM).

The Chinese rule that followed and persisted until the end of the 10th century left numerous archaeological remains, chiefly funerary, in Tonkin as well as in northern Annam. During this rule the successive Chinese governors established their capital in various places. First it was at Luy-lau (Bac-ninh), then at Long-bien, and in the 7th century it was transferred to Tu-thanh, which two centuries later was named Dai-la-thanh and which was apparently on the present site of Hanoi, where numerous remains have been discovered. Throughout this long period of Chinese rule, an intensive Sinological influence was exerted on the country through colonization.

Following revolts whose consequence was the defeat of the Chinese occupation forces, the country obtained its independence in 939 under the rule of Ngô-quyên, who again settled in Co-loa, the ancient capital of An-du'o'ng. After further disturbances that were rapidly quelled by Đinh Tiên-hoàng, who unified the kingdom under the name of Dai-co-viet, the capital was established at Hoa-lu, his native village. With the advent of the Lý dynasty in 1009 Hoa-lu was abandoned and the capital was shifted to Thang-long, now the city of Hanoi, which was apparently on the site of Dai-la, the old capital of the Chinese governors.

Although Buddhism (q.v.) seems to have penetrated into Tonkin toward the end of the 2d century, at the same time as Confucianism and Taoism (qq.v.), and although the Dhyāna sect was founded by Bodhidharma at the end of the 6th century, it was only in the reign and under the protection of Đinh Tiên-hoàng that Buddhism began to spread in Vietnam. But it was above all under the constant protection of the kings of the Lý dynasty that it became widespread, numerous Buddhist temples being built at this time throughout the whole realm. Although it still flourished in the reigns of the first kings of the succeeding Tran dynasty (1225–1413), who were fervent Buddhists, it began to change, first under the growing influence of

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

Vietnam, principal centers of archaeological and artistic interest. *Key*: (1) Modern political boundaries.

Taoism and later because it was supplanted by the rising wave of Confucian culture. In 1400, as a result of a weakening of royal authority, a nobleman of the realm established himself as emperor under the name of Hô Quí-ly and transferred the capital to the city of Tay-do ("the capital of the west"), on the plains of Thanh-hoa (northern Annam). This seven-year interregnum led to a new Chinese invasion under the Ming dynasty in 1418, which provoked a nationalist upsurge under the leadership of Lê Lợ'i. After ten years of struggle the territory of Vietnam was liberated, and in 1428 Lê Lợ'i proclaimed himself emperor under the name of Lê Thái-tô and reestablished the capital, which he named Dong-kinh (the origin of the name Tonkin), at Hanoi, the kingdom itself being called Dai-viet. This newly founded Lê dynasty was destined to reign in Vietnam until 1789. A period of struggles against the neighboring states was followed by an era of peace and economic prosperity that favored the flowering of the arts, mainly during the reign of King Lê Thánh-tôn (1460–97). Confucianism, which had become the official doctrine, spread widely in the 15th and 16th centuries, to the detriment of Buddhism, which was the object of repressive measures that even prohibited the building of temples. However, at the beginning of the 17th century the decline of Confucianism, which had become a stultifying influence, favored a new upsurge of Buddhism, and the country was covered with numerous temples, founded as a result of the protection granted to Buddhism by the Trịnh lords in Tonkin and by the Nguyên lords in Annam.

In 1789 disturbances caused by the Tây-so'n, first against the Nguyên established at Hué since the 16th century and then against the Trinh established in Tonkin, brought about the collapse of the Lê dynasty (which had already been weakened by the internal struggles between the Trinh in the north and the Nguyên in the south) as well as the partial destruction of the temples erected in the preceding centuries. At this point Gia-long, a Nguyên prince, succeeded in establishing his authority with French support. He reunited the kingdom, which was called Vietnam until 1838 and subsequently Dai-nam, and transferred the seat of the capital to his native city, Hué, which remained the capital until recent years.

In this brief historical account no mention has been made of the numerous struggles between the Vietnamese and their southern neighbors, the Cham (see CHAM, SCHOOL OF). These struggles, which were already in progress during the Chinese occupation, were intensified in the 10th century; in 1471 they resulted in the capture of Vijaya, the Cham capital, and in 1663 in the annexation of the kingdom of Champa. The relations between Champa and Vietnam, which were not always bellicose, influenced the art of both countries, starting with the era of the Lý dynasty and even earlier.

The kingdom of Champa, whose inhabitants belonged linguistically to the Indonesian group, was formed in A.D. 192 in the vicinity of the Vietnamese city of Hué. During the period of its greatest territorial extension it stretched the length of the eastern coast of the Indo-Chinese peninsula from the mountain range of Hoanh-son (otherwise known as the Annam portal) in the north to the approaches of the Mekong delta in the south. The expanding Vietnamese gradually encroached upon it until it ceased to exist as an independent country, the remainder of its population being now grouped in the Vietnamese provinces of Nha-trang and Phan-rang.

The country was divided into a number of natural regions, each of which corresponded to a coastal plain. They were, from north to south, the region between Hoanh-son and the Col of Clouds, where there are few archaeological remains; Amaravati, corresponding to the Vietnamese province of Quang-nam; Vijaya, corresponding to Binh-dinh province; Kauthara, which corresponds to the province of Nha-trang; and Panduranga, which corresponds to that of Phan-rang. The archaeological remains of Champa, which are all in Vietnamese territory, are grouped in these four provinces, where the successive political centers of the kingdom were once located.

There is no indisputable evidence that Indian culture had already reached the country as early as the end of the 2d century of our era; it is only in the 4th century that the Sanskrit inscriptions of the Saivite king Bhadravarman provide certainty on this point. Up to the 8th century the center of the kingdom was located first north of the Col of Clouds, then south in what is now Quang-nam, where the remains of the holy city built around the 4th-century sanctuary of Bhadreśvara are still visible; these are the ruins of Mi-son, which lie in the center of an amphitheater of mountains. The capital was situated on the site of the present village of Tra-kieu, 7½ mi. southwest of Faifo.

In the middle of the 8th century the center of the kingdom was transferred southward to Panduranga (Phan-rang). In this region are located the 9th-century towers of Hoa-lai (III, PL. 192) and the sanctuary of Bhāgavatī at Po Nagar in the province of Nha-trang.

In 875 a new dynasty appeared in Quang-nam at Indrapura. The remains of the great Buddhist monastery at Dong-duong (III, PL. 192, FIG. 359) are located near the former site of this capital. The close of the 10th century marked the beginning of the conflicts with Dai-co-viet, which had been freed from Chinese domination; these ended in the dispossession of Champa and its disappearance. In A.D. 1000 the definitive setting up of the court in Vijaya (Binh-dinh), where it had already taken refuge once before, resulted in the construction of many monuments in that region. During the 12th century the occupation of the region by Cambodia at two different times explains the Khmer influence discernable in certain monuments (see CAMBODIA; KHMER ART). The only monuments after this period are of a late date; this is true of those in the region of Phan-rang in the south as well as of those in the interior.

PRINCIPAL ARCHAEOLOGICAL AND ARTISTIC CENTERS. The description of these centers is divided into the three main cultural areas of Tonkin, northern Annam, and southern Annam (the site of the former kingdom of Champa), beginning with the three ancient Vietnamese capitals, Hanoi, Co-loa, and Hoa-lu, and continuing with an alphabetical ordering of the sites within the three main areas.

Tonkin. Hanoi. There is no certain proof that the earth banks to the west of the city represent the various citadels built by the Chinese governors from the time of the founding of Tu-thanh in 621

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

to the founding of Dai-la in 866–67 by Kao P'ien. The only surviving remains of these successive foundations, along with pottery of the T'ang and Sung periods, are the numerous terra-cotta fragments (some of them glazed) that decorated ancient buildings that have since disappeared. Equally fragmentary are the remains of Thang-long ("the soaring dragon"), the old capital built in 1009 by the Lý. Of the old royal palace of the Lê rulers, which was destroyed at the end of the 19th century, the magnificent triple stone stairway, built between 1428 and 1433, has survived. Lastly, the gateways of the old enclosure of the royal palace are all that remains of the citadel built in 1802 by Gia-long on plans inspired by Vauban-style citadels.

stood the royal palace. There are no remains of these buildings, their sites being now occupied by several temples that date from before the 17th century: a *đền* dedicated to King An-du'o'ng, which contains a colossal bronze statue of this king; a *đình* (a communal temple) also dedicated to An-du'o'ng, who was then considered a guardian spirit and was represented by his tablet; and a *chuà* (a Buddhist temple) and various pavilions.

Hoa-lu. Situated 53 mi. south of Hanoi, this town was the capital of the Đinh (968–80) and of the early Lê rulers (980–1009). The only remains dating from this period are some traces of ramparts of so-

Left: Co-loa, plan of citadel. *Key*: (1) Modern inhabited district. Principal monuments: (*a*) Second wall of external enclosure; (*b*) first wall of externa enclosure; (*c*) south gate; (*d*) west gate; (*e*) east gate; (*f*) small hill from which king attended military exercises; (*g*) enclosure of royal city; (*h*) supposed enclosure of royal palace; (*i*) Buddhist temple; (*j*) *đình*; (*k*) tomb of My-châu and *đền* dedicated to An-du'o'ng; (*l*) *vân-miêu*; (*m*) gate; (*n*) pool of Trông-thu'y. *Right*: Hanoi, plan of citadel (broken lines indicate modern streets). Principal monuments: (*a*) Prison; (*b*) Bô-chanh; (*c*) royal palace; (*d*) Tông-doc; (*e*) Dê-dôc; (*f*) Thuân-phu (*from Bezacier, 1955*).

Of the numerous religious buildings in Hanoi built since the Lý period, the following should be mentioned:

1. The Duyên-hu'u Buddhist temple, better known by the name of Chuà Một-cột ("the pagoda with a single pillar"), which Lý Thánh-tôn built in 1049 and which is probably preserved in its original state despite several restorations. It is in the form of a light, graceful pavilion built on top of a stone pillar placed in the middle of a tank, or artificial lake.

2. The *đền* (a Taoist temple) dedicated to Huyên-thiên Tran-vũ, the god of war and of the region of the north, whose colossal bronze statue is over 10 ft. high. This temple was built in 1010, reconstructed in 1768, and inaccurately restored in 1893.

3. The *đền* of Ngoc-so'n ("the jade island"), built on an island in the small lake in the center of Hanoi. The principal sanctuary, dedicated by scholars to Văn-xu'o'ng, the stellar genius of "the splendors of literature," is connected to the bank by a charming wooden bridge, formerly rainbow-arched, at the entrance to which stands the "column of the brush."

4. The *vân-miêu*, a temple of literature dedicated to the worship of Confucius and of his disciples, built in 1070 and afterward frequently restored. Its plan is in the shape of an immense parallelogram 1,150 ft. long and 246 ft. wide and includes five large courts. In the third of these there are 82 steles lined up on each side of a central tank, bearing examination dates (the earliest is 1484) and the names of the winners (in 1295) of the triennial competition for the degree of doctor of letters. The buildings reserved for worship are in the fourth court and contain tablets and ancient bronze ritual objects.

Co-loa. This site, 10 mi. north of Hanoi, has massive ramparts that Vietnamese tradition attributes to the time of the founding of the capital by King An-du'o'ng in 258 B.C. It appears more likely, however, that they date from the reoccupation of the site by King Ngô-quyên in 939. At that time the citadel consisted of three concentric enclosures, which are still visible, in the shape of a snail, whence its name, *loa*. The two outer precincts, which were in the form of an irregular oval, enclosed the "royal city," in the center of which

called "Chinese" bricks, a large type of brick that was little used after this period.

On the site of the buildings of the old royal palace two commemorative temples were built between 1607 and 1610, one of them dedicated to the Đinh dynasty and the other to that of the Lê. Nothing has survived of these old foundations except for the stone altar slabs adorned with bas-reliefs, some animal sculptures, and the beautiful lacquered panels of the portals of the temple dedicated to the Đinh, which depict landscapes and ritual objects.

In a picturesque spot on the summit of the Ma-yen-son, a rocky mountain near Hoa-lu, stands the royal tomb of Đinh Tiên-hoàng.

Binh-son. The stupa at Binh-son, 56 mi. northwest of Hanoi, is the only structure of its type still standing in Vietnam. Built in the period of the Lý dynasty (11th–12th cent.), it is a square tower about 50 ft. high, with sides 13 ft. long, comprising 11 stories embellished with terra-cotta bas-reliefs that are reminiscent of the motifs found in the art of Dai-la as well as of certain sculptures discovered at Phat-tich and Hoi-hop.

But-thap. The Ninh-phúc Buddhist temple (FIG. 785) at But-thap (Bac-ninh province), about 19 mi. east of Hanoi on the Canal of the Rapids, was built before the 14th century, but its present form is the result of restorations carried out in 1646–47. It consists of several buildings enclosed in a gallery 262 ft. long and 132 ft. wide; it is interesting for the bas-reliefs of the balustrade that surrounds the sanctuary and for those of the stupa of Chuyêt-công, the Chinese bonze who promoted the restoration of the temple. One of the halls in the temple contains a mobile octagonal stupa, which dates from the 14th century and comprises nine stories decorated with carved wooden panels depicting Buddhist scenes, including the Paradise of Amitābha.

Dinh-bang. Near this village, about 9 mi. north of Hanoi in Bac-ninh province, is the funerary temple of the Lý dynasty (FIG. 788), built in the 13th century under the Trân. In galleries on either side of the

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

sanctuary sheltering the eight tablets of the dead kings are lined up, on one side, the eight beautiful royal palanquins embellished with red and gold lacquered carvings and, on the other, the rather mediocre representations of the kings' eight horses.

In the middle of the village of Dinh-bang rises the beautiful village *đình*, whose framework, dated 1736, is richly yet soberly decorated.

Doi-son. The Duyên-linh Buddhist temple is located at Doi-son, about 40 mi. south of Hanoi in Ha-nam province. In former times, on the top of a rounded hillock, there was a stupa of the same type as the stupa of Binh-son, whose sculptures were related to those discovered at Phat-tich and Dai-la. This stupa was erected in 1121 and destroyed during the Chinese occupation under the Ming dynasty between 1407 and 1428. The Lê replaced it with the present temple in the 15th century. The only remaining part of the original monument is the great stele dating from 1121; the decoration on its sides is related to the art of Dai-la, as are eight stone statues of Vajrapāṇi, which are of the same workmanship as some of the statues discovered in Phat-tich.

Dung-nghia. Site of the Thân-quang Buddhist temple, 6 mi. southeast of Nam-dinh. This temple, 526 ft. long by 378 ft. wide, is commonly called Chuà Keo and was built in the 13th century. It consists of a Buddhist temple (*chuà*) and a Taoist temple (*đền*). In front of these two temples is a porch, the doors of which are decorated with beautiful carvings in high relief. A fine three-storied belfry, whose architecture is reminiscent of the belfries of the Chinese Buddhist temples of the Sung period, completes the group, which is surrounded by three large sacred lakes.

Hoi-hop. Site of the Thânh-tiên Buddhist stupa, otherwise known as Chuà Cói, about 35 mi. northwest of Hanoi, in the province of Vinh-yen. This temple was built on the site of an old stupa erected about the 11th century, as is revealed by the terra-cotta sculptures discovered during excavations. The carved decorations on the framework of the sanctuary, although of uncertain date, are undoubtedly old; their richness, beauty, and variety make them extremely interesting.

Lim. At Lim, 12 mi. from Hanoi, is the tomb of Nguyên Diên, dating from 1769. It consists of a double enclosure in the center of which are massive stone altar slabs set behind carved figures. It is one of the best-preserved secular tombs in Vietnam.

Phat-tich. The Vạn-phúc Buddhist temple (FIG. 785) at Phat-tich, opposite But-thap on the Canal of the Rapids, was built in 1686, replacing the first two stupas built on the same site in 866 and 1057. Excavations have brought to light the foundations of the second stupa and many stone and terra-cotta sculptures, some of which show a clear Cham influence. The statue of Amitābha erected in the middle of the present sanctuary and a row of ten monolithic animals in front of it are relics of the 11th-century stupa. The 18 lohans (arhats) arranged in one of the halls are of excellent workmanship and are among the most beautiful lacquered clay sculptures of the late 17th century.

Thien-khe. The rock paintings at Thien-khe (province of Tuyen-quang), about 47 mi. in a straight line northwest of Hanoi, were discovered in 1942. These paintings, which are the only ones at present known in Vietnam, probably date from the 9th century. They represent the Buddha attended by bodhisattvas, as well as male and female donors dressed in costumes reminiscent of those of certain figures of Central Asia.

Tho-ha. This ancient potters' village situated on the northern bank of the Song Cau, in the province of Bac-giang, was founded in the 15th century. It has produced a specifically Vietnamese ceramic art, the ornamentation of which sometimes recalls the sculptural decoration of temple frameworks. The *đình* and the Buddhist sanctuary in Tho-ha also deserve mention.

Thuy-khe. Site about 22 mi. west of Hanoi in Son-tay province, where the Thiên-phúc Buddhist temple is located. This temple, constructed in 1132, is a huge building picturesquely set at the foot of limestone rocks. The only relic of the original building is the stone altar, whose sculptures, especially the Garuḍas at the corners, show a clear Cham influence.

Tuc-mac. The Phô-minh Buddhist temple at Tuc-mac, 2 mi. north of Nam-dinh, was dedicated to the emperor Trân Nhân-tôn; it was built in 1262 and restored in 1668 and 1916. Nothing is left of the original structure except for the large entrance doors, whose panels are adorned with beautiful bas-reliefs of dragons. A thirteen-storied stupa, built in 1310 and containing part of the emperor's ashes, was erected in front of the temple.

Northern Annam. Dong-son. At this village, 6 mi. northeast of Thanh-hoa, on the right bank of the Song Ma, excavations have been systematically conducted under the direction of the Ecole Française d'Extrême Orient since 1924. These excavations have revealed several brick tombs of the Han period, which covered an archaeological layer anterior to the Chinese domination. In this older stratum protohistoric tombs were discovered, which can be considered Indonesian and which contained a variety of funerary material consisting of bronze objects (including a drum), ceramics, and various other articles.

Hué. The historical origins of Hué are ancient and complex, going back to the Chinese occupation in the 3d century B.C. From the 3d century of our era to the beginning of the 15th century, the Cham and the Vietnamese fought for its possession, the latter occupying it definitively in the 15th century. The scattered traces of these different occupations are of no great interest. In 1558 Hué became the place of residence of the Nguyên, southern lords who had been appointed to govern the country in the name of the Lê sovereigns, but who later created an independent dominion of their own. However, it was only in 1802 that Gia-long, the conqueror of the Tây-so'n and the unifier of Vietnam after the fall of the Lê in 1789,

Hué, plan of city and its surroundings. *Key*: (*a*) Modern inhabited district and constructions. Principal monuments: (1) Temple of Confucius; (2) Thiên-mụ pagoda; (3) enclosure wall of city; (4) imperial canal; (5) Báo-đình; (6) royal gardens; (7) pagoda; (8) esplanade for sacrifices to guardian spirit of the earth; (9) enclosure of forbidden city; (10) imperial city; (11) ministries; (12) museum; (13) modern city on Huong-giang ("river of perfumes"); (14) esplanade for sacrifices to guardian spirits of the mountains; (15) Leih-dai pagoda; (16) Báo-quôc pagoda; (17) Cathedral of Phu-câm;(18) tomb of Duc-dú'c; (19) tomb of Tự'-dú'c; (20) Tù'-hiêu pagoda; (21) tomb of Đông-khánh; (22) tomb of mother of Khái-dình; (23) Hòng Chén pagoda; (24) tomb of wife of Minh-mạng; (25) Nam-giao; (26) tomb of Hiên-hoà; (27) tomb of Thiệu-trị;(28) tomb of father of Gia-long; (29) tomb of mother of Tự'-dú'c; (30) tomb of Minh-mạng; (31) tomb of Khái-dình; (32) tomb of father of Gia-long; (33) tomb of wife of Gia-long (34) tomb of Gia-long (*from L. Bezacier, 1955*).

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

established the capital of the kingdom at Hué, his choice being dictated by the site's geomantic virtues.

During the first period (16th–19th cent.) the southern lords, most of whom were fervent Buddhists, promoted the building of many Buddhist temples with the help of Chinese bonzes who had been driven from their country by the Manchurian conquest. The foundations of the following temples date from this period:

1. Thiên-mụ, the oldest monument in Hué, which was built in 1601, probably on the site of an ancient Cham monument, and was subsequently enlarged by various sovereigns. In 1844 Thiệu-trị erected in the first courtyard the Phu'ó'c-duyên tower, an octagonal structure 69 ft. high, divided into seven stories, each of which was dedicated to one of the seven buddhas of antiquity. The main temple, Đại-hù'ng, has a rich collection of statues and a large bronze tympanum dating from 1674.

2. Quaôc-ân, located at the foot of the King's Screen south of Hué, which was built by a Chinese bonze in 1684 and is the oldest temple after Thiên-mụ. It was destroyed during the rule of the Tây-so'n and was rebuilt about 1805 and 1837–43.

3. Báo-quôc, near Hué station, which was erected in 1710, deconsecrated by the Tây-so'n, and rebuilt by Gia-long in 1808. A beautiful panel dating from 1747 and some unusual carved openwork doors are relics of the old temple. Six beautiful bronze basins of the same period are preserved in the royal palace. They were cast between 1659 and 1684 and are fine specimens of Vietnamese metal casting.

The most important group of buildings of the second period, which began when Hué became the capital of Vietnam in 1802, is unquestionably the one enclosed by the three walls of the imperial city. Of these buildings the Thài-miêu, a temple of worship built in 1804 and dedicated to the southern lords, is the oldest, followed by the Thái-hòa (throne room) of 1805 and the two palaces of 1811, the Cân-chánh used for audiences and the Càn-thành built to serve as private apartments. Dating from 1821 is the Thê-miêu, a temple of worship dedicated to the Nguyên sovereigns, in front of which are lined up the nine dynastic urns that were cast in bronze by order of Minh-mạng in 1835–36.

South of Hué in charming sites along both banks of the Huong-giang ("the river of perfumes") the various royal tombs of the Nguyên are located; those of Gia-long (1820), Minh-mạng (1804), Thiêu-trị (1847), and Tự-dú'c (1883) are the most interesting both for the composition and for the perfect blending with the landscape.

Lam-son. The birthplace of Lê Thái-tô, 32 mi. west of Thanh-hoa. In the sacred wood behind the village the tombs of eight kings and two queens of the Lê dynasty are arranged around the tomb of Lê Thái-tô (FIG. 788), the founder of the dynasty, which is the most important and the best-preserved. Nothing is left of the buildings used for worship except the foundations and the strings of the staircases that led up to them; the statues of human figures and animals constituting the "Spirit Road" leading to the tomb have also survived. The lavishly decorated steles of the tombs are of great interest for the chronological data they supply.

Tay-do. This site, "the capital of the west," lies 28½ mi. northwest of Thanh-hoa and about 90 mi. south of Hanoi. The citadel of the Hô was erected here in 1397 by Hô Quí-ly in preparation for his seizure of the throne three years later. It is built on a square plan, with sides 1,642 ft. long; its ramparts, which consist of an imposing earth bank, are pierced by four monumental vaulted gateways built of enormous blocks of ashlar. The southern gateway is the only one with three openings. Although all the buildings of the original royal residence have disappeared, their site remains visible because the dikes of the rice fields were superimposed on the old foundations. The dragons that marked the entrance are all that remains of the old palace.

Southern Annam. The kingdom of Champa was located along the coast of southern Annam. The most important Cham monuments are to the south of the Col of Clouds, those to the north being in a poor state of preservation. The centers listed below are outstanding for their size or for their value as landmarks in the development of Cham art. They can be divided into the Quang-nam group, the Binh-dinh group, and the Nha-trang and Phan-rang group in the extreme south.

a. Quang-nam group. Bang-an. The tower of Bang-an, about 12 mi. south of Tourane, is remarkable for its octagonal plan and its superstructure in the form of a dome with eight segments. It was a Saivite sanctuary and probably dates from the 10th century.

Chieng-dang. The ruins of Chieng-dang, about 38 mi. from Tourane and just west of the Mandarin Road, consist of a group of three towers facing east along a north–south axis inside an enclosure. Their lateral façades are decorated with two-tiered blind doors. The central tower, which is by far the best-preserved, has retained two stories of its superstructure. This complex dates from the beginning of the 11th century.

Dong-duong. About 33 mi. south of Tourane, site of the ancient Buddhist monastery of Lakṣmīndra Lokeśvara (III, FIG. 359) erected at the end of the 9th century. This monastery occupies a precinct on an east–west axis, which is split into three connecting enclosures. To the east an imposing portico, with two pylons in front of it, leads to the eastern enclosure, which is decorated on the outside and lined on the inside with rows of stone posts along the northern and southern sides, both of which are pierced with doors. The great door guardians (*dvārapālas*) of the eastern entrance are represented standing on a *makara* (to the north) and a lion (to the south). Inside this enclosure rose a large hall consisting of a nave between two rows of eight pillars and two side aisles supported, on the outside, by two rows of smaller pillars. The roof, which no longer exists, must have been tiled. Between the two pillars erected at the western end, there is a platform supporting a pedestal decorated with Buddhist scenes. On this pedestal rested a statue of the Buddha seated European fashion, but only the feet are in place, the body having been moved to the central tower of the western enclosure. The northern and southern walls of the central enclosure, which is contiguous to the eastern and western enclosures, are no longer standing; only the rows of stone posts that ran along the inside remain. The entrance portico, whose two pylons rise in the westernmost part of the preceding enclosure, included two *dvārapālas*, the northern one on a bear and the southern one on a bull. In the middle of this enclosure there is a long hall that must have been covered with tiles; it has two-tiered doors at its east and west ends and is lit by narrow windows. Two-tiered blind doors adorn the northern and southern sides. The western enclosure, whose interior walls are decorated, can be reached only through the preceding enclosure by means of a portico that has three entrances to the east opening onto the court of the central enclosure; to the west, however, this portico has only one central entrance (flanked by two small temples) giving access to the courts of the western enclosure. In front of this portico there are two tall rounded pylons and two *dvārapālas* trampling human figures underfoot. The tower located in the eastern part of the enclosure is a large structure on a square plan, opening through four bays and built along the axis of the main tower, of which it is probably an annex. Of the superstructure only two stories are left, which reproduce the central structure on a smaller scale. The main tower, to the west of this tower, is a large building constructed on a double basement and surrounded by four smaller towers on the same terrace to the north, south, west, and southwest. To the east it has two flights of steps, and the other sides are decorated with blind doors. The stories of the superstructure are extremely dilapidated. Inside is the body of the statue of the Buddha placed on a pedestal decorated with Buddhist scenes. The western enclosure includes various other structures: seven small temples built against the wall; a tower with four bays to the northeast of the main tower; and two other subsidiary buildings in the northeast and southeast corners of the enclosure.

Khuong-mi. This site, which lies close to the Mandarin Road about 4 mi. south of Chien-dang, is by far the most important one in the Quang-nam group after Tra-kieu, Mi-son, and Dong-duong. Three towers dating from the end of the 9th or the beginning of the 10th century remain; they face east and decrease in size from south to north. In front of the richly decorated south tower there is a spacious vestibule with a three-tiered door opening to the east and a vaulted corridor giving access to the central chamber. The lateral façades are decorated with two-tiered blind doors, and the superstructure comprises three stories on the tower and two on the vestibule. The central tower is similar to the southern one, but its vestibule is less imposing. The northern tower, which is in a poor state of preservation, had no vestibule.

Mi-son. This site is located 15½ mi. from the Mandarin Road, in a natural amphitheater dominated by the peak of Rang Meo ("cat's tooth") and crossed by a stream, on the banks of which some seventy brick buildings were constructed by the sovereigns of Champa to commemorate various events. The oldest of those still standing is hardly earlier than the 9th century, but some of the sculptures probably date from the 8th century, notably a magnificent pedestal adorned with figures and decorative motifs inspired by the Indian tradition of the Gupta period. These monuments are divided into five groups, two on the left bank of the stream and three on the right; they are designated by their orientation, or more usually, by letters. This description is confined to the most important buildings, starting upstream and moving down. On the right bank the southwest group (Group A; III, FIG. 361) comprises — inside an enclosure running

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

west-northwest — two towers, the main one of which, A1, is apparently built on the site of the sanctuary of the Bhadreśvara lingam, which was originally erected at the end of the 4th century, then destroyed and rebuilt several times. The present tower, dating from the beginning of the 10th century, is the largest in Mi-son. It is open to the east and west; the extremely high inner chamber is built on a square plan; and in the center of it there is a large pedestal of a later date, bearing a statue of Lakṣmī. The northern and southern façades are decorated on the outside with blind doors similar to the façade projections of gabled buildings. The importance given to the pilasters is characteristic of Cham art. The superstructure is made up of four stories of decreasing size similar in composition to the main structure. The exterior decoration was carved in the brickwork and must undoubtedly once have been finished with a coating of stucco. This tower with the six small temples surrounding it (three to the north and three to the south) is built on a terrace whose substructure has moldings and applied ornamentation. North of Tower A1 and built right against it there is another, smaller tower (A10), which has only one entrance, on the western façade. This leads to a chamber built on a square plan, in the middle of which there is a two-storied pedestal supporting a large lingam. On the left bank of the stream is the southwest group (B, C, D), facing east; it dates for the most part from the beginning of the 10th century. To the east in front of groups B and C, which constitute one complex, is Court D, containing various buildings. The central monument of the southernmost group (B1), whose substructure is of stone and the superstructure of brick, is surrounded by various buildings; the ones at the southwest, southeast, and northeast corners are comparatively well preserved. The middle monument of the northern group (C1), which combines a sanctuary and vestibule, is accompanied by a row of four subsidiary towers to the north and a fifth one to the southeast. Court D contains two long halls in front and to the east of the two preceding groups; the southern one (D1) extends in the form of a nave, its outer walls adorned with pilasters between which figures standing in prayer are depicted in niches.

The northeast complex (E, F) on the right bank consists of two juxtaposed groups facing west, separated by a party wall. The center monument of the southern group (E1), which is the oldest (second half of the 8th cent.), is a square chamber planned to house the large decorated pedestal (now in the Tourane Mus.) that served as the support for a lingam. The outside decoration is very simple: there are no blind doors, pilasters being the only form of ornamentation. The missing superstructure probably had a tiled roof. North of this monument another temple (E4), with a vestibule to the west and blind doors on the other sides, has a superstructure consisting of stories of decreasing size that repeat the composition of the main structure. The central monument of the northern group (F1), which dates from the end of the 8th century, is built on a high basement. The rectangular inner hall, which is open to the west, contained a lingam. The exterior decoration of the lateral façades consists of a series of large frames flanked at either end by wide pilasters and separated from each other by a broad wall surface, from which projects a blind door.

Tra-kieu. Situated on the Song Baren, about 22 mi. south of Tourane (10 mi. west of the Mandarin Road), Tra-kieu was originally a Chinese colony that was later developed by the Cham kings. During the period when this city (which perhaps corresponds to Simhapura) served as their capital, it was surrounded by a brick wall pierced with loopholes. Excavations have disclosed a group of eight Brahman temples. The main one dates from the beginning of the 10th century and was a building of extraordinary size; all that remains is a huge terrace, the brick base of which is carved. It was decorated with sandstone bas-reliefs depicting dancers, trained lions, and remarkably realistic elephants.

b. Binh-dinh group. Binh-lâm. Situated about 3 mi. southeast of the Ivory Towers, Binh-lâm is a tower built on a square plan, occupying the northeast corner of the enclosure of a vast citadel. All that remains is the first part of the vestibule; the blind doors are richly decorated, and the three tiers of the roof are adorned with metopes and figures of animals. The structure dates from the 11th century.

Cha-ban. The citadel of Cha-ban (the old capital Vijaya), located about half a mile south of the Golden Tower, is a vast rectangular enclosure built of earth faced with laterite, measuring about 1,530 yd. on the north-south axis and about 1,200 yd. on the east-west axis. The 13th-century "Copper Tower" rises on a hillock in the middle of this quadrilateral. Its entrance and blind doors are in a poor state of preservation, but the two-storied roof with its corner crowns is comparatively well preserved. Along the axis of this tower about 330 yd. north of the enclosure, the remains of a large tower, now completely in ruins, form the rounded hillock of Thap-mam, which is about 30 ft. high and extends over a surface about 100 × 130 ft. Excavations carried out here in 1934 unearthed an impressive group of excellently preserved sculptures dating from the end of the 12th or the beginning of the 13th century.

The "Golden Tower." This lies 17 mi. north of the port of Qui-nhon, on a hill with two artificial tiers on its summit, and consists of a sanctuary dating from the 13th century whose entrance vestibule is completely ruined. It has three-tiered blind doors with three superimposed pediments. The two stories of the roof reproduce the scheme of the central structure.

Hu'ng-thanh. The two towers of Hu'ng-thanh, about 2 mi. west of Qui-nhon, date from the middle of the 12th century. The northern tower, which was originally the central tower of a group of three, is 75 ft. high. Its three blind doors have four tiers, each surmounted by an ogee arch. The upper story is in the form of a curvilinear pyramid. The southern tower, which is similar to the northern one except for its smaller dimensions, is covered by a pointed dome with four segments.

The "Ivory Towers" (Towers of Duong-long). About 5 mi. east of Cha-ban, on a slight rise backed by a low hill, are the remains of an important complex, other traces of which are still visible to the east. The three large towers, which open to the east and are built on one terrace, are all of the same type and style and date from the end of the 12th to the beginning of the 13th century. The central tower, which is more imposing than the others, includes an entrance vestibule, stone-faced blind doors, and a superstructure consisting of four square stories without corner crowns or projecting elements, surmounted by a circular story.

The "Silver Towers." The site of these towers, about 10 mi. from the port of Qui-nhon, is a hill whose summit has been given the form of a three-tiered truncated pyramid. The complex, dating from the first half of the 12th century, must have consisted originally of six or seven structures. At the foot of the hill can be seen the remains of a tower at the entrance of a roadway about 270 yd. long. This ended in a stairway that led to a second tower crossed by a passageway and covered by a roof with two diminishing tiers. A few yards farther on a terrace served as the support for a pillared hall, now completely destroyed. Beyond, a continuation of the stairway led to the upper terrace, which was occupied by the central tower. The entrance door of its vestibule has partly collapsed; the blind doors are three-tiered, and the roof consists of three diminishing stories. There is a structure with two chambers south of this tower that is covered by a vault terminated at either end by an outward-leaning pediment. On the southern side, level with the pillared hall, rises a tower with four pedimented doors.

Thu'-thiên. This tower is located opposite the Ivory Towers on the other side of the river, facing east. It is noteworthy for the slight projection of its entrance door and for the graceful silhouette of this door and of the blind doors. The structure dates from the 13th century.

c. Nha-trang and Phan-rang group. Hoa-lai. The towers of Hoa-lai, 8½ mi. from Phan-rang, on the highest point dominating the plain north of this city, are the oldest preserved examples of Cham architecture. They date from the first half of the 9th century and reveal the main characteristics of this architecture in the form of the arcature and the importance given to the pilasters. This site constituted an important complex, of which three towers of the same type remain. They all have projecting entrances, blind doors, roofs in diminishing tiers, and pilasters that widen out from the bottom toward the top. The central tower is the smallest and the most carefully built. The southern tower has remained in a state of incomplete construction, while the northern tower resembles the central one but is more roughly built.

Nha-trang. The Po Nagar at Nha-trang, situated at the top of a rounded granite hillock on the left bank of the Song Cai, originally consisted of seven or eight buildings, four of which are still standing (III, FIG. 362). At the foot and to the east of the hillock is an entrance tower; a third of the way up there is a large hall with a double row of octagonal pillars that is joined to the esplanade of the summit by a stairway. On the eastern edge of the esplanade there are three towers: the main tower on the north side (VII, FIG. 924), which is 75 ft. high, comprises one story built on a square plan and covered by a pyramidal roof formed by three diminishing stories. The elaborate eastern entrance is surmounted by a roof that repeats, on a small scale, the roof of the main tower; the other sides are decorated with

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

extremely prominent blind doors. In the center of the high inner chamber is a pedestal that supports a black stone statue of a seated ten-armed Bhāgavatī leaning against a richly decorated backrest. The southern tower is built on the foundations of an earlier sanctuary. The external decoration is simple, the blind doors are two-tiered, and the roof has two gables in the form of a pointed segmental arch. Behind, the richly decorated northwest tower is covered with a roof with two slopes and two gables, set at right angles to the general direction of the building. On the esplanade, in addition to these three 11th-century temples, there are some ruined structures to the southwest and west and a miniature temple to the southeast.

Pho Hai. An 8th-century Saivite temple, built on a hill about 160 ft. high dominating the city of Phan-thiet to the north. It comprises three brick sanctuaries opening toward the east and overlooking the sea. The main tower is built on a rectangular esplanade. It opens to the east by a door whose structure is reproduced by the blind doors of the other sides. The three diminishing tiers of the superstructure reproduce those of the central structure; the inner chamber contains a square vessel that serves as the support for a lingam. To the northeast, on the same terrace, an annex building, which is now in a poor state of preservation, adjoined this tower. At the foot of the terrace and to the north of it is another tower that is a reduced version of the main tower.

Po Dam. Lying approximately 12 mi. south of Po Romé, Po Dam is built on the first tier of a hill. The complex dates from the second half of the 9th century and consists of two groups of three extremely dilapidated towers that are believed to be princes' tombs. Of the three towers of the southern group, which are small and simple and without blind doors, two open to the south and the other, lying behind, to the east. The northern group comprises a main tower similar to the towers of Hoa-lai but smaller and two simple square structures set somewhat farther back. The principal tower has a projecting entrance on the south side, while its other sides are decorated with blind doors; its superstructure has collapsed.

Po Klaung Garai. About 4 mi. northwest of Phan-rang, on a hill about 330 ft. high, there is a group of four 14th-century structures, two of which are in ruins (III, FIG. 362). In front and to the east of the principal tower, which is built on a square plan, there is a rectangular hall that is in turn preceded by a tower reproducing the principal tower on a small scale. The hall is flanked on the south side by an oblong structure simulating two stories and containing two halls. The excellently preserved main tower has prominent blind doors and an imposing vestibule that is in itself a small gabled building decorated with a pediment depicting Śiva dancing. Its roof consists of three diminishing tiers with corner crowns, in the shape of a curvilinear pyramid. This tower, which has little external decoration, contains a square chamber in which there is a lingam.

Po Romé. This monument, which is situated on a small hill about 9 mi. southwest of Phan-rang, is considered to be the sepulchral temple of King Po Romé (1627–51). The structure, which is well preserved but rudimentary, recalls in simpler form the architecture of Po Klaung Garai. The inner chamber contains two statues of queens and a bas-relief depicting a king represented in the guise of Śiva. South of this sanctuary there is a brick tower whose interior is adorned with paintings.

VIETNAMESE ART. Within the sphere of Indo-Chinese artistic production (see BURMESE ART; CHAM, SCHOOL OF; KHMER ART; LAOTIAN ART; SIAMESE ART), on which Indian and Chinese art exerted an influence, Vietnamese art is distinguished by the complete predominance of Chinese elements (see CHINESE ART). These, however, were interpreted in accordance with the local decorative sensitivity and reflect an attempt to integrate the architecture with the local landscape. In the field of the so-called "minor arts" only bronzes and pottery have withstood the climate of these regions; the bronzes follow an ancient tradition, while the pottery is stylistically and technically of Chinese inspiration, although esthetically inferior. Few traces remain of the wood architecture of the more ancient periods, whereas the stone and brick architecture is better preserved; it is the latter that is chiefly discussed in the present article.

SUMMARY. Cultural periods (col. 778): *The Bronze Age; Chinese domination; Art of Dai-la; Art of the Trân period; Art of the Lê period; Art of the Nguyên period.* Architecture (col. 786): *General characteristics; Religious architecture; Funerary architecture; Civil architecture; Military architecture.*

CULTURAL PERIODS. The art of Vietnam can be divided into three broad chronological periods. The first, belonging to the Bronze Age and known as the Đông-so'n period, extends from the 4th century B.C. to the 1st century of our era. It was followed by a long period which corresponds to the Chinese occupation — from the 1st to the 10th century of our era — and which is characterized by a large number of Chinese tombs that have yielded abundant funerary material. Finally, the third and last period began toward the 9th century of our era and continued into modern times. The art of this period, at first Sino-Vietnamese in character, slowly broke away from the Chinese influence and acquired its true Vietnamese character toward the 13th century.

The Bronze Age. The earliest examples of Vietnamese art were revealed by the discoveries made south of the Tonkin delta in the province of Thanh-hoa (Annam), mainly at the village of Dong-son. The many objects discovered at this site came for the most part from tombs. In addition to the bronze objects, which were the most numerous and most interesting, there were pottery wares and many fragments of vases, both decorated with lozenge and meander motifs; there were also terra-cotta beads, earrings made of jade and other materials, and tools made of finely polished schist. Among the bronze objects were weapons of all kinds: lance heads, swords, daggers, axes of various shapes, and armor plates, with which some plowshares and vases were grouped. Although some of these objects were of Chinese origin — for example, a fine two-edged sword, a mirror, and some vases — most of them give evidence of native workmanship. Among the latter, special mention should be made of the pediform axes, whose faces are decorated with birdlike figures, as well as the dagger hilts in the shape of figures. The most interesting objects discovered at Dong-son were a few bronze drums, some of them of small size (PL. 361). These instruments, of which the Musée d'Histoire du Viet Nam in Hanoi has a fine collection from various regions of Indochina, have been known for many years and were inventoried at the beginning of the 20th century by F. Heger, who, in his basic work (1902), classified them into four types (a classification that is still valid). Of these only Type I belongs to the Đông-so'n period, the three other types being of much later date; in fact, the last, Type IV, was still being produced during the last century from Burma to northern Laos and is still used in certain festivals and ceremonies of western Tonkin, especially among the Muong, who are closely related to the Vietnamese.

Although they have been the subject of much discussion, the complex problems raised by these musical instruments of varying sizes and decoration have not yet been satisfactorily solved. For example, the question of their chronology, although it can be limited to about the 4th–3d century B.C. for the oldest examples, still presents some uncertain points. Their origin is even less certain, and scholars have still not identified the center or centers of diffusion, the area of distribution being extremely broad, since it extends from Mongolia to the Malay Archipelago and from Burma to Tonkin. The designs represented on the upper surface and on the sides of these instruments are extremely interesting for the study of the fauna and especially for the study of the people who used the instruments, a race of warriors whose civilization is comparable

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

to that of certain islands of the Malay Archipelago and who at that time probably inhabited a geographic area extending over a large part of southeast Asia. Around a central star inscribed within concentric circles are represented rows of birds (pelicans, storks), various animals (especially species of deer), and rows of bird-men similar to those depicted on the pediform axes, some of them dancing and others playing various instruments. There are also scenes incised on the drums (VIII, FIG. 46). These are representations of different types of boats and canoes, with sitting or standing oarsmen also disguised in birds' plumage. Some are armed with crossbows, axes, or lances; others are playing mouth organs, drums, or castanets. Lastly, certain types of houses on piles appear in the ornamentation. On the roof ridges of these dwellings birds (peacocks or roosters) are perched; birds' heads decorate the ends of the roofs, whose sloping edges, which almost touch the ground, are formed by the curved outline of the birds' wings. Inside these dwellings people can be seen in various crouching or recumbent postures.

These representations of domestic or religious life, animated by the presence of human beings and animals, are combined with saw-tooth and comblike patterns, hatching, meanders, running circles, and S-shaped motifs. These various decorative elements make it possible to establish the date of these musical instruments as 4th–3d century B.C. by analogy with similar elements reproduced on Chinese bronzes of the Huai style dating from the pre-Han era (see CHINESE ART). These instruments, like certain bronzes discovered at Dong-son, were probably the products of an industry that was dependent, to a certain extent, on Chinese metallurgy and art (see METALWORK) but belonged to a civilization that nevertheless differed from Chinese culture since it had strong ties with the Indonesian peoples of the Malay Archipelago and of other regions of southeast Asia (see INDONESIAN CULTURES).

Not all the bronzes discovered at Dong-son, however, and not all the bronze drums of Type I belonged to the early period. Probably this industry spread over several centuries, as is indicated by the development of the ornamentation and of the scenes represented on these bronzes. Moreover, coins dating from the time of the Chinese usurper Wang Mang (A.D. 9–23), discovered in conjunction with bronze objects in certain graves, make it possible to establish the 1st century of our era as an approximate terminal date.

This Đông-so'n culture, which was more indigenous than Chinese, gradually gave way after the 1st century of our era to an art that was more Chinese than indigenous, as is shown by the many objects discovered in the brick tombs in the Tonkin delta and in northern Annam.

Chinese domination. The tombs that date from the Chinese occupation assume different aspects according to the periods to which they belong. The oldest go back no further than the 1st century of our era. They are perhaps the tombs of Chinese soldiers or officials belonging to the retinue of the Chinese general Ma-yuan, who, in A.D. 40, came to put down the rebellion of the two Tru'ng sisters. The position of these first tombs, dating from the Eastern Han period (25–221), is generally indicated on the surface of the ground by a mound. Most of the tombs take the form of one or several vaulted burial chambers in which the coffin or coffins lay. The simplest and also most common form consisted of a rectangular chamber that, during this period and the following Six Dynasties period (3d–6th cent.), was always quite large (ca. 5–6½ ft. wide by ca. 13–16 ft. long) and always had two vestibules set one at either end. Certain tombs comprised two chambers or, occasionally, three (which was the maximum), for example, the two tombs discovered at the village of Nghi-ve (Bac-ninh province). In these two tombs each of the three chambers, set parallel to one another, was preceded by a square vestibule giving access to a large transverse common hall, which was itself preceded by three rectangular vestibules. On each side of the lateral burial chambers were set two other, smaller chambers whose purpose is unknown. In most cases the funerary furnishings have been discovered in the vestibules.

Throughout the first five centuries of the Christian Era these tombs, which were all barrel-vaulted, were built of large bricks, measuring approximately 17 in. by 8¾ in. by 2¾ in. for the walls; in the vaults the dimensions were the same but the bricks were wedge-shaped, decreasing in thickness from about 3½ in. to 2¼ in. The bricks were baked and were ornamented on one face or sometimes on two adjoining faces (those which remained visible in the structure) with a great variety of decorative motifs: various lozenge patterns, checker designs, concentric circles, spirals, S-shaped motifs, sometimes joined in combination with other motifs, for example, with a kind of quatrefoil made up of irregular lozenges, a sort of stylized vajra.

In the T'ang era (7th–10th cent.), whether the tomb was simple or made up of several chambers (three was still the maximum), the size of each chamber was smaller, barely larger than the coffin it was to contain; but the principle of barrel-vaulted construction was maintained, as was the common transverse vestibule where the funerary furnishings were placed. The construction is in some measure a simplification of the earlier tombs. The bricks, of inferior quality and less well baked than the Han bricks, were smaller and often undecorated.

In the Sung period (10th–13th cent.) the brick burial vault was no longer used. The graves of this period, which came after the Chinese domination, were always plain pits, at one end of which were placed the funerary furnishings. This development of the tomb can be observed not only in its construction but also in the funerary furnishings that it contains. In the Han tombs, and also in those of the Six Dynasties, these furnishings were generally rich and varied. They consisted of vessels of different shapes, sometimes highly original (tripods, baluster vases, earthenware jars decorated with *t'ao-t'ieh* masks, bowls, cups, etc.), as well as a whole collection of terra-cotta objects, including not only those in common use which the deceased would have used during his life on earth but also miniature models of dwellings, some of them perfectly preserved, beside which were placed models of ovens, wells, and the like. To these wares of varied shapes and uses there were sometimes added (more often in the tombs of Thanh-hoa than in those of Tonkin) bronze objects of Chinese workmanship, such as mirrors, vessels of *hu* form, tripods, bowls, and clasps.

Together with these imported objects there were others, also of bronze but with Indonesian affinities and therefore of local workmanship. These represent a continuation of the Đông-so'n tradition and therefore reveal a combination of the Chinese and indigenous cultures, the former at first overlaying the latter without destroying it, and then gradually replacing it.

Among the most characteristic objects of local origin should be mentioned the fine lamp holder discovered by O. Janse in a tomb at Lach-truong (Thanh-hoa province; PL. 361). Various hypotheses — none of them entirely satisfactory — have been advanced as to the significance of the two figures found in the same tomb, one playing a mouth organ, seated astride the back of his companion, who appears to be dancing.

In the T'ang period the funerary furnishings were simpler and less varied; they comprised merely a few bowls and some large earthenware jars, often undecorated. None of the tombs of this period has yielded any of the human figures in terra cotta that are so characteristic of the T'ang graves of China. The furnishings became even more limited in the subsequent Sung period, although they were then of higher quality. There were fine urns with lids decorated with lotus petals in relief and with bellies elegantly ornamented with brown flowers, leaves, birds, or human figures on a creamy white or light-yellow background. There was also some fine celadon ware in a large variety of colors, from ordinary brown celadon to the superb "sea green" celadon, which is sometimes adorned with motifs in slight relief (fish, floral decoration, etc.).

This long period of Chinese occupation, lasting until the middle of the 10th century, was in fact marked in north Vietnam only by this funerary architecture, which was dependent upon Chinese inspiration, although certain objects belonged to an indigenous art whose first expressions date back to the Đông-so'n era.

Art of Dai-la. Although nothing is known of the secular or religious architecture of this Chinese period, scholars are a little better informed about its sculpture, at least for the late period. Their sources are some bricks whose decoration is similar to that of the bricks used in the tombs, numerous fragments of architectural decoration in terra cotta, decorated flagstones, and pottery, discovered mostly in the vicinity of Hanoi, the site of the ancient city of Dai-la. Although some of these fragments, such as the bricks and flagstones, may have belonged to secular buildings, most of them certainly came from religious edifices. The place they may have occupied in these buildings has been shown by the stupa of Binh-son, which includes similar elements. Although none of these fragments is dated, the Binh-son stupa makes it possible to set the 7th–8th century as the earliest possible date. These early fragments are in fact the first pieces characteristic of Vietnamese art; their chief place of origin, Dai-la, has given its name to this artistic period, which is also called Sino-Vietnamese since most of its products show a strong Chinese influence.

In addition to the fragments from Dai-la there are those discovered, since 1940, in the Vạn-phúc temple at Phat-tich (PL. 362). The sculptures brought to light at this site are of two kinds: stone and terra cotta. The stone pieces must have belonged to a former stupa built, according to certain Vietnamese and Chinese texts, about 866–67 by the Chinese general Kao P'ien, who was at that time governor of the protectorate of Annam. Among the most characteristic of these sculptures is the statue of a lokapala (PL. 362), a guardian of the Buddhist Law, in which the Chinese influence is revealed by the presence of the leggings, but which also shows, for the first time in a sculpture discovered in Vietnam, an Indian influence in the *hanchement* of the figure and the decoration of the robe. Another statue from the same site, as fine as the first and perhaps even more typical, shows a *kinnara* (PL. 362), an imaginary creature, a musician with a bird's body and a human head; in this piece may be distinguished both a Chinese influence of the T'ang period, which characterizes the head, and an Indian influence, different from that discernible in the lokapala. Indeed, the figure's general bearing, with the drum, shaped like an hourglass, hung around its neck, reveals influences from both Champa (see CHAM, SCHOOL OF) and Java, which had some contacts, though infrequent, with ancient Vietnam. These sculptures, as well as a Vajrapāṇi statue and various fragments of decorative sculpture, all showing this double Sino-Indian influence, characteristically represent the fusion of the last manifestations of Hindu art, passing through Central Asia and T'ang China, with Cham art.

These different influences are also perceptible in the friezes decorating several stone bases of columns that were incorporated in the present temple of Phat-tich. These friezes, which are all alike, have as a central motif a stylized lotus flower in the shape of a heart enclosing three chrysanthemum flowers. On each side of the lotus are grouped five figures, four of them musicians playing various instruments; the fifth, which is the one nearest the central motif, is shown making an offering in the form of a sugar loaf. Although the posture and arrangement of the figures in these friezes recall those which appear in certain Cham bas-reliefs, they are more comparable to those in the bas-reliefs of Yün-kang or, especially, those of Lung-mên (see CHINA; CHINESE ART). The Cham influence is more marked in an enormous section of a vault, also from Phat-tich, in which it is clearly revealed by the presence of a corner Garuḍa that recalls the Cham corner motifs in the posture of Atlantes. This Cham Garuḍa motif was reproduced, but in a less delicate style, a little later in an altar base of the Thiên-phúc temple at Thuy-khe, dated 1132, which, like the stupa of Binh-son, heralds the following period of the Trân dynasty.

The so-called "Kao P'ien stupa" to which these stone sculptures belonged was replaced by another stupa, this time built of brick, founded in 1057 by King Lý Thánh-tôn, as is testified by the two-line inscription in beautiful and delicate characters stamped on each of the bricks used in its construction. Of this second stupa, whose substructure measured at least 28 ft. square, many decorative elements have been recovered. These are all ornamented fragments of terra cotta, some of them glazed. In style they resemble those discovered at the ancient site of Dai-la and in the earth platform of the Chuà Cói temple, as well as at the site of an old stupa built in 1121 by Lý Nho'n-tôn at the top of Long-doi-son and replaced by the present temple, which was built at the beginning of the 15th century. These fragments belong to what is commonly called the Lý style, since it was mainly the kings of this dynasty who promoted the building of edifices of this kind, of which the stupa of Binh-son is the last representative monument.

The Lý style, like that of Phat-tich of which it is the continuation, belongs to the art of Dai-la and shows the same characteristics. It reveals the same refinement in the representation of vermiform or threadlike dragons embellished with delicate volutes, the same rinceaux trimmed with small alternating leaves that, shaped at first like commas, gradually assumed the form of stylized clouds or lanceolate leaves, the latter characteristic becoming accentuated in Vietnamese art of the 15th century. The stupa of Binh-son (probably 11th–12th cent.) marks the end of this period of Dai-la art, during which Vietnamese art attempted to assimilate the Chinese and Indian influences it had received in the course of the previous centuries. This stupa, at present 11 stories high, while reproducing certain decorative motifs — such as the dragons — that are proper to Dai-la art, heralds the subsequent art of the Trân dynasty. This is apparent, for example, in the shape given to the lotus petals surmounting its base, which are like those decorating the base of the Thiên-phúc temple, which in turn can be compared to those subsequently carved on the tomb of Trân Nhân-tôn at Tuc-mac in 1310.

After the 12th century the art of Dai-la ceased to flourish. Reminiscences of it, however, appeared toward the middle and end of the 14th century, especially in the stele of Thị-du'c (1331) and in the dragons that formerly decorated the entrance to the royal palace of the citadel of the Hô rulers.

Art of the Trân period. This period extended from the end of the 12th to the end of the 14th century. The first dated example of Trân art is the stone altar on the Thiên-phúc temple at Thuy-khe, which is the only remaining trace of the temple built in 1132 by Lý Nho'n-tôn. Although built under the Lý rulers, its general massiveness distinguishes it from the style of that period. Certain motifs retained the delicacy of expression of the preceding period (e.g., the frieze of rinceaux recalling the one on the reproduction of a stupa from Dai-la); the lotus petals, on the other hand, are very different in style from those of Long-doi-son (which are ornamented with chrysanthemum flowers and date from the same period), although they differ only slightly from those of the Binh-son stupa and those of later date on the stupa of Trân Nhân-tôn at Tuc-mac. What characterizes the base of this altar, in addition to the corner Garuḍas — which recall, in a rougher form, those of Phat-tich and, consequently, the Cham influence — are the dragons that ornament the rectangular medallions. These dragons, like the Garuḍas, are heavier and no longer have the vermiform or threadlike form of Dai-la art. The fine, delicate art of Dai-la was superseded by a new, more massive form of artistic expression. This subsequently grew refined once more, but in a different style that appeared at the beginning of the 15th century in the monuments of Lam-son.

Another monument that is a good example of the art of this period is the tomb-stupa built in 1310 in front of the Phô-minh Buddhist temple at Tuc-mac; only the stone basement of the stupa belongs to that period, the brick stories having been reconstructed at a recent date. The cubic appearance of the ground floor of this monument contrasts with the great delicacy of its decoration. The simply incised friezes that decorate some of the platbands of the basement and the pilaster bases are composed of rinceaux with elongated and intersecting volutes enclosing circles decorated with delicate scroll motifs like those of Dai-la. Similarly, the arrangement and decoration of the lotus petals that ornament the upper molding of the basement are comparable to those of the stupa of Binh-son.

Of the old temple built in 1262 behind this stupa and

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

dedicated to King Trân Nhân-tôn nothing remains except the four door panels, which are the oldest and also the finest in Vietnam. The upper part of each panel is decorated with a coiled dragon, its head lifted toward a pearl, the symbol of perfection. These dragons are set in a kind of trilobate teardrop whose prototype was an antefix from Dai-la. Between the coils of their bodies appear volutes, some of which, in the shape of stylized clouds, herald the Lê art of the 15th century as well as the flamelike decorative motifs that were to become fashionable in the 16th and 17th centuries.

The citadel of the Hô rulers (1397) and the few pieces of sculpture from it are the last examples of the art and architecture of the Trân.

Art of the Lê period. This period extended from the first third of the 15th to the end of the 18th century. Its beginning was marked by a new Chinese invasion, that of the Ming, which introduced new forms of expression into Vietnamese art, although the old themes were also preserved.

The first buildings dating from this period are those marking the grave of King Lê Thái-tô at Lam-son (FIG. 788). Of this tomb, dated 1433, only the stone elements have withstood the invading jungle; they include steles, staircase strings, and the human figures and animals of the Spirit Road. The outer surfaces of the strings of the staircases, which led to the temple and which were surmounted by a rampant dragon, are adorned with a decorative composition with motifs similar to those found in the Dai-la period on facing or flooring bricks as well as on a stone console from Phat-tich. This composition consists of a group of geometrically arranged rinceaux representing lotus flowers in full bloom alternating with chrysanthemum flowers, but these flowers are much more stylized than in the Dai-la period. The lotus flowers, for example, tend to be transformed into clouds, as on the ramp that surmounts the staircase strings. Similarly, the comma-shaped leaves of the Dai-la rinceaux are here transformed into volutes with sinuous outer edges, some of which end in spirals and others in flames. From the 15th century on these two new decorative motifs, spirals and flames, were increasingly used, both in stone and in wood sculpture, especially in the decoration of structural timbers.

Better preserved, and identical with the staircase strings of Lam-son, are those which formerly adorned the entrance to the royal palace of the Lê rulers in Hanoi. Their resemblance to those of Lam-son is so complete that they seem to have been executed by the same team of craftsmen.

The stele, dated 1433, on which the epitaph of King Lê Thái-tô is engraved also deserves mention. Its border decoration is composed of superimposed teardrops whose prototype goes back to the Dai-la period, although the treatment here is very different. The dragon inscribed within each teardrop recalls not only the dragons of Dai-la but also those ornamenting the panels of the doors of the Phô-minh temple, except that here it is embellished with a plant decoration that may be compared to that of the friezes of the Trân Nhân-tôn stupa at Tuc-mac. This decoration of dragons inscribed within teardrops was used for the last time in the stele of Lê Thái-tô. The border decoration of the steles that were subsequently erected at Lam-son — those of Lê Thái-tôn (1442), Lê Thánh-tôn (1498), Lê Hiên-tôn (1505), and Lê Túc-tôn (1505) — was edged with affronté rampant dragons forming an unbroken sinuous line all around the circumference of the stele.

The human figures and animals that border the Spirit Road in front of the tumulus of each of the Lam-son tombs are of no great artistic merit. They lack the artistic quality of the sculptures of the staircase strings or even that of some of the animal figures in the temple courtyard. Indeed, this Vietnamese funerary sculpture, both during the Lê period and later under the Nguyên at Hué, was of a quality inferior to that which can be seen in certain other monuments, for example, at Hoa-lu or even at the tomb of Nguyên Diên.

After Lam-son, it is Hoa-lu that provides the sequel to this art of the Lê period. The oldest remains of Hoa-lu are the stone sculptures, animals and offering tables, placed in front of the dynastic temple of the Đinh rulers, built about 1607 or 1610 (PL. 364). The style that predominates in these sculptures is very different from that which characterizes the sculptures of the 10th and 11th centuries. All the characteristics first observable at Lam-son are developed and accentuated here. The accolades that had made a timid appearance on the basement of the Thiên-phúc temple toward the middle of the 12th century are developed and embellished by spiral-shaped leaves. The macrocephalous dragons that border the main offering table of the funerary temple of Đinh Tiên-hoàng are in a distinctly more angular and tortuous style. Lastly, the dogs are better formed and more realistic than those of Lam-son; although they are, like the latter, ornamented with flames on their shoulder blades (a decoration that first appeared in the 11th century on the monolithic animals lined up in front of the Vạn-phúc temple at Phat-tich), here these motifs are sharper and the tips of the flames more pointed.

Although the Chinese influence, having been fully assimilated, is no longer discernible in the sculptures of Hoa-lu, it made a new, momentary, and localized appearance in the sculptures of the balustrade of the Ninh-phúc temple at But-thap (PL. 364), because of the fact that the temple was restored by two Chinese bonzes, Chuyêt-công and his successor Minh-hạnh, the former from Fukien province and the latter from Kiangsi. This stone balustrade, built between 1646 and 1647, ends at the back of the temple in a pretty little bridge, also of stone. The subjects and scenes carved in relief on the 38 panels composing the balustrade are highly varied. Different species of flowers and shrubs alternate with scenes in which the animal kingdom predominates: horses and deer, the dragon-horse (*long-mã*), the phoenix (*con-phu'o'ng*), lions, carp turning into dragons. Although the subjects are often of Chinese inspiration and may be compared with certain bas-reliefs of the temples of Hu-nan, their execution shows Vietnamese craftsmanship. The principles are the same as those apparent in the composition, the subjects, and the execution of the bas-reliefs of the base of the stupa built in 1647 by Minh-hạnh over the ashes of his predecessor Chuyêt-công. The portrait statue of Minh-hạnh (PL. 363), the finest specimen of Vietnamese statuary, is placed in the niche of the stupa of Trach-lam, which was built in his honor in 1660.

The Ninh-phúc temple (FIG. 785), although entirely restored in 1646–47, nevertheless preserves some elements from an earlier period, such as the mobile wooden stupa, octagonal in shape and nine stories high, that, according to some texts, was probably built at the beginning of the 14th century by the Vietnamese bonze Huyên-quang. The bas-reliefs ornamenting the eight sides of the first four stories, among which the Paradise of Amitābha is recognizable, show, both in their composition and in their decoration, a transition between the end of the art of the Trân era, whose simplicity they reflect, and the beginning of the art of the Lê period, which they herald.

With the tomb of Nguyên Diên, built in 1769 in the vicinity of Bac-ninh, the art of the Lê period approached its end. In this small monument everything is rectilinear, the squares are juxtaposed with the rectangles, and the motifs themselves, inscribed within quadrilaterals, follow this movement; a general geometrizing of the forms is apparent. New motifs make their appearance here, especially the key meander, which was often to be used in Nguyên art.

Art of the Nguyên period. The art of this period flourished chiefly at Hué. Originating at the beginning of the 19th century with the accession of Gia-long in 1802, it comprises two subdivisions. The first extended throughout the entire 19th century and was characterized by the many buildings of the royal palace and the tombs built by Gia-long and his successors. At this time Chinese art, and more particularly that of Peking, exercised a new and powerful influence; the Ngộ-môn gate that gives access to the palace is one of its finest products. Notwithstanding their efforts to free themselves from this influence, the Vietnamese hardly succeeded in doing so. Evidence

Vietnamese buildings for Buddhist worship, plans. (*a*) But-thap, Ninh-phúc temple; (*b*) Phat-tich, Vạn-phúc temple (*from Bezacier*, 1955).

of this can be seen in the nine beautiful urns lined up in front of the Thê-miêu. Cast in 1835–36, they are a reflection of those cast by the emperors of the early Chinese dynasties. Nevertheless, the motifs worked in relief on the bellies are Vietnamese in technique.

With the accession of Khái-định in 1916, this Sino-Vietnamese style underwent profound changes. The new style preserved only a few decorative motifs from the past. The Chinese influence was at this time replaced by that of neoclassic Western art, which was not assimilated with any great success. The decoration of the tomb of Khái-định, built in 1925, is the most striking example of this tendency.

ARCHITECTURE. *General characteristics.* As the preceding discussion indicates, the sculptural works can be dated with a certain degree of accuracy; unfortunately, this is not the case with architecture. Although the founding of many temples in early periods is mentioned in inscriptions, these temples, always built of wood, were subjected to successive restorations, which, without perhaps profoundly changing the original conception, may have modified their appearance and decoration.

Of all the forms of artistic expression, architecture is the one in which the Vietnamese have shown the greatest creative originality. It is also the one that best met the manifold requirements created by the presence of the numerous gods and spirits of the religions practiced in Vietnam: Buddhism, Taoism, and Confucianism (qq.v.). The religious requirements, to which should be added the funerary needs, whatever their importance, were not, however, the only ones that had to be satisfied; the equally numerous civil and military requirements had also to be taken into account.

One of the main characteristics of Vietnamese architecture, whatever its purpose, is its consideration for landscape, a characteristic that appears more especially in religious architecture: the prettiest spots of the countryside are always complemented by a religious building. But this architectural landscape created by man complementing nature is not the result only of artistic concern but also, and even more, of a concern with magic and religion demonstrated by the application of geomantic principles. The result is an intimate and inseparable association between the monument and the landscape surrounding it.

Although the geomantic principles that determine the establishment, orientation, and disposition of Vietnamese monuments, as well as their size, vary according to the nature of the terrain and the presence of vegetation, the construction of the monuments depends on architectural principles which are identical for all buildings although they are variable in their application. The application of similar principles inevitably created a similar architectural form for all structures, thus creating a certain monotony. This monotony, or rather, this uniformity of style, was nevertheless relieved by the individual character given to each monument and by the purpose assigned to it, as well as by its surrounding landscape.

The Vietnamese, like the Chinese who provided the main source of their inspiration, were only rarely concerned with building their monuments in terms of elevation. Instead, they developed the horizontal planes in large spaces where the crowd could deploy through a sequence of courtyards and terraces joined to one another by large shaded avenues. The finest application of these principles is to be found at the tombs of the Nguyên in the vicinity of Hué, as well as in some Buddhist temples of Tonkin.

Vertical architecture, which was less frequent, was used more particularly in the building of stupas. It seems to have been in favor between approximately the 9th and the 13th century, judging by the remains that some excavations have yielded and by the existence of the stupa of Binh-son, the only example of this architecture still standing. This period of favor corresponds to the flourishing of Buddhism under the Đinh, Lý, and Trân rulers. In the following centuries this style of architecture was confined to the stupas built in most of the Buddhist temples, beneath which the bonzes were buried.

Religious architecture. This architecture is far from uniform, the plan of each building varying according to the religion practiced in it.

The Buddhist temple (*chuà*) is made up of a series of chambers juxtaposed in the shape of an H: the "front chamber," reserved for the public; the "chamber of the perfume burners,"

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

where the bonze reads the prayers each day; and the "chamber of the main altars," where the many statues that form the Buddhist pantheon are lined up on steps, their number varying according to the wealth and importance of the temple. Behind this nucleus that forms the sanctuary various buildings are constructed for different purposes, all of them comprising, like the sanctuary, a single story. A bell tower with one or sometimes several stories (e.g., Chuà Keo at Dung-nghia) occasionally completes this complex enclosed by a peripheral gallery ending in an entrance portico with three openings. Some of the important temples (Vạn-phúc at Phat-tich, FIG. 785; Thiên-phúc at Thuy-khe; Chuà Keo) are embellished with sacred pools.

Whatever the kind of building, its architecture is always conceived according to the same principles: a large rectangular hall covered by an immense roof with inward-curving ridges and upturned ends, supported by many columns surmounted by a massive framework whose beams are decorated with sculptures.

The *đên* is the temple of Taoism, in which a national or regional spirit is worshiped. Its external architecture hardly differs from that of the *chuà*, although its over-all plan is simpler and often comprises fewer buildings than the latter. Its interior, however, is quite different. The spirit, rarely portrayed by a statue, is represented by its tablet placed on an armchair of bronze or of carved and lacquered wood and enclosed within the sanctuary from which the public is excluded. The furnishings consist of sets of symbolic weapons and a number of altars for offerings.

The *đình* has both a secular and a religious function. It is the meetinghouse, the place where the local dignitaries convene to deal with matters of administration or of local justice concerning the community; they also assemble there to celebrate certain ceremonies on the occasion of village festivals or spirit anniversaries. However, the religious role of the *đình* is even more important: it is the holy place harboring the altar of the guardian spirit, the protector of the village, whose tablet is carefully enclosed in a large and opulent tabernacle, covered with lacelike carving, that adorns the central bay of the building. Consequently the edifice is simultaneously a holy place, a meeting hall, and even a banqueting hall. These different functions make it the community center par excellence, around and in which the entire religious and social life of the community is concentrated. It is often isolated in the center of the village or near its edge, and its large size frequently makes it one of the most majestic monuments of the Vietnamese landscape. Often made up of one immense T-shaped hall, it is the only Vietnamese structure built on piles; from this point of view it can be compared to the "men's house" of the proto-Indo-Chinese mountain peoples. Its external architecture is simple. Usually it consists of an immense, imposing roof supported by huge columns holding up massive timberwork (PLS. 365, 366). It is certainly in the construction of this type of monument that the Vietnamese craftsmen exploited their knowledge and traditional talent. In fact, it is in the *đình* that the timberwork most characteristic of Vietnamese architecture is found, timberwork that is often profusely decorated with deep and delicate carvings.

The *vân-miêu* is the temple of literature assigned to the cult of Confucius and of his chief disciples. Every provincial capital has its own *vân-miêu*, but the one built in Hanoi in 1070 and restored many times since then remains the most important (PL. 367); in its general lines, it reproduces the Confucian temple built at Kufow (Ch'ü-fu), the native town of Confucius. It is a series of buildings separated by inner courtyards. Although it is important for its size and interesting for its over-all composition it is nevertheless not the finest from the point of view of architecture and decorative timberwork.

Funerary architecture. Examples of monumental funerary architecture are comparatively rare and mark the burial place of a venerated or distinguished person. The common graves are merely plain mounds whose shapes vary in different regions. Among the tombs of distinguished persons an interesting example is that of the military mandarin Nguyên Diên, built near Bac-ninh in 1769. Enclosed in a double wall of laterite, this tomb consists of a stone slab behind which is built a laterite block; near this block are placed two figures, a military and a civil mandarin, while other figures are lined up along the enclosure walls.

Interesting as they may be, however, these mandarins' tombs cannot be compared with the royal tombs, whether those of the Lê dynasty at Lam-son or those of the Nguyên dynasty at Hué. No trace remains of the tombs of the rulers of the Lý and Trân dynasties (11th–14th cent.). Of the early tombs, only that of King Đinh Tiên-hoàng remains, originally built in the 10th century on the summit of the Ma-yen-son at Hoa-lu, his birthplace. This tomb, consisting of a quadrangular tumulus in masonry surmounted by a seat of the same material, is of modern construction, and there is no justification for considering the monument an exact preservation of the original tomb. It is impossible to appreciate what the architecture of the royal tombs may have been before the beginning of the 15th century, and even from that period only a few traces have survived. These are the remains of the tombs of rulers of the Lê dynasty buried in the sacred wood overlooking the village of Lam-son, the birthplace of the dynasty's founder, Lê Thái-tô. All that remains of this king's tomb (FIG. 788)

Vietnamese funerary buildings, plans. *Above*: Lam-son, tomb of Lê Thái-tô. (*a*) Grave; (*b*) temple; (*c*) stele. *Below*: Dinh-bang, funerary temple of the Lý emperors. (*a*) Vạn-chi'; (*b*) Vo-chi'; (*c*) temple; (*d*) tank.

are the column bases of the old temples and the strings of the staircases leading to them. After crossing two porticoes separated by a large courtyard in which is erected the beautiful stele recounting the dead king's life, one comes to the main temple, 150 ft. by 118 ft., consisting, according to the common plan of Vietnamese temples, of three chambers juxtaposed in the shape of an H. Behind this temple, on terraces stretching in descending tiers to the east and west, several pavilions were built, each preceded by a staircase. From the central pavilion an avenue nearly 330 ft. long led to the tomb, which was made up of a plain square tumulus about 3 ft. high and 15 ft. square. It was preceded by the Spirit Road formed by a double row of paired human figures, horses, elephants, lions, and rhinoceroses. This complex, enclosed in a vast precinct about 1,000 ft. long and 720 ft. across, is the most complete one known. The tombs of the successors of Lê Thái-tô, built in the vicinity, consist merely of the tumulus, preceded by the Spirit Road, and the stele.

With the royal tombs built in the 19th century in the vicinity of Hué by the Nguyên rulers it is possible to form an exact idea of the appearance of this funerary architecture, which, like that of the tomb of Lê Thái-tô, is an intelligent interpretation rather than a slavish copy of the Chinese imperial tombs. These tombs consist of a number of structures scattered in a vast wooded park; fine avenues bordered with trees of every variety lead up to them across pleasant gardens adorned with streams and variously shaped lakes, a complex that perfectly expresses the intimate association of architecture and man-made landscape. Each structure has a precise purpose; the temple for worship, the pavilion with the stele, and annex buildings erected to commemorate ancestors, to house the wives of the deceased, or to serve as rest pavilions for the ruler when he came to supervise the work on his final resting place.

Although these different burial places comprised to a considerable extent the same buildings, their composition was always different. Indeed, the plan of Minh-mạng's tomb has nothing in common with that of Gia-long's tomb. The same is true of the tombs of their successors Tự-đức (PL. 367) and Thiệu-trị. These four tombs are the finest Vietnamese examples of landscape-oriented architecture.

Although the buildings that make up this royal funerary architecture hardly differ from secular structures, those marking the burial places of members of the clergy are quite different. The latter were always marked by a stupa (*tháp* in Vietnamese) in the shape of a quadrangular tower that comprised a greater or lesser number of stories according to the importance of the person buried there or the wealth of the monastery that had the tomb built. Sometimes a niche in one of the lower stories contains the statue of the deceased, as in the stupa of Trach-lam (Thanh-hoa), built in 1660, which preserves the portrait-statue of the bonze Minh-hạnh (PL. 363), and probably also in the stupa of the village of Tuc-mac. This 13-storied stupa, 66 ft. high, of which only the stone base is part of the original structure, was built in 1310 over some of the ashes of the bonze king Trân Nhân-tôn. Its architecture shows some features not found in any other monument, for instance, the curvilinear movement of the raised corners of the powerful basement molding and the projecting stone beams crowing the massive central structure.

The Ba'o-nghiêm stupa, built in 1647 near the Ninh-phúc temple at But-thap over the ashes of the Chinese bonze Chuyêt-công, who was the restorer of the temple, is an exception in that it was built on an octagonal plan. The base of this stupa is composed of two concentric walls decorated with carved panels in the same style as those of the balustrade of the Ninh-phúc temple described above.

Until the 18th century all these stupas were built of stone and conceived according to the same principles: a fairly high tower with several stories separated by a plain cornice. This type of building seems to have been replaced in the 18th century by constructions built of brick. However, the architecture of the building did not change, although the number of stories was reduced. The only innovation was the presence, on each of the four sides, of a recess on whose surface were incised or painted rather distorted Sanskrit characters or old demotic Chinese characters.

Civil architecture. The house, of course, occupies first place in this architecture. The wide variety of houses — whose study falls more in the province of ethnology than in that of art history — makes it difficult to determine a type.

No trace remains of the early Vietnamese royal palaces. What is known of them comes from the annals. It is at Hué, the last capital of Vietnam, that the study of a 19th-century Vietnamese royal palace can be made. Although it is conceived according to the arrangement of Chinese palaces, the royal palace of Hué also shows a Western influence in the conception of the outer surrounding wall.

The plan of the citadel of Hué (FIG. 772), in which the royal palace was located, comprises three concentric enclosures. The first or outer enclosure, Kinh-thành ("capital city"), conceived according to the principles of Vauban, contained various administrative buildings — ministries and civil and military offices — as well as several residences of important civil servants; the second, Hoàng-thánh ("imperial city"), comprised the different religious buildings — Thái-miêu, Thê-miêu, and so forth — devoted to the worship of the rulers of the dynasty and their ancestors. It was in the third enclosure, Tu'-câm-thành ("forbidden purple city"), that the palace buildings for the exclusive use of the ruler were located: the Cân-Cháhn, and audience palace; the Càn-thánh, the king's private apartments; the Thài-hòa, the throne room; and the Khôn-thái, the first queen's residence. The most important and finest of these buildings were destroyed in 1946.

This arrangement of a series of palace buildings (the main ones built on a north–south axis) surrounded by concentric enclosures, to which access is provided at Hué by the majestic Ngô-môn ("south") gate, is similar to that of the Chinese palace, particularly the palace at Peking. There is no doubt that Gia-long, the creator of the royal palace, and even more his son and successor Minh-mạng, who was especially imbued with classical Chinese culture, were inspired by the arrangement of the imperial palaces of the Celestial Empire.

This Chinese influence appeared not only in the ordering of the general plan of the Vietnamese royal city but also in the architecture and decoration of each of the palace buildings composing the city. This architecture was profoundly altered with the accession of Khái-định in 1916. The new style retained nothing from the past except a few decorative motifs. The Chinese influence was replaced by the Western neoclassic style, which, as is attested by the gate of the imperial villa An-định, was only imperfectly assimilated, thus creating a new art that departed as much from the style that inspired it as from the traditional Vietnamese style, whose best elements it abandoned.

Two other types of civil structures (although they are rather rare) should be mentioned: bridges and covered markets. Bridges are made of stone or wood, using the same construction: a stone or wooden superstructure resting on a variable number of piles, whose piers, also of stone or wood, are joined at the top by crossbeams. In the stone bridges, whose structure indicates an imitation of woodwork, the ends of the beams are decorated with stylized clouds and sometimes with heads of crocodile-like animals. The main features of the wooden bridges are their tile roofs and the center altar dedicated to the spirit of the bridge or of the river it crosses. One of the finest examples of these covered bridges was that of Khuc-toai near Bac-ninh, which was dismantled in 1940. There is little difference between the covered bridges of Tonkin and those of Annam, the best known of which is the so-called "Japanese" bridge of Faifo. The conception and structure are the same; only the roofing is different, flat tiles being used in Tonkin and rounded ones in Annam.

Some of the covered markets of Tonkin have undeniable architectural interest, for example, that of the village of Yen-phu near Bac-ninh. This market, built in front of the village *đình*, consists of a peripheral gallery enclosing a large central courtyard like a caravansary. Access is by a large portico of brick. The timberwork of the gallery, which is identical to that of the

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

galleries of religious monuments, is adorned at the corners with graceful and delicate lanterns that produce a beautiful effect. Like all the monuments, this market is equipped with a small altar dedicated to the tutelary spirit of the place.

Military architecture. Of the various military constructions, only the citadels are considered here, leaving aside the various fortifications built both in Annam and in the north of Tonkin, such as the Mac Wall. The citadels were of two types. The first was of Chinese origin (the earliest citadels having been built by the Chinese governors) and continued up to the end of the 18th century; the second, of French inspiration, was developed by Olivier de Puymanel, a French engineer who built various works for Gia-long, beginning with the citadel of Saigon in 1790. The most important citadels correspond to the location of the old capitals. Although the plan of the citadel-capital of Hoa-lu (10th cent.) and of those that succeeded one another on the site of Hanoi from the 7th to the 15th century cannot be reconstructed because their sites have undergone profound upheavals, it is possible to study the plan of the citadels of Co-loa (FIG. 769), Luy-lau, Ho-thanh, and Yen-truong, all of which are earlier than the 16th century.

On the basis of their remains, it appears that the plan of these fortified towns, from the 3d century B.C. for Co-loa up to the 16th century for Yen-truong, underwent no change. The towns were surrounded by three concentric enclosures. The first one, square or rectangular, the "royal town," contained in its center the royal palace, which was itself enclosed within another precinct on the same plan constituting the "forbidden city," the concept of which recalls that which governed the building of the successive cities of Peking and Nanking. Around the first enclosure were built an inner and an outer ringwall, ovoid and irregular in shape, constituting two lines of defense. This concentric ovoid shape seems in fact to have only a remote connection with strategy; it derived rather from a geomantic or astrological concept, a knowledge of which was indispensable for the building of all cities as well as for the choice of their location and orientation.

This concept was only partly changed under the influence of the French officers under Gia-long at the beginning of the 19th century. The plan of the royal city still remained square in general, but to it were added bastions and redoubts, inspired by the fortified towns built in France by Vauban. The outer surrounding walls disappeared; only isolated outposts without connecting earth embankments remained. The geomantic orientation, however, corresponding approximately to a north–south line, was respected, as, for example, in Hanoi, Hué, and Saigon.

Apart from the royal city, citadels conceived according to the same principles were built in the main provincial capitals, but here the square plan was not the only one adopted: some citadels were built on a regular polygonal plan with five, six, or eight sides.

VIGNOLA, GIACOMO [BAROZZI] DA. Italian architect of the late Renaissance and author of the famous treatise *Regola delli cinque ordini d'architettura* (b. Vignola, near Modena, Oct. 1, 1507, but according to Vasari, 1510; d. Rome, July 7, 1573). Vignola spent his youth in Vignola and then studied in Bologna under local masters such as Sebastiano Serlio, and, apparently, under Serlio's own teacher from Rome, Baldassare Peruzzi, both of whom, like Vignola, began their careers as painters before winning recognition as architects. While at Bologna Vignola demonstrated a strong interest in perspective and architecture, but he was nevertheless originally active as a painter when he went to Rome in 1530. In 1534, however, he found work as an assistant in the construction of the Vatican, where for two years he benefited from the expert tutelage of the architects Peruzzi, Jacopo Melighino, and Antonio da Sangallo the Younger. He later became thoroughly acquainted with ancient building construction at the Accademia Vitruviana, where with Francesco Primaticcio he worked on such projects as the collection of antique statuary and the preparation of plaster casts for the King of France, and in 1541 he and Primaticcio actually went to Paris and Fontainebleau. Although the extent of Vignola's activity in France is difficult to ascertain, the influence of this visit upon his later work was no doubt great. On his return to Italy he was given the position of construction supervisor of the Church of S. Petronio in Bologna for which he drew two designs for the façade, neither of which was executed. His drawings, along with the polemics which greeted them, are preserved in the Museo di S. Petronio (PL. 368). He was active in Bologna from about 1543 to about 1550 and participated to varying extents in the construction of a number of structures in the area. He probably had a hand in the construction of the Palazzo Boncompagni, but his particular contributions are difficult to pinpoint. The Palazzo Bocchi in Bologna, contracted in 1545, is thought to be completely the work of Vignola, whereas the attribution to him of the Palazzo Isolani in nearby Minerbio with its octagonal dove tower is disputed. Vignola has been cited as the likely architect of the extension of the Naviglio canal to Ferrara and of the Samoggia bridge in the same neighborhood. Willich (1940) credits him also with the tabernacle for the principal altar of S. Petronio, which, according to Walcher Casotti (1954, 1960), was completed in 1559 by another hand.

In 1546 Vignola was recommended to Pierluigi Farnese, duke of Parma and Piacenza. Thereafter he worked extensively for the Farnese family and became very famous chiefly as a result of his handling of their architectural problems. Before he was able to begin any important architectural projects in Rome he was assigned to complete the reconstruction, already begun, of the Farnese Church of SS. Giacomo e Cristoforo on the Island of Bisentina in the Lake of Bolsena. Willich also attributes to Vignola at this point in his career (1550) the hall of the ground floor of the Palazzo Comunale in Nepi, but Walcher Casotti (1954, 1960), although concurring that there are stylistic resemblances between Vignola's work and the design of the Palazzo Comunale, points out that documents conclusively indicate Antonio da Sangallo the Younger as the architect. Vignola also designed several churches during this period: a church in Mazzano Romano, constructed sometime around 1562–63 but no longer extant, and possibly the Church of S. Maria del Piano near Capranica (Willich, 1940).

When in 1549 Michelangelo (q.v.) broke with the Farnese family, Vignola assumed the supervision of the construction of the Palazzo Farnese in Rome, where he finished the hearths, chimneys, and portals. In February, 1551, he entered the papal service, supervising the construction of one of the architectural wonders of the times, the villa of Pope Julius III (PL. 370; VIII, FIG. 1087; XII, PL. 89), in which such prominent artists as Michelangelo, Giorgio Vasari (q.v.), and Bartolommeo Ammanati (q.v.) also took part. The designs for the casino of Villa Giulia are by Vignola and possibly parts of the main building are also his. In 1553, before the completion of the construction of Villa Giulia (1555), he may have been commissioned by Baldovino del Monte to design the connecting construction between the courtyard and the garden of the Palazzo di Firenze in Rome (Willich, 1940), although this work has been attributed as well to Ammanati (Walcher Casotti, 1954, 1960). Vignola is also thought to have designed and begun the construction of the Villa Lante in Bagnaia near

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

(*a*) Grotte di Castro, project for the Palazzo Comunale, ground plan; (*b*) Caprarola, project for the Hospital, ground plan; (*c*) San Oreste al Soratte, church, ground plan (*from Walcher Casotti, 1960*).

Viterbo. In 1554 he began the construction of the Castellina at Norcia, near Spoleto, and completed the Church of S. Andrea in Via Flaminia in Rome (PL. 369, FIG. 795; I, PL. 305). The nearby fountain in Via Flaminia may also be by Vignola (Coolidge, 1950). He designed the gate and the gardens of the Orti Farnesiani (FIG. 797) on the Palatine, but the date of this work (1555; Willich, 1940) has been disputed (1565–73; Walcher Casotti, 1954, 1960). In 1558, in competition with Francesco Paciotti, he drew up plans for the famous Palazzo Farnese in Caprarola (PLS. 371, 372; I, PL. 388; IX, FIG. 465). Vignola utilized the site and outlines of a ground plan of a pentagonal fortress that had been begun sometime around 1520 by Peruzzi and/or Antonio da Sangallo the Younger and converted it into a combination castle-villa. Vignola is responsible for the façade, the circular courtyard (FIG. 797), and the disposition of the interior spaces. Of particular interest are the grand spiral staircase (PL. 371, FIG. 797) and the so-called "Camera Tonda," or guardroom, for which Vignola also painted the ceiling frescoes. The construction of the Palazzo Farnese was begun in 1559 under his direction and was almost finished at the time of his death in 1573; the monumental exterior stairs were added about 1600 (Vignola's plans are in the Archivio di Stato in Parma). In Rome in 1558 he designed the portals of the façade and some of the interior details of the Palazzo della Cancelleria (XII, PL. 14), extended the Oratorio del Crocefisso in the Church of S. Marcello (Willich, 1940; Walcher Casotti, 1954, 1960, dates this work to 1563), and finished a plan for a building for the conclave in the west wing of the Cortile del Belvedere in the Vatican. The Church of S. Oreste al Soratte (FIG. 793), built about 1560, is also attributed to Vignola. Plans for a large villa, probably for Margaret of Parma, were drawn at this time but were never carried out. He may also have begun the reconstruction of the façade of the Palazzo dei Banchi in Bologna (PL. 372) in this year (Willich, 1940; Ackerman and Lotz, 1965), although some scholars date it to later in the decade (Coolidge, 1950). This structure, a pleasing fusion of several originally separate buildings, remained without the two clock towers with which Vignola had intended to crown the principal gateway (PL. 368). In 1560 he took over the construction of the Palazzo Farnese in Piacenza, whose cornerstone had been laid in 1558 by Paciotti. Vignola finished the plans for this building, which included a semicircular theater in the courtyard, in 1561, but its actual construction was hindered by local powers. Although he revised and extended the plans in 1564, only about one-third of the whole had been erected by the end of the century. He is presumed to have drafted the plans for the courtyard façade of the no-longer-extant Palazzo Torres in Piazza Navona in Rome sometime between 1550 and 1560. Also attributed to Vignola are the designs for the Palazzo della Corgna in Città di Castello and the Villa Ascanio in Castiglione del Lago, both executed by Galeazzo Alessi.

Vignola's treatise *Regola delli cinque ordini d'architettura* was published in 1562, followed in 1570 by the first of a long series of new editions. He was involved about 1565 in the designing and construction of the Cappella Ricci in the Church of S. Caterina dei Funari as well as in the execution of several other projects outside of Rome. Some scholars have assigned the design of the Church of the Gesù in Perugia to Vignola (Willich, 1940, dates it to 1562; Coolidge, 1950, assigns the work to 1566); but Walcher Casotti (1954, 1960) strongly repudiates this attribution and sees this church rather as the possible work of Annibale Lippi (1562). A chapel in the Church of S. Francesco in Perugia is assigned with greater certainty to Vignola. In 1564 he designed the Palazzo del Giardino in

Rome, Church of the Gesù, scheme of the project for the façade as deduced from the Cartaro engraving.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Parma, which was later completely rebuilt. Although his authorship of the fountain in Piazza della Rocca in Viterbo (1566) is quite certain, the attribution to him of another fountain in nearby Ronciglione is disputed.

In 1564 Vignola began to work on the construction of St. Peter's in Rome, first as "secondo architetto" under Pirro Ligorio, whose position he assumed in 1566; after that date Vignola worked independently on St. Peter's until the end of his life. His task was to carry through the projected design of Michelangelo, to which Vignola contributed the idea of the adjoining domes. The details of their design and their actual execution were left in the hands of Giacomo della Porta (q.v.). The Chapel of S. Stefano in the Torre Pia in the western section of the Cortile del Belvedere in the Vatican was built in about 1566 following Vignola's design. The next year he designed a palace to be built in the small town of Isola Farnese; his plans were altered in the construction of this palace, which was never completed. Vignola's plans for one of his masterpieces, the Church of the Gesù in Rome (XI, PL. 450, FIG. 899), had been in progress for some time before 1568; the cornerstone was laid on June 26, 1568. The church was completed in 1576 after Vignola's death under the direction of Giacomo della Porta, who also replaced Vignola's design for the façade with one of his own (IX, PL. 312). The church was not actually dedicated until 1584.

Vignola designed the Palazzo Comunale in Grotte di Castro in 1568 (FIG. 793) and the palace in Cittaducale for Margaret of Parma in 1569, but the latter corresponds to the designs only in the ground plan of the tower. At the same time Vignola produced the plans for the Church of S. Marco in Caprarola and the Church of S. Maria degli Angeli in Assisi. The cornerstone of S. Maria degli Angeli was laid in 1569, but the church was not finished until the end of the 17th century, after having undergone a number of changes in design; it collapsed in the 19th century and was rebuilt with further changes. Vignola's hand is therefore very difficult to detect in the design. In 1570 he drafted plans for alterations of the papal palace in Castel Gandolfo, but because of more recent alterations it is impossible to tell whether Vignola's plans were actually carried out. Designs done the same year for a palace in Montalto di Castro were not executed. Plans done by Vignola in 1571 for houses in Caprarola are extant. In 1572 he designed the Church of S. Anna dei Palafrenieri in the Vatican (FIG. 795), constructed after his death by his son Giacinto and altered and extended in the 18th and 19th centuries. In 1572 Vignola submitted designs for the Church and the Monastery of S. Lorenzo el Real in the Escorial in Spain but declined an offer to visit Spain on the grounds of his advancing age. The designs for the Hospital in Caprarola (FIG. 793) and the Palazzo Comunale in Velletri also date from 1572. The Cartaro engraving of Vignola's design for the façade of the Church of the Gesù (FIG. 793) is dated 1573. In that year, while traveling to Caprarola to inspect the numerous projects being erected there according to his designs, the architect was stricken by fever and died on July 7. He is buried in the Pantheon. From the records left by Vignola, Egnazio Danti was able to publish a treatise on perspective, *Due regole della prospettiva pratica*, in 1583.

Rome. *Left*: Church of S. Andrea in Via Flaminia, longitudinal section and ground plan (*from B. Fletcher, A History of Architecture, London, New York, 1961*). *Right*: Church of S. Anna dei Palafrenieri, in the Vatican, ground plan (*from Walcher Casotti, 1960*).

Vignola's early education in northern Italy, his apprenticeship in Rome, and his stay in France were the chief determining factors in the formation of his style. His studies in Bologna gave his artistic talent a foundation that he later expanded and built upon in Rome. Not only did he learn a great deal in Rome working under Peruzzi and Antonio da Sangallo the Younger; he also took the opportunity to become thoroughly familiar with Rome's ancient monuments and buildings. His subsequent contact with French art somewhat differentiated his taste from that of most of his central Italian contemporaries, but his brilliant rise resulted chiefly from his accomplishments in the service of the popes and of the Farnese family, whose architect he was considered to be. Vignola achieved great esteem in Italy as supervisor of the construction of the Villa Giulia, architect of the Palazzo Farnese in Caprarola, and initiator of the Church of the Gesù in Rome, which served as a model for numerous later churches. As a result of the success of his treatise on architecture, his fame spread throughout Europe to the extent that Vignola's European reputation was unchallenged in his time. Although his ability was later depreciated in comparison with that of other architects of the 16th century, newer studies have brought a greater understanding of his importance.

The colorful vitality of Vignola's façades shows the Bolognese and more general northern Italian characteristics of his style. His successful development and frequent use of the oval ground plan was the result of the influence of Peruzzi, many of whose ideas Vignola markedly simplified for his own use. The influence of Antonio da Sangallo the Younger can be seen in the façades of Vignola's palaces. The impressions he received in France are responsible for his Gothic façade designs for the Church of S. Petronio and for the plans for the fortresslike palace at Caprarola. It has not yet been adequately clarified whether he made direct use of his studies of the ancient Roman architecture in his work as construction supervisor or whether he simply used the proven formulas of such earliers master as Bramante and Peruzzi and to what extent his knowledge of the antiquities specifically influenced his style.

Vignola's early work strongly reflects the Roman architectural ideas of the thirties and forties of the 16th century. His first buildings in Rome, the Villa Giulia and S. Andrea in Via Flaminia, are realizations of a new, discriminating, and finely nuanced conception of composition and harmony. In the Palazzo Farnese in Caprarola, Vignola created his masterpiece and reached the level of his mature style, also demonstrated in the façade of the Palazzo dei Banchi in Bologna. This style was characterized in his façades by the rectangular patterns created by the superimposed orders. In the design for the façade of the Church of the Gesù — with its presentation of mass as relief sculpture, developing dynamically toward the center of the façade design — a still later phase of his style is expressed.

The churches designed by Vignola around an oval ground plan furnish a deep insight into his artistic development. The oval appears as a leitmotiv everywhere in his work. Vignola considered the oval form for practically all of the representative ecclesiastical buildings that he designed. In S. Andrea in Via Flaminia (FIG. 795) the oval appears only in the cupola that is set over the main rectangular area. This edifice is axially oriented in one direction, and the consequent emphasis given to the sole façade represents an important new achievement that differed basically from the multifrontality of most of the architecture of the High Renaissance. Characteristic also of Vignola is the presentation of space as a preexistent stereometric system, applied independently around the wall and outer structure — also evident in S. Andrea. As his style further developed in the following two decades, Vignola extended contained space

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

ever more unequivocally, separating it more and more from the surrounding outer structure, so that his later works can really be considered "double-shell" structures. His project for a building for the conclave, which included an oval church in the western section of the Cortile del Belvedere, did not get beyond the planning stage, but in the Chapel of S. Stefano in the Torre Pia of the Cortile del Belvedere Vignola realized, from the ground up, the first completely oval church. One of his plans for the Church of the Gesù in Rome used an oval design with a double-shell construction, in which the interior space and the outer walls scarcely came in contact with each other. Although this plan was not used in the Gesù, an edifice of the same nature that was actually constructed is the Church of S. Anna dei Palafrenieri in the Vatican. With the development of the oval church plan and the basic presentation of a building in which the interior space and outer structure are separate entities, Vignola definitely made his mark on the course of architectural history.

No less important is Vignola's part in the 16th-century Roman development of the twin-tower church façade, as well as his creation, in the Church of the Gesù, of a model for future architectural development. More research, however, is needed to assess properly the import of these two achievements.

The efforts to reconcile Italian architecture of the 16th century with stylistic implications of mannerism have cast a new light on Vignola and his work. Art historians of the Renaissance and baroque periods have long presented him as a transitional artist or at least as a precursor of the baroque. Many of the traits that are considered characteristic of mannerism — play of space, introversion, isolation, dissonance, stratification — are found also in Vignola's work. From this point of view, the Villa Giulia and the Palazzo Farnese in Caprarola are definitely mannerist buildings. Admittedly the Palazzo Farnese as a whole has a decidedly baroque appearance, resulting chiefly, however, from the later-added monumental exterior stairs. In the over-all appearance of the Palazzo Farnese in Piacenza one also already observes an activation of the structure in the sense of a baroque mass effect, while the spatial arrangement in the Church of the Gesù was considered a pioneering step toward the baroque.

(*a*) Caprarola, Palazzo Farnese, section of the spiral staircase (*from M. G. Iannoni and E. Maccari, Il Palazzo di Caprarola, Rome, n.d.*); (*b*) Rome, Orti Farnesiani, base area of the portal (*from Walcher Casotti, 1960*); (*c*) Caprarola, Palazzo Farnese, base area of the circular courtyard (*from Iannoni and Maccari, op. cit.*).

Vignola is acknowledged to be one of the outstanding central Italian artists of his generation. He is regarded as a successor of the early mannerists in Rome who were inspired by the work of Donato Bramante and Raphael. As such, Vignola differed from the mannerist artists following Michelangelo, such as Vasari and Ammanati, in his formulation of a more classical style of architecture that eventually effected a decisive turn toward the baroque.

Vignola was principally interested in "ben intesa architettura" (harmonious and well-proportioned architecture), which signified above all a flawless technical performance. His structures can actually be presented as models, for he strove for

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

impeccable artisan quality as well as for accuracy and beauty within the connotations of architectural theory. Vignola's "ben intesa architettura" was first and foremost an architecture of the intellect, and his designs were drawn, therefore, with the help of a system of proven mass relationships. He obeyed strictly the mathematical and stylistic laws of the orders, planning architectural details with the help of small-integer relationships and similarly harmonizing such larger units as the wall area and the volume of enclosed space.

In his *Regola delli cinque ordini* Vignola makes a literary presentation of the essentials of his architectural doctrine. His success as a theoretician of architecture was the result of his careful exclusion of irrelevant material from his treatise. He followed earlier authors in their unequivocal statements, passed over their confused points and unsolved problems, and avoided superfluities such as the antiquarian profusion of Ligorio and Palladio's (q.v.) evaluation of contemporary music theory. Vignola's book is remarkable for its brevity, and unlike any other work before it, it achieved an outstanding success throughout Europe for several generations.

Vignola was interested as well in various branches of contemporary art practice: the designing of pattern sheets, painting, and the collection and measurement of antique pieces. His chief preoccupation, however, was with the problems of architectural creation and engineering. His works can be divided into groups: a large number of less significant functional buildings and several edifices of exceptional artistic achievement. His architectural treatise placed him among the rank of those great architects who, since the time of L. B. Alberti, have forged beyond the practical problems of building to an independent study and an articulate formulation of the fundamentals of architecture. As an architectural theorist Vignola influenced architects all over Europe, and as an architect he brought about the decisive turn from mannerism to baroque through the examples of his buildings; thus he earned a significant position in the history of European architecture.

VIOLLET-LE-DUC, Eugène Emmanuel. French architectural theorist and architect (b. Paris, Jan. 27, 1814; d. Lausanne, Sept. 17, 1879). Viollet-le-Duc is remembered today as a restorer of Gothic buildings and as author of the *Dictionnaire raisonné de l'architecture française du XIe au XVIe siècle* (10 vols., Paris, 1854–68), a work of cardinal importance in the history of Gothic studies, and of the lesser *Dictionnaire raisonné du mobilier français de l'époque carlovingienne à la Renaissance* (6 vols., Paris, 1858–75).

At sixteen Viollet-le-Duc entered the studio of the architect Jean Jacques Marie Huvé; from there he went on to study with Achille Leclère. After spending 17 months in Italy he returned to France determined to oppose what he considered the malefic influence of the Ecole des Beaux-Arts, and to this end he turned his attention to Gothic architecture. In December, 1839, Prosper Mérimée, secretary to the newly constituted Commission for Historical Monuments, appointed him to restore the Church of La Madeleine at Vézelay (XII, pl. 204). The following year, with Jean-Baptiste-Antoine Lassus (1807–57), he was made an inspector of the restoration of the Ste-Chapelle. In April, 1844, again with Mérimée's active support, Viollet-le-Duc and Lassus began restoration of Notre-Dame in Paris (VI, pl. 293). For the Commission and other bodies Viollet-le-Duc undertook a wide range of restorations. He did major work at Sens, Narbonne, Saint-Denis, Toulouse, Amiens, and Clermont-Ferrand; he rebuilt the fortifications at Carcassonne (pl. 130); and for Louis Napoleon he contrived the heavy-handed Gothic fantasia of Pierrefonds. His restorations have been judged heartless and unfeeling, but they are at least thorough. Moreover he did not consider himself an archaeologist. The great *Dictionnaires* in which his learning is embodied are not mere repositories of fact but works of propaganda for an architecture of the 19th century based on a scientific analysis of the Gothic style.

Viollet-le-Duc saw Gothic architecture primarily as a limited, functional art — as a solution to a problem in equilibrium. Every element, he believed, had a structural or functional purpose; even moldings and ornaments were not mere decorative adjuncts but were designed to emphasize structural features, feats of ingenuity, and extraordinary skill. Nothing, he insisted, was superfluous; nothing, least of all, was done for picturesque effect. His thesis was not novel: French architects from Philibert Delorme (ca. 1510–70) onward had analyzed Gothic structure, and in the 18th century Jean Louis de Cordemoy (1629–1713), his disciple Abbé Marc Antoine Laugier, and Jacques-Germain Soufflot and his circle had attempted to make a rational analysis of Gothic the basis of architectural reform; but Viollet-le-Duc's exposition was infinitely more thorough and determined. What he was ultimately striving to prove was that architecture is a precise, studied affair, whose every form and detail should be thought out in accord with a rational ideal.

In the most intriguing of his books, the *Entretiens sur l'architecture* (pub. in parts, I, Paris, 1862–63; II, Paris, 1868–72), he set out to show that his scientific analysis of Gothic was equally valid in assessing Greek, Roman, or Byzantine buildings, indeed all good buildings. He himself was not a creative architect. The houses and the handful of churches that he built are commonplace and eclectic, though St-Denis de l'Estrée (1864–67) is a tolerably robust example of the French Gothic revival (X, pls. 292, 293). Yet he did not flinch in the second volume of the *Entretiens* from indicating how the rational principles he had derived from his study of historical buildings might find application using the materials and serving the needs of the 19th century. His many designs for constructions in masonry and iron are unequal in quality, but some are as vigorous and memorable as anything done during the century (IV, pls. 195, 197). The result does not add up to architecture; but despite his failings as an architect, Viollet-le-Duc's theories have provided a solid foundation for much good architecture of the 20th century, and men as diverse as Antonio Gaudí, Auguste Perret, Frank Lloyd Wright, Le Corbusier, and Ludwig Mies van der Rohe (qq.v.) have been profoundly inspired by his doctrine.

Robin Middleton

VISCHER. Nürnberg family of sculptors and casters in bronze active 1453–1556 and probably beyond. Hermann the Elder (d. 1488) founded the workshop in Nürnberg and acquired citizenship in 1453; he probably came from northern Germany, as the spelling Vischer (instead of Fischer) implies. His most important known work is a baptismal font in the Stadtkirche of Wittenberg (1456); in addition he cast numerous bronze-effigy tomb slabs of excellent technical but no more than me-

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

diocre artistic quality, which were commissioned from nearby cities and also from faraway Poland.

Peter the Elder, the most outstanding member of the Vischer family, was born in Nürnberg about 1460 and died in 1529. In 1488 he completed a large (nearly 6 ft. high) pen-and-ink drawing on parchment (Vienna, Ak. der Bildenden K.), his first design for his best-known work, the shrine of St. Sebald (1508–19) in Nürnberg. The remains of this saint had been placed in a silver sarcophagus at the end of the 14th century; the sarcophagus was to be placed within an architectural framework of bronze, closed enough to protect the sarcophagus yet wide enough to leave it completely open to view. Twelve lofty piers with the statues of the Apostles aligned against them were to support three vaults, each crowned by a high turret, reaching a height of almost 57 ft. Work on the shrine seems to have been interrupted (1512–14), probably for lack of funds; but a few of the Apostles that had already been cast were used in the niches of the monument of Archbishop Ernest in the Cathedral of Magdeburg, commissioned in 1494. The effigy of the archbishop, in full relief, with sharply angular folds and hard, precise, extremely powerful features, is perhaps the best portrait in a period not poor in outstanding works of portraiture; the similarity of this style to late-15th-century achievements in Italy is striking. Similarly the figure of a kneeling man, the so-called "Bough Breaker" (*Der Astbrecher*, Munich, Bayerisches Nat. Mus.), with the incised date 1490, recalls the so-called "Paduan naturalism" of the young Andrea Briosco (known as Andrea Riccio, 1470?–1532; VII, PL. 336; XII, PL. 502), without any possibility of actual connection. The attribution of this statue to Adam Kraft by E. F. Bange (*Deutsche Kleinbronzen*, 1923) is unfounded. An awareness of contemporaneous Italian art appears only in the first decade of the 16th century in the small bronze group of Hercules and Antaeus (Munich, Bayerisches Nat. Mus.), but the treatment of these sturdy little figures lies between the Magdeburg work and the self-portrait on the shrine of St. Sebald. When in 1512 Emperor Maximilian commissioned for his tomb in Innsbruck two monumental bronze statues, Peter Vischer the Elder left the completion of the shrine to his sons Peter the Younger (1487–1528), and Hermann (1486–1517). The statues in Innsbruck represent King Arthur of Britain (VI, PL. 133) and Theodoric the Great. Though the Emperor's interest lay mainly in armorial bearings and the details of armor and accouterments, Peter the Elder has produced the only real statues among the many men-at-arms grouped around the Emperor's sarcophagus. The artist triumphed over an uncongenial task by creating great contrasts of volumes, mood, and lighting, and yet made the two statues part of a unified group.

Besides the self-portrait and the statuette of St. Sebald, Peter the Elder probably contributed to the shrine's six Apostles (Simon, Peter, Thaddeus, Paul, Andrew, and Matthew), with noble faces and draped in long robes which make a classical impression but which are really based on the idealizing Gothic of the second third of the 14th century: it is known that he had a collection of 300–400 wooden statues of that period. The other six Apostles seem to show some affinity with Venetian sculpture (Tullio and Antonio Lombardo), perhaps transmitted by Albrecht Dürer (q.v.), whose influence is strongly felt in other works by the same hand: the six reliefs on the base of the shrine with stories from the legend of St. Sebald and the overpowering wealth of Italianizing statuettes, putti, and *drôleries* strewn over the floor of the shrine. The same combination of Dürer, Italian influence, and strong Vischer tradition is found in the two inkwells with a standing female nude in the Ashmolean Museum, Oxford (the earlier one dated 1525), and in three plaquettes of Orpheus and Eurydice (Hamburg, Mus. f. K. und Gewerbe; VI, PL. 139; Berlin, Staat. Mus.; Washington, Nat. Gall.). A preliminary drawing in the Louvre bears the date 1519 and the monogram and sign of Peter Vischer the Younger. No doubt it is he who brought the shrine of St. Sebald to completion in 1519. The contribution of his older brother, Hermann the Younger, who studied the architecture of the Renaissance in Siena and Rome in 1515 (20 architectural sketches in the Louvre), was limited to modernizing the architecture of the shrine, mainly by transforming the tall turrets into elegant Renaissance domes.

Between 1513 and 1515 Hermann began work on the grille for the burial chapel of the Fugger family in the Church of St. Anna in Augsburg. This work was completed (1537–40) by the third brother, Hans (d. 1550). The grille was used in the City Hall of Nürnberg and was melted down in 1806; in 1921 four of its reliefs were discovered at Château Montrottier, near Annecy, France. The tomb effigies and memorial tablets of Hans are less personal, more coldly efficient than those of his father and brothers. Three statuettes have been attributed to him: *Eve* (New York, Frick Coll.); a youth (two casts, Vienna, Kunsthist. Mus., and Munich, Bayerisches Nat. Mus.); and the Apollo Fountain (*Die Apollobrunnen*), from the City Hall of Nürnberg (two variants, Vienna, Kunsthist. Mus., and Munich, Bayerisches Nat. Mus.). All three attributions have been challenged with good arguments; the Apollo Fountain is now given, with unconvincing reasons, to Peter Flötner.

Although Peter the Younger introduced into Nürnberg the graceful bronze statuette that has no parallel elsewhere outside Italy, the leading genius of the shop is Peter the Elder. It is still an unsolved problem whether for the last 16 years of his life (after the completion of the Innsbruck statues in 1513) he surrendered all artistic activity to his sons, who were filled with the ideas of a new time.

VISION, THEORIES OF. See OPTICAL CONCEPTS; PERSPECTIVE.

VITALE DA BOLOGNA (known also as Vitale d'Aimo de' Cavalli). Italian painter, also documented as a wood sculptor, probably born about 1309. The first reliable information about Vitale ("Vitale di Aymo degli Equi") dates from 1330, when he painted the Odofredi Chapel in S. Francesco in Bologna. Other information is available from 1333 and 1334, when, still in Bologna, Vitale appeared as a witness. With good reason Brandi (1935–36) assigns a *Last Supper* executed for a lower room of the Monastery of S. Francesco (Bologna, Pinacoteca) to about 1340. It is moreover known that in 1340 Vitale painted the Chapel of S. Lorenzo and the guesthouse of S. Francesco. His contract for the execution of four wooden statues, now missing, for a church in Ferrara (perhaps the Cathedral) is dated 1343. The so-called *Madonna dei Denti* (Bologna, Gall. Davia Bargellini) is dated 1345; it forms part of an ensemble almost all of which has recently been recovered. In 1348 Vitale was in Udine, where the Fraternità dei Fabbri commissioned him to paint the chapel of its patron, S. Nicolò, in the Cathedral. After 1349 he executed the frescoes in the Church of S. Maria dei Servi in Bologna. The date 1351 is clearly visible in the frescoes of the apse of S. Maria in Pomposa, which are attributed to him for stylistic reasons. A document of 1353 refers to a work for the Church of S. Salvatore in Bologna, identifiable on good grounds with a polyptych there. The last Bolognese documents having to do with him are of 1357 and 1359. In 1361 he was already dead.

His first known work, *The Last Supper* for S. Francesco

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

(PL. 373), portrays SS. Catherine and Louis at the left and SS. Francis and Raphael on the right and demonstrates Vitale's ability to impart considerable liveliness to the gestures and expressions of his figures. He is not at all bound to Giottesque forms and proportions: a play of masses expressed by a restless "Gothic" line and supported by a dense impasto completely removes this work from the ranks of composed and solemn Giottesque volumes. It has been suggested that the work betrays a Sienese influence, but in this case the influence of the circle of Giovanni Pisano (q.v.) must also be considered, even though the resulting synthesis in Vitale's work is completely different; unquestionably these are the two most important components in the formation of a style for which no plausible precedents have so far been found in Bolognese art. The feminine type dear to Vitale appears in the St. Catherine, whose wide jaw and slender chin and restless yet reticent pose reappear in the panel known as the *Madonna dei Denti* (PL. 374), where they are even more pronounced. The heraldic motif of rampant griffins on the mantle of the Virgin, the animation of limbs and bust, the fluttering hemlines, and the vertical strokes of the outlines of the garments (an especially typical feature of Vitale's painting) contribute to a style that is more Gothic and, consequently, less plastic than that of *The Last Supper*. The two panels that accompany the *Madonna dei Denti*, one of St. Peter blessing and the other of SS. Anthony Abbot and James, demonstrate the same stylistic formulations in equally coherent terms: the softly undulating bodies, the gently encompassing mantles, the bowed heads, the eyes of St. James and the angels suffused with sweetness. Two female saints, now in Vienna (Lanckoronski Coll.), belong in the same ensemble. Extremely close to the *Madonna dei Denti* is the *Madonna and Child* in the J. B. Gold Collection in Richmond (Surrey), England. It is possible that the so-called *Madonna dei Battuti* (Vat. Mus.), which is signed but has perhaps been marred by restoration, can be placed in the preceding years. The frescoes of the life of St. Nicholas (PL. 373) that decorate the chapel dedicated to him in the Cathedral of Udine can no doubt be related to a document that explicitly mentions a painter named "Vitalis." A Giottesque quality has been mentioned in connection with these frescoes; undoubtedly the action is shown with a composed monumentality that is completely lacking in *The Last Supper*, yet Vitale is still the same artist who painted the *Madonna dei Denti* triptych of three years earlier. The half figures of the angels in the tondo above the saints of the Bologna triptych repeat the movement of the figure of Christ set above the funeral scene in the Chapel of S. Nicolò, and the heads, with their slender chins and mild eyes, are exactly alike.

The fresco in the apse of S. Maria in Pomposa (1351) comprises a Theophany in the semidome with a group of female saints on the left and a damaged group of male saints on the right, while below are depicted Doctors of the Church, Evangelists, and episodes from the life of St. Eustace. While the hieratic Christ in Majesty and the gentle female saints fall more or less into the same stylistic category as Vitale's earlier work, a new impetus, at times utilizing violent movement in unusually daring compositions like the Baptism scene, gives the stories of St. Eustace a distinctly different figural sense. The polyptych of 1353 in the Church of S. Salvatore in Bologna (PL. 376) continues, however, the serene, elegant spirit of the previous incontestable works, even in scenes where action would have been justified, such as the Nativity and the martyrdom of St. Catherine. Close to this polyptych are two paintings of the Virgin, one in Milan (Mus. Poldi Pezzoli) and the other in Viterbo (Mus. Civico). A Crucifixion in Philadelphia (Mus. of Art, Johnson Coll.) and one in Lugano (Thyssen-Bornemisza Coll.) are also close to Vitale's style.

The lively expressionism of the frescoes in the Church of S. Maria dei Servi in Bologna, perhaps painted about 1355, is characterized by a delicacy and elegance of form that places them near the fragment of a Resurrection scene from S. Francesco that is now in the Pinacoteca in Bologna and the *Madonna and Child* in S. Michele dei Leprosetti in Bologna. The stupendous *St. George and the Dragon* (PL. 375), also in the Pinacoteca, may have been painted immediately afterward.

A group of important works that critics have attributed to Vitale should also be considered here. Chief among these is the Nativity fresco formerly in the Church of S. Apollonia in Mezzaratta (PL. 376) and now, with the other frescoes of the same ensemble (some of which are also attributed to Vitale), in the Pinacoteca of Bologna. This Nativity, the product of an obviously lively personality, may be dated after 1350 because of the similarity of its painted frame to the frames of paintings by Jacopino de' Bavosi and Simone dei Crocifissi, both of whom were born after Vitale and were active sometime later than 1355. Jacopino's work bears witness, moreover, that this expressionistic tendency was characteristic of Bolognese painting of about 1365. In the Mezzaratta Nativity fresco the scene has been articulated within a constricted, forced perspective scheme that gives the groups extraordinary vivacity: violent contortions agitate the figures and give them an expressionistic impetuosity. Now if, as seems likely, the Mezzaratta cycle is posterior to 1361, after Vitale's death, this confirms the hypothesis set forth by Toesca that the panel of the Nativity (like the panels depicting the life of St. Anthony Abbot (VI, PL. 352) was painted after that date by a follower of Vitale. This follower also clearly collaborated with Vitale on the St. Eustace frescoes in S. Maria in Pomposa and perhaps on the *Adoration of the Magi* (Edinburgh, Nat. Gall. of Scotland), a companion piece to a Pietà now in Florence (Longhi Coll.). This hypothesis is supported by a comparison of the Nativity in the polyptych of S. Salvatore with the Nativity of Mezzaratta: it is impossible not to be struck by the radical difference between the two representations.

Other works executed by Vitale's circle include a Trinity in the Church of S. Maria dei Servi in Bologna, a fragment of a Crucifixion in the Church of S. Martino in Bologna, and a Coronation of the Virgin in the Pinacoteca of Bologna, which is perhaps an early work of Jacopino de' Bavosi. The *St. Ambrose* in the Museo Civico of Pesaro is reminiscent of Simone dei Crocifissi.

VITRUVIUS. Roman architect and engineer of the 1st century B.C., known mainly as the author of *De architectura*, a theoretical treatise in ten books. It is generally accepted that his surname was Pollio, though another person with that name may be meant in Faventinus's text. All that is known of Vitruvius's origins and life has been gleaned from the scant biographical information contained in the prefaces of his ten books. Even the date of his work has often been disputed, but its publication must no doubt be placed between 27 and 23 B.C., when, according to his own testimony, he was an old man. In his dedication to Augustus, Vitruvius points out that he was a friend of Caesar, who died in 43. He was therefore a contemporary of Varro and Cicero. The studies of Sontheimer (1908) and others invalidate those theories which hold the treatise to be an apocryphal work of the 3d century of our era that has been erroneously attributed to an architect whose name has been preserved by mere accident. In fact, the contemporary state of Roman architecture reflected in the treatise leaves no doubt as to the date of its composition.

In Book I the author first deals successively with the training of architects, with the definition of an esthetic based on rhythm and numbers, with the making of a project, including drawings of the plan (*ichnographia*), the elevation (*orthographia*), and the perspective (*scaenographia*); and then, in several chapters, he postulates fundamental principles, such as the relationship of the structure of the edifice to its function and of the orders used in the temples to the nature of the divinities to whom they are erected, and, lastly, frames the standards to which the architect must adhere in the choice of site and plan on which to build a new town (see PL. 133) and in the distribution and exposition of its buildings. Book II discusses more technical matters, such as the characteristics and uses of various materials (brick, sand, lime, pozzuolana, stone, masonry, and timber and the properties of the different species). Books III and IV set forth in logical sequence all the prescriptions relating to the construction of temples and the architectural orders: the Ionic, the Corinthian, and the Doric (see STRUCTURAL TYPES AND METHODS). His treatment of the members — column, capital, entablature — shows a scrupulous respect for rigorously defined proportions: "Proportion consists in taking a fixed module, in each case, both for the parts of a building and for the whole" (III, i, 1). The Corinthian order, which was to become an important feature of Roman construction after the 1st century B.C., is given scant treatment.

Book V is devoted to secular public constructions: the forum and basilica; the treasury, prison, and Curia; the theater and its annexes; the palaestra; baths; and harbors and shipyards. The discussion is interrupted by a digression on harmony, prompted by the study of problems relating to acoustics in the theater. In Book VI, devoted to domestic buildings, Vitruvius makes a clear distinction between the traditional Roman and Greek types. He examines in detail the problems of site and exposition both for the house as a whole and for its various parts.

In Book VII, after discussing plans, interior arrangements, and diverse types of courtyards, atriums, and peristyles, the author turns to the problem of construction, especially the techniques of paving and of preparing stucco facing, with an important insertion on the styles and technique of wall painting.

The contents of the last three books, VIII through X, now lie within the province of the engineer, since they deal with water, with the measurement of time (including digressions on astronomy, the constellations, and sun dials and water clocks), and with building and siege machines.

In the first chapter of Book I Vitruvius draws an ideal portrait of the architect, whose "personal service consists in craftsmanship and technology." He must be highly cultured, well read and learned in the various arts and sciences: drawing, geometry, optics, arithmetic, physics, history, music, and medicine. The author concludes that "only these persons can forthwith justly claim to be architects who from boyhood have mounted by the steps of these studies and, being trained generally in the knowledge of arts and sciences, have reached the temple of architecture at the top" (I, i, 11). To support this point of view Vitruvius quotes a passage from Pytheos, the Greek architect of the 4th century B.C., who is said to have written in his commentary on the Temple of Athena at Priene that "an architect ought to be able to do more in all arts and sciences than those who, by their industry and experience, have advanced individual arts to the highest renown." Certain scholars, such as E. Stürzenacker (1938, 1939), have thought that Vitruvius was describing himself in his definition of the architect and have accordingly sought to establish him as an all-round genius of the same capacity as Leonardo da Vinci (cf. XI, PL. 344). However, neither the style nor the content of the treatise justifies this farfetched inference. Other writers, on the contrary, have been unfavorably impressed by Vitruvius's lapses into slipshod style, by his frequent use of common expressions, and by his sometimes primitive and even childish mind (Winckelmann). But this critical position goes to the opposite extreme, since the tone and style of his preface show the author to be a man of solid culture who knows Greek and has profited from his wide reading. According to Pernice (ThB), whose opinion seems well founded and undoubtedly closer to the truth, Vitruvius was born in humble circumstances but raised himself above his background through his work and pursuit of culture. In his treatise he expresses pride in this achievement.

Vitruvius acted as architect at Fanum (mod. Fano), in the Marches, where he had been called to build the basilica. In the precise description of this work in the first chapter of Book V the author enumerates the principal elements of the simple, well-proportioned plan. The basilica consisted of a rectangular hall, whose width was half its length, with a colonnade that ran along all four sides and enclosed the nave, which was three times the breadth of the aisles that served as a passageway between the outside walls and the columns. On the long side facing the forum there was a rectangular niche, in which was inscribed a semicircular exedra for the sittings of the tribunal. An original particular of the plan was

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

the absence of an upper gallery, so that the columns rose without interruption to the roof. Although no trace of this structure has been found, it may be compared to the basilica of Pompeii and to that of Ardea, near Rome, studied by A. Boëthius (in *Roma*, XII, 1934, p. 303 ff., and in *Apophoreta Gotoburgensia Vilelmo Lundström Oblata*, Göteborg, 1936, p. 353 ff.).

In reference to the basilica of Fanum, Sachur (1925, p. 144 ff.) points out the problem arising from the Roman tendency to use circular forms (i.e., the semicircular exedra) with rectilinear plans. Vitruvius solves this difficulty by excluding two columns before the exedra, thus breaking the rhythm of the internal colonnade. His personal solution is representative of the attempts made by Roman architects of the 2d and 1st centuries B.C. to reconcile Hellenistic traditions with the search for axiality.

Vitruvius must also have been an engineer of some brilliance, as a record of his work has been preserved in the traditional literature. In the preface of Book I he recalls the works confided to him under Augustus. Together with M. Aurelius, P. Minidius, and C. Cornelius, he was entrusted with the construction of *ballistae* and the renovation of "scorpions" and other war machines, for which he was granted certain advantages, most likely including a pension. The discussion of machines and instruments in Book X draws on this experience. Thus Vitruvius became the first in a line of authors who left writings on the same subject — among them, Apollodoros of Damascus (q.v.), whose *Poliorketica* is a commentary on a group of designs sent to the emperor Hadrian, and Athenaios Mechanicos, whose 2d-century Greek text, *Peri mechanematon*, closely follows that of Vitruvius. C. Wescher (*Poliorcétique des Grecs*, Paris, 1867) and R. Schneider (*Abh. der Königlichen Gesellschaft der Wissenschaften*, Göttingen, XII, 5, 1912, pp. 1–79) agree that Vitruvius and Athenios used the same source. Though Vitruvius probably resorted to earlier treatises, he added observations from his personal experience. For this reason Book X came to occupy an extremely important place in this field of literature and remained influential until the end of the Middle Ages.

Frontinus reports in his *De aquaeductu urbis Romae* that Vitruvius was appointed engineer for the public water system of the city of Rome. Book VIII, on water, derives from this experience, though it echoes in part philosophical theories and geographical and literary traditions. Nevertheless, the chapter on the various types of conduits and their respective advantages and disadvantages and on the digging of wells and cisterns shows a precise knowledge of techniques, which Vitruvius must have acquired through practical experience.

The problem of Vitruvius's sources continues to be debated and remains unresolved. On the surface the problem appears simple, for in the preface of Book VII the author has taken care to advise the reader of his use of ancient sources, especially Greek ones, and he enumerates a series of treatises written for the most part by famous architects as commentaries on buildings constructed by themselves. The list of treatises ranges chronologically from the 5th century (Theodoros of Samos, Chersiphron and Metagenes of Ephesus) to the 2d century B.C. (Hermogenes), including the commentaries of Iktinos (q.v.) and Pytheos, for example, as well as a number of specialized works on symmetry, proportion, and machines. He names only three Roman writers: Fufidius, Varro, and Publius Septimius. Since almost nothing of the works cited by Vitruvius has been preserved, the question of how much of the treatise should be attributed to its author and how much to his sources remains largely hypothetical. Only close examination of the text and concrete comparisons based on present knowledge of ancient architecture, both Greek and Roman, can lead to reliable results; the supposition that Hermogenes or any other single author constitutes the basic or only source is futile, as several studies based on this premise have demonstrated (Choisy, 1909; Birnbaum, 1914; Schlikker, 1940). The various sources from which Vitruvius drew can be distinguished only through fine comparisons (Boëthius, 1939). The complexity of the problem becomes apparent in a few selected examples; Vitruvius's method is clearly indicated in Book III, on the Ionic order, which Choisy and other commentators believe to be based principally on the treatise of Hermogenes. After the excavation of edifices built by Hermogenes, the Temple of Artemis Leukophryene in Magnesia ad Maeandrum (VII, FIG. 294) and the Temple of Dionysos in Teos, there have been attempts to establish parallels between the architectural characteristics of these constructions and the prescriptions of Vitruvius. After certain differences were discerned, investigations were pursued elsewhere, and in each Ionic edifice investigated, scholars thought they recognized the Vitruvian model. Actually, the architrave described by Vitruvius in the fifth chapter of Book III does not correspond to the form used by Hermogenes or to that used in Hellenistic architecture, for the Vitruvian type consists of one element less and thus has smaller proportions. Birnbaum suggested (1914) that Vitruvius did not take as his model the edifices built by Hermogenes, but simply followed the architect's treatise, which might have been a polemic rather than an exact commentary on his works; however, this hypothesis cannot be proved. Carpenter (1926) introduces several additional subtleties, proposing that Vitruvius might have obtained his general proportions for the Ionic order from Pytheos's treatise on the Mausoleum of Halicarnassus and the Temple of Athena at Priene, both of which were built in the 4th century B.C.; that the structure and the proportions of the capital could have been borrowed from the architectural traditions of the late Hellenistic period in Asia Minor; and that the classification of temple plans might be derived from a Hellenistic author of secondary importance. Schlikker (1940), in his development of this thesis, rejects any influence of Hermogenes on the work of Vitruvius. Furthermore, the structure and the proportions of the architrave described by Vitruvius correspond much more directly to those of Roman buildings of the Sullan period (138–78 B.C.), such as the Sanctuary of Fortuna Primigenia in Palestrina.

The same hesitancies have arisen in connection with the possible models for Vitruvius's description of the Doric order. For Choisy (1909) the Doric capital presented in the treatise has a pronounced Roman character. But Vitruvius particularly emphasizes the cymatium surmounting the abacus, a feature peculiar to the Doric order in Asia Minor, where it appears as early as the 4th century B.C. and is to be found in all known constructions of the 3d and 2d centuries. Since Hermogenes was hostile to the Doric order, which he found too severe, Vitruvius's treatment must have been based instead on the work of an unidentified contemporary of Hermogenes.

Examination of the chapters on the house in Book VI clearly shows that Vitruvius combines data from theoretical treatises with personal observations. It is to him that we are indebted for the precise definition of the different types of atrium that excavations have brought to light. Regarding the Greek house, universal recognition has been accorded to the importance of his information on the Rhodian peristyle, which has a higher colonnade on the south than on the other three sides; this peculiarity, which has been noted in several houses at Delos, would otherwise have remained unexplained. It is certain that his ideas relating to the site and exposition of the house, which he develops in the first chapter of Book VI, derive from the Hellenic tradition, to which, in this field, Vitruvius closely adheres. These principles, first applied in the cities of the 4th and 3d centuries, were taken from the Hippocratic texts and were subsequently systemized by Aristotle (*Œconomics*, I, 6, 7) and expounded by Xenophon (*Memorabilia*, III, 8, 8). Vitruvius's detailed observations on the structure of the peristyle and the distribution of the living quarters around the courtyard have been confirmed by the excavations at Olynthos, Priene, and Delos (VII, FIGS. 304, 305). He not only discusses the *oikos* and megaron types of dwelling, but he also presents a far more complex type of house, which has not been found at the sites mentioned above, although it is known to have existed in the highly Romanized Hellenistic cities. This is a kind of palace with a succession of peristyles and with gynaeceum, andron, reception halls, and guests' quarters. He makes no mention, however, of the large, multistoried tenement buildings of the late Hellenistic period, which were common in

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Alexandria and in the Syrian cities, especially Antioch. Vitruvius's method thus becomes apparent in this example; for his discussion of the Greek house is clearly founded on literary sources, and to this material he has added personal observations but without doing so systematically. His information on the Roman house is much more exact and corresponds more closely to reality. In this connection, Maiuri's study of the Egyptian oecus (1951) demonstrates that Vitruvius's observations in the third chapter of Book VI were based on precise models.

Regarding the theater, which Vitruvius discusses in Book V, it has long been recognized that his indications correspond perfectly to the archaeological discoveries. But his description of the Greek theater has aroused much discussion, especially the vigorously disputed passage on the *logeion*, the platform between the orchestra level and the walls of the stage from which the actors spoke (cf. XII, FIG. 749). W. Dörpfeld, the major supporter of this theory, came to the conclusion that Vitruvius was referring to a theater inspired by a Hellenistic model that he had seen in Rome rather than to a specific Hellenistic theater in Asia Minor (AM, XXVIII, 1903, pp. 383, 411 ff.). Subsequent archaeological finds and, above all, the Theater of Priene (VII, FIG. 299), studied by A. von Gerkan (*Das Theater von Priene*, Munich, 1921), have proved beyond doubt the existence of the *logeion* in Hellenistic theaters (see SCENOGRAPHY).

In his exposition on the Italic temple, in the seventh chapter of Book IV, Vitruvius advises the adoption of the Tuscan temple, a type that appeared in the last century of the Republic, in which the traditional Italic was modified by the introduction of stone columns in accordance with Greek usage (see ETRUSCO-ITALIC ART). But the use of stone columns in conjunction with the traditional wooden superstructure created difficulties. Vitruvius shows a preference for wood, but he accepts the innovation of stone and attempts to solve the ensuing problems.

An important consideration for Vitruvius is the question of building materials (see ROMAN IMPERIAL ART). In Book II he expresses a preference for local stone over marble, which was then being widely used by the young generation of architects in the city of Rome. For this attitude he was regarded as old-fashioned and an enemy of progress; but he saw it as the duty of a good architect to make the solid and durable constructions at minimum cost. If he advises against marble it is because of its exorbitant price, due in part to the high cost of transport, and because it represents useless luxury, whereas local materials such as the tufa of Ferentum (near Viterbo) are of high quality. Therefore, Vitruvius's criticism seems to have been based solely on technical and economic considerations.

The variety of arguments dealt with in Vitruvius's *De architectura* explains its success and importance for posterity. It is the only truly technical treatise on architecture that has been handed down from antiquity. In spite of its gaps or uncertainties, it constitutes a sum of extremely valuable knowledge. For example, the fifth chapter of Book VII remains the fount of all that is known about the technique of wall painting at the end of antiquity; upon it A. Mau founded his celebrated classification of the Pompeian styles (*Geschichte der dekorativen Wandmalerei in Pompeij*, Berlin, 1882).

In Rome itself the importance of Vitruvius was soon recognized. His treatise was used by Pliny the Elder; in the time of Trajan (r. 98–117) Frontinus dedicated his treatise on aqueducts to Vitruvius, and about a century later Faventinus profitably drew on the treatise. Evidence from the 4th and 5th centuries shows no decrease in its influence. V. Rose and M. Müller-Strübing, who conducted a thorough study of the two extant series of manuscripts in the preparation of their 1867 edition of Vitruvius, ascertained that both descend from a single archetype (Br. Mus., Harley Ms. 2767), which dates to the time of Charlemagne and contains no illustrations. Sackur (1913) is even of the opinion that the ancient editions of Vitruvius contained none and that illustrated editions did not flourish until later.

De architectura was well known in the monasteries of the Middle Ages and even then was the sole literary source of knowledge of ancient architecture. It was only with the Renaissance (q.v.) that Vitruvius was really "rediscovered." Diligent study of his rules undoubtedly brought about a change of taste that coincided with the current aspirations to classical values of order and symmetry. However, it was Leon Battista Alberti (q.v.) who made the first purposeful reference to the Vitruvian text. Alberti's treatise *De re aedificatoria* is inspired by that classic text, and its influence is also obvious in his architectural works. Vitruvius's treatise also influenced other 15th-century scholars and architects, such as Francesco di Giorgio and Antonio Filarete (qq.v.), Luca Pacioli (whose *De divina proportione* popularized the principles of Piero della Francesca), Francesco Colonna, Roberto Valturius, and Taccola. In the 16th century architects and classical scholars undertook a detailed and systematic study of *De architectura*. None of the great 16th-century architects escaped the fascination of the almost mythical figure of the Roman architect, whose rules were interpreted by each in his own way, both in buildings and in treatises (see ARCHITECTURE). From the Vitruvian norms arose that aspiration to grandeur combined with supreme equilibrium which characterized the works of artists such as Bramante, Peruzzi, Raphael, Sanmicheli, Scamozzi (qq.v.), and G. B. Bertani. Palladio, Serlio, and Vignola (qq.v.) gave a theoretical interpretation of these norms in their respective writings (see TREATISES); and, significantly, new editions of Vitruvius's text appeared simultaneously with these new works.

From the Renaissance onward, numerous editions of Vitruvius's work have been published in many languages. The *Editio princeps* was published by J. Sulpicius da Veroli in about 1486. Before the end of that century two more editions appeared, one in Florence in 1496 and another in Venice in 1497. Among the editions of the 16th century that of the architect Fra Giocondo was highly successful; published in Venice in 1511, it was reissued in 1513, 1522, and 1525. At this time there began to appear editions with comments and illustrations. The first of these was Cesare Cesariano's edition of 1521 (see I, PL. 308; IV, PL. 198; XI, PLS. 342, 343), which was followed by Giovan Battista Caporali's of 1536 (see I, PL. 376) and Daniele Barbaro's of 1556, which was reissued in 1567, 1584, and 1629 (PLS. 377–384 accompanying this article and IV, PL. 195, are from Barbaro, 1567).

With the discovery of ancient documents, the commentaries on Vitruvius's treatise have become more definitive and the characteristics of ancient architecture have emerged with greater clarity. Interest in *De architectura* has not declined with the advancement of archaeological exploration. Although the limits of its scope and value have been ascertained, it remains a work of fundamental importance.

VIVARINI. Family of painters of Murano (an island in the Venetian lagoon), active from the first half of the 15th century to the beginning of the 16th century; includes Antonio, his brother Bartolomeo, and Alvise, the son of Antonio.

The most significant personality of the family was Antonio (also known as Antonio da Murano; b. Murano, ca. 1420; d. Venice, between 1476 and 1484), a sensitive and extremely individualistic artist, who represents the earliest Renaissance style to appear in Venetian painting. From his earliest works (the polyptych of 1441 in the Cathedral of Poreč, Yugoslavia) he established a personal and independent style, which does not, as Berenson suggests (1953), reveal the influence of Jacobello del Fiore. Even his early collaboration with Giovanni d'Alemagna did not affect the coherence of Antonio's style. This collaboration is documented for several works in which it is difficult to distinguish the assistant's hand, including the famous *Adoration of the Magi* in Berlin (Staat. Mus., Mus. in Dahlem), the three polyptychs in the Church of S. Zaccaria in Venice, and the *Coronation of the Virgin* in the Church of S. Pantalon in Venice, all of 1444. Antonio's works are in the rich and at times almost overdecorated style that followed in the wake of the International Gothic; they parallel the work of other artists of the same tradition, such as Gentile da Fabriano, Pisanello, and Sassetta. However, the probable passage of Masolino through Venice on his return from Hungary may have suggested new artistic possibilities to Antonio, such as his new way of placing his figures in perspective, his striving toward a rational and real space, and his use of luminous colors that give a sense of physical presence to his figures — all echoes of the artistic principles of the Renaissance in Florence during the first decades of the 15th century. Nevertheless, Antonio's interpretation of the Renaissance remained linked throughout his work to the Venetian tradition of painting, which is primarily a chromatic interpretation of reality. This tendency is seen in Antonio's mature works, on which Bartolomeo assisted him: in the polyptych of 1450 (Bologna, Pin. Naz.) Bartolomeo's participation is clearly apparent, but he soon after broke away from his elder brother. Antonio's numerous works, executed primarily for churches in Venice, Dalmatia, and Apulia, do not reveal any further stylistic development; he remained a delicate and sensitive interpreter of a style that marked an opening toward new horizons (polyptych in S. Eufemia at Rab, Dalmatia, 1458; polyptych in S. Maria della Colonna, Rutigliano, near Bari; polyptych of St. Anthony Abbot, Vat. Mus., 1464; polyptych in S. Maria Vetere, Andria, near Bari, 1467; etc.).

Bartolomeo Vivarini (b. Murano, ca. 1432; d. ca. 1491), after working initially with his brother, came under the influence of contemporaneous Paduan painting; his work, like that of the young Giovanni Bellini, reveals an awareness of the formal innovations introduced by Mantegna. Bartolomeo's style was formed by Antonio Vivarini's Gothic style directed toward Renaissance discoveries; subsequently the influence of Mantegna resulted in an increasing sharpness of form (VIII, PL. 197). However, Bartolomeo never achieved a real understanding of the Renaissance world or that interpretation of classical antiquity conceived by Mantegna; rather, he seems to aim at an often laborious balance between strongly accentuated linear drawing and the violent, often dissonant colors that, under Mantegna's influence, depart from the gentle fusion of tones to be found in the works of his brother. This is especially evident in the triptych of the Madonna with SS. Benedict and Scholastica (Taranto, Mus. Naz.); that of the Madonna enthroned with saints and angels (1465; Naples, Capodimonte); the triptych depicting the Madonna of Mercy, the birth of the Virgin, and the meeting of SS. Joachim and Anne (1473; Venice, S. Maria Formosa); the triptych of the Madonna with SS. Andrew and John the Baptist (1478; Venice, S. Giovanni in Bragora); and such late works as St. Roch with an angel and the Madonna (1480; Venice, S. Eufemia alla Giudecca); the polyptych of 1490 in Florence (Coll. Contini Bonacossi), and the triptych of St. Martin and the beggar with SS. Sebastian and John the Baptist (Bergamo, Acc. Carrara), in which the preponderant work of assistants is evident. Bartolomeo, like Antonio a prolific painter, was assisted by a large workshop and executed works in the Veneto, Dalmatia, and Apulia.

Alvise, the son of Antonio (b. Murano, ca. 1445; d. 1503 or 1505), was a pupil of his father but was more in sympathy with his uncle Bartolomeo's style, as can be seen in the Montefiorentino polyptych (1476; Urbino, Gall. Naz. delle Marche). His marked interest in the works of Giovanni Bellini is revealed especially in the *St. Jerome in the Desert* (Washington, D.C., Nat. Gall., Kress Coll.). Of fundamental importance for Alvise was his acquaintance with the art of Antonello da Messina, who had left in Venice one of his most important works, the S. Cassiano altarpiece of 1476 (I, PL. 318). In contact with Antonello's monumental style and Bellini's coloristic interpretation, Alvise became receptive to the new Renaissance concepts and undertook large altarpieces such as that depicting the Madonna and saints formerly in Berlin (destroyed 1945) and St. Ambrose enthroned, with other saints (XII, PL. 45). The altarpiece of the Madonna enthroned with six saints (1480; Venice, Acc.) is one of Alvise's most successful works; here he achieved a fusion of accentuated linearity with a sense of color and tone derived from Antonello, thus heralding the painting of Lorenzo Lotto, as Berenson (*Lorenzo Lotto*, London, 1901) has observed. This linearity becomes softened in his later works (*Madonna Enthroned with SS. John the Baptist, Jerome, Augustine, and Sebastian*, in Berlin, Staat. Mus., Mus. in Dahlem), and his affinity with the art of Giovanni Bellini becomes more apparent (XII, PL. 375). A few remarkable portraits by Alvise are known, among them those in New York (Brooklyn Mus.), Padua (Mus. Civ.), London (Nat. Gall.), and Philadelphia (Mus. of Art, Johnson Coll.).

Marco CHIARINI

VORTICISM. See EUROPEAN MODERN MOVEMENTS.

VOUET, SIMON. French painter (b. Paris, 1590; d. Paris, 1649). He received his early training from his father, Laurent, an obscure painter during the reign of Henry IV. Simon's ability as a portraitist seems to have gained him a measure of fame early in his life and resulted in travels that took him from London to Constantinople.

In 1613, after a year in Venice, he settled in Rome, where, during the following 14 years, his early style matured and formed the basis of his later style, which he was to perfect throughout his lifetime. As early as his Italian period, Vouet enjoyed an easy success that is to some extent reflected in his works. He was pensioned by Louis XIII; esteemed by the amateur artist, Cassiano del Pozzo; and asked to paint portraits of Pope Urban VIII and Giambattista Marini, known as Il Cavaliere Marino. He was overwhelmed with commissions, surrounded by pupils, and was elected Principe of the Accademia di S. Luca (Baglione, 1642). He was summoned to work at Genoa and visited several towns, including Parma, on his return journey. His first wife was Virginia da Vezzo, whose seductive half-smile and unclassical face were reproduced in the nymphs of Fontainebleau and the goddesses of Versailles.

A first meeting of two opposed esthetic currents occurred when Poussin attended a gathering of painters held at Vouet's house in 1624. In the midst of the artistic ferment that existed in Italy at that time, Vouet laboriously and discerningly drew from the different currents that which best served his inspiration.

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

His first-known works, such as the *Two Lovers* (Rome, Palazzo Pallavicini-Rospigliosi), clearly reveal Caravaggio's influence and resemble the genre paintings of the contemporary *tenebrosi*. While the paintings of his Italian period, and occasionally those of his mature years, are characterized by their chiaroscuro, at the same time they are closer to the decorative tendencies of Reni, Guercino, and Stanzione than to the tragic pathos of Caravaggio. This is evident in the *St. Bruno* (Naples, Certosa di S. Martino), the charming *Cupid and Psyche* (PL. 387), and even in such paintings as the *Birth of the Virgin* (PL. 387), the *Allegory of the Human Soul* (Rome, Capitoline Mus.), and the two scenes from the life of St. Francis (part of Vouet's first important cycle in the Church of S. Lorenzo in Lucina; II, PL. 208), in all of which dense shadows produce dramatic effects. Shortly before his departure from Rome, an incipient change in his style became apparent in the *Time Vanquished* (Prado), in which there is no strongly contrasted chiaroscuro. To the influence of Caravaggio may perhaps be attributed the plasticity — later less pronounced — of the beginning of Vouet's French period, evident in his drawings (Louvre) for the tapestry with scenes from the Old Testament, commissioned by Louis XIII in 1627. According to Dimier (1926–27), this year marked a turning point in the history of French art. Vouet was named chief court painter and had lodgings at the Louvre; the King himself wished to learn the art of pastel portraiture from him. Vouet established the supremacy of his new Italianate style in his work for the court, the aristocracy, and the Parisian churches. He executed frescoes and probably also tapestry cartoons. W. R. Crelly (1962) gives the following analysis of his stylistic evolution: "The strong contrasts of light and shadow and the richly varied color of the Italian and early French paintings are gradually replaced by planes of clear color set one beside another across the canvas, so that in some of the latest examples there results an effect of colored silhouettes." Regarding the artist's later works, Crelly remarks, "... it may not be wrong to see a special French character in Vouet's linear grace and decorative refinement, in spite of his strong dependence upon Italian traditions. Furthermore, as will be seen in studying the decorative works, it is possible to relate the meticulous delicacy of his late style directly to the sixteenth-century tradition of mannerism in France."

Although Vouet's religious paintings are the best preserved of his works, they are not the most characteristic of his art. His free technique imparted a spontaneous quality to the compositional schemes of the altarpieces of the Counter Reformation — schemes dictated by the Carraccis with their diagonals and their division of the composition into heavenly and earthly levels. The altarpiece of the *Assumption* (1629) in the Church of St-Nicolas-des-Champs in Paris is surrounded by stucco decorations by Vouet's pupil, Jacques Sarrazin. The painting of St. Merri still hangs in the Parisian church of the same name. After the destruction of the high altar of St-Eustache in Paris, the *Martyrdom of St. Eustace* was moved to a side aisle and the painting of the apotheosis of the saint was transferred to Nantes (Mus. B.A.). The *Presentation of Christ in the Temple* (II, PL. 211) and the *Apotheosis of St. Louis* (Rouen, Mus. B.A.) were removed from the Maison Professe (now the Church of SS. Paul et Louis), built during the apex of Vouet's French period (1627–40), in the decoration of which they represented the transalpine currents adopted in France. Other paintings that Vouet executed for churches are the *S. Carlo Borromeo* (Brussels, Mus. B.A.), in which the effigy of the 16th-century saint assumes the value of a portrait and in which there is a spareness of style generally foreign to Vouet and more in keeping with the austere tendencies of such contemporary painters as Philippe de Champaigne; the *Temptation of St. Anthony* (Grenoble, Mus. de Peinture et de Sculpture), which combines the taste of the period, a medieval theme, and a Renaissance spirit; the *Rest on the Flight into Egypt* (PL. 388), which takes up a subject treated by Correggio and Barocci, through the Bolognese tradition exemplified by Simone Cantarini; and the *Assumption* of 1644 (Reims, Mus. B.A.), which is somewhat stiff in its movement and subdued in its coloring.

Other religious paintings, which depart from these schemes, elude classification. Among these are his paintings of Mary Magdalene (PL. 385; another in Amiens, Mus. de Picardie) and the angels in the *St. Margaret*, which later appeared as cupids in the *Parnassus* at the Hôtel Séguier (both angels and cupids are known from engravings by Michel Dorigny). The same study must have served both for the figure of Mary Magdalene in the *Crucifixion* (Lyons, Mus. B.A.) and for the figure of one of the daughters of Lot in the painting in Strasbourg (1633; Mus. B.A.), which is ambiguous and might equally be a mythological or Biblical scene. This led to Vouet's secular works, which are far removed from the anecdotal observation of Abraham Bosse's engravings. They best express a certain spectacular aspect of his times, when the theater was leaving behind the classical unities and becoming tinged with preciosity, and when a richly ornate style showed "... a constant preoccupation with movement and life" (P. du Colombier, 1941).

None of Vouet's great decorative works has survived intact; however, engravings that were based on them give a general idea of their composition. The etchings by Vouet's son-in-law, Michel Dorigny, have done justice to his work. Large-scale allegorical figures such as the *Riches* (PL. 386) and the *Peace* (Derbyshire, Eng., Trustees of the Chatsworth Settlement) were probably created as part of the decoration of the Château of Saint-Germain-in-Laye, as was also, perhaps, the painting, *The Cardinal Virtues* (Versailles, Palace), which is of smaller dimensions and which anticipates the period of Natoire. The *Diana* (PL. 388) probably formed part of works commissioned by Charles I and Henrietta Maria of France; a drawing of Zephyr (Besançon, Mus. B.A.) for a figure in a ceiling at Oatland Palace is the only direct testimony of this lost work. The *Gaucher de Chastillon*, whose pose is repeated in other works and whose ample cloak is in a rich yellow much used by Vouet, was painted for Richelieu's Galerie des Hommes Illustres at the Palais Royal. The *Time Vanquished* (Bourges, Mus. du Berry) was executed for a cabinet at the Hôtel Bretonvilliers in Paris. Nothing survives of the painted decorations of the Château de Chilly and the Hôtel Séguier, both in Paris, in which there were echoes of the work of Veronese and of Reni's pale paintings. Especially in the Hôtel Séguier, Vouet indulged in an abundance, even an excess, of figural and other elements in the galleries, library, and chapel, where the lively procession of the Magi stretched out behind a balustrade. A few drawings for these decorations are still extant: for the Château de Chilly, the sketch for a depiction of the Source (Louvre) that was to form part of the fresco of an allegory of the *Sun*; and for the Hôtel Séguier, two drawings for the allegorical composition of the Arts (Met. Mus.) and one of St. Peter (Rennes, Mus. B.A.), as well as various figure studies, among which the gay trumpeter of the Adoration (Louvre).

The paintings at the Hôtel de Bullion in Paris consisted chiefly of two cycles, both of which were reproduced in tapestries. The scenes from the Odyssey are known only from tapestries (now at the Château de Cheverny, near Blois), but the paintings from the Rinaldo and Armida series have survived (Paris, Coll. Guyot de Villeneuve). Some drawing studies, closer to the tapestry versions than to the canvases, may well lend weight to Charageat's theory (1927) that the tapestries were executed before the paintings. The compositions are airier than those of the Hôtel de Séguier; the figures, which are less numerous and more contemporary in their features, move in a park in dancelike rhythms. Lastly, the frescoes of *Parnassus* and the *Nymph and River God*, with stuccoes in the style of Sarrazin, are still preserved in the nymphaeum in the park of the Château de Wideville in Davron. This is the only extant example of what must have been Vouet's most accomplished decorative style.

Notwithstanding the importance of such a contemporary as Jacques Blanchard, Vouet remained without a rival until the end of the reign of Louis XIII. But, although he continued to work for Anne of Austria during her regency (his arabesques at the Palais Royal mark a transitional stage between the Italian tradition and the period of Claude Audran III), the arrival of Poussin (q.v.) in court in 1640 (when the King remarked, "That's a blow for Vouet") and, later, the King's death, marked the end

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

of his supremacy. Both Vouet and Poussin executed paintings for the Jesuit Novitiate (Vouet's is known from an engraving), and a comparison of the two works was inevitable. Poussin was turned to tasks that would have suited Vouet perfectly in his capacity of accomplished decorator at the head of a group of helpers. Although Poussin later left for Rome, Vouet's work no longer enjoyed the favor that it had previously. Vouet was director of the Académie de St-Luc (see INSTITUTES AND ASSOCIATIONS, col. 155), and among the members of the Académie Royale, founded in 1648, were many of his pupils, painters who were to dominate French art until it felt once more the renewed impact of the work of Rubens. Vouet instituted in France the "grand manner," to which the following generation subscribed, altering its spirit. In the 18th century his works had renewed appeal and influence, primarily through the rhythms and light colors of his tapestries (to the examples mentioned above must be added those of the *Amours des Dieux* in the Château de Champchevrier, Indre-et-Loire).

Of Vouet's drawings, a few general projects survive from his French period together with numerous isolated studies in black and white chalk. These studies and their relationship to one another contribute to the understanding of Vouet's art, in its skillful juxtaposition of lines. The comparison of Vouet's drawings with those of other masters makes it possible to measure his rank in relation to other artists: Le Sueur, who was so close to Vouet technically, had a laborious style of ingenuous diligence; Lebrun sketched the general lines of his compositions before he inserted the figures, which he then strongly outlined; Poussin, in his global vision, gave dramatic emphasis to essential figures, such as Solomon or Romulus, and only afterward harmonized them within a rational perspective in his paintings.

The enduring quality of Vouet's art consists above all in his directness of approach, which is evident in his intimate portraits and which is also to be found in his other works, whether elaborate compositions or simple studies. Paradoxically, his detractor Lépicié (1752) came close to a definition of this quality: "He stuck to his first ideas, whether inspired or commonplace, such as they presented themselves to his mind, without changing anything, and without aiming at improving them."

Monique LAVALLÉE

VUILLARD, J. EDOUARD. French painter and graphic artist (b. Cuiseaux, Nov. 11, 1868; d. La Baule, June 21, 1940). Vuillard's father was a retired army officer; his mother, whose family was in the textile-designing and -manufacturing business, turned to dressmaking when her husband died in 1883 and set up a shop in Paris. In 1886 Vuillard entered the Ecole des Beaux-Arts, where he came to know Pierre Bonnard, Henri Gabriel Ibels, Paul Sérusier, Félix Vallotton, and Paul Ranson through his boyhood friends Maurice Denis and Ker-Xavier Roussel. These men, with Vuillard, formed a loosely organized artistic fraternity, calling themselves the "Nabis" (see EUROPEAN MODERN MOVEMENTS, col. 186). Attracted by Paul Gauguin's painting and his symbolist theories, they sought visual metaphor for certain exalted states of awareness, exploiting color, brushwork, contour, and pattern and avoiding evocative subject matter. The "gaucherie" of conception contrasted with the generally commonplace and mild thematic material: Vuillard and Bonnard (q.v.), in particular, found their subjects within the confines of the home. Because of this predilection for the private and personal they were dubbed "intimists"; as early as 1892 the critic G. A. Aurier referred to Vuillard as an "intimiste Verlainien."

In 1892 Vuillard painted for Mme Desmarais his first decorative panels and screens (now lost); and in 1894 he was commissioned by his friend Alexandre Natanson, an editor of the *Revue Blanche*, to paint for his home nine canvas panels in tempera, each some 7 ft. high, of Paris park scenes, now dispersed in various museums and private collections, including three in Paris (Mus. d'Art Mod.) and one each in Brussels (Mus. B. A.), Cleveland (Mus. of Art), and Houston (Mus. of Fine Arts). The emphasis on light and pattern and the naturalistic colors applied in broken patches give an effect midway between a tapestry and a poster; the figures appear informally, as if caught off guard. Four other decorative panels, done for a Dr. Vaquez in 1896 (Paris, Mus. du Petit Palais), feature young women engaged in domestic affairs, against interiors in which the rectilinear framework holds in check the contrasting flowered wallpaper and other animated decorative expanses.

In 1899, Vuillard's series of colored lithographs, *Paysages et Intérieurs*, was published by Vollard. From 1903 until World War I, Vuillard exhibited regularly at the gallery of his dealer, Bernheim Jeune, at the Salon des Indépendants, and at the Salon d'Automne, of which he was a founding member. In 1913 he executed decorations for the foyer of the Comédie des Champs-Elysées and, with Bonnard, visited London and Holland. During World War I he served in the home guard. Vuillard never married and lived with his mother until her death in 1928. In 1938 he was elected to the Institut de France and was given a large retrospective exhibition at the Musée des Arts Décoratifs.

Vuillard's style developed from the Japanese print and from the late work of Degas, from Gauguin, and from Redon (qq.v.). No doubt Vuillard was influenced by members of the Nabis, especially Bonnard, yet his art is peculiarly his own. His favorite medium was oil paint on cardboard, and he often chose a theme of domestic work, executed in small format. His interiors usually include people, frequently his friends and often women, engaged in simple tasks such as sewing or reading the morning paper, conversing, or merely daydreaming. They tend to be shown marginally, denied their fullness and centrality through segmentation, and are often overwhelmed or submerged in a wealth of decorative detail of wallpaper, rugs, and tablecloths. A tinted ground, dappled areas of muffled tones, and tender colors sharpened with piquant accents of black lend a cohesiveness to the whole. Certain of his works evoke a fragile mood; others seem fraught with Proustian nuances of tension and ennui. Vuillard's most daring work appeared early in his artistic

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

career; his later work is generally more literal in conception and more precisely detailed, with depth more clearly articulated, and the intimacy and poetry of the earlier paintings are often sacrificed for solidity and verisimilitude.

Among Vuillard's best-known works are *Woman Sweeping* (ca. 1892; V, PL. 122); *The Vuillard Family at Lunch* (1896; New York, Coll. Mr. and Mrs. Ralph F. Colin); *Waiting* (1900), *The Newspaper*, and *Woman with Child in Sailor Suit* (all, Washington, D. C., Phillips Coll.); *Madame Vuillard at the Household Accounts*, (1907; Winterthur, Kunstmus.); and *Annette's Father*, Saint-Tropez, Mus. de l'Annonciade.

Robert F. REIFF

WAGNER, OTTO. Austrian architect (b. Vienna, July 13, 1841; d. Vienna, Apr. 11, 1918). Wagner attended the Vienna Technische Hochschule, then studied at the Vienna Akademie der bildenden Künste under August Siccard von Siccardsburg and Eduard van der Nüll, and then attended the Bauakademie in Berlin. When Wagner began his architectural career in the 1860s, Vienna had just entered a period of dramatic change and expansion best exemplified by the Ringstrasse with its wreath of eclectic buildings. The monumental designs of Gottfried Semper (1803–79) in connection with the Ringstrasse and his theoretical writings were important factors in the formation of Wagner's architectural style.

Early in his career Wagner built a number of apartment houses in Vienna, including his own residence at Rennweg 3 (1889). He retained an interest in urban housing throughout his life, and some of his best buildings are apartment houses, such as 38a and 40 ("Majolika Haus") Linke Wienzeile (1898) and 40 Neustiftsgasse (1909). Apartment buildings did not permit a full realization of his monumental intentions, but other projects exist that are embodiments of monumentality and decorative exuberance, such as the "Artibus" design of 1880. In 1881 Wagner designed decorations for the entry of Crown Princess Stephanie into Vienna; two years earlier he had collaborated with the painter Hans Makart in providing decorations for the silver wedding celebration of Emperor Franz Josef I. The 1880s also saw remarkable buildings carried out, among them the office for the Länderbank, at Hohenstaufengasse 3, and his own first country villa, Hüttelbergstrasse 26. In the first period of Wagner's career, up to the early 1890s, he was essentially an eclectic and favored, in his own words, "a certain free Renaissance"; but he was obviously more talented than most of his contemporaries and more radical in his insistence on utility and construction as determinants of design.

In 1892–93 Wagner won first prize in a city-planning competition for Vienna with his scheme, "Artis sola domina necessitas." A commission to plan the Stubenviertel followed, and in 1894 came the gigantic task of designing the architecture of the new metropolitan subway, the Stadtbahn, which put him in close contact with large-scale engineering problems. In the same year Wagner was appointed professor of architecture at the Akademie der bildenden Künste, succeeding Baron Karl von Hasenauer. From this key position he published in 1895 what purported to be a textbook for his students but amounted to a manifesto: his book *Moderne Architektur*, which went through several editions and translations (in 1914 as *Die Baukunst unserer Zeit*), which contains Wagner's renunciation of the principles of eclecticism and his recognition of the need for a new architecture to fit the requirements of a new society. In it he boldly expressed the concepts of the new architecture: "The recognition must become general that the only point of departure for our artistic activity can be modern life.... This new style, the modern one, in order to represent us and our time, will have to express clearly ... a distinct change of what has been the sentiment till now, the almost complete decline of romanticism, and the accentuation of function in such a way that it usurps almost every domain.... Something impractical cannot be beautiful.... The architect must always develop the art form from the construction.... In the resulting art form of the future the carrying and supporting line, the handling of the surface as a slablike plane, the greatest simplicity of conception, and an energetic emphasis on construction and material will dominate strongly...."

The attitude expressed in these and similar formulations explains why in 1899 Wagner joined the Vienna Sezession, a radical artistic group that promoted a characteristic local version of Art Nouveau (q.v.). Following the trend of the times, Wagner also designed a number of interiors, including furniture and craft objects. Typical Art Nouveau elements, however, especially scrolls of decorative metalwork, occur in his *œuvre* for only a few years; later his classicist and rationalist tendencies made themselves felt more strongly again.

By the beginning of the 20th century Otto Wagner had created an architecture unmistakably his own, which in its best examples points clearly toward the future. In the face of hostility from many official circles he produced an impressive number of designs, only a few of which were realized as buildings, such as the Postsparkassengebäude (Postal Savings Bank, Vienna, 1903–06; V, PL. 100, FIG. 225), the Church of St. Leopold (Steinhofkirche, Vienna, 1903–07; V, PL. 100), a sanatorium (Heilstätten Heim für Lupuskranke, Vienna, 1908–09), and a second residence for himself at Hüttelbergstrasse 28 (1905–12). These buildings share a disciplined rationality in plan, a juxtaposition of simple geometric volumes, an insistence on flat planar elements, a preference for new materials such as aluminum and black glass, and a masterly use of light and color. Wagner's projects that remained on paper were numerous; they include designs for a number of churches, for ministries, a museum of technology, a hotel, a new academy of fine arts, the so-called "House of Glory" for San Francisco, and several versions of a design for a great museum of the city of Vienna that had important city-planning implications.

Wagner never lost a genuine interest in questions of city planning. In 1910 he made a project for a twenty-second district of Vienna, and in 1911 he published a study of the *Groszstadt*, which was translated into English in the *Architectural Record* of 1912. His influence was more far-reaching than is generally realized. He participated in many competitions, including the international ones for the Amsterdam Stock Exchange (Börse, 1884) and for the Vredespaleis (Palace of Peace) in The Hague (1905), and his "Artibus" design seems to have been sent to the United States. Published designs from his class at the Akademie were often quite revolutionary and almost utopian in character. His pupils or assistants included such leading figures as J. M. Olbrich and Josef Hoffmann, and his architecture was studied and admired by architects outside Austria, including Antonio Sant'Elia and Frank Lloyd Wright.

MAJOR WORKS (all located in Vienna unless otherwise indicated). 1863: First prize, competition for Kursalon, Stadtpark. – 1877: Apartment building, Schottenring 23. – 1879: Decorations, silver wedding celebration of Emperor Franz Josef. – 1880: Apartment building, Rathausstrasse 3. – 1881: Decorations for entry of Crown Princess Stephanie. – 1882: Apartment building, Stadiongasse 6–8; Länderbank office building, Hohenstaufengasse 3. – 1884: Apartment building, Lobkowitzplatz 1; project for Amsterdam Stock Exchange competition. – 1885: Villa Hahn, Baden. – 1886–87: First Otto Wagner villa, Hüttelbergstrasse 26; apartment building, Universitätsstrasse 12. – 1889–90: Otto Wagner town residence, Rennweg 3; apartment buildings, Rennweg 1a and 5. – 1893: Plan for Vienna. – 1894: Neumann department store, Kärntnerstrasse; "Ankerhaus," Spiegelgasse 2; Johanneskapelle. – 1894–98: Stadtbahn and Nussdorf water gate. – 1898: Apartment buildings, "Majolika Haus," Linke Wienzeile 38a and 40; project, Academy of Fine Arts, I; projects for church at Währing and for the Kapuzinerkirche. – 1900–12: Projects for a museum of the city of Vienna. – 1903–06: Postal Savings Bank. – 1903–07: Church of St. Leopold (Steinhofkirche). – 1904–06: Kaiserbad water gate buildings. – 1905: Project for competition, Palace of Peace, The Hague. – 1905–12: Second Otto Wagner house, Hüttelbergstrasse 28. – 1906: Project, Palast der Wiener Gesellschaft. – ca. 1907: Project, "House of Glory," San Francisco. – 1907–08: Project, Ministry of War and Ministry of Commerce. – 1908–09: Heilstätten Heim für Lupuskranke. – 1909: Apartment buildings, Neustiftsgasse 40 and Döblergasse 2 and 4; project, Technisches Museum für Industrie und Gewerbe. – 1910, 1914: Projects for uni-

Eduard F. SEKLER

WALES. See GREAT BRITAIN.

WALPOLE, HORACE. English collector, connoisseur, and historian of art (b. London, 1717; d. London, 1797). Walpole was the youngest child of Sir Robert Walpole, 1st Earl of Orford (later George II's prime minister) and himself succeeded to the title as 4th Earl of Orford toward the end of his life. He was educated at Eton College and King's College, Cambridge. In 1739–41 he made the grand tour through France and Italy, setting out with the poet Thomas Gray but returning separately as the result of a quarrel.

In his long life, which is well documented by his writings and especially by his letters, Walpole was prominent in many fields. He was Member of Parliament for King's Lynn 1757–68; he was author of *The Castle of Otranto* (1764) and *The Mysterious Mother* (1768), described by Byron as, respectively, "the first romance and . . . the last tragedy of our language"; but to the student of the visual arts he is primarily the owner of Strawberry Hill and the author of *Anecdotes of Painting in England*.

Walpole bought the house that he named Strawberry Hill (VIII, PL. 109; see VI, cols. 780, 827), at Twickenham, Middlesex, in 1747. Gothic additions were begun in 1752 and continued, with intervals, until 1776. During the first decade the chief designers were John Chute and Richard Bentley; the gallery (1760–63) was designed by Thomas Pitt (later Lord Camelford), and the Beauclerk Tower (or Round Tower, 1776) by James Essex. In 1790 detached offices were built by James Wyatt after plans by Essex of 1777. Even in 1752 Neo-Gothic (q.v.) was no novelty, but Walpole's example established its respectability, and the imitation of specific medieval models in features of Strawberry Hill heralded a more archaeologically oriented phase of the Gothic revival (see X, col. 554).

At Strawberry Hill Walpole kept his collection of works of art and articles of virtu, and there in 1757 he set up the printing press from which came, *inter alia*, the first edition of *Anecdotes of Painting in England* (vols. I and II, 1762; III, with a "Catalogue of Engravers Born and Resident in England," 1763; IV, with an "Essay on Modern Gardening" appended, 1771 but not published until 1780). This work was the result of Walpole's purchase in 1758 of the notebooks in which the engraver George Vertue (1684–1756) had collected information about English artists from the earliest times to his own. In reassembling this "chaotic and often hardly intelligible material" in highly readable form, Walpole became the father of English art history, while his "Essay on Modern Gardening" remains the most eloquent vindication of the landscape school of the 18th century.

Marcus WHIFFEN

WANG MÊNG. Chinese painter of the Yüan period (b. Hu-chou [Huchow], now Wu-hsing [Wuhing], Chekiang, ca. 1308; d. 1385). Only two years before Wang Mêng's birth, Giotto had completed his Padua frescoes (ca. 1306), an artistic event that, although contemporaneous with Yüan painting, is completely unrelated to it. To point up the wide discrepancy between the aspirations of a Trecento master and those of an intellectual artist of 14th-century China, one has only to observe that the latter was groping toward an expressionistic art comparable to Western movements no earlier than the late 19th and early 20th centuries.

It is known from the Ming Annals (*Ming-shih*) that Wang Mêng, whose courtesy name was Shu-ming, was a grandson on his mother's side of Chao Mêng-fu (q.v.), a descendant of the Sung imperial family, a statesman, and a versatile artist who had contributed much to the change of artistic climate in his day and whose wife, Kuan Tao-shêng (1262–ca. 1325), Wang's grandmother, was a renowned painter in her own right. Of Wang Mêng's parents nothing is recorded, but certainly they enabled him to study literature and calligraphy and to make himself at home in the art world early in his life. Wang Mêng held minor official positions under both the Yüan and Ming dynasties: he was a supervisor of investigations under the former and prefect of T'ai-an-chou in Shantung under the latter. When the uprisings against the Mongols began, he withdrew to Huang-hao-shan ("Yellow Crane Mountain") near Hang-chou (Hangchow) in his home province. The locality accounts for Wang's literary name, Huang-hao-shan-ch'iao ("Fuel Gatherer of Yellow Crane Mountain"), which may have been adopted before his retirement, since it appears in his signatures of the 1340s. For a time Wang Mêng served under the first Ming emperor, T'ai-tsu (reign name Hung-wu; 1368–98), but in 1380, when Prime Minister Hu Wei-yung was executed for having plotted against the emperor, Wang Mêng was imprisoned as an alleged conspirator. He died in prison in 1385. The Ming Annals virtually exonerate him by relating that it was to see paintings in Hu Wei-yung's possession that he had visited the minister's residence.

That Wang Mêng was early aware of matters that occupied the minds of the foremost painters of the beginning of the 14th century may, in view of his family ties, be taken for granted. While he may not have been mature enough to have profited from encounters with his grandfather, who died when Wang Mêng was only fourteen, he certainly must have seen many of the elder's works and learned about his relationships with Chao Mêng-chien (1199–ca. 1295), Ch'ien Hsüan (ca. 1235–1300), and Kao K'o-kung (1248–after 1310), all of whom contributed works or ideas of importance to the profound reorientation in Yüan painting. Wang Mêng was no doubt well acquainted with Chao Yung (1289–ca. 1360), a son of Chao Mêng-fu, as well as with Ts'ui Yen-fu, grandson of Chao Mêng-fu, and Ts'ui Fu, Chao Yung's son-in-law. The two Ts'ui were noted painters, but there is only one work of Yen-fu now extant, a landscape signed and dated 1342 (Peking, Palace Mus.), a mountain scene that in its contrived linear structure and its dry, soft brushwork with light color but no tonal variations might have appealed to Wang Mêng. This landscape demonstrates no outright archaism or primitivism, the features that were characteristic of the older generation's struggle to break away from the sophisticated realism of Southern Sung painting. That primitivism is strikingly exemplified by a short handscroll, *Autumn Colors on the Ch'iao and Hua Mountains*, painted by Chao Mêng-fu in 1296, the year after Marco Polo's return to Venice. While it stands rather isolated within Chao's diversified *œuvre*, this scroll is such an outright denial of Southern Sung ideals as to be almost programmatic. The typically picturesque Sung landscape, enveloped in a vibrant atmosphere

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

evoked by exquisitely graded ink washes, has been replaced here by an arbitrary assemblage of commonplace things rendered in linear patterns and color, devoid of movement, air, and space. As in archaic landscape designs, the two mountains are brusquely set into this assemblage, disengaged from the rest. Perhaps this scroll of Chao Mêng-fu is more remarkable as a document of his resolute negation of the exhausted Sung tradition than as a positive achievement of a new form. It scarcely set a standard, but it did contain the seeds of some of the future standard features of landscape painting. As for Wang Mêng, in whose work we find only rarely any signs of direct indebtedness to others, it is difficult to tell whether he owed anything more to his grandfather Chao than his artistic inclinations and a comparable attitude of detachment from realistic representation. His style cannot be said to be derived from Chao's *Autumn Colors*, and it certainly owes even less to the various other manners and experiments of the older master. From the beginning, Wang's work seems to have developed in a circumscribed, personal direction.

Among Wang's close friends were Ni Tsan (q.v.) and Ch'ên Ju-yen (active ca. 1340–80). Ni Tsan, whose bleak and serene river views done in a most sparing technique contrast greatly with Wang's involved and exuberant mountainscapes, refers to him in the inscription of a picture of 1352; together with Wang he painted a landscape in 1361; and in his late "Lion Grove" handscroll of 1373, he once more mentions his friend in a jocular colophon in which he says, "Not even in his dreams could Wang Mêng have conceived of a picture that so truly captures the spirit of Ching Hao and Kuan T'ung." Ni Tsan's estimate of Wang Mêng's artistic rank is known through the words quoted by Tung Ch'i-ch'ang (q.v.) in an inscription on a painting by Wang Mêng: "There was not such a man in the last five hundred years" (Fang Hsün, *Shan-ching-chü hua-lun*).

Both Ni and Wang were acquainted with Ch'ên Ju-yen (courtesy name Wei-yün; executed in 1380) and with his brother Ch'ên Ju-chih (courtesy name Wei-yin). Ju-yen was a painter whose landscape style, which is said to have been based on Chao Mêng-fu's, agrees more closely with Wang Mêng's than does Ni Tsan's. Still, measured by Wang's impetuosity and dynamism, Ju-yen's landscapes have a very quiet and lucid air. Both Ni and Wang painted Ch'ên's Ya-i Mountain cottage, Wang's version dating from 1358 (PL. 390). Ch'ên Ju-yen's *Ching River*, depicting the scenery of the western banks of Tai Hu (literally, "Great Lake"), bears inscriptions of both friends. When Wang Mêng was prefect at T'ai-an in the early Ming period, Ju-yen came to see him, and two of Wang's extant works are dedicated to Ju-chih.

Wang Mêng's known dated works range from 1342 to 1370. Too little is known of the master's life to explain why there seem to be no works from the decade 1370–80, nor can the absence of any works dated before 1342 be explained. However that may be, the twenty-eight-year time span of his known works ought to give a fair idea of the painter's growth and maturity, even though the task of sifting his *œuvre* remains to be performed. On the whole his style is readily recognizable, and for precisely that reason it was widely imitated. It was bound to be imitated and reinterpreted also as one of the great intellectual achievements of its period.

To judge from the *River Dwellings among Autumn Mountains* of 1342 (PL. 389), Wang Mêng had by his early thirties achieved a style, consistent with his later works, that was unlike that of any of his great contemporaries. The long scroll is crowded with forms built up of innumerable small elements arranged in transparent patterns. These patterns for tree or forest, rock or mountain lack both volume and solidity, cohering chiefly through the geometric device of curves winding upward. Nor do they possess specific surface qualities as the rocks of Sung paintings do. Even the houses are reduced to simple ciphers that are, like the trees, commonplace elements rather than representations. In fact, a painting of this kind may be considered less a representation than a pictorial paraphrase of the theme of landscape.

A rare early work of Wang's, according to a colophon of 1506 by Shên Chou (1427–1509), is the handscroll *T'ai-pai Mountain*, in the Museum of Fine Arts in Boston (detail, PL. 389). Though unmistakably in Wang's style, the scroll does not closely agree with the painting of 1342; it has a neatness and ease of execution that may point to another hand. In contrast, a work that exhibits nothing truly typical of Wang's manner yet bears his own later-added signature, a mountainscape entitled *Ko Chih-ch'uan's Removal* (reproduced in *Chung-kuo ming-hua*, VII, Shanghai, 1926; formerly, Kuang-tung [Kwangtung], Tuan Fang Coll.), may well antedate the *River Dwellings* of 1342. For once it seems to reveal a dependence on Chao Mêng-fu, a feature that would be in keeping with its presumed early date.

Two paintings of the late 1350s may be singled out to represent the mature artist. The *Hall in the Glen of Heavenly Fragrance* (*T'ien-hsiang shen-ch'u t'ang*; PL. 389) of 1357 far surpasses in expressiveness and character the master's early creations. In his peculiar graphic idiom of short curly strokes he constructs here, with a weird and solemn effect, gigantic pillarlike cliffs that tower oppressively above the secluded homestead in the valley. The artificiality of the shapes and textures is enhanced by an unrelentingly precise technique. *The Ya-i Mountain Studio* (*Ya-i shan-chai*; PL. 390), painted for Ch'ên Ju-yen in 1358, is a smaller and less complex variation of the motif of the mountain hermitage, executed with an apparent tempo and in a sketchier manner. Extraordinary and disquieting is the effect of rocks in motion — an effect brought about by the changing direction of the dabs and flicks of the brush, fuzzy contours, and ambiguous definition of surfaces. Nothing is seen, however, of this restless air in the appealing scroll of 1361 in the Art Institute of Chicago, *A Quiet Life in a Wooded Glen*, which despite its intricate design, especially of the trees, is clearly articulated and of a serene expression.

Beginning with a very long and narrow scroll in the Palace Museum in Peking, *Remote Monastery in the Autumn Hills*, painted for Tsou Fu-lei in 1362, the forms coalesce. A unifying movement pervades the whole composition, the brush becomes pliant and softer, and the sharp contrasts of textures disappear. Wang Mêng's landscapes come to resemble colossal organic structures either in convulsive movement, as in *The Ch'ing-pien Hermitage* of 1366, or in an even rhythm and with a new awareness of open space, as in the painting of 1368 entitled *Dwelling in the Summer Mountains* (PL. 389). This late work scarcely differs thematically from the *River Dwellings* of the 1340s, which, however, seems by comparison like an insignificant, conventional exercise. The deeply personal and moving, if sometimes oppressive, images of the following decade reveal an artist of individual and unmistakable character who was to achieve in his work of the 1360s a true classicality.

WANG SHIH-MIN, CHIEN, HUI, AND YÜAN-CH'I. Chinese painters of the Ch'ing period, known as the "Four Wangs." They are grouped together not only because they have the same family name but also because the intellectual background from which they derived their inspiration was the same.

Wang Shih-min (1592–1680), his grandson Wang Yüan-ch'i (1642–1715), and Wang Chien (1598–1677) came from T'ai-ts'ang (Kiangsu), the region that gave its name to the school of painting founded by Wang Shih-min and Wang Chien. Wang Hui (1632–1717), whose father was an art dealer, was a native of

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

Ch'ang-shu, also in the province of Kiangsu. Wang Hui and Wang Yüan-ch'i were both pupils of Wang Shih-min and were consequently able to enjoy the educational advantages of the rich art collection of Wang Shih-min's grandfather, Wang Hsi-chiao. Their styles show the influence of their studies of original works of art of the Sung (960–1279) and the Yüan (1260–1368) periods that were included in this collection, among which were paintings by four of the masters of the Yüan dynasty: Huang Kung-wang (1269–1354), Wu Chên (1280–1354), Ni Tsan (q.v.), and Wang Mêng (q.v.). Apart from this collection, however, it was not easy for the four Wangs to gain access to important originals for study. The styles of Ch'ing painters were for the most part formed by the study of such paintings as chanced to be accessible to them in private collections, rather than by general stylistic influences like those affecting European artists, who could study masterpieces in churches and other public buildings. In China such conditions simply did not exist; there had always been, instead, a small group of private owners and artists who influenced one another through reciprocal loans of available masterpieces. One cannot, therefore, speak of a "17th-century Chinese style" in painting, since, for example, during the same period such masters of Nanking as Kung Hsien (ca. 1625–after 1698) painted in a very different manner from the Buddhist monks K'un-ts'an and Shih-t'ao (Tao-chi), who were their contemporaries. The masterpieces of the great European artists determined the style of an epoch, which was modified by succeeding masters. As a result one can speak in European art of a "Gothic style" and a "Renaissance style" that, as period styles, differ basically. This phenomenon did not occur in China, where, instead, one differentiated between the "professional painters," whose domain was portraiture and the representation of historical scenes, and the "literati painters." The four Wang masters belong in the latter group.

The Confucian indoctrination in their education distinguished them from the professional painters, who had only a technical education. The most fundamental concept drawn from a Confucian education that had a specific influence on the development of the Wangs' approach to painting was their ability to discover and depict the timely essence of the general from an independent and careful study of the particular (see CONFUCIANISM). This ability could be achieved only through practice, through daily undertakings and repeated contacts such as the study of some masterpiece, approached each time with a renewed vigor. Whoever accustomed himself in daily life to the Confucian manner of continually measuring the unimportant against the important would always know how to separate the durable from the ephemeral, whether he was observing a masterpiece or creating one. In keeping with this, the literati painter might well mention reflections in water in his poetry but would never seek to represent something so fleeting in his painting. In the landscape paintings done by the literati the artist never selected a single specific slice of nature, recognizable as something that existed at a certain time and in a certain location and reproduced in the original coloring, but instead painted, after much observation, a kind of composite of the same object seen at different times and from different viewpoints. In this manner he unconsciously developed and expressed a deeper understanding of the subject, always keeping his emotions under control so as not to confuse his judgment of what is permanent.

This Confucian approach to painting had technical implications as well. The literati painter's faculty of synthesis — the bringing together in a larger context of the small particular observations that he has made from time to time — shows itself in his paintings in the uniform rhythm of the brush strokes. Likewise, the color in these paintings in no way changes the essence of the form of the object. Color was not considered by the literati painters as something that adds a lasting quality to the model, since the characteristics of color are subject to the changing influence of light. As a result, the colors in a painting were regarded as something superimposed on the basic form, whereas for the professional painter the relationship of color and form was a integral one.

How the four Wang masters reflected this philosophy of painting can best be determined from their own works (PLS. 391–396) and from colophons and their own inscriptions on their paintings. According to one inscription, Wang Shih-min and Wang Chien "studied and debated together the laws of painting," using famous works of the old masters as models. Wang Chien especially devoted himself to comprehensive study, copying almost all the Sung and Yüan masters, but more such studies of the old masters done by Wang Hui have been preserved. He worked a great deal with the collection of Wang Shih-min, as is shown by letters still in existence, and derived much of his personal style as well from the study of the famous originals that his father bought and sold.

This approach among the Ch'ing literati had its foundations not only in the concept of discipline as the only real means of first understanding and then expressing the inherent truth in nature, but also in the fundamental Confucian tenet of reinforced tradition. The principal duty of the educated Confucianist — the literati prototype — was the maintenance and development of tradition. Thus the Ch'ing painters' absorption in and emulation of the Yüan masters, with whom they had a certain feeling of historical kinship, was a seriously conceived artistic movement. But the works of the four Wangs reflect above all a concept intrinsic to the idea of *wên-jên-hua* — that there need not be a connection between the expressive purpose and the representational content in a work of art. The Ch'ing literati painters were concerned, therefore, not with new concepts of landscape themes but rather with the power of the brush stroke for representing established, immutable themes. Wang Yüan-ch'i described most fully the specifics of the artistic intuition of the literati painter: "What is important in paintings is that the artist have the inspiration before he applies the brush. When he has brush in hand, he must leisurely and meditatively adjust himself to his inspirations, purge himself of any trite feelings, compose himself, and concentrate. Then he should estimate the height and width and decide what should be inserted, what omitted, and how the main features of the composition should be arranged. When he has come to a final decision he then dips his brush into the ink, determines a lively mode of expression of the energy areas, so divides the space, and then decides on the amount and intensity of the shading. Certainly one must now and then change something, bring East and West into their proper relationship; but when the water flows and finds its natural level by itself, then a happy conclusion will undoubtedly be reached. To complete the arrangement, the rises and declivities should be brought into proper relationship with the distance, and the foreground and background should be clearly differentiated; sometimes the composition is worked toward the heights, sometimes toward the broad view; the relationship between the peak, the middle, and the foot of the mountain must be very carefully balanced. If one . . . fails to consider all these aspects, he will strangle the life of his representation, and it will lose its power of expression. . . . If, however, the painter brings the diagonals and verticals, the complete and the disintegrated, the separate and the united into such vitality that motion is incorporated in it, then he will have a 'real' painting."

Wang Yüan-ch'i, further explaining the philosophy behind his painting, also wrote in an inscription: "A breath must flow through every brush stroke, so that the oblique lines and the curves give life to the changes of direction in the painting. The brush strokes are the bones, the colored shading the flesh. Even sharp lines must not lose their mellowness, as they do when the painter allows the brush to lead him. Depiction of the surfaces begins with gentle tones, only gradually becoming forceful; one must never begin with the color just as it drips from the brush. Whatever one may produce from the time-honored rules depends on his own eye, his own judgment."

SELECTED WORKS ATTRIBUTED TO THE FOUR WANGS. *Wang Shih-min: River Scenery*, signed and dated 1636, Boston, Mus. of Fine Arts. – *Field Flowers*, signed and dated 1657, Stockholm, Östasiatiska Mus. – Landscape in the style of Huang Kung-wang, fan painting, signed and dated 1665, Lugano, Coll. J.-P. Dubosc. – Landscape in the style of Chao Mêng-fu, album leaf, 1670, New York, C. C. Wang Coll.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Wang Chien: *River Valley between High Mountain Slopes*, signed and dated 1660, New York, C. C. Wang Coll. – Eight small landscapes after old masters, one signed and dated 1665, Stockholm, Östasiatiska Mus. – *White Clouds over Hsiao and Hsiang*, signed and dated 1668, Washington, D.C., Freer Gall.

Wang Hui: *Straw-covered Hut in the Autumn Mountains*, signed and dated 1674, Paris, Mus. Guimet. – *River Landscape in Autumn Colors*, signed and dated 1677, Paris, Mus. Guimet. – *Old Trees and Bamboos*, signed and dated 1688, Stockholm, Östasiatiska Mus. – Homestead under bare trees in early spring, fan painting, signed and dated 1689, Boston, Mus. of Fine Arts. – *Watching a Waterfall*, after Li T'ang, signed and dated 1692, Tokyo, Nat. Mus. – An old temple surrounded by leafy trees between two steep cliffs, signed and dated 1692, Cologne, Mus. f. Östasiatische K. – *Tall Bamboo and Distant Mountains*, signed and dated 1694, Cleveland, Mus. of Art.

Wang Yüan-ch'i: River landscape in the style of Ni Tsan, vertical scroll, 1704, Lugano, Coll. J.-P. Dubosc. – *Mountains in Mist*, combining the manners of Huang Kung-wang and Fang Ts'ung-i, 1712, Paris, Mus. Guimet. – Grassy mountains and tall trees, fan painting, Boston, Mus. of Fine Arts.

WANG WEI. Chinese poet, painter, calligrapher, and musician of the T'ang dynasty (b. 699; d. 759). Wang Wei, styled Mo-ch'i (which, when combined with his first name, forms the Chinese equivalent of *Vima*lakīrti, the great Buddhist lay saint), was also called Yu-ch'êng (a reference to his last official rank). Originally from the district of Ch'i in Taiyuan (Shansi), he came from a clan of great social eminence that contributed no less than 13 prime ministers to the T'ang dynasty. His father moved the family to P'u-chou, where Wang Wei was born, two years before the birth of the great poet Li Po. He was brought up at a time (1st half of 8th cent.) when the T'ang Empire was at an unprecedented height of material wealth and cultural vitality, an age that was immortalized by an unparalleled procession of artistic and literary giants whose imprints were left permanently not only on China but also on a large part of eastern Asia. In the capital, Ch'ang-an, figure painting at its fullest development had aroused great public excitement through large religious compositions on hundreds of temple walls, and landscape painting was on its way to revolutionary changes, pioneered by the two foremost masters of the time, Li Ssŭ-hsün (q.v.), who in 705 was Senior Lord of the Court of Imperial Family Affairs, and Wu Tao-tzŭ (q.v.), who in 713 had just been appointed Painter-in-Imperial-Service. These two had opened up a new continent for the following generation of painters, including Wang Wei.

Wang Wei's literary genius was recognized early in his childhood, but his success in the metropolitan examination in 717 may have been attributable less to his scholarship than to his musicianship. He was an acomplished composer, performer, and critic, and when he passed the palace examination for the highest degree (*chin-shih*) in 719, at the age of twenty-one, he was appointed assistant director of the Imperial Directorate of Music. From here he began his long and often frustrated climb in the bureaucratic hierarchy of the T'ang dynasty. When he died in 759, at the age of sixty-one, he occupied the powerful position of *shang-shu yu-ch'eng*, or Right Executive Assistant of the Chief Minister, overseeing the administration of 12 departments in the war, justice, and works ministries. Disillusioned in later life by public service and saddened by the deaths of his wife and his mother, he completely withdrew from society into a life of solitary Buddhism. In one of six impromptus written during this period, he said, "I may have been recognized, all by mistake, as a poet in this world, while I should have been a painter in my former life." It is believed, however, that he had taken up painting at a younger age. He is known to have done a portrait for a contemporaneous poet, Mêng Hao-jan, who died in 740, when Wang Wei was forty-two. His early interest in painting was also manifested in his financial support of the outstanding painter of horses, Han Kan, which is reported to have continued for nearly two decades, until the latter acquired national fame

Wang Wei's exalted position in Chinese art history rests primarily on his enshrinement as founder of the so-called "southern school" of painting by Tung Ch'i-ch'ang (q.v.), the most influential Chinese art critic of the last three centuries. Tung Ch'i-ch'ang's theory about the southern and northern schools, with its far-reaching implications, is admittedly an arbitrary hypothesis from a purely art-historical point of view. It does, however, reveal a deep historical insight that goes beyond the limited domains of style and technique, reaching the very heart of the social and philosophicoreligious background of Chinese art. The middle of the 8th century was a turning point in Chinese social history, as the new literati class coming from the landed gentry gradually began to displace the aristocratic families from the dominant position. In the person of Wang Wei, Tung Ch'i-ch'ang found an ideal model of the man who combined the best qualities of both groups: a gentleman of high birth and moral standards and of great social charm, a creative genius who could hardly be equaled in the "three excellences" of poetry, calligraphy, and painting, and an intellectual able to reconcile Confucianist principles with a Buddhist life. Even more important, the middle T'ang period was an age of renaissance in the sense that the southern culture of the Six Dynasties was being revived, and Wang Wei symbolized this nostalgic, spiritual return to a national heritage amid the influx of alien influences. This renaissance was partly a result of the success of the Chinese in transforming Ch'an Buddhism and integrating it into the commonplace immediacy of daily life, and Wang Wei, again, was best qualified to represent this transition. A rebellion in 755–56 marked the turn of public allegiance from the northern Ch'an Buddhist school of the priest P'u-chi to the southern school of Shên-hui. Wang Wei was probably first converted by the former, although he later became deeply devoted to Shên-hui.

One of the key statements in Chang Yen-yüan's *Li-tai ming-hua chi* (Eng. trans., *A Record of the Famous Painters of All the Dynasties*, in Acker, *Some T'ang and Pre-T'ang Texts on Chinese Painting*, 1954) declares that the revolution in Chinese landscape painting, which occurred sometime before 713, was initiated by Wu Tao-tzŭ and accomplished by the father and son Li Ssŭ-hsün and Li Chao-tao (q.v.). Wu Tao-tzŭ emancipated the symbolic landscape of the Six Dynasties tradition with his highly individual and expressive style and was the first great master to exploit the potential of the brush stroke for its evocative as well as its descriptive power, bestowing an illusion of realism on plastic forms and creating a new sense of movement and continuity in space in panoramic compositions. The two Li gave the spatial design of the picture a unified and atmospheric definition with a fully developed decorative and coloristic technique in the best tradition of Chan Tzŭ-ch'ien (ca. 550–620; IX, PL. 155). It is highly significant that Chu Ching-hsüan, author of *T'ang-ch'ao ming-hua-lu* (Eng. trans., *Celebrated Painters of the T'ang Dynasty*, by Soper, 1950), which was written less than a century after Wang Wei's death, emphasized that Wang Wei's brush style in paintings of pine trees, rocks, and landscapes reflected that of Wu Tao-tzŭ. Tu Mêng, who, with his brother, was probably the highest critical authority contemporary with Wang Wei, ranked the poet-painter above Li Ssŭ-hsün for his "profundity and subtlety" in pictorial expression. It appears that while the majority of Wang Wei's works were probably in color and comparable to paintings by Li Ssŭ-hsün in many other technical aspects as well, they also show the strong influence of the brush and ink methods of Wu Tao-tzŭ. His achievements certainly go beyond mere delicacy and lyricism — the only qualities granted to his works by later critics. This misconception became so deep-rooted and widespread that even Mi Fei (q.v.), at the end of the Northern Sung dynasty (960–1127), found it difficult to persuade collectors of Wang Wei's true worth.

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

Wang Wei made many major contributions to Chinese landscape painting. He is remembered first and foremost as the patriarch of Chinese "literati painting" (*wên-jên-hua*). Because he was the first great poet of this period as well as a great painter, he was historically in a position to raise painting to the social and intellectual level considered worthy of the endeavors of the literary elite. Moreover, being one of the keenest and most "impressionistic" observers of nature of all Chinese poets, he was able to project a strong poetic subjectivity into his pictorial art, transforming his landscapes into a mirror of the soul; indeed, it is exactly this that was to become the guiding principle of the *hsieh-i* (literally, the "writing of ideas") school of later Chinese painting.

Wang Wei was also one of the leading precursors of ink-monochrome painting in the middle T'ang period. His experiments with this medium in probing the inward sentiment of nature probably helped to give birth to a great new movement in the 9th and 10th centuries that was centered not in the capital but in the lower Yangtze Valley, the cradle of the southern tradition of Chinese landscape art.

Wang Wei was undoubtedly instrumental in establishing the *p'ing-yüan* ("level distance"), not only as a landscape type but also as an immensely important space concept that was one of the cornerstones in the foundation of later scholarly painting. His works were characterized by T'ang critics as *ch'ung-shêng* ("superimposed in depth") or *yu-shêng* ("solitude in depth"). Although these two terms have been interpreted as the equivalent of the "deep-distance" type of landscape painting, it is much more likely that they refer only to an atmospheric effect, probably achieved by an innovation in the ink technique.

Wang Wei definitely played a significant role in the development of the *p'o-mo* ("broken-ink") landscape. Contrary to the theories of most modern historians, there is strong evidence suggesting that this term originally connoted a brush technique, which in the case of Wang Wei was described by Chang Yen-yüan as "forceful and swift." This early meaning was gradually lost during the process of technical evolution until the term came to be understood by later critics as an ink method. This misunderstanding probably inspired the famous theory of Tung Ch'i-ch'ang, not without some historical justification, that Wang Wei was the first important landscapist who used graded washes as a substitute for the more traditional "hook and chop" strokes in the rendering of forms and textures.

As recorded in late T'ang literature, Wang Wei's works were mostly wall paintings, but only works on silk (and presumably also on paper) survived in the imperial collection in Emperor Hui-tsung's period (1101–26). The 126 items by Wang Wei listed in the *Hsüan-ho* catalogue include Buddhist paintings and scenes of fishing villages, but snowscapes are by far the commonest subjects. The important hand scroll known as "Snowy River" is extant in two versions (Kyoto, H. Ogawa Coll.; Honolulu, Acad. of Art; detail, *Clearing after Snowfall on Mountains and Rivers*, PL. 397), but there is little evidence of their common origin in the brushwork. These two paintings do demonstrate, however, two supposed characteristics of Wang Wei, namely, the concept of "level distance" — here in a beautiful composition that is probably too advanced to be dated to Wang Wei's period — and the special technique for snowscapes known as *liu-pai-(ti)-fa*, meaning literally "leaving-the-white (ground) method" (PLS. 397, 398). The *Snowy Stream* (PL. 397) from the *Hsüan-ho* collection of the Northern Sung period probably came much closer to the T'ang tradition, but with the dispersal of the large album *T'ang-Sung-Yüan-pao-hui-ch'a*, formerly in the Palace Museum in Peking, this painting was presumably lost.

Wang Wei's famous villa, built in 726–48 south of the capital at Wang-ch'uan, is known through a collection of great five-word poems and a painting devoted to its scenery. The painting was originally on the wall of the Ch'ing-yüan monastery and was then copied sometime before 809 on silk in a version that has since been known as the "Li Wei-kung Family version." This must have been the common source for two Northern Sung copies: the Kuo Chung-shu copy, which was the model for almost all later versions and was finally engraved on stone in 1617; and an anonymous landscape (PL. 397) in the Chicago Art Institute, identified by this author as a copy of *The Wang-ch'uan Villa* belonging to the tradition of Li Lung-mien (ca. 1049–1106).

WATTEAU, JEAN ANTOINE. French painter (b. Valenciennes, Oct. 10, 1684; d. Nogent-sur-Marne, July 18, 1721). He was the second son of a well-to-do roof tiler, who was known for his violent and irascible character. Nothing is known of his mother except that her name was Michèle Lardenois. Since his elder brother had joined his father's business, Watteau's parents did not oppose his vocation as a painter, which became apparent very early. In 1699, when he was about fifteen, he was apprenticed at Valenciennes to J. A. Gérin, a painter of religious subjects.

Having left Valenciennes when his father refused to continue paying for his apprenticeship with Gérin, alone and penniless, Watteau made his way to Paris before 1702. He copied fashionable paintings for some obscure art dealers, and he frequented dealers in engravings in Rue St-Jacques, especially Pierre and Jean Mariette, who were patrons of Jacques Callot and admirers of Pierre Brebiette, François Collignon, and Stefano della Bella, all skillful draftsmen and engravers. The Mariettes probably introduced him to Jean's cousin, the painter Claude Gillot, known for his depiction of subjects from the Italian *commedia dell'arte*. Watteau worked with Gillot from 1703 to 1707 or 1708 and came strongly under the influence of his style. The two artists quarreled when Gillot became jealous of his pupil because of the preference shown him by clients, and Watteau left him.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

During his stay with Claude Audran III in 1708–09, Watteau studied and acquired a sound artistic back ground. Audran was the curator, or, as he was called, the "concierge" of the Medici Gallery in the Luxembourg Palace, which housed the largest and most remarkable collection of paintings by Rubens in France. Thus Watteau had occasion to meet the artists who came to admire and copy the works of the great Flemish painter. Moreover, Audran was primarily a great decorator, and as such he was employed by Louis XIV in the Château de la Muette; a drawing (Vienna, Albertina) proves that Watteau assisted him in his decorating work, mastering a quick, supple line and displaying light, sensitive brushwork in tracing arabesques of foliage, landscape elements, and figures on white and black grounds.

Before and after his brief return to Valenciennes in 1710, Watteau painted military subjects such as *Le Recrue* (Paris, Coll. Edmond de Rothschild) and *Alte* (formerly New York, Duveen Coll.), depicting the hard life of the soldier and the picturesque aspects of military campaigns. But he was soon to leave such subjects to his young colleague, Jean-Baptiste Pater, whom he brought back with him from Valenciennes and who worked with him for a short time. Watteau then went to live with his close friend Pierre Sirois, an art dealer of the Pont Notre-Dame area; his friendship was later extended also to Sirois's son-in-law, Gersaint, and several members of their family served as models for his paintings. Like all artists of his time, Watteau wished to perfect himself and to go to Rome; he never made the journey, however. On the recommendation of Charles de Lafosse and Antoine Coypel, he was made a member of the Académie on July 30, 1712, with the presentation of a painting entitled *Les Jaloux* (known from an engraving).

Nothing is known of Watteau between 1712 and 1715, with the exception of a record of a large painting representing Louis XIV decorating the Duc de Bourgogne with the Cordon Bleu, commissioned by a painter named Antoine Dieu, who provided the preparatory sketch.

During this period Watteau's style was influenced by his activity as a decorator in that he depended chiefly on the decorative aspects of landscapes and objects to frame his compositions and enclose his subjects. He attempted to break away from this formula in paintings such as the *Occupation selon l'âge* (Paris, Coll. Edmond de Rothschild), in which he depicts a scene with a bourgeois setting.

Watteau's stay with Pierre Crozat in 1715 was important both for his contacts with Crozat's artistic adviser, the painter Charles de Lafosse, and for his study of drawings by the old masters, especially those of the Venetian school, which the collector had brought back with him from Italy. This circle became Watteau's first real public, and his art began to attain popularity. His painting *La Conversation* (Paris, private coll.), painted in the spring of 1716, is noteworthy; the subject is modern and the painting probably represents Crozat's circle of friends, depicted amid the calm and harmonious landscape of the park of his residence at Montmorency. *La Finette* (Louvre) and *L'Indifférent* (PL. 406) are even more successful realizations of the same kind. He also attempted pictures with numerous figures such as *L'Accordée de Village* (London, Soane Mus.), the two paintings of *Le Bal Champêtre* (Paris, formerly Coll. Jules Strauss; Paris, Coll. Vicomte de Noailles), and the *Divertissements Champêtres* (London, Wallace Coll.). In these the influence of Rubens is strong.

In search of a quieter life, Watteau returned to the home of Sirois, and later went to live with Nicolas Vleughels at Rue du Cardinal-Lemoine; there, between 1716 and 1719, he painted his masterpieces. Watteau passed on some ideas for paintings and drawings to his friends, especially to Vleughels, suggesting compositional groups and poses to be imitated by them; thus he was able to satisfy an increasing demand for his work.

In 1717, at the specific invitation of the Académie, Watteau presented his *L'Embarquement pour l'Isle de Cythère* (Louvre), also known as *Fête Galante* (a title that was used throughout the 18th century for paintings of this kind). This masterpiece was preceded by a number of exploratory works, including the *Isle de Cythère* (Paris, private coll.), the *Réunion en Plein Air* (PL. 404), the *Assemblée dans un Parc* and *Faux-Pas* (both Louvre), and the *Récréation Galante* (Berlin, Staat. Mus.). Watteau painted a second version of *L'Embarquement pour Cythère* for the collector Jean de Jullienne; this replica (PL. 403) is somehow more modern, realistic, and precise. The artist probably executed it to conform with the collector's wishes, and, consequently, it is less moving than the original version.

L'Embarquement pour Cythère is subject of a controversy; C. de Tolnay (*Gaz. des B.A.*, Feb., 1955, pp. 91–102) and this author (since 1938) have held the opinion that the painting represents the pilgrims leaving for the Island of Cythera, but M. Levey (1961) has convincingly demonstrated that the couples may be returning from Cythera, and that this accounts for their apparent sadness.

Three paintings depicting courtly figures in rustic settings (PL. 399; others in London, Dulwich College; Potsdam, Palais-Royal), the *Gilles* (PL. 407), and the *Mezzetin* (PL. 400), *L'Amour au Théâtre Français* (PL. 401), and *L'Amour au Théâtre Italien* (Berlin, Staat. Mus.) are Watteau's most important and successful works and can be dated between 1716 and 1720. The *Gilles* has long puzzled art historians. This author has suggested (*Arts*, Dec. 7, 1950) that it represents the comedian Belloni, a famous interpreter of Pierrot, who, on retiring from the stage in 1718, opened a café in Rue Quincampoix at the corner of Rue Aubry-le-Boucher, where he hung his portrait as Pierrot in place of a signboard. Furthermore, before 1718 Belloni had opened another café in Rue des Petits-Champs where a ceiling painting represented the Italian actors and included his figure; this work may be related to *Les Comediens Italiens* (PL. 402). Panofsky, however, holds a rather different point of view (*Gaz. des B.A.*, May/June, 1952, pp. 319–40).

In 1719 Watteau went to London; Gersaint (1744) relates that he hoped to make his fortune there, but according to Walpole, he went to see Doctor Richard Mead of the Royal Society, for whom he painted *L'Amour paisible* (formerly New York, Balback Coll.) and the above-mentioned *Les Comédiens Italiens*. His stay was brief but had a great influence on the colony of French painters in London, some members of which, such as Philippe Mercier, completed his works and continued, long after Watteau's death, the painting style created by him.

On his return from London, Watteau suggested to Gersaint that he paint a signboard (PL. 404; IV, PL. 29) for the dealer's shop at Pont Notre-Dame; according to Gersaint, the artist executed it in eight days, working on it only in the mornings "to exercise his fingers." Gersaint's account should probably not be taken too literally, as his memory may have become faulty by the time he wrote it in 1744. However, one may assume that this masterpiece was painted rapidly and with enthusiasm. Contrary to what has been said, it does not symbolize a condemnation of the old style, represented by the stowing away of the so-called portrait of Louis XIV, but it is, nevertheless, a glorification of the modern style of painting which Watteau's genius helped to create.

Watteau had a delicate constitution and often was ill. Although of a retiring nature, he was always surrounded by a few good friends; little is known of his somewhat mysterious character except that he was contemptuous of money, discreet in his relationships with women, and passionately interested in his art. He died in 1721 in Nogent-sur-Marne, at the home of Philippe Le Fèvre, formerly "intendant" of Louis XIV's *menus plaisirs*.

The chronology of Watteau's works remains conjectural if one is to depend on the sources alone. No painting of his is either signed or dated. Only *Le Voyage à l'Isle de Cythère*, known as *L'Embarquement pour Cythère*, is documented. Some paintings are known to have been executed while Watteau was staying with Sirois, but the artist spent two different periods with him; others were painted at the house of Crozat but do not necessarily date from the time Watteau was staying there, since, although they quarreled for a time, the two are known to have resumed their close friendship. However, stylistic evidence, in addition to the scant information provided by the sources, leads to some positive conclusions.

Watteau was active as a painter from 1704 to 1721, executing

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

about 300 paintings in all; these were copied in engravings executed under the direction of Jean de Jullienne between 1721 and 1735. For various reasons a number of paintings were not engraved.

It is impossible to identify works by Watteau prior to the years about 1703, when he was staying with Gillot; the hypothesis of very early works proposed by Jacques Mathey (*B. de la Soc. de l'Histoire de l'Art Français*, 1939, pp. 150–60) is to be considered with reservations, since Watteau was not the only artist who painted in the style which he is known by, as later was also true of both Fragonard and Chardin.

The works executed before 1703 are few; three are known from engravings: *La Danse Champêtre*, *Le Repas de Campagne*, and *Le Départ pour les Isles*. This last is curiously analogous to the Abbé Prévost's *Manon Lescaut*, in its reference to the deportation of prostitutes, a frequent occurrence at the beginning of the 18th century, and a subject often treated in popular engravings.

Watteau's works dating from his stay with Gillot (1703–1707/08) are better known; almost all have been copied in engravings. Their subjects are derived mainly from the Italian *commedia dell'arte* and its French counterpart; some depict minor craftsmen or Parisian peddlers such as *La Marmotte* (PL. 400) and *Le Petit Savoyard* (lost). There has been a tendency to give a later dating to the *commedia dell'arte* scenes, since the Théâtre de la Foire had been closed since 1697, and Watteau would not have been able to see the company perform. However, all the society theaters presented the *commedia dell'arte* at that time. From 1708 onward Watteau's paintings can be classified in cycles and are more easily datable.

Watteau's art is, so to speak, isolated in its period. During the austere rule of the Marquise de Maintenon, religious and historical painting dominated French art. Courtly subjects were disguised as complicated allegories. During this period, Watteau worked as a decorator and painted small genre scenes. It was only after Louis XIV's death that he could give full expression to his art; for this reason it is incorrect to consider him a 17th-century painter. He was really the painter of the Regency.

Watteau's works have been often misunderstood. Classified as a painter of "fêtes galantes," who took joy and love as his subjects, he was successful and much imitated. His art is quite the opposite, however; the subjects of his paintings are "galants" insofar as they are pairs of lovers, but they are depicted facing life's weighty problems with touching anxiety. It is perhaps the greatest proof of Watteau's genius that the viewer of his paintings is able to penetrate so intimately into the world of his sensitivity through commonplace subjects.

The Goncourt brothers said of Watteau: "He has brought under the influence of his style, his taste and his vision, all the painting of the 18th century." This is evident from a study of his immediate disciples, many of whom died as much as 30 years after him. In England, Germany, Portugal, and Spain, Watteau's style survived until 1770, especially in decorative painting. Momentarily eclipsed by neoclassic painting, Watteau's art returned to favor as a result of the French Revolution, during which works by him, or in his manner, were confiscated and distributed to museums. Toward 1810, collectors and dealers were once more buying his works. These were also sought after during the romantic period (B. Hédouin, *Mosaïque*, Paris, 1856); others such as Lacaze formed their collections. In 1840 Victor Hugo wrote on the subject of Watteau (J. B. Barrère, *La Fantaisie de V. Hugo*, II, Paris, 1949, p. 374), and the Goncourts published articles on Watteau (*Watteau, étude*, Paris, 1860). Baudelaire evoked him in his poem, "Les Phares," in 1855 (Proust recited the poem in 1900 at the Louvre before *L'Embarquement*) and Verlaine paid homage to him in 1867, as had a number of lesser writers from the 1840s onward, a period important for his influence on contemporary art.

Certain aspects of Watteau and his art have only recently come to light. Many of his drawings (PL. 405; IV, PL. 279) were scattered and are known only from the album of engravings by J. de Jullienne (*Figures de différents Caractères, de Paysages et d'Etudes*, 2 vols., Paris, 1726–28). K. T. Parker's book *The Drawings of Antoine Watteau* (London, 1931) was a pioneer work on this subject and was followed by the two volumes on Watteau's drawings by Parker and J. Mathey (1957). Jean Levy (BM, July, 1954, pp. 197–202) has identified *Le Lorgneur*, mentioned in sources, with a painting in a private collection in Paris; another article by the same author is dedicated to Watteau and François Lemoyne (*Gaz. des B.A.*, Dec., 1958, pp. 347–54).

A. P. de Mirimonde has studied the statues and emblems in Watteau's *œuvre* (*Revue du Louvre*, XII, 1962, No. 1, pp. 11–20) and also the musical subjects (*Gaz. des B.A.*, LVIII, Nov., 1961, pp. 249–88, and *B. de la Soc. d'Histoire de l'Art Français*, 1962, pp. 47–53). He demonstrates how Watteau's choice of statues to be depicted was by no means haphazard and how they are intimately linked with the subjects of his paintings. On the basis of this, he suggests changing the titles of a number of pictures. Similarly, he analyzes the instruments depicted in the paintings of musical subjects.

WEBER, MAX. American painter (b. Białystok, Poland, Apr. 18, 1881; d. Great Neck, N.Y., Oct. 4, 1961). Brought up in the religious culture of Russian Judaism, Max Weber came with his parents to the United States in 1891, settling in Brooklyn, N.Y. After public school he studied at Pratt Institute from 1898 to 1900; he then taught in Virginia and in Duluth, Minn., until 1905, when he sailed for France. In Paris he studied under Jean Paul Laurens at the Académie Julian (1905–06) and at the Académie de la Grande-Chaumière and Académie Colarossi (1906–07). In 1906, 1907, and 1908 came long visits to Spain, Italy, Belgium, and Holland. From 1906 he was in close contact with the modern movements in Paris and with their leaders, becoming an intimate friend of Henri Rousseau. Weber helped to organize the famous Matisse class in 1908 (see IX, col. 588).

Returning to New York in January, 1909, Weber became one of the first American pioneers of modernism. His early work was allied to Fauvism, but in 1912 he began experiments in abstraction, notably paintings based on New York (*New York*, 1912, Santa Barbara, Calif., Wright Ludington Coll.); *Rush Hour, New York*, 1915; *New York at Night*, 1915, New York, Paul Rosenberg and Company. Weber interpreted the dynamism of abstraction in a style related to both cubism and futurism and also to the chromatic abstract expressionism of Kandinsky. Several small sculptures of 1915 (e.g., *Spiral Rhythm*, Mr. and Mrs. Aaron Davis Coll.) and 1917 were among the earliest purely abstract sculptures in modern art. In these years Weber was one of the first American exponents of abstraction, and the most inventive. His one-man shows in 1909, 1911, and

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

1912 were violently attacked by the critics, and for years he suffered from hostility and neglect.

In 1917 began a fundamental change to religious and poetic subjects expressive of his Jewish heritage. Weber's vision became more representational, his style expressionist (*Invocation*, 1919). After 1919 abstraction was abandoned for two decades. In this middle period his paintings were idyllic figure compositions (*Eight Figures*, 1927, New Rochelle, N.Y., Mrs. Nathan J. Miller Coll.; *Tranquillity*, 1930, New York, Downtown Gall.), mystical and contemplative in mood, and some landscapes and still lifes.

With the late 1930s Weber's subjects widened to include more contemporary content (*At the Mill*, 1939, Newark, N.J., Newark Mus.; *The Haulers*, 1939; *Refugees*, 1939; *The Builder*, 1940; *The Workers*, 1941; *The Toilers*, 1942) and greater imaginative fantasy. There was a trend to semiabstraction, which, however, never reached pure abstraction. His latest work was marked by growing plastic freedom and the use of line as a leading element (*Chassidic Dance*, 1940, New York, Edith and Milton Lowenthal Coll.; *Woman Carrying Picture*, I, PL. 124). His color developed from the grays of his middle period to a new richness and intensity.

Weber's works are in most American museums, one of the largest groups being in the Whitney Museum of American Art, New York (including *Summer*, 1911; *Chinese Restaurant*, 1915; *Listening*, 1930; *The Red Cap*, 1930; *Gaillardias*, 1933; and *Adoration of the Moon*, 1944).

Lloyd GOODRICH

WÊN CHÊNG-MING. Chinese calligrapher, painter, essayist, and poet (b. 1470; d. 1559), originally known as Wên Pi — the name with which he signed his works until 1518, when he adopted Chêng-ming as his official name and acquired the surname Chêng-chung — and also known as Master Hêng-shan, a name derived from the site of his family's original homestead near Hengyang (formerly Henchow, Hunan). Wên Chêng-ming is ranked with T'ang Yin (1470–1524), Ch'in Ying (first half of 16th cent.), and Shen Chou as one of the "Four Great Masters of the Ming Period."

His father, a prefect and a learned and severe moralist, was also a patron of literature and other cultural activities, so that Wên was exposed in his youth to many of the gifted and scholarly men of the time. His great-grandfather had abandoned the military service that was the family heritage in order to concentrate on Confucian scholarship, and Wên Chêng-ming grew up with the discipline and dignity of a strict Confucianist, dedicated to introspection, humility, perseverance, and thoroughness. He led a quiet, scholarly life, interrupted only when at the age of fifty-four he was appointed by the emperor to the bureau in charge of editing historical documents and given the title of *tai-chao* in the Han-li Academy. He was uncomfortable in public life, however, and retired from his post after three years, to produce in the thirty-some years that remained of his life his best work. During this time he became a leading figure in the arts and letters and the patron, friend, and teacher of many young artists, among them two of his own sons, both of whom also became well-known artists and connoisseurs, and a number of his grandchildren (the artistic tradition of the Wên family continued, in fact, down to the 18th century, producing more than twenty painters). The great Ming literati painter Tung Ch'i-ch'ang (q.v.), although born too late to have known Wên Chên-ming personally, also owes an obvious debt to Wên.

Wên Chêng-ming's art training began in early childhood. He subscribed to three scholars in particular as his masters — Wu K'uan in literature, Li Yin-chêng in calligraphy, and Shên Chou in painting. Wên's carefully written essays became the model for younger students, and his poetry has the repose of late T'ang poetry. In calligraphy he mastered all four major styles — seal script, chancery script, regular script, and running script (see CALLIGRAPHY AND EPIGRAPHY). In his younger years Wên Chêng-ming spent endless hours copying the old masters until Li Yin-Chêng persuaded him to abandon copying and to develop instead a style of his own. In doing so he achieved a grace and clarity equal to that of the calligraphy of the Western Chin dynasty (265–316).

He drew inspiration for his painting not only from his immediate teachers but also from the "Four Great Masters of Yüan" — Huang Kung-wang (1269–1354), Wu Chên (1280–1354), Ni Tsan (q.v.; 1301–74), and Wang Mêng (q.v.; ca. 1308–85) — from whom he derived some of the spirit of the Sung painters Tung Yüan (active 947–70) and Chü-jan (active about 975). His early detailed works and his painting in mineral pigments also reveal the influences of such Sung painters as Kuo Hsi (ca. 1025–ca. 1090; IX, PL. 26) and Chao Po-chü (1127–62; VII, PL. 257). In general, the painting of Wên Chêng-ming is not tied to a single style; his interpretation of the technique and essential spirit of the many old paintings that he studied is invariably detached, natural, and individual. He was always ready, however, to acknowledge his devotion to the old master Chao Mêng-fu (q.v.; III, PLS. 197–200), the ablest technician of the Yüan period. Chao Mêng-fu's intellectual efforts stimulated Wên Chêng-ming to become himself a well-rounded artist — essayist and poet, calligrapher and painter, scholar and connoisseur. Although neither was, strictly speaking, a professional painter, both Wên Chêng-ming and his Yüan master took the art of painting seriously, practicing it with diligence and sincerity.

Wên Chêng-ming can be said to have two styles, one detailed and deliberate, the other spontaneous. Both styles were executed with a varied technique. Sometimes, particularly in the rocks and slopes of such landscapes as the *Old Woods and Chilly Brook* (PL. 408), he used a dry brush to achieve the effect of *p'o-mo* ("broken ink," in wiping or twisting strokes); at other times, as in a fan in the Honolulu Academy of Arts (PL. 408), he employed a very wet brush to articulate lines and dots. Although Wên Chêng-ming was at his best in ink paintings, he also frequently painted with mineral pigments. He used a characteristic "pepper-dot" technique to depict trees with a distinctive and unmistakable movement (PL. 409). Besides landscapes he painted equally superb junipers (III, PL. 283), bamboo, orchids (PL. 408), chrysanthemums, and garden scenes, often copied from their actual settings and sometimes including figures (III, PL. 282).

In later life Wên Chêng-ming worked more and more in a spontaneous, summary manner, freeing himself from the meticulous detail of his early painting. Those paintings that represent him at his best are mostly hand scrolls, still little known to the public at large. They have a suggestive force that goes beyond realistic representation; their complex and taut inner power stands out as an expression of the artist's own genius.

Wên Chêng-ming's publication of collected examples of calligraphy was an important contribution to art. Engraved on stone and then reproduced in rubbings, these calligraphic specimens were published in two parts. The first, entitled *T'in yün kuan tieh*, contains rare examples by old masters; the second part, *Hsiao t'in yün kuan tieh*, comprises examples by great calligraphers contemporary with Wên Chêng-ming. These rubbings deserve particular attention because of their high quality. Wên Chêng-ming's collection and a similar one by Tung Ch'i-ch'ang are the best compilations of calligraphy that were assembled during the Ming period.

Another contribution by Wên was his revival of the art of seal cutting. The carving of seals had previously been done chiefly by unknown artists. Wên Chêng-ming's mastery of the art, however, gave it a new prestige, and seal cutters began to observe more carefully the rules of composition, style, and technique. Although seal cutting was only a secondary artistic pursuit for Wên Chêng-ming, his son Wên P'êng (San-ch'iao) became dedicated to the art. Wên's revival of the ancient art of seals, with their intricate and sensitive carving and new sense of space and design, was to have an important influence upon later Chinese painting.

MAJOR WORKS ATTRIBUTED TO WÊN CHÊNG-MING. *Autumn Landscape in the Style of Ni Tsan*, signed hand scroll (Chicago, Art Inst.). – Bamboo and chrysanthemum by a garden stone, 1512 (Osaka, Municipal Mus., Coll. Abe). – *Chrysanthemums and Pine Trees*, signed short hand scroll, 1541 (Washington, Freer Gall.). – A gully in the mountains; two men on the road by the torrent, 1520 (Paris, Mus. Guimet). – Landscape with a waterfall, 1531 (Los Angeles, County Mus.). – *River Scenery in Rain*, fan painting (Met. Mus.). – *River Valley with Homesteads and Fishermen, After Wu Chên*, signed long hand scroll, 1540 (Br. Mus.). – The seven junipers, part of a scroll, 1532 (Honolulu, Acad. of Arts). – A slender bamboo and two bare trees growing by a garden rock, 1533 (Stockholm, Östasiatiska Mus.).

WEST, BENJAMIN. American painter (b. Springfield, Pa., Oct. 10, 1738; d. London, Mar. 11, 1820). West's early portraits in colonial America, largely the product of self-training, encouraged local merchants to send him in 1759 to Europe. In Italy this intelligent and outspoken Yankee gained the friendship of a group of artists and connoisseurs that included Anton Raphael Mengs, Gavin Hamilton, and Johann Joachim Winckelmann. In 1765 in England Matthew Pratt's painting *The American School* (I, PL. 97) showed West in his studio surrounded by the first of many young Americans who came to him for advice and instruction, including Pratt himself, Charles Willson Peale, Abraham Delanoy, Jr., Gilbert Stuart, William Dunlap, Ralph Earl, and John Trumbull. West's rise to fame was meteoric: at thirty he played a leading part in the foundation of the Royal Academy of Arts and at thirty-four became historical painter to King George III. He painted neoclassical compositions fifteen or twenty years before Jacques Louis David did and challenged convention by portraying a recent historical event in contemporary costume. Commissions multiplied for those large and complex canvases on historical, mythological, and religious themes which were then considered the highest form of art. At fifty-four West became president of the Royal Academy of Arts and held that position with only one year's interruption until his death at eighty-two. His later years were troubled by declining popularity, sharp criticism from contemporaries, financial difficulties because of the King's illness, and the jealousy of his colleagues in the Academy.

West's neoclassical style can be studied in *Agrippina with the Ashes of Germanicus* (1767; New Haven, Yale Univ. Art Gall.). One version (ca. 1770) of his *Death of General Wolfe*, of which he made several replicas, is in Ottawa, Canada (Nat. Gall.). Typical of his religious scenes is *Christ Rejected* (1814; Philadelphia, Pennsylvania Acad. of Fine Arts). A study for *Death on the Pale Horse* (1802; Philadelphia, Mus. of Art) anticipates by several years the turbulence of the French romantic painters; and a portrait, *Dr. Enoch Edwards* (1795; Amherst, Mass., Amherst College), and a landscape with figures, *Woodcutters in Windsor Great Park* (1795; Indianapolis, John Herron Art Mus.), have a breadth of handling and a sense of form and atmosphere seldom seen in his more ambitious works and prove his excellence in fields of painting that he considered inferior. Important works by West are in the Metropolitan Museum of Art in New York and in the National Gallery, Washington (I, PL. 104). Although West broke new ground for art, his effort to approach Titian and the Carraccis was usually defeated by lack of imagination, a meticulous but cold manner of drawing, a too literal reliance on the pictorial schemes of the old masters, a cautious and rather metallic coloring, and a chiaroscuro that achieved neither the force nor the unity of his admired models.

Oliver W. LARKIN

WEYDEN, ROGIER VAN DER. Few facts are known about the life of the painter. He was probably born in 1399 or 1400, but his birthplace has never been established. Documentary evidence shows that in 1426 he married Elizabeth Goffaert of Brussels. His four children all seem to have been born there; among them there are records of Peter (1437–1510), a painter, and Jan (1438–68), a goldsmith. Another son, Cornelius, studied at the University of Louvain before entering the Carthusian monastery of Hérinnes. Rogier, who had probably been living in Brussels since 1426, if not earlier, became "Portraiteur de Stadt van Brussels" (official painter of that city) in 1435. He undertook a pilgrimage to Rome in the Holy Year of 1450 and was received by several Italian princes who ordered paintings from him. On June 18, 1464, he was buried in the Cathedral of St-Michel in Brussels.

The fame of Rogier van der Weyden and, in fact, even his very existence have long been confused with certain other painters of the period. Although he was one of the best-known artists of his day, his fame later died out to the point that J. D. Passavant did not even know his name when, in 1841 (in *Kunstblatt*, Stuttgart, Tübingen; Fr. trans. in *Messager des sciences historiques de Belgique*, pp. 313–16), he attributed several works by Rogier van der Weyden to a mysterious Roger de Bruges. Alfred Michiels, in 1845, introduced the name of Rogier van der Weyden in a general work, *L'Histoire de la peinture flammande et hollandaise* (Brussels, II, pp. 186–94, 210–13); but the true and definitive rediscovery of this remarkable master occurred only with the publication, in 1856, of the excellent monograph by the archivist Alphonse Wauters. On the basis of the fragmentary information at his disposal, Wauters was inclined to conclude that Brussels was the artist's birthplace, based on the fact that he was the official painter of that city from 1435. Also in 1856, however, another archivist, Genard, raised the first doubts on this subject with his discovery in the records of the painters' guild at Tournai of a certain "Rogelet de la Pasture, natif de Tournai," who was apprenticed to Robert Campin (q.v.) on Mar. 5, 1427, and became a master painter in 1432. The seeming coincidence in the dates of Rogier van der Weyden of Brussels and Rogelet (or Roger) de la Pasture of Tournai prompted Genard to conclude that these two painters

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

were the same person. This tempting conclusion, although oversimple and too hasty, was also accepted by Pinchart (1867). Neither author seems to have noticed the inconsistency involved in considering Rogier van der Weyden as Campin's apprentice in March, 1427, since Rogier was already a well-known painter on Nov. 17, 1426, when the magistrate of Tournai paid him the special honor of presenting him with eight casks or lots of wine.

The result of this unfortunate confusion was to prevent the grouping of all Rogier's works under his name. All those which might have been executed in his youth — that is to say, before 1426–27 — were attributed to an anonymous painter called the Master of Mérode, who was so designated because his most important and characteristic work, a triptych with an Annunciation, was preserved by the Mérode family at Westerlo until 1957; it was subsequently acquired by the Metropolitan Museum of New York for The Cloisters. In 1849, at Aachen, three panels from an enormous work, including a Virgin and Child, a St. Veronica, and a Trinity, were sold by Ignace van Houthem to the Städelsches Kunstinstitut of Frankfurt am Main. The previous owner had passed on the oral tradition of their provenance from a supposed abbey of Flémalle, near Liège. Von Tschudi (1898) consequently attributed them to the Master of Flémalle and grouped around this nucleus several paintings, including those assigned to the now discarded Master of Mérode, thus creating an impressive catalogue of works for this new anonymous artist.

In 1902 Georges Hulin de Loo (*Catalogue critique de l'Exposition des Primitifs à Bruges*, Ghent) suggested that the Master of Flémalle should be identified with Jacques Daret, a fellow apprentice of Rogelet de la Pasture in Robert Campin's studio, and later, in 1909, with Campin himself. [The Metropolitan Museum in New York, present owner of the Mérode Altarpiece (VI, PL. 66), identifies the Master of Flémalle with Campin.] These proposals, however, have not withstood serious criticism. In any case, the designation Master of Flémalle is a misnomer, since an abbey of Flémalle seems never to have existed. Art historians (e.g., Friedländer, 1924), however, continued to use this appellation to designate a specific artistic personality clearly distinct from Rogier van der Weyden.

The origin of these difficulties and complications lies in the juxtaposition and forced overlapping of the archival sources pertaining to the famous Rogier van der Weyden and the obscure Rogelet de la Pasture. Ingenious efforts have been made to "fuse" these two groups of documents at all costs, in order to "confuse" the two masters, although some scholars were from the first opposed to accepting the two as one and the same artist. Thus, as early as 1898, E. Firmenich-Richartz (ZfbK, X, 1, pp. 1–12) firmly opposed Von Tschudi's thesis. Before long, other reputable scholars defended the unity of Rogier van der Weyden's production, refusing to attribute his youthful works to the anonymous and elusive Master of Flémalle. As early as 1928, but especially in 1931, E. Renders brought about the collapse of the shaky scaffolding of the Master of Flémalle-Jacques Daret-Robert Campin theory; the main lines of his reasoning and conclusions were subsequently considered by Friedländer (1932, 1937).

At the 1953 Congress of Kortryk (Courtrai) the author presented decisive evidence of the unity of Rogier's *œuvre* based on an exceptionally faithful copy of the central panel of the Mérode Altarpiece in a private collection in Genoa. In 1857 the copy — then the property of Abraham Darby — had been lent for an exhibition of art treasures in Manchester, and at that time William Burger (*Trésors d'art exposés à Manchester en 1857*, Paris, p. 158) attributed the panel to Rogier van der Weyden. Since then, a cleaning of the Genoa copy has disclosed Rogier's signature in the lower right-hand corner. This signature is clearly by the hand of the late-16th-century copyist who executed the painting itself. Does the presence of this signature imply that the original Mérode Altarpiece, now in New York, once bore Rogier van der Weyden's name? In any case, it shows that before 1857 there was no doubt that the triptych was by Rogier. But more important, this new evidence removes from the *œuvre* of the Master of Flémalle the altarpiece that has always been considered his principal and most characteristic work.

Even a partial reconstruction of Rogier van der Weyden's *œuvre* encounters considerable difficulty because none of his works are signed and because numerous panels have been attributed alternately to him and to the Master of Flémalle. The author believes that the existence of the Master of Flémalle can now definitely be ruled out and that all the works which have been assigned to him (and which bear the stamp of a still inexperienced artist) are, rather, the youthful works of Rogier van der Weyden; everywhere they reveal — despite the inexperience they betray — Rogier's drawing, color, composition, and spirit. Furthermore, it is implausible that the Master of Flémalle, supposedly born in Tournai and active there, would have represented in his altarpieces so many Brabantine edifices, the presence of which clearly attests to the hand of Rogier van der Weyden. Is it not also surprising that several later painters should have combined in a single work copies of panels attributed to the Master of Flémalle and others most certainly by Rogier? For instance, the *Descent from the Cross* in Liverpool (Walker Art Gall.) and the Edelheer Triptych of 1443 in Louvain (Church of St-Pierre) take their central motif from Rogier van der Weyden's masterpiece of the same subject in the Prado, while the secondary subjects are those of the previously discussed panels attributed to the Master of Flémalle in Frankfurt am Main (Städelsches Kunstinst.). Finally, even if one were to admit the activity of the Master of Flémalle, it would be difficult to explain why all his paintings betray a youthful hand whereas not one youthful work by Rogier van der Weyden could be recognized. As for the absence of signed paintings by Rogier, documentary evidence has fortunately made possible the recognition of some basic works and hence the reconstruction of his entire *œuvre* so far as it survives.

Reconstructing the *œuvre* on this basis, it may then be said that during his youth — that is, until about 1430 — the master modeled his style, with its realistic tendencies, on that of his celebrated elder, Jan van Eyck. Nevertheless, Rogier's style is already recognizable in the more emphatic drawing and in the more thickly applied color. From this time onward, his personality reveals itself particularly by a predilection for rather cold coloring, while Van Eyck's palette is characterized by distinctly warm shades. It should also be noted that — contrary to his later preferences — Rogier van der Weyden's youthful production deals exclusively with the tenderest and happiest scenes from the Virgin's life. This is his euphoric period. Inexperience, awkwardness, and archaism are combined in the *Madonna in the Meadow* (ca. 1420) in Berlin (Staat. Mus., Gemäldegalerie). The figure, the cloak, and especially the hair of the Virgin show a scarcely promising stiffness, whereas the small flowers and innumerable small plants — although spread out in a purely decorative manner without any attempt at perspective — betray the expert hand of a practiced miniaturist. In the *Marriage of the Virgin* (ca. 1425; V, PL. 279) the duality of the scenes (the marriage at the right, the flowering of the staff of St. Joseph at the left) and the multiplication of figures detract from the beauty of the composition. The principal scene is shown beneath the uncompleted porch of the Church of Notre-Dame-du-Sablon in Brussels; this historical accuracy indicates that the artist of the panel was already resident in that city, where he was to marry the following year. Between 1425 and 1430 the artist painted at least three Annunciations: successively, the example in the Prado and that in Brussels (Mus. Royaux des B. A.), and the central panel of the Mérode triptych, which has been discussed above. The master's style became progressively softer and acquired breadth. Three other works also belong to this first period and should be dated about 1430. In the *Nativity* in Dijon (Mus. B. A.) the artist depicts a spacious landscape. As in the Prado *Marriage of the Virgin*, one can note a characteristic tendency of the master, probably a direct influence from the contemporaneous theater, to place in the foreground one or even several figures seen from behind, thus creating a complete cohesion of all the actors of the scene and thereby excluding the "spectator." In the *Madonna with SS. Peter, Benedict, and Augustine* (Aix-en-Provence, Mus.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Granet) there is not only a similar landscape but also a figure seen from behind. The scene of the Magdalen reading (PL. 411) is only part of a work depicting the Virgin surrounded by saints, of which the Gulbenkian Collection owns two other details (a head of St. Joseph and another, probably St. Catherine).

Between 1430 and 1450, when Rogier van der Weyden was at the height of his powers, he executed his impressive series of great masterpieces. Iconographically they fall into three distinct groups: he continued to paint scenes from the life of the Virgin, but he concentrated mainly on dramatic subjects relating to the Passion and also executed numerous portraits. A noteworthy work in the first group is the *Seated Virgin* (ca. 1435) in Lugano (Thyssen-Bornemisza Coll.). The *Marriage of the Virgin* in the Prado had already shown the artist's fondness for placing a Biblical scene within an architectural frame — in that instance an existing church porch — and this tendency was to continue throughout his career. In the Lugano painting the Virgin with the Child is seated beneath an imaginary porch, to which the artist gives particular importance. The openwork decoration of the outer arch of the porch is intended to create an illusion of depth; this motif can be found again, with increasingly skillful variations, in numerous later altarpieces as well as in the *Standing Virgin* in Vienna (Kunsthist. Mus.), which is contemporaneous with the Lugano work. The Louvre *Annunciation* (PL. 412) originally formed the central panel of a triptych with volets (Turin, Gall. Sabauda) representing a Visitation and a kneeling donor, whose original head has been cut out and replaced by the present one. It can be observed that Rogier van der Weyden's Virgins always have far more tilted heads than those of Jan van Eyck. However, the most striking feature of the Louvre *Annunciation* is the astonishing fidelity in the rendering of every detail, as, for instance, in the brocade cope of the archangel Gabriel and in the small still life on the fireplace mantel; nor can the attempt at chiaroscuro between the Virgin and the window be ignored. The general compositional outline of Van Eyck's *Madonna with Chancellor Rolin* (V, PL. 224) reappears in Rogier's altarpiece *St. Luke Painting the Virgin* (ca. 1435; Boston, Mus. of Fine Arts). Rather than attempting to rival his brilliant predecessor in the rendering of the most infinitesimal detail, Rogier here emphasizes the back-lighting effect, the nuances of which he already handles well.

During these years the master began to show a decided preference for tragic scenes, among which those from the cycle of the Passion predominate. Other artists before him had represented the same theme, but unlike his predecessors Rogier strove to analyze fully the sufferings of the Saviour during the successive phases of His Passion, as well as the different aspects of the grief of the Virgin, St. John, Mary Magdalene, and other figures. Highly typical in this respect is the dead Christ represented in the grisaille Trinity panel in the Städelsches Kunstinstitut, Frankfurt am Main, which also owns two other panels of the same lost altarpiece, namely, a standing Virgin nursing the Child and a St. Veronica, as mentioned above. Shortly after 1430 the master must also have painted a Deposition of monumental dimensions, judging from the large panel of the bad thief (also in Frankfurt am Main), which is actually only part of the right volet. Here the incisive style of the painter has become more assertive and his corrosive brush gives the impression of cutting into the panel. The plain background permits the artist to throw into relief the full intensity of the tortured figure's agony.

In his great masterpiece *The Descent from the Cross* (formerly in the Escorial, near Madrid, and now in the Prado) Rogier reached his peak. This altarpiece (PL. 413) was in the Church of Notre-Dame-hors-les-Murs in Louvain until 1574, when Mary of Hungary bought it as a gift for her nephew Philip II. All the figures are life-size and set against a gilt background; the master thus achieved a frieze of moving beauty, with each figure expressing in his own way his confusion, bitterness, and grief. The general feeling of sadness is expressed by the juxtaposition of the bent bodies. The sinuous line of the body of Christ, exhausted by pain, is strikingly echoed in the figure of His grief-stricken mother. Toward 1440 Rogier van der Weyden executed at least three Crucifixions, which are now in Vienna (PL. 414), Berlin (Staat. Mus., Gemäldegalerie), and Zurich (Abegg Coll.). In each of them it is the mystical and tragic beauty of the Christ that arouses admiration.

The triptych of the Virgin, now divided, dates from the same years; its three panels of equal size represent a Pietà (the central panel; PL. 182), the Nativity (the left volet), and the resurrected Christ appearing to His mother (the right volet). The central panel and left volet are preserved in Granada (Cath., Capilla Real) and the right volet is in New York (Met. Mus.). The Miraflores Altarpiece in Berlin (Staat. Mus., Gemäldegalerie) is an excellent contemporaneous copy of this triptych. In both triptychs the scenes are placed at the center of arches directly inspired by church portals of the period. This arrangement, undoubtedly deriving from the representations of mystery plays, sets the different groups in striking relief. The artist was not alone in exploiting this ingenious system; other painters were soon to make use of it in their works. Also belonging to the same cycle of dramatic subjects is the monumental altarpiece of the Last Judgment (ca. 1443–46) in Beaune (PL. 414). This work was commissioned by Chancellor Nicolas Rolin for the chapel of the Hôtel-Dieu, which he had just had built at his own expense. In this work recur several of the characteristics of the *Descent from the Cross* in the Prado. The figures are placed side by side to form a symmetrically rhythmic frieze on both sides of the central scene, and the flat gilt background causes the figures in the scene to stand out sharply, accentuating their individual emotions. The viewer has the sensation of assisting at the drama of the souls drawn toward the horrors of hell.

Although they are less spectacular and less "theatrical," the faces in Rogier's portraits are no less marked by intensity (PLS. 415, 416). Significant examples from this same period of his maturity (ca. 1430–50) are the two contrasting portraits in Berlin (Staat. Mus., Gemäldegalerie): the powerful and highly expressive head of Robert de Masmin (?) and the timid and mysterious countenance of the portrait of a young lady (PL. 416). The artist was already attracted by the problem of light; on the garments of this beautiful unknown woman, whose somewhat ironical glance betrays a sure sense of superiority, Rogier has discreetly used a kind of pointillism that can only be described as preimpressionistic.

Rogier van der Weyden's third and last period (1450–64) began with an important event in the life of the painter: his journey to Rome as a Holy Year pilgrim. During his stay in Italy and immediately after his return home, he executed several works for various art patrons south of the Alps. All these works show a sudden change in his conception, as if direct contact with the Italian Renaissance has noticeably modified his style. In his portraiture the change is complete. In the portrait of Francesco d'Este (New York, Met. Mus.), who is depicted proudly showing the hammer used by Pope Nicholas V to open the Porta Santa, the subject stands out from the light-colored background with great precision. Here the sense of mystery inherent in all Flemish portraits of the 15th century has been left behind. The mood is much less religious, less meditative — it has become more human.

Rogier's altarpieces of this period reveal a similar transformation. For the Medici family he painted the *Virgin and Child with Peter, John the Baptist, Cosmas, and Damian* (PL. 415), the first *sacra conversazione* in the history of Flemish painting. The tent beneath which the Virgin and Child appear is also borrowed from Italian art. *The Entombment* (Uffizi) shows a dual southern influence: the subject itself is inspired by Florentine examples (perhaps Fra Angelico), and the emphasis with which the beautiful nude body of the crucified Christ is "exposed" betrays a concept completely foreign to Flemish art before 1450. Another important detail is the way in which Nicodemus's gaze fixes the viewer and thus breaks the "closed circle" of the scene, even while the figure of Mary Magdalene shows that the artist has remained faithful to his habit of showing figures in rear view. But these are not the only changes in Rogier's iconography and style. There is a general softening of his style, encouraged no doubt by his contact with Italian artists,

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

but also perhaps due to age and no less to increasingly frequent and apparent workshop assistance (perhaps Hans Memling) in the completion of his paintings. By way of example, it is sufficient to compare the triptych of John the Baptist (Berlin, Staat. Mus., Gemäldegalerie) with the previously discussed triptych of the Virgin, the panels of which are now divided between Granada and New York, even though their general disposition is similar. This loosening in Rogier's style is also evident in the numerous Virgin and Child paintings of the period (Caen, Mus. B. A.; Chicago, Art Inst.; San Marino, Calif., Henry E. Huntington Lib. and Art Gall.; etc.) and, above all, in the *Adoration of the Magi* (PL. 417), also known as the St. Columba triptych because it was long preserved in the church dedicated to that saint in Cologne.

In his last period the painter executed a few masterpieces without assistance, particularly when commissioned by important dignitaries at the court of Philip the Good. The most striking of these are the Nativity triptych, or Middelburger Altar (Berlin, Staat. Mus., Gemäldegalerie), painted for Pierre Bladelin, Contrôleur Général des Finances, and the Seven Sacraments triptych (PL. 415) for Jean Chevrot, Bishop of Tournai. During these same years Rogier also executed numerous portraits of Philip the Good (copies in Bruges, Groeninge-Mus., and Antwerp, Mus. Royal des B. A.) and of the most prominent figures in his immediate circle: Charles the Bold (Berlin, Staat. Mus., Gemäldegalerie); Antoine, Grand Bâtard de Bourgogne (or Jean de Coïmbre?; PL. 415); the courtier Philippe de Croy (Antwerp, Mus. Royal des B. A.); and Laurent Froimont (Brussels, Mus. Royaux des B. A.).

Whereas Jan van Eyck had aspired to include the entire visible world in his paintings, Rogier van der Weyden limited himself more to the analysis of human beings. This essential difference in their aims accounts for the rather secondary importance given by Rogier to landscape and interiors, to the degree that on occasion he did not hesitate to eliminate them altogether, reviving the tradition — already fallen into disuse by his time — of the plain, generally gilt, background. As a result his figures acquired more monumental dimensions and infinitely greater plasticity. Yet the quintessence of his art does not lie in this; his ideal was to express with the greatest possible intensity the most varying and preferably the most dramatic emotions, as demonstrated by his predilection for the Passion cycle. Another fairly consistent characteristic, already mentioned, is his placement of figures in an architectural frame, painted in grisaille, that gives a highly realistic effect and uncommon depth to the whole; in some instances the architectural element is reduced to a more or less decorated openwork arch used for the same purpose. His coloring in general is the opposite of Jan van Eyck's, as Rogier's palette is rather cold in tone, with blues predominating. Rogier's drawing is distinguished by an extraordinary precision, as attested by the sublime silverpoint drawing of the head of the Virgin (Louvre) or the dedication miniature of the *Chroniques du Hainaut* (Brussels, Bib. Royale), which shows Jean Wauquelin presenting his translation of Jacques de Guise's *Annales illustrium principum Hannoniae* to Philip the Good in the presence of the youthful Charles the Bold, the aged Chancellor Rolin, Bishop Jean Chevrot, and some friends, all Knights of the Golden Fleece.

Apart from Jan van Eyck, no other 15th-century Flemish master exerted so deep and so extensive an influence as Rogier van der Weyden (see V, cols. 409–410). All the painters in Brussels came under his stylistic influence during his lifetime and even after his death, at least until the artistic renewal stirred by Bernart van Orley (V, PL. 287). Among these followers may be mentioned Rogier's son Peter (possibly the Master of the Legend of St. Catherine), Vranck van der Stoct (Stock), and the Master of the Legend of St. Barbara, all of whom were active in the late 15th century; the Master of Affligem (perhaps Jacob van Laethem), of about 1500; and Colijn de Coter, the Master of the Legend of Mary Magdalene (perhaps Bernart van der Stoct), and the Master of Orsoy, all of the 16th century. Even the greatest of Rogier's contemporaries were susceptible to his influence, as may be seen in certain works by Petrus Christus, Dirk (Thierry) Bouts, and Hans Memling. Moreover, the imitation of his compositions, of his iconographic types, and of occasional revealing details spread beyond the frontiers of the Low Countries to Germany, in the works of Stefan Lochner, Martin Schongauer, and even Albrecht Dürer; to France, in the *œuvre* of Jean Bellegambe; to Spain, in the production of Bartolomé Bermejo, Pedro Sanchez, and Jorge Inglés; and to Italy, more particularly Ferrara, in the art of Cosmé Tura, Francesco del Cossa, and Ercole de' Roberti. Beyond this direct imitation by painters, many other artists, especially the Brabant sculptors of altarpieces and statues in the round and the designers of tapestry cartoons, were inspired by the works of Rogier van der Weyden.

WHISTLER, JAMES ABBOTT MCNEILL. American painter and engraver (b. Lowell, Mass., July 10, 1834; d. London, July 17, 1903). Whistler spent his early childhood in the United States; in 1843 he went to St. Petersburg (Leningrad), where his father was a railroad engineer for the Russian government. He studied there until 1849 and returned to the United States in 1851 to take courses at the United States Military Academy in West Point, N.Y. In 1854 he abandoned his studies to take a job as cartographer for the Department of the Navy in Washington, D.C., at which time he began to paint.

In order to dedicate himself exclusively to painting, he moved to Paris in 1855 and enrolled in the atelier of Charles Gleyre, where he met Edgar Degas (q.v.), Alphonse Legros, and Félix Bracquemond and became a friend of Henry Fantin-Latour (q.v.), with whom he visited Gustave Courbet's (q.v.) Pavillon du Réalisme. This exhibition, prepared by Courbet in 1855 to display works of his that had been refused by the Exposition Universelle, made a great impression on Whistler. Courbet's influence is particularly evident in Whistler's paintings of this period and in his first series of etchings, published under the title of *Twelve Etchings from Nature* but commonly known as "The French Set" (1858; Washington, D.C., Freer Gall.).

In 1859 in Léon Bonvin's studio, Whistler and Fantin-Latour exhibited their paintings that had been rejected by the

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Salon jury — among them Whistler's *Portrait of Lady Seymour Haden at the Piano* (1859; Cincinnati, private coll.). Courbet himself visited the exhibition and expressed his appreciation of the American artist's work. Courbet's influence is also evident in some paintings executed by Whistler in England, such as *Wapping-on-Thames* (1861; New York, John Hay Whitney Coll.) and *The White Girl* (PL. 419). The latter, which the Royal Academy of London refused to exhibit, was shown instead in 1863 at the first Salon des Refusés in Paris. As Zola related (*L'œuvre*, Paris, 1886, chap. V), it created a public scandal. In 1865 Whistler and Courbet worked together in Trouville-sur-Mer where they met Monet (q.v.) and Boudin and, later, Daubigny. During this period Whistler's progressive withdrawal from Courbet's realism had already begun; his *Harmony in Blue and Silver: Trouville* (1865; Boston, Isabella Stewart Gardner Mus.) employs a tonal scale not unlike but quite distinct from that of the impressionists. Whistler's art was beginning to reflect the new cultural stimulus of Eastern art that was later to have such a profound influence on his painting. He had just discovered Japanese prints and had begun to collect Chinese porcelain; the chromatic delicacy and concise formal elegance in these works fascinated him, and this fascination immediately became evident in a group of paintings executed in 1864, including *La Princesse du Pays de Porcelaine* (*Portrait of Miss Christine Spartali*; Washington, D.C., Freer Gall.), which was exhibited at the Salon of 1865, and *The Little White Girl: Symphony in White, No. 2* and the *Lady of the Lang Lijsen* (both, PL. 420).

Whistler seems to have been chiefly preoccupied in this period with the search for subtle tonal relationships that would appeal immediately to the sensibilities of the viewer, independent of the representational content; for Whistler, in fact, subject matter was totally subordinated to these relationships (cf. AMERICAS: ART SINCE COLUMBUS, cols. 294–95). It is precisely this aspect of his work that constitutes the radical distinction between Whistler's stylistic credo and that of the impressionists, for whom the subject regained a specific and more immediate value by means of these relationships. In this search, Whistler tended to associate the expressive capacities of painting with those of music; this is indicated by his adoption of musical terms for the titles of his works: harmony, symphony, nocturne (as in *Old Battersea Bridge: Nocturne — Blue and Gold;* PL. 418), variation, arrangement, and so forth.

Whistler's new stylistic approach matured by 1867, when, in a letter to Fantin-Latour, he clearly repudiated Courbet's teachings and his own earlier paintings, claiming for painting a more absolute independence from the exigencies of nature.

However, his art remained closely linked to French figural and literary tradition, which he helped to spread in England, where he had settled after a trip to Valparaiso in 1865–66; he strongly influenced the development of Victorian esthetics. Exoticism contributed to a great extent to the development of Whistler's style, becoming one of the most obvious characteristics of his art. It found brilliant expression in the Oriental tendencies of the Peacock Room, executed for the London house of F. R. Leyland in 1876–77 (PL. 421). Although he became an intimate friend of Dante Gabriel Rossetti and other Pre-Raphaelites, Whistler did not share their enthusiasm for a medieval revival (see PRE-RAPHAELITISM AND RELATED MOVEMENTS). His philosophy of "art for art's sake" contrasted radically with the esthetics of William Morris (q.v.) and the Arts and Crafts movement. Consequently, although Whistler was important as an intermediary between Eastern art and the beginnings of Art Nouveau (q.v.) his paintings and engravings had little direct influence on that style, except as they affected A. H. Mackmurdo's decorative taste and Aubrey Beardsley's drawings.

In 1878 Whistler initiated a law suit against John Ruskin, who had contested the "willful imposture" and the price of the painting, *Nocturne in Black and Gold: Falling Rocket* (Detroit, Inst. of Arts), in an article (*Fors Clavigera*, July 2, 1877). The legal proceedings gave Whistler an opportunity to set forth his ideas on art with brilliant polemic spirit, in an account entitled *Whistler Versus Ruskin — Art and Art Critics*, which he published in 1879.

In 1879 Whistler went to Venice, where he spent a year before returning to London. In 1883 he executed the *Portrait of Théodore Duret* (PL. 420); Duret, supporter of the impressionists, later wrote about Whistler in the *Critique d'avant-garde* (Paris, 1885). He also executed *Arrangement in Gray and Black, No. 1, Portrait of the Painter's Mother* [Louvre (Ed. note: Most authorities give the date of this work as 1872)], which was exhibited at the Salon of 1883, and he organized a large exhibit of his engravings. In 1884 he moved again to Paris, where he opened a school of painting, and sent to the Salon the greatly admired *Portrait of Thomas Carlyle* (PL. 420). In the same year and again in 1886 he was invited to participate in the first exhibitions of the work of Les XX, a vanguard symbolist group, in Brussels. In 1886–87 Whistler held a large one-man show at the gallery of Georges Petit, who later organized another exhibition in which Whistler's work was included along with paintings by Morisot, Monet, Pissarro, Sisley, and Renoir. Thus, after about twenty years Whistler once again became associated with the impressionists.

His position as the principal exponent of estheticism in the figural arts was firmly established by the late 1880s and brought to him the increasingly lively attention of the littérateurs. Joris Karl Huysmans, writing in *Certains* (Paris, 1889), compared his painting to Verlaine's poetry. George Moore, who wrote of him in *Confessions of a Young Man* (London, 1888), was among the first to demonstrate an understanding of the profound difference between Whistler's art and that of the impressionists, and he considered him a "classicist like Ingres." In 1888 Mallarmé translated for the *Révue Indépendante* the so-called "Ten O'clock" lecture that Whistler had delivered in 1885 (Mallarmé, *Oeuvres complètes*, Paris, 1945). In this lecture the painter again expounded his concept of art and discussed some considerations in the use of artificial lighting in painting, a discussion that was, significantly, to interest Seurat later. Marcel Proust symbolized in the character of the painter Elstir in *A la recherche du temps perdu* (Paris, 1913) the ideal artistic personality that Whistler had been for his contemporaries; Proust refers to him explicitly several times in this work and again expressed his admiration for him in a preface to Jacques-Emile Blanché's *De David à Degas* (Paris, 1927).

In the last years of his life, Whistler once more set forth his ideas on art in *The Gentle Art of Making Enemies* (London, 1890) and in *The Baronet and the Butterfly* (London, 1899).

In Paris and then in London from 1896 until his death, Whistler dedicated himself almost exclusively to the execution of portraits, which are among the most refined expressions of the taste and the artistic ideals of the best society of the time.

WILIGELMO DA MODENA. Italian sculptor active in Modena in the first decade of the 12th century. It is thought from the character of his work that he was from northern Italy, but although he is often regarded as the first great artistic personality in the history of Italian sculpture, no other facts of his life are known. His chief work decorates the Cathedral of Modena, and his name is preserved in the last two lines of the epigraph on the façade of the Cathedral: *Inter sculptores quanto sis dignus onore — Claret scultura nunc Wiligelme tua.* The figures of Enoch and Elijah that flank the memorial tablet and are carved from the same block can therefore be considered signed works, and on the basis of these figures the portal with the prophets (PL. 424), the four reliefs from Genesis (PLS. 422, 425; XII, PL. 255), the two genii holding torches (PL. 425), the Samson, and the various capitals of the blind arcade of the façade are clearly also to be attributed to Wiligelmo.

The fact that Wiligelmo worked from about 1100 until sometime probably between 1106 and 1110 is evident from a study of the construction of the Cathedral (founded 1099, crypt consecrated 1106; construction begun — as is known from the available sources and from the evidence of the edifice itself — simultaneously from the apses and the façade). The dates of Wiligelmo's work are further confirmed by a number of works dating from the first and second decades of the 12th century that are obviously derived from the Modenese sculptures: the cathedra of Bishop Elia in S. Nicola, Bari, prior to 1105 (XII, PL. 261); Aragonese tombs; surviving sculptural decoration from the old Cathedral of Cremona, which was founded in 1107 and collapsed in 1117; the portal of the Abbey of Nonantola, begun in 1121; etc. Consequently, there is little basis for either the cautious extension of the dates of Wiligelmo's work to about 1125 (Schnaase, 1869; Cipolla, 1895; Dondi, 1896) or the repeated attempts of scholars to place his sculptures at a later date. These attempts have rested on various bases resulting in different hypothetical dates: on the so-called "archaeological method" and on the assumption of "progress" (Mâle, 1918, and Deschamps, 1925–26; ca. 1140); on the claim of derivation from the Provençal school of Saint-Gilles (Hamann, 1923, 1955, and Krautheimer-Hess, 1928; after 1117); on the gratuitous hypothesis that Wiligelmo succeeded Lanfranco as the architect of the Cathedral (Simeoni, 1933–34; after 1106); and finally, on the slight discrepancy in size between the two reliefs on the right and the adjoining parts of the wall, from which one could assume that the sculptures were placed there later (Jullian, 1945, 1958; ca. 1106–20) — although it seems equally logical to deduce from this that the relief sections were prepared prior to the construction of that part of the façade. The dating in the first decade is accepted by many scholars (Vedriani, 1667; Burckhardt, 1884; Zimmermann, 1897; Venturi, 1904; Porter, 1917; Bertoni, 1921; Toesca, 1927; Francovich, 1940).

Concerning the sources of Wiligelmo's style, it is necessary to reject both the Provençal thesis of Hamann (1923, 1955) and the Aragonese one expounded by Porter (1923) and supported by Beenken (1925, 1928). The Aragonese sculptures are closer to the style of Wiligelmo's disciple who executed the Porta dei Principi than to Wiligelmo's own; furthermore, the erroneousness of the current early dating of Spanish sculpture was partially shown by Gaillard (1938) and is still being demonstrated (Salvini, 1963). The observations of Porter (1917), Toesca (1927), and especially Morey (1919, 1924–25) regarding the derivation of Wiligelmo's art and of other Emilian Romanesque sculpture from Ottonian and Carolingian ivories and miniatures should be regarded with similar caution. Wiligelmo's art belongs to the early period of the formation of Romanesque sculptural expression, and it participated, with all the early Romanesque sculpture of the West, in the process of reordering the current of pre-Romanesque popular expression (often incorrectly defined as "barbarian"). This reordering took place under the influence of Roman art — particularly noticeable in Wiligelmo and demonstrable by careful comparisons with pieces of sculpture in the Modenese necropolis — and of the Carolingian and Ottonian court styles — difficult to detect in Wiligelmo. The only Romanesque precedents of Wiligelmo's art are some sculptures of the early Aquitaine (Languedoc) school, although Wiligelmo owes less to the still very archaic work of Bernard Gilduin in St-Sernin of Toulouse (XII, PL. 236) than to the reliefs of the pilasters and, even more, some of the capitals in the cloister of Moissac (ca. 1100; XII, PL. 237). The clear demarcation of volumes in the reliefs from St-Sernin slowly gave way at Moissac to a more articulated and sculpturally denser style, laying down the precedents that were to be followed, though in a different way, by the sculptor of the Portal of the Counts in St-Sernin and by Wiligelmo in the Modenese reliefs. The presence in Wiligelmo's work of the Aquitaine double lines marking drapery folds, pointed out some time ago by various critics (Porter, 1917; Toesca, 1927; Francovich, 1940; etc.), is clear proof of these relationships. This in no way detracts, however, from the profound originality and the extremely high artistic level of the work of Wiligelmo. The style, still archaically metaphorical, of the Aquitaine reliefs is translated by Wiligelmo into a vigorously personal and concrete idiom in which even the most purely ornamental aspects constitute an integral part of the basic sculptural arrangement.

Wiligelmo's style reveals an intensely sculptural vision based on the relation between the relief and the background; this is why the images remain partly engaged in the plane, almost as if they were emerging from it with difficulty. Thus arises, in the figures of the prophets in the niches on the jambs of the portal (PL. 424), the poetic image of a humanity fervidly inspired but burdened by a destiny of earthly servitude. On the outer sides of the same jambs young shoots of acanthus leaves and grapevines take shape in dense volutes, which enclose small intense figures of men and animals; this motif creates the impression of a continual germination under the impulse of a slow but irresistible force, and the whole recalls the 3d-century Roman portal now installed in the Chapel of St. Aquilinus in S. Lorenzo Maggiore, Milan. A doleful image is presented by the two telamons on the portal of the Cathedral of Modena (PL. 423), which are prototypes of this peculiarly Italian Romanesque motif, extensively used from Lombardy to Apulia. Here they are subhuman beings, condemned to support for eternity the enormous weight of the Tree of Life; sculptured with a perfect balance between the plastic expression of the mass and the rounding of the volumes, they evoke a sense of the slow, turgid rise and fall of a wave.

The inspiration of Roman sarcophagi is evident in the linear unfolding of the story and in the articulation of the background of the reliefs from Genesis, originally intended as a single continuous sequence but later separated into four panels on the façade (cf. view of façade, XII, PL. 219). The main portal is flanked by two panels: the one on the left depicts Adam and Eve rebuked by God, sent forth from the Garden of Eden, and condemned to till the earth (PL. 422); the one on the right portrays Cain and Abel making offerings and Cain slaying Abel and being cursed by God (PL. 425). The other two panels were moved in about 1200 to their present positions over the two Campionesi portals of the façade and are consequently better preserved. The relief over the left-hand portal shows the Creator and the creation and fall of Adam and Eve (PL. 422); that over the right-hand portal depicts the slaying of Cain, Noah's Ark, and the departure from the Ark (XII, PL. 255). In spite of its debt to Roman sculpture, however, the style of Wiligelmo's Genesis reliefs is a new one; the sculptor has replaced the worn-out *ars rhetorica* of his models with a sober and sparing treatment of forms. The compositions take shape slowly in a rhythm that is unusually sustained, comprehensive, and explicit; and the figures and their gestures, concentrated in broad masses, restrained and basic in their articulations, are sculptured with a force that gives an absolute and corporeal clarity to the action. In the monotonous severity of the narration, the naked and elementary reality of this primal humanity is heavy with a mysteriously dramatic sense of an ineluctible destiny of suffering. A peak of dramatic intensity is reached in the solemn, bell-shaped composition of the creation of Eve; the straight lines of the drapery introduce a tension that culminates in the harsh lines of Eve's face, with its distant stare. The death of Cain has a similar force; the inexorability of the

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

condemnation is clearly conveyed by the angular quality of the mass and is precisely stated in the clear-cut outlines of every feature.

The work must have been carried out according to the chronological order of the story, beginning with the reliefs of the creation and expulsion, passing to the sculpture of the main portal itself, and ending with the two reliefs on the right depicting the stories of Cain and Abel and the Ark. The sculpture of the portal (PLS. 423, 424) is characterized by a more accentuated chiaroscuro and a greater density, features that are further strengthened in the last reliefs. The figures of Enoch and Elijah that flank the memorial tablet, probably executed after the consecration in 1106, are closely related to the figures in the scene of the emergence from the Ark. The two genii holding torches (PL. 425) were done a little later, followed, as the result of a new spirit of restrained monumentality, by the relief of Samson and by the extremely inventive capitals, architectural and at the same time anthropomorphous, of the blind arcading of the façade. Some of the capitals, however, especially the two large ones on the left (a double-tailed siren and a ram) and the first four of the northern side, do not represent a subsequent phase of Wiligelmo's style (Arcangeli, 1951), but rather define, in this new accent of serene volumes, the personality of a talented disciple, the Master of the Evangelists, the sculptor also of the reliefs of the Lombard-type porch and the symbols of the Evangelists high up on the façade and of the Madonna of Carpi (Modena, Mus. Estense; PL. 426)

The roster of Wiligelmo's followers is, of course, substantial. Similar to the Master of the Evangelists, if not the same man in a subsequent phase, is the Master of the Nonantola Lunette (after 1121; PL. 426), who also executed the left portal of the Cathedral of Piacenza (after 1122). The work of the Master of San Geminiano is easily distinguishable from that of Wiligelmo; even as early as about 1106, in the Porta dei Principi of the Cathedral of Modena, he reduced the profound drama of Wiligelmo's sculpture to graceful narration. Among the sculptures surviving from the old Cathedral of Cremona (ca. 1110) is the work of the great Master of the Prophets, who, using Wiligelmo's style as a point of departure, retraced the Modenese sculptor's steps, but retrogressively, toward an affected archaic expression. Also distinguishable is the work at Cremona, in a more popular vein, of the Master of the Genesis, the sculptor who carved the tablet commemorating the founding of the Cathedral. All the other sculpture of the Cathedral of Modena, like that of the jambs of the portal of Nonantola (PL. 426), grafted new styles derived from Burgundy and from the third phase of the Aquitaine school (e.g., tympanum of Moissac, XII, PL. 237; reliefs of Souillac, XII, PL. 239) onto Wiligelmo's creative roots.

WILSON, RICHARD. Welsh painter (b. Penegoes, Montgomeryshire, 1712 or 1713; d. Colomendy, Denbighshire, 1782). The son of a country rector, Wilson received a sound classical education and early displayed a talent for drawing. Accordingly, in 1729 he was sent to London, where he became a pupil of Thomas Wright, a mediocre portrait painter, with whom he is said to have remained for six years. Wilson's earliest dated picture, *Captain Smith*, of 1744 at Hagley Hall (near Wolverhampton, Staffordshire), shows Wilson at this stage as a capable exponent of the portrait tradition of the then popular Joseph Highmore and Thomas Hudson. By the late 1740s Wilson had established a respectable London practice as a portrait painter and was also employed in executing topographical paintings under the influence of Samuel Scott and George Lambert. In 1750 he traveled in Italy, remained about a year in Venice, and reached Rome at the end of 1751 or the beginning of 1752. Perhaps through the influence of Francesco Zuccarelli or Joseph Vernet, he then gave up portraiture for landscape. He made numerous sketches and paintings of views in the vicinity of Rome and Naples (*Lago di Agnano*, Oxford, Ashmolean Mus.; *Temple of Minerva Medica*, VI, PL. 440) and executed commissions in the manner of Zuccarelli, Marco Ricci, Gaspard Dughet (G. Poussin), and, above all, Claude Lorrain, for visiting English milords on the grand tour.

Returning to England about 1757, he settled in the Covent Garden section of London and took on a number of pupils. He accepted commissions for topographical works, then the chief means of livelihood for an English landscape painter, and painted landscapes with subjects drawn from his Italian sketchbooks (*Hadrian's Villa*, Manchester, Eng., City Art Gall.), as well as views of the English countryside (*Okehampton Castle, Devon*, Birmingham, Eng., City Mus. and Art. Gall.; *A View of Dover*, Cardiff, Nat. Mus. of Wales) and the Welsh landscape (*Cader Idris*, PL. 183), but he never attained the popularity of Zuccarelli or George Barret. The most enduring influences on his style were Albert Cuyp and Claude Lorrain. He was one of the founders of the Incorporated Society of Artists in 1759 and a founding member of the Royal Academy of Arts in 1768. About 1772 Wilson's practice began to decline, and, dogged by illness and increasing poverty, he was glad to accept the post of librarian to the Royal Academy of Arts in 1776. In 1781, when he succeeded to some property, he retired to Wales and virtually ceased to paint.

The following works in public collections are representative of the best of his output in his different periods: *Admiral Thomas Smith* (probably 1746), now in London (Greenwich, Nat. Maritime Mus.); *Ponte Molle, Monte Mario* (signed and dated 1754; Cardiff, Nat. Mus. of Wales); *River Dee Near Eaton Hall* (1760, pair; probably exhibited Society of Artists, 1762; Birmingham, Eng., Barber Inst. of Fine Arts); *Snowdon* (perhaps exhibited Society of Artists, 1766; Liverpool, Walker Art Gall.); *Valley of the Mawddach* (ca. 1770–75; Liverpool, Walker Art Gall.). While never entirely shaking himself free from the conventions of the classical tradition of European landscape, except in his more direct oil sketches and drawings, Wilson reached far beyond the purely topographical and decorative intentions of his predecessors such as Samuel Scott, George Lambert, and John Wootton. In his study of the native scene and in his exceptional feeling for light, atmosphere, and the poetry of landscape, he anticipated the age of Constable and Turner.

John HAYES

WITTE, EMANUEL DE. Dutch painter (b. Alkmaar, ca. 1617; d. Amsterdam, 1692). The chronicler Arnold Houbraken (*De Groote Schouburg der Nederlandsche Konstschilders en Schilderessen*, Amsterdam, 1718–20) states that De Witte (also spelled Witt, Widt, Wit, With) was trained in painting by the still-life specialist Evert van Aelst. He became a free master in Alkmaar, where he entered the Guild of St. Luke in 1636. In 1639 and the following year he was at work in Rotterdam but soon after must have moved to Delft, where he became a member of the painters' guild and possibly came in contact with Carel Fabritius. He remained in Delft for most of the decade of the 1640s. About 1651 he moved to Amsterdam, where he lived and worked until his death. Although his paintings were highly valued even in his lifetime, Houbraken describes him as constantly harrassed by debts. He was difficult in temperament and prone to make enemies; he died by his own hand.

Although best known for his church interiors (*Interior of a Gothic Church*, Amsterdam, Rijksmus.; *View of the Interior of a Catholic Church*, The Hague, Mauritshuis; *Interior of an Amsterdam Church*, Detroit, Inst. of Art), architectural paintings were by no means the only field in which the versatile De Witte excelled. His extensive output also included house interiors (*Domestic Interior*, V, PL. 317), harbor scenes, landscapes and seascapes, and market pictures. His earliest works, painted in the 1640s, are mostly portraits and mythological scenes. After he moved to Amsterdam he could easily have known Rembrandt, Govert Flinck (1615–50), and Bartholomeus van der Helst (1613–70). De Witte is said to have begun to do his famous church interiors under the influence of his slightly older contemporaries Hendrik Cornelisz. van Vliet of Delft (1611–75) and Gerard Houckgeest of Delft (1600–61), but De Witte's paintings far excelled theirs in the effect of vastness and majesty he achieved. De Witte's views are not always of known and recognizable buildings, which suggests that he may have traveled out of Amsterdam and also that he employed a rich imagination in envisioning fantastic composite views of churches and cathedrals. He suggested in his paintings deep quiet spaces between huge sunlit columns and managed complicated architectural perspectives, convincingly constructed with light and shadow. His palette included rich warm colors, with bright accents in the clothing of the little figures placed in awe-inspiring settings that establish a mood of genuine reverence. De Witte's market scenes, especially the renowned *Fish Market in the Evening* (1672; Rotterdam, Mus. Boymans-Van Beuningen), have a lively and interesting genre quality as well as a quaint and atmospheric rendering of people and places; these market scenes exploit to the full his considerable skill in the painting of still life.

De Witte's pictures were much in demand, and the king of Denmark commissioned work from him. His output is uneven in quality, because he painted rapidly in a effort to earn more and also possibly because some pictures were left incomplete by him and were finished by other, inferior artists.

Margaretta M. SALINGER

WITZ, KONRAD. The painter, whose Latinized name was Conradus Sapientis, was born at Rottweil in Württemberg, probably between 1400 and 1410; the theory that he originated in Constance has been disproved by Hecht (1937). He eventually moved to Basel, undoubtedly attracted by the meeting of the great church council there, which began in 1431 and brought to that city the princes of the Church and their households. In 1434 he was accepted into the city's artists' guild "zum Himmel" as Meister Konrat von Rotwil. In 1435 he was made a citizen of Basel, and in 1437 his name appeared on the list of the Lukasbrüder (Brothers of Luke). He married Ursula Treyger (Träger) of Wangen, niece of the renowned painter Nikolaus Rusch, called Lawelin.

About 1435 Witz was commissioned to do the Speculum Altarpiece (Heilsspiegelaltar) for the high altar of either the Chorherrenstift of St. Peter or the Augustinian monastery of St. Leonhard. Records of 1441–42 show payments for paintings, probably frescoes (no longer extant), for the Kornhaus in Basel, and in 1443 he acquired as a residence the fine Haus zum Pflug on Freie Strasse, the main street of the old city. The St. Peter Altarpiece, commissioned from Witz by the Bishop of Geneva, Cardinal François de Mies (Miez, Mez), for his Cathedral, carries on its frame the inscription "Hoc opus pinxit magister Conradus Sapientis de Basilea mccccxliiij"; and the view of the Lake of Geneva in the depiction of the Miraculous Draught of Fishes indicates that the artist spent some time in Geneva. The artist died at an early age, probably in 1445/46, for from that time documents refer to his wife as a widow. He also left five dependent children; with the substantial patrimony of the artist, "mit seinem Hantwerk gewunnen" (earned by his trade), his daughter Katharina entered the Magdalen Convent in 1454. Of the works of Witz, which were highly esteemed, a few survived the iconoclastic destructions in Basel (1529) and Geneva (1535). The partly damaged Speculum Altarpiece was subsequently divided, sawed into fragments and dispersed anonymously into private collections, most particularly that of the Margrave of Baden-Durlach. In the 19th century these fragments — identified as Italian, Burgundian, or Flemish works — appeared in various museums (Basel, Geneva, Dijon, Berlin, Strasbourg, Nürnberg). Even the painter's name was lost until it was rediscovered in 1901 by Daniel Burckhardt; thereby another landmark in the history of the development of German painting was recovered.

The artistic development of the artist, his education and apprenticeship, can only be surmised. In Basel he probably worked at first as a partner of Rusch, known as Lawelin, his wife's uncle, who was an active painter from Tübingen. In Basel during the first third of the 15th century, the high point of Upper Rhineland painting, there flourished locally the highly developed *weiche Stil* ("soft style").

His earliest known masterpiece, the altarpiece typologically inspired by the *Speculum humanae salvationis* (see BIBLICAL SUBJECTS), places the artist among the masters of the 15th century. The twelve — possibly eleven — surviving panels do not, however, strictly respect the ratio of three prefigurations for each New Testament subject. Probably there are not enough elements remaining for a complete and conclusive reconstruction; above all, the central part of the altarpiece is missing. The outer sides of the wings were each divided into four parts; five — possibly only four — of the eight original paintings are still in existence. The outer scenes, which preluded the scenes on the inner sides of the wings, included the pair of the Church (PL. 427) and the Synagogue and that of the angel of the Annunciation (all three, Basel, Kunstmus.) and Mary (lost) in the upper row, and saints and sibyls (Ganz, 1947) in the lower row; the representation of St. Augustine is preserved in Dijon (Mus. B. A.) and that of St. Bartholomew in Basel (Kunstmus.). On the inner sides there were eight paintings with scenes from the Old Testament and prefigurations from ancient history (PL. 428), according to Wendland (1924) and others; Escherich (1914) believes that there were originally two pairs of wings. Seven of the inner scenes are extant: Augustus and the Sibyl of Tibur (Dijon, Mus. B. A.); the Queen of Sheba before Solomon (Berlin, Staat. Mus., Gemäldegalerie); Antipater before Julius Caesar (PL. 428); Abraham before Melchizedek; Esther before Ahasuerus; and two panels with David and the heroes Abisai, Sabobay, and Banaias (last four subjects, Basel, Kunstmus.).

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The large central compartment, now lost, has been variously reconstructed as a single work, painted or in relief, with the Last Supper, which would correspond to all the prefigurations; or, improbably, as a Last Judgment and a Redemption (Escherich, 1914); or as consisting of several smaller pictures with subjects from the New Testament (typologically corresponding to events in the Old Testament), such as the Nativity, the Adoration of the Magi, the Last Supper, and Christ and Mary as intercedents. It may possibly have included New Testament scenes on the predella and the cusped arch. Wendland (1924) believes the central compartment contained four scenes, while Gantner (1941) and Stange (1951) propose four to six scenes; Baum (1948) holds that the central compartment consisted of several scenes of the Last Judgment in relief.

It is also possible that the existing fragments are actually remnants of several smaller Speculum altarpieces of the Flemish type, such as those produced by Van Eyck, Rogier van der Weyden, and Dirk Bouts (Gantner, 1941). In any case, all together the surviving scenes represent one of the most comprehensive and oldest programs for an altarpiece inspired by the *Speculum humanae salvationis*. It can be said that the wings of Witz's Speculum Altarpiece had single figures in narrow nichelike frames on the outer sides and pairs of figures against a background of golden drapery on the inner sides; the figures were shown seated in the upper row and standing in the lower, and all was arranged in a hieratic, rigid parataxis, creating a highly effective sculptural appearance.

Of the St. Peter Altarpiece, ordered by Cardinal François de Mies for the high altar of the Cathedral of St-Pierre in Geneva and installed there on Feb. 20, 1444, only the wings have been preserved. The outer side shows the Miraculous Draught of Fishes and the Liberation of St. Peter (PL. 429), and the inner sides contain representations of the Adoration of the Magi and the donor (Cardinal de Mies) being recommended by St. Peter to the Virgin (PL. 430). There is no reliable information regarding the missing central panels; the Gnadenstuhl (Throne of Mercy) in Berlin, proposed by Wendland (1924), does not seem to be a work by Witz; the two-level altar reconstruction suggested by Escherich (1914), Burckhardt (1926), and Ganz (1947) is rather unlikely. With the St. Peter Altarpiece, Witz established himself as a true master of the highly dramatic tale and the multifigured composition.

Of the remaining individual panels those depicting the Annunciation (Nürnberg, Germanisches Nat.-Mus.) and the meeting of Joachim and Anna at the golden gate (PL. 430), as well as the St. Catherine and Mary Magdalene (Strasbourg, Mus. B. A.), probably belonged to an altarpiece dedicated to the Virgin, which according to Ganz (1947) came from the Dominican convent "zu den Steinen" in Basel, and which was erroneously reconstructed by Wendland as the so-called "Olsberg altarpiece." The poorly preserved panel with St. Christopher in Basel (Kunstmus.) does not belong to the Speculum Altarpiece. Whether the panels of the Holy Family (Naples, Mus. di Capodimonte) and the Crucifixion (Berlin, Staat. Mus., Gemäldegalerie) should be included among the works of Witz remains a subject of debate; the former is composed of motifs employed by the artist, and the latter reveals links between the Burgundian painting of about 1420 and the art of Witz. He probably did execute the famous Dance of Death murals in the Predigerkirche in Basel as well as the so-called "Earthquake Picture" in the Kaufhaus (destroyed) in the same city, both of which can be judged only by later copies.

Like no other major German artist of his time, Witz comprehended the principal artistic problem of the Quattrocento: the conquest of the visible world, the here and now. After having surpassed the prevailing "soft style" in the Speculum Altarpiece, the young master concentrated primarily on the corporeal aspect of things. He treated the human form as a stereometric solid, rather like a painted statue, without much concern for anatomy, movement, individuality, or expression. His figures are set diagonally, rather than frontally or transversally, in a restricted space, and they impinge upon the plane of the picture with their severity and angularity. The standing figures conceived as "columns" and the sitting figures intended as pyramids, combine grace and majesty. Thus worldly phenomena are reduced "cubistically" to the palpable and solid. The Nürnberg Annunciation (Germanisches Nat.-Mus.), for example, lacks the lilies, the prayer desk, and all the usual household articles, as well as the symbolic apparitions of the dove, the rays of light, and God the Father. Even space, when carefully studied, can be seen to have form. For instance, the small niches in which the figures of the Speculum Altarpiece appear are conceived as hollowed-out stone blocks, as concave correlates of the figures. Still richer spatial figurations are found in the St. Peter Altarpiece, in which the interior spaces result from a combination of wall, floor, and ceiling forms; a clear, unearthly light gives these interior spaces an unmistakable spiritual aura. Clearly Witz the artisan did not proceed from the systematically abstract and preconceived construction of space that was characteristic of the Italians; nor was his composition determined by the space. Also he did not attempt to create that suspended interior atmosphere which is characteristic of Flemish art. In the representation of Miracle of the Draught of Fishes (St. Peter Altarpiece) the panoramic view of the Lake of Geneva, with its novel unity of water, mountains, sky, and Biblical scene, is inspired by a direct impression from nature and may well be regarded as a prototype of German landscape painting. Witz's figures are customarily placed toward the lower edge of the panel, so that the small intermediate space results in an emphatic perspective and in broad angles and abrupt convergences.

Witz was highly sensitive to fabrics, both those that draped heavily and the light, rustling kind, in cold or warm colors, and he could also depict the cold, glistening smoothness of metals; but he did not attempt to reproduce the texture of human skin. His preference for the inorganic, for stone and metal, reached its culmination in the "statues" he painted in grisaille on buildings and in his armored figures. In the rigid garments, arranged in abstract crystalline patterns, Witz seems to have been seeking to armor the body, so that its posture takes on a sculptural generality, without any transient or individual differentiation. There is no attempt to convey the dignity or significance of materials (in the manner of Flemish painting); his works show concern rather with the nature of matter, especially stone, wood, and water. Volume and a sense of solidity are the principal virtues of Witz's forms. The finely blended brushstrokes affirm the cool objectivity of the artist.

As was also the case with other realists of his generation, his sacred figures and events are depicted in the everyday world of the years 1430–40. In the panel from the Speculum Altarpiece showing David and the three heroes, for example, Sabobay's battle dress is a valuable document in the history of armor. Also the particulars of the scene — the rust, the spider webs, and the flaking whitewash — create a sense of actuality devoid of any important iconological significance; unlike the Flemish painters, Witz sought extreme simplicity and had no taste for still life. In the St. Peter Altarpiece the Lake of Geneva landscape looms over the scene of the Miraculous Draught of Fishes as an eyewitness to the wondrous event.

This powerful, though one-sided, talent created single figures, such as the St. Bartholomew (PL. 430) from the Speculum Altarpiece, and pairs of figures with a hieratic monumentality that in German art was reached again only by Dürer. With Witz the human figure breaks away from medieval tradition. In the St. Peter Altarpiece, the artist faced critical problems of composition. Though stirring tales and even miracles were to be represented, even here the artist was not expansive, nor did he seek variety; instead, clarity and tranquillity elevate the tale to a level of spiritual significance. Architecture and landscape were increasingly made use of in his compositions — most effectively in the above-mentioned scene of the Miraculous Draught of Fishes, in which the action is heightened by the presence of the hills and mountains. As a bridge from one object to another, Witz used cast shadows for contrast with the clear, direct, unatmospheric light. While the sharply contrasting colors in the Speculum Altarpiece shine symbolically, in the St. Peter Altarpiece there is a tendency toward graduated tones, broader rhythms, and fusion with the painting surface.

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

Witz as empiricist and discoverer was directly concerned with the objective world. He used set formulas and stylistic borrowings sparingly. His principal interest in the problem of figural plasticity allies him with Paolo Uccello and Andrea del Castagno; yet his works do not indicate that he treated this problem systematically, without reference to spatial composition or to anatomical beauty. He differs from his southern German contemporaries, such as Lukas Moser and Hans Multscher, in his objectivity, to which all expressive emphaticness, fantastic or caricatural, is alien.

Witz's art owes much to the Flemish painters, and more to the Master of Flémalle than to Jan van Eyck — though certainly not directly — as revealed, for example, in his use of deep diagonal spaces and extreme perspective. His eye is scarcely less acute than Van Eyck's, particularly in his observation of the play of light and shadow, of reflections, and of textural surfaces. Even in the rigid attitude of his figures, in the tension between figure and space, in the depth of his compositions, and in the dense, crystalline folds of the robes, Witz seems to have been inspired by the Flemish painters, although his work remains simpler, more temperate, and iconologically freer, with total emphasis on the dominant single figure. His heads do not have the individuality of the Flemish portraits, his drapery does not have the richness of the Flemish materials, and his light does not have the golden quality of the Flemish light. The Master of the Aix Annunciation blended the same influences with his own stylistic inclinations in a manner similar to Witz.

The outstanding and highly personal art of Witz failed to attract a large following, mainly because of the prevalent influence of the great Flemish masters.

WOODCARVING. See SCULPTURE; TECHNIQUES.

WREN, SIR CHRISTOPHER. English architect (b. East Knoyle, Wiltshire, 1632; d. Hampton Court, 1723). His early training was not in architecture, but in science, and he became a professor of astronomy, first in London and then at Oxford, before he was thirty. He was a founding member of the Royal Society and became its president in 1680. Although he had turned from science to architecture long before that date, his knowledge of science proved of incalculable value to his career. He had an innate talent for mathematics and was concerned with many kinds of scientific experiment outside his own field of astronomy. He was constantly devising the apparatus for practical demonstrations, and, according to his great contemporary, Sir Isaac Newton, his experiments were a material contribution to the knowledge of the laws of motion. He was also a meticulous draftsman.

Wren's work as a scientist brought him to the notice of King Charles II, who was keenly interested in the work of the Royal Society. In 1661 Wren refused a royal commission to direct the construction of the fortifications of Tangier, part of the Queen's dowry. Later in the decade he received further proof of royal favor.

His first major building, the Sheldonian Theater at Oxford (1663–68) was a mathematical rather than an architectural triumph. This work, a great assembly hall presented to the University by Gilbert Sheldon, Bishop of London, was without precedent in England, and Wren's achievement in roofing over the 70-ft.-wide interior structure without supporting columns was noteworthy. The plan of the building, however, and its immature exterior design are clearly indicative of Wren's early concept of architecture. For his plan he had turned to antiquity, basing his design on the Theater of Marcellus (XII, PL. 284), which he knew only through Sebastiano Serlio's (q.v.) treatise. He also drew on Serlio for individual motifs of the main façade, but he was not yet capable of combining them in a coherent design, and his treatment was sometimes clumsy.

It was perhaps on Sheldon's recommendation that Wren was asked in 1663 to advise on the repair of Old St. Paul's Cathedral in London, then in unsafe condition. Before he presented drawings for this project in 1665, he paid his only known visit to the Continent, spending some months in Paris. Although he was still a scientist by profession, he was turning more and more toward architecture. Little is known about his visit to Paris, but it is certain that he met and admired Bernini (q.v.), that he was fascinated by Colbert's careful organization of the rebuilding of the Louvre, and that he bought many French engravings. The designs for St. Paul's that he presented soon after his return show that he proposed to replace the unsteady central tower with a tall dome, derived in part from that of Lemercier's Church of the Sorbonne, and that he wished to create a broad space beneath it. Although the designs were soon rendered useless by the destruction of Old St. Paul's, along with a large part of London, in the Great Fire of September, 1666, these two features were to remain in Wren's mind.

The Great Fire of London gave Wren his great opportunity. He was appointed one of the three Royal Commissioners for the rebuilding of the city, and although his baroque plan of piazzas, radiating streets, and major buildings at focal points proved too utopian, he was from that moment to devote almost all of his time to architecture. In 1669 he was made Surveyor-General of the King's Works, and he was knighted in 1673. His main contribution to the rebuilding of the city was the reconstruction of 52 churches, many of which are now destroyed, and of St. Paul's Cathedral. The churches date mainly from the 1670s; many of them were "beautified," chiefly by the addition of steeples, in successive decades. In building them Wren was faced with the problem of designing churches suitable for Protestant worship that were to be built on sites that were often irregular and confined; a further requirement was that they incur relatively little expense. He used mainly brick and plaster as his materials, with stone dressing for doors and windows; sometimes, as the site required, at least part of the exterior was constructed in stone. Wren showed endless ingenuity in the planning of these churches. The larger rectangular buildings that were divided into naves and aisles were generally conceived as basilicas on the Vitruvian pattern; there is, however, a great variety in the design of the piers and in their relation to the galleries (a motif used extensively by Wren), and also in the type of roof. In St. Bride's in Fleet Street (destroyed in 1940, since rebuilt; FIG. 855), large paired columns carry a brick and plaster barrel vault. Christ Church in Newgate Street

London, St. Bride's, ground plan and elevation according to the original design (*from V. Furst, The Architecture of Sir Christopher Wren, London, 1956*).

(destroyed in 1940) had single columns on high bases, a cross vault, and flat ceilings above the galleries. In St. Clement Danes (destroyed in 1940; since rebuilt) small columns start at the gallery level; this church is a freestanding building and has an apse instead of a flat east wall. Many of Wren's churches are quite small and are, therefore, built on a central plan. A few of these, such as St. Mary Abchurch, were designed with a dome over a square plan; others, among them St. Mary-at-Hill, are on a cross-in-square plan, derived, perhaps, from the Nieuwe Kerk at Haarlem. St. Stephen Walbrook (VI, PL. 435, FIG. 823), the most complex of the small parish churches, combined both of these plans.

The demands on Wren were so great during these years that he was unable to superintend all the work himself, and some of the detail in his buildings is poor. In some instances, however, such as the entrance door of St. Mary-le-Bow (ca. 1680; PL. 432), it is fine and bold and suggests that he could transmute his borrowings from earlier works into a personalized style. More interesting still is the design of his steeples, which fascinated Canaletto (q.v.) when he came to London in 1746. The tallest of these, piled tier on tier with varied outlines (PL. 432), are perhaps inspired by engravings of Giuliano San-

St. Peter's in Rome; others are composed of columns clustered around a core. The steeple of St. Magnus the Martyr at London Bridge (PL. 432) has a small open cupola, similar to that of the Church of St. Charles Borromée in Antwerp, while that of St. Martin Ludgate is in the form of a sharp lead needle and was surely conceived as a contrast to the rounded lines of the nearby dome of St. Paul's.

Wren's work on St. Paul's occupied him from about 1668 until the completion of the building in 1711. Two preliminary designs were made and rejected; one of these, a Greek-cross plan with the arms joined by concave curves (FIG. 856), survives in a wooden model (IV, PL. 194) and is said to have been Wren's

London, St. Paul's, redesigned ground plan according to one of the original designs (*from B. Fletcher, A History of Architecture, London, New York, 1950*).

favorite. The clergy, however, wanted a traditional Latin-cross cathedral (cf. VI, FIG. 822, above), and a building of this type was begun in 1675. The first design for it shows a high nave and choir flanked by lower aisles. This plan was soon altered; the upper parts of the nave walls were raised, so that the exterior rises in one unbroken plane 90 ft. to the main cornice, and, though the upper walls are only screen walls, their weight is an important factor in the buttressing of the dome. The support of the great dome was a major problem; in order to solve it, Wren adopted a system of relieving arches above the eight main piers (PL. 432). Although this device is not entirely successful the dome itself is a masterly achievement. Designed late in the architect's career (ca. 1704–11), it is a triple structure, with the high stone lantern supported by a hidden cone between the inner and outer dome (VI, FIG. 822, below). Not only is the construction admirable, but the exterior design, in which the buttressing is arranged in such a way that the sweeping circle of the drum remains unbroken, is one of the great achievements of northern European architecture. The main exterior elavation (PL. 431), dating from the late 1670s and, therefore, from much earlier in Wren's career, was inspired by Inigo Jones's (q.v.) Banqueting House (II, PL. 147) in its superimposed order of pilasters in front of a channeled wall; the rich surface decoration that ties the whole together and leads the eye from one part to another is inherently baroque. Wren wanted to give the Cathedral a giant portico, but a suitable stone was lacking. He was compelled, therefore, to employ a motif of superimposed columns, coupled to give an effect of greater volume. Above these columns, the west towers, with their broken silhouettes, are evidence that, by the end of his career, Wren was tending toward the baroque.

The same development can be seen in his public buildings. The Library of Trinity College, Cambridge (begun 1676; VI, PL. 435), with its well-proportioned stories and clear-cut, simple lines, is one of Wren's most refined designs. It is, actually, less simple than it appears, for the main-floor level is not that of the lower cornice but is dropped to the springing of the arches below in order to make a finer room above. In the Royal

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

Hospital in Chelsea (PL. 433) and in Winchester Palace (not completed; FIG. 857), both begun in 1683, Wren experimented for the first time with the massing of large-scale blocks and with the use of giant orders as accents. Both buildings were created as experiments; in his first design for Hampton Court Palace (1689) he used a giant order and a dome with far greater assurance. This design proved to be too lavish, however. As something more modest and less expensive was required, he devised, instead, a brick and stone palace (PL. 433) that was domestic in nature and of a tranquil charm. Only in the King's Entrance (PL. 433), with its Ionic colonnade, is there an indication of the sophistication of the earlier, more massive design.

London, Winchester Palace, partial ground plan according to the original design (*from V. Furst, The Architecture of Sir Christopher Wren, London, 1956*).

Wren was unfortunate in his larger commissions. His splendid scheme for replanning the entire Whitehall complex after a fire in 1698 came to nothing, but it reveals an ability to plan on a great scale that is unparalleled in England. When, in 1694, the sovereigns wished to transform the existing parts of an older palace in Greenwich into a hospital for seamen (Royal Hospital; VI, PL. 435), the architect was not able to carry out his scheme for a domed central building with a long vista to the river, because it would have blocked the view from the Queen's House (by Inigo Jones; VIII, PL. 340). He produced a second solution, placing two smaller domes nearer the river and leaving a long vista open to the low block of the Queen's House, which he linked to his baroque domes by means of the horizontal line of his colonnades (VI, FIG. 821).

Few architects have accomplished so much within a lifetime. Much of Wren's work remains, but its full range can hardly be grasped without a study of the many drawings for these and for other projects, some of them abortive. Not all his buildings, if executed, would have enhanced his reputation, but they are a most impressive proof of his devotion to his profession and his ceaseless attempt to master its disciplines.

WRIGHT, FRANK LLOYD. American architect (b. Richland Center, Wis., June 8, 1867; d. Taliesin West, Scottsdale, Ariz., Apr. 9, 1959).

Wright's Celtic temperament was inherited from his mother, Anna Lloyd-Jones, whose father, a Welsh farmer and Unitarian minister, had immigrated to America and established a farm in rolling hill country near Spring Green, Wis. It was here that Wright later built his home, Taliesin, and founded the Taliesin Fellowship. The architect's father, William C. Wright, was a musician and preacher, English in stock but raised in New England. There were three children: Frank Lloyd, the eldest, Jane, and Maginel.

Frank Lloyd Wright's childhood was inevitably affected by an unsettled home life and by an irregular education; it was also a period of profound personal experiences that later influenced his work. In 1876, while the family lived in Weymouth, Mass., Wright was introduced to the Froebel kindergarten games, an educational method that employed sets of wooden blocks and geometrically shaped pieces of colored cardboard to construct increasingly complicated structures — structures not unlike buildings that Wright later designed. When Wright was twelve his family settled in Madison, Wis., and subsequently his summers were spent at Spring Green working on his uncle's farm — an experience that engrained in him a profound love and respect for the land and an appreciation for natural and growing things. He apparently left Madison High School without graduating, in April, 1885; in that month William Wright received a divorce on grounds of desertion by his wife, with the court records indicating that domestic harmony had seldom existed between man and wife. Wright was then almost eighteen and probably left school to help support his mother and younger sisters. He worked as a draftsman for A. D. Conover, and early the following year — while continuing his employment with the engineer-architect — he enrolled as a part-time student at the University of Wisconsin. His few courses (including descriptive geometry and drawing) were the equivalent of less than one academic year.

Early in 1887 Wright left Madison for Chicago, where he found employment with Joseph Lyman Silsbee, a residential architect from upper New York State who helped introduce the shingle style into the Middle West. Silsbee had a strong impact on Wright, who stayed, however, only 5 to 7 months before obtaining work with Dankmar Adler and Louis Sullivan (q.v.), who were then designing the Auditorium Building (1886–89) in Chicago. Wright assisted Sullivan with the ornament for this building, helped with some of the skyscraper designs and the Victoria Hotel (Chicago Heights; 1892–93), and also was responsible for designing most of the residences for which the firm accepted commissions. Best known among these was the James Charnley house of 1891, a severe, precise design of great simplicity in which was inherent the same logic found in Sullivan's skyscrapers. In violation of his contract with Sullivan, however, Wright designed several houses on his own, which led to a rupture between the two men in 1893.

When Wright entered private practice he was a skilled designer, yet nearly nine years passed before he perfected a fully mature style of his own. By 1893 he had absorbed much of the best that American architecture had to offer and had begun to synthesize it as E. E. Viollet-le-Duc — the only architectural writer he unreservedly admired — had recommended. From Silsbee and the eastern architects of the shingle style he had acquired a love for the texture of materials and had gained an appreciation for the continuity of exterior surface and for open planning — the latter being reinforced by his knowledge of Japanese architecture gained at Chicago's World's Columbian Exposition of 1893. From the architects of the academic reaction, particularly McKim, Mead & White, he acquired a profound respect for order, discipline, and the axial layout of interior space. From Henry H. Richardson he learned to appreciate monumentality, unity, and the basic dignity of architectural forms; he also learned how to relate a building to the ground. And from his "lieber Meister," Louis Sullivan, he acquired a logical, analytical approach to design and a concept of natural organic growth. This was incorporated into Wright's own theory of organic architecture: "By organic architecture I mean an architecture that *develops* from within outward in harmony with the conditions of its being as distinguished from one that is *applied* from without" (F. L. Wright, "In the Cause of Architecture, II," *Arch. Record*, XXXV, 1914, p. 406).

George Blossom house, Chicago, 1892, plan.

The search for a uniquely personal style took many years, yet in retrospect the line of development seems clear. First came Wright's exploration of interior space, as is evident in the plans for his own house in Oak Park, Ill., the Henry N. Cooper project (La Grange, Ill.), the McAfee project (Chicago), the Robert G. Emmond house (La Grange), and particularly the George Blossom house (FIG. 859), all of which were designed before 1894. The search for a formal architectural expression was more protracted; yet unconsciously it was essayed by 1893 in two designs for barns: the projected barn and stables for Henry N. Cooper and the barn behind the William H. Winslow house (River Forest, Ill.). What Wright had achieved, almost spontaneously, in barn design took a decade of development to attain in houses. Several of these were of seminal importance. The Winslow house, dating from shortly after Wright had left Sullivan, was of classic simplicity, with an ordered, monumental design of great forcefulness. Its broad, hipped roof, central chimney, and dominant horizontality were all harbingers of the future. The McAfee project of 1894 explored the possibilities of a lower, asymmetrical massing based on a T- or L-shaped plan that five years later was redesigned for the Joseph W. Husser house (Buena Park, Ill.; demolished) of 1899. Earlier, with the Chauncy L. Williams house (River Forest, Ill.; 1895) and the River Forest Golf Club (1898; demolished; I, PL. 90), a more horizontal massing and earth-bound form was gradually being evolved.

From 1900 to 1902 a final synthesis occurred between interior space and exterior form. This was first accomplished in two projects for the *Ladies' Home Journal* ("A Home in a Prairie Town" and "A Small House with 'Lots of Room in It' ") and in two houses at Kankakee, Ill. (the B. Harley Bradley house, Glenlloyd, and the Warren Hickox house), designed in 1900. For the Hickox house (FIG. 859; I, PL. 90) Wright used a modified version of the Emmond house plan of 1892, which he combined with thin, crisp gables that were reminiscent of Japanese design. But the culminating masterpiece in this synthesis, the design in which the fully mature "Prairie" house emerged, was the Ward Willits house at Highland Park of 1902 (I, PL. 90). The building stretches across the flat prairie landscape with the far-flung extremities (porch and porte-cochere) permitting a free interweaving of interior and exterior space, while near the center of the cruciform plan the massing becomes more compact and pyramidal. Particularly notable is the continuity of the horizontal surfaces — foundations, walls, rows of casement windows, and low hipped roofs — and the centrally placed living room, which extends out onto an enclosed terrace. The entire concept is dynamic, yet at rest, being locked together by a massive chimney at the crossing. The exterior materials are light: off-white stucco articulated by strips of wood that are stained rather than painted and are left unplaned. The plan (FIG. 859) is a brilliant essay in spatial organization. The open, axial — yet often static — planning of the shingle style is here redefined in terms of a flowing, interpenetrating space that, when experienced, offers tantalizing mysteries that invite exploration. The areas of various rooms (and also porches) often overlap yet are seldom directly accessible, either visually or physically, without first progressing through a predetermined series of spatial experiences. The subtlety of this spatial organization is enhanced by an inge-

Left: John Storer house, Los Angeles, 1923, plan. *Right*: Falling Water, Edgar J. Kaufmann weekend house on Bear Run in Pennsylvania, 1936, section and plan.

nious adjustment of axes that also injects greater vitality into the plan. The three major horizontal axes, for example, are in close alignment. One coincides with the roof ridge and extends the length of the building; it defines the limits of certain interior walls. Two other horizontal axes terminate in fireplaces; one is the center line of the dining room and the other of the reception room. This subtle adjustment is also reflected in the exterior elevations, where the ridge of the porte-cochere roof (at the right) is on a line with the eave of the porch (at the left). It is precisely because of these complexities of design that the Ward Willits house achieves such vigor and unity, and it is here that the essence of Wrightian space may be fully appreciated.

Two other designs from 1902 also attest to Wright's mastery. One is the Arthur Heurtley house (Oak Park, Ill.), which is more in the Richardsonian tradition and which revives the broad, hipped roof of the Winslow house (yet with a more plastic envelope around its asymmetrical plan). The other is the Hillside Home School (Spring Green, Wis., later incorporated into the Taliesin Fellowship complex), which is distinguished by its rough-faced masonry piers and broad areas of vertically divided glazing. This assertive use of piers foreshadows certain nonresidential designs such as the Larkin Company Administration Building (Buffalo, N.Y.; now demolished; see I, col. 261) and Unity Church in Oak Park, Ill., of 1906.

Unity Church (I, PL. 91), with its great corner blocks (stairways) and its broad yet high podia upon which rest piers that support the cantilevered slabs of the roof, is almost an embodiment of the Froebel kindergarten constructions. The roof slabs, repeated on the four sides, effectively reiterate the truncated cross of the auditorium plan. The structure is of reinforced concrete — one of the earliest examples of its use in the United States — and the aggregate is left exposed on the surface. A low attic story is inset with deep, square light wells that provide interior illumination and simultaneously establish the square-and-right-angle theme of the interior decoration (PL. 434). The interior space is considerably enlivened by the location of the peripheral balconies at half levels above the auditorium floor.

These nonresidential designs, culminating with Unity Church, influenced Wright's residential work and resulted in the more cubic, slab-roof type of design evolved in three projects of 1906 — the Warren McArthur apartment house, the "Fireproof House for $ 5,000" for the *Ladies' Home Journal*, and the studio house for Richard Bock. Soon, however, the heavy enclosing walls of these projects were replaced by long bands of windows, projecting porches, and cantilevered balconies that echoed the slab of the roof and simultaneously developed a rich interplay between interior and exterior space. Nowhere is this better seen than in the splendid little Thomas Gale house in Oak Park, Ill., of 1909 and the Mason City, Iowa, hotel of 1910.

It is generally assumed that no apparent development occurred in Wright's Prairie houses after the concept was formulated in 1900–02, yet the preceding analysis suggests the contrary. Actually, three principal types of Prairie houses are distinguishable, typified respectively by the Willits house, by the Heurtley house, and by the slab-roof houses commencing in 1906. By analyzing any Prairie house in relation to these types it is possible, upon stylistic evidence alone, to place it chronologically among other designs and to approximate its date. The Frederick C. Robie house (PL. 435), for example, is related to the Willits type, yet its almost cubist interplay of sliding planes and geometric masses indicates that the design postdates 1906. Similarly the stabilized planes and symmetrical massing of the Avery Coonley Playhouse (Riverside, Ill.; altered, now a residence) — the progenitor of which was the Isabel Roberts house (River Forest, Ill.) — represent a still later development and prefigure the brilliant design of Midway Gardens (1914, demolished 1923; PL. 434; see I, col. 262), where virtuosity and inventiveness reached a high point even for Wright's career.

By the date of Midway Gardens — that is, by 1914 — Wright was already internationally known as an architect. His work was first published in 1900, and the following year his

Paul R. Hanna house, Palo Alto, Calif., 1937, plan.

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

talk, "The Art and Craft of the Machine," was printed. In 1908 he wrote "In the Cause of Architecture," with its sequel appearing in 1914. But of unique significance was *Ausgeführte Bauten und Entwürfe von Frank Lloyd Wright*, a magnificent folio of 100 plates (perspective drawings, plans, and details), which was published by Ernst Wasmuth in Berlin in 1910. This work profoundly influenced European architectural design and as such stands as one of the most important architectural publications of modern times. In 1911 Wasmuth published another volume devoted to Wright's work, in this instance illustrated with photographs and with an introduction written by Charles Robert Ashbee.

Wright's private life had a direct influence on his professional career. After his marriage he built a home (1889) in Oak Park, Ill., beside which he constructed a studio (1895). There he employed five or six assistants (several of whom, notably Walter Burley Griffin, Barry Byrne, Marion Mahony, and William Drummond, later made substantial contributions on their own). But family discord developed, and in October, 1909, Wright left his wife, six children, and a thriving architectural practice and departed for Europe with Mamah Borthwick, the wife of a former client. Upon his return he built Taliesin on the Lloyd-Jones homestead near Spring Green, Wis., where, in 1914, a deranged servant brutally murdered Mamah Borthwick, her two children, and four employees before setting fire to the house. Wright, who was at Midway Gardens at the time, rebuilt Taliesin, but the human loss apparently unnerved him and for years he was destined to roam. The Midwest no longer held his interest, but rather Japan and California.

Architecturally he sought greater monumentality, and in pre-Columbian architecture he found new inspiration. This was particularly manifest in the A. D. German Warehouse (Richland Center, Wis.; ca. 1915), in the decoration for the F. C. Bogk house (Milwaukee; 1916), and in several of his California houses, notably those for G. M. Millard (Pasadena), Charles Ennis (Los Angeles), and Aline Barnsdall (Hollyhock House; Los Angeles), all of which were completed between 1920 and 1924. The plan of the Barnsdall house repeats the basic cruciform layout common to Wright's Prairie houses, but at the John Storer house (Los Angeles; FIG. 861) of 1923 a significant change may be noted. The organization is looser, with the walls creating pavilions of space on a broad terrace; interior and exterior seem almost interchangeable, with areas being defined, rather than confined, by the walls. In the building of these California houses (except the Barnsdall house, which was the earliest) Wright experimented with a precast

Above: Taliesin West, Scottsdale, Ariz., 1938, plan. *Below*: Winkler-Goetsch house, Okemos, Mich., 1939, plan.

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

reinforced-concrete-block type of construction. This permitted the casting of decorative patterns on the face of each block, an idea that he had first introduced at Midway Gardens.

Prior to 1922, however, Wright's major concern was not the houses in California but rather the Imperial Hotel (PL. 436) in Japan, a vast H-shaped complex of buildings that were jointed and "floated" on the thin earth crust of Tokyo in such a way as to resist the frequent earthquakes. The exterior material was brick trimmed with richly carved lava stone, and the effect, at least as seen in photographs, was somewhat heavy and ponderous.

The remaining years of the 1920s, in spite of the building boom that preceded the depression, were not materially prosperous for Wright. Few commissions were realized, although several grand projects were designed. Yet during this decade Wright formulated many ideas that were exploited in later years. The 1929 project for the tower of the vestry of St. Mark's-in-the-Bouwerie (New York) became the prototype for the Price Tower of 1953 (PL. 437; FIG. 868); and the spiral shape for the Gordon Strong Automobile Objective (Sugar Loaf Mountain, Md.) of 1925 was the progenitor of such designs as the Solomon R. Guggenheim Museum (X, PL. 217, FIG. 414), the Baghdad Opera House project (PL. 438), and the project for the Pittsburgh Golden Triangle (I, PL. 408). The project for a steel cathedral of 1926 matured as the Beth Sholom Synagogue at Elkins Park, Pa., of 1956; and the valley-leaping arches of the Edward H. Doheny ranch development (Los Angeles) of 1921 were finally realized in the Marin County (Calif.) Civic Center buildings of 1959 (PL. 438). New ideas for plans were also initiated during these years; the most significant was the use of the 60/30-degree triangle for formulating the plan rather than the traditional 90-degree angle. The 60/30-degree method was first used in Wright's projects for San Marcos-in-the-Desert (Chandler, Ariz.) of 1927 and was fully developed in the Paul R. Hanna house (FIG. 862) at Palo Alto, Calif., of 1937.

In the late 1920s, after two divorces, Wright's personal crises ended happily in an enduring marriage. The domestic tranquillity that ensued, plus the encouragement of his wife, led Wright in 1932 to write his autobiography and to found the Taliesin Fellowship. The Fellowship, which eventually numbered three- or fourscore students, was organized on the broadest possible educational basis; ideally, if not in practice, each student devoted equal time to domestic and farm labors, to construction work and the processing of materials, and to work in the drafting room. The community was largely self-supporting — a necessity during the depression years. The milieu was ideal for Wright; he was always at his creative best when in the company of younger people, and the Fellowship effectively reestablished, although on a more autocratic basis, the environment of his earlier, highly productive Oak Park years.

The Fellowship soon became involved with Broadacre City (PL. 147), Wright's defiant response to the spreading metropolis that he held in such disdain. Broadacre was, in fact, not a city but rather a community of strictly limited size where the agrarian ideal was preserved by providing each family with its own home and arable plot of land. This necessitated low-cost housing, a design problem repeatedly attacked by Wright, as in his project for American System Ready-Cut houses of ca. 1915 and in his experiments with concrete-block construction in the early 1920s. The development of the "Usonian" house was another step in this direction.

The real symbols of Wright's comeback as an architect were two brilliant designs of 1936: the Edgar J. Kaufmann weekend house, Falling Water, on Bear Run in Pennsylvania, in which cantilevered planes dramatically hover over a forest brook (FIG. 861; I, PL. 91), and the Johnson Wax Company Administration Building at Racine, with its smooth, curving surfaces of brick and glass tubing and its tapering interior columns (PL. 437; I, PL. 415). Although different in appearance, both designs reflect Wright's awareness of European (specifically Dutch and German) design, which had earlier received much impetus from his work. Wright's response to contemporary Dutch architecture, with its brick construction, strong horizontals, and continuity of seemingly thin (and often curved) exterior surfaces, is evident in the Johnson building and in the Herbert F. Johnson house, Wingspread (Wind Point, Wis.). In Falling Water (see I, col. 268), on the other hand, Wright reinterpreted his own earlier work in terms of the international style (perhaps as a dramatic gesture to demonstrate that, first, he could outdo the European architects at their own game and, second, he had done it first anyway). For this design his most immediate source was his own Thomas Gale house in Oak Park, of 1909.

In 1938 Wright began to build a winter home in the desert, called Taliesin West, in Scottsdale, Ariz. (PL. 437, FIG. 863; VIII, PL. 116). Stone set in concrete and canvas stretched on wood comprised his materials; the design, although highly ceremonial in layout, rested quietly in the desert landscape to which it seemed to belong. Rugged masonry, primitive in its simplicity, contrasted with the translucent, tentlike canvas covering, while the rust-colored stone and the redwood trusses harmonized with the desert hues and dramatically repeated the silhouette of the mountain backdrop.

Research Laboratory Tower, Johnson Wax Company, Racine, Wis., 1947, section and plan.

During what is often called Wright's "second career" — that is, the period from 1936 until his death — there is no characteristic design, such as the Prairie house, that typifies his work. In this brief discussion, however, his buildings will be grouped, according to their plans, as designs based on right angles, on triangles, or on circles. The Usonian houses are typical right-angle plans, and the Winkler-Goetsch house at Okemos, Mich., of 1939, is a particularly fine example (FIG. 863). The open planning first noted at the Storer house (FIG. 861) is here adjusted for a more rigorous climate without loss of freedom in interior arrangement. Nor has Wright neglected the human need for intimacy and seclusion, which are provided by the cavelike "alcove" with its dim lighting from above and its warmth-giving fireplace. On the exterior the most striking

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

features are the slab roof that hovers over the cubic masses and the spur walls that define rather than enclose the space. Although the imprint of Mies van der Rohe is apparent, the interpretation is entirely Wright's; the materials — brick, redwood, and glass — harmonize with the site to an extent unknown in European design.

Level sites were requisite for Wright's earliest designs, but first at Taliesin and then with the California houses he began utilizing hillsides and ravines, until finally, in a complete reversal of his initial practice, he elevated houses that were situated on the prairie (Lloyd Lewis house, Libertyville, Ill.; 1940) or on the desert floor (David J. Wright house, Scottsdale, Ariz.; I, PL. 424; 1952). Falling Water is, of course, the most dramatic instance of this; the George D. Sturges house (Brentwood Heights, Calif.) and the John C. Pew house (Shorewood Hills, Wis.) of 1939–40 are also splendid examples.

Designs based on circles and spirals developed from the Ralph Jester house project of 1938. Designed in abstractly ar-

Herbert Jacobs house, Middleton, Wis., 1948, plan.

ranged circles, the various components of this house (rooms, garden walls, and swimming pool) strikingly recalled (when read in plan) Wright's decorative murals for Midway Gardens. Segments of circles (arcs) were also exploited by Wright at the Herbert Jacobs house, Middleton, Wis., of 1948 (FIG. 867). Here the arc shape was tucked into the ground with its outer perimeter banked with mounded earth and its interior view focused on a central sunken garden. Other variations on this theme were built by Wright for his sons: the David Wright house, which spiraled up from the Arizona desert floor, and the Robert Llewellyn Wright house near Bethesda, Md. (1953), which consisted of several cantilevered segmented circles.

Circular shapes were of great importance in Wright's nonresidential designs, for example, the previously mentioned Guggenheim Museum, initially designed in 1943, the Golden Triangle designs for Pittsburgh, and the Baghdad Opera House project. The double saucer — a circle in plan — first entered Wright's vocabulary of forms in the late 1940s and was realized in the splendid Greek Orthodox church at Wauwatosa, Wis. (1956–59), with its saucer-shaped auditorium crowned by a low "floating" dome.

Triangles were less common in Wright's work than circles and generally predate them. Excellent examples are the Hanna house (FIG. 862), the layout of the grounds at Taliesin West (FIG. 863), the plan and elevation of the Unitarian Church in Madison (FIG. 868; 1951), the Beth Sholom Synagogue, and the Price Tower (FIG. 868).

The Price Tower and the Research Laboratory Tower (1947; PL. 437, FIG. 866) for the Johnson Wax Company in Racine were the only towers built by Wright; he designed many others. The structural system he devised during the 1920s for towers was revolutionary. The floors were not supported on load-bearing walls; instead Wright, using the analogy of a tree with its tap root and branches, cantilevered the floors from a central core that was rooted deeply in the ground. From the extremity of the floors was hung a curtain wall.

Left: Unitarian Church, Madison, Wis., 1951, plan. *Right*: Price Tower, Bartlesville, Okla., 1953, plan.

In later years Wright's designs apparently were more decorative, that is to say, richer in their color scheme and more varied and intricate in form. But much of this richness existed only in the preliminary projects (cf. PL. 438; I, PL. 408, below) and was not incorporated in those buildings which were actually constructed by Wright (cf. X, PL. 217). The executed buildings were inevitably more monumental and severe than the earliest designs would lead one to expect.

Wright's architecture always expressed a uniquely American point of view — his was the tradition of Emerson, Thoreau, and Whitman. He believed in Jeffersonian democracy, an agrarian state, yet held himself to be of the aristocratic elite. His inspiration was derived from nature and from the land; his buildings were of the earth, bound to it, and usually inseparable from it while echoing its horizontal lines. His materials, particularly in his early career, recalled their natural state: wood direct from the sawmill, never planed, sanded, or painted, and the earth-given materials of brick or rough quarried limestone. He rethought the problem of the house, and the result was the destruction of the box; he opened the house within itself and opened it out to nature.

It is in the realm of architectural space rather than that of architectural forms that Wright made his most valuable and enduring contribution. Intangible and elusive — and fully comprehended only by those who have experienced them — Wright's splendid essays in interior space owe their uniqueness not to what he achieved in monumental buildings but rather to what he so brilliantly created for the individual in the single-family private house.

LISTS OF WORKS. Three lists of Wright's innumerable works are readily available, each being appended at the back of a book. The

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

only complete list that includes executed works (but without street addresses) and projects, together with biographical information, appears in Olgivanna Lloyd Wright, *Frank Lloyd Wright: His Life, His Work, His Words*, New York, 1966. A list that includes works, with addresses, and projects up to 1941 is published in Henry-Russell Hitchcock, *In the Nature of Materials*, New York, 1942, where most of the important items are illustrated. *Frank Lloyd Wright: Writings and Buildings*, edited by Edgar Kaufmann, Jr., and Ben Raeburn, New York, 1960 (available in paperback), contains a directory, arranged geographically, of Wright's executed designs.

BIBLIOG. Wright was a prolific author, yet a good idea of his thought and style may be gained by reading *An Autobiography* (published in 1932 and enlarged in 1943; London, New York, Toronto), the so-called Princeton lectures (*Modern Architecture . . . Kahn Lectures for 1930*, Princeton, 1931), *A Testament* (New York, 1957), and *Frank Lloyd Wright on Architecture, Selected Writings 1894–1940*, edited by Frederick Gutheim, New York, 1941.

The standard monograph on Wright, and the best single source of illustrations, is Henry-Russell Hitchcock, *In the Nature of Materials*, New York, 1942, which was published 17 years before Wright's death. For a detailed study of his early career see Grant C. Manson, *Frank Lloyd Wright to 1910, The First Golden Age*, New York, 1958, and for a short and provocative account of his entire life work see Vincent Scully, Jr., *Frank Lloyd Wright*, New York, 1960. The chronological documentation for Wright's early life (prior to 1887), including the factual evidence for his 1867 (vs. 1869) birth date, is contained in Thomas S. Hines, Jr., "Frank Lloyd Wright — the Madison Years," *Wisconsin Magazine of History*, L, 2, Winter 1967, pp. 109–19. Bruno Zevi, in *Towards an Organic Architecture*, London, 1950, emphasizes Wright's contribution in the domain of architectural space, and Norris Kelly Smith, *Frank Lloyd Wright, A Study in Architectural Content*, Englewood Cliffs, N.J., 1966, presents an interpretation of Wright as a designer. For a fascinating account of Wright's maternal ancestry — the Lloyd-Joneses and their immigration to America — see Maginel Wright Barney (Wright's sister), *The Valley of the God-almighty Joneses*, New York, 1965. On the specialized topic of Broadacre City there is an incisive article by George R. Collins, "Broadacre City: Wright's Utopia Reconsidered," in *Four Great Makers of Modern Architecture*, New York, 1963, pp. 55–75. Architectural drawings by Wright are illustrated in color in *Frank Lloyd Wright, Drawings for a Living Architecture*, edited by Edgar Kaufmann, Jr. (New York, 1959); and 300 drawings are reproduced in the Museum of Modern Art book/catalogue by Arthur Drexler, *The Drawings of Frank Lloyd Wright*, New York, 1962. For an analytical study of Wright's early drawings see H. Allen Brooks, "Frank Lloyd Wright and the Wasmuth Drawings," *Art Bulletin*, XLVIII, 2, June 1966, pp. 193–202.

An extensive bibliography of books and articles by and about Frank Lloyd Wright (up to 1958) will be found in Grant C. Manson, *Frank Lloyd Wright to 1910*, New York, 1958; also useful, but not widely available, is Bernard Karpel, *What Men Have Written about Frank Lloyd Wright: A Bibliography Arranged by Decades from 1900 to 1955*, published by House Beautiful Magazine, New York, 1955. Many previously out-of-print publications are now available in reprints and facsimile reproductions.

WU LI. Chinese painter of the Ch'ing dynasty (b. 1632; d. 1718). Wu Li was born in Ch'ang-shu, Kiangsu, the same province in which four other Ch'ing masters, the "Four Wangs," were born (see WANG SHIH-MIN, CHIEN, HUI, AND YÜAN-CH'I). He was also known as Yü-shan, Mo-ching-tao-jên, and T'ao-chi-chü-shih, and after his conversion to Catholicism his teacher, Father Philippe Couplet, gave him the name Simon Xavier. He accompanied Father Couplet in 1681 to the Portuguese island of Macao, where he entered the Jesuit order. In 1692 he was ordained priest under the name Acunha and was put in charge of a mission post in Chia-ting (Kiangsu). He died in 1718 while on a trip to Shanghai.

Wu Li was not raised in the home of an art collector or art dealer as were the "Four Wangs," who from their youth had the opportunity to study and to copy outstanding works of masters of the Sung (960–1279) and Yüan (1260–1368) periods in order to develop their own styles. Wu Li was, however, a friend of both Wang Shih-min and Wang Hui, who taught him a great deal. He led a rather secluded life in his youth, pursuing his hobbies of music, poetry, and painting and reading the philosophy of religion. He aspired to the Confucian ideal of *wên*, for which the polite arts were a vehicle (see CONFUCIANISM). The stress *wên* placed on the personality of the individual artist was manifested in the visual arts by *wên-jen-hua*, or literati painting. This is reflected in an inscription on a painting by Wu Li that reads, "Even in ancient times it was said when speaking of paintings that only eminent men have the talent for brush and ink. Only he who has recognized that the use of brush and ink is not merely a matter of scrupulous performance, that one must free himself from time-bound thinking, and that one must understand clearly what is meant by that purification which for our inner selves is like a bath in snow — only he understands how to handle the brush in natural harmony with the quickening breath of heaven and earth! He who can become a part of his surroundings, as the mist is one with the rain, can fashion something meaningful from the countless phenomena which he strives to bring to expression." This inscription is an expression of Wu Li's conviction that what is tied to time and place has only transient value. Hence the European paintings that he saw in Macao had no influence on his style, which derived its character from a Confucian education, as did the styles of the "Four Wangs." Wu Li was brief and to the point in his criticism of these European paintings, with their views in perspective, saying: "In our paintings we do not aspire to an exact reproduction of form or to the creation of an impression of depth, as if one were peering into a cave; they, on the other hand, are striving for precisely this cavelike effect."

In his paintings of mountains and streams (PLS. 439–441), which were to him the symbols of the functioning cosmos, Wu Li sought to reproduce the breath of the spiritual horizon that he had developed step by step within himself. Technique was for Wu Li merely a means to the end of capturing this spiritual essence, and he believed that the individual style of each artist was uniquely suited to express that artist's thoughts and feelings. He says in an inscription on another of his paintings: "*Steep Cliffs and Deep Woods* is an exceptionally fine work of Huang Kung-wang [1269–1354]. . . . The brushwork in this painting is of remarkable virtuosity. Each time that I visited Wang Shih-min's studio I asked him to let me view this painting, and since I always had my brush with me, I copied it. Although I followed the original to the smallest detail, it was quite difficult to achieve the same feeling." He is referring in this inscription to the specifics of brush manipulation, for the paintings of the Ch'ing literati often differed not in the content of the landscape they chose to represent but principally in the manner of using the brush. The brushwork of these artists has such a personal character that one can recognize the hand of a great painter from even a small section of his painting, just as one familiar with a person's handwriting can recognize a letter from him by a mere glance at the envelope. Wu Li himself utilized exceptionally short strokes to fill in his outlines. In whatever style he chose to paint, therefore, his work can be readily distinguished from that of the four Wang masters.

Literati painters were inspired not only by the works of the great masters who preceded them but also by poetry, music, and nature itself. Wu Li had a particularly strong interest in music and poetry. One of his paintings, *Zither Player in the Mountains* (1674; Shanghai, Coll. Chang Tsung-yü), reflects his happy memories of having studied that instrument in his youth, and in an inscription of a painting he wrote: "I would like to paint a picture, 'The Zither Sings through the Valley of Pines,' in order to express these thoughts . . . . Today as I returned from a lengthy visit and the sky was clearing after a long rain, I wrote — in the ancient style — the following poem in seven-word lines: With the sound of the zither one should mimic the clear call of the birds. For twenty years I have striven under this Master! Today I listen to the pines, the mountain torrents, the waterfalls. When the water cascades down from the high mountains, one no longer needs to touch the strings." In reference to his painting of a site celebrated in a poem of T'ao Yüan-ming, Wu Li wrote, "Then I could sympathize in the depths of my heart with the words of T'ao Yüan-ming, and his poetry will nurture this painting."

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

All of Wu Li's paintings were signed with his Chinese names, not with the Christian name that had been given him. He maintained his Confucian approach toward everything that surrounded him, and to the end of his life he painted with the Confucian eye of all-embracing discernment. Thus he united a Christian approach with the philosophical detachment of the cultured Confucianist.

SELECTED WORKS ATTRIBUTED TO WU LI. Signed hand scroll of a landscape, 1699, Lugano, Coll. J.-P. Dubosc. – Landscape after Wang Mêng, 1707, Washington, Freer Gall. – Landscape with a scholar in a hut, inscription 1703, Met. Mus. – Mountain landscape after Wang Mêng, Osaka, Municipal Mus., Coll. Abe. – Mountain landscape in autumn, signed fan painting, Boston, Mus. of Fine Arts. – *Myriad Valleys and the Flavor of Pines*, signed, Cleveland, Mus. of Art.

WU TAO-TZŬ. The one painter who has been extolled by Chinese critics of every period as the greatest master in all categories of subject matter is the T'ang master, Wu Tao-tzŭ. He is ranked above all others in the *shên* ("inspired grade"). Wu Tao-tzŭ was born probably about 680, and the period of his florescence coincided with the golden age of T'ang painting under Emperor Ming-huang (T'ang Hsüan-tsung, 712–56; see CHINESE ART). He is described as having been possessed with a kind of divine energy and alone of all painters is said to have been the master of all "Six Principles" of painting. His repertory of subjects is thought to have included Buddhist icons, landscapes, clouds, dragons, human figures, demons, birds and beasts, architectural subjects, flowers and grasses, and terrifying hell scenes. It is not at all surprising that, when even in the 12th century Master Wu's paintings were a rarity, not a single original has survived to the present day.

Wu learned his craft from a calligrapher, not a painter, and this training may explain the tremendous power of his draftsmanship, as described by critics of the late T'ang and Sung dynasties. Various comments on his performance in such works as the *Li-tai ming-hua-chi* (*A Record of the Famous Painters of All the Dynasties*) and the *T'ang-ch'ao ming-hua-lu* (*Celebrated Painters of the T'ang Dynasty*) can give at least some idea of the character of his style. His paintings are described as bold and filled with supernatural energy: "When Master Wu was about to paint the halo of a divinity on the central gate of one of the temples in the capital, old as well as young, who raced to the spot to get a view, surrounded him like a dense hedge, and then raising his brush, he swirled it about with the force of a whirlwind, so that all the people said he must be receiving supernatural aid." Another passage says that "in some places there are wall paintings by Master Wu done entirely in ink, and in recent years there has been no one who could justly add color to them." Of the many works formerly attributed to Wu Tao-tzŭ, such as the Śākyamuni trinity in the Tōfukuji (PL. 442), none is now recognized except as remote reflections of his style. The pair of landscapes in the Daitokuji (Kyoto) formerly attributed to Wu are now assigned to the circle of Li T'ang.

There are innumerable literary references to great cycles of wall paintings of Buddhist subjects executed by Wu Tao-tzŭ in temples in and around Loyang (Honan), but certainly all these had been destroyed even before the end of the T'ang period in the course of persecutions of Buddhism and in other civil disturbances. The great painter and critic of the late 11th and early 12th centuries, Mi Fei (q.v.), states that in a lifetime devoted to the appreciation of ancient paintings he had seen only four pictures that could be attributed to the hand of Wu Tao-tzŭ. Among the engraved copies of lost works by Wu is a stone at Chengtu representing the emblem of the north, an entwined tortoise and serpent, a single rubbing of which is in the British Museum. Another engraved stone, depicting Confucius and a pupil, is in the Pei-lin at Sian (Shensi). A scroll representing the miraculous events attending the birth of the Buddha (Osaka, Municipal Mus., Abe Coll.) has been attributed to Wu Tao-tzŭ, but its style can hardly be earlier than the Ming dynasty (1368–1644) or perhaps even the Ch'ing period (1644–1912), so that it is at best no more than a shadow of the great artist's style.

Perhaps the most accurate reflections of Wu Tao-tzŭ's style are to be found in the stone engravings after now-lost paintings, which were made for the purpose of taking rubbings. There are, for example, a number of different versions of a painting of Kuan-yin, presumably all derived from the same original. The Bodhisattva of Compassion is shown as a soft, feminine figure, with the effect of wistful compassion emphasized by the languorous pose and the softly curving lines. The lines of the robe, as reproduced in these rubbings, reveal a powerful, even coarse, brush stroke. These broken and raveled lines summarily describe the heavy drapery of the robe and at the same time stand out as an independent abstract design in powerfully moving, dynamic rhythms. It is this quality which seems to correspond most closely to the literary accounts of the titanic force of Wu Tao-tzŭ's brush stroke. In contrast to the strength of the drapery lines in these Kuan-yin rubbings is the extreme delicacy, perhaps exaggerated in these later copies, of the linear definition of the face and hands of the bodhisattva.

It is, of course, the absence of any original paintings and the consequent complete dependence on literary descriptions that make it so difficult to envisage the enormous development over earlier painters that is credited to Wu Tao-tzŭ. As already indicated in quotations from early critics of his work, this progress is invariably described in terms of an unfettered imagination and a dynamic spontaneity of expression and line. Indeed, the descriptions of Wu Tao-tzŭ's facility would not be inappropriate as a characterization of the freedom and spontaneity of expression in monochrome ink paintings executed hundreds of years later. Wu Tao-tzŭ was undoubtedly a great innovator and artist, but the extravagant praise lavished on him by critics writing in early Sung times (960–1279) must be considered relative to the prevailing style of painting in the Six Dynasties (220–589) and early T'ang periods. A series of articles by the Japanese scholar Kobayashi (1939–40) has clearly demonstrated that a change in artistic taste may have taken place in Wu Tao-tzŭ's own lifetime: a change from the admired control and rational definition in precise contour and local tone to a more spontaneous and activated expression in terms of swirling monochrome and creative vitality — a departure from mere correctness and good form in the Confucian sense.

Perhaps the one reflection of his work that more than any other gives some idea of the stupendous power and freedom of the brush attributed to Wu Tao-tzŭ by Chinese critics may be seen in the stone engraving of a flying devil preserved at Ch'ü-yang (Hopei). In comparison with Six Dynasties paintings and the work of early T'ang artists, this is a design filled with tremendous movement and energy, in which the thinning and thickening of the lines with the moving brush alone make for the powerful and plastic realization of the form. The figure appears as though swelling and bursting with the pressure of pent-up energy. In its demoniacal and heroic quality it bears comparison with the *terribilità* of Michelangelo. The swirling scarves of the drapery impart at once a feeling of movement and of airborne lightness to the celestial figure. The lines as reproduced in the engraving are executed in long, casual sweeps of the brush with a continuous thinning and thickening in the course of a single stroke, so that the line not only acquires the vibrancy but also through its thickening fulfills the function of an abstract modeling. This is to all intents and purposes the same line that appears in the engraved copies of Wu Tao-tzŭ's Kuan-yin. What amounts to a very accurate description of the kind of activated drapery that characterizes these Wu Tao-tzŭ designs may be found in the passage in the *Li-tai ming-hua-chi* in which the author contrasts the style of Wu Tao-tzŭ with

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

that of the painter Ts'ao Chung-ta: "Wu's brush gave an effect of smooth curving and his robes billowed upward. Ts'ao's robes were clinging and tight. It was for this reason that later men held that Wu's girdles were caught by the wind while Ts'ao's garments were drenched in water."

Another possible reflection of Wu Tao-tzŭ's style is the painting of a bodhisattva in the collection of the Shōsōin (PL. 443). This figure, executed entirely in ink outline, provides a very close approximation of the style preserved in the engraving at Ch'ü-yang. As may be seen here once again, the novelty of Wu Tao-tzŭ's innovation lay in his departure from the accepted controlled precision of line with the expression of a sort of dynamic turbulence, enhanced by the very impetuosity of the brush stroke, and in his development of painting in ink without color. The very fact that the Shōsōin bodhisattva is entirely in monochrome is another reason for relating this picture to Wu Tao-tzŭ, whose preference for this mode was so often signalized by early writers. This painting, like the rubbings, reveals the emergence of a new criterion of performance and of taste based on the artist's ability to achieve effects of spontaneity and vitality through the controlled bravura of his brushwork. The suggestion of whirling movement in broadly swept lines of the brush conveys the impression of an inner dynamic life, or *ch'i*, in a far more explosive, baroque fashion than was ever possible with the "unfaltering correct use of the brush" that characterized the work of Six Dynasties artists.

Various mentions in Chinese critical texts compare the style of Wu Tao-tzŭ to developments in Chinese sculpture: at the end of Kuo Jo-hsü's account of the methods of Master Wu and Ts'ao Chung-ta, for example, it is remarked that "the contrast between Ts'ao's and Wu's styles is a basic one also for sculpture." It should be noted first of all that Ts'ao Chung-ta is invariably described as an artist from the "western countries," perhaps from Samarkand, who flourished in Northern Ch'i times (550–77). It is apparent that his style derived from the semiclassical school of Gandhara. The descriptions of his drapery formula completely fit the type of clinging garment, with the folds of the robe defined in multiple parallel lines, that is encountered in many examples of T'ang Buddhist sculpture and in painting as well. The Ts'ao style may be recognized in many statues of Central Asian or Gandharan types at Yün-kang and in many steles and gilt bronzes of Six Dynasties and early T'ang date.

The clue to understanding Wu Tao-tzŭ's dynamic drapery style is to be sought in various formulas already developed in Six Dynasties art; a notable illustration would be the panels of flying apsarases formerly decorating the Six Dynasties caves at T'ien-lung-shan (most of them now in Cambridge, Mass., Fogg Art Mus.). In these reliefs the figures themselves appear almost bodiless, so involved are they in the blustery rhythms of their scarves. The long sweeping lines of their movement are repeated in echoing curvilinear shapes that admirably suggest the gossamer flight of ethereal spirits. Both design and movement clearly anticipate the Wu style as seen in the engraving of the flying devil. A somewhat similar suggestion of weightless elegance is present in many of the figures in Ku K'ai-chih's scroll of *The Admonitions of the Instructress to the Court Ladies* (III, PL. 235; VIII, PLS. 406, 407). In these Six Dynasties examples the line is completely even and controlled throughout its length. This kind of drawing was transformed by Wu Tao-tzŭ to convey an impression of dynamic vitality through variations in the thickness of individual lines and through the tremendous sweep and power of the brush itself.

YAMATO-E. The name of an ancient Japanese province (mod. prefecture of Nara), later applied to the whole of Japan, Yamato provides the designation for a particular style of Japanese painting called Yamato-e. The Yamato-e school was bound up with the aristocratic class and flourished especially in the middle of the Heian period (i.e., ca. 894–994). It represents one of the most original and authentic aspects of Japanese art (q.v.) — which is indebted in most cases to China and Korea — precisely because it was directly inspired in its themes and modes of expression by the sensitivity and the forms of Japanese life.

SUMMARY. Historical evolution of the Kara-e and Yamato-e styles (col. 874). Essence and characteristics of Yamato-e (col. 876). Yamato-e and illustration: *emakimono* (col. 877). Masters and masterpieces of Yamato-e (col. 878). Yamato-e in relation to succeeding styles (col. 879).

HISTORICAL EVOLUTION OF THE KARA-E AND YAMATO-E STYLES. About A.D. 300 an independent state, generally designated by historians the Yamato government, was formed in the territory of Yamato (the administrative district equivalent to mod. Nara) with a federal type of control under the predominant authority of the Tennō (the present ruling house). For some time the influence of the Chinese civilization of the Han (206 B.C.–A.D. 221) had been manifest in Japan, but in a sporadic and intermittent manner. The Japanese invasion of Korea in A.D. 369 had as one of its effects the importation into Japanese territory of Korean culture, close in character to that of China under the Han and the Six Dynasties (220–589), when Korea was subject to China (see CHINESE ART; KOREAN ART). Later, as a result of the progressive diplomatic and cultural contacts between the archipelago and the mainland, the forms of Chinese civilization were introduced continuously. In 552 the Korean kingdom of Paekche sent sacred texts and images appertaining to Buddhism (q.v.) to the Yamato government. The newly introduced faith, based on ideological unity with the state, was systematically organized as the national religion. The state of Yamato, which was undergoing constitutional changes, being converted from a federal regime to a rule with the power concentrated in the hands of a single sovereign, welcomed the new religion and the political ideology comprehended in it. Subsequently the Yamato sovereigns invited Korean monks and craftsmen to settle in Japan, and Chinese emigrants were also well received. In 594 the prince regent, Shōtoku (572–621), promulgated in the name of Empress Suiko (593–628) an edict protecting and propagating the Buddhist faith. Shōtoku was responsible for numerous religious establishments, the most famous being the Hōryūji near Nara. He did everything in his power to encourage the rapid diffusion of Buddhism; following his example, the nobles of the country were converted to Buddhism and vied with each other in the construction of temples and of large and small sanctuaries. This development was accompanied by the spread of religious art inspired by that of China of the Six Dynasties and of the Sui dynasty (581–618). As a result, Yamato and the surrounding area were filled with images from the Buddhist pantheon.

Japanese painting before the introduction of the culture and art of the mainland had been divided into two branches: painted terra-cotta surfaces (see CERAMICS), often decorated with abstract motifs, and wall paintings in tombs. Both types, however, fall into the category of primitive and, so to speak, folkloristic art, since Japan, before contact with the mainland civilization began, did not possess concepts or works that relate to painting in the broad sense. In the years 645–46 Japan succeeded in realizing the administrative improvements known as the Taikwa Reforms and in strengthening the central power of the emperor through the adoption of institutions in operation

in China during the T'ang period (610–966). The union between the state and Buddhism became increasingly strong; the devotion of the sovereigns and the aristocratic class to the Buddha became ever more fervent, and consequently a great number of temples and sanctuaries were constructed in Nara and in other centers throughout the country. Many monks, scholars, and skilled artisans went to Korea and T'ang China to obtain direct knowledge of the continental civilization and also maintained continuous contact with the representatives of the local culture. Thus began a period of imitation and assimilation of foreign civilization, a phenomenon that has remained characteristic of the development of Japanese thought. At first, then, Japanese Buddhist painting was no more than an imitation of Chinese examples.

Even after the establishment of the centralized power in the year 645, no permanent capital was created, in deference to an old Japanese custom that required each new sovereign to change the seat of government. However, in 694 the empress regent Jitō founded a large city, Fujiwara, on the outskirts of the modern city of Nara, and in 710 the empress Gemmyō founded Heijō, another large city, with a palace and numerous religious establishments, which developed into modern Nara. The plan of Heijō, in imitation of that of Ch'ang-an, capital of the T'ang (III, FIG. 454), was rectangular and divided into square sections (VIII, FIG. 813). With Heijō, which contained magnificent palaces, temples, and dwellings, there emerged for the first time in Japan a capital whose planning reflected its function. Almost nothing survives of the ancient monuments, but it appears that a *kōdō* (lecture hall) of the Tōshōdaiji of Nara formed part of Heijō's palace, the plan of which was based on the palace of Ch'ang-an, though it was entirely constructed of wood.

All court ceremonial was borrowed from T'ang China, as was the style of furniture and decoration in general, and even objects of continental origin were used. The decoration of interiors also reflected T'ang styles. In that epoch the art of painting in China had indeed reached very advanced levels through the works of artists of high quality. The painters of Yamato adhered to large dimensions in the works executed for the court, which comprised mural paintings; *byōbu*, or folding screens; and *tsuitate*, or single-paneled screens (see FURNITURE; HOUSEHOLD OBJECTS). The subjects of these paintings may be divided into three categories: portraits of sovereigns, important personages, and worshipers; landscapes with streams and mountains (*sansui-ga*); and didactic paintings inspired by Confucianism and Taoism (qq.v.). The secular subjects depicted in the Heijō palaces represented a very different type from the Buddhist paintings that decorated the temples and sanctuaries of the Asuka (552–644) and Nara (645–793) periods, since by the 8th century Japan had acquired the concept of two sources of pictorial inspiration, the religious and the secular. Typical examples of the former are to be found in the frescoes of the Kondō, the main or Golden Hall, of the Hōryūji, and of the latter in the screens of the Shōsōin of the Tōdaiji.

In 794 the seat of government was transferred from Nara to Heian-kyō ("Capital of Peace and Tranquillity"; mod. Kyoto), which was also built in Chinese fashion on a rectangular plan divided into square sections (VIII, FIG. 818). Whereas Buddhist culture continued to be inspired by that of China, the way of life of the court and of the aristocracy was assuming a national character. The reason for this is to be found not only in the changing political, economic, and social conditions but also in the changes in taste and in the creation of a typically Japanese architectural style, the *shinden-zukuri*, in accordance with which buildings were composed of various rooms divided from one another by sliding doors (*fusuma*), folding screens (*byōbu*), and cedarwood partitions (*sugi-to*). Also the paintings were adapted to the new architectural concept. In other words, in contrast with the earlier style, of Chinese inspiration, the art of painting came to reflect, in subject matter and style, the peculiarities of the Japanese taste and culture. The new orientation is increasingly apparent in the secular subjects and landscapes during the course of the 10th and 11th centuries, though generally speaking the style follows the T'ang tradition. The new themes, of course, demanded original expression, and consequently it is possible after the 10th century to distinguish two styles of painting: Kara-e (Chinese-style painting) and Yamato-e (national painting).

ESSENCE AND CHARACTERISTICS OF YAMATO-E. During the Nara period the China of the T'ang was known in Japanese as Kara, and all objects imported from the mainland were designated with that name used as an adjectival prefix (e.g., *karabitsu*, Chinese casket; *karakami*, Chinese paper). (The artistic term Kara-e was not yet in use, since all the paintings of the period were painted in the Chinese style.) On the other hand, just as the Chinese designated Japanese things with the prefix *wa* (from the Chinese pronunciation of the Japanese ideogram for Yamato), so, in Japan, the adjectival prefix *yamato* was used to distinguish Japanese from Chinese objects (e.g., *yamato-bitsu*, Japanese casket). After the 10th century, following the crystallization of the national style, the artistic term Yamato-e came into use, the first evidence being found in an entry of Oct. 30, 999, in the diary (*Gonki*) written by Fujiwara-no-Yukinari (972–1027), a master calligrapher and high dignitary of the court. It can thus be concluded that the origin of Yamato-e dates to the beginning of the 10th century. There are a few documents indicating that such artists as Kose-no-Kanaoka (fl. 850–80) and Kose-no-Omi (active 899) painted large-size portraits and landscapes for the royal palaces and the dwellings of the aristocracy in a style very different from the traditional Kara-e. These artists should therefore be regarded as the founders of Yamato-e.

Thus the shaping of the Yamato-e trend began in aristocratic circles, whose official and private life it portrayed. Consequently Yamato-e had a markedly aristocratic character since it fulfilled the decorative requirements of that milieu with large paintings for royal palaces and smaller paintings for *byōbu* and *fusuma* (necessities of the official ceremonies and private banquets) depicting the life and customs of the nobility. The aristocrats of the time, who generally held the high civic offices, numbered among their favorite pastimes attendance in gala dress at court ceremonies, visiting Buddhist and Shinto temples (see SHINTOISM), making journeys to famous sites to admire the view, and, lastly, gathering in groups to read Chinese poems or to compete in the writing of the Japanese poems known as *waka*. All the meetings and ceremonies had fixed dates coinciding with the changes of the seasons, which they represented symbolically. Yamato-e portrayed these various aspects of life and their sometimes elusive manifestations in splendid epical and lyrical interpretations. Unfortunately almost all the larger paintings are lost, but from the evidence of the few extant documents the existence of four thematic series can be deduced: *shiki-e* (paintings of the four seasons), also called *tsukinami-e* (paintings of the months), representing festive scenes in the various months; *meishō-e* (paintings of famous places), representing well-known monuments and beautiful landscapes with mountains, rivers, seas, and plains; paintings of traditional and genre scenes; and commemorative portraits.

Of these series of paintings the most important was the *shiki-e*, whose theme was the source of inspiration for the greater number of paintings and, in general, for those of higher esthetic merit. It can be said, then, that the principal current of Yamato-e in the Heian period was connected with the representation of landscapes and the seasonal aspects of nature. After having asserted itself in large-size works, Yamato-e entered upon a new phase toward the beginning of the 11th century with the appearance of paintings of smaller dimensions and different form: the painted scrolls known as *emakimono*.

The painted partitions and sliding screens of the Heian period are of various sizes. A *byōbu* usually consisted of six panels of silk stretched on wooden frames, the measurements of each panel varying between a maximum of about 8 ft. in height and 4 ft. in width and a minimum of about 4 ft. in height and 2 ft. in width (VIII, PL. 277). These paneled screens could be folded vertically. A *fusuma* was usually composed of four single elements whose measurements corresponded more or less to those of the *byōbu* panels. The *byōbu* were painted on

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

one side only, whereas the *fusuma* were painted on both. Although they were made up of separate panels, both the *byōbu* and the *fusuma* could be painted with compositions covering the whole surface, scenes with numerous figures and rich in detail. In the case of the Kara-e style, the Japanese painters referred to Chinese models, not having direct knowledge of the places represented. In contrast, the Yamato-e painters depicted subjects that fell under their direct observation and interpreted them in a free and personal manner in accordance with their first-hand experience. Hence the Yamato-e style, being capable of evoking immediate echoes and the feeling of an ambience, gradually superseded the Kara-e style, tied as it was to established and traditional themes.

An idea of the primitive phase of Yamato-e may be gained from the fragments of mural paintings dating from 1053 in the Hōōdō (Phoenix Hall) of the Byōdōin in Kyoto. The subject represented — Amida Raigō, or the descent of Amitābha and his assistants to receive the souls of the dying — is a traditional theme of Kara-e painting. Here, however, a landscape is depicted in the background, with figures in costumes characteristic of the Yamato region and following the style common to *byōbu* and *fusuma* painting. Another painting of the same subject, dating from about 1100, in the Kongōbuji (prefecture of Wakayama) also has a landscape background rendered in a realistic and detailed style.

In any case, all the large-size paintings were inspired by literary taste, in whose orbit the various themes of Yamato-e paintings had been expressed. The poetic form of the *waka* had always held a prominent place in the history of Japanese literature from the Nara period onward, and it was in full flower in the Heian period. Nobles and court ladies vied in writing poems, and with excellent results, particularly in this type of composition, the subjects of which coincided with those of Yamato-e. It could even be said that this artistic current constituted a kind of illustration of *waka* poetry, and often verses in beautiful calligraphy, expressing the same themes as the paintings, were transcribed onto *byōbu* and *fusuma*. This fusion of painting and literature, of painterly and calligraphic elements, constitutes one of the most original aspects of Yamato-e.

Yamato-e and illustration: emakimono. Beginning in the 10th century, a new literary genre came into existence in Japan: the *monogatari*. At first these tales followed Chinese prototypes, as in the *Taketori Monogatari* (*The Tale of the Bamboo-cutter*). In the course of time, however, the narrative became more developed in both style and form and assumed an altogether national character, achieving its most evolved expression in 1006, in the novel *Genji Monogatari* (*The Tale of Genji*) by Murasaki Shikibu, a lady-in-waiting to the empress. The novel was, in fact, the form preferred by court ladies. After the 11th century, the illustrations of these novels were executed in the Yamato-e style, thus giving rise to a new trend, the *monogatari-e*, with illustrations in the text; these fall into two groups, the *emakimono*, or horizontal scrolls with alternating text and illustrations, and the *toji-hon*, or bound volumes. In both types the texts were written in a calligraphic style known as *kusa-kana*, or *sōgana*, which was in vogue at that time, especially with women. In the Yamato-e paintings this script was preferred for its symbolic and sensitive expression.

Contemporaneously with the beginnings of the novel other literary forms developed in religious circles: the *engi*, which was a sort of legend about the origins of Buddhist sanctuaries, and the *reigen-ki*, legends and miracles of the Buddhist divinities or sainted monks. The prototypes of the *engi* may be found in the writings in Chinese characters of the Nara period, but the *engi* of the Heian period were written in Japanese characters. The production of illustrated *engi* underwent a notable increase as a result of the spread of the Buddhist cult, and in the Heian period both the *monogatari* and the *engi* were written and illustrated in *emakimono* as well as in *toji-hon*; however, the former were predominant in number and in quality. Among the painted scrolls of the period the most famous are the *Genji Monogatari Emaki* in the Tokugawa Art Museum, Nagoya, and the *Shigisan Engi Emaki* (History of Shigisan) in the Chōgosonshiji, prefecture of Nara.

In summary it may be said that the Yamato-e style, originally employed for works of large dimensions, gradually became adapted to the vogue for small illustrations of novels and sacred legends (pl. 444). On the other hand, whereas the production of *byōbu* and *fusuma* had a fundamentally practical purpose, which rendered them easily subject to deterioration, the small paintings were ends in themselves, and for this reason they present the most genuine esthetic expression of the new Japanese style of painting. Lastly, it should be noted that this style, deeply influenced by literary motifs, was to be closely bound, not only in its initial phase but also at the height of its development, to the evolution of literature.

Masters and masterpieces of Yamato-e. In the Nara period the state administration included an office known as the Edakumi-no-tsukasa, which was in charge of the work of painters; the artists thus executed works at court or in temples under the aegis and the jurisdiction of the government. In the Heian period the state administration abandoned the tutelage of the religious organizations, and Buddhism ceased to be the state religion. Consequently, all the temples were obliged to look to the aristocratic families and to the faithful for protection.

In the year 808 the former government office for artists was replaced by a systematically organized imperial artists' bureau known as the E-dokoro. The painters who were under the jurisdiction of the E-dokoro put their art exclusively at the disposal of the imperial court. It is in fact the imperial court artists Kose-no-Kanaoka, active in the latter half of the 9th century, and his son Kose-no-Omi, active at the turn of the century, who can be regarded as the founders of Yamato-e. About the middle of the 10th century other imperial court artists — Kose-no-Kintada, Kose-no-Kimmochi, Kose-no-Hirotaka, and Asukabe-no-Tsunenori — elaborated and refined the new style, which owed its formation mostly to the Kose family.

In the 11th century, as a result of the increasing economic and political power of the aristocracy, the demand for paintings steadily enlarged, paralleled by an increase in the number of Yamato-e artists. (However, accounts dealing with these artists are very scarce, since virtually all documents have disappeared.) On the other hand, from the 11th century on, since knowledge of *waka* art was indispensable to participation in court life, the ability to paint became imperative for officials and aristocrats. These amateur painters had to acquire a style and a refined technique so that their works might be appreciated in court circles. The 12th century was the golden age of the aristocracy, and their taste for luxury and splendor inspired the Yamato-e artists to decorative effects marked by brilliant colors and extremely delicate design. An outstanding example of this trend is provided by the elegant and harmonious Heike-nō-kyō scrolls, a sacred manuscript bequeathed by the Taira family to the Shinto temple of Itsukushima, Hiroshima (pl. 445). Among the outstanding artists of this period mention should be made of Fujiwara-no-Takayoshi (first half of the 12th cent.), also a government official, who is credited with the scroll of the *Genji Monogatari* mentioned above. In contrast with Yamato-e, which was at the height of its flowering, Kara-e was gradually reduced to a more limited and traditional use, as a result of which the name ultimately amounted to no more than a term to indicate Chinese subjects.

During the Kamakura period (1185–1333), which was dominated by the military power of the Minamoto clan, the political and economic power of the aristocracy waned, and consequently Yamato-e painting, which flourished in the circles of the court and the great families, underwent a caesura, especially in the production of monumental works. A *sansui byōbu* (landscape screen) in the Jingoji in Kyoto (pl. 447) is the sole surviving large work of this period; it is a simple stylistic imitation of landscape painting of the Heian period.

The small *emaki* paintings, on the contrary, branched out in different directions, and it is above all in the sphere of this form of painting that the art of portraiture unfolded. Scrolls

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

and portraits are therefore the salient expressions of Yamato-e in the Kamakura period. Again, the illustrated novel was the favorite form. Examples may be divided into various categories according to themes. In one category are the romances intended for a feminine public, such as the *Murasaki Shikibu Nikki Emaki* (*Illustrated Scroll of the Diary of Lady Murasaki*, Tokyo, Coll. Hachisuka Masauji) and the *Nayotake Monogatari Emaki* (*Scroll of the Tale of Nayotake*). A second category comprises war stories: such are the *Heiji Monogatari Emaki* (*Scroll of the Tale of Heiji*), dating from the beginning of the Kamakura period, of which the three surviving scrolls from the original set are in Tokyo (Nat. Mus. and Seika-dō Foundation) and Boston (Mus. of Fine Arts; VIII, PL. 258); the *Mōkō Shūrai Emaki* (*Scroll of the Invasion of the Mongols*), dating from the end of the period, in Tokyo (Imperial Palace), and the *Gosannen Kassen Emaki* (*Scroll of the History of the Battle of Gosannen*), also dating from the end of the period, in Tokyo (Nat. Mus.). A third category includes legends of famous people and saints — among these is the *Saigyō Monogatari Emaki* (*Scroll of the Life of Saigyō*), dating from the middle of the period, in Tokyo (Nat. Mus.).

A fourth and last category takes in works of a religious character. At the beginning of the Kamakura period the government was engaged in the revival of Buddhism and the restoration of temples of the Nara period, and consequently religious works became more numerous. Belonging to this last group are the *Kegon-shu Soshi Emaki* (*Scroll of the Life of the Founders of the Kegon Sect*), of the early Kamakura period, in Kyoto (Kōzanji), and the *Taima Mandara Emaki* (*Scroll of the Mandala of Taima*), in Kamakura (Kōmyōji). A new Buddhist sect, the Jōdo-shū, arose during the Kamakura period and had considerable success. Excellent works, whose content concerns this sect, are the *Hōnen Shōnin E-den Emaki* (*Scroll of the Life of the Monk Hōnen*), in Tokyo (Nat. Mus.), Kyoto (Chionin), and Taima, Nara prefecture (Taimaji); the *Shinran Emaki* (*Scroll of the Life of the Monk Shinran*), dating from the middle of the period, in Kyoto (Honganji); and the *Ippen Shōnin E-den Emaki* (*Scroll of the Life of the Monk Ippen*; VIII, PL. 298), painted by the imperial court artist Eni toward the close of the period. In the meantime, Shintoism had also reached a certain level of theoretical systematization, and many *emakimono* were produced in the orbit of this religion; an example is the *Kitano Tenjin Engi Emaki* (*Scroll of the Legend of the Origin of the Kitano Shrine*), dating from the middle Kamakura period and still in the Kitano Shrine (PL. 448).

The tendency to commemorate and venerate famous persons — sovereigns, aristocrats, monks, warriors, and scholars — inevitably fostered the development of portraiture (q.v.). A certain trend in this direction had already been discernible in the Heian period, although it was generally confined within schematic and conventional limits. In the Kamakura period, however, portraiture succeeded in capturing and delineating realistically the expression of the individual. As excellent examples of this genre may be cited the portraits of Minamoto Yoritomo, founder of the military government (XI, PL. 229), and Taira-no-Shigemori, the former painting probably and the latter definitely by Fujiwara-no-Takanobu (1142–1205); both portraits are in the Jingoji in Kyoto, as is a presumed portrait of Fujiwara Mitsuyoshi attributed to the same artist (VIII, PL. 290). The son of Takanobu, Fujiwara-no-Nobuzane (1176–1265; PLS. 447, 448; VIII, PL. 304), painted a remarkable portrait of the emperor Gotoba (Osaka prefecture, Minase Shrine). The abundant production of portraits and scrolls in the Kamakura period confirms what has been said — that in this period Yamato-e found its finest expression in paintings of small dimensions (PLS. 446–450).

YAMATO-E IN RELATION TO SUCCEEDING STYLES. During the Muromachi period (1334–1573), when the government was dependent chiefly on the military class, the aristocracy became less vigorous, and Yamato-e art, whose development had always been bound up with the life and the milieu of the aristocracy, followed it in its decline. This process was accentuated by the introduction into Japan of Chinese ink painting of the Sung (960–1279) and Yuan (1260–1368) periods, which appealed to the taste of the ruling military class. Moreover, beginning in the 15th century, with Fujiwara-no-Yukihiro (d. ca. 1434), the position of chief artist of the E-dokoro, which previously had always been held by artists of superior ability, assumed a hereditary character that took no account of the merit of the individual painter. Yukihiro had a double surname, Fujiwara and Tosa, and the latter gradually came to be used by the artists of the family (see TOSA SCHOOL). As imperial court artists the Tosa masters acquired various privileges in artistic and social matters that were not granted to other Yamato-e painters. It was Tosa Mitsunobu (1434–1525), one of the finest painters of the family, who founded the so-styled Tosa school (PL. 450). Despite a period of decline in the Momoyama period (1573–1615), the school succeeded in achieving a position of preeminence in the Edo period (1615–1867), primarily through the activity of Tosa Mitsuoki (1617–91).

In the later development of Yamato-e art, especially after Mitsunobu, it acquired an increasingly formal and conventional character. Furthermore, from the Momoyama period on it progressively absorbed influences from the new Kanō school (q.v.) founded by Kanō Masanobu (VIII, PL. 351) at the end of the Muromachi period. Finally, the style and colorism of Yamato-e were absorbed into the manner of another Kanō artist, Motonobu (1476–1559; VIII, PLS. 313, 359), whence they passed into the "grand manner" of the Kanō school, whose magnificent and solemn decorative style was preferred by members of the military class for their houses and castles. In the Meiji period (1868–1912) the Tosa family disappeared and Yamato-e art itself, although still practiced by a few painters, slowly drew to a close. Although no Japanese artists currently follow this style, its tradition, which modern criticism is reevaluating from various points of view, has been absorbed into contemporary painting.

YEN LI-PÊN. The greatest and most famous of the master painters of the early T'ang dynasty (618–906), Yen Li-pên (b. ca. 600; d. 673) was the son of Yen Pi, a Sui dynasty (589–618) official, painter, and calligrapher, and the younger brother of Yen Li-tê, an almost equally renowned official and painter who died in 656 after attaining the high ranks of Grand Architect and President of the Board of Works. As early as 626 Yen Li-pên was commissioned by the future emperor T'ai-tsung, then Prince of Ch'in, to paint a picture of the 18 scholars who had gathered at the Ch'in palace in 621. In 635 he was requested by T'ai-tsung to paint a picture of a Sogdian lion that had been presented in tribute to the Emperor, and in 643 he was assigned to paint the official portraits of 24 meritorious officials for the *Ling-yen-ko*, "Hall of Fame" in the imperial gallery.

Probably soon after his brother's death he was appointed to that late official's positions, advancing even higher to become in 668 Chief Minister of the Right, one of the two ministers

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

of state. When he died in 673 he was given the posthumous title *Wên-chên*, or "True Scholar." In view of this career of official and scholarly success, the famous and oft-repeated anecdote ending in the lines "yet I am known only by painting, as if I were a menial" is properly suspect and was doubted as early as the *Li-tai ming-hua chi* (*A Record of the Famous Painters of All the Dynasties*) of Chang Yen-yüan, finished in 1847.

Yen was famous not only for portraits but also for his paintings of Buddhist and Taoist subjects — about half of the paintings attributed to him in the *Hsüan-ho hua-p'u*, the catalogue of the collection of the Northern Sung emperor Hui-tsung, are Buddhist — and for paintings showing barbarians from tributary and foreign regions. He was ranked by his sovereign as having divine power as an artist — the highest possible praise. If this information were all that was available, however, critics would be in no better position with regard to Yen Li-pên's painting than they are with so many of the early and almost legendary artists of China's greatest period of figure painting. Fortunately, however, there are at least two monuments that give some idea of Yen Li-pên's artistic character and greatness: the stone reliefs of the *Six Horses* from the tomb of T'ai-tsung in Chao-ling (two now in Philadelphia, Univ. Mus.; four in Sian, Shensi Provincial Mus.) and the *Scroll of the Emperors*, now in Boston (Mus. of Fine Arts).

The *Six Horses* (PL. 452), according to an already old tradition first recorded in 1089 by Yu Shih-hsiung on a stone tablet at Chao-ling, were carved in moderately low relief from designs by Yen Li-pên. The T'ai-tsung reign date of the sculptures cannot reasonably be doubted, and the fact that the artist himself was also buried at Chao-ling is further evidence of the likelihood of Yen's authorship for this imperial commission. The six horses are, in their original order: Ch'ing-chui, a piebald; Shih-fa-ch'ih, a brick-red horse; T'ê-lo-piao, the charger Teghin; Sa-lu-tzû, a bay called "Whirlwind Victory"; Ch'üan-mao-kua, a saffron horse called "Curly"; Pai-t'i-wu, a black horse called "White-hoofed Crow." They are shown against a plain flat background framed within a rectangular recess, their simple and massively sculptured forms rigidly parallel to the frontal plane, and are alone except in the fourth relief, in which a warrior in padded armor is shown removing arrows from Whirlwind Victory (PL. 452). The figures were designed with a unity of silhouette, modeling, and detail that reveals a truly monumental talent.

The genius of design that is evident in these reliefs is to be found to an even higher and subtler degree in the hand scroll in Boston (PL. 451; VII, PL. 256; X, PL. 492). Representing 13 emperors who reigned from the Western Han dynasty (206 B.C.–A.D. 9) to the Sui dynasty, the hand scroll has a reasonably well-documented history from at least 1060 and probably from before 1000, depending on the reading of the cyclical date *Kêng-tsŭ* in the first and oldest inscription following the painting in the scroll. The first six portrait groups (VII, PL. 256) are justly considered to be early (perhaps Northern Sung period, 960–1127) replacements of the damaged originals. The last seven emperors and their attendants (PL. 451; X, PL. 492) are so fine in quality, so unlike any later figure painting, and so congruent in tone and power with the *Six Horses* of T'ai-tsung's tomb that even if they were not actually executed by Yen Li-pên they more than adequately represent his art at its peak. The individual groups, although distinct and monumental, are in an easy relationship with one another. The almost wirelike line that precisely defines contours, turns of the heads, and the fall and movement of the drapery is augmented by an even, sparingly used shading, particularly evident in the drapery, which adds sculptural form to the indicated volumes and attests to Central Asian and, ultimately, Indian and Sassanian influences. The accomplished handling of the limited space between the groups, strictly excluding any indication of setting or depth beyond the ideally conceived figure groups; the limited use of color — white, red, and black, with touches of yellow-green and mauve; and the archaic use of a large scale for the emperors and a diminished scale for the attendants: all these result in an uncompromisingly grand, dignified, and powerful expression that is in keeping with the tone of early T'ang culture.

Other important copies after Yen Li-pên include the scroll *Tribute Bearers from Western Countries* (Taichung, Taiwan, Palace Coll.); subject types only: *Scholars Collating Texts* (Boston, Mus. of Fine Arts); composition only, and that according to a 12th-century colophon; and the *Emperor T'ai-tsung Borne in a Palanquin* (*Pu-nien-t'u*; Peking, Palace Mus.), known to the author only from a reproduction, but perhaps very close to the work of Yen Li-pên.

YUGOSLAVIA. The Federal People's Republic of Yugoslavia (Federativna Narodna Republika Jugoslavija), which comprises the republics of Slovenia, Croatia, Bosnia-Herzegovina, Serbia (with the autonomous regions of Vojvodina and Kosovo-Metohija), Montenegro, and Macedonia, was proclaimed in 1945 and occupies the Slavic territories that, having as their nuclei the kingdoms of Serbia and Montenegro, declared their independence in 1918 after the dissolution of the Austro-Hungarian and Turkish empires; later, parts of Dalmatia and Istria were added. Yugoslavia occupies the northwestern area of the Balkan Peninsula, situated between the Adriatic Sea and the Danube Valley (only Vojvodina extends to the north of the Danube). Highly developed ever since prehistoric times, this area, which to a great extent is identical with the former Illyria (Illyricum, or Dalmatia), shows signs of several civilizations: Greek, Roman, Byzantine, medieval Slavic, Turkish (in the south), Venetian (along the coast), and recent Central European (especially in the north). From its important popular traditions Yugoslavia is developing ever more clearly national cultural and artistic characteristics.

SUMMARY. Historical background (col. 882). Cultural and artistic phases (col. 883). *Prehistory and protohistory; Greco-Roman period; The Middle Ages; Art from the 13th century to the present: a. Slovenia; b. Croatia; c. Dalmatia; d. Bosnia-Herzegovina; e. Serbia and Macedonia; The contemporary epoch and the growth of national art; Folk art.* Art centers (col. 899): *Slovenia; Croatia; Bosnia-Herzegovina; Serbia; Montenegro; Macedonia.*

HISTORICAL BACKGROUND. Since prehistoric times the territory of the present state of Yugoslavia has been a border and transit area in which political interests and different civilizations have intersected and intermingled. The boundary between the Greek and Latin languages within the Roman Empire cut the area of present Yugoslavia into two almost equal parts. The same division continued through the Middle Ages. When the Slavs arrived on the Balkan Peninsula in the 6th century, tribes with a primitive civilization invaded the territory and occupied the area from the eastern Alps to the Adriatic Sea, the Peloponnesos, and Thrace. After Christianity was adopted,

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

the dualism deepened, with missionaries from both Byzantium and Rome, which during the Middle Ages opposed each other strongly. The borderline between the Eastern and Western churches of medieval Europe fluctuated for centuries as it ran through the chaotic and unstable province of Bosnia, which as a "no man's land" became the center and refuge of the Bogomiles, a Balkan sect of the Patarines.

The stormy history of the Yugoslav peoples became still more complicated when the Turks invaded Europe. The Turkish wars lasted from the end of the 14th century to 1912, during which period especially the southeastern parts of present-day Yugoslavia suffered.

Federal People's Republic of Yugoslavia. *Key*: (1) Modern political boundaries; (2) boundaries of the republics; (3) boundaries of the autonomous territories of the Republic of Serbia.

The Yugoslav peoples, who were oriented in different directions and subjected to unequal conditions of historical evolution, developed entirely different patterns of artistic culture through the Middle Ages and modern times, up to the first decade of the 19th century. The intense and varying historical currents to which the Balkan Peninsula was exposed have greatly influenced the arts. In the Middle Ages the territories of the present republics of Slovenia and Croatia, and to a certain extent Montenegro, followed the artistic currents of Western Europe. Bosnia had from the 13th to the end of the 15th century its own — although primitive — local art, while the remaining districts of the republics of Serbia and Macedonia and parts of Montenegro fell within the area of Byzantine and post-Byzantine art, up to the end of the 17th century. Even baroque art on Yugoslavic territory was divided into two groups without contacts with each other though often living side by side. Thus in the 18th century there were in the northern, Catholic province of Croatia both domestic artists and foreigners of Italian and Austrian origin, while Serbian baroque — even in Croatia — leaning almost exclusively on the Russian Orthodox variation of the baroque, developed in the monasteries of the remote city of Kiev.

CULTURAL AND ARTISTIC PHASES. *Prehistory and protohistory.* The evidences of Stone Age industry in Yugoslavia go back to the Upper Paleolithic period. Although several stations from the Lower Paleolithic period have been found, those from the Mesolithic period are few. During the Neolithic period Yugoslavia must have been fairly densely populated; household and agricultural utensils and weapons have been found. The stations of the Starčevo group (the stations of Starčevo, where the Sava joins the Danube, the present site of Belgrade; Bubanj, near Niš; Čoka, near Subotica; and others in the neighborhood) date from the earliest Neolithic period, while other Neolithic settlements around Vinča, close to Belgrade, are more recent. Another group comprises the stations of Butmir, near Sarajevo, in Bosnia; Nebo, near Travnik; and Donji Klakar, near Brod, where the Bosna joins the Sava. The caves of Grabak, Pokrivenik, and Markova, on the island of Hvar, are probably Neolithic. Other Neolithic finds were made in the islands of Korčula and Lastovo; at Danilo, not far from Šibenik; and in the cave called Crvena Stijena, in Montenegro. From the Bronze Age are the large stations of Sarvaš, near Osijek, and Vučedol, near Vukovar, both in Slavonia, and Ljubljansko Barje, near Ljubljana. Besides the settlements already mentioned, which have furnished vast and rich material, many other smaller ones have been found both from the Neolithic period and from the Bronze Age. Especially important is the pottery, because of the variety of forms (dishes, bowls, amphorae, etc.) and because of the splendid colors and the quality of design: painted pottery from Starčevo and Vinča, in the Narodni Muzej (Nat. Mus.), Belgrade; the pieces found in the caves of Grabak, Pokrivenik, and Markova, in the Arheološki Muzej (Archaeol. Mus.), Zagreb, and in the G. Novak Collection, Hvar; the spiral-decorated pottery from Butmir, in the Zemaljski Muzej, Sarajevo; the painted pottery from Danilo, in the Muzej Grada Šibenika (City Historical Mus.), Šibenik; the carved Bronze Age pottery from Ljubljansko Barje, in the Narodni Muzej, Ljubljana; the "Slavonian" pottery in the Slavonian Museum, Osijek. There are also many sculptures, such as the figures found at Vinča and Butmir.

It is to be presumed that at least from the beginning of the Bronze Age Indo-European peoples, such as the Greeks, the Thracians, and the Illyrians, were present within the territory of Yugoslavia. The Greeks did not linger on but went on to the south; but the Thracians in the east and the Illyrians to the west invaded the northwestern Balkan Peninsula and introduced the Bronze Age civilization.

Few Bronze Age settlements have been studied systematically, but everywhere in Yugoslavia bronze utensils, weapons, and ornaments, often of excellent quality, have been found (IX, PL. 503). Among the settlements may be mentioned Vattina, near Vršac, in Vojvodina, and Žuto Brdo and Dubravica, in Serbia, near the Danube. Pottery was used only for household purposes; the sacred objects, as well as the more important utensils, were of metal, generally bronze. Very beautiful are the small terra-cotta statues from Kličevac, Vršac, and Bapska. The fortified sites found along the Adriatic coast, from the Tršcanki (Gulf of Trieste) to the Boka Kotorska (Kotor Strait), belong in part to the Bronze Age, in part to a later epoch.

The Iron Age in Yugoslavia has local subdivisions; its first period extended from about 1000 B.C. to 400 B.C. and the second from 400 B.C. onward. It has left numerous traces, not only metal objects (weapons, utensils, ornaments, small statues, etc.) and pottery but also architectural remains. On the Glasinac Plateau, a few miles east of Sarajevo, thousands of tombs from the first period have been discovered; in fact, it is possible to speak of a "Glasinac culture," extending from the Adriatic to the Morava River and from the Sava to Montenegro. The material found, which is rich and plentiful, is kept in the Narodni Muzej, Sarajevo.

During the first half of the 14th century B.C. the Celts invaded the territory of Yugoslavia, spreading gradually to Bosnia and Serbia and occupying Slovenia, parts of Croatia, and the northern parts of Bosnia and Dalmatia. They brought with them the La Tène civilization and, mixing with the Illyrians and Thracians, gave a special character to the Iron Age civilization. The Celts founded Siscia (mod. Sisak), Singidunum (mod. Belgrade), and many other towns.

There is evidence of trade between the Yugoslavic Adriatic coast and the Mediterranean area and Central Europe during the Neolithic period and the Bronze Age. The relations between the Aegean, Ionian, and Adriatic coasts, and especially between the coasts of the Balkan and Italian peninsulas, is exemplified in the finds made on the island of Hvar: the beautiful ceramics from Ripoli have been found not only on that island but also at Danilo; and there can consequently be no doubt as to the existence of a vast Neolithic cultural circle including the Aegean, Sicily, the Liparis, southern Italy, and the Dalmatian coast. In the Neolithic period, or at any rate during the Bronze Age, reference may already be made to the "Amber Road," which passed through the Tršcanki or Rijeka (Fiume) and, touching the island of Hvar, passed through the Straits of Otranto, to arrive in Greece and Sicily.

Trade continued throughout the Bronze and Iron ages, as can be seen, for instance, from the finds on the island of Hvar. From the coasts the trading routes followed the valleys of the rivers, especially the Neretva, and reached the centers of Bosnia, Slovenia, and Croatia. Furthermore, from the Neolithic period until the late Iron Age there were trade contacts also with Austria, Hungary, Bulgaria, and Greece, resulting in wide cultural exchanges: Etruscan helmets have been found on the Glasinac Plateau; Atestine vases at Vače, in Slovenia; Greek weapons in Bosnia and Serbia; and Greek jewelry at Trebenište, in Macedonia.

Greco-Roman period. The Greeks apparently reached the Adriatic as early as the 7th century B.C., when in 627 they founded the colony of Epidamnos (mod. Durrës), later named Dyrrachium by the Romans; there they gradually advanced to the north. Apollonia (near Pojani,

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

Albania) was founded in 558 B.C. Greek pottery made its appearance at Vizače, near Pula, from the 5th century on, but relations with Greece may have existed earlier, as indicated by finds in the Illyrian necropolises preceding those of Atestine type; Greek pottery has also been found at Pizzughi in Istria. Between 394 and 390 B.C. the Cnidians founded the colony of Melaina Korkyra on the island of Korčula. At the same time the Greeks from Sicily also reached the Adriatic, and the Syracusans, under Dionysius the Elder, founded Issa on the island of Lissa (mod. Vis). The inhabitants of Paros in 385–384 B.C. founded the colony of Pharos (mod. Starigrad) on the island of Hvar. Issa in its turn founded colonies near the village of Lumbarda, on the island of Korčula, in the 4th century and at Tragourion (mod. Trogir) and Epetion (mod. Stobreč) in the 3d century; in the 2d century it conquered the Illyrian town of Salona. A Greek *emporion* (trading center) existed in the 5th century at the mouth of the Neretva River, as did another settlement at Budva.

The Romans entered the area during the 3d century B.C. and Romanized it to such an extent that under Augustus the province of Illyricum was created; the name of Dalmatia, designating the coastal area, appeared with the Flavians. Augustan colonies were Narona, Salona, Iadera (mod. Zadar), and Pietas Julia (mod. Pula); Julio-Claudian colonies were Emona (mod. Ljubljana), Aequum (mod. Čitluk), and Siculi (near Trogir). Other colonies sprang up at Poetovium (mod. Ptuj), Siscia (mod. Sisak), Mursa (mod. Osijek), Cibalae, Sirmium (mod. Sremska Mitrovica), and Scupi (mod. Skoplje); Celeia (mod. Celje), Piranum (mod. Piran, Pirano), Arsia, Tarsatica (mod. Rijeka), Aenona, Scardona (Skradin), Tragurium, Issa, Doclea, Domavium, Argentaria, Singidunum (mod. Belgrade), Naissus (mod. Niš), Lychnidus, and others were simple *municipia*.

The towns grew mainly on the sites of earlier Greek centers, in spite of the difficulties caused by the inveterate habits of tribal life. Roman civilization spread along the great lines of communication, roads and rivers. Nevertheless, a few particularly isolated centers — such as Emona, where a special coarse, rustic kind of sculpture survived, and Singidunum — either rejected or accepted only reluctantly the Roman culture that was developing along the coast.

The whole area passed through a particularly prosperous period in late antiquity, owing partly to the presence of the court at Sirmium and the imperial residence at Split and partly to its geographical situation, which enabled it to act as a bridge between the Roman and Byzantine worlds. This explains the migration of architectural peculiarities, especially within the field of religious architecture, from Syria to northern Italy via Salona and Istria; while a particular taste in mosaics seems to have spread by way of Aquileia, going against the strong current of refined handicraft that moved up along the Adriatic and from there spread toward Central Europe.

Grga Novak

The Middle Ages. In the part of present-day Yugoslavia that fell within the boundaries of Justinian's empire (527–65), some valuable monuments are preserved: the Euphrasian Basilica at Poreč (Parenzo; XIII, PL. 254), the Caričin Grad (Fortress of the Empress) in central Serbia, and several examples from the 6th century in Macedonia, with remains of architecture, architectural sculpture, and mosaics — Konjuh (near Kumanovo), Skoplje, Bitolj, and the well-known town of Stobi, whose large episcopal basilica dates from about 500.

The invasions of the Slavs at the end of the 6th century interrupted the brief flowering of Justinian art. A group of Avars and Slavs settled between the Pannonian plain and Constantinople and brought with them a new, primitive civilization, which is preserved in finds from necropolises. Jewelry, weapons, utensils, and pottery are the sole objects by which one can classify the various kinds and groups of Avar-Slav art. The chronological and topographical distribution of the early medieval civilizations in the eastern Alps, Trans-Danubia, and the Balkan Peninsula has by now been established with sufficient certainty, although there is still a considerable amount of disagreement as to the ethnic origin of the individual civilizations and it is still unknown whether the so-called "Kuturgur culture" was in part produced by the Slavs. The first group of archaeological finds definitely connected with the Slavs falls within the "Keszthely

Northern Yugoslavia, principal centers and monuments of historical and artistic interest. *Key*: (1) Modern political boundaries; (2) Neolithic and Bronze Age settlements; (3) settlements and archaeological sites from the Bronze and Iron ages; (4) Greek centers and archaeological sites; (5) Roman centers and archaeological sites; (6) medieval centers; (7) monuments of Moslem art; (8) modern centers.

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

culture" (7th–8th cent.), which had its center in Trans-Danubia; there are only a few finds in Dalmatia. Exquisite samples of Keszthely material (fibulas, metal ornaments from belts, etc.) from the surroundings of Belgrade are to be seen in the Narodni Muzej in that city.

During the course of the 9th and 10th centuries a marked differentiation occurs in the art of the necropolises: in the northwest, in Slovenia, the objects found in tombs belong to the Kettlach culture; those found in Dalmatia represent an independent culture usually called Old Croatian, although objects belonging to this culture are also to be found in Bosnia, Serbia, and outside Yugoslavia, in Bulgaria and Russia. The latest culture connected with necropolises in Yugoslavia is named after one of the largest finds of this kind, situated at Belo Brdo, near Osijek. The Belo Brdo culture extends from the Pannonian provinces across the Balkan Peninsula, excluding Slovenia and Dalmatia.

Up to the 9th century material from burial sites provides almost the only traces of artistic activity. For the 10th and 11th centuries such material forms only part of a complex of artistic life, represented by remains of monumental art, especially in Dalmatia; the Belo Brdo culture gives valuable information regarding rural crafts, very highly developed alongside the monumental art.

The oldest monumental buildings from the early Middle Ages, probably from the 9th century, are to be found at Zadar (former Church of Sv. Donat, now the Arheološki Muzej; XI, PL. 323, FIG. 672) and at Novi Pazar, the medieval town of Raš (Church of Sv. Petar; only fragments remain of the 10th-century Church of Sv. Tripun, formerly the Cathedral of Kotor). The extant examples of early medieval architecture are generally of modest dimensions. In Dalmatia most of the churches dating from the 9th–11th centuries are still in existence. Their original plan often shows a variant of a central construction, but most of them are basilicas with vaulting and dome. The rustic construction of these buildings springs mainly from local tradition. Dalmatian builders up to the 11th century do not show marked Byzantine or Italian influence; however, the decorative stone sculpture on these rather original buildings is closely connected with early medieval decoration, in which interlace patterns dominate. New discoveries have proved that this sculptural decoration, earlier taken to be connected with the former state of Croatia, existed in Slovenia, at Srem (Syrmia), in Bosnia-Herzegovina, and in Macedonia.

The art of the northwestern part of Yugoslavia was subject, in the early Middle Ages, to influence from two centers: Aquileia and Salzburg. Of the principal architectural monument left by the Pannonian Slavs, the three-aisled basilica of Blatograd (Balaton, now in Hungary), only the damaged early-9th-century foundations remain.

From the 11th century on, monumental art developed uninterruptedly. From Italy came the Cassinese Benedictines, who built flat-ceilinged basilicas on the east coast of the Adriatic, from Rab (Sv. Petar, 1059) to the Montenegrin coast (Church of Sv. Bogorodice Krainska, 11th cent.); in the 12th century the Benedictines built abbeys north of Belgrade in Slavonia and at Srem (Bani Monasterium, today Banoštor at the Fruška Gora).

In the first half of the 11th century the Byzantine influence spread from the southeast, mainly from Ohrid, center of an archdiocese that extended to the north as far as the Danube. During the 11th century the cathedral church of the archbishops of Ohrid, Sv. Sofija, a three-aisled basilica with a dome, was decorated with frescoes (XIII, PL.53) that are among the finest work of Byzantine monumental painting from the Macedonian epoch; on the shores of the neighboring Lake Prespa are the impressive ruins of the three-aisled Church of Sv. Ahil, which was probably erected by the end of the 10th century.

The art of the 12th century was heavily influenced by the Byzantine style in Macedonia, while Byzantine and Romanesque elements intermingle in the broad territory from Serbia and Dalmatia to Istria. In Dalmatia, where the Benedictines still dominated, a strong Western influence made itself felt. In Slovenia, in the architecture of the most important monasteries, the French influence is noticeable. Along with works that clearly depend on foreign models, the 12th century introduced some original examples of autonomous artistic creation in Macedonia and Serbia, especially in miniature painting (see XIII, col. 77).

While in Dalmatia and the northwestern part of Yugoslavia 12th-century architecture underwent considerable changes during the following century, in Macedonia and Serbia the autonomous architectural style was preserved. Comnene architecture is represented by the small five-domed Church of Sv. Pantalejmon (1164), in the village of Nerezi, near Skoplje; Romanesque and Byzantine components mingle in the Church of Sv. Djordje (ca. 1170), near Novi Pazar, which was badly damaged during World War II. Other examples of 12th-century Dalmatian architecture are found at Zadar (Benedictine Convent of Sv. Marija).

Fine frescoes of Comnene style are preserved in Macedonia, in Sv. Pantalejmon at Nerezi (XIII, PL. 52) and in the Church of Sv. Nikola at Kurbinovo on Lake Prespa. Fragments of the frescoes from Sv. Djordje at Novi Pazar, are now in the Narodni Muzej, Belgrade. Related to the style of the frescoes from Macedonia and Serbia are the frescoes in Sv. Krševan at Zadar; they belong within the sphere of Comnene art, except for certain marks of provincialism. Of early Romanesque Western art of the 12th century there are some fairly well-preserved frescoes in the Church of Sv. Mihail at Stonsko Pole; they show considerable marks of French influence along with predominant characteristics borrowed from the Benedictine style.

Miniatures and illumination present the clearest picture of the contrasts that characterize 12th-century Yugoslavic art. The monasteries in Slovenia and northern Croatia have manuscripts with miniatures of northern French stylistic derivation; in Dalmatia the illuminated manuscripts come from local Cassinese Benedictine scriptoriums; and the Cyrillic manuscripts of Serbia and Macedonia show a chaotic mixture of Oriental, Byzantine, and Romanesque traits.

Art from the 13th century to the present. a. Slovenia. In the 13th century, art in the area that constitutes present-day Yugoslavia began to split into independent regional and national schools limited to well-defined districts. In Slovenia and northern Croatia the arts followed an evolution conditioned by similar factors. These regions, being exposed to strong foreign impulses, closely followed the general course of Western European art, and it was only at a comparatively late stage that they developed a truly national school — Slovenia in the first half of the 18th century and Croatia not until the beginning of the 19th century.

The Romanesque style penetrated Slovenian art in the 12th century. A building of archaic forms is the three-aisled main basilica of the Cistercian monastery at Stična, which was probably erected by French masters. About 1260 a transitional half-Romanesque, half-Gothic style penetrated Slovenia from Germany. The chief monument of this style is the Cistercian church of Kostanjevica, with a rectangular presbytery and massive quadrilateral columns with fine capitals and well-preserved ornamental stone sculpture. The mature Gothic style is represented by the church at Crngrob (14th–16th cent.) and that of Kranj (1491). The constant threat of Turkish invasion and the wars of religion hampered further artistic evolution in the Slovenian provinces. In fact, even in the 16th century Gothic forms persisted, to be directly superseded by the baroque style in the 17th century.

Renaissance painting in the region of Slovenia depended on foreign artists. Several churches ordered altarpieces from the most famous Italian painters; thus Tintoretto painted a St. Nicholas for the church at Novo Mesto, and Palma Giovane a St. John for the Capuchin convent at Ljubljana (now in the church of the Ursulines in that city).

The decline of the Turkish empire and the victory over Protestantism helped to renew artistic life in Slovenia in the 17th century; this revival was still dominated by Italian artists. The late baroque gave Slovenia its finest monumental architecture and sculpture: the Cathedral of Sv. Nikolaja, at Ljubljana, was built to the designs of Andrea Pozzo (Puteus), and Domenico Rossi built the elegant Church of the Križev Niška (Teutonic Knights), also at Ljubljana. The leading sculptor of this epoch, Francesco Robba, was active in Ljubljana and in neighboring Zagreb, where his finest works are preserved. While the Italians dominated architecture and sculpture, Slovenia soon witnessed a first great generation of domestic baroque painters; although in the beginning of the 18th century (1703–05) the Italian Giulio Quaglio decorated the Cathedral of Ljubljana with frescoes, during the following decades — partly under his influence — the first great Slovenian baroque artists appeared: Franz Jelovšek (1700–64), Fortunat Bergant (1721–69), and Anton Cebej (1722–74). Another group of foreign artists came to the fore, this time Austrian, among which the most outstanding is Martin Johann Schmidt (known as Kremser-Schmidt; 1718–1801), who in the 1750s painted several altarpieces for the church at Velesovo.

b. Croatia. Medieval artistic manifestations in Croatia were almost completely destroyed, the Romanesque monuments during the Tatar invasion in 1241 and the Gothic monuments during the Turkish wars. The largest medieval monument extant is the Cathedral of Zagreb, built after French models in the 1280s but much altered later; in the vestry some rather faded frescoes of late Romanesque style are still preserved. After the Tatar invasion, the Church of Sv. Marko in Zagreb was begun, but it was largely rebuilt in the 15th century. The only other remains of Gothic monumental architecture in Croatia are the impressive ruins of the three-aisled Abbey church at Topusko. The rich 15th-century Pauline monastery at Lepoglava originally had a church in late Gothic style, but in the 17th century it was enlarged and rebuilt in baroque style.

In Zagreb there are no important baroque churches. Sv. Katarine, the fairly modest Jesuit church, does not compare with other baroque churches of the province. In northern Croatia the baroque center

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

Southern Yugoslavia, principal centers and monuments of historical and artistic interest. *Key*: (1) Modern political boundaries; (2) Neolithic and Bronze Age settlements; (3) settlements and archaeological sites from the Bronze and Iron ages; (4) Greek centers and archaeological sites; (5) Roman centers and archaeological sites; (6) medieval centers; (7) monuments of Moslem art; (8) modern centers.

was Lepoglava, where, in the monastery itself, the Pauline monks dedicated themselves to architecture, painting, sculpture, stucco, and metalwork. Among them the most outstanding was the Tirolese painter Johann (Jochan) Ranger (1700–53), who painted frescoes in the new parish church at Belec (1739–40), the finest baroque building in northern Croatia; in the main church and refectory in Lepoglava (ca. 1742); and in the church of the village of Purga, north of Lepoglava (1750). From the 15th century on, more and more Slovenia-based foreign artists worked in Croatia — for example, Francesco Robba, active in Zagreb — as well as native Slovenian painters. At the same time emerged the first noteworthy Croatian painters, who were pupils of the baroque artists among the Pauline monks; the greatest talent among them was F. Bobich (d. 1728). Toward the end of the 18th century, mediocre Austrian painters came to Croatia. They were predominant in Zagreb in the middle of the 19th century, but along with them Croatian artists were at work, headed by Vjekoslav Karas (1821–58), who began the uninterrupted line of modern Croatian art.

c. Dalmatia. Dalmatia, from the 13th century to the end of the baroque period, had a more independent and richer artistic life than the northwestern provinces of Yugoslavia. In the 19th century, when Dalmatia was taken by Austria, it lost its leading position, regaining a certain importance at the beginning of the 20th century, especially in the field of sculpture.

Romanesque art reached its height in Dalmatian architecture at the beginning of the 13th century, when the Cathedral of Sv. Lovre (XIII, PL. 76) at Trogir (Traù) was erected, the Cathedral of Zadar was altered to its present appearance, and the fine bell tower of the Cathedral of Rab and that of the Cathedral of Split were constructed. In the same period that saw the appearance in Raška of the first Dalmatian painters, the first important native sculptors emerged, notably Andrija Buvina (Guvina), who carved the great wood gate of the Cathedral of Split with 28 reliefs illustrating the life of Christ. In 1240 the most beautiful portal in Dalmatia was created by Radovan for the Cathedral of Trogir (XIII, PL. 76); undoubtedly the reliefs of the Annunciation and the Nativity in the lower part of the bell tower of the same cathedral also come from his workshop.

At the beginning of the 14th century there was marked artistic activity in all the larger towns along the Adriatic coast; records show that almost all of them had workshops for sculpture and painting. In Dubrovnik, the Franciscans erected the church of their monastery, whose cloister was richly decorated at the middle of the century with sculptured ornament by Mihoje Brajkov (Miho of Bar), a local stonecutter; and in 1304–06 the Dubrovnik Dominican monastery was built.

The 15th century marks the last great artistic period in the Dalmatian towns; in fact, the most important artistic works in Dalmatia date from that century. Some masterpieces of 15th-century architecture are preserved, such as the Cathedral of Sv. Jakov at Šibenik (XIII, PL. 76), decorated in a mixture of Gothic and Renaissance styles, the work of Georg Matejević (Juraj Dalmatinac, Giorgio Orsini, Giorgio da Sebenico), Andrija Aleši, and Nikola Firentinac (Niccolò di Giovanni Cocari). The early Renaissance produced triumphant achievements in the roof and dome of this Cathedral. In the 1460s the Knežev Dvor (Palace of the Rectors) was rebuilt at Dubrovnik, partly on the designs of the Florentine artist Michele Michelozzo, while local artists carved the magnificent ornamentation of the Dominican cloister in the same city. During the last years of the century local artists carved the portal of the Franciscan church at Dubrovnik in a richly ornate late Gothic style. At the beginning of the 16th century (ca. 1520) Petar Andrijić designed the Church of Sv. Spas, which remains the purest example of early Renaissance architecture in Dubrovnik. The Sponza Palace at Dubrovnik was built to the designs of Paskoj Miličević, who vacillated between the Gothic and early Renaissance styles, using elements from both. Along with religious and public buildings, several private palaces were erected in Dalmatia in the 15th century usually showing strongly Gothic elements; one of the finest is the Čipiko Palace at Trogir.

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

Important 15th-century sculptors in Dalmatia included the Italian Bonino da Milano, whose work is to be found at Split and Šibenik, and Georg Matejević from Zadar, active at Šibenik, Split, and Dubrovnik, whose work transcends the framework of the late Gothic through a marked realism that falls within the concepts of the early Renaissance. Andrija Aleši worked on the Baptistery of the Cathedral of Trogir (1467). The finest work of early Renaissance architecture and sculpture in Dalmatia, the Chapel of Sv. Ivan in the Cathedral of Trogir, was executed by Andrija Aleši, Nikola Firentinac, and Ivan Duknović (Giovanni Dalmata), who is well known even outside Dalmatia. Along with monumental sculpture there was also fine metalwork, especially in silver: extant examples include liturgical utensils, crosses, and altarpieces, often of high quality. Besides local artists, among whom Johan Progonović (Progonić; from Novo Brdo, in Kosovo) is the best known, there were also foreigners such as Johann of Basel, who in 1440 worked on the silver altarpiece of the Cathedral of Kotor.

In Dalmatia 15th-century painting gradually freed itself from Byzantine and Gothic traditions. The principal workshops were at Trogir, Šibenik, Dubrovnik, and Kotor. Dubrovnik had the most important local school of painting, and it also attracted to its workshops painters from the neighboring Kotor. Among the painters of the early Renaissance (ca. 1510–20) in Dubrovnik the best were Nikola Božidarević and Mihajlo Hamzić. The Umjetnička Galerija (Municipal Art Gallery) has many works by the Dubrovnik school.

The Turkish invasion, which from the last quarter of the 14th century had dispersed Christian cultural, artistic, and civic life in the interior of the Balkan Peninsula, came to a halt in the 15th century before the walls of the fortified towns along the Adriatic coast. Dubrovnik succeeded in retaining its independence, while the rest of the coast fell under Venetian domination. The former independent cities, economically tied to the interior of the Balkan Peninsula, became Venetian fortresses, garrison towns of a region that was chronically at war. Under these circumstances the independent artistic life began to decline. From the 16th century to the end of the 18th, most of the art in Dalmatia was produced by Venetians. The citizens of Dubrovnik bought pictures by Titian and Palma Giovane; Michele Sanmicheli designed the Loggia and city gate at Zadar and the Loggia on the island of Hvar. However, in most cases the modest requirements of the province were met by less well-known masters. During the 17th and 18th centuries numerous variations of Italian baroque appeared in Dalmatia, often in the same city: in Dubrovnik the Church of Sv. Vlaho was erected by Marino Groppelli in an ornate Venetian style, while the Cathedral and the Jesuit church are in the Roman baroque style. Good sculpture of the baroque period in Dalmatia was executed by Johann Maria Morlaiter, Antonio Corradini, and others. At the same time local artists began to be increasingly concerned with civil architecture. A fine example of a totally baroque seaside town, with its harbor, churches, palaces, and gardens, is Perast, on the Boka Kotorska, now practically a dead city. Local painters made their appearance during the 17th century, the most interesting of them being Tripe Kokolja. However, the works of a few artists of modest talent were unable to stop the steep decline of Dalmatian art, which was to revive only during the last decades of the 19th century.

d. Bosnia-Herzegovina. The two religious forms that dominated Bosnia from the 12th to the 19th century — the Bogomile and the Moslem — were clearly hostile to the visual arts. For this reason in Bosnia and what was later to be Herzegovina there are few examples of monumental art.

There are some interesting Bosnian illuminated parchment documents (14th–15th cent.) of Bogomile origin, with miniatures that fall into two clearly differentiated groups: the earlier type, pen drawings of primitive coloring, dominated by symbols and ornamental motifs, was the work of local artists from Bosnian scriptoriums; whereas the later type, the painted miniatures, in late Gothic style, of the more lavishly decorated codices of the 15th century, was done by Dalmatian artists, probably from Split. Bosnia did not succeed in producing a definite artistic style of its own throughout the entire Middle Ages. In the 15th century, while it was being devastated by internal feudal quarrels, religious wars, and Turkish plundering, it created its own extraordinary art: large sepulchral stones (*stećak*) with primitive reliefs (XIII, PL. 75). All over Bosnia and Herzegovina and in parts of Dalmatia, western Serbia and Montenegro there are necropolises with roughly cut slabs and sarcophaguses. The finest sepulchral stones of this kind are to be found in the Zemaljski Muzej, Sarajevo; the oldest of them are from the end of the 14th century. The decoration of these monuments, which sometimes bear Cyrillic inscriptions, is rather monotonous: the reliefs repeat the same motifs, heraldic signs, symbols, highly conventionalized portraits, and scenes of court life, games, tournaments, and hunting. This coarse art, akin to folk art, continued even after the Turkish victory, up to the 16th century. While the remaining Christian landlords built small churches in the villages beside their family burial grounds in the towns, which became centers of the Turkish administration, large mosques were built: at Sarajevo, the Begova Džamija (1530); at Banja Luka, the Ferhadija Mosque (end of 16th cent.). Beautiful Turkish bridges survive at Mostar (XIII, PL. 75) and Višegrad.

e. Serbia and Macedonia. The Serbian and Macedonian provinces produced a rich medieval art from the 13th century to the middle of the 15th. Serbia's dynamic history is reflected in the history of her arts: each new period of Serbian art unfolds in a different place as the political centers shift from one area to another. The Serbian influence reached a huge territory stretching from southern Macedonia to northern Hungary. Withal, Serbian art maintained an unusual vitality, adapting to new artistic environments but at the same time keeping its own characteristics. From Raška (Rascia; the central Serbian area in the valleys of the Ilear and Lim rivers) it traveled through Macedonia and the Morava Valley, reaching later to the regions around Buda and Timisvara (Temesvar); and at the beginning of the 19th century, after the creation of the new, liberated Serbia, it completed the circle and returned to its place of origin.

In the 13th century the Raška school flourished in Serbia. The architecture of this school represents a cross between Romanesque and Byzantine elements. The stone and marble buildings, single-aisled and vaulted, with a single dome, often have rich sculpture at the portals and windows (XIII, PL. 49). The monastery at Studenica, founded by Stefan Nemanja (founder of the Nemanjić dynasty) and completed about 1209, stands out as the finest example of the Raška architecture (XIII, PL. 47). By 1209 there emerged a clearly Serbian style of painting, which underwent a rapid evolution during the 13th century. The chief extant pictorial works of the Raška school are to be found at Mileševa (XIII, PL. 53), at Peć, at Morača, and at Sopočani (II, PL. 462; XIII, PL. 47). During the last quarter of the 13th century there was a decline in the quality of Serbian painting. The monumental style, with large, powerful forms and intense colors, was replaced by the medieval Byzantine style, which reached Serbia through Macedonia. In Macedonia (then still Byzantine), in the town of Ohrid, the artists who painted the frescoes in the Church of Sv. Klement (1290s) were, between 1307 and 1321, the principal representatives in Serbia of the "Palaeologian renaissance" (see II, cols. 814–819). In the first two decades of the 14th century Serbia rapidly expanded to the south, and the architects and painters of King Milutin created the new style of the united Serbian and Macedonian provinces. In architecture the new style dropped the Romanesque forms and costly materials: only the burial churches of the rulers were erected in marble (the church of the monastery at Banjska, near Kosovska Mitrovica; the monastery church at Dečani, near Peć, XIII, PL. 48; and the Church of the Holy Archangels, near Prizren); other churches were built of stone and of bricks placed so as to form ornamental designs (XIII, PL. 50). This architecture, based on Byzantine principles, broke away from the Romanesque style flourishing on the Adriatic coast. However, though Eastern in construction and materials, the Serbian-Macedonian style of architecture had characteristics alien to Byzantium. The older Byzantine architecture, characterized by horizontal lines, underwent a change in the Serbian and Macedonian provinces, resulting in a more dynamic architecture with clearly stressed vertical lines. The church (1321; XIII, FIG. 75) at Gračanica (in the Kosovo Polje, near Priština) is an example of a new style based on Byzantine forms, although it differs considerably from Greek models in its brisk rhythm, vertical emphasis, and supporting framework. In the early 14th century, along with single-domed churches, five-domed churches are found: the Church of Bogorodica Ljeviška (1307–09; XIII, PL. 48), in Prizren; the Church of Sv. Djordje (1313–17) in the monastery of Staro Nagoričino, near Mlado Nagoričino, east of Kumanovo; and the one at Gračanica.

In early-14th-century Serbia and Macedonia, a new narrative style of fresco painting appeared. The figures grew smaller and more plastic, and the space in which they moved gained in depth; the colors were toned down, realistic details, especially of movement and physiognomy, appearing more often; and the contents of the frescoes became increasingly varied and universal. About 1340–50 Greek painters from the Adriatic coast decorated the large churches of the monasteries of Dečani and Matejic (near Kumanovo) with fresco cycles of an encyclopedic nature (XIII, PLS. 54, 61). Serbian painting was of particularly high quality in the first decades of the 14th century, but later artists adopted a rather superficial narrative style with frequent stereotyped repetitions.

From 1371 to 1459 the Serbian artistic center moved to the Morava Valley. The architecture of the early 14th century served as a model for the new style of the Morava school (see XIII, cols. 80–81). The basic techniques remained the same, but rich stone ornamentation, especially brightly colored bas-reliefs, was added. Interlacing patterns, stylized palms, fantastic animals, and human figures adorn

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

portals and windows. The decorative façades enclose the internal structure, in which cubic and semicircular forms of noble proportions are linked. The finest buildings of the Morava school were erected in the late 14th and early 15th centuries: the church of the monastery of Ravanica, near Cuprija (ca. 1375; XIII, PLS. 50, 51); the church of the monastery of Kalenić, near Svetozarevo (beginning of 15th cent.); and the monastery of Manasija (ca. 1406–18; called Resava in the Middle Ages), near Despotovac. The frescoes of the Morava school, particularly beautiful at Ravanica, Kalenić (XIII, PL. 55), and Manasija (XIII, PLS. 54, 62), are distinguished by their high artistic quality.

The breakdown of the independent Serbian states in the second half of the 15th century did not extinguish all Christian artistic manifestations. After the first wave of Turkish terror, during which the Christian monuments in the towns and along the main communication routes suffered damage, there was a reorganization of the Serbian church; the patriarchate of Peć was reestablished in 1557. The patriarchs administered an enormous territory, extending from Turkish Hungary in the north to Ohrid in the south and from parts of Bulgaria in the east to the Croatian towns of Požega, Križevci, and Lepavina in the west. In this huge area, characterized by different social and cultural groups, flowered an artistic life with various centers and many local variations. The last Serbian kings encouraged the construction of representative ecclesiastical buildings on their lands in Hungary. The monasteries in the Fruška Gora (north of Belgrade) constituted the main center of this art, which was influenced by the Serbian monastery of Chilandari on Mount Athos. Strong artistic refuge was provided by the old monasteries, especially the Monastery of Sv. Apostola at Peć, the residence of the patriarchs.

The wealthy townspeople in the large cities (Skoplje, Sarajevo, etc.) erected modest, low, but ample churches without bell towers or domes, while the villagers constructed small stone churches, usually vaulted, whose architecture depended on the nearest important cultural center; thus different architectural styles sprang up, for example, in the Orthodox villages around Dubrovnik, in the villages near Skoplje, and in those around Prizren.

During the Turkish period the monumental frescoes disappeared, but the painting of icons developed to a high level. In the 16th and 17th centuries most Serbian painting was done for the iconostases, which often had gilded wood carvings and icons on several levels. The decoration of iconostases became a substitute for the former mural paintings, and it remained the most important and monumental expression of Serbian painting up to the 18th century.

The contemporary epoch and the growth of national art. The first steps toward independent artistic creation in Slovenia and Croatia in the early 18th century were hampered by the political process of Germanization and Magyarization. The Serbs, who had strong traditions, a different religion from their neighbors, relative economic independence, and a certain importance in Austrian eyes because of their military capabilities, were the first among the Yugoslav people to develop a new art. In the towns of Hungary, such as Buda, Székesfehérvár, Novi Sad, Vršac, Pančevo, and especially Timisvara, a number of Serbian painters, some of them trained at the Vienna Academy, taught students who later perfected themselves in Vienna and Italy. The reborn Serbian art made rapid progress, showing continuity in its evolution. In the second half of the 18th century a generation of Serbian painters appeared: Teodor Ilić Češljar, Teodor Kračun, and Jakov Orfelin, the last representatives of monumental religious painting. A secular and bourgeois art was developed in Serbia by the first classicists, Arsa Teodorović (1768–1826) and Pavle Djurković (1772–1830), gifted portrait painters. In Timisvara, where Teodorović had his studio, the first representatives of the Serbian Biedermeier style began their training: Konstantin Danilo (1799–1858) and the great Serbian romantic poet and painter Djura Jakšić (1832–78).

Before Jakšić most Serbian painters studied in Vienna; he, however, went to Munich after studying in Timisvara and Vienna. Among the Serbs who studied in Munich the most original talent was that of Djordje Krstić (1850–1907), the chief representative of Serbian realism. Krstić's younger friends, Uroš Predić (Predits; 1857–1953) and Pavle Jovanović (1859–1957), were representative of academic realism; they painted religious, historical, and genre pictures.

Modern Slovene art has not had any permanent centers. The Slovene Franc Kavčić (Caucig; 1762–1866), a learned classicist, worked mainly in Vienna; Josip (Giuseppe) Tominz (1790–1866), the well-known portrait painter from Trieste, did not influence other Slovene artists. The brothers Johann and Djordje Šubic, realist painters, worked abroad, as did Anton Ažbe (1862–1905), a Slovene painter in Munich, in whose studio the first generation of Yugoslavic impressionists was trained, those Slovene and Serbian painters who in the beginning of the 20th century laid the foundations of a modern Yugoslavic school of painting.

In Croatia the new art had a modest and belated start. Until the middle of the 19th century Croatia was dominated by foreign artists, except for Vjekoslav Karas (1821–58), who had no followers. The first painter from Croatia to attract attention abroad was Nikola Mašić (1852–1902). It was only during the first years of the 20th century that an active artistic center was created in Zagreb, headed by Vlaho Bukovac (1855–1922), a pupil of Alexandre Cabanel; Bukovac painted portraits and decorative compositions and succeeded in grouping around himself a large number of artists who were later influenced by the Vienna Sezession.

The first period of modern Yugoslavic art began with the generation of Slovene, Croatian, and Serbian impressionists. Through the activity of young Yugoslav artists who felt the need for national unity the cities that had crystallized as political entities — Ljubljana, Zagreb, and Belgrade — became focuses of the new Yugoslavic art. In the first decade of the 20th century it was the Slovene impressionists who distinguished themselves in the field of painting: Ivan Grohar (1867–1911), Rikard Jakopič (1869–1943), Matej Sternen (1870–1949), and Matija Jama (1872–1947), followers of the German impressionists. The Croatians, who worked under French influence, clearly differed from them: Miroslav Kraljević (1885–1913), Josip Račić (1885–1909), and Vladimir Becić (1886–1954). The artistic life of Belgrade was in those years dominated by the clash between old and new ideas, and the impressionists had difficulty in breaking through; besides Milan Milovanović (1876–1945) and Kosta Miličević (1877–1920) there was the temperamental Nadežda Petrović (1874–1915), who was the first to introduce Fauvist concepts into Serbian art.

The central personality of the new Yugoslavic art was the sculptor Ivan Meštrović (1883–1962; I, PL. 130), whose early works, inspired by folk songs, brought him fame. Meštrović gathered around himself a group of Yugoslav sculptors and painters whom he greatly influenced: among the sculptors were Toma Rosandić (b. 1878), Marin Studin (b. 1895), and Anton Augustinčić (b. 1900); among the painters, Joza Kljaković (b. 1889) is outstanding.

Yugoslavic art made rapid progress between the two wars. New forces and new orientations notably accelerated the evolution of artistic life. Along with Belgrade, Zagreb, and Ljubljana, new centers sprang up in Dalmatia, Bosnia, and Macedonia. Having reached unity as a state, the Yugoslavs no longer felt the urge to create one single, unified artistic expression, the object of the Zagreb artists who had flocked around Meštrović. In all three centers (Belgrade, Zagreb, and Ljubljana) immediately after 1919, there was a reaction among the younger generation against impressionism. The Slovenes Franc (b. 1895) and Anton (Tone; b. 1900) Kralj and the Croatians Vladimir Becić and Joza Kljaković showed a marked interest in compact forms. In Belgrade the tendencies toward constructivism crystallized in two groups. The leading artists in the first one, inspired by Cézanne, included Petar Dobrović (1890–1942), Jovan Bijelić (b. 1886), Marin Tartalja (b. 1894), and Milo Milunović (b. 1897); the artists of the second group, followers of André Lhote, included Sava Šumanović (1896–1942), Stojan Aralica (b. 1888), Milan Konjović (b. 1898), and others.

About 1930 there was an important change; owing to French influence, Yugoslavic painters suddenly showed increasing concern with color. In Zagreb, besides Emanuel Vidović (1872–1953) and Ljubo Babić (b. 1890), younger talent appeared, such as Jerolim Miše (b. 1890) and Juraj Plančić (1899–1930). In Ljubljana there was a similar development; here the most outstanding artists are Gojmir Anton Kos (b. 1896), Stane Kregar (b. 1905), France Mihelič (b. 1907), and Maksim Sedej (b. 1909). Belgrade, which follows Paris in artistic ideas, had in that period numerous groups of painters of quality. One group, following Fauvist concepts, insisted on intense coloring — Jovan Bijelić, Ignjat Job (1895–1936), Milan Konjović, Petar Lubarda (b. 1907), and Zora Petrović (1894–1962) — while a second group was closer to the Parisian intimists: Ivan Taboković (b. 1898), Nedeljko Gvozdenović (b. 1902), Marko Celebonović (b. 1902), and Predrag Milosavljević (b. 1908). In those same years the artistic life of Bosnia and Macedonia also lost its provincial character.

In Belgrade the sculptors of the period between the two wars freed themselves from Meštrović's influence; among them may be mentioned Petar Palavičini (1888–1958), Risto Stijović (b. 1894), and Streten Stojanović (b. 1898), a pupil of Emile Antoine Bourdelle and creator of some of the best portraits in contemporary Serbian sculpture. Zagreb, however, remained the most important center for sculptors, with Meštrović the principal artist. Besides this great artist and his followers, others working in Zagreb in the middle decades of the 20th century were Frane Kršinić (b. 1897), Vanja Radauš (b. 1906), Vojin Bakić (b. 1915), and Kosta Angeli Radovani (b. 1916). The Slovene Lojze Dolinar (b. 1893), whose style was similar to that of the Zagreb artists, later went to live in Belgrade.

At the end of World War II, Yugoslavic art was dominated for a time by socialist realism; but after 1950 that line was dropped and

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

the earlier tendencies of Yugoslavic art were further developed. During the 1960s some individualists left the ranks of older artists and joined later tendencies of contemporary international art (see V, col. 209); among these, Petar Lubarda, in particular, has achieved considerable success.

Svetozar Radojčić

Folk art. For many centuries life on the Yugoslavic plains had been dominated by sedentary agriculture and life in the mountains by seminomadic sheep rearing; because of this pattern, traditional and popular art had survived up to very recent times. It often had its roots in antiquity and was frequently marked by a noteworthy continuity, even though in the course of the centuries it was enriched and altered by individuals or by contacts with other, more refined cultures. The recent clash with the modern world has naturally broken up the traditional pattern of life, so that the types, forms, and products of folk art are disappearing even in the most conservative areas.

Typologically Yugoslavic folk art follows the characteristics of the different ethnographic areas, although as a whole it represents a patrimony with important common features (see also V, col. 492).

In the area constituting the southern edge of the Pannonian plain, which since the Neolithic period has been devoted to agriculture, the self-sufficiency of the "clan" (*zadruga*) and the division of labor within it determined special customs and habits that have facilitated the perfection of tools and utensils and have led to a high level of handicraft. The complex structure of the house made of oak beams, the carvings and paintings adorning it, the ornamental exuberance of fabrics (V, PL. 347), furnishings, and clothing are closely linked with the rest of the Pannonian basin. However, the form of Croatian and Slovene traditional dress reveals Renaissance and baroque influences, together with the primitive Slavic heritage. In the Croatian Posavina, the art of flax weaving was transformed into a domestic industry at the beginning of the 20th century by S. Berger, the collector.

The coast from Istria to Bojana has always taken part in the historicultural evolution of the Mediterranean area. The compact stone settlements developed in accordance with the norms governing the Aegean *politeia*; later, the Slav population continued the Roman and Byzantine traditions, and this mixture has given rise to an extraordinarily lively local artistic production. One of the strongest traditions is the use of silk as raw material; Dalmatia's traditional silk embroidery, with its various shades of red-purple, repeats Hellenistic motifs. The popular costume of the women of the coast shows the impact of the 15th century; on the island of Pag, for instance, the art of netting — an archaic form of lacemaking, which Venice was later to develop to a level of great refinement — is still practiced.

In the Dinaric mountain region very ancient traditional elements still survive. In this hinterland, where the sheep rearing is still subject to seasonal migration, the Paleo-Mediterranean heritage is evident in rites, cults, and dances (the cults of snakes, summits, rocks, water, and springs; women's dance with two handkerchiefs symbolizing the snake; etc.), in the shape of dresses (circular skirt in the Minoan style), in construction (buildings of a circular plan), and in the funeral symbolism (pigeons in the tombs); these customs are also to be found in northern Albania.

The Vardar basin in Macedonia, besides a great wealth of songs, music, and dances, still retains a characteristic figural art. The Turko-Oriental influence is limited, as in Bosnia and Herzegovina, to the bazaars, while the village populations go on cultivating the land with ancient irrigation methods along the rivers, and in the mountains the Balkan shepherds live as nomads. A predominant element in local artistic production is the handwoven fabric made by the women; the male guilds continue their ancient crafts as silversmiths (V, PL. 350), leatherworkers, and woodcarvers. The rich embroideries, the characteristic weaving of silk and metal threads, and the manufacture of rugs and blankets recall the old ritual fabrics of the Syro-Byzantine world. The luxurious costumes and exuberant ornamentation still survive in this area but are beginning to disappear.

The Morava Valley has always been a busy thoroughfare, and life there has consequently undergone many changes. In Serbia folk art has, however, retained some ancient features such as the Šumadija house and the national costume. At the center of traditional customs is ancestor worship, including the well-known celebration of the family feast (*krsno ime*, or *slava*), with which special monuments in the country churchyards are connected.

The northwestern part of Yugoslavia (Slovenia) is part of the eastern Alps; from here various Alpine influences have penetrated into the Pannonian plain. Through Slovenia the traditional type of glass painting (V, PL. 353) has spread; no longer anonymous, it is now produced by several contemporary artists. In fact, while many rural painters and sculptors continue their activities on the basis of the traditional stylistic patterns, some "sophisticated" artists show a general tendency to organize and resuming and elaborating the various types and forms of folk art.

ART CENTERS. *Slovenia* (*Slovenija*). Bled. The village, on the lake of the same name, has a castle (ca. 1004; altered several times in the Gothic period and during the Renaissance), now a museum of baroque furniture and interior decoration, and a Neo-Gothic parish church, with frescoes by Bozidar Pengov. Near the town are important necroplises (8th–11th cent.). The baroque Church of Sv. Marija, on the island in the middle of the lake, has an adjoining museum of religious art.

BIBLIOG. S. Gabrovek, Prazgodovinski Bled (Prehistory of Bled), Ljubljana, 1960; J. Kastelić, Bled, Belgrade, 1965.

Bodešče. Gothic church (15th cent.), with noteworthy wall paintings (15th–16th cent.): in the presbytery, a Maiestas Domini, a representation of the Apostles, and a scene with Christ among the scribes in the temple, by a painter reminiscent of the one at Suha; on the façade, a St. George fighting the dragon and a St. Florian, belonging to the same stylistic current; on the exterior wall of the south aisle, the legend of St. Leonard (1524); and on the exterior wall of the presbytery, a St. Christopher and a St. Leonard, of the Friulian school, and an Imago Pietatis (Christ showing His wounds).

BIBLIOG. F. Stelè, Monumenta artis slovenicae, I, Ljubljana, 1935.

Celje. There are many remains from the Roman period, when under Claudius it was a Roman *municipium* (Claudia Celeia): part of the drainage system, which reveals the network of streets; foundations of houses with mosaic floors; remains of the Temple of Hercules (?); architectural fragments, altars, etc.; and a Roman necropolis. The archaeological material found here is kept partly in the museum of Celje, partly at Graz, Austria (Landesmus. Joanneum). In the Christian Era, Celeia became an episcopal residence; from that epoch there is a basilica (4th cent.) and fragments of floor mosaics with the names of those who commissioned them. The town was the residence of the counts of Celje; ruins of their medieval castle (Starigrad; 14th–15th cent.) are near the town. The Gothic parish church dedicated to St. Daniel, on Romanesque foundations, has frescoes (15th cent.) and a baroque high altar of Venetian origin; the Gothic side chapel of the Seven Sorrows (end of 14th cent.) has noteworthy stained-glass windows. The Nova Grofija (the new residence of the counts; end of 16th cent.), with remains of frescoes from the rococo period and a wood ceiling (ca. 1600) probably painted by a Venetian workshop (the central portion is a rare example of architectural illusionism), now houses the museum; in the courtyard there is a double order of arcades.

Crngrob. The village, near Škofja Loka, is an important place of pilgrimage. The large Gothic church preserves a Romanesque nucleus. The western portion has three aisles and vaults with intersecting ribs (14th–15th cent.). The presbytery, by a local artist named Jurko Streit (Kranjac), has richly decorated stellar vaults with projecting keystones. The various phases of medieval Slovene painting appear in the pictorial decoration of the church: scenes from the life of the Virgin (early 14th cent.); two cycles of scenes of the Passion, in the Friulian style (before 1410); on the façade, paintings of Giottesque influence and a composition (1460) on the subject of the Sanctification of Sunday, of the school of Johannes de Laybaco (of Ljubljana); remains of frescoes (1453) by Master Bolfgangus; on the south wall, a St. Christopher (1464).

BIBLIOG. F. Stelè, Monumenta artis slovenicae, I, Ljubljana, 1935; J. Veider, Vodič po Crngrobu (Guide to Crngrob), Škofja Loka, 1936; R. Wildhaber, Der "Feiertagschristus" als ikonographischer Ausdruck der Sonntagsheiligung, ZSAKg, XVI, 1956, pp. 1–34 at 19; F. Stelè, Crngrob, Ljubljana, 1962.

Gornji Grad. Remains of a Benedictine abbey (12th–15th cent.), now an episcopal palace; domed baroque church with Romanesque tower and, inside, baroque paintings by the Austrian Martin Johann Schmidt (known as Kremser-Schmidt).

Hrastovlje. A typical village of the Kras plateau, east of Koper. On a neighboring hill stands a late Romanesque church (three aisles with columns, barrel vaults, and three apses) surrounded by high 16th-century walls. The entire interior was painted in 1490 by Johannes of Kastav; on the north wall, the Apostles, saints, scenes of the Passion, the procession of the Magi, all with realistic details; on the south wall, a Danse Macabre; on the main vault, the Creation; and on the side vaults, the cycle of the months. This is one of the most important monuments of the Istrian school of painting, clearly related to the cycle of the presbytery of the Cathedral of Pazin and to the frescoes (1474) by Vincentius of Kastav in the Church of Sv. Marija at Beram.

BIBLIOG. M. Zadnikar, Hrastovlje, Ljubljana, 1962.

Kamnik. The town sprang up in the late Middle Ages near an important junction of the roads leading to Styria. Two castles (12th cent.; now ruined) guarded the road. Of the Mal Grad, a smaller castle in the center of the town, only the small church remains; it is a two-storied building with a crypt below the apse of the lower, first-floor chapel. Both chapels are Romanesque, with semicircular apses; of particular interest is the portal of the lower chapel, with a symbolic decoration and two triumphal arches inside.

In the neighborhood stands the former Mekinje monastery, altered in the baroque period, with a parish church that contains one of the most important wood altars from the workshop of the Franciscan sculptors of Ljubljana.

BIBLIOG. L. Stiasny, Kamnik, n.p., 1894; Kamniški zbornik, 1955 ff.

Koper (It., Capodistria). The town, on a circular island, is now linked to the mainland by means of dikes. For many centuries (until 1797) it was subject to Venice, whose influence has given the town a typically Venetian character. Only one of the twelve gates in the partly preserved surrounding wall is extant: the so-called "Gate of the Mute." The Cathedral, perhaps of Romanesque origin, has a Venetian Gothic and Renaissance façade (15th–16th cent.); in the interior, enlarged in the 18th century by Giorgio Massari, are many paintings (16th–18th cent.), mainly Venetian, including a Madonna and saints by Vittore Carpaccio; also of note are the bell tower (13th–15th cent.), with 17th-century alterations, and the Baptistery (13th cent.), on a circular plan. Civil architecture is closely related to Venetian Gothic and Renaissance styles: Praetorian Palace, formed by joining two 15th-century palaces; Loggia (1462–63), by Nicolò da Pirano and Tommaso da Venezia, altered in the 17th century; late Renaissance Tacco Palace, now a municipal museum.

BIBLIOG. B. Ziliotto, Capodistria, Trieste, 1911; F. Forlati, EI, s.v.; A. Alisi, Il duomo di Capodistria, Rome, 1932; Inventario degli oggetti d'arte d'Italia, V: Provincia di Pola, Rome, 1935, pp. 27–80.

Kostanjevica. The baroque parish church still shows traces of the original Romanesque building, particularly two portals with remains of paintings. The former Cistercian abbey, founded in 1234, includes the ruins of the original church, of the same type as the one at Fontenay, in a Romanesque-Gothic transitional style. The courtyard of the abbey has open, two-storied arcades. There are remains of fortifications from the days of the Turkish raids.

Kranj. The town was founded in the late Middle Ages on the site of a center that had been well known in Illyrian, Roman, Lombard, and Paleo-Slav days. The Lombard necropolis is one of the most important outside Italy. The parish church is a Slovenian hall church with stellar vaults decorated with numerous reliefs.

BIBLIOG. J. Žontar, Zgodovina mesta Kranja (History of Kranj), Ljubljana, 1939; 900 let Kranja: Spominski zbornik (900 Years of Kranj: Memorial Journal), Kranj, 1960.

Laško. The medieval town of Laško has an interesting parish church, the nucleus of which is Romanesque, later enlarged by

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

adding a presbytery and Gothic aisles; it contains a baroque altar and baroque frescoes of a local Styrian school.

Ljubljana. The capital of the People's Republic of Slovenia stands on the site of the Roman Emona. In the Bronze Age (the Vučedol culture) it was inhabited by an Illyrian tribe; then it was occupied by the Celts at the beginning of the 4th century B.C. and by the Romans in the second half of the 1st century B.C. Under Tiberius it became Colonia Julia Emona. The Roman town, built on a camp area, has a rectangular plan with insulae including two or more houses; the surrounding walls from late antiquity, with 22 square towers and 4 round ones at the corners and with two moats and trenches, are partly preserved. Altars, inscriptions, and the like have been found. Ljubljana is mentioned in 12th-century sources, and in the 16th century it became a cultural and artistic center, fully asserting itself during the baroque period; in the 18th century it was the most important artistic nucleus in southeastern Central Europe, its influence spreading toward Croatia (Zagreb, Litto).

The town, dominated by a turreted pentagonal castle of medieval origin (partly rebuilt, 16th–17th cent.), has a Central European baroque aspect. The 1895 earthquake destroyed many important monuments (Camillo Sitte, Max Fabiani, Josef Plečnik, and Edvard Ravnikar, among others, replanned the town), leaving, however, the 18th-century Cathedral of Sv. Nikolaja (1700–17), designed by Andrea Pozzo (Puteus) and decorated with a bold illusionistic fresco composition by Giulio Quaglio; on the altars and in the niches, marble sculptures by Giacomo Contiero (Contieri), Angelo Pozzo Padovani, and Francesco Robba. In the Church of Sv. Jakoba the splendid marble altars are from the workshop of Lukas Mislej, with statues by Contiero, Pozzo, and Robba. The Church of the Križev Niška was designed by Domenico Rossi. The Ursuline church, built during the first decades of the 18th century in Palladian style, contains a marble high altar by Robba and paintings by Palma Giovane and Valentin Metzinger. Public buildings: the episcopal palace, with a large courtyard and open arcades; the Knezoškofijski Seminary, with a portal flanked by giant atlantes and a library with frescoes by Quaglio; the Gradska Koča (Town Hall), with courtyard and open arcades; the Grubarjeva Hiša (1773), with a Zopfstil façade and portal and, inside, a spiral staircase painted by Andreas Herrlein according to designs by M. J. Schmidt; and the Parliament building (architect, V. Glanz; painters and sculptors, Zdenko Kalin, Karel Putrih, Gojmir Anton Kos, Marijan Pregelj, and others), a typical example of modern Slovenian architecture. Also worthy of note are the marble fountain (1751) depicting the three rivers of Carniola, by Robba; the Church of Sv. Franja in the suburb of Šiško; and the cemetery of Žale, by Plešnik. Public monuments: that commemorating the poet F. Prešeren, by Ivan Zajc, and that of Primož Trubar, by F. Berneker; the "Denkmal des Illegalen," by Franc Smerdu; that commemorating B. Kidrič, by Zdenko Kalin.

The Narodni Muzej (Nat. Mus.), housed in a Neo-Renaissance building (1821), comprises archaeological, ethnographic, and folk-craft sections. The Narodna Galerija exhibits Slovenian art from the 12th century to the end of the 19th. The Moderna Galerija specializes in modern Slovenian art, from the impressionists to the present. The Mestni Muzej houses historical documents of the local culture, from the Bronze Age to the present, and displays furniture and interior decorations from the Gothic to the Biedermeier period.

Emona.

Mače. The Church of Sv. Nikolaja has frescoes (1467) depicting the procession of the Magi, the martyrdom of St. Ursula, and St. Christopher (the latter two following the well-known engravings of Master E. S.); the work of an unknown artist, these frescoes exemplify the peak of Slovenian fresco painting.

BIBLIOG. F. Stelè, Monumenta artis slovenicae, I, Ljubljana, 1935.

Maribor. The town, the administrative and economic center of eastern Slovenia, has an advantageous geographic position, which accounts for its importance since the Middle Ages. It is mentioned in documents from the 12th and 13th centuries. The Cathedral, originally a Romanesque three-aisled basilica (1150), was remodeled in Gothic style (1420–1530); of note are the Gothic choir, with stalls carved with figures and reliefs (mid-18th cent.) by Johann Georg (Franz) Holzinger, and the altar of the Holy Cross. The 12th-century castle, altered in the 17th century and rebuilt in 1744, has a remarkable main staircase with stuccoes and allegorical figures (mid-18th cent.) as well as a great hall with stucco figures and allegorical ceiling paintings (end of 17th cent.); the chapel is modeled on the Holy House at Loreto. The Pokrajinski Muzej, housed in the castle, contains archaeological, ethnographic, historical, and civic sections. There is also a gallery of modern art, with works by local artists.

Piran. The town, which stands on a promontory on the west coast of Istria, was founded in the Middle Ages, probably on the site of a Roman imperial town; it was under Venetian domination until 1797, hence its typically Venetian architecture. On the mainland side it is enclosed by crenelated walls (15th cent.) with seven defense towers. The Cathedral of Sv. Djordje, originally medieval but rebuilt in the 17th century, has a bell tower modeled on that of St. Mark's in Venice and a baptistery (17th cent.); inside there is a polyptych by Paolo Veneziano. The Church of Sv. Franje (14th–16th cent.) contains an altarpiece by Vittore Carpaccio and a carved wood pulpit (16th cent.). The Church of Sv. Mihajlo (18th cent.) contains an altarpiece attributed to Giovanni Battista Tiepolo. The Church of Sv. Petar (1818) and the town hall are neoclassic.

BIBLIOG. A. Tamaro, Pirano, Trieste, 1910; Inventario degli oggetti d'arte d'Italia, V: Provincia di Pola, Rome, 1935, pp. 144–63; A. Riccoboni, EI, s.v.

Ptuj (anc. Poetovium). Ptuj was an Illyrian, Pannonian, and then Celtic settlement; in the days of Augustus there was a military camp, which gave rise to the thriving town of Poetovium. The town, located north of the Drava River, and the castrum, to the south of it, were linked by a bridge. The town was badly damaged during the barbarian invasions and the civil wars of the 4th century. Archaeological finds include three well-preserved mithraeums; several other sanctuaries; remains of a temple, of the Roman fortifications, and of a Christian basilica; and votive altars, statues, and inscriptions, kept in the Mestni Muzej and in the mithraeums. In one of the town squares there is a monolithic funerary monument called the "Pillar of Orpheus," adorned with reliefs (2d cent. of our era). The town was an important center in the Carolingian period; from 874 to 1565 it belonged to the archbishops of Salzburg and subsequently, until 1918, was under Hapsburg domination. The parish church dedicated to St. George, which dates back to the 12th century although it is now largely Gothic (14th–15th cent.), contains a choir with beautiful carved Gothic stalls (1444); the arcades of the side aisles are Romanesque; and the western portion of the nave was constructed at the end of the 14th century upon the remains of a *westwerk*. Close to the church stands the town tower, decorated with Roman fragments. The former Dominican monastery (early 15th cent.), where the influence of the school of Parler is evident, has a remarkable cloister with figured keystones on the vaults and a refectory with frescoes and stuccoes (early 18th cent.); the monastery now houses a museum with a section of antiquities (among other items, a mithraeum) and a medieval section (fine specimens of Gothic sculpture and a triptych painted ca. 1460 by Konrad Laile for the parish church).

In the vicinity of Ptuj stands the Sanctuary of Ptujska Gora. The large church (ca. 1400), surrounded by remains of fortifications from the time of the Turkish invasions (15th–17th cent.), is the best example of Gothic architecture in Slovenia. The interior has a nave and two aisles with tall columns. On the altars and in the peristyle are Gothic sculptures (ca. 1410) from the school of Ptujska Gora, similar to the Styrian school of Hans Swabnitzer (von Judenburg); of these, the one depicting the Virgin of Mercy now adorns the high altar. Also of note are the Gothic stone choir stalls and the rococo pulpit. Frescoes from the workshop of Giovanni da Brunico (ca. 1420) decorate the Chapel of Sv. Križ.

Near the town, at Breg and at Hajdina, there are two buildings especially designed to contain two mithraeums discovered there. In the nearby village of Markovci the rite of the Kurenti has survived, a fertility rite with obvious traces of shamanism.

svetišče na Ptujskem gradu (The Old Slav Sanctuary on the Castle Hill of Ptuj),

Šempeter. In the village, near Celje, are the remains of an important Roman necropolis with rich funerary monuments, some of which are sumptuously decorated with reliefs representing mythological scenes; the best tombs are from the middle of the 2d century of our era. Special mention should be made of the small temple of Priscinianus and that of the Secundius family and of the funerary altar of Vindonius.

Bibliog. J. Klemenc, Das römische Gräberfeld in St. Peter im Sanntale, Archaeol. jugoslavica, II, 1956, pp. 57–66; J. Klemenc, Rimsko grobišče v Šempetru v Savinjski dolini (The Roman Necropolis of Šempeter in the Savinja Valley), Celjski zbornik, 1958, pp. 155–64; J. Klemenc, Ausgrabungen in St. Peter in Savinjska dolina (1925–55), Atti VII Cong. Int. di Archeol. Classica, III, Rome, 1961, pp. 153–57; J. Klemenc, Rimske izkopanine v Šempetru (Roman Excavations at Šempeter), Ljubljana, 1961.

Sevnica. The town stands on the banks of the Sava River. Close to the castle (17th cent.) is the so-called "Lutrovska Klet," a building probably meant for religious purposes, in the style of those built by northern Italian masons who worked in central Austria in the middle of the 16th century; the eastern portion is covered with fine frescoes (ca. 1580; perhaps of the Carinthian school), whose iconography seems to indicate that the building belonged to the Lutheran sect.

Bibliog. F. Stelè, Uloga reformacije v naši umetnostni zgodovini (The Reformation in Our Art History), Drugi Trubarjev zbornik, Ljubljana, 1951, pp. 119–50.

Škofja Loka. The town, north of Ljubljana, was founded in 973 by the Bavarian bishops of Freising. Above the town are the ruins of an 11th-century castle. In the town the Puštal Castle (early 16th cent.), which now houses a rich local museum, has a chapel with the gilt altars of Dražgoše (mid-17th cent.), among the best of their kind in Slovenia, and frescoes by Quaglio. The parish church is in late Gothic style; the nave, recalling that of a hall church, has stellar vaults richly decorated with figural reliefs.

Stična. This Cistercian abbey in Lower Carniola was founded in 1136. Surrounded by walls with defense towers from the period of the Turkish invasions, the monastery retains the original nucleus, with typical Cistercian architecture. The church, consecrated in 1154, with later baroque additions, preserves the original three-aisled basilica, with a transept and three apses; the presbytery is Gothic. The early Gothic cloister has, on the walls and vaults, important remains of paintings from the mid-12th century and the 14th. The eastern portion of the monastic buildings is from the 17th and 18th centuries; beside the original 12th-century doorway are remains of the exterior Romanesque chapel.

Bibliog. M. Zadnikar, Romanska Stična (Romanesque Stična), Ljubljana, 1957.

Svete Gore. The Sanctuary of Svete Gore, near Bizeljsko, comprises five churches, four of which are Gothic, although they preserve pre-Romanesque elements. The Church of Sv. Martin has an interesting portal surmounted by a window. The portal of the Church of Sv. Djordje has an inscription (never deciphered) in an alphabet similar to the runic; to the right of the portal is a roughly executed relief representing a figure seen from the front with its right hand lifted as if in prayer and a globe in its left; next to it are other illegible signs. These two churches are the most interesting examples of pre-Romanesque architecture in Slovenia.

Bibliog. A. Stegenšek, Svete Gore na Štajerskem (Svete Gore in Styria), Maribor, 1911; F. Stelè, Vorromanisches aus Slowenien, Beiträge zur älteren europäischen Kulturgeschichte: Festschrift für R. Egger, I, Klagenfurt, 1952, pp. 367–82.

Sveti Janez ob Bohinjskem Jezero. The town, on the shore of the Lake of Bohinj, has a church with a Romanesque nave and a late Gothic presbytery. Of note in the interior are the three wood altars from the first half of the 17th century; on the walls of the nave, the frescoes of the cycle depicting the legend of St. John, from the beginning of the 14th century; on the triumphal arch and the Gothic vaults of the nave, paintings from about 1520; in the presbytery, the Apostles, a St. George fighting the dragon, and paintings (ca. 1440) of Friulian influence; on the plinth, angels by Bartolomeo of Loka. The façade is painted with scenes from the legend of St. John and other subjects by Bartolomeo of Loka (ca. 1530).

Bibliog. F. Stelè, Monumenta artis slovenicae, I, Ljubljana, 1935.

Sveti Primož. On the slopes of the Kamniške Planine, north of Kamnik, the large Romanesque church, enlarged in the late Gothic style, has two aisles, a long presbytery, and richly decorated stellar vaults with projecting keystones. In the church, beneath a Gothic canopy, are the relics of SS. Primus and Felician. The frescoes of the nave (ca. 1520) are the best examples of late medieval Slovenian painting; on the north wall a procession of the Magi and a Mater Misericordiae; on the south wall a cycle of episodes from the life of the Virgin. Of particular interest are three 17th-century gilded altars. In the neighborhood stands the late Gothic Church of Sv. Petar with three gilded altars and a remarkable painted wood ceiling (second half of the 15th cent.).

Bibliog. F. Stelè, Monumenta artis slovenicae, I, Ljubljana, 1935.

Turnišče. The Romanesque parish church was enlarged in the last decades of the 14th century by Johannes (Giovanni) Aquila; the Gothic presbytery is vaulted and the nave has a wood ceiling. The walls are decorated with frescoes: in the first register of the presbytery, remains of painting from the second quarter of the 14th century; in the second register, the Apostles and other figures (1383); in the second register of the apse, a Maiestas Domini (1393) by Johannes Aquila; frescoes (1389) on the triumphal arch and on the side walls of the nave. The most prominent representations are the legend of King Lajos I of Hungary, the Last Judgment, the legend of St. Nicholas, the martyrdom of St. Peter, and the legend of St. Catherine.

Bibliog. F. Stelè, Monumenta artis slovenicae, I, Ljubljana, 1935.

Vrzdenec. The town, near Horjul, has a church with Romanesque nave and Gothic presbytery (15th cent.). Three cycles of wall paintings have been discovered: in the nave a cycle of the Childhood and the Passion of Christ, dating back to the first decades of the 14th century; formerly covering these paintings and now in the Narodna Galerija, Ljubljana, frescoes (ca. 1410) of the procession of the Magi and scenes from the Passion, of the Friulian school; and in the presbytery, the Apostles, male and female saints, and a Nativity, revealing the influence of Master E. S.

Bibliog. F. Stelè, Monumenta artis slovenicae, I, Ljubljana, 1935.

Žički Samostan. The former Carthusian monastery, near Konjice, was consecrated in 1194 and is now largely in ruins. Extant are the walls with defense towers (15th–16th cent.); the chapel with ossuary, dating back to the first half of the 15th century; and parts of the Gothic buildings. The church, with an interior cloister, is in ruins but still shows impressive remains of Romanesque and early Gothic architecture. Nearby is Špitalič, where the impressive church (ca. 1200) with two Romanesque portals is preserved.

Bibliog. A. Stegenšek, Konjiška dekanija (The Diaconate of Konjice), Maribor, 1909, pp. 180–205.

Grga Novak, with the assistance of France Stelè

Croatia (*Hrvatska*). Asseria. The site of this 1st-century Roman town is in the vicinity of modern Benkovac, near Podgrad. Excavations have revealed the surrounding walls, with four gates, one with a dedication (113) to Trajan; buildings around the forum; an aqueduct; and tombs, altars, and inscriptions.

Bibliog. H. Liebl and W. Wilberg, Ausgrabungen in Asseria, ÖJh, XI, 1908, Beiblatt, cols. 18–87; A. L. Frothingham, Roman Cities in Italy and Dalmatia, New York, London, 1910, pp. 266–83; G. Novak, EAA, s.v.

Biskupija. Biskupija was a *villa regalis* of the Croatian kings and probably the residence of the bishops of the Croatian court. Excavations have confirmed the existence of five basilicas and a large Paleo-Croatian necropolis (8th–11th cent.). The material found here (now preserved at Split) is very rich and important, especially a bas-relief of the Virgin in prayer (11th cent.), a copy of a Byzantine model, from the large three-aisled Church of Sv. Marija. At the source of the Cetina River is the Paleo-Croatian Church of Sv. Spas, surrounded by medieval sepulchral stones (*stećak*).

Čakovec. The fortress of the Žrinski family has surrounding walls with polygonal bastions (1562; architects, G. Arconati and M. Secco) and a palace, now a museum. The Church of Sv. Nikola (1707–67) has baroque furnishings. In the Church of Sv. Elena, outside the town, are remains of late Gothic paintings (15th cent.).

Nearby, at Prelog, is the Church of Sv. Jakov (1758), with three wooden altars (1766) by Veit Königer (Kiniger) and J. Hermann. At Štrigovo, the Church of Sv. Jirolima (1738–49) has three apses and a dome; the frescoes (episodes from St. Jerome's life) are by Johann Ranger.

Cavtat (anc. Epidaurum; It. Ragusa Vecchia). The town, founded by the Greeks, was conquered in 47 B.C. by the Romans. There are remains of temples (including, outside of town, two mithraeums), villas, a theater, and an aqueduct. The Church of Sv. Marija contains a polyptych (1509) in archaic style, with saints on a golden background, by the painter Vincenzo Dobričević. Of note are the Račić Mausoleum (1920–22), by Ivan Meštrović, and the Bogišić Muzej, which houses the archaeological material found at Cavtat, a collection of prints, ancient costumes and necklaces, and works by Vlaho Bukovac.

Novak, Stari Grci na Jadranu (Ancient Greeks on the Adriatic), Rad Jugoslavenske Akad. Znanosti i Umjetnosti, 322, 1961, pp. 145–221; C. Patsch, RE, s.v. Epidaurum; G. Novak, EAA, s.v. Epidaurum.

Čitluk (anc. Aequum). The town, located near Sinj, was the Colonia Claudia Aequum. There are remains of the Roman surrounding walls; the forum, with ruins of buildings perhaps belonging to the curia and the basilica; an amphitheater, outside the walls; and a necropolis, northeast of the town. The material found here — Roman inscriptions; fragments of statues, including a fine head of Herakles, the original of which is ascribed to the school of Lysippos, and a relief with Nike and a kneeling barbarian — is kept at the Minorite monastery at Sinj.

BIBLIOG. A. Mišura, Colonia Romana Aequum Claudium (Čitluk), Graz, Vienna, 1921; M. Abramić, Antike Kopien griechischer Skulpturen in Dalmatien, Beiträge zur älteren europäischen Kulturgeschichte: Festschrift für Rudolf Egger, I, Klagenfurt, 1952, pp. 303–26; G. Novak, EAA, s.v. Aequum.

Cres (It. Cherso). The island of Cres, which, with Lošinj, made up the Apsyrtides of antiquity, was inhabited in the Neolithic period and in the Bronze and Iron ages; little material is left from the Greek era. From the 2d century B.C. until about A.D. 500 the islands were under Roman domination. The small town of Cres preserves the Venetian walls and the Loggia (15th cent.); the Gothic-Renaissance Church of Sv. Marija; the Church of Sv. Franja (15th cent.), with paintings by Venetian artists; Gothic, Renaissance, baroque, and neoclassic palaces; and the town gate, the so-called "Gradska Vrata."

At Osor (Apsorus, Absortium), another town on the island of Cres, the network of Roman streets can still be roughly ascertained; there are remains of the circle of walls as well as of a late Roman building with a mosaic floor. A church from the 6th century has been discovered. The Renaissance Cathedral (15th cent.) is presumably by Georg Matejević (Juraj Dalmatinac, Giorgio Orsini, Giorgio da Sebenico). The local museum contains archaeological material.

Dubrovnik (anc. Rhagusium, Rhacusa; It. Ragusa). The town consists of two nuclei: one founded (7th cent. B.C.) by refugees from the Greek colony of Epidaurum (mod. Cavtat) on a small rocky island separated from the coast by a narrow canal (subsequently filled, now the town's main thoroughfare) and the other founded by the Slavs. During the period of Byzantine domination it belonged to the thema of Dalmatia, and later it became an autonomous republic. Although it was almost completely destroyed by an earthquake in 1667, the town preserves the surrounding walls (13th cent.; reinforced in the 15th, 16th, and 17th cent.), with towers and bastions: the Minčeta Tower, built to the designs of Michelozzo and completed by Georg Matejević (Juraj Dalmatinac, Giorgio Orsini, Giorgio da Sebenico); and the Fortress of Ravelin (1538), with baroque additions (1618) by M. Hranjac and M. Držic. The oldest remains are those

Dubrovnik, plan of the city within the 13th-century walls, restored up to the 17th century. (*a*) Church of Sv. Vlaho; (*b*) Sponza Palace; (*c*) Kneževe Dvor; (*d*) bishop's residence; (*e*) Cathedral; (*f*) Jesuit church; (*g*) Franciscan monastery; (*h*) Church of Sv. Spas; (*i*) Minčeta Tower; (*j*) Dominican monastery.

of a Paleo-Christian basilica and fragments of pre-Romanesque buildings. The Franciscan monastery (14th cent.) has a church with a late Gothic portal (1499) by Leonardo and Petar Petrović, a Romanesque-Gothic cloister (after 1317) designed by Mihoje Brajkov (Miho of Bar) with elegant six-light windows, and a bell tower (14th cent.); the Apoteka (1318), with valuable equipment and a rich library, is one of the oldest European pharmacies. The Dominican monastery (14th–15th cent.) has a splendid cloister by the sculptors Utišenović, Grubačević, and Vlatković; in the church are paintings by L. Dobričević (15th cent.; of the school of Titian), Mihajlo Hamzić (1513), Enguerrand Charonton (Charton, Quarton; 15th cent.), Giorgio Vasari, and Nikola Božidarević. The Cathedral (nave and two aisles, side chapels, dome at the crossing), which stands on the site of the Romanesque church (12th cent.), was rebuilt (1671–1713) in Roman baroque style to the designs of Andrea Ruffalini and P. Andreotti; it contains a Flemish triptych (15th cent.), paintings by Titian, Giuseppe Salviati (Porta), and others, and a rich treasury. The Church of Sv. Vlaho (1707–15), on the site of a 13th-century building, was designed by Marino Groppelli in Venetian baroque style. The Jesuit church (1699–1725) was designed by Pozzo in Roman baroque style; it contains frescoes by Gaetano García and a staircase by Padalacqua. The Church of Sv. Spas (1520), a Renaissance structure by Petar Andrijić, has Roman and Gothic elements (this mixture of styles is typical of the local Dalmatian architecture). The Knežev Dvor (1435–42), an elegant building designed by Onofrio de la Cava, has Renaissance additions (an arcaded portico adorned with statues) by Michelozzo. The Sponza Palace (1516–24), designed by Paskoj Miličević, mixes Gothic and Renaissance styles. Two Gothic fountains (1436–38) by Onofrio de la Cava, the Town Tower (1445) by Radoničić, Grubačević, and Utišenović, and the so-called "Roland's Column" (1418) decorate the town's squares. Other examples of civil architecture are the bishop's residence, with a small

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

picture gallery; the Kaboga, Pucić, Gozze-Gučetić, and Bunić palaces at Gruž, a suburb of Dubrovnik; and the Stjepović, Skočibuha, and Sorkočević palaces. In the surrounding area are many villas (15th cent. and later).

At Lokrum (It. Lacroma), a nearby island, there is a Neo-Gothic Hapsburg castle with park, built on the site of a Benedictine abbey founded in 1192.

Hvar (anc. Pharos; It. Lesina). The island of Hvar has been inhabited since prehistoric times. Excavations in the Grapčeva Špilja have revealed objects — including painted neolithic pottery — dating from 3000 to the 6th century B.C. In 385–384 B.C. Paros founded the town of Pharos (mod. Starigrad), which was destroyed in 219 B.C. by the Romans and later rebuilt. Coins produced here (4th–2d cent. B.C.) are preserved in the museums at Zagreb, Osijek, and Split. At Starigrad there are remains of the walls (4th cent. B.C.) and a fine Roman mosaic.

After Byzantine and Croatian domination, the island was ruled by Venice from 1402 to 1797. The town of Hvar preserves bastioned walls (13th–14th cent.) and remarkable monuments revealing Italian influence. The Cathedral (16th cent.) contains a Madonna (13th cent.) of the school of Pisa and paintings of the Venetian school. The church of the Franciscan monastery (15th cent.) has works by Leandro Bassano and other Venetians, and there is a Last Supper by Matteo Ingoli in the refectory. Of interest are the remains of the Leporini Palace, in Venetian Gothic style; the Loggia (1515–17), by Michele Sanmicheli; and the clock tower (1466), also in Venetian Gothic style. Nearby are the so-called "Španjola" ("Spanish Fortress"; 1551) and the Kastel Sv. Nikolaja (Napoleonic era).

Another important center on the island is Vrboska, with the Church of Sv. Marija, a fine example of a 16th-century fortified church. Inside the Church of Sv. Lovre are paintings of the Venetian school of the 16th century (Paolo Veronese, Jacopo Bassano). Near Starigrad is the castle of Trvdalj.

Polaschek, RE, s.v. Pharos, no. 2.

Ilok. The walls of the Citadel (15th cent.) are extant. The Franciscan monastery has a Gothic church (15th cent., restored in 1907) with an altarpiece (1862) depicting St. John of Capistrano by Joseph Kessler. Turkish buildings include a mausoleum and the baths (17th cent.). The Odescalchi Castle (ca. 1793) has a park.

In the environs are the Šarengrad (a brick castle) and a Gothic church with baroque furnishings. At Bapska there is a small Romanesque brick church.

Bibliog. G. Szabo, Spomenici prošlosti u Srijemu (Monuments of the Past in Sirmium), Savremenik, XI, 1916, pp. 43–50; A. Horvat, Ilok, B. Jugoslaveske Akad. Znanosti i Umjetnosti, VI, 1, 1958, pp. 15–21; A. Horvat, Die Skulpturen mit Flechtbandornament aus Syrmien, Südost-Forschungen, XVIII, 1959, pp. 249–64.

Karlovac. The nucleus of the town is a fortress, begun in 1579 during the Turkish invasions. The town, planned during the Renaissance, is in the shape of a six-pointed star and is surrounded by moats and bastions; it has regularly drawn streets and a central square. Of interest are the Franciscan monastery and church, the arsenal (1783), and the Serbian Orthodox church (1784–86), built by J. Štiler.

Nearby are the medieval castles of Ozalj, Dubovac, and Ribnik.

Bibliog. R. Strohal, Grad Karlovac (The City of Karlovac), Karlovac, 1906; A. Horvat, Karlovac spomenik kulture (Karlovac Monument of Culture) (Čovjek i prostor, 4), Zagreb, 1954.

Korčula (anc. Corcyra Nigra; It. Curzola). The island of Korčula has been inhabited since prehistoric times. Between 394 and 390 B.C. (or, according to others, in the 6th or 5th cent. B.C.) the Cnidians founded a colony here, probably in the western area. At the end of the 4th century B.C. nearby Issa (mod. Vis) also sent a colony, which apparently settled at Lumbarda. In 228 B.C. the Romans rid the island of pirates; in Augustan times the people attempted to rebel and were punished by the Romans. In various parts of the island traces of Greek and Roman settlements have been discovered. Near Lumbarda a necropolis (4th cent. B.C.–1st or 2d cent. of our era) and a large building in *opus reticulatum* have been found.

The town of Korčula is predominantly Venetian in character. The Cathedral (Sv. Marko) is in Gothic style, built by local masters on the site of a Romanesque church, to the designs of G. Correro of Trani (1441) and continued in late Gothic style by M. Andrijić, who designed the remarkable ciborium (ca. 1490). Also worthy of mention are the fortress from the Napoleonic era, the Kneževa Palača, and the Loggia.

The Franciscan church on the nearby island of Otok has a noteworthy late Gothic cloister (15th cent.).

Bibliog. N. Trojanis, Sui monumenti di storia e di arte esistenti nella città ed isola di Curzola, Trieste, 1911; W. Gobbin, Korčula: Ein Beispiel dalmatinischen Städtebaus, Berlin, 1930; L. Krapina. A well-preserved portion of the medieval castle, which existed in 1222, houses a museum. In the Franciscan monastery is the Church of Sv. Katarina (1644), with baroque furnishings.

Nearby is Trški Vrh, with the Church of Sv. Marija (1750–52), built by J. Javornik; it contains frescoes (1777) by A. Lerchinger and rich baroque fittings. The castle (15th–16th cent.) was formerly the property of the Ratkay-Veliki Tabor family. The castles of Miljana and Gornja Stubica have 18th-century frescoes.

Bibliog. G. Szabo, Spomenici kotara Krapine i Zlatar (Monuments of the Krapina and Zlatar Districts), Vjesnik Hrvatskoga Arheol. Društva, XIII, 1913–14, pp. 103–204; A. Cevc, Anton Lerchinger, Zbornik za umetnostno zgodovino, N.S., V–VI, 1959, pp. 477–88.

Križevci. In the Gothic Church of Sv. Križ there is a marble altar (ca. 1755) by F. Robba. The Church of Sv. Marija Koruška has an apse of trilobate plan and 18th-century frescoes. In the Cathedral are wall paintings and iconostases (early 20th cent.) by the painters Celestin Medović, Ivan Tišov, and B. Čikoš. The bishop's residence was rebuilt in neoclassic style by B. Felbinger.

In the vicinity are the castles of Veliki and Mali Kalnik (13th cent., in ruins), Gornja Rijeka, and Tkalec (17th cent.). Noteworthy are the large two-aisled Gothic Church of Sv. Marija at Glogovnica; the neoclassic church at Pogančec; and the Gothic church dedicated to St. Brictius at Kalnik, with Gothic frescoes (after 1500) by a local artist.

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

Krk (anc. Curicta, Curicum; It. Veglia). On the island of Krk there were two ancient towns, Curicta (or Curicum) and Fulfinium. At Krk, the main center of the island, the Romanesque Cathedral (ca. 1200) contains the silver altarpiece (1477) of Duke Ivan Krčki. Of interest are the Episcopal Palace, the Kastel Frankopanski, and the Franciscan monastery, with a Gothic church. Nearby are the Paleo-Croatian churches of Sv. Grisogon, on a trilobate plan, and Sv. Donat (8th cent.).

In the town of Baška, founded in the 14th century, there is a church with a painting of the Virgin and saints by a local artist. Nearby, in the hamlet of Jurandvor, is the Church of Sv. Lucija, where the stone (ca. 1100; now in Zagreb, Povijesni Muzej Hrvatske Jugoslavenske Akademije Znanosti i Umjetnosti) with one of the most important inscriptions of the Croatian language and the Glagolitic script was found.

At Omišalj (It. Castelmuschio) the Romanesque Church of Sv. Marija has tracery decorations, Glagolitic inscriptions, and an altar by Jacobello del Fiore.

In the nearby isle of Košljun (It. Castellione) the Franciscan monastery contains textiles and paintings (16th–18th cent.).

Bibliog. L. Karaman, Iz kolijevke hrvatske prošlosti (From the Cradle of the Croatian Past), Zagreb, 1930; D. Westphal, Malo poznata slikarska djela XIV do XVIII st. u Dalmaciji (Works of Little-known Painters from the 14th to the 18th Cent. in Dalmatia), Rad Jugoslaveske Akad. Znanosti i Umjetnosti, 258, 1937, pp. 15–60; C. Patsch, RE, s.v. Curictae.

Lepoglava. In the town are the Pauline monastery (ca. 1400) and the Church of Sv. Marija, in Gothic and baroque styles, decorated with stuccoes (1706) by Antonio Quadrio and paintings (1742) by J. Ranger.

In the vicinity are churches at Gorica (1731) and Purga (1750), with frescoes by J. Ranger. There are castles with parks at Klenovnik and Maruševec (17th cent.) and a Neo-Gothic castle at Trakošćan (ca. 1855).

Bibliog. G. Szabo, Spomenici kotara Ivanec (Monuments of the Ivanec District), Vjesnik Hrvatskoga Arheol. Drustva, XIV, 1915–19, pp. 22–97.

Mljet (anc. Melita; It. Meleda). The island of Mljet was conquered by the Romans; it rebelled during the Octavian period, but it was again occupied in 35–33 B.C. On a little island situated in the middle of Veliko Jezero stands a Benedictine abbey (1511) erected by Desa, King of Zahumlje, enlarged in the 16th century and fortified in the 17th; the church (recently restored) is built on a central plan. At Polače there are ruins of a Roman villa (3d cent. B.C.) and remains of a Paleo-Christian basilica.

Bibliog. B. Gušić, Mljet, Zagreb, 1931; L. Karaman, O rimskom zaseoku u Polačama na otoku Mljetu (A Roman Country House at Polače on the Island of Mljet), Antidoron M. Melite.

Narona. Near present-day Vid, Narona stood almost at the mouth of the Neretva River. From the 5th century B.C. it was an Illyrian-Greek trading station; after 167 B.C. it was a Roman town; from 34 to 33 B.C. it was called Colonia Julia Narona. There are remains of the circle of walls, as well as of towers (dating, according to the inscriptions, from the late Republican period), a forum, baths, a theater, an aqueduct, and private houses. Many altars, inscriptions attesting the existence of numerous temples and sanctuaries, fragments of columns, capitals, tiles, coins, clay vases, jewels, and gems have been found (now in Split, Arkeološki Muzej). Ostrogothic helmets found here are now in Vienna.

Bibliog. C. Patsch, Zur Geschichte und Topographie von Narona (Schriften der Balkankommission, Ant. Abteilung, V), Vienna, 1907; C. Nin (anc. Aenona; It. Nona). Located northeast of Zadar, Aenona was a Liburnian colony during the Hallstatt period, and in the 1st century of our era it became a Roman *municipium*. The medieval walls were partly built on the Roman ones. Remains of a fine temple with three cellae, probably consecrated to Jupiter, Rome, and Augustus, have been found, as well as ruins of what were probably the baths; of the eight Roman statues discovered in 1777, four are now in the Arheološki Muzej, Zadar, while the one of Isis is now in the Arheološki Muzej, Zagreb. In the neighborhood of Nin numerous Roman tombs were found, containing limestone urns and many funeral gifts, now in the Zadar museum.

Nin was the first Croatian political center after its conversion to Christianity. The surrounding walls, with two gates from the period of Venetian domination, are well preserved. The Church of Sv. Križ (11th cent.), on a cruciform plan with four semicircular apses at the crossing, has inscriptions of great documentary interest. Near the town is the small Church of Sv. Nikolaja, on a trilobate plan, containing many objects from the Carolingian and Paleo-Croatian eras, including the reliquary of St. Asel. The regional costume of the Ravni Kotari area is noteworthy; examples of it are exhibited in the museums of Zagreb, Split, and Vienna.

Osijek (anc. Mursa; It. Mursia). The city, inhabited in the Bronze Age, was an Illyrian center that later, under Hadrian, became the Colonia Aelia Mursa. Recent excavations have revealed remains of the circle of walls, Roman houses, and several altars (dedicated to Jupiter, Hercules, Sylvanus, etc.), as well as many statues of Hercules. The city first appeared under the name of Osijek in a document from 1196. It was conquered by the Turks in 1525 and became a bulwark against the Christians until 1690. During the 18th century, under Austrian domination, baroque art flourished. The city is divided into seven quarters: Retfala, the former Hungarian Calvinist city, with the Pejačević Castle (1796–1801); the Upper Town; Tvrdja, planned in the 18th century; the Lower Town, along the right bank of the Drava; and Novigrad, Tvrdjavica, and Podravlie. There are remains of the Crown fortress (1721) and of the Water Gate (18th cent.). The Church of Sv. Arhanjeli (18th cent.), the Capuchin church, and the Neo-Gothic Cathedral (1894; with frescoes by Franjo Rački) are noteworthy. The Muzej Slavonije has archaeological and ethnographic sections; the Galerija Slika exhibits Austrian, Slavic, Croatian, and Serbian paintings.

In the vicinity are ruins of the medieval castles of Kolodjvar (13th cent.) and Erdut (15th cent.); the castles of Valpovo (15th–19th cent.) and Belje (18th cent.) have parks.

Poreč (anc. Parentium; It. Parenzo). The Illyrian town (2d half of 1st cent. B.C.) became the Colonia Julia Parentium; it was a bishopric in the Middle Ages, and one of Istria's most important centers. In the 12th century it was conquered by Venice. The network of streets of the present city follows the Roman plan, with the *decumanus maximus*, *cardo maximus*, and the minor parallel streets. In Trg Marafor there are traces of the forum, with part of the antique paving; nearby are remains of a large temple (1st cent. of our era) and columns from a temple or portico. In 544 Bishop Euphrasius built the Basilica, on the site of previous Paleo-Christian buildings — namely, a rectangular oratory (4th cent.) and two 5th-century basilicas (the apse of one and the geometrically divided mosaic floors of the other are preserved). The Basilica, from the early Byzantine period, has a quadriporticus and is divided into three aisles by col-

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

umns with noteworthy capitals (VIII, PL. 84; XIII, PL. 347; etc.); the vault of the apse and on the triumphal arch are preserved the original mosaics (III, PL. 309; VII, PL. 266), rare examples with figures from the preiconoclast Byzantine period; the ciborium (13th cent.) has 5th-century capitals; in the central aisle is a polyptych by Vivarini. Across from the Basilica there is a hexagonal baptistery (perhaps 5th cent.). The *consignatorium* (now the bishop's residence), from the time of Euphrasius, contains the two-storied Chapel of Sv. Andreja. The city, which has many small palaces and Romanesque houses as well as Gothic and Renaissance buildings of Venetian influence, is still surrounded by walls with gates and towers (a pentagonal tower from 1447 and the Tower of the Serenissima). There is a lapidary museum as well as the Zavičajni Muzej, with archaeological finds and a rich collection of Istrian ethnographic material.

Pula (anc. Pola; Pulj). According to legend, the town was founded by Colchians; during the Iron Age it was an Illyrian stronghold; in 177 B.C. it was occupied by the Romans, and under Augustus it became the Colonia Pietas Julia Pola. The necropolis on the eastern slopes of the hill dates from the Iron Age. From the Roman period are the walls (5th cent. of our era), built on top of those from the Augustan period; the Porta Aurea (Arch of the Sergi), perhaps Augustan; the Porta Herculea (ca. 40 B.C.); the Porta Gemina, from the period of the Antonines; the forum, bounded on the north by the Capitol, between the Temple of Augustus and the so-called "Temple of Diana" (now part of the town hall); a hall for the cult of the emperor and propylaeum; houses with fine mosaic floors; a theater at Mount Zaro; the amphitheater, begun under Augustus and completed under the Flavians; cisterns; a nymphaeum; baths(?) below the Baptistery of the Cathedral; mausoleums of varying shape (exedra, pyramids, etc.), the most remarkable being an octagonal one from the 1st century of our era; and, at Prato Grande, the necropolis *sub divo* of large stone arches, mentioned by Dante (*Inferno*, IX, 113). In the Middle Ages the town escaped devastation by the barbarians, and in 1148 was conquered by the Venetians. After being sacked in the 14th century by the Genoese, it was rebuilt with aid from Venice, but it did not reach its former splendor. Of the famous Abbey of S. Maria del Canneto, founded in 554 by Maximianus, who later became bishop of Ravenna, there is only one funeral chapel, with remains of mosaics in the vault of the apse, similar to those in the so-called "Mausoleum of Galla Placidia" at Ravenna. The Cathedral retains from the original church (6th cent.) some one-light windows in the façade, fragments of the mosaic floor, remains of the plutei, and perhaps the apse. Noteworthy are the Franciscan church (16th cent.), with remains of Paleo-Christian plutei; the castle (1632); and the town hall, built in Gothic style with Roman materials but altered during the Renaissance. The Arheološki Musej contains prehistoric, classical, and Paleo-Christian collections.

In the neighborhood, at Peroj, is the Church of Sv. Fosca, with frescoes (1150–1200). In the nearby Brioni Islands (Pullaria, Brijuni) there are remains of villas, baths, Roman temples, and a Paleo-Christian basilica.

Pula, plan of the ancient city up to the 6th century. Principal monuments: (*a*) Pre-Roman necropolis; (*b*) walls; (*c*) Porta Aurea (Arch of the Sergi); (*d*) Porta Herculea; (*e*) Porta Gemina; (*f*) Gate of St. John; (*g*) gate facing the sea; (*h*) forum; (*i*) Capitol; (*j*) Temple of Augustus; (*k*) so-called "Temple of Diana"; (*l*) hall for the cult of the emperor and propylaeum; (*m*) *domus* under the castle; (*n*) theater at Mount Zaro; (*o*) small theater; (*p*) cistern; (*q*) octagonal mausoleum; (*r*) amphitheater; (*s*) nymphaeum; (*t*) Basilica of St. Theodore; (*u*) Basilica of St. Martin; (*v*) Cathedral; (*w*) Baptistery; (*x*) Basilica of St. Nicholas of the Greeks; (*y*) St. Nicholas in Via Sergia (destroyed after the war); (*z*) S. Maria del Canneto (*from RE, s.v., with additions*).

Rab (Arba, Arbe). Rab, the main town of the island of the same name, was once an Illyrian center, then a Roman colony, and subsequently Byzantine. The town has a Venetian character, with picturesque narrow streets and patrician houses; it is characterized by four medieval bell towers. The Cathedral of Sv. Marija (11th–12th cent.; altered several times) has a portal (1514) with a Pietà by P. Trogiranin, a main-altar ciborium with tracery (11th cent.), an enameled cross (12th cent.), a Pantokrator (10th cent.), stuccoes (1798), and carved wooden stalls (1445); the Romanesque bell tower (12th–13th cent.) has bi-, tri-, and quadripartite windows. The Church of Sv. Andreja (11th cent.) has a bell tower (1181) and a Madonna (1485) by Antonio Vivarini. The Church of Sv. Justine is from the 16th century. In the nearby Franciscan convent there is a collection of ancient homespun cloth, a Byzantine Virgin (ca. 1300), and a polyptych by Vivarini (1458).

Near the valley called Supetarska Draga is the Romanesque Church of Sv. Petar (ca. 1060), with three aisles.

Rijeka (It. Fiume). In the 1st century of our era the Illyrian-Celtic town of Tarsatica became a Roman *municipium*. An arch from the late imperial period and remains of the town walls (4th cent.) are preserved. The old city was encircled by walls until 1700. Monuments: the Church of Sv. Jirolima (14th cent., restored in baroque style in the 18th cent.) with remains of late Gothic frescoes; the Palača Bivšeg Municipija, formerly an Augustinian monastery (14th cent., rebuilt in the 18th cent.); the baroque Church of Sv. Vida (1638–42); the Serbian Orthodox church (1786), in baroque style; the parish church (14th cent., rebuilt in baroque style in the 18th cent.; the Gradski Toranj (Town Tower, started in the 15th cent. and completed in baroque style in the 18th cent.); and the Gradska

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

Palača (17th cent.). The Vladimir Švalba Cultural Center, in the former palace of the governor, houses an important collection of paintings and sculpture (19th–20th cent.). On the hill of Trsat are the Frankopanski Kastel (12th cent., rebuilt in the 19th cent.) and the Franciscan Church of Sv. Marija (15th–19th cent.).

Forlati Tamaro, EAA, s.v. Fiume.

Rovinj (anc. Rovignium; It. Rovigno). The town was inhabited before Roman times. The Cathedral, on the site of a previous church dating from before 1000, has a bell tower (1654–77) modeled on that of St. Mark's in Venice. The small Church of the Holy Trinity (13th cent.), on a polygonal plan, and the baroque Arch of the Balbi, near the Clock Tower, are noteworthy.

Nearby, on the Limski Canal, is the Church of Sv. Mihajl, with frescoes (1028–40) from the Ottonian period.

Bibliog. B. Benussi, Storia documentata di Rovigno, Trieste, 1888; G. Caprin, Istria nobilissima, 2 vols., Trieste, 1907; H. Folnesicz and L. Salona (mod. Solin). In the late 2d or early 1st century B.C. the inhabitants of Issa set up a colony at Salona, an Illyrian town;

Salona, archaeological plan. Principal monuments (divided into the earlier town, A, and the later town, B): (1) Walls with gates; (2) main street; (3) forum; (4) theater (graphically reconstructed); (5) portico; (6) temple; (7) horreum(?); (8) baths; (9) amphitheater (graphically reconstructed); (10) Christian basilicas; (11) walls; (12) Porta Caesarea; (13) Porta Suburbia II; (14) Porta Capraria; (15) Porta Andetria; (16) aqueduct; (17) main street; (18) baths; (19) exedra; (20) Roman bridge; (21) possible area of the *praetorium*; (22) cross-plan basilica; (23) town basilica; (24) baptistery; (25) oratory; (26) eastern basilica; (27) Paleo-Christian basilica; (28) aqueduct; (29) cistern; (30) Christian cemetery with basilica; (31) Marusinac, with basilica and cemetery; (32) Christian cemetery with basilica; (33) sarcophagi; (34) to the necropolis in Horto Metrodori; (35) cemetery with basilica (*from Dyggve, Bröndsted, and Weibbach, 1928–33*).

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

in 34–33 B.C. Octavian promoted it to the Colonia Martia Julia Salona, which was the capital of the province of Dalmatia until the town was destroyed in A.D. 614. It is divided into two portions, surrounded by walls, the earlier one to the west, the later one to the east. In the western area excavations have brought to light the forum, a temple, theater, amphitheater, and the baths; in the eastern part, the baths, an exedra, and a torcular. The material found here (marble statues, bronze figures, Latin and Greek insciptions, etc.) is kept in the Arheološki Muzej, Split. Remains of Paleo-Christian Salona are centered in the northern section: a private building that was transformed into the Oratory of St. Domnius under Diocletian; a basilica from the 4th century, rebuilt during the 5th century on a cruciform plan; and another basilica (5th cent.) flanked on the north side by additional buildings (*consignatorium*, *baptisterium*, *cathecumeneum*, *episcopium*). Five funeral basilicas, of great importance for the study of Paleo-Christian monuments, are those of Kapljuč; Manastirine, with a cemetery around the tomb of St. Domnius; Marusinac, including a cemetery, the apsidal mausoleum of St. Anastasius (on two levels, with two-storied, Oriental characteristics), and a *basilica discoperta*; of the other two, one is in the direction of the headwaters of the Jadar River, the other along the road to Vranjić.

After the Croatian conquest of Dalmatia (ca. 614) the area became the center of the new Croatian state under the Trpimirović dynasty (835–1090). At nearby Gradina na Otok there are remains of churches built by Croatian kings; in one of them Franco Bulić discovered the funeral inscription (976) of Queen Jelena; there are also remains of a Paleo-Croatian church (11th cent.) on a square plan and containing eight columns that formed an octagon and probably supported the dome. Near Majdan, the so-called "Šuplja Crkva" (11th cent.), known from documents, has been identified. At Rižinice are the remains of the Church of Sv. Petar, built (ca. 852) by Duke Trpimir. At Glavičine, Mravince, and near Majdan, there are Paleo-Croatian cemeteries with rich material, today at Split.

Senj (anc. Senia; It. Segna). Founded by Iapygians, Senj, a Roman *municipium* under Augustus, became a center of trade between the Mediterranean and Pannonia. There are remains of the Roman walls and of buildings, capitals, mosaics, altars, inscriptions, and tombs. The fortress of the Uskoks has strong bastions and towers (16th cent.). The Romanesque Cathedral (13th cent.), with a partly brick façade, has undergone repeated restoration. On a hill is Nehaj Castle (ca. 1544).

Šibenik (It. Sebenico). The town, which stands in the valley of the same name, is of early medieval origin. In the 12th century it was under Hungarian control; in the 13th century it became an autonomous city and the seat of a bishop; and from 1420 to 1797 it was under Venetian domination. The town lies in tiers around the old castle, encircled by the Venetian walls. The Cathedral (Sv. Jakov; XIII, PL. 76), rebuilt from 1431 on by Francesco di Giacomo, Lorenzo Pincino (Pinciano), and Antonio Busato, is in Gothic-Renaissance transitional style; the first story of the façade is in Gothic style; the dome at the crossing, the apse, and the ceiling, all in Renaissance style, are by Georg Matejević (Juraj Dalmatinac, Giorgio Orsini, Giorgio da Sebenico) and his pupils, by Nikola Firentinac (Niccolò di Giovanni Cocari), and by Andrija Aleši. The exterior of the Baptistery (ca. 1443), also by Georg Matejević, is entirely decorated with statues. Other noteworthy churches are the Gothic Sv. Franja, several times destroyed and rebuilt, with a coffered ceiling decorated with paintings (17th cent.) of the Tintoretto school; Sv. Dominik; Sv. Spas; Sv. Križ, with baroque elements; and Sv. Janez, with a staircase (1460) by Ivan Pribislavić. Civil buildings include the Loggia (1542) and the Fortress of Sv. Nikola (1546) by Gian Girolamo Sanmicheli, and the Foscolo and Orsini palaces.

In the neighborhood, at Vodice, at Bilice, and in the suburb of Jurasi, some circular buildings (called *bunje* or *poljarice*) have vaults similar to those used in nuraghi and trulli.

Sisak (anc. Siscia). Strabo spoke of two neighboring cities, Segestica and Siscia, which later on probably merged into one. In 35 B.C. the town was conquered by Octavian and became the strongest Roman city in Pannonia. Under Vespasian it became the Colonia Flavia Siscia, and under Septimius Severus it became an important port on the Sava. There are many remains of the Roman town: foundations of houses, baths, and a basilica, as well as columns, capitals, sarcophagi, steles, statues, reliefs, and altars dedicated to different divinities. The material found here (pottery, coins, jewelry, etc.) is kept in the Arheološki Muzej, Zagreb, and in the Gradski Muzej, Sisak. From the Paleo-Croatian period there are fragments with tracery decoration, earrings, and pottery (9th–10th cent.). The triangular fortress (1544–50), with three corner bastions, is by Pietro (di Martino) da Milano and Croatian assistants.

In the neighborhood, in the large villages of the Croatian Posavina, are oak-beamed houses and several wooden churches (at Bok, 18th cent.; at Buzeta, 19th cent.; at Brest, 20th cent.). At Selo there is a baroque church (1765) with a dome and two bell towers.

Split (anc. Spalatum; It. Spalato). A highly important modern port, Split began as a small Greek colony (Aspalathos); in Roman times it was a fishing hamlet a few miles from Salona. In the late 3d century Diocletian built the imperial palace (Palatum), one of the most important monuments of the late-antique period (IX, PL. 34, FIG. 91). In the form of a castrum, divided into four equal parts by the *cardo* and the *decumanus*, and surrounded on three sides by strong walls with towers, it had three double gates (Aurea, Argentea, Ferrea) flanked by octagonal towers. Inside, beside the palace itself, there were buildings for worship, such as the Temple of Jupiter and the Mausoleum of Diocletian, as well as military and administrative facilities. The palace, with peristyle, atrium, vestibule, library, baths, triclinium, gynaeceum, and exedra, opened onto the sea; the façade was decorated with arcades supporting three loggias. Recent excavations on the level below have revealed a vast underground hall with three aisles. After the Avars and Croatians had destroyed Salona (in 614), the population sought refuge in the fortified palace. This gave rise to medieval Spalatum, where the Croatian element gradually became dominant. The Pope sent Giovanni Conversino da Ravenna as a missionary, and through his efforts the archbishopric of Split was established in the mid-8th century; the Temple of Jupiter became the Baptistery and the Mausoleum of Diocletian became the Cathedral.

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

The original portico and vestibule of the Mausoleum were demolished to make room for the Cathedral's Romanesque bell tower (13th cent.; rebuilt in the 19th cent.); otherwise the original structure and decorations were retained. The base of the bell tower is decorated with Romanesque reliefs; the Cathedral's wooden door (1214), by Andrea Buvina, has 28 panels with reliefs representing scenes of the life of Christ. Noteworthy in the Cathedral are the Romanesque wooden stalls (13th cent.; altered in the 14th cent.); the hexagonal ciborium (13th cent.); the Chapel of St. Domnius (1427), by Bonino da Milano; the vault frescoes (1428) by Vušković; and the chapel and altar of St. Anastasius (1448), by Georg Matejević (the sculptures of the sarcophagus are a magnificent example of 15th-cent. realism). The Cathedral Treasury contains objects dating from the 8th to 18th centuries. In the Baptistery, which contains the sarcophagus of Giovanni da Ravenna and a bas-relief (11th cent.) representing a Croatian king and two other persons, elements of pre-Romanesque architecture were found. Above the Porta Aurea, on what was originally a sentry walk, is the small Church of Sv. Martin (ca. 800), which preserves its original iconostasis; another small church (Gospa od Zvonika; ca. 1100) is situated above the Porta Ferrea. Some of the numerous monuments of the old town, which grew up during the centuries within the walls of Diocletian's palace, are the churches of Sv. Rok and Sv. Duje; the Papalić (Gothic), Ivellio, and Cindro (baroque) palaces; and the town hall, with a Gothic loggia (1433). The Venetian town adjoined the western side of Diocletian's palace and was encircled by bastions and towers; there are several palaces (Cambi, Milesi, etc.), the Church of Sv. Duh, and the remains of the Benedictine abbey. In the modern town, outside the walls, are the Franciscan and Dominican monasteries. Museums: Arheološki Muzej, Etnografski Muzej, Muzej Hrvatskih Arheoloških Spomenika, Muzej Grada Splita, and Galerija Umjetnina.

Nearby are the ruins of the Paleo-Croatian Church of Sv. Jurje, on a circular plan with six semicircular niches. At the foot of Mount Marjan is the Muzej Meštrovoca, with works by the sculptor Ivan Meštrović.

Trogir (anc. Τραγούριον, Tragurium; It. Traù). The Greek colony was founded (3d cent. B.C.) on a small island by the inhabitants of Issa (mod. Vis). Traces of the Greek walls have been found, as well as Greek and Latin inscriptions, a fine relief attributed to the school of Lysippos (now built into the wall of the Benedictine convent), and statues from the Roman period. In the Middle Ages the town was first under Byzantine, then under Hungarian, rule; from 1420 to 1777 it was ruled by Venice. The town nucleus, predominantly medieval in appearance, covers a small island between two canals. The Romanesque Cathedral (Sv. Lovre; XIII, PL. 76), begun in 1180 on the site of an earlier church and completed about 1250, has a peristyle surmounted by a bell tower (15th–16th cent.; Matija Gojković, T. Bokanić) and a magnificent portal (1240) with remarkable sculptures by Radovan and assistants (XIII, PL. 76); the interior consists of an ogival-vaulted nave (1427–40) and two cross-vaulted aisles, separated by rectangular piers, and three apses; the original pulpits and ciborium are preserved. In the left aisle are the Chapel of Sv. Ivan, by Andrija Aleši, Nikola Firentinac (Niccolò di Giovanni Cocari), and Ivan Duknović (Giovanni Dalmatia), on a square plan with barrel vaults and a rich decoration by Firentinac and Aleši, perhaps assisted by Laurana; and the Chapel of Sv. Jeronima, by Marco Gruato (Gruvato) and Nikolaus Račić. The square Baptistery has sculptured decoration by Aleši. The Church of Sv. Barbara (9th–11th cent.), a small basilica, has three aisles and reused capitals; the Romanesque-Gothic Church of Sv. Dominik dates from the 14th century. The Benedictine church (1270) is decorated with small pensile arches and has a quadrilateral apse. Civil buildings include the Loggia (1308), the town hall (15th cent., altered), the Kastel Kamerlengo (15th cent.), and the Čipico (15th cent., with a baroque portal), Fanfonja, Lucio, and Andreis palaces. Many private houses preserve remains of Romanesque structures.

Varaždin. The town, an important center during the Middle Ages, preserves the castle (1575) of the Erdödy family, with fortified walls and strong bastions, built by Domenico dell'Allio. The town's architecture is predominantly baroque. Noteworthy churches include Sv. Marija (1642–46), formerly the Jesuit church; Sv. Nikolaja (1751–68), with a Gothic bell tower; and Sv. Ivan — all with rich baroque fittings. Also of note are the town hall (restored in 1793), the baroque Patačić Palace (1764), and the Keglević Palace.

In the vicinity there are many castles: Vinica (16th cent.; in ruins); Bela (16th–18th cent.); Opeka (18th cent.), with a beautiful park; Jalkovec (ca. 1900); and Ludbreg (18th cent.), with fresco decorations.

Vinkovci (anc. Cibalae). Inhabited from the Neolithic period on, under Hadrian the town became a *municipium* and under Septimius Severus a colony named the Colonia Aurelia Cibalae. There are traces of the Roman fortified walls and remains of the baths, a pottery-making center, and the necropolis, on the left bank of the Bosut River; a large part of the material found here (statues in provincial style, pottery, coins, etc.) is in the Arheološki Muzej, Zagreb. The present-day town is built around a baroque square with arcaded houses, the Church of Sv. Ivan Nepomuk (1772), and the Serbian Orthodox church (1794).

At nearby Lučica there is a brick Gothic church; at Rokovci there are ruins of another Gothic church.

Novak, EAA, s.v. Cibalae.

Vis (anc. Issa; It. Lissa). About 385 B.C. the Syracusans founded a colony on the island of Vis, which in 47 B.C. became a Roman *municipium*. From the Greek period there are remains of the walls (4th–3d cent. B.C.) and buildings, as well as many tombs with the so-called "Gnathia" pottery, imported from southern Italy, and vases made locally; fragments of Hellenistic structures, Greek inscriptions, and statues of the Tanagra type have been found. From the Roman epoch there are remains of a theater, the forum, tombs, statues, and inscriptions in Greek and Latin. The material found at Vis is kept in the archaeological museums at Split, Zagreb, and Vienna.

Vizače (anc. Nesaticum; It. Nesazio). This Istrian stronghold, erected on the location of a prehistoric settlement, was destroyed by the Romans in 177 B.C. but was rebuilt and later became a *municipium*. About the 2d century of our era it had a period of prosperity. Traces of the prehistoric walls, with gate, and an Atestine necropolis have been discovered. Sculptures (7th–6th cent. B.C.) of archaic Greek influence and imported Greek vases (5th cent. B.C.) have been found, as well as situlae and Attic, Apulian, and Este vases. From the Roman period there are remains of the walls, with several gates; of the forum area, with twin temples built on the site of a prehistoric place of worship (of the goddess Eia?); of private houses and baths; and of a necropolis. There are also basilicas from the Paleo-Christian epoch.

Zadar (anc. Iadera; It. Zara). Originally a Liburnian town, Zadar is located on a peninsula in the Adriatic. Iadera, promoted to the status of a colony by Augustus in 34–33 B.C., was a prosperous center, trading especially in oil and wine; after the destruction of Salona, it became the most important town in Dalmatia. It was controlled by Byzantium, by the Croatians, and by Venice (1409–1797). Of the Roman town there are remains of two honorary gates and of the forum, whose paving is preserved under the former Church of Sv. Donat; two restored columns, one in front of the bishop's residence, the other near the public gardens; remains of the aqueduct and the baths; and inscriptions, altars, cippi, fragments of statues, and pottery. The town, which suffered much damage during World War II, has retained the Roman town plan, with streets intersecting at right angles. The deconsecrated Church of Sv. Donat (now the Arheološki Muzej) probably dates from the 9th century (XI, PL. 323, FIG. 672); built on Roman foundations, it is a two-storied rotunda with annular aisles and three apses. From the Paleo-Croatian period are the Church of Sv. Lovre (11th cent.), with a tympanum decorated with a bas-relief representing Christ in glory, and the Romanesque Church of Sv. Krševan (12th cent.), with frescoes of Byzantine and Giottesque influence. The Cathedral (Sv. Stošija), originally from the 11th century (crypt with fragments of the 8th–9th cent.) and consecrated in 1285, is Romanesque, with influences from Tuscany and Apulia in the architecture and from Lombardy in the sculpture; in the interior, the two side aisles, separated from the nave by piers with double columns, are surmounted by women's galleries (*matroneum*) with six-light windows. The Cathedral contains a ciborium from 1332, a painting by Palma Giovane, parts of an altarpiece by Carpaccio (ca. 1480), and a rich treasury. The Church of Sv. Marija, originally from the 12th century (bell tower, with frescoes from 1105), has a Renaissance façade of Venetian influence and contains baroque stuccowork (18th cent.). In the treasury of the Church of Sv. Šimun is the shrine (1377–80) of St. Simeon, donated by Queen Elizabeth of Hungary, a masterpiece of the jeweler Francesco da Sesto of Milan and his Croatian assistants. The Church of the Franciscan monastery (founded in 13th cent., entirely rebuilt in 17th–18th cent.) contains a wooden crucifix (12th cent.) and richly carved stalls (14th cent.); the cloister dates from the 16th century. Noteworthy civil structures include the Clock Tower (18th cent.), the Loggia (1565), the Porta Marina (1572), and the Porta Terra Firma (1543) by Sanmicheli.

Zagreb. The capital of the People's Republic of Croatia. The city consisted of two centers — Zagreb, or Kaptol, known since 1094, when the Zagreb bishopric was founded (the surrounding walls date from 1466), and Grič, or Gradec, which became a free royal city in 1242 — which merged in the 19th century. Some towers are left of the medieval walls (1266) of Grič (Kamenica Vrata, Popov Toranj, Dverce). The Cathedral, rebuilt in 1275 to replace an older church destroyed by the Tatars in 1241, was modeled on the Church of St-Urbain at Troyes; the exterior, damaged several times, was rebuilt in Neo-Gothic style to the designs of Friedrich von Schmidt and Hermann Bollé in the 19th century, when the fortified walls (ca. 1517) around the church were partly destroyed and the baroque bell tower was replaced by two Neo-Gothic ones. The three-aisled interior is decorated with sculptures of the Prague school of Parler; of note are the stalls (1520) inlaid by Pietro de Rechardo, the marble pulpit by Cussa (1696), and the 13th-century frescoes. The Gothic parish church of Grič (Sv. Marko), restored in the 19th century, has a portal decorated with sculptures (after 1400); it contains modern works by Ivan Meštrović and Joza Kljaković (ca. 1937). Other noteworthy churches include Sv. Marija, with baroque marble furnishings by Franz Rottmann (Rodmann, Rothmann); Sv. Katarine (1620–32), in Roman baroque style, with frescoes (1726–29) by Franz Jelovšek and stuccoes; Sv. Ksaver (1748–52); Sv. Ivan (1789–90), with frescoes (18th cent.) by A. Lerchinger and Arher; and Sv. Vlaho (1915), designed by Viktor Kovačić. The Nadbiskupski Dvor (Archbishop's Palace; ca. 1730) contains the Gothic Chapel of Sv. Stjepan, with mid-14th-century frescoes. There are several palaces dating from the 17th to the 19th century (Oršić, Jelačić, etc.).

The modern section of Zagreb, dating from the 19th century, has several noteworthy public buildings: the Univerzitet, or Sveučilište (1856); the Jugoslavenska Akademija Znanosti i Umjetnosti (1879); the Hrvatsko Narodno Kazaliste (National Croatian Theater; 1895), in baroque style; the Maksimir, a neoclassic park; the Umjetnički Paviljon; and the Sveučilišna Biblioteka (ca. 1913). The cemetery of Mirogoj is surrounded by monumental neo-Renaissance arcades by Bollé (after 1876). Museums: Muzej za Umjetnost i Obrt, Arheološki Muzej, Muzej Grada Zagreba, Gliptoteka, Stara Galerija (with paintings by Fra Angelico, Filippino Lippi, Cosimo Rosselli, Pintoricchio, Paolo Veronese, Tintoretto, etc.), Moderna Galerija, Gradska Galerija Savremene Umetnosti, Etnografski Muzej, and various private collections.

At nearby Šćitarjevo are the remain of the Illyrian Andautonia, later a Roman *municipium*. In the environs of Zagreb there are ruins of medieval castles (Medvedgrad, ca. 1250; Susegrad; Zelingrad), several from the 18th century (Lužnica, Lukavec, Bistra, and Brezovica, all with frescoes), and the neoclassic Januševec (ca. 1820). At Donja Lomnica there is a wooden palace (1806). South of Zagreb, in the Turopolje lowlands, are several wooden churches, the most beautiful being Sv. Barbara, in the village of Velika Mlaka; its interior is painted (mid-18th cent.) in baroque style. North of Zagreb, in the villages of Šestine, Gračani, Remete, and Markuševec, picturesque folk costumes are still used for weddings and festivals. Homespun fabrics, interwoven with red, are produced locally.

Bosnia-Herzegovina (*Bosna-Hercegovina*). Banja Luka. Situated on a hill overlooking the Vrbas River, the town was an important Roman military center. In the 14th century the fortress (Vrbaski Grad) was built; the town was occupied by the Turks in the 16th century. There are remains of the Roman baths and tombs. The modern town has extended in the direction of the valley; the old town has retained the character of a citadel. Noteworthy buildings include the Ferhadija Džamija (1557–83), a mosque modeled on that of Sultan Sulaymān in Istanbul; the Arnaudija Džamija; and the Kaštel, restored in the 18th century.

Bibliog. J. Asboth, Bosnien und die Herzegowina, Vienna, 1888; S. Bešlagić, Kratka uputa (Short Guide), Sarajevo, 1900; L. Thallóczy and M. Šufflay, Povijest banovine, grada i varoši Jajca (History of the Banat, Castle and City of Jajce), Zagreb, 1916; A. Bejtić, Banja Luka pod turskom vladavinom (Banja Luka under Turkish Rule), Nase starine, I, 1953, pp. 91–116.

Bistua Nova (mod. Zenica). The Roman town, near Zenica, was an important coal-mining center. In the vicinity of the modern town are remains of the Roman period and of a Paleo-Christian basilica, with steles bearing reliefs and fragments of the Paleo-Croatian decorations.

Bibliog. Ć. Truhelka and K. Patsch, Iskopine u dolini Lašve 1893 (Excavations in the Lašva Valley in 1893), Glasnik Zemaljskog Muz. u Sarajevu, V, 1893, pp. 685–707; C. Truhelka, Starokršćanska arheologija (Paleo-Christian Archaeology), Zagreb, 1931; Poviest hrvatskih zemalja Bosne i Hercegovine (History of the Croat Lands of Bosnia and Herzegovina), Sarajevo, 1942.

Delminium (mod. Županiac). Delminium was occupied in 155 B.C. by the Romans, who made it a *municipium*. There are remains of the forum, with a portico on three sides and a basilica(?) on the fourth, and three other buildings, with statues; remains of baths and other buildings, vases, coins, altars, and fragments of columns, piers, and architraves have also been found.

Bibliog. K. Patsch, Prilog topografiji i povjesti Županica-Delminiuma (Contribution to the Topography and History of Županiac-Delminium), Glasnik Zemaljskog Muz. u Sarajevu, XVI, 1904, pp. 307–66; G. Novak, EAA, s.v. Delminium.

Domavium (mod. Srebrenica). The Illyrian town became a Roman *municipium* and later a colony. Lead and silver were already being mined in the Bronze Age. There are remains of the curia, comprising two adjoining buildings, in one of which bases of statues have been found. The material found here is in the museum at Sarajevo.

Bibliog. V. Radimsky, Rimski grad Domavija u Gradini kod Srebrenice (The Roman City of Domavium at Gradina near Srebrenica), Glasnik Zemaljskog Muz. u Sarajevu, III, 1891, pp. 1–19; V. Radimsky, Prekopavanje u Domaviji kod Srebrenice godini 1891 (Excavations at Domavium near Srebrenica in 1891), Glasnik Zemaljskog Muz. u Sarajevu, IV, 1892, pp. 1–24; G. Novak, EAA, s.v. Domavia.

Foča. The town, which stands where the Ćeotina joins the Drina, has several noteworthy mosques: Aladža Džamija (1549), by Ramadan-aga, a pupil of Sinān; Atik Džamija (1518); Kadi Osman Džamija (1593); and Basha Džamija (1753). Of interest are the large Han (17th cent.) and the Sahat Kula (Clock Tower; 1750).

In the neighborhood are Višegrad, with a multiple-arched stone bridge (1571; 540 ft. long) and the remains of a fortress, and Humsko, where in 1933 the funerary monument of the high Bogomile dignitary Milutin, with symbolic decorations, was found.

Bibliog. M. Zarzycki, E. Arndt, and G. Stratimirović, Aladža-džamija u Foči (The Aladža Mosque at Foča), Glasnik Zemaljskog Muz. u Sarajevu, III, 1891, pp. 103–15; V. Ilidža. A spa near Sarajevo, Ilidža contains remains of Roman baths (2d cent. B.C.), with mosaics. The material found here is in the museum at Sarajevo.

Bibliog. J. Kellner, Römische Baureste in Ilidže bei Sarajevo, Wissenschaftliche Mitt. aus Bosnien und Herzegowina, V, 1897, pp. 1–32; N. Miletić, Nekropola u selu Mihaljevićima kod Rajlovac (Necropolis in Mihaljevići near Rajlovac), Glasnik Zemaljskog Muz. u Sarajevu, N.S., XI, 1956, pp. 9–41; F. Novak, FA, VI, no. 5988; G. Novak, EAA, s.v. Aquae S(...).

Jajce. Built in the early 15th century, Jajce was the residence of the kings of Bosnia until the Turkish conquest (1463). The town grew up around the Kaštel, built by Italian masters on a hill, surrounded by walls and bastions with portals carrying the coat of arms of the Hrvatinić family; two towers, Medved Kula and Sahat Kula, are linked to the Kaštel. The Franciscan church is noteworthy. Cut into the rocks are the so-called "Bogomile Catacombs" (perhaps a mausoleum), with Romanesque and Gothic elements. In the neighborhood there are remains of a mithraeum. The old water mills along the cascades of the Pliva are similar to the Bosnian wooden houses with sloping roofs.

Bibliog. Ć. Truhelka, Katakombe u Jajcu (Catacombs at Jajce), Glasnik Zemaljskog Muz. u Sarajevu, IV, 1892, pp. 57–68; L. Thallóczy and M. Šufflay, Povijest banovine, grada i varoši Jajca (History of the Banat, Castle and City of Jajce), Zagreb, 1916; D. Sergejevski, Spätantike Denkmäler aus Jajce, Glasnik Zemaljskog Muz. u Sarajevu, L, 1938, pp. 49–63.

Konjic (anc. Brindia). The town, of Roman origin, has expanded along both banks of the Neretva, connected by a Turkish five-arched stone bridge (1682; restored). A mithraeum with a relief of a god was found in the neighborhood; at nearby Lisičići there are three late imperial Roman villas (3d–4th cent.) and a necropolis.

Bibliog. K. Patsch, Mithräum u Konjicu (The Konjic Mithraeum), Glasnik Zemaljskog Muz. u Sarajevu, IX, 1897, pp. 629–56; I. Čremošnik, Nova antička istraživanja kod Konjica i Travnika (New Research in Antiquity near Konjic and Travnik), Glasnik Zemaljskog Muz. u Sarajevu, N.S., X, 1955, pp. 107–36; I. Mostar. The capital of Herzegovina. Of Roman origin (Andetrium, or Mandetrium), Mostar grew considerably in the Middle Ages and became a very active trade center in the 17th and 18th centuries. It was the residence of Sandjak Beg in the 15th century and of an Orthodox bishop in the 18th. The town expanded along both banks of the Neretva, linked by several bridges; the most notable is the so-called "Roman bridge" (1566–67; XIII, pl. 75), built by Hajrudin, with a single arch and flanked by towers. The town has a markedly Oriental character because of the many minarets and Turkish buildings. Noteworthy mosques are the Karadžoz Begova Džamija (1557), with richly decorated minaret and şerefe, and the Koski Mehmed Paše Džamija. The Orthodox Cathedral, the Sahat Kula, and the Bišćevića Ćošak are interesting.

At nearby Blagaj are the ruins of the Šćepangrad, a 15th-century fortress; near the source of the Buna are the remains of the Ali Paša Rizvanbegović Džamija; at Radimlje there is a Bogomile necropolis (XIII, pl. 75) with symbolically decorated tombs (dances, hunting scenes).

Bibliog. A. Benac, Radimlja, Sarajevo, 1950; A. Benac, Široki Brijeg, Sarajevo, 1952; S. Bešlagić, Stećci u dolini Neretve (Sepulchral Stones in the Naretva Valley), Naše starine, II, 1954, pp. 180–212.

Sarajevo. The capital of the People's Republic of Bosnia-Herzegovina. The town was founded by the Turks in the 15th century around the Vhrbosna, the conquered fortress of the local rulers. Because of its fortunate geographic position, the town expanded rapidly along the banks of the Miljacka. The name Sarajevo (Town of the Palaces) first appeared in the 16th century. In 1697 Prince Eugene of Savoy burned the town, and after a long period of decay it experienced a new spurt of growth at the end of the 19th century. The Begova Džamija, built in 1530 by Sinān, who was inspired by Hagia Sophia in Istanbul, has a wide dome on an octagonal base and two smaller domes flanked by a tall minaret; the portico has ogival arches. Other noteworthy mosques include the Sarač Hadži Ali Džamija (1545); the Careva Džamija, erected in 1450 for Isa Beg and rebuilt (ca. 1565) after a fire; the Hadim Ali Paša Džamija (1561); and the Baščaršiska Džamija (1550). Particularly interesting is the Oriental quarter of Čaršija, a market center with picturesque streets and buildings, including the Madrasah (15th cent.), often called "Kuršumlija" because of its lead (*kuršum*) roof, with a richly decorated portal and a tall, square, red-brick tower; the Gazi Husrefbegov Bezistan; and the Husrefbegov Hammam. The Kaštel, surrounded by bastions and walls, has three 15th-century gates. More recent are the Neo-Byzantine Orthodox Cathedral (1882); the Neo-

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

Gothic Catholic Cathedral (1889); the Orthodox Church of Sv. Arhanjeli, with the adjoining museum of the Dobro-bosanska diocese, rich in manuscripts; the Sephardic synagogue; and the town hall, a modern building in Moorish style. The Zemaljski Muzej contains rich prehistoric, archaeological, and ethnographic collections.

In the vicinity of Sarajevo there are, at Breza, a church from the time of Theodoric the Great; at Rogačići, a circular church (12th cent.) with six niches; and a Bogomile necropolis.

Bibliog. E. Stix, Das Bauwesen in Bosnien und Herzegowina, Vienna, 1887; Ć. Truhelka, Naši gradovi (Our Cities), Sarajevo, 1904; S. F. Truhelka, Gazi Husrufbeg: njego život i njegovo doba (Gazi Husrufbeg: His Life and Times), Glasnik Zemaljskog Muz. u Sarajevu, XXIV, 1912, pp. 91–234; H. Mineti, Osmanische provinziale Baukunst auf dem Balkan, Hannover, 1923; A. Nametak, Islamski kulturni spomenici (Islamic Monuments), Sarajevo, 1939.

Travnik. The former capital of Bosnia and later the residence of the Turkish vizier, Travnik was built near the fortress (15th cent.) founded by King Tvrtko II. Of the many mosques the Jeni Džamija, built over a medieval church, and the Hadži Alibegova Džamija are particularly interesting.

In the surrounding area are the villages of Varošluk, with a Paleo-Christian church (4th cent.) and the barrel-vaulted Bogomile mausoleum of Batalo, on a square plan and with a portico (ca. 1393); Turbe, with a two-storied Paleo-Christian mausoleum with barrel vaults (4th–5th cent.) and the mausoleum of Sheik Ismail-baba (1770); Pašinac, with a Roman building from the age of Trajan, subsequently turned into a Paleo-Christian sanctuary; and Rankoviči, with baths and living quarters from Roman times.

Serbia (*Srbija*). Banjska. The monastery of Banjska, near Kosovska Mitrovica, was built (ca. 1314) by kings Dragutin and Milutin. The church, stylistically of the Raška school, has a dome, a wide semicircular apse, and a narthex later flanked by two bell towers; it is covered with polychrome marble and decorated with Romanesque sculptures similar to those at Studenica and Dečani. Little remains of the frescoes.

Bibliog. A. Deroko, Banjska, Starinar, 3d ser., VI, 1931, pp. 107–09.

Belgrade (anc. Singidunum; Beograd). The capital of the Federal People's Republic of Yugoslavia, Belgrade has always been an important center. Singidunum (its name suggests a Celtic origin) was built on the site of a prehistoric settlement; in the 1st century of our era it was a Roman military camp, which in the 3d century became a colony. Inscriptions, altars, and statues from this period have been found. The town was destroyed by repeated barbarian invasions, rebuilt and fortified by Justinian, and again destroyed. In the 9th century it reappeared in the chronicles with the Slavic name of Beli Grad (White City). During the subsequent centuries it was under Byzantine, Magyar, and Bulgarian rule; in 1521 it was conquered by the Turks; from the 17th century to 1867 it was alternately ruled by the Turks and the Hapsburgs. During World Wars I and II Belgrade was to a large extent destroyed, but both times it was rapidly rebuilt.

The older parts of Belgrade extend in concave tiers down the sloping hills toward the Sava, while the newer sections cover the central areas of the plateau. One of the most noteworthy monuments is the Citadel, rebuilt several times since the Roman period (almost nothing remains of the Roman and medieval structures) and completely refurbished in the 18th century by the Swiss Nikolas Doxat (1682–1738). The Citadel comprises two sections, Gornji Grad and Donji Grad, and has noteworthy towers — Sahat Kula (18th cent.), Kula Jakšić, and Kula Nebojša — and the Kapija Princa Evgenija Savojskog (Prince Eugene's Gate; ca. 1717) in baroque style, designed by Doxat. Religious buildings include the Bajrakli Džamija, a 17th-century mosque; the Orthodox Cathedral (1840–45), in baroque style, with an iconostasis by Dimitri Avramović; the Ružica Crkva, consecrated in 1830, formerly a Turkish arsenal; the Vaznesenka Crkva (Church of the Ascension; 1863); Crkva Aleksandra Nevskog, a modern church in Byzantine style; the Church of Sv. Marko, by B. Krstić, which repeats the architectural motifs of Gračanica; and Sv. Save (1895, restored in 1905). Noteworthy civil buildings are the Narodno Pozorište (National Theater; 1868, later altered); the Patriarchate; the Konak Kneginje Ljubice (1831), by Hadži Nikola Živković, in Serbo-Balkan style; the French Embassy (1933), a neoclassic building by Expert, with decorations by Charles Sarrabezolles; the Umetnički Paviljon, used since 1928 for exhibits of contemporary art; the Parliament (begun 1907); and the University buildings, by N. Nestorović and B. Tanazević. Museums: Narodni Muzej, with prehistoric, archaeological, medieval, numismatic, and epigraphic collections and modern Yugoslav and foreign (French impressionists and postimpressionists, German expressionists, etc.) paintings; Etnografski Muzej; Galerija Fresaka, with copies and tracings of Yugoslav medieval mural paintings (9th–15th cent.); Vukov i Dositejev Muzej, in the Velika Škola (Old University), which in the 17th century housed the harem of a pasha; Muzej Pozorišne Umetnosti (Serbian Theater Mus.); and Muzej Primenjene Umetnosti (Mus. of Applied Arts).

In the vicinity is Topčider, a large park with the Konak Kneza Miloša (1834; now the Muzej Prvog Srpskog Ustanka), in Serbo-Balkan style; a small church (1834) with icons by Stevo (Stefan) Todorović and Nikola Marković; and the so-called "Miloševa Česma" (19th cent.), a fountain in typical Balkan style. At Dedinje is the Beli Dvor (White Palace, 1929), the residence of Marshal Tito, and the monastery of Rakovica (18th cent.). At Vinča there are important archaeological finds from the Stone Age. The surrounding area of Belgrade, Šumadija, is noted for its farmhouses and folk costumes.

Caričin Grad. On this site, near Niš, are ruins of a town, probably Justiniana Prima, destroyed at the beginning of the 7th century of our era. From the acropolis, where the three-aisled episcopal basilica with a baptistery stood, four gates gave access to the town. In the town the remains of a three-aisled basilica and of a bath complex were found. Outside the walls is a church on a triconch plan with an exonarthex. In both churches there are remains of frescoes and mosaics. The architectural sculptures recall those of Asia Minor.

Bibliog. V. Petković, Izvestaj o iskopavanju u Caričinom Gradu kod Lebana 1912 (Communication on the Excavations at Caričin Grad in 1912), Godišnjak Srpske Akad., XXVII, 1913, pp. 285–91; A. Dečani. The monastery, near Peć, was founded in 1327 by King Stevan Uroš III Dečanski and completed in 1335 under his son Dušan (Dushan). The church (XIII, pl. 48), planned as a cruciform basilica and designed by Vito da Cattaro, a Franciscan monk, may be considered one of the most interesting examples of medieval Serbian architecture, in which Western and Eastern elements are originally synthesized. The exterior is decorated with horizontal polychrome stripes, a range of small arcades under the roof, and a series of buttresses articulating the external masses; the sculptural decoration (XIII, pl. 49), recalling that at Studenica, is notable. The interior is entirely covered by frescoes (1335–40; XIII, pls. 54, 61) of a narrative liveliness that is far removed from the courtly types of Byzantine painting; the frescoes were executed by *pictores graeci*,

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

but only one name, Srdj Grešni (Sergius the Sinner), has been found in an inscription. The frescoes of the portico (1350) represent the legend of St. George and illustrate 365 themes, one for each day of the year. The monastery has a rich treasury with valuable icons and illuminated manuscripts.

BIBLIOG. V. Petković, Ciklus slika iz legende Sv. Djordja u Dečanima (The Cycle of Paintings of the St. George Legend at Dečani), Starinar, 3d ser., 1928–30, pp. 7–11; V. Petković, La peinture serbe du moyen âge, 2 vols., Belgrade, 1930–34; D. Mano-Zisi, Dečani, Belgrade, 1934; V. Petković and D. Bošković, Manastir Dečani (The Monastery of Dečani), Belgrade, 1941.

Djurdjevi Stupovi. The monastery, near Novi Pazar, was founded about 1170 by Stefan Nemanja and restored in 1282–83. The church, dedicated to St. George, is one of the oldest in the region; the building, with Byzantine and Romanesque elements, belongs to the Raška school of architecture. The frescoes in the nave (ca. 1168), similar to those at Nerezi (1164), are expressions of the official Greek art of the 12th century, characterized by linearism. At the entrance is a St. George on horseback; the legend of St. George and other cycles painted in the interior have almost completely vanished. In the chapel of King Dragutin there are portraits of members of the Nemanjić family.

BIBLIOG. V. Petković, Eine Kirche des Königs Nemanja, Studien zur Kunst des Osten, Vienna, 1923, pp. 159–67; N. L. Okunev, Stolpy Sv. Georgiya (The Column of St. George), Seminarium Kondakovianum, I, 1927, pp. 205–46; A. Deroko, Les deux églises des environs de Ras, in L'art byzantin chez les Slaves, I, Paris, 1930, pp. 130–46; G. Millet, Le peinture du moyen âge en Yougoslavie, II, Paris, 1957.

Golubac. The fortress of Golubac, on a rocky promontory overlooking the Danube, was the Castrum Columbarum of the Romans. One of the finest fortresses in Serbia, it was rebuilt (1337) by the Hungarians. On the highest rock there is a cylindrical tower on an octagonal base; eight square towers radiate from the central one. This nucleus is surrounded by walls with towers, semicylindrical toward the outside and polygonal toward the interior.

BIBLIOG. A. Deroko, Srednjevekovni gradovi u Srbiji, Crnoj Gori i Makedoniji (Medieval Castles in Serbia, Montenegro and Macedonia), Belgrade, 1950.

Gračanica. The monastery, near Priština, was founded in 1321 by King Milutin. The beautiful five-domed church, which recalls the Byzantine architecture of that period, is a splendid example of Serbo-Byzantine art, which within the Byzantine sphere endeavored to develop original forms. The church, of the double-inscribed-cross type (XIII, FIG. 75), has an apse with a three-light window; an exterior portico was added in the 14th century. The mural paintings that decorate the interior are from 1321–22; those in the narthex are from the late 14th or the early 15th century; and those in the exterior portico are from 1570–71.

Ćorović-Ljubinković, Pećkodečanska ikonopisma skola (The Icon-painting School of Peć-Dečani), Belgrade, 1955.

Kalenić. The monastery, between Kragujevac and Rekovac, was founded about 1413. The church, dedicated to the Virgin, follows the architectural tradition of the Morava Valley area, characterized by rich decoration (XIII, PL. 51); on a cruciform plan, it has a trefoil apse, a central dome, and a domed portico. Alternating courses of stone and bricks and a row of originally polychrome bas-reliefs constitute the main exterior decoration. The frescoes, of the Morava school, show refinement of color and of composition; the subjects reveal different inspirations and show a delicate nostalgic touch. The iconostasis (XIII, PL. 55) is noteworthy.

Kruševac. Of the 14th-century town, the residence of Prince Lazar (d. 1389), there remain only ruins of the royal buildings and the Lazarica Crkva (Church of St. Stephen), founded about 1380, badly damaged by the Turks, and altered through recent restorations. The domed church, on a cruciform plan with a trefoil apse, is one of the first examples of the Morava school of architecture, of a marked verticalism and with a richly decorated exterior of white and red checkerwork. The sculpture decoration consists of stylized plant and animal motifs. Only two fragments (now in Belgrade, Narodni Muzej) of the frescoes of the church survive.

Near Kruševac stands the Naupara Crkva (first mentioned in 1382), founded by Prince Lazar; it is modeled on the Lazarica.

BIBLIOG. R. Ilić, Kruševac, Kruševac, 1908; M. Vasić, Žiča i Lazarica, Belgrade, 1928; P. Henry, Les principes de l'architecture religieuse serbe et l'école moldave, in L'art byzantin chez les Slaves, II, Paris, 1930, pp. 295–302.

Manasija. The fortified monastery, near Despotovac, was founded by Stevan Lazarević between 1406 and 1418. In the earliest documents it is mentioned as Resava, and it was not until much later that it received its present name. The monastic complex, surrounded by a wide wall and many towers (XIII, PL. 51), has suffered much damage and undergone many changes. The church, however, is fairly well preserved; of the Morava school of architecture, it is on a cruciform plan with a trefoil apse and a large dome supported by cluster piers and contains 15th-century frescoes (XIII, PLS. 54, 62).

BIBLIOG. S. Stanojević, L. Mirković, and D. Bošković, Manastir Manasija (The Monastery of Manasija), Belgrade, 1928; V. Petković, La peinture serbe du moyen âge, 2 vols., Belgrade, 1930–34.

Mileševa. The monastery, near Prijepolje, was founded by King Vladislav and built about 1235. It is a typical example of 13th-century Serbian architecture of the Raška school (XIII, PL. 48, FIG. 75). The church contains a number of frescoes (XIII, PL. 53). Those in the nave, generally painted on a yellow background, sometimes on gold, with small squares profiled in black, are based on late classical mosaics. The other fresco cycles reveal greater freedom of execution and more marked realism. There are also frescoes (ca. 1250) on the external portico of the church.

BIBLIOG. V. Petković, La peinture serbe du moyen âge, 2 vols., Belgrade, 1930–34; N. L. Okunev, Mileševo, Byzantinoslavica, VII, 1938, pp. 33–107; G. Millet, La peinture du moyen âge en Yougoslavie, II, Paris, 1957.

Niš (anc. Naissus). Naissus, located southwest of modern Niš, was founded by the Thracians, and under Marcus Aurelius it became a Roman *municipium*. Constantine was born there and, according to the sources, built magnificent buildings and fortifications. The town was destroyed by the Huns in 441 and rebuilt by Justinian; subsequently it was ruled by the Serbs, the Turks, and the Austrians. It was to a great extent rebuilt after World War I. Two Paleo-Christian tombs (4th–5th cent.), one of them with frescoes, are preserved. The Byzantine Citadel, rebuilt in 1690 by the Turks with many towers and bastions, is decorated with Moorish ornamental motifs. The Cele Kula (Tower of the Skulls) dates from 1809. The Narodni Muzej has interesting prehistoric, archaeological, ethnographic, and numismatic collections, including the material found at Naissus (altars, steles, reliefs, mosaics, bronze figures, etc.).

Nearby, at Jagodin Mahala, there are remains of Paleo-Christian churches. At Brzi Brod (anc. Mediana) a Mithraic relief has been found.

Novi Pazar. The town, founded in the 15th century by the Turks near the ancient town of Raš, was very important up to the 17th century. Of the original Turkish town only an octagonal tower and vestiges of the surrounding walls remain. The Altum-Alem

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

Džamija (15th cent.) is a square, domed, stone mosque with an interesting mihrab; in the courtyard is a 19th-century Turko-Balkan building with a polychrome façade and an outside staircase. The Turkish inn (18th cent.) is a one-storied building with an unusual façade, the only extant example in Serbia of the ancient caravanserais.

Nearby are remains of an earlier town. The Church of Sv. Petar, first mentioned in documents from the 10th century but probably built much earlier (8th, perhaps 7th, cent.), is on a central plan with a ribbed dome on pendentives. A circular structure, typical of Dalmatian architecture, encloses the church.

BIBLIOG. V. Petković, Petrova crkva kod Novog Pazara (The Church of Sv. Petar near Novi Pazar), Narodna starina, I, 1922, pp. 119–24.

Peć. The town was formerly the residence of the Serbian patriarchate. The Patrijaršija Manastir, which reflects different artistic traditions, comprised several buildings surrounded by a wall; the churches are well preserved: Sv. Apostola (13th cent.), with remarkable frescoes (12th–14th cent.); Sv. Dimitrije (1317–24), with frescoes by Jovan; and the Bogorodice Odigitrije (1330), on an inscribed-cross plan, with a dome and frescoes inspired by those of the Mount Athos monasteries. In the 15th century the three churches were connected by a large narthex. Some of the sarcophagi of the patriarchs have Gothic decorations, probably executed by Dalmatian artists. There is an important treasury, rich in manuscripts and icons.

BIBLIOG. V. Petković, La peinture serbe du moyen âge, 2 vols., Belgrade, 1930–34; D. Bošković, Osiguravanje i restoracija crkve manastira Sv. Patrijaršije u Peći (Conservation and Restoration of the Church of the Monastery of the Holy Patriarchate at Peć), Starinar, 3d ser., VIII–IX, 1933, pp. 91–165; A. Deroko, Monumentalna i dekorativna arhitektura u srednjevekovnoj Srbiji (Monumental and Decorative Architecture of Medieval Serbia), Belgrade, 1953.

Prizren. In Roman times Prizren was known as Theranda; in the Middle Ages it was the residence of the Nemanjić family; in the late 14th century it was occupied by Turks and underwent a period of decline. The medieval churches are of great interest, especially the Crkva Sv. Bogodorica Ljeviška (XIII, PL. 48), erected in 1307 by King Milutin and converted into a mosque in the 18th century. On a Greek-cross plan, with five domes and a bell tower, the church is a fine example of Serbo-Byzantine architecture of stone and brick; the interior frescoes, only recently discovered, are noteworthy. The Church of Sv. Spas dates from the 14th century. Between the town and the castle of Višegrad, built by Dubrovnik architects, is the fortified Manastir Sv. Arhandjela Mihaila (1348–52), now in ruins, with a cross-plan church, once embellished with a magnificent mosaic floor.

BIBLIOG. V. Popović, Crkva Svetih Arhandjela u Prizrenu (The Church of the Holy Archangels at Prizren), Starinar, 3d ser., IV, 1926–27, pp. 55–58; V. Petković, La peinture serbe du moyen âge, 2 vols., Belgrade, 1930–34.

Ravanica. The fortified monastery was founded by Prince Lazar in 1381. The church, destroyed by the Turks in 1445 but rebuilt in the 18th century, is on an inscribed-cross plan (XIII, FIG. 75) with two lateral apses and is surmounted by a large central dome and four smaller ones; the external walls are faced with rich brick decorations (XIII, PLS. 50, 51). The Ravanica frescoes are the earliest example of the Morava school.

BIBLIOG. V. Petković, Manastir Ravanica (The Ravanica Monastery), Belgrade, 1922; P. Henry, Les principes de l'architecture religieuse serbe et l'école moldave, in L'art byzantin chez les Slaves, II, Paris, 1930, pp. 295–302; V. Petković, La peinture serbe du moyen âge, 2 vols., Belgrade, 1930–34; P. Popović, Le mur occidental de l'église de Ravanica, in L'art byzantin chez les Slaves, I, Paris, 1930, pp. 213–16.

Sopočani. Built near the source of the Raška River, the monastery of Sopočani, founded (ca. 1260) by King Stevan Uroš I, is an outstanding example of the Raška school of architecture (XIII, PL. 47). The sculptural decoration of the two Romanesque portals of the church reveals Western influences. The frescoes decorating the church (II, PL. 462; XIII, PL. 53) are in two different styles. Those in the nave (ca. 1260) are among the finest examples of old Serbian painting; the monumental style, with large, vigorous figures, is particularly impressive because of the bright colors and the large size of the compositions. The frescoes of the interior narthex are also in the Serbian monumental style. The paintings of the exterior narthex (mid-14th cent.) are stylistically very similar to those at Dečani. The monastery was devastated in 1689 but was later restored.

Sremska Mitrovica (anc. Sirmium). The old capital of Pannonia Inferior, founded by the Tauri, became a Roman town under Augustus and a colony in the Flavian period. In A.D. 380 it was occupied by the Goths, and in 582 it was destroyed by the Avars. From the Roman period there are remains of the walls, of the baths, and of houses and palaces. The rich and varied archaeological material (inscriptions, sarcophagi, jewelry, etc.) found before 1914 is kept at the Arheološki Muzej, Zagreb; the later finds are at the local Muzej Srema.

Studenica. Founded during the Nemanjić dynasty, the monastery of Studenica is one of the most important in Serbia; the buildings date from 1100 to 1300, and have been much altered in the course of the centuries. Eastern and Western components are here perfectly blended. The Church of Sv. Bogorodice (of the Virgin) may be considered an archetype of the Raška school of architecture; built about 1190, it originally had a single nave with side vestibules and an apse with a three-light window (XIII, PL. 47, FIG. 75); the side chapels and narthex were added in 1230. The church has rich exterior sculpture (XIII, PL. 49); inside there is a cycle of frescoes (ca. 1208–09). The Kraljeva Crkva (King's Church; ca. 1314), dedicated to St. Anne and St. Joachim, has remarkable 14th-century frescoes (XIII, PL. 54), interesting both because of their quality and because they reflect the life of that period. The Church of Sv. Nikolaja (13th cent.), showing influences from Dalmatian architecture, contains frescoes with inscriptions by local artists. The monastery has a rich treasury, with manuscripts, vestments, an iconostasis, and the silver coffin of King Stevan Prvovenčani.

Viminacium (mod. Kostolac). The Roman town and legionaries' camp in Moesia Superior stood on the site of a previous Neolithic settlement that was later inhabited by the Celts. The pre-Roman and Roman settlements stood on the slopes of a hill; the camp was on the plain; and to the south of the camp stood the village of Canabae, which became a *municipium* under Hadrian and a colony under Marcus Antonius Gordianus III. There were two necropolises, one beside the village and the other east of the camp. In the 3d century of our era money was coined at Viminacium. Viminacium was destroyed by Attila in 441 and rebuilt by Justinian. Excavations have revealed the network of streets with sewers, several houses, and two casting furnaces.

Viminacium, no. 2.

Montenegro (*Crna Gora*). Bar. The busy modern port of Bar has grown up a few miles from Stari Bar (Old Bar), a medieval town with an Oriental aspect whose monuments were destroyed in 1878 by Montenegrin artillery. There are remains of the 11th-century town gate, of the Cathedral, of the small Gothic Church of Sv. Katarine, and the large Gothic Church of Sv. Marko, with a rectangular apse and a façade overlaid with white and red stones. The latter

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

was transformed into a mosque (Orta Džamija) after the arrival of the Turks; the brightly colored frescoes bear Latin inscriptions.

Bibliog. J. Marković, Dukljansko-barska mitropolija (The Archdiocese of Duklja-Bar), Zagreb, 1902; F. Šišić, Letopis Popa Dukljanina (Chronicle of Pop Dukljanin), Zagreb, Belgrade, 1928; D. Bošković, Izveštaj i kratke beleške sa putovanja (Communication and Short Notes on a Voyage), Starinar, 3d ser., VI, 1931, pp. 140–89.

Cetinje. Montenegro's former capital, the town, founded in 1485 by Ivan Crnojević, was built around the monastery (1484; rebuilt in the 17th and 18th cent.) and the castle (1482). Outstanding buildings include the Vlaska Crkva, the 15th-century Orthodox church; the Biljarda, a 19th-century palace named after the billiard room, now containing the Etnografski Muzej and the Njegošev Muzej; and the royal palace, now housing the Drzavni Muzej and the Umjetnička Galerija.

Bibliog. V. Petković, Pregled crkvenih spomenika kroz povesnicu srpskog naroda (Religious Monuments Through the History of the Serbian People), Belgrade, 1950.

Dioclea (mod. Duklja). Located near Titograd, the town was founded by the Flavians as a fortress, then became a Roman *municipium*, and was destroyed at the end of the 6th century. The town was surrounded by walls (largely preserved), with towers and an honorary arch near the north gate. Excavations have revealed the forum, surrounded on three sides by public buildings, one of which is a basilica with a single nave adorned with statues; the baths; the Temple of Diana; another temple probably dedicated to Caesar; living quarters; and many Roman inscriptions. There are remains of Paleo-Christian buildings.

Kotor (It. Cattaro). Founded in the early Middle Ages, the town was under Byzantine rule until the 12th century; it became part of the kingdom of Serbia and subsequently, from 1378 to 1797 (except for short periods of Turkish domination), it was ruled by Venice. The Church of Sv. Tripun (formerly the cathedral), consecrated in 1166, an example of Benedictine Romanesque style, was altered in the 14th century (three-light window, frescoes in Byzantine style), destroyed and rebuilt in the 17th century (bell tower and portal), and restored at the beginning of the 20th century; inside are a Paleo-Christian baptismal font, a Maiestas Domini (ca. 1440) by Johann of Basel, and a Crucifixion by Jacopo Bassano. The Church of St. Lukas (12th cent.), a typical Paleo-Croatian structure, has a vaulted nave and a dome and contains an iconostasis. The collegiate church (the so-called "Church of S. Maria Infunara"; 13th cent.), an example of local architecture, contains a painted wood and stucco crucifix (15th cent.) and the sarcophagus of the Blessed Ozana, by Augustinčić. The Church of St. Clara has a fine baroque altar (1704–08) by Francesco Cabianca. The Venetian influence is evident in many public and private structures: the clock tower (17th cent.), the Grgurin palace (now housing the Pomorski Muzej and a collection of weapons and costumes), the Pima palace (16th cent.; now the State Archives), and the Beskuća palace (now the Law Courts).

Nearby is Dobrota, a village famous for its delicate lace and for the white fabrics used for folk costumes with white net embroidery (costumes exhibited in the Church of Sv. Stasija).

Bibliog. G. Gelcich, Le lettere e le arti alle Bocche di Cattaro, Venice, 1879; I. Stjepčević, Vodja po Kotoru (Guide to Kotor), Kotor, 1926; P.

Dioclea, archaeological plan. Principal monuments: (*a*) Walls with towers and gates; (*b*) Via Triumphalis; (*c*) honorary arch; (*d*) forum; (*e*) basilica; (*f*) temple probably dedicated to Caesar; (*g*) small temple; (*h*) dwellings; (*i*) Temple of Diana; (*j*) baths; (*k*) unidentified buildings; (*l*) central-plan church (mausoleum?); (*m*) Paleo-Christian basilica; (*n*) building possibly used as a *castellum aquarum*; (*o*) aqueduct; (*p*) building probably used in defending the bridge; (*q*) possible remains of the bridge; (*r*) funerary buildings(?); (*s*) tombs (*from Sticotti, 1913*).

Perast. The town has a markedly baroque aspect. Noteworthy are the Bujović (1693), Balović, Smaki, and Zmajević palaces; the Catholic Cathedral, in late Renaissance and baroque styles; and the building (16th cent.) of the former maritime school. On an artificial island off the town stands the Church of Sv. Bogorodice Škrpjelo, containing paintings with scenes from the life of the Virgin by Trifun Kokoljie (Cocoglia; 1661–1713).

Bibliog. S. Vulović, Gospa od Skrpjela (Our Lady of Škrpjelo), Zadar, 1887; F. Viskovich, Storia di Perasto, Trieste, 1898; L. Titograd (formerly Podgorica). Capital of the People's Republic of Montenegro. The city has been almost completely rebuilt after World War II. There are ruins of the castle and of the 16th-century Sahat Kula.

In the mountainous region to the south the circular skirt of the women's costume, of the Minoan type, is one of the oldest survivals of its kind in Europe.

Bibliog. F. Nopcsa, Beiträge zur Vorgeschichte und Ethnologie Nordalbaniens, Wissenschaftliche Mitt. aus Bosnien und Herzegowina, XII, 1912, pp. 168–254.

Ulcinj (It. Dulcigno). The town has an Oriental aspect. Important monuments are the castle, the Kula Balšić, a mosque with Gothic capitals and a Latin inscription, and the remains of a richly decorated Gothic basilica.

Nearby are the remains of medieval Svač, with the ruins of the Gothic Cathedral, erected by Queen Jelena, the wife of Uroš I. On the shore of Lake Skadar (Scutari) are ruins of the monastery and of the Church of Sv. Bogorodice Krainska (11th cent.), built by Queen Teodora-Kosara, with a Romanesque bell tower.

Bibliog. T. Ippen, Alte Kirchen und Kirchenruinen in Albanien, Wissenschaftliche Mitt. aus Bosnien und Herzegowina, VII, 1900, pp. 231–42; A. Degrand, Souvenirs de la Haute Albanie, Paris, 1901; J. Bošković, Ulcinj, Starinar, N.S., VII–VIII, 1956–57, pp. 416–17.

Macedonia (*Makedonija*). Andrejaš. The town was founded by Andrejaš, a son of King Vukašin. The church has three apses and a polygonal cloister dome on pendentives. The frescoes, by Jovan from Zrze, tend toward archaism and recall paintings of the mid-13th century.

Bibliog. V. Petković, Jedna srpska slikarska škola XIV v. (A Serbian School of Painting of the 14th Cent.), Glasnik Skopskog Naučnog Društva, III, 1928, pp. 51–66; V. Petković, La peinture serbe du moyen âge, 2 vols., Belgrade, 1930–34; N. Mavrodinov', Ednokorabnaya kr'stovidnata tsr'kva (A Church with a Cruciform Nave), Sofia, 1931; R. Ljubinković, Srpski crkveni spomenici u klisuri reke Treske (Serbian Ecclesiastical Monuments on the Cliffs of the Treska River), Skopje, 1940.

Bitolj (anc. Heraclea Lyncestis). The ancient town, near modern Bitolj, was on the Aegnatian Way; originally on the hill, it was moved by the Romans to the plain and made a *municipium*. There are remains of the surrounding walls, from the late-antique period, as well as of houses, a three-aisled basilica, and a palace with a well-preserved mosaic; fragments of statues, altars, and inscriptions have been found. Bitolj reached a particular splendor under the Turks; from this period are the Hajdargazi Džamija (15th cent.), of stone and brick; the Evi Džamija (16th cent.); and the Bezistan, a covered Turkish market (17th cent.). There are important remains of a Paleo-Christian basilica and of the Byzantine fortress on the acropolis. The Church of Sv. Dimitri dates from the 14th century.

The Naroden Muzej na Bitolkiot Kraj contains a rich collection of folk costumes, which in this region have numerous, picturesque variations. The most famous type, that of the village of Smiljevo, is of densely woven fabrics with scarlet embroidery, abundant fringes, and metal necklaces. The Morihovo area, along the Crna River, preserves archaic forms of houses and clothing. The area around Bitolj is famous for the manufacturing of rugs; the woven and fulled blankets (*jambolije*) are particularly well known.

Lesnovo. The monastery, dedicated to the Archangel Michael, has a church of noble proportions, with two domes (one over the nave, the other over the narthex). The present church was built in the mid-14th century on the foundations of an 11th-century church. The frescoes in the presbytery belong to the local tradition of 14th-century monastic art, characterized by a strong dramatic quality and an expressionistic style obtained by contrasting bright colors. The frescoes in the narthex reflect the classicist tendency of the first decades of the 14th century.

Matejič. The monastery, dedicated to the Virgin, has one of the largest churches in northern Macedonia; built for Queen Jelena and her son, Tsar Stevan Uroš V, it has five domes and frescoes (ca. 1350; badly preserved) stylistically similar to miniatures.

Ohrid (anc. Lychnidus; It. Ochrida). The town, on the lake of the same name, was first mentioned in a document from the last quarter of the 3d century B.C. Lychnidus became an important Roman town on the Aegnatian Way. In the 3d century of our era it became a bishopric, and from the 9th to the 11th century it was a center of Slavic civilization under SS. Clement and Naum, who founded the first monasteries, and under the Macedonian Tsar Samuel (976–1014). The Roman-Byzantine fortress, later used by Samuel, preserves the original 18 towers and the 4 gates. The Cathedral of Sv. Sofija, built in the 11th century on the ruins of a 5th-century basilica, has three aisles, three apses, and a two-storied narthex that opens to the outside through large arcades and is decorated with frescoes from various periods (11th–14th cent.; XIII, PL. 53); from the 15th to the 19th century it was a Turkish mosque and was subsequently completely restored. The Church of Sv. Klimenta (recently restored), on an inscribed Greek-cross plan with three aisles and a dome, is decorated with frescoes from 1296 (by Mihailo and Eutihije) and from 1365, and contains a wooden episcopal throne (14th cent.) inlaid with silver. Near the church is the Kapela Sv. Dimitrija, with frescoes from the same period. The Church of Sv. Konstantina i Jelene (14th cent.) has 15th-century additions. Under the foundations of the Imaret Džamija the remains of the Monastery of Sv. Pantelejmon (9th cent.) have been discovered. Other important churches are Sv. Nikola Bolnički (14th cent.), with interesting frescoes; Sv. Bogorodica Bolnička (14th cent.), with a fine iconostasis and frescoes; Sv. Bogorodica Čelnica; and Sv. Jovan Bogoslov (14th cent.). From the Turkish period are the clock tower and the Ali Paša Džamija. The Naroden Muzej contains ethnographic, prehistoric, and medieval collections, including some fine icons (11th–14th cent.) from Sv. Klimenta.

In the neighborhood, on the shores of Lake Ohrid, stand the Manastir Bogorodice od Zahuma (1361), with fine frescoes, and the Manastir Sv. Nauma (10th cent.), with a church on a Greek-cross plan. Near Lake Prespa stands the church of Sv. Ahil, from Samuel's reign; at Kurbinovo is the 12th-century Church of Sv. Nikola.

Prilep (anc. Prilapon). Once the residence of King Vukašin and his son Marko, the present town dates back to a Turkish settlement at Markova Varoš, the medieval suburb that grew up around the Markovi Kale, a castle built into the rocks. Between the castle and the suburb King Vukašin and Marko founded the Monastery of Arhandjela Mihaila in the 14th century. The Church of Sv. Dimitrija is from the 14th century; Sv. Nikola, with noteworthy frescoes, dates from the end of the 13th century.

Nearby are the medieval monastery of Treskavac, restored in the 14th century by Stevan Uroš III, and the Monastery of Sv. Spas, near Krušovo.

BIBLIOG. A. Deroko, Markovi Kuli, Starinar, N.S., V–VI, 1954–55, pp. 83–104; O. Bihalji-Merin, Fresken und Ikonen: Mittelalterliche Kunst in Serbien und Makedonien, Munich, 1958.

Skopje (or Skoplje; anc. Scupi). The capital of the People's Republic of Macedonia. The original town, a few miles from the present one, was occupied by the Romans and became a colony (Flavia Aelia Scupi); it was destroyed by an earthquake in A.D. 518. Excavations have revealed the baths and have yielded many inscriptions, fragments of statues, figures, reliefs, and altars. The fortress built by Justinian (altered several times) is preserved, and there are remains of the aqueduct and later medieval fortifications. In 1393 the town was taken by the Turks, who chose it as a main base for their military operations in the Balkans; thus it acquired its Oriental aspect. The Church of Sv. Spas (after 1689), architecturally not very interesting, contains an important iconostasis (1829) by Makrijan Frčkovski and the Filipovski brothers, all natives of Galičnik, and many sculptures and wood carvings. From the Turkish period are many mosques — Murat Džamija (1430), with a minaret; Isa Beg Džamija (15th cent.); Jaja Džamija (1503); and Mustafa Džamija (15th cent.) — and the Kuršumli Han (the former caravanserai; 15th cent.) with a large courtyard surrounded by two ranges of arcades (XIII, FIG. 82); the Hammam Daut Paša (15th cent.; XIII, FIG. 82), now housing the Umetnička Galerija (contemporary art and medieval icons); the Hammam Ćivte; the Suli Han; and the Sahat Kula. Of particular interest are the Etnološki Muzej and the Arheološki Muzej, which contains material found at Scupi and in the surrounding dstrict and examples of medieval art.

Nearby are the Monastery of Marko, founded in 1389 by King Vukašin and Marko, with frescoes; that of Sv. Andrija (1389), with frescoes by Jovan from Zrze; and that of Sv. Nikita, near Čučer, founded (14th cent.) by King Milutin, with frescoes (by Mihailo and Eutihije) with interesting iconographic motifs.

In the Skopska Crna Gora area the folk costume consists of a tunic embroidered with black wool with ornaments in Paleo-Christian style. The costume of the Vardar plain has multicolored embroidery that recalls Byzantine fabrics.

Stobi. Near modern Gradsko are the ruins of the ancient city of Stobi, the most important group of ruins in Macedonia. In the 3d century B.C. Stobi belonged to Macedonia; in the 2d century B.C. it became a Roman *municipium* and later a colony. In the 3d century of our era Christianity reached Stobi, which was sacked by Theodoric the Great in 479 and destroyed by an earthquake in 518. Excavations have revealed the theater, erected in the 2d century B.C. and altered in the late imperial period, and the baths; Greek and Latin inscriptions, statues, and mosaics have been found. The so-called "Partenius Palace" has rooms decorated with fine mosaics and sculptures. There are remains of an episcopal basilica (late 5th cent.), built with material taken from the theater and adorned with many splendid capitals and plutei; a funerary basilica; and another basilica with an octagonal baptistery. The rich archaeological material found at Stobi is kept in museums at Belgrade, Skopje, and Gradsko.

Strumica. In the village of Vodoča, near Strumica, stands the impressive church dedicated to St. Leontius (10th–11th cent.), on a cross plan with a dome and a portico flanked by two towers. The monastery of Veljuša (1080) has 11th-century frescoes.

ZAMBIA. See RHODESIA, ZAMBIA, AND MALAWI.

ZEUXIS (Ζευξις). Greek painter active during the last 25 years of the 5th century B.C. His name is a contraction of Zeuxippos (Ζευξιππος). His birthplace is recorded as Herakleia, in all probability the city in Lucania, although some scholars believe it to have been Heraclea Pontica (mod. Eregli, Turkey); the Sicilian city of the same name is to be excluded as a possibility. Closely connected with the question of his native city is that of the era in which he lived. Pliny (*Naturalis historia*, XXXV, XXXVI, 61) places the high point of Zeuxis' career in the last year of the 95th Olympiad, that is, in 397 B.C., but at the same time he warns that other writers had dated it to the 89th Olympiad, between 424 and 421. In 424 Plato (*Protagoras*, 318, B) recorded as a recent fact the young painter's arrival in Athens. Perhaps Zeuxis had arrived the year before, as Aristophanes' reference in 425 (*The Acharnians*, 991 ff.) to the painting of Eros crowned with roses that was executed for the temple of Aphrodite would seem to indicate. He was still in Athens in 422 when he participated with Sokrates in the Symposium of Xenophon (*Symposium*, VI, 63). His presence in Akragas (Agrigento), Sicily, must be dated to before 406, the year in which the city was sacked by the Carthaginians. Zeuxis' presence at the court of King Arkelaos of Macedonia must have been within the fifteen-year period of the King's reign (413–399). In 394 Isokrates (*Antidosis*, 2) wrote of Zeuxis as a painter already dead and referred to his work in historical perspective. These isolated chronological facts seem to validate Pliny's dating: the 89th-Olympiad date would refer to Zeuxis' artistic peak and Pliny's own dating of 397 to the end of the painter's activity, if not to the actual year of his death. Zeuxis' birth is thus to be placed between 450 and 445 B.C. Thus he would have been about fifteen years old in 432 when the Tarantines founded Herakleia. Born in Taras (Taranto) or in its territory, he would therefore have been one of the first inhabitants of the new Lucanian city.

At about the age of twenty, he went to Athens, where he mmediately became famous. The indication of Eusebius, who in his *Chronicon* (III) dates Zeuxis to the 78th Olympiad, is to be corrected by a simple inversion of the figures to the 87th, the years of the artist's maturity and greatest activity.

Zeuxis' teachers are known to have been Demophilos of Himera and Neseus of Thasos, but nothing is known of their work. Sources record many of his own works and sometimes describe them, but usually in such imprecise and general terms as to make critical observation impossible.

His first work seems to have been the above-mentioned painting of Eros crowned with roses; his last, a painting of an

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

old woman, which, according to the anecdote related by Festus (s.v. *Pictor*, 228 L), caused the painter to laugh himself to death. There are no dates, except for the very general ones already mentioned, that would make possible a precise chronology of the rest of his works.

His most famous work is a painting of Helen, executed for the Heraion of Kroton and commissioned either by the Crotonians (Cicero, *De inventione*, II, 1, 13) or by the Agrigentines (Pliny, *Naturalis historia*, XXXV, xxxvi, 64); it was later displayed in Rome in the Porticoes of Phillipus (Pliny), and a copy, perhaps also done by Zeuxis, remained in Athens (Eustathios, *Commentari ad Homeri Iliadem*, par. 868, 30–40). There is a rich collection of anecdotes concerning its execution; these refer to Zeuxis' models, chosen from among the most beautiful girls of Kroton, to the high evaluation that the artist himself gave of his work (Valerius Maximus, *Opera*, III, vii, 3), and to the earnings it brought him (Aelianus, *Varia historia*, IV, 12).

Another well-known work, the *Family of Centaurs* (Lucian, *Zeuxis*, 3–8), was admired by his contemporaries more for the originality of the subject than for the artistic treatment; this aroused the painter's ire. The original was lost near Cape Malea when the ship that was carrying it to Rome at the order of Sulla was wrecked. A copy of it remained in Athens.

Zeuxis also executed a painting with various figures, or several paintings that can be considered a series, depicting Alkmene, Zeus enthroned, and the infant Herakles strangling the serpents. He gave a painting of Pan to King Arkelaos as a gift; the subjects of other paintings executed by him in the palace of the Macedonian ruler are not known.

His painting of Marsyas was taken to Rome, where it was placed in the Temple of Concord. For Ephesos he painted a scene representing Menelaos offering a libation. It is perhaps this painting to which the anecdote about Megabyzos refers: he expressed opinions on Zeuxis' art in the manner of a dilettante critic and was booed by his students.

Except for their titles or indications of the technique and material with which they were executed, no detailed information exists concerning other works, among which are a painting of Boreas, or Triton; the *Athlete* (pl. 453); a still life with grapes; the *Boy with Grapes*; some white monochromes; and some terra-cotta works executed for the city of Ambrakia.

Quintilian in his *Institutes* (XII, x, 4–5) related that Zeuxis "luminum umbrarumque invenisse rationem" ("seems to have discovered the method of representing light and shade") and that "plus membris corporis dedit" ("he emphasized the limbs of the human body"). This same criticism of Zeuxis' preoccupation with body volumes, which resulted in heads and joints that were too large and were out of proportion, is repeated by Pliny (*Naturalis historia*, XXXV, xxxvi, 64), who was apparently echoing Xenokrates, an admirer of Lysippos (q.v.), who, for that very reason, preferred slender figures with small heads. Zeuxis seems to have had his own artistic canons, which included an accentuation of volumes, which were rendered with the same painterly technique (i.e., chiaroscuro) used by his contemporary, Apollodorus. Aristotle later accused Zeuxis of lacking "ethos" (*Poetics*, vi, 25–30), indicating that the painter was concerned with the problem of the relationship of the forms to the chiaroscuro values of their volumes, rather than the problem of the psychology of the figures (cf. IV, col. 119).

The frequent mention of Zeuxis' works in ancient sources finds an exact correspondence in citations in Renaissance and Humanist literature of Zeuxis as a magnificent painter. In both ancient and modern sources, however, the brief, disconnected fragments of anecdotes about the painter are the only basis for a critical judgment of his work.

ZIMMERMANN, Dominikus. South German architect and stuccoist (b. Gaispoint, near Wessobrunn, 1685; d. Wies, 1766). In his architectural commissions Dominikus was often assisted by his elder brother Johann Baptist Zimmermann (1680–1758), a stuccoworker and outstanding fresco painter (VI, pl. 148; XIII, pl. 292).

The Abbey of Wessobrunn was one of the most important centers in Europe for the training of stuccoists, and here both Zimmermanns served their apprenticeship. Dominikus was apparently trained by Johann Schmuzer, an architect and leading member of a family of stuccoworkers. He must have been familiar with Schmuzer's ornate pilgrimage church at Vilgertshofen (1687–92), only 12 mi. northwest of Wessobrunn, as in many respects Vilgertshofen was the germ of Zimmermann's design for his last great work, the Wies pilgrimage church (Wieskirche).

Zimmermann's early career was limited to stuccowork, and in that capacity he assisted the architect J. J. Herkomer at the Abbey of St. Magnus in Füssen from 1701 to about 1708. Immediately afterward he went to Fishingen in northern Switzerland, where he executed six altars in stucco and scagliola for the abbey. From 1710 to 1712 he worked at the Abbey of Buxheim in Swabia. Zimmermann settled in Landsberg, on the Bavarian-Swabian border, in 1716, where he eventually became the mayor. His first work (1718) at Landsberg was the stucco ornamentation for the façade and upper floor of the Rathaus.

Zimmermann was a prolific architect. Among his notable buildings are the convent church at Maria Mödingen (near Dillingen, 1718), the Ursuline (now Dominican) convent church at Landsberg (begun 1725), the parish church next to the Abbey of Buxheim (1725–27), the convent church at Siessen (near Biberach, 1726–33), the pilgrimage church at Günzburg near Ulm, 1735–40), the small but elaborate Johanniskirche at Landsberg (1741–52), and the delicately ornate library of the Abbey of Schussenried (near Steinhausen, 1754–ca. 1760).

In a much more ambitious enterprise he competed unsuccessfully for the plan of a new church for the Benedictine abbey at Ottobeuren. The competition, held in 1732, was won by Johann Michael Fischer.

Zimmermann's two major commissions, which are his masterpieces, are the pilgrimage churches at Steinhausen (1727–33; VI, pl. 153; XII, pl. 167) and Wies (1745–54; XII, pl. 165), in which Johann Baptist Zimmermann assisted in the decoration (XII, pl. 161). Both buildings have an oval plan (see VI, col. 188, and XII, cols. 266–67), and the interiors are filled with brilliant light and sprightly movement. Although the decoration of the Wieskirche is more pronouncedly rococo than it is at the earlier church in Steinhausen, the lushness of the Wieskirche has an unexpectedly baroque appearance despite its mid-18th-century date.

As an architect Zimmermann is important for his contribution to church design on the oval plan. His importance as a decorator lies in the fact that he adapted the French rococo style to the heavier taste of southern Germany.

ZOOMORPHIC AND PLANT REPRESENTATIONS. The antiquity and diffusion of animal and plant representations are the result of man's natural disposition to select his subjects from the world around him and especially from those which occur most frequently and which are most easily reduced to schematic drawings. The growth and movement that characterize living nature, with its implicit capacity for benefit and harm, have always stimulated the artistic imagination. The animal and plant image has been conceived in extremely varied ways: as a complement in compositions with human figures and in landscape scenes, as an isolated symbolic motif, and as an ornamental element.

SUMMARY. Introduction (col. 937). Historical survey (col. 940): *Origins and early manifestations; Pre-Columbian America; The ancient world: a. Animal representations; b. Plant representations; The East and Eurasia: a. Animal representations; b. Plant representations; European protohistoric and barbarian art; The Byzantine era; The Middle Ages in Europe; The modern era; Plant and animal forms in architecture.*

INTRODUCTION. Animal and plant representations have been of primary, and sometimes exclusive, interest in only a few cultures that have been bound to particular religious and symbolistic concepts and iconographic traditions as in paleolithic art, that of Minoan Crete, steppe art, barbarian art, and Islamic art. Even when these representations have been subordinated to representations of the human figure (as in the great historical civilizations) they have appeared in a noteworthy quantity of artistic production as secondary or background elements, and have given rise to specific types; in Oriental, Hellenistic, and baroque art, some painters of still life specialized exclusively in flowers or animals. In ornamentation (q.v.), nature has often been made to conform to geometric forms, at times so schematized as to be completely unrecognizable, as on Chinese bronzes (III, PL. 228) and in early medieval (X, PL. 438) and Islamic interlacing (VIII, PL. 155). Plant and animal representations have lent themselves to alternatives of naturalism and abstraction (see GEOMETRIC STYLE; MIMESIS). Although zoomorphic and plant representations have appeared widely in art, they are almost never the exclusive protagonists of a work of art, unless a motive such as aniconism (see IMAGES AND ICONOCLASM) sustains them.

Animals appeared in portraits commissioned by Renaissance courts and gentlemen from even the greatest artists (e.g., Titian; PL. 100); they appeared in works such as the *Still Life* of Jacopo de' Barbari (XIII, PL. 199); still others were inserted as anecdotal details in paintings by Mantegna and Bellini (II, PL. 264). Sometimes animal portraits were commissioned to record and preserve the likenesses of such zoological curiosities as the giraffe, the panther, the hippopotamus, and other exotic specimens, which were almost always doomed as a result of their removal from their native habitat. Both exotic and domestic animals appeared in ancient art (e.g., the animals represented with their pet names, as in Etruscan tombs and in mosaics depicting Roman *venationes*).

From the time that the human figure became predominant in art, animal and plant representations generally have been regarded as ornamental and subordinate and nonessential elements. In other cases they are distorted in an antinaturalistic sense, taking on monstrous or geometric forms.

Eugenio BATTISTI

A tendency to identify the image with reality (as in representations of the capture and slaughter of wild animals, of prime interest to hunting peoples from the Stone Age on, or in pictorial evocations of fecundity of game and domestic livestock, the concern of hunting and herding peoples) gave rise to mimetic fidelity in reproduction. The most evocative manifestation of this tendency, and the most striking for its antiquity, is that of the naturalistic art of the Paleolithic era (see PREHISTORY); however, it is expressed also in naturalistic and schematic form in the figural traditions of successive phases of hunting cultures, for example, in Africa (see PALEO-AFRICAN CULTURES), as well as in more evolved livestock-rearing cultures of the Eurasian world (see ASIATIC PROTOHISTORY; STEPPE CULTURES).

Plant symbolism is of a predominantly paradisaic nature. The foremost example of this is the symbol of the "tree of life," used extensively in ancient Eastern art. In the Byzantine world, flowers were identified with stars, as in the vault of the so-called "Mausoleum of Galla Placidia" in Ravenna (X, PL. 179).

An important example of animal symbolism is the hunt; its iconography preserves traces of the religious ritual with which it was associated in the Near East (animal representations in that area are strongly stylized and are of the same type that appears on armor, trophies, and coats of arms). Stereotyped animal images are also used as symbols of the zodiac. Animal symbolism developed a rich repertory during the Middle Ages in the bestiaries. The animal as a symbol appeared in magic literature and in the writings of the alchemists (for a modern psychoanalytical interpretation of the problem, cf. C. G. Jung, *Psychologie und Alchemie*, Zurich, 1944), and even in devotional literature. In the vault of the Cathedral of Xanten (12th cent.) is illustrated a series of symbols in which a Biblical personage is related to an animal and to a virtue (e.g., Adam–Serpent–Knowledge; Abraham–Cock–Intellect; Moses–Ant–Counsel; Elias–Lion–Strength; Solomon–Dog–Science; Samuel–Dove–Pity (R. Tuve, *Notes on the Virtues and Vices*, Warburg, 1964, XXVII, pp. 60–61). The allegories and personifications collected in Renaissance treatises on emblematology, even though they omit the greater part of the medieval symbology, constitute a monumental sum of all the preceding forms. In Cesare Ripa's treatise, *Iconologia* (Rome, 1593), about two hundred animals are designated as symbols (III, PL. 202).

Plant representations as symbols are introduced into artistic decoration according to subtle choices motivated by devotional and religious motivations or by exclusively formal and literary ones. They often substitute the divine image or a historical scene, as in the depiction of cherries and carnations in icons representing the Madonna and Child, in which their red hue serves as an allusion to the Passion of Christ.

Just as the study of the human body was of fundamental importance to Greek art, the observation of animals was a prime element in the development of the art of the hunting peoples and in more advanced civilizations, such as the Roman, in which the hunt was a sport (IX, PL. 3).

Also noteworthy is the curiosity aroused by the unusual and exotic species returned as spoils of war, such as those of the expedition of the Egyptian queen Hatshepsut in Punt, Phyrrus's elephants, and so on. Lastly, the Roman games with wild beasts in the circus or amphitheater contributed to the formation of a tradition of analytical figural study, in some cases directed toward individual "portraits" of single, famous beasts, of which outstanding documentation is to be had principally in the African mosaics. A modern parallel exists in the studies of bulls that are occasioned by the widespread passion for the bullfights in Spain, principally in the work of Goya (VI, PL. 402).

More recent developments in the study of animal and plant forms have been in the sphere of scientific observation, from the medieval bestiaries and herbaria to modern zoological and botanical studies (see SCIENTIFIC AND MECHANICAL WORKS; XII, PLS. 474, 479, 480).

Animal and plant representations as decorative motifs may be used either for their symbolic or narrative significance or solely for their form and value as ornament (see ORNAMENTATION). Plant representations (branches, flowers, leaves) are more widely used in decoration because of their natural and harmonious geometry, the affinity of their essential structures, their greater ease of observation and imitation, and their repetitive and rhythmic forms.

The problem of the stylization and schematization of plant and animal forms in decoration is related to, but differs from, that of the establishment of decorative forms. Some of the processes by which the naturalistic image is given an abstract form are not at all related to a decorative function, as in prehistoric and subprehistoric rock art and in those representations, of semantic significance, that constituted the origins of writing (see CALLIGRAPHY AND EPIGRAPHY). Animal and plant decoration of the Near East (PL. 469; X, PLS. 450, 452) and that of the Greek and Roman world generally retained a high degree of naturalism, as in the frieze of acanthus spirals on the Ara Pacis of Augustus (VII, PL. 211).

* *

Although animal and plant representations inevitably obey canons of proportion developed or accepted by individual artistic cultures, there are rare occurrences of studies of animals that went beyond anecdotal record and suggested objective norms of proportion. Once the intuitive genius that inspired

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

the animal representations of the Paleolithic era had been lost, the most striking esthetic effects (except for such unusual examples of almost photographic realism as those achieved by means of direct casts by Palissy and Buontalenti, among others) were attained in representations of animals in motion. In his *Trattato delle perfette proporzioni* (Florence, 1567) Vincenzo Danti discusses the difficulty of establishing norms for the correct representation of animals "since it is not necessary merely to know how to compose the limbs of a horse, for example, with proportion, but also to know how to represent them in the act of walking, running, jumping, or similar activities" (P. Barocchi, *Trattati d'Arte*, Bari, 1960, p. 254). Danti recommends anatomic studies of at least three species: "quadrupeds, birds, and fish," since, although their subphyla may differ in form, "the knowledge of one may very easily give information about the other."

Studies of equine anatomy, sometimes sculptured, were used in teaching and in designing the equestrian monuments to which Donatello had given importance. L. B. Alberti dedicated a brief treatise, *De equo animante* (ca. 1438), to the study of the proportions of the horse, preliminary to the execution of an equestrian monument to the father of Lionello d'Este, his patron at that time. Also in this tradition were the drawings that Leonardo da Vinci, a great animal anatomist, executed for purely scientific and technical purposes (e.g., his studies of the flight of birds). Renaissance treatment of animals was, instead, oriented toward the anecdotal. Representations of various animals were used increasingly to enrich paintings, illuminations, and sculptural ornamentation, as geographical discoveries and commercial and diplomatic exchanges gradually introduced direct knowledge of such animals to Europe. Artists of the time sought to create accurate figural records of these animals, depicting them in what was often excessive detail. Dürer's engraving of a rhinoceros (1515; Br. Mus.) is perhaps the most evocative example of a vast series of illustrations collected in the *Historia animalium* by C. Gesner (1551–87) and later in Aldrovandi's study of natural history (1599). Animal subjects had occasionally been introduced into monumental art (e.g., the mosaics with scenes from Genesis in the atrium of S. Marco in Venice) and were used in a noteworthy manner in the early-16th-century fresco decorations by Giovanni da Udine in Palazzo Baldassini in Rome, executed after careful study of the living examples of exotic fauna owned by Leo X. In these frescoes Giovanni applied a theme that he had originally used in aviaries and gardens to an ornamental sphere. This interest in the animal world later gave impetus to the compilation of vast encyclopedias that provided models for artists, especially for representations of exotic fauna; in these works, however, emphasis was on the descriptive rather than the scientific.

The first systematic studies of plant forms were compiled in herbaria. These had their prototype in the work of Dioscorides and generally reflect the artistic styles of the period during which they were executed, ranging from the naturalism of early works to the stylization of later ones, such as those reflecting International Gothic styles (VI, PL. 315). Botanical studies of the 18th and 19th centuries were the sources of the ornamental motifs that characterized the Art Nouveau style (PL. 473; I, PL. 469).

Artistic interest in plant forms was greatest during the late Gothic period, at the time of the Van Eycks (V, PL. 215; L. Behling, *Die Pflanze in der mittelalterliche Tafelmalerei*, Weimar, 1957), and during the Renaissance. From 1550 onward, modern herbaria by famous painters began to appear. Perhaps the best example of these is the Medici collection of water colors (Uffizi, Gab. delle stampe e dei disegni), dating from about 1570; the work of Giacomo Ligozzi, it is much superior to that less graphic one begun a few years before by the Bolognese Aldrovandi. (For a discussion of 16th-century botanical studies, see C. Nissen, *Geschichte und Bibliographie der Botanischen Buch-Illustration*, Stuttgart, 1960; and E. Battisti, *L'Antirinascimento*, Milan, 1962, pp. 254–77.) The Medici herbarium for the first time turned attention upon plant diseases and their causes, aspects of which are stressed by Caravaggio in his still lifes. Later, decorative interests once more prevailed and there was a lack of attention to realistic representation.

Plant forms continue to inspire such modern artists as Paul Klee (*Theory of Form and Representation*, Milan, 1959), in whose work emerges the reason for this interest: the search for new elements in structural systems. The Bauhaus fostered other studies on the scientific relation of colors, partly inspired by the "tones" of the four seasons. More recently, a relation has been established between the rules which determine the development and enlargement of leaves and those which refer to an efficient town-planning system, in which the residential and industrial centers on level terrain are disposed on a network of equilateral triangles, interconnected by high-speed traffic arteries that are reminiscent of the veining of leaves.

Eugenio BATTISTI

HISTORICAL SURVEY. *Origins and early manifestations.* Figural art began in the Paleolithic era with representations of animals, and since then it has continued to find in them a source of inexhaustible inspiration on all continents and at all levels of civilization. Any lessening of interest has never been either total or simultaneous among diverse cultures; it first occurred when the initial urban societies were set up in protohistoric and historic times, that is, with the incipient emancipation of man from nature. However, in primitive cultures — preurban and preliterate — the animal has remained the focus of artistic themes up to the present.

For the majority of the hunter-gatherer groups, subsistence — the primary factor in economic and social life — was based no less on the plant world than the animal one. With the transition to a sedentary life and with the development of agriculture, man's dependence on plant life became primary and sometimes almost exclusive. However, an art inspired exclusively or even prevalently by plant forms is not known to have existed in any part of the world at any high cultural level. In nature, then, it was not the contemplation of the heavens or the landscape that caught man's early attention and stimulated him to esthetic activity, but it was, rather, the observation of living creatures of sky, water, and earth, because, like himself, these creatures were endowed with life and movement. Man early arrived at an intimate knowledge of the behavior, habits, and anatomy of those animals which he hunted or observed. Another factor in this dominance of the animal in early art is the fact that artistic activities were carried on by men — the hunters, those who knew animals — while the women, who in primitive times had no artistic interest whatsoever, tended to the cultivation of plants.

The animal art of the hunting peoples has a relatively uniform aspect, even though it is widely diffused in space and time; it is characterized by such elements as a prevalence of two-dimensional representations over sculpturally conceived forms, an almost universal realism, a perspective treatment of figures, respect for their natural proportions, a preponderance of group compositions, and a preference for subjects in motion (PL. 454). This art of the hunting peoples is unique in that it may properly be described as "primitive"; unfortunately its significance remains obscure, both in its prehistoric forms and in its manifestations in historical times, as, for example, in the artistic production of the Bushmen (X, PL. 239) and that of primitive Australian peoples (see AUSTRALIAN CULTURES), which was not discovered and studied until the terminal phases of its decline (19th cent.). It is now generally acknowledged, however, that a purely magical explanation of the origins of this art is not satisfactory, even though it may, in several cases, be plausible. In 1879, T. Hahn, collecting the last evidence of Bushman wall paintings *in situ*, noted that the hunters dedicated themselves to this art for the esthetic enjoyment they derived from it; other modern critics agree (see PALEO-AFRICAN CULTURES), adding that the naturalism of this essentially zoomorphic art does not exclude elements of caricature and humor and a freely imaginative treatment.

The recurrence of the above-mentioned stylistic characteristics can in certain cases be explained by the persistence of

CC-0. Kashmir Research Institute. Digitized by eGangotri Digital Preservation Foundation, Chandigarh

millenary traditions, as is indicated by parallels that exist between the production of European paleolithic art and that of ancient as well as recent Paleo-African art.

Historical links are doubtful, if not nonexistent, in a comparison of the petroglyphs from Australia and the paintings on hides of the Plains Indians (X, PL. 363). Notwithstanding geographical distance and chronological, cultural, and technical differences, the same general stylistic characteristics can be found again in this art. This leads to the conclusion that the realism and dynamism implicit in animal forms are bound less to any persistent tradition than to the cultural forms and ideals of the hunt.

With the exception of the chattel art of the Central Asian steppe and the rock art of the Saharan nomads, who had settled down to shepherding but remained heirs to the great hunting tradition, the livestock-rearing peoples of Asia and Africa did not achieve the excellence in animal representation that might be expected from those whose entire existence is bound even more closely to the animal world than that of the hunting peoples.

Animal wall art of the shepherding peoples is known from the far reaches of Siberia (the limestone ravines of the Suruktakh-khaya in Yakutsh, with representations of reindeer, and the gorges of Zaraut-Sai in Uzbekistan, with engravings of animals dating for the most part from the Bronze Age). Evident in these engravings is that unusual technique which has been called the X-ray style and which is well known in Australian art (II, PL. 61; IX, PL. 242) and in the art of the northwest American coast. Here, too, as in the Sahara, traditions in design seem to be linked to an older art of the hunting peoples, with no apparent break in style.

In the most recent artistic production of the Siberian livestock raisers, the representations of reindeer, birds, and conifers, such as those on the shamanic drums of the Teleuts and the Tartars (IV, PL. 262), or the representations of the twelve beasts of the zodiac (of Chinese derivation) are characterized by a puerile oversimplification, as also are some of the rare sculptural works (Goldian amulets in the shape of tigers, leopards, and bears; outlines of mythical animals sewn on the shamans' costumes or placed on their tombs). Floral and plant ornamentation on clothing lacked originality and was inspired to a great extent by Chinese models. There is an almost total lack of figural expression in the shepherding cultures of Africa: Cushite, Nilotic, and Bantu. This is especially evident in the Bantu cultures; although animal representations appear in the art of the peoples of the humid forests and savannahs of Angola and the Congo (where there is no extensive livestock-rearing), they are unknown in the art of the people (mainly shepherds) of the eastern and southern areas, where with only occasional exceptions, such as those in the art of the Barotse (II, PLS. 131, 232), the only attempts to reproduce the animal form are in clay figures modeled by children (Zulu, Nguni, and Nuer, among others).

In contrast, animal representations are a fundamental element in the art of the agricultural peoples on every continent and at all levels of civilization (PL. 455). They are executed in a variety of materials and techniques — in basketwork (see BASKETRY), featherwork (q.v.), and fabrics, in wooden sculpture, ceramics, and metalwork (qq.v.).

Undoubtedly form and function are closely related in many cases in which animal models are used in the creation of objects. The profile of a hornbill with its great curved beak inspired the outline of the Bakota (Gabon) throwing knife; the parrot is the model of the shape of the "whistling" jar from Chimu (Peru; I, PL. 200). The Micronesian coconut scraper is in the stylized form of a quadruped (IX, PL. 544); among the Swahili the same type of implement is the "goat" (*mbuzi*). The fishermen of the Solomon Islands carve wooden floats for their nets in the form of sea birds resting on the waves; the head of a crocodile moving on the surface of the water suggests the prow decoration for the pirogues of the Papuans of Sepik. The relationship between the animal and the object sometimes achieves a degree of immediacy. Noteworthy in this regard are the *mayurī* from India in the shape of a peacock (X, PL. 229) and the wooden kava bowl from Fiji in the shape of a tortoise (Seattle, Thomas Burke Memorial, Washington State Mus.).

Animal motifs have been reworked in successive centuries, imperceptibly making the transition from realism to extreme abstraction. Among the most obvious of such transformations are those of the bird and the serpent in the art of Trobriand, New Guinea, in which what were initially realistic representations later became obscure and complex designs (cf. IX, FIG. 705). Another is the gradual simplification of the loom pulleys of the Guro weavers into the form of an elephant head. The antelope form atop the headpieces of the Bambara dancers undergoes a progressive change: body and legs are deemphasized, while horn and mane assume exaggerated proportions (XIII, PLS. 307, 309). In the final stages of this process, the arched line of the neck has been transformed into four distinct concentric curves, a device that is an effective complement to the dynamics of the dance (XIII, PL. 329).

The free interpretation of animal motifs can go ever further, ending in the rigid abstraction of geometric ornamentation. In the decorations of the Carajá tribe of the Amazon region, a series of superimposed broken lines represents the bat in flight, the cross denotes a variety of lizard, and the rhombus with indented sides represents a wild bees' nest. In the art of the Bakairi Indians, a wavy line with alternating dark spots represents the anaconda with its spotted scales, and a lozenge with blackened corners represents the *mereshu* fish.

Some scholars have attributed an animal origin to many of the geometric motifs of Australian art, which are derived not so much from the over-all aspect of the entire animal as from isolated parts of its body or from the pattern of its coat or scales; an Australian aborigine has told scholars that he drew inspiration from living creatures — serpents, iguanas, and insect larvae — but not from trees or plants.

Early artisans, so improperly called "primitive," transcended mere animal representation, creating highly original therianthropic and polyzoomorphic works. In the *malanggan* and the *uli* of New Ireland (IX, PLS. 447, 448) the human figure is associated with that of the animal in a unitary vision (see MELANESIAN CULTURES); similar intermingling is to be found in some vertical sculptural compositions by the Haida Indians, the Tsimshian, and other peoples of the northwest American coast (X, PLS. 353, 356). It is especially evident in the prow decorations of the canoes of the Papuans of Humboldt Bay, in which ichthyomorphic and anthropomorphic elements are fused. In the bird-men of Easter Island, the image of the god Meke Meke, and some Efik and Ibibio masks (VII, PL. 132), theriantropism achieved a dramatic level never equaled in the mythology of the classical world. The most impressive compositions are perhaps the masks of the Lo society of the Senufo culture, in which a large antelope head with pointed horns bears boar tusks and has a gaping mouth showing carnivore's teeth; the brow of the mask is surmounted by a hornbill in the act of devouring a chameleon (XIII, PL. 304).

In many African and American works, however, the animal figure is humanized and reveals its original nature only through details which may elude the inexpert observer. A Bambara mask inspired by the hyena has the appearance of a stylized human face, in which only the long ears reveal its theriomorphic nature. The head of the falcon in Tsimshian art has entirely human features, in spite of its hooked nose, and even has a human mouth and teeth (X, PL. 224; XIII, PL. 3).

The great numbers of animal representations in middle- and lower-level cultures throughout the world are still, for the most part, subject to various and changing interpretations.

The representation of a lizard on the spoons of the women of the Kran and other Guinean peoples is a fertility symbol. That of the bear on the *iku bashui* of the Ainu refers to the worship and sacrifice of the plantigrade by northeastern Asian peoples. The sculpture of an otter on a Tlingit rattle indicates its magic properties. Bird forms appear frequently in the iconography of the North American Indian: the bird's mysterious power of flight is associated with the wind, thunder, and storm. The Navahos believe that four white swans in-

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

habit the four corners of the sky, controlling the winds. The Hurons consider the dove the guardian of the soul. Among the Prairie Indians the eagle was a sacred animal; it was offered to the gods, and its feathers are the symbol of the victorious warrior. However, all these meanings are arbitrary. Like other birds (woodpecker, heron, parrot, owl) the dove and swan are regarded by the Amerinds as bearers of omens, and their flight is studied for the purpose of prophecies. The bear is essentially a heraldic animal for the Tlingit; for the Gilyak it is the intermediary between men and the supernatural "masters" (XIII, PL. 30).

In what is still a classic study of primitive Melanesian designs, G. Reichardt has identified a single, dubious instance of plant inspiration among many hundreds of subjects in which the animal element predominates. This is a serrated motif carved on a wooden cup from Tami, in which a soft treatment of the serration is reminiscent of a leaf form (Reichardt, *Melanesian Design*, New York, 1933, I, p. 42, II, pl. LXXI–208).

Another isolated instance of plant motifs in primitive art appears on a drum, probably from the Torres Strait area of New Guinea (Cambridge, Eng., Univ. Mus. of Archaeol. and Ethnol.; R. Firth, *Art and Life in New Guinea*, London, New York, 1936, p. 88). The motif represents a tree, or branch, and consists of a few lines — twelve leaves in all — and is a secondary element in the over-all decoration: below it a cassowary is shown pecking at some fruit fallen from the tree.

Plant representations appear sporadically also in Australian art (a single, impressive example is to be found in the collection of bark paintings from Arnhemland published by K. Kupka, *Un art à l'état brut, Peintures et sculptures aborigènes d'Australie*, Lausanne, 1962, p. 40) and in Polynesian art, in what seem to be palm-leaf or corolla motifs on tapa (XIII, PLS. 386, 388).

When three-dimensional representations predominate in art, there is an almost complete lack of plant representations. This is particularly true in African art, with few exceptions (e.g., the gold weights of the Akan tribes, made in the shape of kola nuts), and applies not only to sculptures in wood or metal but also to ceramics, basketry, and wall painting. Among the exceptions, the bas-reliefs of Abomey (VII, PL. 116) are noteworthy; this is a gallery of curious allegories in which some trees in semi-naturalistic form appear among various anthropomorphic and zoomorphic figures. On the walls of the palace of Agadja there is a representation of a roka tree, the mythical tree from which the primordial couple is supposed to have descended. Another perhaps represents King Ghezo in the form of a palm, in an allusion to his statement that "the sheep do not eat the leaves of the palm-tree," or, in another interpretation, the painting may refer to a statement of King Agonglo, "I am the *agonde* (pineapple) against which lightning can do nothing." In any case the culture of the Guinean Negroes cannot be considered "primitive." Generally, any attempt to translate plant forms into artistic elements, even for merely decorative purposes — as in the flower motifs on embossed brass objects of the Nupe people of Nigeria; the designs on bamboo executed by the islanders of Timor or Borneo; the rosettes and plant arabesques on the pottery of the Caduveo (Chaco; XIII, PL. 104) — occurs in cultures that have attained a superior degree of civilization. These attempts are most successful in Asian art of such peripheral areas as Siberia and Indonesia. An esthetic appreciation of plants and flowers — unlike that of animals — seems to emerge almost exclusively in urban civilizations; outside of these it is usually the result of migration and diffusion.

Pre-Columbian America. The highly developed civilizations of Pre-Columbian America (see ANDEAN PROTOHISTORY; MIDDLE AMERICAN PROTOHISTORY) drew extensively on the very rich animal themes (and to a lesser extent on those of plants) that constitute the common patrimony of the indigenous traditions of the New World; they elaborated them and occasionally achieved a great measure of originality. Especially in the Mayan civilization, new elements were added, the result of incipient urbanism, a strong theocratic orientation, and the stratification of society into classes that offered new opportunities to the ranks of specialized craftsmen.

The extremely rich figural repertory is undoubtedly the result of the importance that animal images had in mythological and astral symbolism, in religious ritual, in costumes, and in other aspects of everyday life — to an extent that had its only parallel in Egypt. Aztec warriors fought dressed in the skins of wild beasts, with their faces visible between the animal's jaws (X, PLS. 33, 42, 55; this motif was also used in the stone sculptures). An illustration of the *Antiquedades Mexicanas* (Mexico City, 1892) shows a warrior surmounted by the figure of a great heron with wings widespread; similar images appear in B. de Sahagún's work (16th cent.; *Historia general de las cosas de Nueva España*, Mexico, 1938) and in other sources; golden disks with superb heads of wild beasts in full relief decorated the lips of important personages. Eagles and jaguars, emblems of warrior aristocracy among the Toltecs, were adopted by the Aztecs as opposing symbols of heaven and earth, light and darkness, the sun and the morning star (X, PL. 46). In Aztec reliefs in wood they were used on either side of the solar symbol and also appeared together in the impressive bas-reliefs of the monolithic temple of Malinalco (1501–15), where they could be seen by the worshipers through a portal in the shape of the throat of a dragon, a monster associated with the world of caverns. The rabbit was a lunar symbol and appears in the Borgia Codex (Vat. Borg. Mss. I) in the act of being swallowed by a feathered serpent. The hummingbird was emblematic of Tonatiuh, the sun god. An eloquent synthesis of Aztec animal symbolism appears on the stone cist in Hamburg (Mus. für Völkerkunde). The cover bears the image of the feathered serpent (the sky); on the inner base of the cist is a carving of an alligator (the earth); the lower part of the side is decorated with an elaborate allegory featuring the toad (which symbolizes the underworld).

Of the new elements referred to above, the most outstanding is undoubtedly the use of series of theriomorphic motifs as integral parts of architecture. This ingenious expedient was adopted on a monumental scale in the Teotihuacán culture (cf. the monumental decoration on the temple of Quetzalcoatl; X, PL. 6) and frequently recurs throughout Toltec and Aztec art in the symmetrical series of large, terrifying serpent masks flanking walls and stairways. These elements were transmitted, through Toltec influence, to the Mayan ceremonial centers. At Chichén Itzá (Yucatán), the mythical serpent with gaping jaws is not only the guardian of the entrance to the sacred building, but is also a supporting structure in the building (Temple of the Jaguars; X, PL. 37). Further south in Mayan territory appear gigantic stone heads of birds (e.g., that of a parrot at Copan, Honduras). The most impressive examples of this use of animal motifs in sacred architecture remain those created by the Aztecs. Although the famous temple of Tenochtitlán has been destroyed, an indirect idea of its structure may be had from the restored pyramid of Tenayuca, where the feathered serpent appears both in a series of large grimacing masks (X, PL. 41) and in freestanding monumental sculptural works, in which the curled-up body is in masonry and the head is carved out of stone.

Similar solutions are lacking in the much more sober monumental architecture of the Andean area (see ANDEAN PROTOHISTORY). However, imaginary and semirealistic animal figures, as well as stylized motifs that may represent vine shoots, were used in mural decoration (in *tapial*) in coastal Peru, to judge by that which is preserved at Chan-Chan (I, PL. 161).

Wall painting (practically unknown in other American cultures, except for the Pueblo cultures) and goldwork were the other media in which Mexican and Mayan artists gave the full measure of their artistic ability in animal and plant representation. Little evidence of mural decoration survives, but there is enough to document the skill with which Middle American artists rendered animals and plants in a realistic manner, in scenes of everyday life, devoid of all symbolism. An example of this is the fresco of the Tlaloc paradise at Teotihuacán, where the blessed ones run and dance on green meadows beside the waters, among fruit trees and flowering bushes, while varicolored birds and enormous butterflies fly about (IV, PL. 465). Another such representation is that of the fish and

CC-0. Kurukshetra University. Digitized by eGangotri. Digitized by Digital Preservation Foundation, Chandigarh

birds in a fresco in the Temple of the Warriors at Chichén Itzá, where different conventions and colors are used to express the differences between the various trees that shade the Yucatán village represented. [Elsewhere in Mayan art the tree, too, is changed; the most interesting example is to be found in a vase painting from Yucatán (S. G. Morely, *The Ancient Maya*, London, 1946) in which the trunk has human facial elements and the branches extend like arms and hands.] Middle American goldwork (X, PL. 40), which has produced some of the most graceful and precious animal representations of all time, is relatively recent and appeared among the Mayas in postclassical times.

In areas other than those mentioned above plant and animal representations in art remained on a high level of achievement in the more highly developed urban and national civilizations, but remained bound to early traditions among the peoples to the north and south of these areas of civilization. This is true of sculpture in wood, stone, and shell; to a lesser extent it is true of basketry and featherwork, and, above all, of ceramics. In the classical Middle American periods even the products of the most common and popular types of art — especially among the Maya and Zapotec peoples — had elements of great refinement and elaborate symbolism, but they could not surpass in quality the clay figures, such as the frogs and birds of Tlatilco, produced by some of the more archaic civilizations or by the people of the outlying western provinces; here, even in later centuries, artisans continued to produce an extremely varied and imaginative series of animal figurines, among which the fat little dogs of the Colima are noteworthy examples (PL. 457; X, PL. 28).

In contrast are the ceramic styles from the valleys along the Pacific coast of Peru. These repeat the votive and funerary purpose and the rich repertory of animal and plant subjects of their models, which they equal in vigorous sculptural quality (pottery from Mochica Chimù; cf. I, PLS. 178, 196, 200) and clearly surpass in the originality of their naturalistic or stylized motifs and in their taste for color (Mochica pottery with painted motifs, Nazca; I, PLS. 188, 194, 197).

Vinigi L. GROTTANELLI

The ancient world: *a. Animal representations.* Among the Egyptian peoples of the predynastic period there was probably a totemic animal cult, which, after the political unification of the country, became part of the national pantheon. The bull Apis, the cow goddess Hathor, the monkey god (and ibis) Thoth (patron of wisdom and the scribes), the falcon god Horus, the vulture goddess, the crocodile god, the hippopotamus goddess Taurt, the scarab (incarnation of the sun), and the *uraeus* (the cobra; emblem of judgment and death) were depicted in art. Some gods gained a human body while retaining an animal head, as, for example, the cat goddess, the lion-headed goddess, and the god of the dead, Anubis, who has the head of a jackal (IV, PL. 464). Egyptian artists also showed animals in scenes of the hunt, of war, of agriculture; these works were painted, engraved, or carved, or were in the form of small statues (PL. 456; IV, PLS. 326, 328, 335). The lion was an important subject. Today this animal has disappeared from Egypt and it was certainly more numerous in prehistory than at the time of the Pharaohs, when it was considered the king of the beasts. It would seem that the Egyptians sometimes succeeded in domesticating lions, as may be deduced from the fact that members of the Ramessides dynasty took lions into battle with them. In combat scenes the lion is depicted throwing himself on the enemy (IV, PL. 322); this is sometimes interpreted as an allegory referring to the Pharaoh himself. The lions of Amenhotep III from Soleb (ca. 1400 B.C.; Br. Mus.) are outstanding among Egyptian animal figures. The great royal lion hunts are to be considered ritual acts rather than pure cynegetics. Even beyond this, the lion was the subject of an entire theological and cosmological theory devolved by the priests, in which the sphinx figure was conceived of as a lion with the head of a Pharaoh (IV, PL. 354). The best-known animal figure in Egyptian art is, in fact, the Great Sphinx (IV, PL. 333).

The most ancient lion in art — a well-fed lion, crouched and grimacing — is a Sumerian stone statue dating from before the 3d millennium B.C. Archaic Babylonian art tends to treat the animal figure as a decorative element, mainly because the Mesopotamian peoples represented their gods either in human form or by means of symbols. Decorative animal motifs appear in art from the time of the first Sumerian dynasty, in monuments at Warka, Khafaje, Kish, and Ur. The decorations are in the round, in relief, or are inlaid (IX, PL. 475). The decoration of the sound box of the harp from Ur (I, PL. 505) is a glorification of the animal kingdom. The silver vase of King Entemena, from Telloh (I, PL. 504) is decorated with graffiti of animals — stags, ibexes, lions, and lion-headed eagles — elegantly stylized and composed in groups that circle the body of the vase. The cylinder seals of the kings of Akkad are engraved with scenes of the battle between the hero Gilgamesh and the lion, the watering of the sacred bull, and wildbeast and bird hunts. These works are notable for their perfection of technique, the organic quality of their composition, and their elegance of form (XII, PL. 523). Among what remains of Babylonian sculptured work, a bronze from the beginning of the 2d millennium is a charming representation of three ibexes (IX, PL. 491). The Assyrian artists elaborated the Babylonian theme of the human-headed bull and lion, presenting them as gigantic demons, guardians of the gates of fortresses and royal palaces (IX, PL. 488). The originality of the Assyrian work lies in the expression of the form, which conveys a feeling of force and violence. The same artists, at the same time, produced the friezes with animals in bas-relief on glazed bricks in the temples and palaces at Khorsabad. The Assyrian concept of the animal figure, rendered with naturalistic feeling, as neither protagonist of a hunting or battle scene nor part of a landscape but as pure decoration, was later to reach archaic Greece through Phoenicia. Assyrian animal art reached its peak in the great hunting scenes cut in bas-relief from the palaces of Ashurnasirpal (884–859 B.C.) and Ashurbanipal (669–626 B.C.) in Nineveh (mod. Quyunjig; PL. 456; IX, PL. 493). In these there are several figures at varying heights: there are no perspective planes, and the figures intended to be nearest the viewer rest their hooves on the lower fillet of the panel, while the others are higher in the panel. The natural shape of each animal — lion, gazelle, onager, dog — has been accurately rendered. Also noteworthy are the crouched lion in his death agony and the lioness pierced by two spears. During the Neo-Babylonian period (612–539 B.C.), Mesopotamian artists created the Ishtar Gate in Babylon, which was decorated with bas-reliefs of bulls and dragons in polychrome bricks (IX, PL. 494).

The oldest known manifestations of Anatolian art (early Bronze Age, ca. 2500–2000 B.C.) are small-scale images cast in bronze and sometimes inlaid with silver, representing stags with branching antlers, bulls, and panthers (PL. 455). Placed atop knotty sticks, these small statues were "standards" belonging to a cult, and some come from tombs at Alaca Hüyük (I, PL. 517). In them, the artists adapted the natural shape to the emblematic function of the effigy. Ever since the archaic period of Hittite art, which occurred in Anatolia at the beginning of the 2d millennium B.C., the lion was the principal subject in the animal repertory (PL. 458). This animal first appeared on terra-cotta rhytons, which were sometimes glazed (there are some examples of the 18th cent. B.C. from Kültepe); later, when the Hittite kingdom was at its height (1450–1200 B.C.), lion figures were used as guardians of doors and as supports for anthropomorphic deities (this was a motif of Mesopotamian origin; its last echo is the Syrian type of Jupiter Dolichenus of the Roman period; IV, PLS. 216, 220). The lion of Hittite statuary has an original and unmistakable aspect: massive, square, measured, and charged with energy (VII, PL. 280).

During the 2d millennium B.C. in the area of Phoenician civilization, art was subject to the influences of the Mesopotamian and Hittite civilizations in the north and to Egyptian influence in the south. Large statues of lions, sphinxes, griffins, and scorpions appear as decorative motifs at the bases of pillars in the palace of Kaparu at Tell Halaf: under the wild beasts are goats of smaller size. The motif of the feline bringing

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

down a grazing animal is often the symbol of the victorious king destroying an adversary (PL. 459). This concept passed from Asia to the peoples of the West. Lions supported the sarcophagus of Aḥīrām, king of Byblos; lions, deer, goats, cattle, female sphinxes, and winged bulls are carved on ivory plaques or embossed on sheets of metal (forming handles of mirrors, cups, etc.) found at Ugarit, Byblos (XIII, PL. 366), Nimrud, Megiddo, Tyre, Arslan Tash (XIII, PL. 363), and Samaria, as well as in Etruria, Sardinia, and Andalusia. A granite stele found at Beth Shan (Israel) bears on each side a sculptured bas-relief of a dog fighting a lion, a symbol of peoples or divinities in conflict (XIII, PL. 365). There are a number of terra-cotta statuettes of monkeys, hippopotamuses, and other mammals (Beirut, Lebanon, Nat. Mus.).

In Cretan-Mycenaean art, not only terrestrial but also, and especially, marine fauna was represented in small statues of *pietra dura*, faïence reliefs, vase paintings, embossed gold cups, inlaid dagger blades, plaster bas-reliefs, wall paintings, and carved precious stones. Among the best-known of such objects are the goat with her kids (Heraklion, Archaeol. Mus.), a faïence relief from Knossos (a motif of Asian origin, here rich with an original naturalistic content and elegance of line); the amphora from Gournia with a polyp with tentacles (IV, PL. 65); painted flying fish from Phylakopia (Melos); a wall painting of a wildcat stalking a pheasant (Heraklion, Archaeol. Mus.) from Hagia Triada; the two golden cups from Vaphio, with scenes of the capture of bulls in repoussé work (IV, PL. 73); the relief of a bull's head in painted stucco from Knossos (Middle Minoan period, 1600 B.C.); the bull's-head rhyton in black steatite with details in other materials, from Knossos (Late Minoan period, 1550–1500 B.C.) and the rhyton in the shape of the head of a lioness, also from Knossos (IV, PLS. 59, 64); the lion's head in gold from the acropolis of Mycenae; the acrobat on a bull, frescoed on a wall in Tiryns; and the two heraldic lionesses sculptured in the pediment of the Lion Gate at Mycenae (IV, PL. 69). This last sculpture is somewhat of a departure from that naturalistic style which characterized Cretan-Mycenaean art for the greater part of its historical existence. Animals in the art of the final period of this civilization — the shellfish and polyp, painted on the vases from Ialysos — have coldly elegant and stylized forms.

Although Greek art took man as its central theme, it also portrayed all the species of fauna known to the Greeks. The Indian parrot was not known to the Greeks before the time of Alexander the Great; nonetheless one example is represented in a Greco-Persian carved precious stone of the second half of the 5th century B.C. (Met. Mus.). Writers of antiquity record animals cast in bronze or painted by famous artists: the heifer by Myron on the Acropolis in Athens; the bulls by Theopropos dedicated by the Corcyrians in Olympia and Delphi (here the base and inscription were discovered); a colossal bronze bull on the Acropolis that became famous through the witticisms of the comic poets; a bull led to the sacrifice, painted by Pausias; and a similar subject in a painting by Apelles. The vase painters of the Ionian workshops, and later those of Corinth, introduced the Eastern taste for continuous friezes with processions of animals — felines, goats, cattle, birds, and female sphinxes. The Mesopotamian archetypes of these zoophoric friezes are well known. In Ionian and Corinthian vases animals decorated the entire surface; in Attic vases the areas of animal decoration were limited to the shoulders or neck or foot of the container, because the greater part of the surface was reserved for mythological scenes. The zoophorus was taken up in architectural sculpture and appeared on the architrave of a proto-Archaic temple at Prinias in Crete. Large serpents and polychrome monsters with fish tails appear in the corners of archaic pediments on the Athens Acropolis. An Attic black-figure cup is painted with a single polyp, which is perhaps an allusion to the name of the craftsman, who signs himself "Polypous." Gradually animals ceased to be the sole subjects of art, as they were in the East, and became elements in a narrative. In a metope at Selinunte Zeus in the form of a bull — body in profile and head seen frontally — rapes Europa above a sea suggested by darting fish (VII, PL. 58). The Calydonian boar with the short-cropped crest stands out in a metope from the Treasury of the Sikyonians (Delphi, Archaeol. Mus.); in Attic black-figure ceramic decoration the animals are those from the myth of Herakles (cf. I, PLS. 348, 362); in very ancient embossed bronze laminae the animals are associated with a beast-taming divinity of Asiatic origin. This reflects the difference in attitude between the Greek and Asiatic spirit. In all Greek art two subjects from the animal repertory were especially favored: the horse and the lion. The horse was regarded as a heroic, aristocratic animal of divine origin, sacred to the god of the sea, and symbol of the eternally moving waves. From the time of the geometric period, the horse appears either alone, as a votive statue, or in association with a god, a hero, or another mortal who sits astride it or guides it from the cart of the agon, in battle, or in the cosmic journey of the sun. Such are the horses (Nos. 697 and 700) in the Acropolis Museum in Athens, those from the frieze of the Treasury of the Knidians (Delphi, Archaeol. Mus.), those from the east pediment of the Temple of Zeus at Olympia (Olympia, Archaeol. Mus.), those from the frieze and pediments of the Parthenon (Br. Mus.), those from the friezes of the Temple of Athena Nike in Athens and of the Sanctuary of Apollo Epikourios at Bassae (Br. Mus.), those from the acroteria on a temple of Licri Epizephyrii (Naples, Mus. Naz.), those from the friezes on the so-called "Nereid Monument" at Xanthos, from the Asklepieion at Epidaurus, from the mausoleum at Halikarnassos, from the base by Bryaxis (II, PL. 58), and from the votive and funerary reliefs on the so-called "Alexander Sarcophagus" (VII, PLS. 151, 152). Of equal artistic value are a small bronze from 480–470 B.C., another of the same period from Olympia (Athens, Nat. Mus.), representations on the tetradrachma of the 5th century B.C. from Syracuse (cf. III, PL. 397), and some precious stones (VI, PL. 35). Best-known of all of these are the Phidian horses and that of Selene on the eastern pediment of the Parthenon (PL. 467). The observation of the natural shape had at this time made a great step forward, expressing itself in the chiaroscuro of painstakingly modeled planes.

The image of the lion had more or less the same symbolism for the Greeks as for the Orientals; it was the symbol of force and courage, and hence the spirit that warded off evil beings; it was also the guardian of temples and tombs. The oldest-known lion image in the West dates from about 650 B.C. and is a head on the Macmillan lekythos (Br. Mus.) from Thebes, of Corinthian production. From 60 or 70 years later came the first large-scale stone lion, found at Perachora on the Isthmus of Corinth. Rainwater spouts in the gutters of temple roofs were in the form of lions' heads, in terra cotta during the archaic period and in stone or marble in later centuries (VII, PL. 57). The archaic lion heads are characterized by green eyes and a black mane, which spreads out in the pattern of floral calyxes. The ears were shaped separately and later set into the sculpture. On a limestone pediment from the pre-Persian Acropolis at Athens, of Eastern inspiration, two lionesses devour a calf. A similar theme appears in reliefs on small clay altars of archaic Italiote and Siciliote origin. Two splendid lions that were influenced by Corinthian styles crouch within the wings of a pediment from the Temple of Artemis at Corfu (I, PL. 343). On the same island another stone lioness guarded the cenotaph of Menekrates (VII, PL. 43). For three centuries the lion was a funerary symbol, perhaps of the underworld (as in Celtic sculpture). Among the best-known of such representations are the lions in the mausoleum at Halikarnassos and the last great lion of classical art, that at Cheronea. Almost 20 ft. high, this marble colossus was erected on the tumulus of the Athenians and Thebans who fell in defense of Greece against the Macedonian hegemony. The scheme — animal crouching on its hind legs with forelegs, chest, and head erect — is traditional. It dates from about 338 B.C., on the eve of the period of strong Hellenistic realism. The lion has a certain architectural rigidity; the taut legs recall columns supporting a pediment. The concept of the lion as a symbol of military valor, even in defeat, emerged again in neoclassic styles. (For the lion figure in engravings on coins, see EMBLEMS AND INSIGNIA; on precious stones, see GEMS AND GLYPTICS, especially VI, PLS. 35, 36.)

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

The base of the so-called "altar of Cn. Domitius Ahenobarbus" was ornamented with marble reliefs. In one of these is portrayed a ritual scene (VII, PL. 210) with preparations for a *suovetaurilia*, that is, the immolation of a pig, a sheep, and a bull — an expiatory sacrifice with which the Romans opened and closed each campaign. This is the oldest of a long series of similar representations. A marble sow suckling twelve piglets (Vat. Mus.) is from the Augustan period and is in a severe style that has more original Roman elements than the Hellenized style of the two Grimani reliefs (Vienna, Kunsthist. Mus.) with the lioness and the sheep. Typical of the Julio-Claudian period were the bronze wolf masks and lion masks used on ships and underwater fauna in mosaic pavements (cf. VII, PL. 179). During the first two centuries of the Empire, crocodiles, hippopotamuses, and ibises appeared in painted and mosaic landscapes (cf. I, PL. 23; VII, PL. 179; IX, PL. 3). Birds and insects are represented in paintings (e.g., garden landscapes of the Villa of Livia at Prima Porta; VII, PL. 208) and reliefs (e.g., those from the Ara Pacis; VII, PL. 211). Animals — eagle, wolf, bull, horse, and boar — were the insignia of the legions. These probably had originally been totems of the prehistoric tribes of Latium. The eagle image was surrounded by an entire mythology, which was enriched with Syrian elements at the time of the Severi (the eagle was the ray of the sun, supreme god in the Syrian pantheon); in some apotheosis scenes the dead emperor is carried up to heaven by an eagle (IV, PL. 220). One of the most beautiful eagles in Roman sculpture is that which was found in Trajan's Forum and which was collocated in the portico of the Church of the SS. Apostoli in Rome. In this work the motif of the eagle surrounded by a garland of oak leaves, known in earlier Roman art, was taken up and elaborated. The horse was another subject of Roman art and appeared mainly in aulic sculpture, in equestrian statues, or in representations of the emperor in the triumphal chariot. Noteworthy examples of such sculptures are a bronze horse from Herculaneum (Naples, Mus. Naz., No. 4904); the bronze statue of Marcus Aurelius on horseback in Piazza del Campidoglio (X, PL. 148); a panel in the vault of the Arch of Titus in Rome (VII, PL. 262); and the relief of the triumph of Septimius Severus on the quadrifrons arch in Leptis Magna (XI, PL. 358). Chariots and *quadrigae* also appear in scenes of circus games. The most notable sculpture of this subject is the large marble chariot in the Vatican Museum. In scenes of games staged in the circus or the amphitheater wild beasts are depicted in combat. The most impressive representation of this subject is painted on a wall of the so-called "Hunting Baths" at Leptis Magna: the names of the animals, as well as those of the hunters, are indicated beside each figure. A similar subject was rendered in mosaic in the villa of Dar-Buk-Ammera (I, PL. 22) and in Hippo Regius (VI, PL. 61). The funerary lion reappears in the sarcophagus reliefs of the 2d and 3d centuries. The last lion representation of ancient art is perhaps that on the so-called "Shield of Hannibal" (Paris, Cab. Méd.), a large round silver object which was part of a treasure probably produced in Carthage during the late-antique period. The lion, slightly foreshortened, moves toward the left of the composition; in the background stands a palm tree with an umbrella of foliage. Roman art of the imperial period produced representations of the animals of Eastern divinities (e.g., the bull of Mithras; IV, PL. 220), and the animals of Early Christian symbolism (see below). The last group of animal subjects in Roman art is that of the ducks, dolphins, swans, and griffins on the buckles, necklaces, and other gold objects from the Ténès Treasure (Algeria), dating from the first half of the 5th century.

b. Plant representations. The artists of the Nile Valley drew on the local flora for inspiration. The shapes of columns and capitals were copied from the plant world (palmiform, lotiform, and bundled papyrus columns; IV, FIG. 682) and plant forms were geometricized to suit their decorative function.

In the Ptolemaic era a type of composite capital was formed by putting together several superimposed elements, used with infinite variety. Flowers and leaves adorned glazed terra-cotta vases and ivory handles for mirrors and cutlery (VIII, PL. 236); they also appeared in frescoes and textiles. A frequent motif was that of the lotus flower (PL. 464; III, PL. 130).

The most ancient Mesopotamian representation of a tree — with linear, threadlike trunk and branches — is engraved on a cylinder seal showing Gilgamesh fighting a lion, from the Sargonid period (3d millennium). Rich, geometricized flower decoration is painted on Mitannian vases (about the middle of the 15th century B.C.) from Tell Atchana and Tell Billa. The rose with an open corolla depicted in perspective, like a disk, or with the calyx in profile — either upright or at the end of a long, spiral stem — was a favorite motif, as was the palmette. These motifs were extremely stylized and were repeated with regular rhythm in friezes on the walls of Assyrian royal palaces. The stylized palm evolved into the motif of the sacred tree flanked by winged griffins. Landscape representations are engraved on cylinder seals and are sculptured in stone reliefs from the palaces of Sennacherib and Ashurbanipal at Nineveh (IX, PL. 2). The last flowering of Babylonian art, under Nebuchadnezzar II (604–561 B.C.), produced a wall decoration in glazed polychrome bricks, in which yellow masts with volutes and palmette capitals stand out against a blue background. At the top a frieze of white palmettes and lotus flowers connects the capitals.

At the top of the four sides of the sarcophagus of Aḥīrām, king of Byblos, runs a frieze of lotuses with their calyxes turned upside down, alternately open and closed (10th cent. B.C.). In reliefs on ivory plaques, capitals with leaves and flower calyxes decorated the balustrades of the window balconies. On a fragment of an ivory plaque from Arslan Tash (8th cent. B.C.) Isis stands beside the sacred tree, which is rich with curving branches that are ribbed in a decorative manner. The same subject, set between two water birds, is seen again in a small clay jug from Cyprus. During the 8th century B.C. Cypriote artists produced a type of pillar capital, in which the iris flower was elegantly stylized and enriched by the addition of the palmette (IV, PL. 96). This motif is commonly called "Cypriote," but it really derives from an Egyptian prototype of the beginning of the 18th dynasty. One of the most notable examples of this motif is a limestone stele of the late 6th century from Golgoi (Athienou), Cyprus (Met. Mus.); to the palmette is added a motif with two female sphinxes at the sides of the sacred tree. The Cypriote palmette is a decorative element found frequently in Phoenician and Punic crafts production. The palm-tree motif appears on several steles of the Tophet in Carthage and also was used on Carthaginian coins.

The plant world inspired the vase painters of Crete. Decorators of pottery in the Kamares style (Middle Minoan III; IV, PL. 57) rarely reproduced the plants in naturalistic style and stylized them to a high degree instead. Sometimes the natural models — daisies, lilies, anemones, and water lilies — are recognizable among the decorative spirals. On a vase with a spout (from Knossos) can be seen amid the branches leaves that were later repeated in the Greek anthemion. About 1600 B.C. there were two types of production of vases with naturalistic decoration of lilies and grass: one was white on a dark background, the other dark on a light background. The pottery decorators were inspired by the frescoes at Amisos, Hagia Triada, Knossos, and Phaistos (Middle Minoan III, 1600–1580 B.C.; IV, PLS. 62, 65).

When the painters of Attic black-figure vases reserved the principal part of the amphora for mythological scenes, they used floral decoration on the secondary areas — neck, shoulder, feet, and the zones under the handles; these were painted with palmettes, lotus flowers, leaves, and pods (II, PL. 47). The same motifs adorned the capitals and upper zones of temples: cornices, gutters, antefixes, acroteria. In architecture, elements derived from the plant world ceased to be simply surface decoration and acquired a precise significance closely related to the decorated parts. For instance, the upright flower and leaf signify the architectural impulse upward. The proto-Greek type of capital, called Aeolic (because it appeared during the 7th century in Lesbos and Troas), is represented by the example found at Neandria (Istanbul, Archaeol. Mus.; I, PL. 334) and shows more clearly than the Ionic capital its origin in the plant

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

world: on a cylindrical shaft a stylized lily opens out. Between flowers and shaft are a mass of erect leaves and a garland of leaves turned upside down, both motifs of Asian origin. No trace of this type of capital appears elsewhere, but in the 6th century B.C. it was widely used as the ornament for and as the crowning element of bases in column form. One plant — the acanthus — unknown to the pre-Hellenic civilizations, was rendered immortal by the Greek artists. It flourished on Attic soil and perhaps as early as prehistoric times was considered to have a magic property that protected against death. For this reason acanthus leaves decorated the acroteria of funerary steles. Significant examples are the acroteria from the Apollonion in Phigalia (420 B.C.; Br. Mus.), the "Venetian" stele (460 B.C.; Berlin, Staat. Mus.), the stele from Karystos (Berlin, Staat. Mus.), and the stele of Meneas (5th cent. B.C.; Athens, Nat. Mus.). Other monuments are the capital from Megara Hyblaea in Palermo (Mus. Archaeol.), the frieze of palmettes and acanthus from the Erechtheion (III, PL. 341), the silver vase from Actia Nicopolis (late 5th cent.; Leningrad, The Hermitage), and one of the small pediments of the cover of a Sidonian sarcophagus in Istanbul (Archaeol. Mus.). The acanthus dominates in the third type of Greek capital, the Corinthian (VII, PL. 150). According to Vitruvius (*De architectura*, IV, 1) the sculptor Kallimachos (in the last decades of the 5th cent. B.C.) is supposed to have invented it, inspired by the sight of a basket around which an acanthus plant had grown on the tomb of a Corinthian girl. This is a legend that was perhaps fostered by the fact that this artist had created the same type of capital in Corinthian bronze. One detail of the legend seems to preserve the memory of the funerary origin of this subject. The Corinthian capital permitted infinite variations on the plant motif. Sometimes the nucleus is circumscribed by a simple, sparse crown of large spiny acanthus leaves on which rises another crown made of lighter leaves; at other times the leafy crown is doubled and to its corners are added voluted vine shoots in spirals that bear the projections of the abacus. In Hellenistic art the leaves are depicted in a realistic manner. Because of its elegance, slimness, and esthetic adaptability, the acanthus capital was taken up in Roman and, later, in Renaissance art. The most representative examples are those of the temple of Apollo Epikourios at Bassae, the Tholos of Epidaurus, the votive column at Delphi (Archaeol. Mus.), and the monument to Lisikrates at Athens (334 B.C.; X, PL. 156). Finely chiseled acanthus leaves decorate a golden diadem from Taranto; two 2d-century diadems from Canosa bear small garlands of fruit and flowers in gold and enamel (VI, PL. 242). (See COINS AND MEDALS.)

In general the heritage of ornamental forms, at first Eastern and then Hellenistic, filtered through to the Etruscan civilization. For this reason there are, in Etruscan art, the same motifs of the craft products of early archaic times, in the terracotta temple facings, the sculptured cippi and sarcophagi, and in the bronze cists and mirrors decorated wth graffiti (under the influence of Attic red-figure ceramic decoration). The forms have more body and are more massive than the Greek ones. An outstanding example of the plant motif in Etruscan art is the representation of slender and delicate trees with red trunks and branches, light green lanceolate leaves and dark green berries, which, soberly naturalistic, figure in a composition with dancers and musicians on the walls of the "Tomb of the Leopard" at Tarquinia (PL. 466; V, PL. 42).

The first great aulic monument of Roman art, the Ara Pacis Augustae, is also the first splendid exaltation of the plant. The essential value of Augustan art is its original plant decoration (VII, PL. 211). The wall of the podium of the Ara Pacis is completely covered with volutes of acanthus in relief, composed in a complex system of spirals that open out, like embroidery, from a central acanthus and spread until they meet the corner piers. Among the flower motifs in this work are palmettes, peonies, poppies, and roses, to which are added such animal figures as small birds, insects, lizards, and small serpents. Roman art widely used the wreath of leaves and the festoon — a large bunch of leaves, flowers, and fruit, tied with ribbons — which was hung in loops on altars, in temples, and in arches (herms, too, were decorated with wreaths as a mark of religious devotion). These were not new themes, since they had been known in Greek art, but Roman artists developed them with great richness and variety and naturalistic sensitivity, making them, to all effects, original Roman creations. The Italian artists of the Renaissance did something similar. The Ara Pacis also presents the first noteworthy examples of Roman festoons sculptured in high relief: clusters of grapes, ears of wheat, and various fruits and nuts. The sculptural work reproduced natural colors; these festoons can be considered, therefore, to be among the most outstanding examples of still life in ancient art. Flower motifs were used extensively at the time of the Julio-Claudians; the Flavians produced plant subjects in which the motifs are part of landscapes of gardens and woods, often with sacred trees enclosed and decorated with consecration bands (IX, PL. 4). Artists worked in all media: mosaic; repoussé work in precious metal (silver cups from Alesia and Boscoreale abound with olive twigs or with plane-tree leaves; VI, PL. 254; VII, PL. 216); glasswork (amphora from Pompeii in white and blue cameo glass with vintaging cupids; VI, PL. 219); glyptics (cup in chalcedony in the form of celery leaves, from a tomb at Olbia, Sardinia, perhaps of the Neronian period). The sculptors of the school of Aphrodisias created works over a period of many generations, from the doorposts of the portal of the Temple of Bel in Palmyra (1st cent. B.C.), to the pilasters of the Baths of Aphrodisias (Istanbul, Archaeol. Mus.), to those of the Severan basilica and of the quadrifrons arch in Leptis Magna. This art, in which the leaves tended to occupy almost all the free space, is reechoed in the distant Gandhara (q.v.) art (bone frames from Kapisi, mod. Begram, 2d–3d cent.), in the early Byzantine period (a pre-Justinian bronze door in Hagia Sophia, Istanbul), and in Coptic art (architectural details, III, PL. 453; textiles, III, PL. 446; and funerary steles in Cairo). Plant representations took on allegorical significance in Early Christian frescoes (III, PLS. 92, 95). The last examples of plant representations in ancient art are the palmate cross among spirals with roses in the pediment of the Tempietto del Clitunno (5th cent.) and the leaves of an openwork gold necklace from the Treasure of Ténès, mentioned above.

Gennaro PESCE

The East and Eurasia. a. Animal representations. The figural art of Asia, from the dawn of protohistory to modern times, offers an extraordinary variety of structural and stylistic interpretations of animal motifs that reflect a vast range of magic, religious, sociological, and decorative values.

The figure of the animal in the Asiatic cultures and civilizations is expressed in a realistic manner, or with a stylization that is variable in its origins, its intentions, and its taste (PL. 458). The tendency toward ornamentation suggests from time to time forms that are illogical and unnatural. From the earliest times there is a recurrence of composite images in which parts of various animals become fused in an imaginary creation which adheres to reality in the single details. Semihuman and semianimal figures abounded, and served to add to the already rich repertory of the ancient Near East and the classical world. In some cases plant elements were represented as having become integral parts of living creatures, not because of mere whim, as is almost always true in the West (see FANTASY), but in a search for symbolic significance that broke down the barriers separating the various realms of nature. Similarly, the transformation of a terrestrial animal into an acquatic or winged creature alluded to arcane disorders or supernatural powers.

In Asia the almost exclusively preferred subject of the so-called art of the steppe (see STEPPE CULTURES) was the animal figure, which was part of a complex phenomenology that found expression throughout a large part of Asia and Europe. It even influenced medieval art in the West.

The principal centers of animal representation in the protohistorical periods include the cultures and civilizations of the Near East and the areas of the Iranian and Baikal cultures. The art of the latter shows a marked tendency toward realism and, in some figural schemes, foreshadows solutions used by

CC-0. Agamnigal Digital Preservation Foundation, Chandigarh

the various artistic trends of steppe art. The works produced by the Baikal culture, relatively rare and generally of mediocre quality, nonetheless represent an important point of reference.

Iranian production was much more rich and varied. Its predominantly stylized (or abstract) vision of animal figures is opposed in vase painting by vigorously realistic images, sculpturally treated (III, PL. 121). There is an obvious attempt to adapt the figures of the animals, almost always seen in profile, to the form of the vase, emphasizing individual attributes or characteristics that are transformed into elegant decorative motifs (e.g., horns; long, flexible necks; and lengthened necks). Among the subjects, goats are dominant. The geometricizing stylization in this art can be linked with the geometric styles of very ancient basketry (q.v.) and effects of movement (lines of elongated dogs on the goblets from Susa I; VIII, PL. 119). In zoomorphic vases the craftsmen demonstrated a marked sense of volume, creating images of impressive power, both realistic and stylized, some of which probably were intended to be caricatures, or at least humorous (e.g., in the cultures of Hasanlu and Garmabak; II, PLS. 3, 4).

The animal image in Iranian vase painting is always considered in itself, for although it was repeated for decorative purposes, it clearly outlined an isolated element against the background formed by the sides of the vase. There was no indication of the animal's natural environment, as there had been in the protohistoric cultures of northwestern India and of Afghanistan (see AFGHANISTAN; ASIATIC PROTOHISTORY; INDIAN ART; INDUS VALLEY ART; PAKISTAN), where the animal was depicted in its natural environment with stylized representations of trees, grass, and water. These representations, less linear and more sculptural in quality, reveal a less clear vision and a lesser capacity for stylization in the search for a descriptive realism. From ancient times, Iranian metalwork has shown frontal images of animal heads (VIII, PLS. 125, 130). The prevalence of the profile is notably reduced in the bronzes from Luristan (see IRANIAN PRE-SASSANIAN ART CULTURES), while the Zawiyeh golden cup presents, with very accurate and efficacious realism, the fusion of the profile of the bodies (in light repoussé) with the high relief of the splendid heads. There is a ribbon-form stylization of some animal images from Luristan. In various aspects Zawiyeh foreshadows Achaemenid art. The rampant lion from the combat scenes repeated on a gold facing plaque (VI, PL. 248) should be enough to demonstrate this connection, which does not preclude earlier influences from Hittite and Urartian sources, easily recognizable also in the "passant" lion motif favored by the Achaemenids. The archaic conventions of the animal repertory persisted in the minor works of Achaemenid art, while on the equipment of the Medean officers recurred animal motifs that attest to the bonds that existed between the art of the Medes, that of Scythia, and that of Central Asia. Achaemenid sculpture, with its realistic tendency, became an involuntary documentation of the tastes of a rather mysterious nation and confirmed the connections which Achaemenid Iran maintained, directly and indirectly, with Outer Iran. Animal motifs were widely used in the art of the Scythian and Śaka peoples, which together with Chinese contributions and the autonomous art of the nomads formed the art of the steppe, subdivided into the Scythian and the Sarmatic. Steppe art used animal motifs for emblematic and decorative purposes in a magic context, and it followed remarkably different lines of development according to area. While Scythian art passed from stylized linear figures to others which were much more elaborate and complex and finally produced works that show traces of Greek realism, the art of the Siberian area passed instead from rigid forms, in which the volumetric structure is dominant, to others rendered in almost geometric schemes (animals twisted into the shape of a circle with legs forming an openwork circle or contorted in a horizontal S), some of which are of nomad origin and others of which are Chinese (X, PLS. 397–400; XIII, PLS. 184, 186, 187). From stereometric forms they passed to linear stylizations, often in openwork, with color values attained through the application of enamels, precious stones, and glass paste, especially popular in the Sarmatic era. Notwithstanding the stylization, the form of the animal is never completely obscured, and the nomads rejected the indistinct and monstrous zoomorphic forms.

The monstrous aspect in zoomorphic representations is to be found in the Chinese *t'ao t'ieh* motif of the Shang period, which in the Chou period gradually became less popular and disappeared, giving way to images which were equally fantastic but which were combinations of different parts of animals that really existed; these images were realized in forms and styles that were unmistakably Chinese. In the bronzes of the Shang and Chou periods and in the lacquers of Ch'ang-sha (cf. III, PL. 226) there appear stylized representations of insects to which particular symbolic significance is attributed. The cicada larva is a symbol of the indistinct and the undifferentiated, because of its asexuality. Symbols, including that of the fly, also were widely used in Christian and barbarian art of the early European Middle Ages and retained similar symbolic meanings. In China the larva symbol is alternated with that of the homunculus. In the lacquers of Ch'ang-sha these images were fused to form a roughly anthropomorphic figure with a larva's head.

The Shang larvae are the first representations of insects in art. Although the animal images on seals of the Indus civilization (II, PL. 18; VIII, PL. 69) are mainly realistic, there also appear some completely imaginary figures as well as figures in which a single fantastic element is added to a detailed realism (bulls with a single horn). Still other figures represent masked animals. The Indus seals reflect man's desire to act on nature, transforming it in the process. The elaborate head harnesses of Pazyryk were designed to transform the horse into the reindeer by masking it (XIII, PLS. 188, 189). Pazyryk was exposed to Achaemenid influences, which probably reached the area through trade routes even after the end of the empire, just as in the India of the Maurya dynasty. Here the stylized lion images bear the mark of their Western origin in the rictus of their jaws and in the treatment of the mane (II, PLS. 399, 400). However, the realistic animals sculptured on the plinth and the bull atop an Aśokan capital (II, PL. 401) show the existence of an entirely different line of development, perhaps derived from the realism of the Indus seals. The doctrine of reincarnation dictates the care with which artists executed animal images, reducing stylization to a minimum and reserving it exclusively for imaginary figures that are often derived from Western art. One of these imaginary figures was the *makara*, a water monster, perhaps related in form to the crocodile (I, FIG. 410; X, FIG. 843, no. 15). Stylized images of horses, lions, and elephants were used in decorative motifs that, in later periods, took on baroque aspects. The continuation of the Achaemenid influence was very pronounced on the artistic development of the northwestern regions and endured sometimes into very late eras. The serpent image was an original Indian motif: in representations of the naga kings it underwent a number of variations, though constantly remaining a mixture of human and animal elements (VIII, PL. 6). The elephant-headed god Gaṇeśa (VII, PL. 227) and the animal *avatāra* of Viṣṇu (VII, PLS. 228, 232) also are symbols that combine observation of animal life with elements of fantasy.

The most ancient phases of bronze production in China, related to that of the rest of Asia in various aspects, were followed by a period in which there were characteristic stylizations with large elliptic segments or with marked curves; these motifs were used in commemorative compositions and other forms of animal representation. Among these forms the characteristic interpretation of the equine head in the Han terra cottas dominates; the value of the horse as an instrument of war is evident in this type of head. Other animals, among them the turtle and the lion, complete the repertory and appear sometimes in highly stylized forms that are extremely far removed from reality. Chinese art, with its tendency toward the fantastic, interpreted the data of nature in a particular way, not only in decorative motifs but also in the characteristic figurines of the T'ang dynasty (III, PLS. 246, 247, 250). This Chinese interpretation greatly influenced that of animal motifs throughout the Far East; it recurs in Chinese court painting. Together with albums dedicated to animals and compositions

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

that depicted the seasons and their characteristic fauna, representations of horses, often stylized, appeared frequently. The horse has been chosen as subject by master painters such as Han Kan, Li Kung-lin (q.v.), and Kuan Tao-shêng (III, PL. 197), up to Lang Shih-ning (Giuseppe Castiglione), and in modern times, Jupéon (q.v.; VIII, PL. 343; X, PL. 422). In general, however, the animal figure is included in Chinese art either as an animated detail in a landscape or as a primary or marginal notation in compositions often charged with symbolic and allegorical meanings. It sometimes is related to poetic interpretations of the seasons. Similar artistic conceptions are found in Korea and Japan, while the mass of production both in China and elsewhere tends toward stylized forms charged with an almost grotesque expression, emphasizing the symbolic value of the figure represented. Noteworthy among such forms is that of the dragon (PL. 32; II, PL. 15, FIG. 26; III, PLS. 229, 278, 280; VI, PL. 50).

b. Plant representations. The attribution of symbolic value to the tree, in the form of a stylized lanceolate leaf, is evident in a seal from Susa, datable about 3000 B.C., in which the tree is represented at the summit of a stylized mountain at whose sides two ibexes face each other. The symbolism of the composition, indisputable though not completely clear, does not obscure the decorative value always linked to plant motifs. Decorative motifs used in vase painting ranged from the thorny bushes, faintly geometricized, of al-'Ubaid to the landscape elements in the clay decorations of Kulli, one of the protohistoric cultures of Baluchistan, in which the artist strove to balance the distortions of the extremely stylized animal figures. The lanceolate leaves of the pipal tree appear in the decoration of terra cottas from Nal (another Baluchistan culture). The same motif appears not only on seals but also as one of the geometric motifs in vase painting of the Indus civilization (VIII, PL. 70). A stylized monochrome representation of round flowers with stems recurred sporadically on the ceramics from Tepe Giyan dating from the middle of the 2d millennium B.C. The tree motif returned in the Elamite cylinder seals from Susa and Chuga Zanbil. In some cases, the skeletal and strongly stylized tree was transformed into a whimsical motif, with branches arranged roughly in star formation; its value as a symbol was not diminished by this use.

The highest example of the decorative plant motif is to be found in the stylized Assyrian palmette (IX, PL. 493, FIG. 785, no. 6), which was used more systematically and coherently than those more complex motifs created by Iranian artists, especially in goldwork. The most noteworthy applications of the plant motif in the Iranian area are in the sheaf of twigs called the *baresman* (see LITURGICAL AND RITUAL OBJECTS), used by the priests. A mixture of plant and animal elements recurs on some bronzes from Luristan, on which a stylized pomegranate tree appears instead of the Assyrian palmette (VIII, PL. 123). The form with a human body and a pomegranate head is extremely rare; it is similar in concept to the mandrake in 15th-century German drawings. Some motifs in which imaginary beings seem to be twisted like braids of reeds or stems (the golden cup of Amlash; New York, private coll.) reflect trends toward plant motifs and at the same time geometricizing trends derived from basketry.

In India the tree had already been conceived of as a symbol of life when it appeared as an isolated element in protohistoric art and when it was flanked by the apparition of the mother goddess. In Buddhism (q.v.) the Tree of Enlightenment became the symbol not only of Buddha but also of his doctrine (II, PLS. 376, 407), and in this sense it was used by the iconoclast schools (see IMAGES AND ICONOCLASM). Depicted with strong emphasis on fruit, foliage, and leaves, the trees in the sculptured decorations at Bharhut and at Sanchi are conceived as the dwelling-places of the yakshis; from this relation of female figure and plant was developed the scheme of the *sālābhañjikā* attitude, in which the woman grasps the tree with one hand (II, PL. 408; VII, PL. 441; IX, PL. 384). This is repeated in the iconography of the birth of Buddha, in which Queen Maya, his mother, assumes this attitude. Plant motifs could be purely decorative as well. Apart from the lotus, with all its implications, other plant motifs were used in Buddhist decoration. The Hellenistic acanthus appeared on Gandharan capitals and the festoons of flowers and fruits on their long looped stems were used by the Mathura school. There is a clear link between the votive offering of flowers or of festoons and the plant decorations of Buddhist India. During the medieval period the plant decoration of pyramid temples symbolized the assimilation of the temple itself into the mountain. The classical contribution was completely lost in this period, while the scheme of stylization of plant forms was clearly Indian (XI, PLS. 6, 7). In Central Asia, and above all in those areas where Buddhist thought predominated, realistic floral expressions were used to create fairytale-like backgrounds for scenes of a timeless world. In the Turfan area tiny plant motifs and motifs of clear plant derivation are used as isolated symbols of beauty in representations of divine or semidivine beings (PL. 214). The landscapes in Tun-huang wall paintings retain the plant motif even when such geographical features as mountain chains are reduced to the form of superimposed triangles (III, PL. 244). The trees, especially the pine trees, are sometimes seen against a background of light that defines their shape; they are always interpreted impressionistically. The official representation of the Uigurian princes in Turfan art almost always includes a large flower held in the hand (I, PL. 488). Both realistic tendencies and decorative stylizations are evident in this scheme, just as they appear together in the repertory of floral motifs in Western art. The floral motif became common in Chinese silks as a refined decorative element and its use was extended in Central Asia to the frames of wall paintings and to the decoration of chapel vaults (III, PL. 238). In Sassanian Iran, plant decoration was restricted to stucco ornaments (PL. 464), to garlands that framed symbolic motifs in embroidered silk (XII, PL. 405), and to secondary decorative motifs on silver vessels (XII, PL. 404). Plant forms are generally only accessory ornamentation in toreutics. Plant decorations in stucco were generally of Assyrian or Luristan derivation and tended to have a stellar disposition and geometricized composition.

The most striking developments in plant representations in the East were Islamic art's creation of the arabesque and use of minute decoration and Chinese art's emphasis on landscape and on compositions of fruit or flowers that were imbued with the esthetic value of the subject.

Islamic decoration clearly concentrated on plant forms (the ban on the representation of the human figure, although not a decisive factor, nonetheless was of considerable importance in the development of Moslem art; see IMAGES AND ICONOCLASM). The prevalence of the plant motif — minute, elaborate, and stylized to the extreme — was determined by a vision of the world that was peculiarly Moslem; this vision (and these motifs) remained constant and unvaried in the different countries and cultures influenced by Islam in the course of centuries. Such details as leaves and stems and, less frequently, entire flowers were the principal decorative motifs and were used in bands, as elaborate backgrounds, on volutes, and on arabesques (VIII, PLS. 155, 158, 164; see ISLAM, cols. 351–352; also see OTTOMAN SCHOOLS). Symbolism was an important factor in the repertory of plant forms in Chinese art, especially in the period following the triumph of the Buddhist Ch'an sect (from which Japanese Zen derived).

MARIO BUSSAGLI

European protohistoric and barbarian art. Protohistoric Europe was influenced by the great Eastern trends in animal representation that came from two directions: from the ancient Near East and the Mediterranean basin (see ETRUSCO-ITALIC ART; MEDITERRANEAN, ANCIENT WESTERN; MEDITERRANEAN PROTOHISTORY), and from the northeast, following the trail of invasions and incursions from Asia (see ASIATIC PROTOHISTORY; EUROPEAN PROTOHISTORY).

These influences, presumably active as early as the oldest prehistoric periods and undoubtedly existing in the Neolithic era, became notable from the end of the Bronze Age and from

CC-0. Panjab University. Digital Preservation Foundation, Chandigarh

the beginning of the Iron Age. Scythian currents and, later, more generally, those of steppe art influenced Celtic art of the La Tène period (see CELTIC ART); the process continued with migrations and with the Turkish and Mongol expansions of the Middle Ages. The remote Asiatic origins of Celtic animal and plant themes are no longer subject to doubt (cf. III, PLS. 114–116, 119). It is not always possible to distinguish in European protohistoric decorative motifs that which is the result of direct Asiatic influence and that which came indirectly through Mediterranean sources, rejected by Greco-Roman art but preserved in provincial art (Italic, Illyrian, Alpine, South-Gaulish, and Iberian). Celtic art synthesized these contributions and passed them on to the barbarian art of the age of the migrations and of the early Middle Ages.

• •

With the beginning of the barbarian invasions a new taste and a new series of motifs in animal representations spread throughout Europe (the late and rare plant representations came to the barbarians from Mediterranean sources). This taste was clearly anticlassical. The many extant objects of goldwork, mainly from treasures and funerary accessories (see EUROPE, BARBARIAN; GOLD- AND SILVERWORK), reveal two different trends: one proper to the Goths, who had a marked predilection for polychrome decoration which, in bird-shaped fibulae such as that from Petrossa, are naturalistic in conception and stylized in execution (V, PLS. 58, 60); the other trend, of Germanic derivation, was toward filigree and repoussé techniques and used the animal figure in complex decorative schemes. In Salin's Style I the repertory of animal forms shows once more, as in the bracteates, the use of forms of classical origin, greatly transformed and detached from reality (V, PLS. 72, 73). Most often represented were reptiles (e.g., the lizards on the Ålleberg collar; V, col. 157, PL. 64), snakelike creatures with human or bird heads (V, PL. 83), and dogs with long pointed muzzles. The design was at times almost obsessive, so much so that the figure was sometimes obscured in the agitated development of the motif. This may be seen, for example, in the polyps on the decoration of the scabbard of the sword from Nydam and in the horses on the Gummersmark fibula (V, PL. 84).

In Salin's Style II, animal representations in the Germanic art of Central Europe developed a ribbon trend and a type of interlacing clearly distinct from the classical in its constant and deliberate interruption, often emphasized by the alternating of smooth but strongly repoussé areas with others that were flat and striped (V, PL. 93). Figures of birds predominate, as is evident in the splendid ornamental plaque from Vendel (V, PL. 94). This plaque and others of a similar type show the influence of Hiberno-Saxon art, in which, from the 6th to the 9th century, there was a particular repertory of animal representations (see ANGLO-SAXON AND IRISH ART). Here too the interlacing is of great importance, especially in the last phase. The bird figure appeared most frequently (as in the Book of Kells; I, PL. 281). Anglo-Saxon art interpreted the entire animal figure, as in the symbols of the evangelists, in a bold, decorative play of line and color (cf. the Lindisfarne Gospels; I, PL. 280).

The Byzantine era. In the centuries that marked the decline of the late-antique style (see LATE-ANTIQUE AND EARLY CHRISTIAN ART), followed in the East by the Byzantine era (see BYZANTINE ART) and in the West by the early Middle Ages, plant and animal representations acquired a particular value, determined in many cases by the symbolic and allegorical meaning often attributed to them. Christianity itself based its art on literary images inherited in part from the Hebrew tradition (J. Danielou, 1961, passim), with its harsh iconoclastic attitude. It developed other images on the basis of contacts and similarities in the world of nature. Subjects such as the Bacchic thiasos, the sea teeming with fish, Orpheus taming the animals, the inhabited scrolls of grapevine and acanthus, with opportune corrections (the elimination of Bacchus and Ariadne in the Bacchic scenes, Orpheus's transformation into the Good Shepherd), became part of Christian iconography. The interpretation of these representations was suggested to the faithful by the Church Fathers: for example, a passage from the writings of St. Hyppolitus of Rome (3d cent.) evokes the vintaging scene on the annular vault in S. Costanza in Rome (4th cent.): "the spiritual vine is the Lord, the vine branches and leaves are the Saints who believe in Him, the bunches of grapes His martyrs . . . the harvesters are the angels, the baskets in which the fruit of the vine is gathered are the Apostles, the wine-press is the Church, and the wine the strength of the Holy Spirit" (J. Danielou, 1961, p. 45). A passage from Tertullian (2d cent.), "Sed nos pisciculi . . . nec aliter quam in aqua permanendo salvi sumus" (*De baptismo*, I, 3), recalls images such as that in the mosaic decoration of the Baptistery of Kilibia (5th cent.; Tunis, Mus. du Bardo), where fish dart in the water and water flowers appear along the inner edges of the composition, while grapevines twine across the floor.

Animal and plant representations not only appeared in an allegorical context but also became important symbols in Christian art: the lamb as symbol of Christ (as in the Chapel of St. John the Evangelist in the Lateran Baptistery in Rome, 5th cent.; on an ivory diptych, XIII, PL. 341; and in many Early Christian apse mosaics), or, when there are twelve, as symbols of the Apostles ("Capsella Africana" in Rome, Vat. Mus.; mosaics in SS. Cosma e Damiano, X, PL. 178). The twelve doves also are symbols of the Apostles (X, PL. 194; Baptistery of Albenga, 5th cent.?). The deer drinking at the spring represents the soul thirsting for God (Baptistery of S. Giovanni in Fonte, Naples, 4th cent.; Ravenna, the so-called "Mausoleum of Galla Placidia," 5th cent.); the phoenix and the peacock are symbols of the Resurrection of Christ (PL. 461; III, PL. 303); the fish is the symbol of Christ; the fishes, especially the dolphins, are symbols of the baptized (the portal of Church I of Alahan Monastir, 5th cent.; sculptures of the Basilica of Tebessa, 5th cent.). Monsters and hybrid figures were not used, except as symbols of evil (III, PL. 305). (See also SAINTS, ICONOGRAPHY OF.)

The evangelic identification of Christ with the grapevine made that motif especially popular. The motif was widely used throughout the late-antique period (mosaic in the apse of the Basilica at Sabratha; wooden door panels, S. Sabina, Rome; IX, PL. 83). The palm tree usually symbolized paradise, but it is also represented as an attribute of the saints, together with the laurel crown, a use that is derived from classical art. The tree, or a plant of any type, shown between two animals disposed heraldically (a scheme of Mesopotamian derivation) is to be interpreted as the tree of life.

In Christian art animal and plant representations often appear as pure and simple decorative motifs. In architectural decoration, especially in the East (e.g., the monuments at Baalbek, Lebanon), there was an enrichment of the decoration of moldings with a gradual disappearance of the ovoli and astragals favored by classical art and the increasing importance of the acanthus motif, in various interpretations (in the form of palmettes, helices, or scrolls enclosing a rosette within the spiral). Vines covered the shafts of columns (II, PL. 282); sometimes animals and other figures could be seen among the leaves. The ivy leaf was another commonly used motif. Emblemata bearing representations of animals, flowers, and fruit appear in floor mosaics. A letter of St. Nilus (Migne, PG 77, 577) states that hunting and fishing scenes of purely decorative purpose embellished the presbyteries of some churches in Constantinople previous to 400.

During the 4th and 5th centuries there were no stylistic differences between pagan and Christian representations of plants and animals. There was, however, a general tendency toward the stylization of the motifs [compare, for example, the sculptured acanthus leaves from the Church of St. John in Studion (II, PL. 469) with those of the Byzantine Hagia Sophia (II, PL. 469), in which there was a rhythmic repetition and geometricized style (e.g., circular scrolling; II, PLS. 442, 443)]. The center of this style was Constantinople, where, especially in sculptured architectural decoration based mainly on plant motifs, abstract shapes were emphasized and there was

CC-0. Agamnigam Digital Presevation Foundation, Chandigarh

a clear tendency toward iconoclasm. The principal examples of this are the churches of Hagia Sophia and SS. Sergius and Bacchus, where the acanthus motif was interpreted in an anti-classical manner (II, PLS. 426, 429). The artists split up the traditional cluster motif into single elements that were recomposed in rhythmic or symmetrical relation within a repetitive geometric design (II, PL. 442). This design was interwoven with the same stem motif that covered moldings, capitals, transennae, and even spandrels. In the *opus sectile* decorations in Hagia Sophia, which include, in addition to the acanthus motif, others such as those of the palmette, ivy, and grapevine, the above-mentioned geometricization and schematization are evident together with a tendency to hybridize and mix motifs that probably is derived from Syria. While extant monuments indicate that animal motifs were widely used in the West, they were almost completely lacking in the East. Doves, peacocks, and other animals disappeared or were reduced to tiny forms barely visible amidst luxuriant plant decoration. The cross was represented as the "flowered cross" or "tree-cross of life," thus fusing the ancient Mesopotamian concept of the tree of life with the doctrines of the new faith. In the vaulting of Hagia Sophia the cross is superimposed on a quadruple Sassanian palm tree; in the most common representation the cross rises out of an acanthus tuft or the acanthus is spread along the arms of the cross (Cross of Justin II, 6th cent.; Rome, Vat. Mus.). In *plutei*, two ivy leaves with very long stems extended from the base of the crown within which the cross or the monogram of Christ was inscribed. Direct Byzantine influences may be seen in the carved decorations of the Church of St. John at Ephesus (6th cent.), in some Greek basilicas (e.g., Basilica B at Philippi, where the acanthus-leaf decorations are interspersed with dolphin figures, so stylized as to seem like plant motifs), in S. Vitale in Ravenna (II, PL. 478; XII, PL. 233), and in the Basilica at Poreč, Yugoslavia.

The development of stylization in plant motifs is evident in the mosaics in the bema of the Church of the Dormition, Nicea (destroyed). In these motifs the ivy leaves, which have become monochrome with two thread-shaped cauliculi, are identical in form, one on either side of the traditional winding ribbon form, at this stage broken up into a series of rectangles. In the art produced at Ravenna, the more intense and continuous contact with Roman tradition made the dissolution of naturalistic tendencies more difficult. In Ravenna animal symbolism persisted and was emphasized; it may be clearly traced on a series of sarcophagi preserved there (G. de Francovich, "Studi sulla scultura Ravennate," *Felix Ravenna*, 26–27, 1958, pp. 5–172; 28, 1959, pp. 5–175). On the three sarcophagi in the so-called "Mausoleum of Galla Placidia" such animal figures as lambs, peacocks, deer, and doves had become the principal elements in the decoration. As Francovich states (*Felix Ravenna*, 28, 1959, p. 32 f.), the origin of this tendency must go back to Syria. This thesis is reinforced by the heraldic disposition of the animals and, above all, by the fusion of animal and plant elements. These motifs go back to ancient Mesopotamian art (cf. wall painting from Kar-Tukulti-Ninurta, 1243–1207 B.C.; Berlin, Staat. Mus.) and were taken up again by the Sassanians (XII, PL. 408). In the art of Ravenna, animals were rigorously reproduced in profile at the sides of the monogram of Christ and were increasingly stylized, to the point where the lambs' fleece was transformed into rigid superimposed tiles. This heraldic form — used also in the decoration of many *plutei* — modified the classical scheme of the doves drinking at a cantharus, depicting them in sharp profile at the sides of the vase (sarcophagus of Constantius III; Ravenna, "Mausoleum of Galla Placidia"). In the ambo of St. Agnellus (Ravenna, Cathedral) the animals were depicted in procession on panels.

The extremely rare extant examples of Syro-Palestinian art (q.v.) show two different trends: one, probably directly dependent on Antioch and marked by a Hellenistic taste; the other derived from Palmyra and including some elements of Sassanian origin, with a greater tendency toward schematization and stylization.

To the first trend is to be attributed the Antioch Chalice (IX, PL. 162), decorated with grapevine leaves inhabited by figures and animals, including the eagle, a form rarely seen in the Christian repertory. In this work is evident a lively naturalism such as may be seen in the later Rabula Gospels (Florence, Bib. Laurenziana, Plut I, cod. 56). In this manuscript the arches of the canon tables are decorated with animals such as hares, partridges, birds, and gazelles and with various species of flowers. The free and varied movements of the animals are far from the rigidity of those on Byzantine sarcophagi and *plutei*. To the second trend, closely connected with Palmyra, belong the huge pillars in Piazza S. Marco in Venice. The few extant sculptures in the area of Palmyra show a preference for spiny acanthus leaves, disposed like helices and sometimes opening out into wide flowers with nervation rendered by means of deep grooves on flat surfaces.

In Coptic art animal and plant forms were used for purely decorative purposes (III, PL. 458). The eagle is frequently to be found in this art, where it seems to assume an eschatological significance. The acanthus and the grapevine are the predominant plant motifs in decorative sculpture, and the pomegranate also appears frequently.

In the oldest textiles (e.g., No. 819–1905, Vict. and Alb.; 4th cent.) naturalistic forms were expressed with a rhythmic movement. In the 4th century there was a flattening and stiffening of form in the representation of leaves and bunches of grapes. The purely decorative style of the subsequent period disappeared after the Arab invasion (7th cent.) and was followed by a monotonous and almost calligraphic repetition of abstract motifs.

In the course of the 8th century the outburst of the iconoclastic struggle (see IMAGES AND ICONOCLASM) and the consequent prohibition of representations of the human figure conferred a special value on decoration, particularly that employing plant motifs, and led to a wider acceptance of Eastern themes. A few rock-cut churches in Cappadocia preserve rough floral motifs from the period; these motifs are executed in red and are alternated with symbolic animal representations. The tendencies of Byzantine art at that time may perhaps be indicated by the mosaics, frescoes, and stuccowork of the Ommiads (see OMMIAD SCHOOLS).

In the second half of the 9th century the iconoclastic crisis was ended and the renewed interest in the representation of the human figure relegated plant and animal representations once more to a secondary position. However, plant and animal motifs still constituted the basic elements in the decoration of the canon tables and other tables in illuminated manuscripts; the infiltration of elements of Moslem origin can be noted in these.

While plant motifs were stylized and schematized, animal motifs were executed with greater liberty and a sense of realism. The animal repertory is very extensive and included such animals as the camel, elephant, and monkey, and also such hybridizations as the siren-bird and the centaur.

Both plant and animal motifs appear in Byzantine mosaics (e.g., at Monreale; II, PL. 286). In ivories, plant decoration is rare, and was mainly in the form of a highly stylized acanthus leaf. In gold- and metalwork, the preiconoclastic motifs were favored.

The small so-called "rosette caskets," usually in ivory (VII, PL. 330), are in a distinct and important category. These took their name from the decoration of their borders with long bands of rosettes (an ancient Mesopotamian motif extensively used by Palmyran artists) framing mythological scenes or scenes of cupids and animals (II, PL. 481).

Extant fragments of Byzantine textiles show a skillful re-elaboration of Sassanian motifs, with animals depicted within roundels or in heraldic position flanking the tree of life; the eagle, including the two-headed form, is a recurrent motif (II, PL. 490). The same eagle motifs, of Mesopotamian derivation, also appear in ceramics of the posticonoclastic period.

The Middle Ages in Europe. The advent of the Frankish dynasty marked a return to classical models, a consequent

CC-0. Agamnigam Digital Preservation Foundation

elimination of barbarian animal motifs, and a wide use of classical plant motifs (see CAROLINGIAN PERIOD). The renewed interest in human figural representations, moreover, relegated both plant and animal representations once again to a secondary level. With rare exceptions, these were no longer symbolic, as they had been during the first centuries of Christianity, but fulfilled purely decorative functions. The exceptions included the lamb symbol and the symbols of the Evangelists, and such representations of animals or landscapes as were necessary in illustrative contexts (cf. the numerous animal illustrations in the illuminations of the Psalter in Stuttgart; 9th cent.; Landesbib. Bib., fol. 23). The sources of these animal and plant representations were ancient codices and ivories. In the codices of the Court School (see III, col. 111), the Syrian influence is evident in the canon tables, executed with a decorative elegance that often attained very original solutions (e.g., the grouping of the bull, the lion, and the eagle in the Gospels of St. Médard of Soissons; Paris, Bib. Nat., Cod. Lat. 8850).

In the northern schools and also sometimes in the Court School (III, PL. 56), animal decoration of barbarian origin was restricted to the initials or to the framing of the pages. The interlacing had taken on a continuity and was devoid of interruptions. In many codices the initials were represented by stylized figures of lions, fish, and birds (e.g., the Carolingian Gospel; Essen, Cath. Treas.). In other codices, as in the Drogo Sacramentary (II, PL. 284), the initials are instead composed of plant elements (grapevine or acanthus) that frame figural illustrations. Only sporadically are animal representations found in German ivories and they are generally derived from the Paleo-Christian repertory. The ivories were generally framed by acanthus leaves, and sometimes by grapevine and laurel motifs. The acanthus tended increasingly to be used with leaves of five or more lobes; these leaves took the form of palmettes connected by the lobes of the base, which, at their junction, formed an eyelet that was sometimes perfectly circular (a decoration evidently derived from 6th-century Byzantine motifs and related to that of the bronze railings in the Palatine Chapel in Aachen). The Court School gave wide development to this motif and, by increasing the eyelets between one lobe and another of the acanthus, obtained elaborate lace effects. The motif was used by the Rheims School (cf. plaques with illustrations of Psalms 24 and 26; Zurich, Schweizerisches Landesmus.), while in that of Metz the spiny form of the acanthus was interpreted in a more compact and static manner that resulted in a refined elegance, as in the comb of St. Heribert (III, PL. 67).

With the decline of the Carolingian Empire and the rise of the Ottonian, the center of European culture was moved to Germany, and animal and plant representations underwent further developments toward more concise and abstract forms, undoubtedly favored by renewed contact with the Byzantine world. Animal interlacings disappeared almost completely and plant decoration was preferred. For the plant forms of the Carolingian period were substituted an interlacing of stalks of equal width that ended in a trefoil (Sacramentary of Peterhausen; Heidelberg, Universitätsbib.), an ivy leaf, or an animal head (initial in the Gero Codex; Darmstadt, Landesbib., Ms. 1948). In the more elaborate codices of the Reichenau School (Book of Pericopes of Henry II; VIII, PL. 97; XI, PL. 314), round berries similar to mistletoe dot the entire interlacing; there also were composite plant forms.

In ivories and stuccoes the grapevine leaf (used more frequently than in the Carolingian period) became more schematized and flattened, with lobes folded outward. Animal representations became increasingly important during the Romanesque period (see ROMANESQUE ART), both for their Christian symbolism and as decorative elements. Inhabited scrolls were widely used at this time and were interpreted with great vitality both in the flow of vine shoots, often rendered more vigorous by semicircular veining alternating with grooves [this element was strongly accentuated in the work of the Antelami (q.v.; XII, PL. 252)], and in the marked sculptural quality of animal forms.

Animal representations assumed an important role in illustrations of the lives of the saints (see SAINTS, ICONOGRAPHY OF), in which they were accessory figures or were transformed, in some cases, into the attribute of the saint himself.

In Gothic art (q.v.) monstrous animal representations appeared on the rainspouts of the great cathedrals, and images of flowers and leaves decorated the interiors. The new plant decorations, which originated in France, broke away from the traditional architectural forms that had previously determined their use. In capitals with crockets, for instance, four veined leaves were inserted on each side between the four curled leaves at the corners, and were multiplied on two or more sections, tending to open the crockets in flower shapes (cf. VI, PL. 311). In the Abbey of Maubuisson a realistic grapevine decoration twists around the capitals (13th cent.; Louvre), which seem to be holding up the plant. Often birds peep out between the leaves; large leaves with fringed lobes open out behind the figures of Apostles on the portal of the south transept of Amiens; the leaves on the capitals of the columns between the figures on the central portal of the Cathedral of Rheims form a continuous hedge (VI, PL. 350). Spires and pinnacles of cathedrals were strewn with flowers in a decoration that had naturalistic elements.

Animal representations had become rarer and usually appeared in a narrative or symbolic context. There was a sense of majesty in the kneeling horse in one of the panels of the tomb of St. Dominic in the Church of S. Domenico, Bologna; in the horse in the equestrian statue of Cangrande della Scala in Verona (VI, PL. 367); and in the horse of Guidoriccio da Fogliano, depicted by Simone Martini (IX, PL. 334). The interest in animal and plant representations was even more marked in the production of the International Gothic style, which interpreted it in a particularly poetic sense that had a touch of fable. Animals, plants, and flowers were studied by the artist in the manner of one who discovers a treasure: he copied them from nature, in colors that were sometimes vivid and sometimes extremely delicate, but always recognizable and classifiable. He grouped them in visions such as that of the *Hortus conclusus* (cf. VI, PL. 372), the cycles of the months [e.g., those in the *Très Riches Heures du Duc de Berry* (IX, PL. 140), or those in the fresco of the Torre dell'Aquila in the Castle of the Buonconsiglio in Trent (II, PL. 26), which were of a delicate and aristocratic beauty]. In religious narrative paintings, horses, dogs, monkeys, falcons, and rams appear amid trees and flowers (VI, PLS. 64, 315, 325, 371, 377). Pisanello drew animals and plants from life, collecting his studies in albums (PL. 470; XI, PL. 178).

Fernanda DE' MAFFEI

The modern era. The great masters of the Renaissance (q.v.) regarded the plant and animal worlds from two basic points of view: that of a return to the classical motifs of antiquity, such as the horse in the equestrian monument or the laurel and acanthus in decoration, and that of a study of proportion and anatomy.

The anatomy and proportions of the horse were studied by artists from Alberti to Leonardo da Vinci and Dürer. Donatello and Verrocchio in their respective statues of the Gattamelata and Colleoni modeled their works on Roman equestrian monuments and exalted the animal not only as an anatomical study, but also for the ideal beauty of its form. Images of horses, lions, and sphinxes were used especially in monumental sculpture. Animal motifs returned to fashion in the small Renaissance bronzes, in decoration in general, and in furniture in particular (lion paws on chests, tables, etc.).

Apart from their rediscovery of classical subjects, Renaissance artists (PLS. 470, 471) based their naturalistic vision on scientific studies, becoming investigators and illustrators of the plant and animal world both for their own interest and to illustrate scientific texts. Thus they also satisfied the curiosity of the aristocracy, which was increasingly interested in science. Still lifes, for example, had their origin in the widespread taste for the study of botany (XII, PL. 479). Illustrations of scientific texts, such as those of Giacomo Ligozzi (XII, PL. 480), sometimes rose to the level of works of art (see SCIENTIFIC AND MECHANICAL WORKS).

The study of animal forms was related to the study of temperament; there was a search for the similarities between human physical expressions and those of various animal species (III, PL. 205; see CHARACTERIZATION: PSYCHOLOGICAL, PHYSIOGNOMICAL, AND ETHNIC). Thus the animal was decisively introduced into those artistic trends which aimed at depiction of character and which dominated in caricature (III, PL. 423) and in the illustration of narratives and fables. These trends persist in modern animated cartoons (III, PL. 336).

In the 17th and 18th centuries, with the development of genre subjects (see GENRE AND SECULAR SUBJECTS) fruit and flowers became simple pictorial motifs (PL. 475). Artists specialized in particular subjects: there were fruit painters (such as Pietro Paolo Bonzi, called "Il Gobbo dei Carracci"), flower painters (such as Mario Nuzzi, known as Mario de' Fiori), and animal painters (such as Frans Snyders). The production of the English sporting painters of the 19th century was noteworthy (PL. 472).

In modern Western art, it is only in ornamentation that plant and animal representations appear as autonomous elements with a precise function. They are found in the "grotesques" created by the school of Raphael (e.g., by Giovanni da Udine; PL. 464) and their use persisted up to the 19th century. The motif of garlands of fruit and flowers, widely used in the Renaissance, was extended to fresco decorations from the 16th century on (XI, PLS. 98, 100) and appears also in sculptural decorations. Sometimes animal heads or fruits have symbolic and heraldic values in Renaissance and baroque art (qq.v.), but in general they are used as more or less stylized, purely decorative motifs.

Plant motifs were favored in rococo (q.v.) architectural decoration (XII, PLS. 163–165, 180, 181). Neoclassic decoration took up such stylized motifs as the palmette, laurel, sphinx, lion, and eagle (V, PLS. 450, 451; XII, PL. 464).

Neo-Gothic art and Pre-Raphaelitism and related movements, up to that of Arts and Crafts, took plant motifs from late Gothic and classical antiquity.

With Art Nouveau (q.v.) the free forms of plant motifs inspired new forms in architecture (cf. the iron structures of V. Horta; I, PL. 424), as well as in decoration (PL. 473) and especially in graphic art. This was a last expression of nature in an art that has become increasingly abstract.

Among other modern trends, animal and plant representations often appear in the works of the neoprimitive painters as elements in an enchanted world (XI, PL. 330).

Plant and animal forms in architecture. The use of plant and animal forms in architecture often occasions the appearance of irrational, anticlassical tendencies. This is particularly evident when the plant forms become normative not only for the single parts (such as the capitals) but also for the entire structure.

Perhaps the two most anticlassical architectural styles, rococo and Gothic, appeared to their contemporaries to be intimately connected with the plant world and drew on this presumed connection for rich plant motifs. The theory of the origin of Gothic art in plant forms has been reiterated many times, in both a positive and a negative sense. The great northern cathedrals have been compared to majestic forests (Goethe, Chateaubriand, et al.; cf. J. Baltrušaitis, *Aberrations, légendes des formes*, Paris, 1957, pp. 52–96; P. Frankl, *The Gothic: Literary Sources and Interpretations through Eight Centuries*, Princeton, 1960, p. 481 f.). Curious experiments were also made to prove the naturalness and rationality of the Gothic style, detested by some because of its divergence from classical and Renaissance models. J. Hall (*On the Origin and Principles of Gothic Architecture*, Transactions of the Royal Society of Edinburgh, IV, 1798) tied equidistant stakes of ash with willow branches that interlaced above, forming a kind of ogival vault. Other shrubs were spires, windows, and portals, and when they flowered, the buds and leaves opened at approximately the same points as where the Gothic architects placed plant decorations.

During the Renaissance architectural elements came to have an even more direct relation to plant forms. Interest in ornamental motifs with festoons (used extensively by Mantegna; IX, PL. 322) and topiary work (whose simple and geometric form derived from Alberti) was followed by experiments aimed at achieving an even more intense relation, culminating in mannerism. Some of the sculptural decorations of Bomarzo (X, PL. 137) seem to have been designed to be surrounded by abundant and wild vegetation (for example, the steam, which gushes out of a gaping opening and flows past an enormous tortoise). In the Medici villa at Pratolino Buontalenti constructed a hanging pavilion for banquets, accessible by means of a staircase, around a gigantic oak, in an unusual anticipation of rococo. At the same time, a complex type of rustic decoration was used in architecture; together with facings of rough-hewn stone blocks or of plaster that imitated corroded stone, real or artificial plants and faithful reproductions of animals (sometimes copied from life) assumed primary importance. The sounds of the animals were reproduced by hydraulic instruments. Other unusual facing materials used at this time were shells and compositions of coral.

Although festoons of leaves and fruit and representations of birds and other animals were frequently used in baroque decoration it was not until the emergence of the rococo style that the wilder, more natural forms of vegetation were used again, especially in southern Germany and the castles on the Rhine. Rococo adopted the plant forms of Gothic, liberating them from the geometric scheme of the ogival arch and freeing vines, leafy branches, and flowery boughs to spread through space. This sculptural and chromatic transformation of rococo churches into ever-flowering gardens once more proposed the theme of Paradise. With the same type of decoration, architects sought to bring living nature into palace interiors (e.g., the long gallery of the little-known palace of Bayreuth, an undoubted prototype of Art Nouveau). This taste for plant forms influenced decorative schemes, in which a preference for interlacing structures became evident, even though more broad in their conception than earlier work of this type. The splendid banisters of the great staircase of the Castle of Augustusburg, Brühl, near Bonn, is almost an uninterrupted flowering vine; there was no comparable decoration until that of Art Nouveau (cf. I, PLS. 468, 469), which, however, served a more rigorous architectural function and was therefore based on geometric rather than organic schemes.

ZOROASTRIANISM. Zoroastrianism was the religion of Iran previous to the spread of Islam (q.v.) and takes its name from its founder Zoroaster, about whose personality and dates little is known. Modern exegesis tends to place his activity between the 8th and 6th centuries B.C. He undertook to reform and unify the religious thought of the ancient Iranian peoples — which, being fundamentally pantheistic and animistic, was close to that of Vedic India (see HINDUISM). The religion he taught was essentially monotheistic, even though it included figures of secondary divinities, subordinate to Ahura Mazda (Per., Ormazd), and it more or less accentuated elements of dualism in the division between the forces of good and evil, which mankind follows of its own free will. In choosing good, man is aided by the Zoroastrian message, the instrument of salvation given him by Ahura Mazda through the mouth of Zoroaster. The thoughts of Zoroaster are expressed in the Gathas, a collection of verse sermons, which constitute the oldest part of the Avesta, the canonical book of Zoroastrianism.

This religion did not, however, remain static in every part of Iran and at all times, but underwent variations and swings, sometimes even a reversion to attitudes preceding the Zoroastrian reform, especially in the Achaemenid period (see DIVINITIES). Under the Sassanid dynasty (see SASSANIAN ART) Zoroastrianism become the state religion, losing its original character of a universal message and becoming more decidedly dualistic. It survived in Iran through Islamic times up to the Mongol invasions, when a sort of Diaspora took place, especially toward India, where a community, that of the Parsis, still exists.

• •

In its most remote period Iranian religion, as far as it is possible to analyze its development, shared a characteristic trait with other Indo-European religions: it was aniconic, that is, it did not use images as representations of the godhead. This fact is known from Herodotus, with regard both to the Iranian tribes in the West (Medes and Persians; I, 131) and those in the North (Scythians; VI, 69). Herodotus's statements are confirmed by Clement of Alexandria (*Protreptikos*, V, 65, 1) for the Medes and Persians. At the same time, also in accordance with other Indo-European religions, symbols were freely used to represent the gods (see SYMBOLISM AND ALLEGORY). Not only the rite of sacrificing to the god of the warrior function at the foot of a huge heap of branches and logs, on top of which a short sword (*akinakes*) was placed, but also the legend of the origins of the Scythian tribes attests to the use of symbols for the deities of the three social functions (ruler, warrior, nourisher). In this legend the cup represents the god of the ruler function, the sword or spear or arrow the warrior function, and the plough and the yoke the nourishing function (cf. Herodotus, IV, 5; idem, IV, 62; Ammianus Marcellinus, XXXI, 2, 23; Curtius Rufus, VII, 8). However, as time went on and contacts became more frequent with Mediterranean and Near Eastern cultures possessing rich iconic traditions in religious art, the situation changed completely and from the reign of Artaxerxes II (404–359 B.C.) images were used as representations of Iranian deities. When Zoroastrianism reached the West, probably the old aniconic tradition was being supplanted by new tendencies.

In other fields of sacral art Iran was possessed of much older traditions. The first known specimen of religious art to be classified with certainty as Iranian — for it has not yet been ascertained whether the art of Zawiyeh with its obviously mythological scenes can in fact be so classified — dates from the mid-6th century B.C. and is Median. It shows a ritual scene of great significance — a priest officiating at an altar (Herzfeld, 1941, fig. 313) — and is a relief over the entrance door to the tomb of Qyzqapan (Kizkapan) in Shahrzur (Kurdistan), dating between 600 and 550 B.C. Two men are shown worshiping the fire on the altar between them. The fire itself is pictured in a crude and rudimentary way. However, except for this detail, this is a fully developed art, the tradition of which passed on into Old Persian art. The two men are dressed in the Median coat and trousers, over which one of them wears the usual fur-lined cloak with hanging empty sleeves. On their heads they have the Medo-Persian cap with its mouth cover (*paitidāna*). Each holds a bow in his left hand, a detail that is a characteristic heritage from Assyrian art and recalls the hunting reliefs of Ashurbanipal with sacrificial scenes. The absence of the ritual requisite, the barsom (sheaf of twigs; Avestan, *baresman*), might indicate that the two men are not to be regarded as professional priests, though this seems rather improbable. The small gold plaques of the Oxus Treasure (Br. Mus.) show similar representations of officiating Median priests, but they carry the barsom in their left or right hand (Herzfeld, 1941, fig. 314, no. 4). In some cases the priest, also dressed in the Median fashion, is holding a vessel that it would be tempting to classify as a libation vessel. These priests are Magi, belonging to the famous priestly caste of the Median tribes. It is known from the tablets of the Persepolis treasury that the Magi served not only as fire attendants but also as libation priests. The Dukkān-i-Dāūd tomb, on the Ecbatana-Babylon road, shows an officiating priest wearing the traditional

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

cap with its mouth cover and holding the sacred twigs, but dressed in Elamite fashion (Herzfeld, 1941, fig. 315). In a relief over a small tomb at Sakavand (south of Kermanshah) the same scene is depicted as at Qyzqapan; at Sakavand, however, the single priest is shown wearing the Old Persian undulating dress and in a position of adoration before two altars, flanked by another very small human figure, both being represented with uplifted hands and without the barsom (Herzfeld, 1941, fig. 316).

The motif of a Magian priest, dressed in Median costume, worshiping in front of a fire altar obviously was a favorite theme in Iranian religious art, for it spread with the Iranian political and cultural expansion. Such a representation, dating from Achaemenid times, is shown on a Cappadocian fire altar from Asia Minor (Widengren, 1956, fig. 6). The Median Magi had adopted Zoroastrianism as their own religion at a rather early period, but they had integrated it into their own Zervanite system (for Zurvan, the divinity of Infinite Time, see VIII, col. 258). The outcome was a highly syncretistic product, and it was in this form that Zoroastrianism was propagated in the West by the Magi. The remains of Iranian sacral art found in the West are thus colored by the syncretistic beliefs and customs of the Magi; they are not expressions of the original Zoroastrianism. An illustration is furnished by the relief from the neighborhood of Dascylium in Asia Minor, where two Magi with their barsoms are shown together with the cattle to be sacrificed (PL. 476; see VIII, col. 275–276). In fact, it is well known that the Magi also acted as sacrificial priests; bloody sacrifices, however, were forbidden by Zoroastrianism.

It was presumably shortly before or during the Achaemenid period (550–331 B.C.) that a real sacral architecture was introduced, for in earlier times the Iranians knew no other places of worship than those provided by nature itself. According to Herodotus (I, 131), they worshiped their gods on the peaks of the mountains. Temples were probably constructed rather early, as is shown by the excavations in and around Pasargadae, Susa, and Persepolis (PL. 476). Altars were used during the Median hegemony, but whether the Median tribes also had temples at that time is not known. At a later date the simplest form of fire temple was a square-built structure of modest dimensions (33×33 ft.) with a roof carried by four columns (see SASSANIAN ART); presumably the holy fire was kept in an inner room (FIG. 967). Fire altars, however, were also erected in the open air, for at Behistun and Persepolis there are reliefs showing Darius I as a high priest officiating before a fire altar. He holds a bow in his left hand (a Median heritage) and raises his right hand in a gesture of prayer toward the winged sun disk, the symbol of Ahura Mazda (cf. IV, PL. 216; XII, PL. 525) — a symbol that it would also seem the Medes had inherited from their Assyrian neighbors (see DIVINITIES; SYMBOLISM AND ALLEGORY).

Sassanian fire temples (surviving walls are indicated by hatching). (*a*) Kunar Siah, monumental complex: (1) fire temple (*chaḥār ṭāq*). (*b*) and (*c*) Temples of Farrashband: (*b*) Tall-i-Jangi; (*c*) Khurmā Yak (*from Iranica Antiqua, I, Leiden, 1961*).

Representations of religious scenes other than the fire ritual are difficult to classify as Zoroastrian and, as to the religion of the Achaemenid kings themselves, it is more than probable that they were not Zoroastrians in the strict sense of the word. In Parthian times (ca. 250 B.C.–A.D. 226) it is conceivable that other types of Iranian religion inspired the sacral art and architecture; during this period, however, Zoroastrianism was still the dominant religious factor in the province of Persis (Fars), once the home of the Achaemenid dynasty, after whose fall it was ruled by some petty princes, chiefly known from their coins. They styled themselves *frātadāra*, "fire keeper," and their coins show them as officiating fire priests in keeping with Achaemenid traditions (Sarre, 1925, pl. 51, no. 14). The ruler, who claimed descent from the Achaemenid Great Kings, is pictured in the same position as Darius I, holding his bow in his left hand and raising his right hand in a gesture of adoration toward the symbol of Ahura Mazda, the winged sun disk. This divine figure is seen above a building, the roof of which has a curious appearance, probably to be interpreted as a representation of three fire altars. The temple building itself has much the same structure as what is known today as the Ka'ba-i-Zardusht (VIII, PL. 137). At the right is seen another cultic instrument, the ensign (*drafsh*), which played a considerable role in non-Zoroastrian cultic-social organizations; to judge from its appearance here, it was used in Zoroastrian circles at a fairly early date. The dynast officiating as the fire priest was most probably also the figure pictured in the relief on one of the stone jambs of a window of the temple excavated at Persepolis (Herzfeld, 1941, pl. LXXXVI). The relief shows him in the same position as on the coins, but holding in his left hand the barsom rather than the bow, and thus in perfect priestly attire.

The traditions of the *frātadāra* dynasts were inherited by the Sassanid rulers of Persis, who were themselves fire priests in the temple of Anāhitā in Istakhr. The religious art of the Sassanian period (226–641) does not seem, however, to carry on the traditions of the provincial art of Persis but to take up and develop those inherited from Parthian imperial art — as more suited to the claims of the new Great Kings. This Parthian art too shows the ruler and other prominent personalities in scenes of worship, for example, a Parthian prince before a goddess placed in an aedicula (Sarre, 1925, pl. 65). More important than this representation (whose precise meaning is obscure) are sacrificial scenes from both the western and eastern parts of the Parthian empire, showing a prince or nobleman officiating before an altar — for example, the relief from Hadda in Afghanistan (Rostovtzeff, 1935, fig. 52). The coinage of the Sassanid kings showing the ruler worshiping at the fire altar would seem to exhibit more agreement with these Parthian representations than with the *frātadāra* scenes. This is evidently in keeping with the general trend in early Sassanian art, which carried on even purely stylistic details of Parthian art — a trend much neglected up to now in the literature, where Sassanian art is spoken of as introducing a complete break with the preceding Parthian period. The coins, though of various types, do not show the Great King in the typical prayer position before the symbol of Ahura Mazda but represent him (normally together with another male figure, but sometimes with a female) as officiating before the fire altar, holding his long scepter (PL. 477; III, PL. 399); in the coins of Bahrām I the female figure is his queen. The fire burning on the altar is represented in a much more realistic manner than it was in Achaemenid times. It is remarkable that the coins of Ardashīr I (ca. 226–41) show the altar without any attendants (Sarre, 1925, pl. 143, no. 3). The scenes of investiture, where the deity hands the king the symbols of power, have a very old Iranian, probably northern-nomadic, tradition behind them. The first Sassanian representations show both god and king as horsemen, whereas the later reliefs picture them as standing figures: here, perhaps, is a link between the nomadic Parthian traditions and the ideology of the Zoroastrian church.

ZURBARÁN. Francisco de. Spanish painter (b. Fuentes de Cantos, Badajoz province, Nov. 7, 1598; d. Madrid, Aug. 7, 1664). At the beginning of 1614 Zurbarán was in Seville as an apprentice in the studio of Pedro Díaz de Villanueva, a painter of religious images, formerly a pupil of Juan de las Roelas. A signed picture depicting the Virgin as a young girl being worshiped by a group of angels (Bilbao, Coll. Felix Valdés), dated 1616, reveals all the fundamental elements of the technique and pictorial concept that characterize Zurbarán's works. This painting, in fact, does not seem to be the work of a youth of eighteen; the eminently baroque treatment of the cloud landscape, into which almost monochrome heads of angels are integrated, reappears at a much later period of Zurbarán's career and calls for a certain caution in appraising this work. It is hoped that an adequate cleaning of this canvas will clarify a date that is dimly seen under an old restoration.

In 1617 Zurbarán established himself as a painter in Llerena, where he married María Paez, a mature woman with an inheritance; they had three children. In 1623, after the death of his wife, he married Beatriz de Morales, a widow. Many of the works from this period, mentioned in contracts, have been lost, although those which have survived reveal Zurbarán's artistic personality in these youthful years; these include the *Virgin Healing St. Reginald of Orléans* and the *Apparition of the Virgin in Soriano* (1626–27; Seville, S. Magdalena, formerly S. Pablo); the imposing *Crucifixion* (1627; pl. 480), executed for the sacristy of the Church of S. Pablo; the *St. Serapion* (1628; pl. 480); and the St. Bonaventura cycle, four paintings executed in 1629 (one in Dresden, Gemäldegal.; two in the Louvre, pl. 478; the fourth one, formerly in Berlin, Staat. Mus., was destroyed in 1945). These works belong to the realistic school dominant in Spanish painting at the beginning of the 17th century, although to its more conservative and traditional aspect; all of them reveal a tendency toward abstraction and constant forms. The details are always sober, and the figures, which stand out from a neutral background, appear to be self-contained. The colors are bright and lustrous, and the chiaroscuro is somewhat harsh. The light, concentrated on the folds of the clothes and mantles, comes from a single source, with almost horizontal rays that give off tenuous reflections. The atmospheric depth disappears or is reduced to a minimum, a result of the painter's obsession with an ideal of perfection combined with a need for constant, although restrained, search and experimentation. The drawing, in spite of its schematic tendency, is always adapted to the required pictorial qualities, revealing the influence of the Sevillian 16th-century mannerists, particularly of Pedro de Campaña (Kempener).

Certain incongruities in the execution of the works from this early period must be the result of a beginner's lack of experience, but at the same time they are indicative of the ingenuousness and primitivism from which Zurbarán would never totally free himself. Zurbarán must certainly have had collaborators, for it is difficult to imagine that a single person produced the quantity of work for which he was contracted during his years in Llerena. One of the best paintings of this first period is the above-mentioned *Crucifixion*, which seems to have opened the doors to fame in Seville for the painter.

Zurbarán's innate realism is evident above all in the cycle dedicated to St. Bonaventura. His skillful manner of composing by means of the symmetrical distribution of space but not of the elements within it was evident in the *Visit to St. Thomas*, a canvas lost in the bombing of Berlin. The gestures of the figures also constitute a notable element in Zurbarán's paintings. Frequently the slow and quiet gestures contrast vigorously with the orthogonal outline of the axis and give a sense of relative movement to the work. In spite of a certain archaism, the two scenes of the same cycle in the Louvre (pl. 478) are also very impressive. The composition runs parallel to the surface of the painting; there is a diagonal movement in the foreground, but not toward the back. Even the corporeal abstraction lacks equilibrium in these early works.

The undated works of this first period include the picture depicting the Holy Family with SS. Anne, Joachim, and John (Madrid, Marquise of Campo Real Coll.) and a Crucifixion (Seville, Mus. Provincial de Bellas Artes), which is notable for its sculptural quality. About 1629 Zurbarán drew the magnificent head of a monk (Br. Mus.), which demonstrates the solid drawing technique that underlies the heads of his saints and monks in the large pictures.

In 1629 the Seville town council wrote to Zurbarán, begging him to move his studio and residence there, declaring that the presence of the Estremaduran painter in the Andalusian capital would be a great honor and saying at the same time that "the art of painting is one of the greatest glories of the State." The invitation was accepted, and the painter moved to Seville with his family and eight servants, some of whom were undoubtedly assistants in the studio. His first work as *maestro pintor* of Seville, commissioned on Sept. 26, 1629, was the altarpiece of St. Joseph for the Church of the Trinidad Calzada; of this altarpiece the central part (Paris, Church of St-Médard), the *Flight into Egypt* (Besançon, Mus. B. A.), and the *Epihany* (London, private coll.) are extant. The quality of these three canvases reveals the painter's effort to justify his fame.

In May, 1630, the painters' guild in Seville, headed by Alonso Cano, ordered Zurbarán to submit himself to an examination. The town council supported Zurbarán's refusal, considering such an examination to be an affront to his standing as an artist, and as a vote of confidence, the council commissioned an Immaculate Conception for the town hall. At this time Zurbarán was working on the cycle of the Doctors of the Church, which was to decorate the Mercedarian library, and on the large scenes of the life of St. Peter Nolasco, founder of the Mercedarian order (II, pl. 188). The central work of this group is the *Recovery of the Image of the Virgin of El Puig* (pl. 481), which is harmonious in form and chromatic values and also marks the height of the master's maturity in pictorial synthesism. The saint on the right gave Zurbarán an opportunity to employ his talent for creating texture in white clothing that appears to be made of a soft, warm material.

Another noteworthy canvas, executed in 1630, is the *Vision of Blessed Alonso Rodríguez* (XII, pl. 377), in which Zurbarán employed the horizontally divided composition that El Greco used with such efficacy. Among the figures, which reveal careful study and great interpretative vigor, that of the angel playing the lute, one of the most beautiful figures in Spanish painting, is outstanding. The same split composition reappears in the *Apotheosis of St. Thomas Aquinas* (Seville, Mus. Provincial de Bellas Artes), painted in 1631 for the Colegio Mayor Universitario of Seville. For this canvas Zurbarán obviously followed the tradition in this genre, that of Francisco Pacheco and Juan de las Roelas, and studied the figures of the realist school; but he added to both these factors the powerful imprint of his own personality. The detail of the dialogue between SS. Ambrose and Gregory recalls Michelangelo in the tragic grandeur of the historical personages, who are profiled against a turbulent sky. Also magnificent are the studies of the heads of the kneeling figures in the lower section of the painting;

CC-0. Agamnigam Digital Preservation Foundation, Chandigarh

the subtlety of the architectural background is notable for being resolved with a *sfumatura*, rarely used by Zurbaran.

To the highest point of Zurbarán's career, between 1630 and 1632, belongs the *Vision of St. Francis in the Porziuncola*, which is admirable for the very human representation of the saint in ecstasy; in contrast, the upper section, with Jesus and Mary and the open sky with angels and clouds, appears remote and pallid. In the *St. Margaret* (PL. 482), from the same period, the monster in the lower background contrasts with the gentle figure of the saint, attired in the fashion of the first third of the 17th century. Also of this period is the *Vision of John the Baptist* (Barcelona, Coll. José Molas), which is undoubtedly Zurbarán's most felicitous representation of the imaginative, to which he himself was not particularly attracted; in in this canvas, however, the background landscape to the right, with the unreal light that falls from the sky, acquires an intense quality. Also from about 1632 is the canvas depicting the young Virgin praying (New York, Met. Mus.).

In the *Virgin as Protectress of the Carthusians* (also known as *La Virgen de las Cuevas*), *St. Hugo of Grenoble Visiting the Refectory*, and *Urban II with His Confessor, St. Bruno*, painted about 1633 for the Charterhouse of Seville (now Seville, Mus. Provincial de Bellas Artes), there is an evident lowering in quality — not in the composition and the balance of the chromatic tones, but in the execution of the figures, which lack the vigor, the sense of synthesis, and the material quality typical of Zurbarán, which suggests a probable collaboration. These paintings were followed by *Still Life with Oranges*, in the Contini Collection in Florence, one of the greatest still-life paintings in world art. Zurbarán's abstraction of volume, together with the intense tactile quality of each object represented, is here shown at its peak. The portraits of monks (ca. 1633; Madrid, Accademia de S. Fernando) show a slight departure from the idealizing and synthesizing manner and an approach toward realistic naturalism, with emphasis on the anecdotal, on the momentary expression, and on movement, which gradually replaced the serenity that had characterized his first period.

Zurbarán's realism is not expressed, as is that of Velázquez, by an extraordinary economy of means, nor does it evoke a world by the prodigious effect of light and shade; rather, it is realized in a manner that is faithful not in detail but in over-all effect. Thus Zurbarán abandoned the synthesizing manner of his previous period, at the same trying to destroy all vestiges of mannerism.

In 1634 Zurbarán was in Madrid, collaborating in the decoration of the new Buen Retiro Palace, which was being executed under the direction of Velázquez, and on November 13, he received 332 ducats for 12 canvases depicting the labors of Hercules (10 of which are now in the Prado). He also painted two historical pictures for the Hall of Realms, of which only one, the *Defense of Cádiz*, has been preserved (Prado). In these works Zurbarán accentuated the realism while maintaining the old technique, and each element, whether in the foreground or the background of the composition, is abundantly delineated and painted, showing that his contact with Velázquez did not alter Zurbarán's pictorial concept. He did not value the imaginative — not in the sense of the power of imagination but in terms of the ability to fulfill what it suggests by the smallest formal elements. Zurbarán, infatuated by the truth, relied on exact normal perception. As he was incapable of conveying space and atmosphere, he renounced them and searched for those neutral backgrounds which allowed an almost obsessive synthesis of the subject, always with an excessive simplification, with abundant contrasts obtained by sequences that limit the contours or by gradations of brilliance in order to arrive at a perfect balance between the chromatic scale and the tonal values.

Zurbarán's return to Seville, with the honorary title of *pintor del rey*, marks the beginning of one of his most productive periods. He integrated the style of his previous periods, that is, he recast the naturalistic realism of 1633–34 into a more abstract formula.

From 1636 on, Zurbarán executed the large cycle of canvases (representing saints, bishops, and friars) for the Charterhouse of Jerez de la Frontera, many of which are in the Museo Provincial de Bellas Artes, Cádiz. Compared to works of similar subjects from previous periods, these figures, although they have perhaps lost some of the grandeur of the earlier ones, offer a richer variety of rhythms; the attitudes are more varied and less conventional. The figures are often shown in profile, with hoods, capes, or mantles creating a play of undulating lines from the collar to the lowest folds; the heads have contained, intense expressions, with a mystical rigidity that reveals the inwardness of spiritual vision. In these works Zurbarán once more achieves a synthesis of form, eliminating the accessory details and accentuating the roundness of the volume.

The *Battle of El Sotillo* (1638; New York, Met. Mus.) also belongs to the cycle for the Charterhouse of Jerez de la Frontera. In this work two compositional schemes are integrated: one counterposes some figures in the foreground to the narrative background, as in the *Defense of Cádiz*, and the other has a horizontal subdivision. The upper section is reduced and evokes a feeling of upward flight, with a certain unreality that foreshadows the visionary subjects in the last paintings of Murillo (q.v.), who liked to counterpose the celestial and the terrestrial by technical means. Also part of the cycle for the Charterhouse of Jerez de la Frontera are the *John the Baptist in the Desert* (PL. 484) and the *St. Lawrence* (both dated 1638; Cádiz, Mus. Provincial de Bellas Artes). Both picture are executed with a simple flowing technique. It is remarkable that the almost undefinable impressions generated by Zurbarán's works never stem from a contrived *sfumatura*. Although his figures have almost ecstatic attitudes, they are nonetheless forceful and depicted with a solid technique.

The famous compositions in Grenoble (Mus. de Peinture et de Sculpture), *The Annunciation*, *The Adoration of the Shepherds*, *The Adoration of the Magi*, and *The Circumcision*, dated between 1638 and 1639, belonged to an altarpiece planned by Alonso Cano for the Charterhouse of Jerez de la Frontera. Of resplendent color, but maintaining the essential serenity that characterizes Spanish painting, these pictures demonstrate that Zurbarán had another period of great creativity. The most interesting work in this group is the *Adoration of the Shepherds* (PL. 479), of an idealizing naturalism, but imbued with the zest of the common people of 17th-century Spain and reflecting the preference for simple and direct themes rather than pompous ones. The Holy Family, angels, and secular persons intermingle in a pyramidal composition, which is repeated in the clouds by a group of angels preparing to sing, next to the one playing a harp. The diagonal axis is firmly established by the chromatic harmony that ties the red of the tunic of the harp-playing angel in the upper-right-hand corner of the composition and the skirt of the woman kneeling in the lower-left-hand corner. Here, as in the *Apotheosis of St. Thomas Aquinas*, the finest traditions of the Andalusian school are assimilated; the art of Roelas, Herrera, Velázquez, and Murillo coincides in the representation of these direct and very human types — for example, in the kneeling countrywoman or in the shepherd kneeling behind the proffered lamb. One of the great esthetic achievements of the *Adoration of the Shepherds* stems from the chromatic contrast, a double contrast of perspective and emotion based on the cold tonalities of the angels that appear behind the group formed by the shepherds and the Virgin.

Among the works of the cycle executed for the church (S. Jerónimo) of the monastery of Guadalupe in 1638–39, there are again certain irregularities that must be attributed to collaborators and helpers. The purely Zurbaránesque appears in the portrait of Gonzalo de Illescas, Bishop of Córdoba, and in the *Mass of Father Pedro de Cabañuelas*, in both of which the figures have a strong pictorial and intensely human quality. Outstanding in the former is the admirable still-life arrangement on the bishop's table, composed of an inkstand, a candlestick, books, a death's head, and a hourglass, along with an accent of life provided by the apple resting on a book on the base of the column that separates the room from the outside. Two other compositions in the Guadalupe cycle contain the contrast, evident in the earlier works, between the firmness of the volume of the bodies and the absence of atmosphere in an abstract space, even when there are clouds and landscape ele-

CC-0. Agamnigam Digital Research Foundation, Chandigarh

ments in the background. In the *Flagellation of St. Jerome* the action lacks drama and appears unreal, dominated as it is by the beauty and concern expressed in each individual figure, particularly the angel on the left side, who by the position of the arms appears to be offering the saint's suffering to the Saviour seated on a throne in the clouds. In the *Temptation of St. Jerome* (PL. 483) it is evident that for the artist the subject is a pretext for the realization of forms and colors, in this instance evidenced in the intense contrast between old age and youth. In these two pictures the realistic intention and the free brush strokes have been abandoned, and Zurbarán returns to his synthesizing formula, to the idealizing naturalism that is his most distinguishing mark.

This brilliant period is completed by several dated canvases. Of particular excellence is the one representing Christ the Redeemer (1638; Barcelona, Coll. Felix Millet), in which synthesism and realism are blended to produce a bright, solid image, lighted from within. Two admirable paintings depicting St. Francis, both from 1639 and now in London (Nat. Gall.), possess a dramatic quality, particularly the one showing the saint with his mouth half open, looking skyward, against a neutral background suggesting darkness. In the other (PL. 484), the landscape in the background and the movement of the left hand imply a concession, although exceedingly slight, to the outward narrative and to circumstance. This theme of the saint or the monk kneeling in darkness was so assiduously explored by Zurbarán that he completely mastered it, as is evident in the cycle of small pictures in the monastery of Guadalupe.

There are few dated works by Zurbarán from the long period between 1640 and 1658, an interval in which he was producing works for South America, which obliged him to organize his workshop to produce quantity rather than quality and to use collaborators extensively. The fact that documentation exists for much of the Zurbaránesque work produced for South America and that there exist many pictures from the master's workshop (some unquestionably by his own hand) which do not correspond to those listed in the documents testifies to the quantity of work the painter must have exported. An additional proof is the unquestionable influence his style had in South America during the late 17th and the early 18th century, principally in Peru. The most important commissions were those from Lima, including one for 34 pictures (now lost) for the Convent of Our Lady of the Incarnation and another for a cycle of 12 Roman emperors on horseback (also lost). Commissions also came from Buenos Aires.

In any case, Zurbarán continued to produce works for Spain; in 1643 or 1644 he painted several pictures for the parish church at Zafra, near Llerena; in 1644 he undertook a commission for two pictures for Carmona, and documents exist for other similar commissions. The canvases depicting the Blessed Henry Suso and St. Louis Bertram (Seville, Mus. Provincial de Bellas Artes), notable for their wide spatial conception, were painted during this period for the Monastery of Porta Coeli, as was the *Viaticum of St. Bonaventura* (Genoa, Pal. Bianco), one of Zurbarán's best studies in perspective.

At this time, widowed for the second time, his children married, he contracted a third marriage, from which four children were born. His expenditures rose while his prestige as a painter sank. The brilliant career of Bartolomé Esteban Murillo had begun, and within a few years he was the idol of the Sevillians. Zurbarán tried to adapt his own style to the Murillo pictorial concept, and as a result the master's last works evince a superficiality stemming from his concession to the suave lyricism of the young painter. The effort that this concession entailed, together with an evident crisis in morale and in material circumstances, brought Zurbarán to an existence of near misery, aggravated by the general decline in work because of the outbreak of the plague that hit Seville in 1649. Juan de Zurbarán, the only one of his sons who dedicated himself to painting, died in this epidemic. From this period of ill luck there is only one dated work, the *Christ Carrying the Cross* (PL. 484).

At some unknown date Zurbarán left Seville to try his fortune in Madrid. In a testimony of 1659 Zurbarán declared that he had lived at court for seven months. His removal to Madrid was another failure, because his works were now little appreciated; but he remained in the capital until he died on Aug. 7, 1664, in total destitution. He was survived only by Micaela, a daughter of his third marriage.

Among the works of this final period are the *Virgin and Child with St. John* (San Diego, Calif., Fine Arts Gall.) and the *Annunciation* (Philadelphia, Mus. of Art), both dated 1558; these two paintings mark Zurbarán's closest approach to Murillo's art in technique, in the use of clouds as a dynamic element, and in other aspects of pictorial concept. The *Holy Family* (Budapest, Mus. of Fine Arts) and the *St. Francis Kneeling* (Bilbao, Coll. Felix Valdés), dated 1659, express old themes with less drama than is evident in the paintings of 1639, but they are more intensively narrative. Among the better undated works from his last period, mention must be made of the *Christ at the Pillar*, in the church of Jadraque, in which the strained position does not lessen the beauty and expressiveness of the work. The technique of earlier works is reflected in the *Doctor of Law* (Boston, Isabella Stewart Gardner Mus.) and in the *St. Luke Before the Crucified* (Prado), in which Zurbarán attained the quality of his earlier greatest achievements.

The *Immaculate Conception* (Budapest, Mus. of Fine Arts), dated 1661, confirms Zurbarán's strong desire to return to his former style. The figure of the Virgin has a compelling sweetness in its beautiful, youthful aspect; the tonal contrast is excellent, as is the rhythmic quality. His last picture, *The Virgin and Child with St. John* (Bilbao, Mus. de Bellas Artes), from 1662, also has masterful touches, such as the still life of pears and apples, the soft undulating rhythm of the parallel figures of the Virgin and the Child, and the rigorously pyramidal and mystic composition. This canvas and another with the same theme, in the Grathvohl Collection, Zurich, close the cycle of Zurbarán's work.
